When al-Kāmil died in Radjab 635/March 1238, there was trouble among the Ayyubīd princes, and al-Nāṣir Dāwūd [*q.v.*] had to leave his post as governor of Damascus. For a time, he took refuge in Ḳabūn, some 4 km. north of Damascus. But he felt himself threatened there, so sought refuge in the Mardj al-Ṣuffar in the old Umayyad castle of Umm Ḥakīm, from where he fled to Ḳalʿat al-Rabaḍ, the castle of ʿAdjlūn.

In Shaʿbān 702/end of March or beginning of April 1303, the Mongols of Persia again crossed the Euphrates and marched towards Ḥamāt [*q.v.*]. Damascus had been occupied for a short while by the Tatars in 699/1300, and they now went out to wait for the enemy in the Mardj al-Ṣuffar, where they were to be joined by the Mamlūk sultan of Egypt al-Nāṣir Muḥammad. The troops of the Ilkhānid Ghazan Maḥmūd [*q.v.*] took up their position near Shaḳḥab, to the west of the Mardj al-Ṣuffar. They launched their attack on 2 Ramaḍān 502/21 April 1303 and were repulsed by the Mamlūks, who sustained heavy losses. The *amīrs* ʿIzz al-Dīn Aydamur al-ʿIzzī al-Naḳīb, together with ʿIzz al-Dīn Aybak al-Turkī al-Ẓāhirī, the governor of the province of Ḥimṣ, and also the *ḥādjib* [*q.v.*] Djamāl al-Dīn Aḳḳūsh al-Shāmī, all fell "as martyrs" on that day.

In 791/1359 and 792/1390, the Mardj al-Ṣuffar was the theatre for violent fighting between Muslims. Barḳūḳ, the sultan who had been stripped of his position, left al-Karak [*q.v.*] where he had just been released from captivity, in Shawwāl 791/September-October 1389, and he arrived in Mardj al-Ṣuffar on 22 Shawwāl with, it is said, 500 men, some Mamlūks and some Bedouins. He clashed with the troops from Damascus near Shaḳḥab on 10 Dhu 'l-Ḥidjdja/30

October 1389, and went on to lay siege to Damascus. The *amīrs* of the main towns of the north of Syria banded together and came to the help of the city, but on the way, some of them decided to go over to Barḳūḳ. When, at the beginning of Muḥarram 792/end of December 1389 a warning was given of the approach of Tīmūrbughā Minṭāsh, Barḳūḳ left Damascus after a violent battle at Bāb al-Djābiya, within the eastern area of the city. He fell back towards the Mardj al-Ṣuffar, passed through Kiswa, and went on to camp at Shaḳḥab. According to Ibn Ṣaṣrā, the two armies confronted one another on 17 Muḥarram/5 January 1390. In this critical situation, Barḳūḳ was looking for cover when he suddenly came face to face with the sultan al-Manṣūr Ḥādjdjī, the caliph of Cairo al-Mutawakkil I, and the great *ḳāḍīs* who, since they had only a feeble escort, quickly surrendered. Hence at that point, the situation was reversed. Minṭāsh tried three times to release Ḥadjdjī and his companions but without success, since a violent storm of hail and rain forced the adversaries to abandon their conflict. Though the number of dead on both sides was less than 50, it was nevertheless a battle important for history. While Minṭāsh sought refuge in Damascus, Barḳūḳ went back to Cairo with the caliph and the *amīrs* who had joined his cause, and was restored to the office of sultan in Ṣafar 792/February 1390, whilst al-Manṣūr (al-Muẓaffar) Ḥadjdjī disappeared without any more trouble.

One may note that during the 8th/14th century, *khāns* [*q.v.*] were built in the Mardj al-Ṣuffar, a sign of a certain prosperity in the district. One *khān* was built to the north-west of the Ladjāʾ at Shaḳḥab in 716/1316-17 by the *amīr* Tankiz b. ʿAbd Allāh al-Nāṣirī, the viceroy of Damascus. In 725/1325 another was built between Kiswa and Ghabāghib in the *nāḥiya* of al-Katf al-Buṣrī (?) in the Mardj al-Ṣuffar, at the expense of al-Amīr al-Kabīr ʿIzz al-Dīn Khaṭṭāb b. Maḥmūd b. Murtaʿish (?) al-ʿIrāḳī al-Ghazakī, and it attracted many travellers. The Khān Danūn, a very large *khān*, built 5 km. south of Kiswa on the road to Adhriʿat, was completed in 778/1376 during the reign of sultan al-Ashraf Shaʿbān. One should also mention a *khān* at Ghbāghib, north of Ṣanamayn, on the Pilgrimage route, and another, the Khān al-Zayyāt, to the south-west of Kiswa and north-east of Shaḳḥab.

In 1941, during the course of hostilities between the Free French forces (supported by the British and Commonwealth troops) and the Vichy troops, there was a battle on the Mardj al-Ṣuffar, which took place on the very spot where the Byzantines had been forced to yield ground to the Arabs 1300 years before, and this later battle allowed the Allies to enter the Syrian capital.

MARDJAʿ-I TAḲLĪD (pl. *marādjiʿ-i taḳlid*, Pers. for Ar. *mardjaʿ*/*marādjiʿ al-taḳlīd*), title and function of a hierarchal nature denoting a Twelver Imām Shīʿī jurisconsult (*mudjtahid*, *faḳīh*) who is to be considered during his lifetime, by virtue of his qualities and his wisdom, a model for reference, for "imitation" or "emulation"—a term employed to an increasing extent by English-speaking authors—by every observant Imāmī Shīʿī (with the exception of *mudjtahids*) on all aspects of religious practice and law. As in the case of other institutions, the history of this function (called *mardjaʿiyyat-i taḳlīd* or simply *mardjaʿiyyat*, the term *mardja ʿi- taḳlīd* often being abbreviated as *mardjaʿ*, pl. *marādjiʿ*) is to be understood in the context of the protracted doctrinal development of Imāmism. Although the Arab element played and continues to play an important part in this development, historical circumstances prevalent in Iran since the establishment of Imāmi Shīʿīsm as the state religion under the Ṣafawids (907-1135/1501-1722 [*q.v.*]) were ultimately responsible for giving to the Imāmī *mudjtahids* a dominant spiritual and temporal influence. Under the Ḳādjārs (1794-1925 [*q.v.*]), the Imāmī *ʿulamāʾ* developed or re-interpreted various concepts or points of doctrine (*niyābat*, *aʿlamiyyat*, *mardjaʿiyyat*, *wilāyat*) which contributed to the increase of their power. Having undergone an eclipse since the 1920s—a period corresponding with the renaissance of Ḳum [*q.v.*] as a theological centre—the influence of the Imāmī *mudjtahids* and the role of the *mardjaʿ-i taḳlid* were seriously reexamined in the early 1960s as a result of doubts concerning the succession to Āyatullāh al-ʿUẓmā Burūdjirdī (d. 1961 [*q.v.* in Suppl.]), sole *mardjaʿ-i taḳlīd* since 1367/1947. Discussions and debates were held by members, religious and lay, of the Islamic societies (*andjumanhā-yi islāmī*) concerning the method of selection and the functions of the *mardjaʿ-i taḳlīd* and the institution of *mardjaʿiyyat* in general, the position of Imāmism with regard to *idjtihād*, *taḳlīd* and the various problems posed by the

relations between religious and political authorities, the forms and the degrees of power which could be exercised by the *mudjtahids*, etc. It was especially after the publication of these discussions (*Baḥthī*, 1341/1962; cf. Lambton (1964), 120), of which the authors, Āyatullāh Ṭāliḳānī (d. 1979) and Mihdī Bāzargān, were arrested and imprisoned following the demonstrations of spring 1963 against the "white revolution" of the Shāh (in which Āyatullāh Khumaynī played a prominent role) that abroad there ensued a wide-ranging debate concerning these questions, of which the salient points are summarised below in their historical context.

1. Discussions of *idjtihād* and *taḳlīd*. The evolution of Imāmī attitudes towards *idjtihād* and *taḳlīd* may be analysed in the context of what has been called, sometimes retrospectively and anachronistically, the conflict between the Akhbārīs/Akhbāriyya [*q.v.* in Suppl.] and the Uṣūlīs/Uṣūliyya [*q.v.*]. The eminent scholars of the period of the Būyids [see BUWAYHIDS] who formulated the Imāmī *uṣūl al-fiḳh* (al-Mufīd, d. 413/1022; al-Murtaḍā, d. 436/1044; Shaykh Ṭūsī, d. 460/1067) reject both *ḳiyās* and *idjtihād* (although al-Murtaḍā acknowledges a subordinate role for *idjtihād*: Brunschvig, 210; Arjomand (1984), 53). Even while employing its techniques, the Imāmī *ʿulamāʾ* continue to reject *idjtihād*. At the same time, Shaykh Ṭūsī describes the traditionists as literalists (*aṣḥāb al-djumal*, cf. Kazemi Moussavi (1985), 36). Akhbārīs and Uṣūlīs appear as opposing factions in the *Kitāb al-Naḳḍ*, an anti-Sunni polemical work written by the fervent Uṣūlī ʿAbd al-Djalīl al-Ḳazwīnī al-Rāzī (d. 565/1170; on this source, see Calmard (1971), Scarcia Amoretti (1981)). In the Ilkhānid period, al-Muḥaḳḳiḳ al-Ḥillī (d. 726/1325) admits that—although rejecting *ḳiyās*—the Imāmī *ʿulamāʾ* have practised *idjtihād*. His pupil Ibn al-Muṭahhar al-ʿAllāma al-Ḥillī (d. 726/1325) formulated the methods of Imāmī *idjtihād*. According to Muṭahharī (*Baḥthī*, 42), he was the first Imāmī jurist to use the term *mudjtahid* to describe one who derives religious precepts (*ḥukm-i sharʿī*) on the basis of authentic articles of the *sharīʿat*. According to other opinions, al-Mufīd is said to have been the first Imāmī *faḳīh* to practise *idjtihād*, al-Ṭūsī having given him a definitive formulation (J. M. Hussain, 150, quoting M. Ramyar, 88, 92).

Like *idjtihād*, *taḳlīd* is rejected by the first Imāmī theologians, notably al-Kulaynī (cf. Arjomand (1984), 139) and al-Mufīd (cf. McDermott, 257 ff.). For al-Murtaḍā, the disciple of al-Mufīd, the *taḳlīd* of an *ʿālim* is permitted (with reservations). He is followed three centuries later by Ibn al-Muṭahhar al-Ḥillī who—while no longer basing the competence of the *mudjtahid* on the entirety of the *sharīʿat*—draws a distinction between *idjtihād al-mukallafīn* and *idjtihād al-mudjtahidīn* or indeed between the *muftī* and the *mustaftī*, i.e. between the jurisconsult and the simple believer (Arjomand (1984), 139 f.; Kazemi Moussavi (1985), 37).

2. Basis and extent of the influence of the Imāmī *mudjtahids*. According to Imāmī tradition, the world cannot exist for a single moment without a *ḥudjdja* ("proof" or "guarantee" of God), this function being supplied, after the Prophet, by the Imāms. During the Minor Occultation (*ghaybat al-ṣughrā*, 260-329/874-941), the *fuḳahāʾ* were able to consult the Twelfth Imām through the intermediacy of his four *safīrs* or *wakīls*. On the instructions of the Imām, the fourth *wakīl* did not appoint a successor (Madelung, (1982), 163 ff.). During the Major Occultation (*ghaybat al-kubrā*, after 329/941), the Imāmī community therefore lived in a state of messianic expectation which compelled it to seek out solutions for its spiritual and temporal organisation. Unlike the Sunnīs, the Imāmī *fuḳahāʾ* generally denied the legitimacy of powers established *de facto* during the *ghayba* (the basis and the logic of this attitude have been questioned by Arjomand (1979) who criticises the interpretations of N.R. Keddie, A.K.S. Lambton, H. Algar etc.; cf. Calmard (1982), 255, Calder (1982 A), 3, n. 2).

In the acknowledged absence of an infallible guide or of a just sovereign, or of transmitters of traditions (*muḥaddithūn*), the Imāmī *fuḳahāʾ* became scholastic theologians (*mutakallimūn*) before extending their prerogatives in the capacity of *mudjtahidūn* (J. Hussain, 150). Their influence increased under the Būyids (who professed Shīʿism), with whom they felt able to collaborate without sacrificing their loyalty to their Imām (Kohlberg (1976 A), 532 f.). Numerous Imāmīs, including some *ʿulamāʾ*, collaborated with Sunnī authorities and occupied senior posts in the service of the ʿAbbāsids and the Saldjūḳs (Calmard (1971), 55 f.). The theologian Naṣīr al-Dīn Ṭūsī (d. 672/1274) and the Shīʿī vizier Ibn al-ʿAlḳamī promoted, in varying degrees, the accession to power of the Mongol Ilkhāns (Calmard (1975), 145 ff.). The Ilkhān Öljeytü/Uldjaytū (1304-17) showed favour to eminent Imāmī *ʿulamāʾ* such as Ibn al-Muṭahhar al-Ḥillī and his son Fakhr al-Muḥaḳḳiḳīn (d. 771/1369-70): *ibid.*, 150 ff.; Arjomand (1984), 57 f.).

Whether accepting or contesting the powers established *de facto*, the Imāmī *ʿulamāʾ* continued to seek, within the structural limits of the *sharīʿa*, a means of coming to terms with their existence. According to a theory elaborated under the Būyids, during the *ghayba* certain parts of the *sharīʿa* (such as *djihād* or *ḥudūd*, legal penalties) are inapplicable (this is the doctrine of the *sukūt*: cf. Calder (1982 A), 4, quoting the same (1979 A), ch. 3). Points of doctrine concerning especially *djihād* and the duties incumbent (such as *amr bi 'l-maʿrūf wa-nahy ʿan al-munkar*, ordering the good and forbidding the bad) are thoroughly discussed (Arjomand (1984), 61 ff., see also Kohlberg (1976 B)). But the Imāmī political ethic expounded especially by al-Murtaḍā (and adopted by his successors) recommends in judicial and administrative matters "a positive and ethically responsible involvement in the existing political order" (Arjomand (1984), 65; see also Madelung (1980)).

With the rise of Ṣūfism in the post-Ilkhānid period (14th-16th centuries), Shīʿī themes began to permeate the *ṭarīḳāt* and the thought of various messianic or millenarian politico-religious movements inspired by charismatic chieftains or miracle-workers who seized power (the Sarbadārs, the Mushaʿshaʿīs, the Ṣafawids, etc.). Various Ṣūfī movements threatened the existence of the existing established powers or compromised with them (Kubrāwiyya, Dhahabiyya, Nūrbakhshiyya, Niʿmatullāhiyya, Ḥurūfiyya, etc.). The case of the Shīʿī order of the Marʿashī Sayyids [*q.v.*] constitutes a separate example of politicisation of Ṣūfism from which Mahdism is absent (for a socio-historical study of these movements, see Calmard (1975), 154 ff; Arjomand (1984), 66 ff.). Although these socio-political changes were unconnected with the efforts of the *ʿulamāʾ* to formulate and practise the Imāmī doctrine, their advice was sometimes solicited by politico-religious chiefs, as in the case of the "Shīʿī republic" of the Sarbadārs which created a precedent regarding the functions which could henceforward be exercised by Imāmī *ʿulamāʾ* in a Shīʿī state.

It was in this context of Ṣūfism and extremism that there came about the rise of the Ṣafawiyya and its transformation in the course of the 15th century into a militant order exercising an increasingly extravagant messianic hold over the Turkoman dervish-g͟hāzis, the *ḳizilbas͟h* [*q.v.*]. The imposition of Imāmī S͟hīᶜism as the state religion by S͟hāh Ismāᶜīl (1501-24 [*q.v.*]) had the notable consequence of incorporating into the Ṣafawid state Persian dignitaries who were men of high religious or administrative rank and the owners of large properties (Aubin, 39). Since Ṣafawid "imperio-papism" was based simultaneously on the ethos of Iranian nationalism and on S͟hīᶜism, state policy led to the ruthless suppression of messianic and Ṣūfī tendencies both outside and inside the Ṣafawid movement and to the persecution of Sunnīs. With the appeal to the dogmatic principles of S͟hīᶜism, this situation favoured the establishment and the ascendancy of a hierocracy of Imāmī *ᶜulamāʾ* who, from the outset, under S͟hāh Ismāᶜīl, were subject to the hostility of Persian religious dignitaries (Glassen, 262; Arjomand (1984, 133). The decisive initiative for the establishment of an Imāmī hierocracy was taken by S͟hāh Ṭahmāsp (1524-76). A devout Imāmī, professing no messianic pretensions, he favoured the installation of Imāmī *ᶜulamāʾ*, "imported" from the Arab countries (Syria, mainly the D̲j̲abal ᶜĀmil, Arab ᶜIrāḳ and Baḥrayn). With their Persian students or colleagues recruited from the hostile camp of the Persian religious dignitaries, they ultimately constituted a "brotherhood" of religious specialists. The *farmān* through which S͟hayk͟h ᶜAlī al-Karakī al-ᶜĀmilī (d. 940/1534), the "Propagator of Religion" was awarded the titles of *Nāʾib* (deputy) of the Imām and of *K͟hātam al-mud̲j̲tahidīn* ("seal of the *mud̲j̲tahids*") could be considered both as the ratification of the establishment of the Imāmī hierocracy in Iran and as the definitive transition from extremism to Imāmism (Arjomand (1984), 129 ff., 133 f.).

The principles on which the authority of the Imāmī *ᶜulamāʾ* rests were redefined under the Ṣafawids. The combination of the concepts of *taḳlīd* and *id̲j̲tihād* is expressed in various works (*Zubdat al-bayān*, by Mullā Muḥammad Ardabīlī al-Muḳaddas, d. 983/1585; *Zubdat al-uṣūl*, by Bahāʾ al-Dīn ᶜĀmilī "S͟hayk͟h-i Bahāʾī", d. 1030/1621; *Maᶜālim al-uṣūl*, by Ḥasan b. Zayn al-Dīn, d. 1011/1602). Although the "Mud̲j̲tahid al-zamānī" al-Karakī fulminates against the prospect of imitating a dead *mud̲j̲tahid* (*taḳlīd al-mayyit*), the general competence of the *mud̲j̲tahids* in all areas of the *s͟harīᶜa* (*id̲j̲tihād muṭlaḳ*) is confirmed, sometimes with the intention of restricting its performance to one or a few jurists, as recommended by Mīr Dāmād [see AL-DĀMĀD], d. 1041/1631-2 (*ibid.*, 138 ff.).

The authority of the *mud̲j̲tahids* during the *g͟hayba* is also redefined around the concept of *niyāba ᶜāmma*, Pers. *niyābat-i ᶜāmma* ("deputed authority") of the Hidden Imām exercised, in principle, collectively (Madelung (1982), 166). The prerogatives attached to this concept vary according to the *mud̲j̲tahids*. While al-Karakī limits their applications, ᶜAlī b. Zayn al-Dīn al-ᶜĀmilī, called *al-S͟hahīd al-t͟hānī* (d. 765/1557), introduces a terminological innovation in describing the *faḳīh* as the *Nāʾib ᶜāmm* or *Ḥākim-i s͟harᶜī* of the Hidden Imām. Among the important implications of the *niyāba ᶜāmma* is the right given to the *mud̲j̲tahids* to collect and administer legal taxes (*zakāt*, *k͟hums*) which, with the management of mortmain property, enjoyed with other religious dignitaries, gives them financial autonomy (*ibid.*, 141 f.; Calder (1982 A), 4 f.; on the development of the doctrine of *niyāba ᶜāmma*, see Calder (1979 A), chs. 4-6; on *zakāt* and *k͟hums*, see idem, (1981), (1982 B); Sachedina (1980)). The authority of the *mud̲j̲tahids* also derives formally from various *ḥadīt͟hs*, including a declaration by the Twelfth Imām which describes the *ᶜulamāʾ* as the proof (*ḥud̲j̲d̲j̲a*) of the proof of God (i.e. of the Hidden Imām) for all the faithful. The *ᶜulamaʾ* are also said to be the heirs of the Prophet (Hairi (1977), 59).

Although formulation of the concept of deputed authority was not pursued systematically in the Ṣafawid period, some of the attributes of the Imāms were then transferred to the *mud̲j̲tahids* (Arjomand (1984), 143). But the Imāmī hierocracy lacked an independent "clerical" organisation and needed political power in order to consolidate its position in relation to the religious dignitaries, especially the *sayyids*, who also enjoyed a certain mystique and wielded politico-economic influence. Claiming to represent the Hidden Imām, but incapable of assuming the heritage of Ṣafawid extremism, it legitimised the Ṣafawid dynasty only as a purely temporal power (this was the prudent attitude of Muḥammad Bāḳir Mad̲j̲lisī [*q.v.*], d. 1111/1699; cf. *ibid.*, 184). But in spite of its efforts and the support of S͟hāh Ṭahmāsp, the hierocracy did not succeed in taking over the important religious and administrative function of the *ṣadr* (*ṣidārat*), which was increasingly. The mystique of the *nāʾib ᶜāmm* did not fuse with that attached to the most learned *mud̲j̲tahid* to constitute a hierocratic institution. These setbacks were due in part to the fact that in addition to its rivalries with the religious dignitaries, the new Imāmī hierocracy experienced internal dissensions due to the diversity of its geographical origins and the diverse attitudes of its *ᶜulamāʾ*, some of whom directed their attention to worldy matters, while others sought refuge in philosophy (*ibid.*, 132 f.). Despite the considerable influence enjoyed by al-Karakī in the 16th century, it was only at the end of the 17th century, with Muḥammad Bāḳir Mad̲j̲lisī, that there were established the bases of the future influence of the Imāmīᶜ *ᶜulāmāʾ*, with solid popular roots rendering them independent of the State (*ibid.*, 159 and below).

3. Ak͟hbārī resurgence and Uṣūlī reaction. After being dormant since the Sald̲j̲ūḳ period, the opposition of the Ak͟hbārīs towards the Uṣūlī school was renewed at the beginning of the 17th century, when Mullā Muḥammad Amīn b. Muḥammad S͟harīf Astarābādī (d. 1036/1626-7), encouraged by his teacher Mīrzā Muḥammad b. ᶜAlī Astarābādī (d. 1028/1619), formulated the Ak͟hbārī doctrine in his *K-al-Fawāʾid al-madaniyya*, the basis of the neo-Ak͟hbārism which flourished in Iran and in ᶜIrāḳ in the 17th and 18th centuries (on Ak͟hbārism, notably in this period, see E. Kohlberg, AḲBĀRĪYA, in *Encyclopaedia Iranica*, i, 716-18). Both teacher and pupil belonged to the clique of Persian religious dignitaries. Neo-Ak͟hbārism was embraced by two eminent representatives of gnostic S͟hīᶜism, the elder Mad̲j̲lisī, Muḥammad Taḳī (d. 1070/1660), and Mullā Muḥsin Fayḍ Kās͟hānī (d. *ca.* 1091/1680). The *s͟hayk͟h al-Islām* of Mas͟hhad, al-Ḥurr al-ᶜĀmilī (d. 1120/1708-9) was a fervent propagandist on its behalf. Rejecting the *id̲j̲tihād* and the *taḳlīd* of anyone who is not infallible (i.e. other than the Imām), Ak͟hbārism reflects the thought of religious dignitaries who prefer philosophy, hermeneutism and mysticism. By extolling reverence for the Imāms, it constituted, for the simple believers, an attractive element of S͟hīᶜism which gained in popularity. But with the anti-clerical policies of S͟hāh Ṣafī (1629-42) and of S͟hāh ᶜAbbās II (1642-66) and the resurgence of Ṣūfism in the mid-17th century, this tendency was to in part restored

before being rejected by the Imāmī hierocracy (*ibid.*, 146 ff. and below).

In fact, despite the advance of Akhbārism at the time of the decline and collapse of the Ṣafawids and throughout periods of disorder and instability (Afghan conquest and domination, 1722-9; reign of Nādir Shāh, 1736-47; Afshāri-Zand interregnum, until 1763), an Uṣūlī reaction emerged in the very bosom of the Madjlisī family, under Shāh Sulṭān Ḥusayn (1694-1722). In an effort to destroy popular devotion to Akhbārī-inspired Imāms, thus regaining it for himself, and to isolate the Ṣūfi and mystical trend of the élite, as a prelude to attacking it, Muḥammad Bāḳir Madjlisī adopted Uṣūlism. This reversal and this strategy (adopted by other *ᶜulamāʾ*), had decisive consequences for the consolidation of an Imāmī hierocracy (*ibid.*, 151 ff.; on the Madjlisī family and its descendants see Cole (1985), 6 ff.).

During the years 1722-63, neo-Akhbārism was dominant in ᶜIrāḳ, especially among converts from Uṣūlism coming from Baḥrayn or Iran. But it was not long before in Iran and even in ᶜIrāḳ, Imāmī *ᶜulamāʾ* were observed moving discreetly from Akhbārism to Uṣūlism. After a difficult period for the *ᶜulamāʾ*, involving a kind of Sunni-Shīᶜī ecumenism (1736-51) imposed by the religious policy of Nādir Shāh, the Uṣūlī resurgence came about under the Zands, when Karīm Khān moved his centre of government to Shīrāz (1763-79). However, Karīm Khān had little regard for the *ᶜulamāʾ* (Perry, 220 ff.) and the decisive struggles took place at the *ᶜatabāt* [*q.v.* in Suppl.], the Shīᶜī holy places of ᶜIrāḳ, where the Akhbārīs exploited alliances with wealthy financiers and even with heads of criminal gangs (the *lūṭīs* [*q.v.*]). The leading figure in this resurgence of Uṣūlism was Āḳā Sayyid Muḥammad Bāḳir Waḥīd al-Bihbahānī (d. 1208/1793-4 [*q.v.*]), considered the "renovator" (*mudjaddid*) of the 13th century of the Hidjra or as the founder (*muʾassis*) of Imāmī jurisprudence. He was linked both spiritually and genealogically to Muḥammad Bāḳir Madjlisī. Like other *ᶜulamāʾ* of ᶜIrāḳ, he enjoyed the support of the merchant-artisan class (through the intermediary of family alliances). Forcibly imposing a reformulation of the Uṣūlī doctrine and refuting Akhbārism (*K. al-Idjtihād wa 'l-akhbār*), he went so far as to proclaim *takfīr* (excommunication) against the Akhbārīs, sending armed men (his *mirghadabs*) to harry them, and persecuted the Niᶜmatullāhī Ṣūfī order (Cole (1983), 39 ff.; idem, (1985), 13 ff.). Bihbahānī and his followers succeeded in "converting" to Uṣūlism numerous Akhbārīs, some of whom migrated towards Iran (in part on account of political tensions between Iran and the governor ᶜUmar Pasha concerning Iranian pilgrims, instability and outbreaks of plague). Some *ᶜulamāʾ* of Northern India were then trained in the Uṣūlī doctrine, which they proceeded to canvass in India (Cole (1985), 21 ff.). The resurgence of Uṣūlism, which developed during the 1760s in the *ᶜatabāt*, was spread in Iran during the 1770s (*ibid*)., 26).

In the final phase of the conflict, the last important representative of the Akhbārī school, the *muḥaddith* Muḥammad b. ᶜAbd al-Nabī al-Nishābūrī al-Akhbārī, was discredited in the eyes of Fatḥ ᶜAlī Shāh Ḳādjār (1797-1834), who was at that time sympathetic towards Akhbārism, by the Shaykh Djaᶜfar Kāshif al-Ghiṭāʾ [*q.v.*] who declared him an infidel. In spite of the protests of the Shāh, he was expelled to ᶜIrāḳ and killed by the mob at al-Ḳāẓimayn in 1233/1818 (Algar (1969), 65 ff.). Although the situation of the Akhbārīs subsequently declined rapidly, some groups survived and aspects or concepts of their doctrinal positions remained, especially in Shaykhism (generally considered as being founded by Shaykh Aḥmad al-Aḥsāʾī [*q.v.*], d. 1241/1826; see also McEoin, art. AL-AḤSĀʾĪ in *Encyclopaedia Iranica*, i, 674-9). According to Shaykhism, each believer has, in principle, a vocation to *idjtihād*, the only authority to be followed or imitated (*taḳlīd*) being that of the Hidden Imām (Corbin, iv, 252 f.).

4. The institution of *mardjaᶜiyyat-i taḳlīd.* Under the Ḳādjārs, relationships of power with the Imāmī hierocracy were ambiguous. Since Nādir Shāh, the state had lost the "imperio-papal" character on which Ṣafawid power had been based. Despite the continuation of the "separation-collaboration", Fatḥ ᶜAlī Shāh sought and obtained confirmation of a certain degree of legitimisation on the part of eminent *ᶜulamāʾ* such as Mīrzā Abū 'l-Ḳāsim Ḳumī (d. 1233/1817-18), and Āḳā Sayyid Bihbahānī, grandson of Waḥīd Bihbahānī, who extolled Āḳā Muḥammad Khān and Fatḥ ᶜAlī Shāh as Ẓill Allāh ("Shadow of God") (Arjomand (1984), 221 ff.).

While continuing to express themselves through *fatwās* or *tafkīrs* against one or other hostile or rival tendency or person (Akhbārī, Shaykhī, Ṣūfī), the Imāmī *mudjtahids* were consulted by the temporal authority regarding important issues. Anxious to assure himself of their support, Mīrzā ᶜĪsā Ḳāʾim-Maḳām, vizier of the crown prince ᶜAbbās Mīrzā, consulted them in connection with the threat of invasion on the eve of the first Irano-Russian conflict (1810-13). Their attitudes and their *fatwās* which he collected in his *Risāla-yi djihādiyya* testify to their influence. The most significant initiative came from Shaykh Djaᶜfar Kāshif al-Ghiṭāʾ who—in the capacity of *niyābat-i ᶜāmma* of the *mudjtahids*—authorised Fatḥ ᶜAlī Shāh to conduct the *djihād* in the name of the Hidden Imām (on the parallels and divergencies between the *Risāla-yi djihādiyya* and the positions adopted by Shaykh Djaᶜfar, see Lambton (1970 A), 187 ff.; cf. also Kohlberg (1976 B), 82 ff., Calder (1982 A), 6, and Arjomand (1984), 224 f.). This was also a time of re-assessment of the notion of *niyābat-i khāṣṣa*. Relating, in principle, to the only representatives of the Imāms (initially to the four *sufarāʾ*), it became, with the endorsement of the *fuḳahāʾ*, applicable to the just sovereign. Although the system of taxation had little connection with *djihād*, the subject was discussed at this time, with the *mudjtahids* re-affirming their rights concerning *kharādj* and especially *khums* of which a half, considered to be *sahm-i Imām* ("the Imām's share"), should revert to them after the period of the *djihād* (Arjomand (1984), 229 f.).

The sharing of prerogatives between the *ᶜulamāʾ* and the temporal power is well defined by Djaᶜfar Kashfī in his *Tuḥfat al-mulūk*. His dualist theory of legitimate authority, recalled by eminent *mudjtahids* under Nāṣir al-Dīn Shah (1848-96), permitted the *ᶜulamāʾ* to acquire financial autonomy and judicial rights independent of the state (*ibid.*, 225 ff.). But it was especially the reformulation of concepts or doctrines regarding the powers and functions of the *mudjtahids* which led to a structuralisation of their leadership. Long discussions of *idjtihād* and *taḳlīd* culminated in establishing the competence of the *mudjtahids* in guiding the *muḳallids* ("imitators") in matters of *furūᶜ-i dīn* (i.e. the "branches" derived from "roots", *uṣūl*), the *taḳlīd* of a dead *mudjtahid* being definitively ruled out. The problem of the application of the *ḥudūd* during the *ghayba* continued to be thoroughly debated (*ibid.*, 231 ff.). The faithful

S͟hīᶜī "being unable to understand the code" must entrust himself to the instructions of a jurist (Scarcia (1958 A), 237). The need for recourse to authorised interpreters of the s͟harīᶜa, in the name of the *niyābat-i ᶜāmma*, is energetically reformulated by Mullā Aḥmad Narāḳī (d. 1245/1829-30) in *ᶜAwāʾid al-ayyām*, where he employs the terms *wilāyat-i ᶜāmma* and *wilāyat-i k͟hāṣṣa* to describe the delegation of devolved authority to the *mud͟jtahid*s in the name of the Hidden Imām (Kazemi Moussavi (1984); idem (1985), 40 ff.). Although making of the government of the jurisconsult (which he calls *salṭanat al-s͟harᶜiyya*) an independent subject of Imāmī *fiḳh*, he does not seem to have considered the latter obliged to supplant the existing power or to function in parallel with it (*ibid.*, 43 ff.).

A new and decisive step was taken, however, with the doctrinal formulation of the concept of *aᶜlamiyyat* according to which the Imāmī community must follow or imitate the precepts of the most learned jurisconsult. Its premisses may be traced back to the Īlk͟hānid period (it was then applied to the Imāms, but one celebrated *mud͟jtahid* then bore the title of "ᶜAllāma" al-Ḥillī). Under the Ṣafawids, the term *aᶜlam* is clearly applied to the Imāmī *mud͟jtahid*s (Ḥasan b. Zayn al-Dīn ᶜĀmilī, *Maᶜālim al-uṣūl*, quoted by Kazemi Moussavi, *ibid.*). When, after many cautious and hesitant attempts, the politico-religious context forced the Imāmī hierocracy to adopt a hierarchy, the rehabilitation of the concept of *aᶜlamiyyat* took on its full importance, since the title of *mard͟jaᶜ-i taḳlīd* was given to the most learned *mud͟jtahid.* In view of the obscurity surrounding the birth of the concept of *mard͟jaᶜiyyat*—the initial signs of which may be traced back to the Ṣafawid period—the greatest *mud͟jtahids* of the past have recently been reinstated, *a posteriori*, as prototype *mard͟jaᶜ-i taḳlīds* (on the lists, beginning with al-Kulaynī, d. 328/939, generally including sixty-three names and ending with Burūd͟jirdī, see Bagley (1970), 31; Hairi, 62 f.; Fischer, Appx. 2, 252 ff.). This tendency to reassess, in regard to a concept or a doctrine, the great figures of the past is also found in the tradition according to which the beginning of each century of the Hid͟jra should be marked by a renewer of the religion (cf. a provisional list of S͟hīᶜī *mud͟jaddid*s in Momen, 206, Table 7).

Having been in a process of gestation since the rebirth of Uṣūlism with Waḥīd Bihbahānī, the concept of *mard͟jaᶜiyyat* took on precise form under his successors. But neither Bihbahānī nor Aḥmad Narāḳī bore the title of *mard͟jaᶜ-i taḳlīd* (although Bihbahānī and his immediate successor Sayyid Muḥammad Mahdī Ṭabāṭabāʾī "Baḥr al-ᶜulūm", d. 1212/1797, are currently called *mard͟jaᶜ-i taḳlīd* in S͟hīᶜī biographical works: cf. McChesney, 168). For numerous *mud͟jtahids* and ordinary worshippers in Iran and ᶜIrāḳ, the first to have secured this title and this function was Ḥād͟jd͟jī S͟hayk͟h Muḥammad Ḥasan Nad͟jafī, d. 1266/1849-50, known by the name of Ṣāḥib al-D͟jawāhir (i.e. the author of *D͟jawāhir al-kalām*, "The jewels of scholarship", the most remarkable post-Ṣafawid work of *fiḳh* (Cole (1983), 40 f.; McEoin (1983), 157). When the Imāmī community was riven by the rise of Bābism, Muḥammad Ḥasan Ṣāḥib al-D͟jawāhir appointed S͟hayk͟h Murtaḍā Anṣārī (d. 1281/1864) as his successor. Having initially offered it to Saᶜīd al-ᶜUlamāʾ Māzandarānī who refused it, Anṣārī occupied this function for fourteen years and became the single *mard͟jaᶜ-i taḳlīd* (*mard͟jaᶜ al-taḳlīd al-muṭlaḳ*) for the entire S͟hīᶜī world. He encouraged Uṣūlī studies to a considerable extent and arranged direct payment of contributions (*sahm-i Imām*) to local centres of education. With him, the institution of *mard͟jaᶜiyyat* attained its zenith. He defined its functions in the manual of ritual practice entitled *Sirāt al-nad͟jāt* ("The Way of Salvation"). All the Imāmī S͟hīᶜī communities (Iran, ᶜIrāḳ, India, the Caucasus and the Ottoman Empire) sent contributions to him representing considerable sums of money, yet he led a pious, simple and ascetic life. His political attitudes were moderate and he adopted a conciliatory policy towards the Bābīs, who treated him with respect. Some of his works became manuals (*Farāʾiḍ al-uṣūl*, *al-Makāsib*), and many of his pupils became *mud͟jtahids* and even *mard͟jaᶜ-i taḳlīd* (see Algar (1969), 162 ff.; Hairi, art. ANṢĀRĪ, in Suppl.; idem (1977), 63; Cole (1983), 40 ff.; Murtaḍā al-Anṣārī, list of his works, 131-4). Besides the piety and the wisdom of al-Anṣārī, the emergence of a single *mud͟jtahid* to occupy the supreme function of *mard͟jaᶜiyyat* owes much to the disappearance of major Imāmī potentates as well as to the decline of Iṣfahān and the rise of Nad͟jaf as an Imāmī religious centre (art. ANṢĀRĪ, in Suppl.; Kazemi Moussavi (1985), 45 f.).

Henceforward, it was in the *ᶜatabāt*, especially at Nad͟jaf, but also at Sāmarrā (site of the "catacomb" of the Hidden Imām), places of residence and instructions of the major *marād͟jiᶜ-i taḳlīd*, that resistance was organised to Ḳād͟jar autocracy and foreign domination. Although not political at the outset, the institution of *mard͟jaᶜiyyat* became so, as a consequence of historical circumstances and the respective attitudes of each of the *mud͟jtahids*. Unlike his predecessor, Anṣārī issued no directives concerning his succession. But his definition of the institutional and ideological role of *mard͟jaᶜ-i taḳlīd aᶜlā* ("supreme model") offered opportunities for the exercise of political prerogatives of which his followers took advance, beginning with his immediate successor, Mīrzā Muḥammad Ḥasan S͟hīrāzī (d. 1312/1894), who assumed the responsibility of issuing the *fatwā* to revoke a concession on Iranian tobacco awarded to a British company (the Excise Affair, *fatwā* of December 1891; cf. Bibl. in Hairi (1977), 111, n. 8).

The essential characteristic of the institution of *mard͟jaᶜiyyat* in the 19th century is that the office was occupied successively by a single *mard͟jaᶜ-i taḳlīd*. After the death of Mīrzā S͟hīrāzī, a number of *mud͟jtahids*, equally qualified and unable to choose among themselves, were recognised as single *mard͟jaᶜ* only after the demise of their colleagues. This tendency towards selection by longevity—working to the disadvantage of numerous highly-qualified *mud͟jtahids*—was continued until the death of Burūd͟jirdī. Since the beginning of the institution, the list of *marād͟jiᶜ-i taḳlīd* who exercised the function in a sole capacity for a greater of shorter period of time until their death is summarised as follows:

1. Ḥād͟jd͟jī S͟hayk͟h Muḥammad Ḥasan Iṣfahānī Nad͟jafī, "Ṣāḥib al-D͟jawāhir" (d. at Nad͟jaf 1266/1850).
2. S͟hayk͟h Murtaḍā Anṣārī (d. at Nad͟jaf 1281/1864).
3. Mīrzā Ḥasan S͟hīrāzī, *mud͟jaddid* of the 14th century of the Hid͟jra (d. at Sāmarrā 1312/1895).
4. Mullā Muḥammad Kāẓim K͟hurāsānī, "Āk͟hund K͟hurāsānī" (d. at Nad͟jaf, 1329/1911).
5. Ḥud͟jd͟jat al-Islām Sayyid Muḥammad Kāẓim Ṭabāṭabāʾī Yazdī (d. at Ḥuways͟h, near Nad͟jaf, 1337/1919).
6. Mīrzā Muḥammad Taḳī Ḥāʾirī S͟hīrāzī (d. at Karbalā, 1338/1920).
7. S͟hayk͟h Faḍl Allāh Iṣfahānī "S͟hayk͟h al-S͟harīᶜa" (died 1338/1920, surviving his predecessor by only four months).
8. Ḥād͟jd͟jī Sayyid Abu 'l-Ḥasan Mūsawī Isfahānī (d. at Kāẓimayn, 1365/1946).
9. Sayyid Āḳā Ḥusayn b. Muḥammad Ṭabāṭabāʾī

"Āyatullāh Ḳumī" (d. at Karbalā, 1366/1947, surviving his predecessor by only three months).
10. Āyatullāh al-ʿUẓmā Ḥādjdjī Āḳā Ḥusayn Burūdjirdī (d. at Ḳum, 1380/1961).

After the death of Mīrzā Shīrāzī, religious leadership was shared between eminent *mudjtahids* of Nadjaf: Mullā Muḥammad Kāẓim Fāḍil Sharabyānī (d. 1322/1904); Shaykh Muḥammad Ḥasan b. ʿAbd Allāh Mamaḳānī (d. 1323/1905); and Mīrzā Muḥammad Kāẓim Ākhund Khurasānī, who became sole *mardjaʿ* after the death of Ṭihrānī. A disciple of Mīrzā Shīrāzī, Khurasānī was a fervent supporter of the constitutional revolution of 1905/11. With the *mudjtahids* Ṭihrānī and Māzandarānī, he issued *fatwās*, manifestos and telegrams and took part in the deposition of Muḥammad ʿAlī Shāh (July 1909). He also campaigned against foreign influences and supported the Young Turk revolution (cf. Hairi, art. KHURĀSĀNĪ idem (1976) and (1977), 98 ff. and index; Momen, 246 f.). His successor, Sayyid Kāẓim Yazdī, abstained from political activity, refused to cooperate with the constitutionalist *ʿulamāʾ* and cultivated amicable relations with the British after their occupation of ʿIrāḳ (Hairi (1977), 96 ff., 117 ff. and index; Momen, 247). Mīrzā Muḥammad Taḳī Hāʾirī, resident at Karbalā, declared that he had no part in the constitutional revolution. He was a determined opponent of the British in ʿIrāḳ, against whom he decreed a *djihād* in collaboration with other *ʿulamāʾ* (Hairi (1977), 122 ff. and index).

With the revival of the centre of theological studies (*ḥawḍa-yi ʿilmiyya*) of Ḳum, at the initiative of Shaykh ʿAbd al-Karīm Yazdī Ḥāʾiri (d. 1937 [*q.v.* in Suppl.]), there was during the 1920s a period in which several high-ranking *mudjtahids* were considered as *mardjaʿ-i taḳlīd*. For Iran, the rôle was entrusted, at Ḳum, to Ḥāʾirī; for Nadjaf, to Shaykh ʿAbd Allāh Mamaḳānī (d. 1933), Shaykh Muḥammad Ḥusayn Nāʾīnī (d. 1936) and Shaykh Abu 'l-Ḥasan Iṣfahānī (d. 1946), who became sole *mardjaʿ* after the death of the others. On the death of Āyatullāh Ḳumī (1947), Āyatullāh Burūdjirdī [*q.v.* in Suppl.] was recognised as sole *mardjaʿ-i taḳlīd* (cf. below). Ḳum thus became the leading centre of Shīʿī studies, although many students, especially those from Arab countries and the Indian subcontinent, continued to frequent Nadjaf. Following the example of Yazdī Ḥāʾirī and other *mudjtahids*, Burūdjirdī pursued a passive rôle in political matters. He occasionally collaborated with temporal authorities, especially from 1953 to 1958, and supported the anti-Bahāʾī campaign of 1955. It was not until shortly before the end of his life (1960) that he declared his opposition to the agrarian reforms proposed by the Shāh (see Algar (1972) 242 ff.; Akhavi (1980), 24, 77 ff., 102). Despite his title of Āyatullāh al-ʿUẓmā (see below), and although his name has been mentioned as a *mudjaddid*, Burūdjirdī seems to have been acknowledged as the supreme *mardjaʿ* in an organic rather than a charismatic sense (Binder, 132, MacEoin (1983), 161 f.). He succeeded no more than other *mudjtahids* in structuring the religious leadership to resist the initiatives of the Pahlavī régime which favoured as his successor Āyatullāh Shaykh Muḥsin al-Ḥakīm (d. 1970), an Arab *mudjtahid* resident at Nadjaf (Algar (1972), 244).

In the reformist religious movements of the "Islamic societies" (cf. above), besides discussion of doctrinal issues (*idjtihād*, *taḳlīd*, religious taxes, etc.), the idea was expressed that the function of *mardjaʿiyyat* had become too heavy to be entrusted to a single *mudjtahid* and should be exercised by a "council for religious decrees" (*shūrā-yi fatwā*): M. Ṭāliḳānī, in *Baḥthī*, 201-13; M. Djazāʾirī, *ibid.*, 215-30. It was also proposed (by M. Muṭahharī) that, in accordance with the wishes of ʿAbd al-Karīm Yazdī Hāʾirī, each *mudjtahid* should be "imitated" in the field of his speciality (cf. Lambton (1964), 127; Akhavi, 122 ff.). But the application of the ideas of this movement, revived in part in the 1970s by various reformist trends, did not open the way to a harmonious restructuring of the religious leadership, which henceforward became progressively more influenced by politics.

On the death of Burūdjirdī, the disintegration of the institution of *mardjaʿiyyat* led to a dispersal of *mardjaʿ*s: at Ḳum, the Āyatullāhs Sharīʿatmādarī, Gulpāygānī and Marʿashī-Nadjafī; at Mashhad, Āyatullāh Mīlānī (d. 1975); at Tehran, Āyatullāh Aḥmad Khᵂānsārī (d. 1985); at Nadjaf, the Āyatullāhs Khūʾī, ʿAbd al-Hādī Shīrāzī (d. 1961), Kāshif al-Ghiṭāʾ and Muḥsin al-Ḥakīm. Other less important *mudjtahids* were also considered as *mardjaʿ* (Momen, 248, n. 2).

While Mashhad [*q.v.*] for some rivalled Ḳum in importance, the events of 1963 catapulted Āyatullāh Khumaynī into pre-eminence in the capacity of *mardjaʿ* (at Nadjaf, from 1965 onwards). With Mīlānī and Sharīʿatmādarī, he was regarded as heir to Burūdjirdī (Algar (1972), 245), at least in Iran, since some consensus on the *mardjaʿiyyat-i kull* of Muḥsin al-Ḥakīm seems to have been reached in about 1966 (Bagley (1970), 78, n. 7). In 1975 there were six *mardjaʿ*s of senior rank: Khūʾī and Khumaynī at Nadjaf; Gulpāygānī, Sharīʿatmādarī and Marʿashī-Nadjafī at Ḳum; Khᵂānsārī in Tehran (Mīlānī died at Mashhad in August 1975). But there are also numerous lines of *mardjaʿ-i taḳlīds* linked by matrimonial alliances to the most important branches (see Fischer (1980), 88 ff., Fig. 3. 1. ff.).

After the death of Burūdjirdī, the Imāmī *ʿulamāʾ*, together with the laity, were divided into various groups: radicals wishing to establish Islamic justice; social reformers; conservative heirs to the line of Burūdjirdī; collaborators with the Pahlavī régime (Akhavi, 199 ff.). The three first tendencies are to be found in the Islamic Republic of Iran (since February 1979), where rivalries have rent the religious leadership. The concept of *wilāyat-i faḳīh* reformulated by Āyatullāh Khumaynī could be considered as the logical conclusion to the development of Imāmī religious institutions since the Ṣafawids, absolute political power being regained and reverting *de facto* to the *mardjaʿ-i taḳlīd*, supporters of the idea of collective *mardjaʿiyyat* (including Āyatullāh Ṭāliḳānī, d. 1979) thus being defeated (Fragner, 98; see also the analysis of Calder (1982) regarding Khumaynī's position regarding Shīʿī jurisprudence; F. Rajaee (1983) on Khumaynī's attitude towards man, the state and international politics etc.; see also Rose (1983)). But this new situation has in fact led to another schism in the institution of *mardjaʿiyyat*; the most influential of the *marādjiʿ* before the Islamic revolution, Āyatullāh Sharīʿatmādarī, a man of moderate tendency who retained numerous supporters, especially among the people of Ādharbāydjan, his native region, was progressively isolated and then, accused of subversion, deposed from his position as Āyatullāh al-ʿUẓmā in April 1982 (Momen, 296, 320). Some pious Imāmīs follow the leader of the revolution in political matters and that of one or other of the *marādjiʿ* in religious practice (the one with the largest following now, in 1986, apparently being Āyatullāh Khūʾī who also enjoys a large following in the Arab world, India and Pakistan). It seems, however, that for the new generation of Imāmī *ʿulamāʾ*, the doctrine of *wilāyat-i faḳīh* has ultimately prevailed (Momen, 296 ff.). It is

in this context that there is taking place the muted struggle over succession to Āyatullāh/Imām Khumaynī, the Assembly of Experts (*madjlis-i khibrigān*, created at the end of 1982, a group of seventy-two experts chosen to appoint the future supreme *mardjaʿ*) having recently (October 1986) criticized the "heir-apparent", Āyatullāh Muntaẓirī; Ḥudjdjat al-Islām Rafsandjānī, President of Parliament, now appears to be a possible successor.

5. Qualifications, selection, functions, consultative rôle and titles of the *mardjaʿ-i taḳlīd*. Among the conditions necessary for assuming the position of *mardjaʿ-i taḳlīd*, six are judged indispensable: maturity (*bulūgh*), intelligence (*ʿaḳl*), faith (*īmān*), justice (*ʿadālat*), being of legitimate birth (*ṭahārat-i mawlid*) and of the male sex (*dhukūrat*; some women may, under exceptional circumstances, attain the level of *idjtihād*, but they cannot be *mardjaʿ-i taḳlīd*). Other conditions are sometimes required: literacy, possession of hearing and sight, and being free, i.e. not a slave (Algar (1969), 8 f., following Burūdjirdī, Sanglādjī). In addition to these preliminary conditions, the future *mardjaʿ* must be qualified to practice *idjtihād*, receive the *idjāza* from *ʿulamāʾ* of repute and demonstrate his knowledge through his teaching, his sermons, his discussions, his writings, etc. The *mardjaʿ* must be generally acknowledged as the most learned (*aʿlam*) person of his time. However, this title cannot be awarded to him through appointment, selection or election. His authority can only be confirmed by the universal recognition of the Imāmī community (Hairi (1977), 62; it seems however that there was at Ḳum a kind of "college of cardinals" deciding on the choice of the supreme *mardjaʿ*, the Āyatullāh al-ʿUẓmā; see Binder, 134).

The essential function of the *mardjaʿ-i taḳlīd*—also called *muḳallad*—is to guide the community of those who "imitate" his teaching and follow his precepts, in particular concerning the following: application of the rules of the *sharīʿa* (*furūʿ-i dīn*); judicial solutions or legal qualifications (*aḥkām*) in regard to the problems of contemporary life. Imitation or emulation of the *mardjaʿ* has no connection, in principle, with the *uṣūl-i dīn* which are derived from faith (*īmān*) and from inner conviction (*yaḳīn*). The *mudjtahid* established as *mardjaʿ* must pronounce judicial decisions (*fatwās*) and write one or more books to guide his *muḳallids* (*risāla-yi ʿamaliyya*, a kind of practical treatise; *tawḍīḥ al-masāʾil*, "explanation of problems" etc.).

For his part, the *muḳallid* has particular duties, especially as regards consultation of the *mardjʿ-i taḳlīd* to whom access is sometimes difficult. The rules of conduct in this respect are explained at length by Anṣārī who forbids *taḳlīd* of a dead *mudjtahid* and stresses the role of the most learned (*aʿlam*) *mudjtahid* in sanctioning worship and ritual. Every *muḳallid* is obliged to consult him, to follow or to "imitate" him, either directly, or in a case of obvious impossibility, through the intermediacy of an honest man who has himself witnessed to conduct of the *mardjaʿ*, or through consultation of a book of rules of behaviour written by the latter. In cases of doubt or contradiction, prudence (*iḥtiyāṭ*) is recommended (on these complicated rules for consultation of the *mardjaʿ*, see the analysis in the *Ṣirāt al-nadjāt* of Anṣārī, in Cole (1983), 42 ff.). These criteria represent only general principles, no specific process having been established for the choice of a *mardjaʿ* (cf. Algar (1969), 10).

With the development of the concept of *mardjaʿiyyat*, the economic power enjoyed by the *mudjtahids* has been concentrated in the hands of one man or of a small group of men. Besides the collection and distribution of *zakāt* and *khums*, the administration of *waḳf*/*awḳāf* (taken under state control by the Pahlavīs), the *mudjtahids* have economic and family ties with the merchant-artisan class of the *bāzār*. Imāmī *ʿulamāʾ* have also sometimes taken advantage of threats posed to political authority by movements such as the Ṣūfīs, Shaykhīs, Bābīs, etc. In fact, they have taken the initiative in countering or representing the doctrines and activities of groups seeking to find alternative solutions to the prolonged absence of the Hidden Imām (*wilāyat-i ṣūfī*, *shīʿa-yi kāmil*, *rukn-i rābiʿ* ("fourth pillar" of Shaykhism), *bāb*, etc.). Despite periods of tension or confrontation, *mudjtahids* and *marādjiʿ* claiming the *niyābat-i ʿāmma* have in varying degrees given a certain amount of support to the existing temporal power and have formulated a "variable approach" towards accommodation with an illegal régime established *de facto* (cf. Calder (1982), 6). However, remaining generally mistrustful of both spiritual and temporal powers, the *marādjiʿ* claimed for themselves an important role in the political life of Ḳādjār Iran (see especially Algar (1969)). Although abstaining from political activity, Anṣārī formulated the notion of *mardjaʿ-i taḳlīd-i aʿlā* which offers the potential for political utilisation (cf. Cole (1983), 46 and below). Some of his successors have strongly resisted foreign economic, cultural and political influences favoured by the international context and by the political choices of the Ḳādjārs. They nevertheless held extremely diverse opinions regarding the events of the constitutional revolution of 1905-11 (cf. Lambton (1970 B); Hairi (1976-7), (1977), 55 ff.; Arjomand (1981)). In fact, neither the supporters nor the opponents of the constitution have ever preached the establishment of a government directly controlled by the *mudjtahids*. It is quite clear that recent events in the Middle East (in particular the seizure of power by the religious in Iran (1979), the Iran-ʿIrāḳ war (since 1980) and the situation in Lebanon) have added to the difficulties of Shīʿī believers, increasingly preoccupied with political choices and economic problems.

Since the Ḳādjār period, the number of titles and functions, civil as well as religious, has increased considerably in Iran. This has given rise to abuses, especially as regards the title of Āyatullāh [*q.v.* in Suppl.], often used to denote a *mardjaʿ-i taḳlīd*. Although the distinctions remain somewhat fluid, current usage seems to describe a *mardjaʿ-i taḳlīd* by the epithet *Āyatullāh al-ʿUẓmā*, the term *Āyatullāh* alone being used to describe a *mudjtahid* and *Ḥudjdjat al-Islām* an aspiring *mudjtahid* (Momen, 205 f.). According to a recent decree of Khumaynī (September 1984), certain *ʿulamāʾ* who used to call themselves *Āyatullāh* are henceforward to bear the title of *Ḥudjdjat al-Islām* (Momen, 298 f.; the two titles having been used interchangeably until the creation of the *ḥawḍa-yi ʿilmiyya* of Ḳum in the 1920s: Djalāl Matīnī, 583 ff.). The question may be asked whether the replacement of the title of *Āyatullāh* by that of *Imām* to designate Khumaynī implies a change in the religious hierarchy (i.e. the creation of a title superior to that of *Āyatullāh al-ʿUẓmā*) or is simply an indication of political function (Momen, *ibid.*; on these problems of Shīʿī titles and their historical precedents, see Djalāl Matīnī; on the epithet *Imām* for Khumaynī, 603 f.).

(J. CALMARD)

MARD̲J̲ĀN (A.), coral. As a rule, red coral (*Corallium rubrum*) is used as a piece of jewelry; the black and white coral are also mentioned. The Persian term *bussad̲h̲*, often employed as a synonym, strictly speaking is the root of the coral "which grows as a stone in the sea in the same way as a tree on land" (al-Ḳazwīnī, *Cosmography*, i, 212,7), as well as the subsoil to which it is stuck.

With the pearl (*luʾluʾ* [*q.v.*]) and amber (*kahrubā* [*q.v.*]), the coral belongs to the organic products which were however, as in our time, mostly associated with the precious stones (*d̲j̲awāhir*), i.e. the minerals (*maʿādin*). The most detailed information on the coral is given by al-Tīfās̲h̲ī (see *Bibl.*), according to which the coral belongs to the mineral kingdom on the one hand because of its petrification (*taḥad̲j̲d̲j̲ur*), and to the vegetable one on the other because it grows on the bottom of the sea like a tree with branches and twigs. For the rest, descriptions are taken over from Antiquity. According to Theophrastus, the coral, which grows in the sea, is like a stone, red and round like a carrot (*De lapidibus*, 38). Pliny (*Historia naturalis*, xxxii, 11) repeats a number of older tales on the way coral is won. He describes it as a shrub which, on green stalks, sprouts green, soft berries which petrify, turn red the moment they come out of the water and look like cornelians. According to Aristotle, the coral is "a red-coloured stone which grows in the sea. If put in dung and putrescent material, it is often used [chemically]" (al-Ḳazwīnī, *Cosmography*, i, 238, 5-6). According to the so-called "Stone-book of Aristotle", the coral grows in the way branches do, and puts forth thin or thick twigs (*Kitāb al-Aḥd̲j̲ār*, see *Bibl.*).

As opposed to these relatively sober statements, Ps.-Apollonius of Tyana [see BALĪNŪS] enlarges and speculates upon the double vegetable-mineral nature of the coral: "It resembles the waterplants; it originates from fire and earth through the intermediary of water... its body is mineral-like because hot fire and dry earth combine in it with the help of water, but its spirit is vegetable-like because water acts as a mediator... when water, warmed by the sun, absorbs the dryness of the earth, it becomes able, in its turn, to attract the warmth and dryness of the sun, and so the coral grows gradually like a plant; in cold air however it petrifies... its vegetable character is shown by the fact that it grows and branches in proportion to the warmth which the water, mixed with dryness, causes to mount in it as nourishment", see *Sirr al-k̲h̲alīḳa wa-ṣanʿat al-ṭabīʿa. Buch über das Geheimnis der Schöpfung und die Darstellung der Natur*, ed. Ursula Weisser, Aleppo 1979, 348, 7-351,8; cf. also the shortened translation by the same author in *Das "Buch über das Geheimnis der Schöpfung" von Pseudo-Apollonius von Tyana*, Berlin-New York 1980, 120 f. (*Ars medica*, iii, 2). In al-Tīfās̲h̲ī, who in general quotes Apollonius extensively, the same passage is found on p. 178 f.

Coral is repeatedly said to be won at Marsā 'l-K̲h̲araz (= La Calle in Algeria); from a boat, a wooden cross, weighted with a stone, is sunk on a rope to the bottom of the sea; the boat sails up and down so that the corals get caught at the extremities of the cross, which then is weighed with a jerk. Then emerges a body with a brown crust, branched like a tree. On the markets, these corals are abraded until they shine and show the desired red colour, then are sold in great quantities at a low price. Spain, Sicily and "the Frankish" i.e. probably the European, coast are given as other finding places. From the western Mediterranean, still nowadays the main deposit area of coral, it is shipped to the Orient, the Yemen, India and East Asia. At the finding places, coral is put on the market in quantities of 10.5 Egyptian *raṭls*, costing, in Egypt and ʿIrāḳ, 1,020 *dirhams* if polished, 1,100 *dirhams* if unpolished. Otherwise, prices fluctuate greatly according to the market situation (al-Dimas̲h̲ḳī, *Kitāb al-Is̲h̲āra ilā maḥāsin al-tid̲j̲āra*, in Wiedemann, *Aufsätze*, i, 858).

In medicine, coral is used above all in collyria against eye diseases (full description by al-Tamīmī, see *Bibl.*). Dioscurides deals with it under κουράλιον, var. κοράλλιον (in the Arabic translation, *ḳūrāliyūn*), and mentions the λιθόδενδρον "stone-tree" as a synonym because of the above-mentioned vegetable-mineral double nature of the coral. It is astringent and cooling, reduces proliferations, is effective against haemorrhage, softens the spleen and is a proved remedy against blockage of the urinary tracts. The curative property of the branches and roots is heightened if they are crushed, put in a clay jar, burned overnight in an oven and then baked. Mixed with tooth-powder, pounded coral cleanses and whitens the teeth, purifies the interstices between them, strengthens the gums and removes cavities in the roots. Until today, pulverised coral serves in the Orient as an anti-epilepticum and as a remedy against dysentery.

MARDJUMAK AḤMAD [see merdjümek, aḥmed b. ilyās].

MAREA [see māryā].

MARGHELĀN [see marghīnān].

MARGHĪNĀN, later form Marghelān, a town of Farghāna [*q.v.*] in Central Asia, situated to the south of the Sīr Daryā [*q.v.*] or Jaxartes, on a small river now called the Margelan Say.

It was a place of modest importance in the first Islamic centuries as one of the main towns, with *inter alia* Andidjān [*q.v.*], of the district of Farghāna known as Lower Nasyā; according to al-Muḳaddasī, 272 (see also Le Strange, *Lands*, 479; Ibn Ḥawḳal², 513-14, tr. 491; al-Samʿānī, *Ansāb*, facs. ed. f. 522a), it had a Friday mosque and markets. Coins were first minted there under the Sāmānids. Then under the Ḳarakh-ānids [see ilek-khāns], coins were occasionally minted by members of the eastern branch of the dynasty, e.g. at Marghīnān and the neighbouring towns of Akhsikath and Tūnkath by the son of Yūsuf Ḳadīr Khān, Maḥmūd Ṭoghrīl Ḳara Khān (451-67/1059-75) and then by the latter's son ʿUmar Ṭoghrīl Tigin (467/1074-5), see G. C. Miles, in *Camb. hist. of Iran*, v, 374, 376; E. von Zambaur, *Die Münzprägungen des Islams zeitlich und örtlich geordnet*, i, Wiesbaden 1968, 233. It was in the later Ḳarakhānid or Ḳara Khiṭay [*q.v.*] period that the famous Ḥanafī jurist Burhān al-Dīn al-Marghīnānī [see next article] was born.

Marghīnān appears on a Chinese map of the 14th century as Ma-rh-i-nang (Bretschneider, *Mediaeval researches*, ii, 54). Under the Mongols, Tīmūrids and Özbegs it continued to play a certain role, e.g. in the fighting of rival contenders for power amongst the Tīmūrids' epigoni in the opening years of the 10th/16th century, recorded in Mīrzā Ḥaydar Dughlāt's *Taʾrīkh-i Rashīdī*, see tr. N. Elias and E. D. Ross, London 1895, index. Bābur gives a description of Marghīnān as it was at this time in the *Bābur-nāme*, tr. Beveridge, 6-7. The town was famed for its fruits, including a special variety of pomegranates; the population was mainly of Sarts, i.e. sedentary Tādjīks, who were rough and turbulent. It was probably under the Özbeg Turks, who replaced these Sarts, that the form Marghīlān/Marghelān appeared, giving the Russian form Margelan.

It subsequently came within the khānate of Khoḳand [*q.v.*], and just prior to the Russian occupation was already a centre for textile production, including silk and cotton; the American traveller E. Schuyler described it in 1873 as an unfortified place, with a population of *ca.* 30,000 (*Turkistan. Notes of a journey in Russian Turkistan, Khokand, Bukhara, and Kuldja*, London 1876, ii, 49-50). When General Skobelev marched into the region, Marghīnān was occupied without resistance (8/20 September 1875). A settlement, called New Margelan, was founded two years later as the capital of the *oblast* of Fergana in the Governor-Generalship of Turkestan, some 7 miles/12 km. south of Old Marghīnān, and the new town was renamed Skoblev from 1907 till 1924. When the Bolsheviks began to impose their rule in Russian Central Asia, Margelan became a centre of Basmači [*q.v.*] resistance from January 1918 till 1922 (see G. R. Wheeler, *The modern history of Soviet Central Asia*, London 1964, 108 ff.). Old Margelan is still a place of significance, with nearly 48,000 inhabitants, but has been outstripped in growth by New Margelan, now called Fergana, the administrative centre of the Fergana *oblast* of the Uzbek S.S.R., which already in 1951 had a population of *ca.* 50,000.

comm. by al-Ḳūhistānī (d. 950/1543), *Djāmiʿ al-rumūz*

celebrated *Hidāya*. He acquired his knowledge on his travels, then still the usual way of studying in Islam. His principal teachers were Nadjm al-Dīn Abū Ḥafṣ ʿUmar b. Muḥammad b. Aḥmad al-Nasafī (d. 537/1142-3), al-Ṣadr al-Shahīd Ḥusām al-Dīn ʿUmar b. ʿAbd al-ʿAzīz b. ʿUmar b. Māza (d. 536/1141-2) and Abū ʿAmr ʿUthmān b. ʿAlī al-Baykandī (d. 552/1157), a pupil of al-Sarakhsī. He studied al-Tirmidhī's work on tradition under Ḍiyāʾ al-Dīn Abū Muḥammad Ṣāʿid b. Asʿad with the *isnād* given in al-Ḳurashī, i, 259, no. 679, and also with al-Ḥasān b. ʿAlī al-Marghīnānī (al-Ḳurashī, i, 198, no. 487). He himself, as was often done at this time, wrote a record of his studies, but it does not appear to have survived. He far surpassed his teachers and won recognition in his native town also, where he died in 593/1197. Of his works, the following are known, some surviving in manuscript and others only known from literary references: 1. *Nashr al-madhhab* (Ḳur., Lak., in Ḥādjdjī Khalīfa, no. 13,790, probably wrongly, *al-Madhāhib*); 2. *K. Manāsik al-ḥadjdj* (Ḳur., Lak., H. Kh., no. 12,943); 3. *K. fi 'l-Farāʾiḍ* (Ḳur., Lak.), also called *Farāʾiḍ al-ʿUthmānī* (Ḥ. Kh., no. 8,989); 4. two collections of *fatwās*: *K. al-Tadjnīs wa 'l-mazīd* (Ḳutl., Lak., H. Kh., no. 2,467; mss. in Brockelmann) and 5. *Mukhtārāt al-nawāzil* (Lak.; in Ḳutl., called *K. Mukhtār Madjmūʿ al-nawāzil*, and in Ḥ. Kh., no. 11586, called *Mukhtār al-fatāwā*; mss. in Brockelmann); 6. *Mazīd fī furūʿ al-Ḥanafiyya* (Ḥ Kh., no. 11,838; identical with no. 4?); 7. a commentary on al-Shaybānī's *al-Djāmiʿ al-kabir* (Ḥ. Kh., ii, 567); 8. his principal work is the legal compendium, *K. Bidāyat al-mubtadī* (mss. in Brockelmann), based on al-Ḳudūrī's *Mukhtaṣar* and al-Shaybānī's *al-Djāmiʿ al-ṣaghīr*. On this work, he himself wrote a large commentary in 8 volumes, the *Kifāyat al-muntahā*. But before he had completed it, he thought it was much too diffuse and decided to write a second commentary, the celebrated *Hidāya*, which later writers repeatedly edited and annotated. The most important commentaries and synopses are given in the table below.

For the manuscripts and printed texts of these commentaries and synopses and of many supercommentaries and glosses, see Brockelmann, II², 466-9, S I, 644-9; a printed edition of the *Hidāya* appeared in 4 vols., Cairo 1326/1908.

Bibliography: al-Ḳurashī, *al-Djawāhir al-muḍīʾa*, Ḥaydarābād 1332, i, 383, no. 1058: ʿAbd al-Ḥayy al-Laknawī, *al-Fawāʾid al-bahiyya*, Cairo 1324, 141 ff. (synopsis of the *Ṭabaḳāt* of Kafawī); Ibn Ḳutlūbughā, *Tādj al-tarādjim*, ed. Flügel, Leipzig 1862, no. 124; Brockelmann, *loc. cit.*, and the literature there given.

His sons and pupils were:

2. ʿImād al-Dīn al-Farghānī; cf. al-Laknawī, 146.

3. ʿUmar Niẓām al-Dīn al-Farghānī. Two works by him are recorded: 1. *Fawāʾid* (Ḥ. Kh., no. 9305); 2. *Djawāhir al-fiḳh*, which he compiled from the *Mukhtaṣar* of al-Ṭaḥawī and other works (Ḥ. Kh., no, 4,291; mss. in Brockelmann, S I, 649; cf. al-Ḳurashī, i, 394; al-Laknawī, 149).

4. Muḥammad Abu 'l-Fatḥ Djalāl al-Dīn al-Farghānī; cf. Ḳutl., 137 and al-Laknawī, 182; in al-Ḳurashī, ii, 99, apparently identical with no. 2.

5. A son of no. 2 and grandson of no. 1: Abu 'l-Fatḥ Zayn al-Dīn ʿAbd al-Raḥīm b. Abī Bakr ʿImād al-Dīn b. ʿAlī Burhān al-Dīn b. Abī Bakr b. ʿAbd al-Djalīl al-Farghānī al-Marghīnānī. He wrote the work on legal procedure in civil cases entitled *al-Fuṣūl al-ʿimādiyya*, which he completed in Shaʿbān 651/October 1253 in Samarḳand. Cf. Ḥ. Kh., no. 9,094; Lak., 93; Brockelmann, I², 475-6, S I 656, where the mss. are given.

II. Another family of Ḥanafī lawyers goes back to ʿAbd al-ʿAzīz b. ʿAbd al-Razzāḳ b. Naṣr b. Djaʿfar b. Sulaymān al-Marghīnānī, who died in 477/1084-5 in Marghīnān at the age of 68. Of his six sons who attained fame as *muftīs*, we may mention Abu 'l-Ḥasan Ẓahīr al-Dīn ʿAlī (d. 506/1112-13). His son and pupil was Ẓahīr al-Dīn al-Ḥasan b. ʿAlī Abu 'l-Maḥāsin. Four works by him are recorded: *al-Aḳdiya, al-Fatāwa, al-Fawāʾid* and *al-Shurūṭ*, of which only the last survives in manuscript. He was the teacher of the famous Fakhr al-Dīn Ḳādīkhān (d. 592/1196) and of Burhān al-Dīn al-Marghīnānī [*q.v.*].

Bibliography: Samʿānī, *K. al-Ansāb*, fol. 522a; Ḳurashī, nos. 487, 850, 1010; Laknawī, 62, 97, 121; Flügel, *Classen der hanaf. Rechtsgelehrten*, Leipzig 1860, 309; Brockelmann, I², 471, S I, 651.

(W. Heffening)

MARḤALA (a.), pl. *marāḥil*, in mediaeval Islamic usage, a stage of travel, normally the distance which a traveller can cover in one day; it was, there-

fore, obviously a variable measurement of length, dependent on the ease or difficulty of the terrain to be crossed. The classical Arabic geographers frequently use the term. Al-Mukaddasī [*q.v.*] in one place (206) gives as his norm 6 to 7 *farsakhs* or parasangs (the *farsakh* [*q.v.*] being roughly 6 km.), and has an ingenious orthographical notation for *marāhil* of less than 6 or more than 7 *farsakhs* (cf. A. Miquel, *La géographie humaine du monde musulman jusqu'au milieu du 11e siècle*, Paris-The Hague 1967-80, i, 328 n. 1). But elsewhere (64 n. *c*), his *marhala* works out at an average of 8.6 *farsakhs* = 50 km. (cf. Miquel, *Ahsan at-taqāsīm* ... (*La meilleure répartition* ...), Damascus 1963, 139 n. 6).

Bibliography: Given in the article. (Ed.)

MĀRIB, Ma'rib (*mryb* or *mrb* in the ancient South Arabian inscriptions), in classical antiquity, capital of the Sabaean realm in South-West Arabia, now the chef-lieu of the *muhāfaza* of the same name in the Yemeni Arab Republic, lying some 135 km. to the east of Ṣanʿā'. At the last census in 1975, the *muhāfaza* of Mārib counted 70,000 inhabitants, and the *kadā'* of Mārib—with a population density of 2.4 inhabitants per km.^{2}—13,000 inhabitants, consisting of about 10,000 residents, 2,000 Bedouins and 1,000 refugees. The *ʿuzla* of Mārib counted 1,900 residents, and the place Mārib itself only 292 inhabitants, of whom 270 were men and 22 women, in 48 houses.

The ancient town of Mārib lies in a plain which rises 1,160-1,200 m. above sea level, and which forms the dry delta of the great Adhana wadi (now pronounced Dhana). The latter drains an extensive area of over 10,000 km.^{2} in the north-eastern highlands of the Yemen which has an abundant rainfall. Since the Mārib region lies at the fringe of the desert in an arid zone which has an annual rainfall of less than 100 mm., agriculture is only possible by way of irrigation through flooding. The Adhana wadi carries water twice a year, namely for some two weeks in spring and some six weeks in late summer. Before reaching the oasis of Mārib, this wadi forces its way through a narrow passage between the Balak mountains. By constructing a dam, extensive irrigation became possible and the deposition of fertile clay easier, so that conditions for a lush vegetation were created. The Kur'ānic statement in *Sūrat Saba'* about a "good land" (*baldatun tayyibatun*: XXXIV,15) is rightly applied to Mārib and its surroundings (al-Hamdānī, *Iklīl*, viii, 57,1). The land of Saba' around Mārib is said to have been one of the most fertile and best irrigated regions of the Yemen (al-Masʿūdī, *Murūdj*, iii, 366, 9-367,2 = § 1252), with irrigation creating the possibility of three sowings per year (Yākūt, *Muʿdjam*, iv, 383,10). The actual place of the same name stands inside the ancient urban area on a great hill of ruins which is increased by the débris of successive cultures. It lies at 15° 26′ N. and 45° 16′ E., about as far from the Red Sea as from the Gulf of ʿAdan. By its favourable position in an oasis between the highland on the one side and the desert on the other, Mārib was predestined to be the capital of the Sabaean realm, the core of which was formed by the urban district of Saba' with Mārib as its centre. Besides, Mārib was one of the most important halting-places on the ancient caravan-route which linked the regions producing incense with the Mediterranean Sea and which, along a chain of water-places, skirted the spurs of the wadis on the eastern slope of the range of hills between the mountains and the sandy plain of the desert. Arriving from Shabwa in Hadramawt or Timnaʿ in Katabān respectively, two different routes of the incense-road led on from Mārib, one north-westward through the Djawf, the other first northward, to unite again before Nadjrān [*q.v.*], the next important destination on the route. Information about the course of these routes and their halting-places can in many cases be gained from later Arabic itineraries, because the Islamic pilgrim roads often followed the ancient trade-routes.

In antiquity, Mārib was a large, walled town with an area of about 110 hectares/275 acres. According to Pliny (*Naturalis historia*, vi, 32, 160), it is said to have had a circumference of six miles. From the shape of its ruins, still perceptible in our days, the town formed an irregular quadrangle, with a maximum extension of 1,430 m. in length and 1,070 m. in breadth. The remains of the ancient town, such as blocks of stone from the citywall and other constructions as well as fragments of columns, have disappeared almost completely in the last decades through unauthorised diggings. Consequently, since no scientific archaeological excavations have been carried out, for the description of ancient Mārib we still depend upon the information of the European travellers who, in the 19th century, succeeded in penetrating as far as Mārib under adventurous and dangerous circumstances. These were the two Frenchmen Th.J. Arnaud (1843) and J. Halévy (1870), and the Austrian E. Glaser on his third journey to South Arabia (1888). It is to the latter that we owe the most detailed, accurate and valuable observations.

More recent investigations in the Mārib oasis, carried out by the German Archaeological Institute in Ṣanʿā', have led to the conclusion that the irrigation sediments in places reach as high as 30 m. At a rate of sedimentation of 1.1 cm. per year, this height would lead to an irrigation period of *ca.* 2,700 years, i.e., if irrigation ended around the end of the 6th century A.D. or the first part of the 7th century, its beginning would reach back as far as the later period of the third millennium B.C. As for inscriptions, Mārib is mentioned in one of the earliest Sabaean texts which names a ruler, namely in Gl 1719 + 1717 + 1718 = MAFRAY-al-Balak al-Djanūbī 1, a rock-inscription in which one of the governors (*'kyn*) of Mārib (*mryb*), the governor (*'kyn*) of Yadaʿ 'il Yanūf, dedicates some stone-hewn basins to a deity. H. von Wissmann, whose investigations into the chronology of ancient Sabaean texts is largely utilised in the following, dates this text to around 755 B.C.; its ductus belongs to the oldest paleographic stage of ancient South Arabian script. But already before this period, Mārib may well have become the capital of the Sabaean realm and the centre of South Arabia. The earliest Sabaean inscription bearing directly upon the town of Mārib is probably the three-line boustrophedon inscription (Ga 46), published by G. Garbini in *Oriens Antiquus*, xii (1973), 143. Here Yithaʿ'amar Bayyin, son of Sumhuʿalī, relates that he has walled in *mryb hwkw*. The Mukarrib of Saba' named here is most probably to be dated to around 715 B.C., while Hawkāwu, which figures after the name of the town of Mārib, is likely to indicate a part of the town or a section of its fortifications.

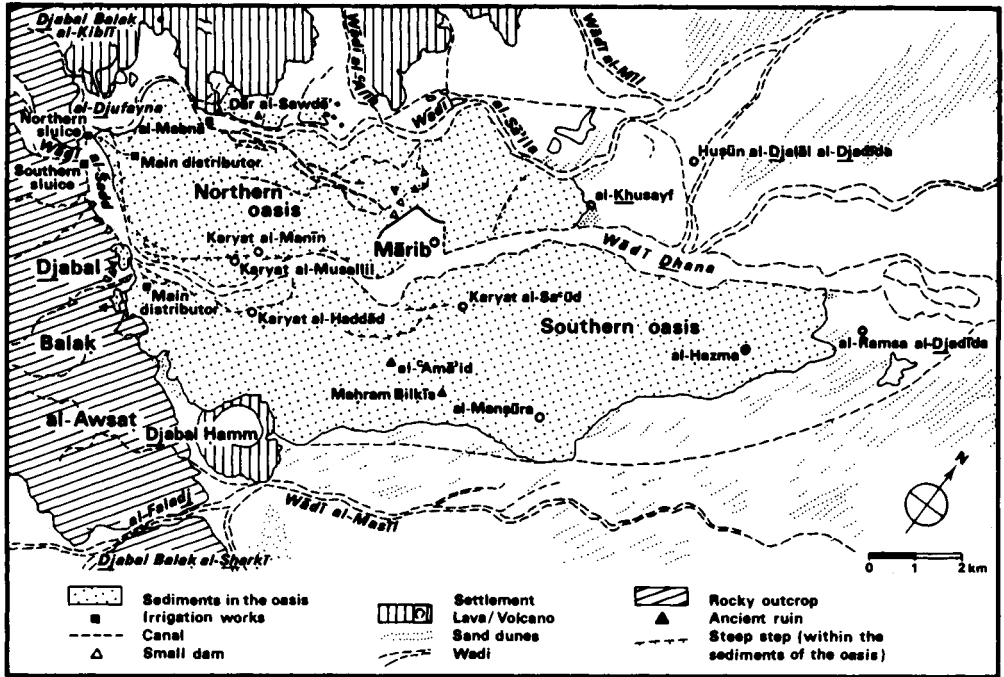
Rock-inscriptions dating from the same period or even earlier, and likewise originating from the Mārib region, mention the oasis area of the town. These inscriptions, containing probably the oldest Sabaean texts, inform us in ever recurring formulaic phrases that, during the priesthood of their founder, the god ʿAthtar drenched Saba' with rain in high summer and spring. Occasionally the word "Gaww" is added to Saba', or the variant "Adhana from Yahwir to


Fig. 2. The Mārib oases: physical geography.

Ḥimārum". Gaww indicates the lowland, i.e. the lower course of the wadi A<u>dh</u>ana, while the expression "A<u>dh</u>ana from Yahwir to Ḥimārum" probably also describes the area of the Mārib oasis. The name Sabaʾ, emerging here as the name of the region in which Mārib was situated, is originally the name of a tribe which in the inscriptions is more than once named together with Mārib. So we find e.g. "the tribe of Sabaʾ, the lords of the town of Mārib and its valleys" (*<u>sh</u>ʿbn/sbʾ/ʾbʿl/hgrn/mrb/wʾsrrhw*: RES 3910, 2), or "the Sabaeans, the inhabitants of the town of Mārib" (*ʾsbʾn/hwrw/hgrn/mryb*: Ga 9,3-4 with a reading corrected after F. Bron, in *AION*, xli [1981], 163). Still in Arabic tradition, Mārib is indicated as Maʾrib Sabaʾ (e.g. al-Hamdānī, *Ṣifa*, 26, 22) i.e. the Mārib which lies in Sabaʾ. After Sabaʾ, as a byname of ʿAbd <u>Sh</u>ams, had been personified as the alleged ancestor of the Sabaeans, and had been inserted into a pedigree by Arab genealogists, Mārib could thus become the town of Sabaʾ, that is to say of Sabaʾ b. Ya<u>shdj</u>ub b. Yaʿrub b. Ḳaḥṭān, who allegedly founded it or after whom it also occasionally may have been named (see e.g. Yāḳūt, *Mu<u>sh</u>tarik*, ed. F. Wüstenfeld, 239, 17-8; Ibn Saʿīd al-Ma<u>gh</u>ribī, *Na<u>sh</u>wat al-ṭarab*, 87, 1-2; Ibn al-Mu<u>dj</u>āwir, *Taʾrī<u>kh</u> al-mustabṣir*, 199, 1-2).

Line 4 of the fragmentary inscription RES 3943 relates that the ruler constructed both gates of Mārib and surrounded the town with towers, that is bastions of limestone (*blḳ*). The ruler, whose name is not retained in the text, may be Yi<u>th</u>aʿʾamar Bayyin, son of Sumhuʿalī Yanūf, whose reign can be fixed around 510 B.C. When the Sabaean realm reached the zenith of its power and founded a colony in Abyssinia, there were among the colonists also emigrants from Mārib, as is shown by the indications of their origin *<u>dh</u>-mryb*, found in Sabaean inscriptions in Yeha and Melazo.

By its geographical position at the eastern side of the mountains, Mārib was protected only slightly by nature: to the south, plains stretched out as far as Timnaʿ, the capital of Ḳatabān, to the east as far as <u>Sh</u>abwa, the capital of Ḥaḍramawt, and to the north as far as the towns of the Minaean realm. With the rise and strengthening of these other ancient South Arabian realms, fortification of Mārib became an urgent necessity. The town was not only the capital, but had also become the eastern fortress of the land-locked Sabaean realm: its frontier with Ḳatabān was only some 25 km. south of Mārib, and that with the Minaeans only some 40 km. to the north. The improvement of the traffic connections with the Yemeni highlands and their maintenance became all the more urgent through the danger threatening from the south. Inscription CIH 955 + 418, dating from the period of Sumhuʿalī Yanūf around 390 B.C., mentions the construction of a road from Mārib to Ṣirwāḥ, the second important town of the Sabaean realm, to which refuge could be taken in case of necessity. "The town which is revered" (*hgrn/thrgb*) in CIH 375,2, very probably also indicates Mārib. From this inscription, dealing with the construction of the Awām temple, we learn that an attack from Ḳatabān against Sabaʾ could be repelled and that its founder brought peace to Mārib. CIH 37, an inscription of the vassal of Sumʿay in the Yemeni highlands drawn up under king Karibʾil Watar at the beginning of the 3rd century B.C., speaks about the Sabaean overlords as kings of Mārib (*ʾmlk/mryb*). The next information about the construction of a wall of Mārib cannot be fitted in accurately, since only the name of the king's father, Yi<u>th</u>aʿʾamar Watar, has been preserved (RES 4452, CIH 626, Gl 1110). The latter, however, cannot be identified with either of the other rulers of this name. On palaeographic grounds, the three frag-

ments belonging to this text can be dated to the middle of the 2nd century B.C. The kings of Sabaʾ repaired the walls of their capital, above all at the time in which danger from the outside was threatening. At that time, this may still have been the encirclement by Ḳatabān in the south and Maʿīn in the north, which ended only when Sabaʾ conquered the Minaean realm in the last quarter of the 2nd century B.C. A monumental inscription, occurring in at least nine homonymous versions and compiled by H. von Wissmann from more than fifty fragments (RES 2669, Fa 91 + 92, Gl 1103 and many others), reads as follows: "Yadaʿ ʾil Watar, king of Sabaʾ, son of Sumhuʿalī Yanūf, walled Mārib (*mryb*) in at the order and promise of ʿAṯhtar and Hawbas and Almaḳah". Unfortunately, the name of this ruler is not known from other inscriptions either, although von Wissmann plausibly dated him to around 30 B.C.

Shortly after the latter date, in 25-24 B.C., a Roman army under Aelius Gallus, the proconsul of Egypt, invaded South Arabia, escorted by Nabataeans, and reached, as Strabo relates, the gates of the Sabaean capital Mārib. Although assaulted during a period of six days, Mārib was able to resist, for the Romans were forced to withdraw because of scarcity of water and disease among their troops. Pliny is certainly not correct in counting Mārib among the destroyed cities. While besieging Mārib, the Romans probably laid waste the neighbourhood of the town and destroyed the irrigation works of the oasis. After their retreat, the most urgent task of the inhabitants of Mārib may well have been the reconstruction of the dam, the sluices and the water-distributors. Numerous fragments of Yadaʿ ʾil Watar's inscription about the construction of the wall were found to have been used again as building material near the northern sluice and its distributor installations. From this, it may be concluded that ashlars were removed from the city-wall, probably destroyed for the greater part, in order to set up the irrigation works anew and to revitalise the oasis of Mārib. Is is not known at what time the city-wall was reconstructed, because no inscriptions about the construction of the wall are known from a later period. At the time of E. Glaser's sojourn in Mārib, the ancient city-wall, only one metre thick and probably provided with eight gates, was still preserved almost entirely. Air photographs of recent years show on the western and northern side only a few ruins of the ancient city-wall with its bastions.

During the decades after the Roman campaign against South Arabia, a period of decline set in for Mārib. The traditional dynasty of the kings of Sabaʾ in Mārib was pressed hard by rulers of four other dynasties rising in the Yemeni highland. All of them assumed also the title of king of Sabaʾ and controlled Mārib alternately. Sabaʾ and Ḥimyar, which had grown strong, were hostile to each other, each claiming the realm of the other. Henceforth, the kings of both states bore the title "King of Sabaʾ and D̲h̲ū Raydān", the latter being the royal castle in the Ḥimyarite capital of Ẓafār. In the same period, Bedouins from the desert steppes also pressed forward from the north and the east into the region of Mārib, and were admitted into the army as contingents. In an inscription, the Bedouins of Mārib (*ʾʿrb/mrb*: CIH 353, 10) are explicitly mentioned among the troops participating in a campaign. But even after South Arabia, towards the end of the 3rd century A.D., had come almost entirely under the domination of the Ḥimyar, and the highlands had become the centre of the united Sabaeo-Ḥimyarite realm, Mārib still retained a certain importance as the site of the central sanctuary of the realm. The fact that Mārib and its inhabitants are mentioned even later on in Sabaean inscriptions leads to the conclusion that the town still enjoyed prestige and influence. Notwithstanding the fact that caravan traffic had declined and trade had been transferred to the sea-route, the prosperity of the town had by no means disappeared. This is shown, to a certain extent, by inscription Fa 74, erected in the year 614 of the Ḥimyarite era (= 499 A.D.), according to which a citizen of Mārib had ordered a stately house with two bronze statues of lions and other bronze statuettes to be erected for himself. The fragments of columns, capitals, friezes and relief-slabs, and above all the perfectly executed inscriptions on stones preserved in Mārib, bear eloquent witness of the high level which artistic and manual skill had reached in this town during antiquity. It had struck al-Hamdānī, too, that elsewhere in Yemen columns dating from ancient times were not of such beauty and value as those in Mārib (*Iklil*, viii, 151, 11-2). After the Abyssinian conquest of the Yemen in 525, a Christian church was also built in Mārib, as we learn from an inscription set up under king Abraha (*bʿl/mrb*): CIH 541, 66-7). One of the new churches, consecrated in South Arabia according to the *Vita Sancti Gregentii*, is said to have been in the middle of Δανα, which probably means Wadi D̲h̲ana, and thus the oasis region of Mārib.

The royal castle of Mārib was Salḥīn, which is also the building of ancient South Arabia most frequently mentioned in Sabaean inscriptions. If we admit that the most ancient form of the name was Salḥum (*slḥm*), the castle is already mentioned in the ancient Sabaean inscription RES 3946, set up by Karibʾil Watar probably around 685 B.C. Line 5 relates that he constructed the upper storey of his house Salḥum. From this statement it may even be concluded that the stronghold was founded in a still earlier period. Salḥīn is mentioned with special frequency in the inscriptions of the 2nd and 3rd centuries A.D. which originate from the Awām temple near Mārib, the place of ruins now called Maḥram Bilḳīs. They mostly relate that the king or one of his commanders returned safely to Salḥīn, or happiness is implored for the house of Salḥīn and its lords. Salḥīn was also the place where indigenous coins were minted on behalf of the Sabaean realm.

Next to Salḥīn, al-Hamdānī mentions Had̲j̲ar and al-Ḳas̲h̲īb as other castles of Mārib (*Iklīl*, viii, 99, 10). From epigraphic tradition, these two are not known so far. The name al-Had̲j̲ar, "the town", is unusual for a fortress, and may already raise doubts for that very reason. According to al-Hamdānī (*Iklīl*), viii, 100, 2), al-Ḳas̲h̲īb was built by a member of the D̲h̲ū Ḥazfar, i.e. of that ancient eponymous kin of the K̲h̲alīl tribe resident in and around Mārib. According to Yāḳūt (*Muʿd̲j̲am*, iv, 104, 6), the castle al-Ḳas̲h̲īb is said to have been built at the order of king S̲h̲uraḥbīl bin Yaḥṣib. Such a ruler, is, however, not attested epigraphically. The name S̲h̲uraḥbīl would fit in with S̲h̲uraḥbiʾil Yaʿfur and the father's name Yaḥṣib with Ils̲h̲araḥ Yaḥḍib, with a faulty rendering of the surname Yaḥḍib. However, the defective title of a "king of Sabaʾ and the Tihāma and their Bedouins" which is also mentioned (Yāḳūt, *Muʿd̲j̲am*, iv, 104, 7-8), points to a king of the later period, i.e. rather to S̲h̲uraḥbiʾil Yaʿfur who reigned in the middle of the 5th century A.D. than to Ils̲h̲araḥ Yaḥḍib who lived more than two centuries earlier. Since *kas̲h̲īb* means "new", both in Sabaean and Arabic—an explanation given by al-Hamdānī himself in another place (*Iklil*,

ii, 317,7)—the name of the fortress may correspond to names like Newcastle, Neufchâteau or Neuburg.

The most important temple of ancient Mārib was the sanctuary of Awām of the god Almaḳah, now called Ḥaram Bilḳīs or Maḥram Bilḳīs. It lay at the eastern edge of Yasrān, the southern part of the oasis, at the other side of the wadi and at a distance of 3.5 km. south-east of the town. Partly excavated in 1952 by an American expedition under Wendell Phillips, it produced hundreds of dedicatory inscriptions, often quite extensive, which were erected in the entrance hall between the middle of the 1st and the 4th centuries A.D. They are our most important source for the history of that turbulent period. The sanctuary consists of a large, oval construction with a spacious courtyard, surrounded by a high, thick circular wall. The latter is made up of two mantles, an outer one and inner one consisting of ashlars, kept together by lateral walls, the hollow spaces being filled up with débris. The longitudinal axis between the north-western gate and the mausoleum on the opposite side measures about 105 m., while the latitudinal axis, which runs from the inner gate of the rectangular entrance hall, constructed before the circular wall, to the south-west, measures about 75 m. The temple court-yard thus had a surface of *ca.* 6,000 m². The construction, with its strongly fortified courtyard was originally perhaps also conceived as a refuge fortress, as is suggested by the name of the temple, *ʾwm*, which very probably means "place of refuge". The inscription CIH 957, placed in the wall of the temple, relates that Yadaʿ ʾil D̲h̲arīḥ, son of Sumhuʿalī and Mukarrib of Sabaʾ, erected the wall of the Awām, the house of Almaḳah. According to von Wissmann, this ruler is to be dated around 670 B.C. The concept of the entire construction presumably reaches back to this ruler, who is known as a temple builder, even if the works were transformed and changed in later times. Thus the oval enclosing wall, originally no doubt as high as 29 layers of ashlars i.e. 8.70 m. without the frieze, was, since the first quarter of the 4th century B.C., raised by 13 more layers of ashlars (cf. CIH 375). This was done in order to make up for the heap of sand and deposit which had accumulated in the precinct of the wall since the time of foundation and to raise the wall to its original height.

The last constructional renovation which is attested epigraphically was undertaken in the second half of the 1st century A.D. under king Karibʾil Watar Yuhanʿim "for the prosperity of the house of Salḥīn and the town of Mārib" (*hgrn/mryb*: CIH 373). It was also in this sanctuary that the tribe of Sabaʾ, i.e. the inhabitants of the town and oasis of Mārib, offered thanks for the fertility granted to their land through the water of wadi Ad̲h̲ana (cf. e.g. Sh 18); or they went there in a rogation procession when rain held off unduly (cf. Ja 735). Until the period of the beginning of monotheism in the second half of the 4th century A.D., hence during a whole millennium, the Awām temple of the god Almaḳah was the central place of worship of the Sabaean realm, to which people came in pilgrimage from afar (cf. e.g. RES 4176, 1-2).

Another large, sacred building in the area of the southern oasis, second only to the Awām sanctuary, was the Barʾān temple (*mḥrmn/brʾn*: CIH 400,2), likewise dedicated to the god Almaḳah. Nowadays it is called al-ʿAmāʾid, "the columns", because five pillars with capitals and a pillar stump still rise up from the débris of the construction so far unexcavated. With reference to Ḳurʾān, XXVII,23, these columns are occasionally also called *ʿars̲h̲ Bilḳīs* "throne of Bilḳīs", a designation which is however also used for a colonnade in Ṣirwāḥ (see R. G. Stiegner, *Die Königin von Sabaʾ in ihnen Namen*, 73).

In Mārib itself there was also a temple of the god Almaḳah. As proved by an epigraphical discovery in 1982 (Schmidt, *Mārib*, 24), the sanctuary Ḥarūnum (*ḥrwnm* or *ḥrnm*), already known from numerous Subaean inscriptions, was situated inside the area of the ancient town.

The oldest epigraphical evidence of the construction of irrigation works in the oasis area of Mārib is found in inscription RES 3946, an account of the activities of Karibʾil Watar, the son of D̲h̲amarʿalī, probably dating from 685 B.C. Lines 5 and 6 relate that the ruler constructed in the wadi Ad̲h̲ana the foundation Tafīs̲h̲ and the overflow-basin of the main canal of Yasrān, as well as the foundation of Yaliṭ and the overflow-basin of the main canal of Abyan; that for Yasrān, he further erected Ẓarib and Milkān and, in their midst, the construction works of Yasrān and Abyan. In an inscription which unfortunately has been copied deficiently and published inadequately, namely text ZI 71 = Sh 6, Sumhuʿalī Yanūf, son of Yadaʿʾil D̲h̲arīḥ, a ruler who, according to von Wissmann, is to be dated around 660 B.C., already proclaimed an instruction which more or less reads as follows: the water, allotted to a certain area which has been prepared for sowing, should not be limited if one lets it flow on that section of Yasrān which is irrigated by opening [the storage works], so that Mārib property (*mlk/mryb*) can be fertilised by water supply. Yasrān is the ancient name of the half of the Mārib oasis which lies south of the river bed of wadi Ad̲h̲ana, while Abyan indicates the northern half of the oasis, at whose further lower end the town of Mārib lay. In the Sabaean inscriptions, both oases are occasionally indicated as "Mārib and its two valleys" (*myrb/wsryhw* in Sh 18,3 and *mrb/wsryhw* in Fa 71,6), which survives in the Ḳurʾān as "the two gardens to the right and to the left" (*d̲j̲annatāni ʿan yamīnin wa-s̲h̲imālin*; Sūra, XXXIV,15). Recent investigations by the German Archaeological Institute have shown that downstream on the southern bank and in the middle of wadi Ad̲h̲ana, remains of constructions and works are to be found in the rocks. They belong to the ancient irrigation systems and functioned as constructions for damming up and distributing the water. A natural lava-barrier served as a dam for the builders of these ancient reservoirs. There are three ruins in all, two of which can be labelled, with a fair amount of certainty, as the oldest damming and distributing constructions in the Mārib oasis. They are perhaps the irrigation works which are mentioned epigraphically in the beginning of the 7th century B.C. as the first northern and southern oases. These ruins of water works, lying in the wadi bed, must be considered as forerunners of the great dam of later date between the D̲j̲abal Balaḳ al-Ḳiblī and Balaḳ al-Awsaṭ. This dam only came into existence when the two halves of the oasis had already risen considerably above the wadi level through sedimentation. Originally, the irrigation works of Yasrān and Abyan were separated from each other, for the possibility of building one single great dam for the two halves of the oasis was only created much later, due to the difficult constructions at the southern sluice. The building of this dam and its sluices was realised under Sumhuʿalī Yanūf, son of D̲h̲amarʿalī, who according to von Wissmann is to be dated approximately around 528 B.C. In Gl 513 and Gl 514 = CIH 623, two identical rock-inscriptions placed almost opposite one another, this Mukarrib of Sabaʾ announces that he has hewn out in the rock the opening for the reservoir Raḥābum of the main canal

of Yasrān, i.e. by cutting through the contiguous limestone rock of the Djabal Balaḳ al-Awsaṭ he has built the southern sluice, so that the southern half of the Mārib oasis can be irrigated from a higher water-level. Although no inscription *in situ* is known at the northern sluice which led to Abyan, the northern half of the Mārib oasis, it can be concluded from the construction of the southern sluice that the great dam and the northern sluice too were built by the same Mukarrib, since the entire complex can only have been executed as a whole, and since the hewing out of the storage canal Raḥābum at the southern sluice presupposes the construction of the dam which held back the waters of the wadi. This dam, which lay about 8 km. west-south-west of ancient Mārib, consisted of sediments heaped on the rocky, solid stratum. At the surface, it was covered with small, unhewn stones, strongly joined by mortar; it was at least 16 m. high, at the bottom at least 60 m. broad, and about 620 m. long. The dam served less to create a storage reservoir than to raise the water, brought down twice a year by the *sayl*, to a level from which the fields could be irrigated. So it was in fact a diverting dam, blocking the total breadth of the wadi, one which made it possible to irrigate regularly a defined acreage. The northern sluice too may well have been constructed at the same period in an analogous way. From the sluice, a main canal of 1,120 m. led to the principal distributor at the western edge of the northern oasis, from where the mass of water, through 15 sluice-like openings and 121 secondary distributors, was directed to the canal systems of the various arrays built on the fields which had to be irrigated. The complicated irrigation works of the northern oasis, with its constructions of water-distributors and remains of the network of canals, is partly still discernible. The next ruler who ordered the canal of the southern sluice to be hewn further through the rock of the Djabal Balaḳ al-Awsaṭ was Yithaʿʾamar Bayyin, the son of Sumhuʿalī Yanūf. From him has also been preserved a boustrophedon inscription of two lines, recorded in two versions on the smoothened contiguous rock of the walls of the southern sluice, namely Gl 523 and Gl 525 = CIH 622. This inscription related that Yithaʿʾamar Bayyin hewed out the opening in the rock for the storage reservoir Ḥabābiḍ of the main canal of Yasrān. The incision of the southern sluice, which has been hewn out of the rock, divides after some 30 m. towards the east in a northern and a southern branch. The northern one, which lies closer to the wadi, belonged to the Raḥābum basin, as is recorded in the two versions of rock inscription CIH 623, mounted there. Consequently, the southern branch could be the Ḥabābiḍ basin, although the two versions of inscription CIH 622 which relate its construction have been chiselled on both sides of the entrance to the sluice on the west-side. Since Yithaʿ ʾamar Bayyin, through this main canal which branched off to the right, enlarged the construction of the southern sluice, a still greater acreage could probably be irrigated through the distributing constructions in the Yasrān oasis which were fed by this canal. Line 5 of the fragmentary, ancient Sabaean inscription RES 3943, preserved without the name of a ruler, mentions the hewing out of the storage reservoir Ḥabābiḍ (the text wrongly has *ḥ b ḍ ḍ* instead of *ḥ b b ḍ*). Hence it may be concluded that the text was set up under Yithaʿ ʾamar Bayyin. Besides, the enlargement of the storage reservoir Raḥābum and the building of further irrigation works in Yasrān and Abyan are also recorded. The constructions of the southern sluice have been best preserved. According to Glaser, the inhabitants of Mārib called them Marbaṭ al-Dimm "place where the cat was tied", because a cat was said to have been tied there once on a long chain in order to catch the rat which undermined the dam, and to prevent thus the calamity of a bursting of the dam.

North-north-east of the great dam lies a smaller dam construction, probably built relatively late and called Mabnā al-Ḥashradj. Water, also supplied from the great dam, was stored here and, through a canal system, was used to irrigate the fields of Dār al-Sawdāʾ, lying to the east, as far as the town of Mārib.

According to the calculations of U. Brunner, the entire surface irrigated at the lower end of the dam amounted to 9,600 hectares/24,000 acres, 5,300 hectares/13,250 acres belonging to the southern oasis and 3,750 hectares/10,740 acres to the northern one. The rest of the fields lay north-west and north of the northern oasis near al-Djufayna and Dār al-Sawdāʾ. If the results of the census of 1975, according to which 13,000 people were living in the *ḳaḍāʾ* of Mārib, is taken as a basis, the number of inhabitants in and around Mārib in antiquity may be calculated at 30,000 at the least estimate and 50,000 at the most.

From the later Sabaean period, several dam-bursts have been recorded epigraphically. From text RES 4775, until today to be found on a wall near the northern sluice, we learn that, during the reigns of Dhamarʿalī Yuhabirr and his son Thaʾrān, at some time or other in the first two decades of the 4th century A.D., the storage basin Dhū-Amīr, in the Abyan oasis, was repaired after it had been destroyed and swept away by the rain flood. Inscription Ja 788 + 671 from the Awām temple mentions that, at the time of the kings Thaʾrān Yuhanʿim and Malikkarib Yuʾmin, in the beginning of the second half of the 4th century A.D., the dam broke at the storage basins Ḥabābiḍ and Raḥābum; the whole wall of the middle section between the two basins mentioned was destroyed, as well as 70 *shawāḥiṭ*, i.e. 350 ells or some 180 m. of the dam. Repair of the constructions took three months. The first of the two great inscriptions on the dam works, CIH 540, erected at the northern sluice constructions, relates that in the year 564 of the Ḥimyarite era (= 449 A.D.), under Shuraḥbiʾil Yaʿfur, the dam was restored after it had broken down as a result of the floods after late summer rain, but that in the next year heavy damage occurred again, which had to be made good through great expense of people and material. The main victuals are said to have been flour made from wheat, barley and *dhura* (*ṯḥnm*/*dhbrm*/*wshʿrm*/*wgdhdhtm*: CIH 540, 86-7; in another sequence in CIH 540, 39-40), i.e. from the three most important kinds of cereals which in the Mārib region nowadays still constitute about three-quarters of cultivation. The same king Shuraḥbiʾil Yaʿfur testifies in an inscription (Garbini, *AION*, xxix [1969], 560 = ZM 1) to the building of a castle in the capital Ẓafār in the year 572 of the Ḥimyarite era (= 457 A.D.). It is also said there that at the same time, repairs were executed at the dam in Mārib and constructions carried out at the storage basin Raḥābum; the first activity involved the removal of the mud deposits. The second great inscription on the construction of the dam, CIH 541, set up under king Abraha, relates to a dam-burst in the year 657 of the Ḥimyarite era (= 542 A.D.), which again could only be repaired after enormous efforts. It remains undecided whether by the newly-built construction, erected as high as 35 ells (CIH 541, 107-8), the dam proper is meant or another part of the storage works. The last inscription which mentions the great Mārib

dam is the rock-inscription Ja 547 which is certainly to be united with Ja 545, the latter being dated in the year 668 of the Ḥimyarite era (= 553 A.D.). The authors of the text were again engaged, under great exertion, in removing the mud deposits at the dam. Researches by U. Brunner on the discordances which occur in the sediments of the storage area have revealed that another dam-burst must have taken place some 35 years after the one described in inscription CIH 541. It was again repaired. The final catastrophe apparently occurred only at the beginning of the 7th century. It is the event which is mentioned in the Ḳurʾān as the dam-flood (*sayl al-ʿarim*: Sūra XXXIV, 16), i.e. the flood which broke the dam (Sabaean *ʿrm*). Afterwards, the Mārib oasis became desolate and, in the words of the Ḳurʾān, produced only briar fruits, tamarisks and a few Zizyphus trees (*loc. cit.*). Only small fields which lie at the edge of the wadi bed, and to which the high water can be directed through diverting dams, are cultivated. Al-Hamdānī already relates how in Mārib the pieces of land are irrigated from the *sayl*, and *ṭahaf* and *dukhn* are sown there until finally, the harvest is reaped and ploughing prepares the soil for the next sowing (*Ṣifa*, 199, 19-22). In more recent times, more and more extensive areas have been added, especially in the section lying to the south of the Adhana wadi; they are irrigated by subsoil water which has, however, to be brought up by pumps from as deep as 45-50 m.

Considering that, after a dam-burst, the sediments deposited by the floods had to be cleared away each time until the original level of the wadi was reached, it follows that each rebuilding of the dam became more difficult. Since the level of the oasis meanwhile had risen further, the dam had to be built higher each time. The mud which was carried along with the floods, and which raised the fields and was precipitated on to the dam and the storage basins, must have played an essential role in the dam construction being completely abandoned in the end.

Air photographs of the neighbourhood of Mārib show so called "dotted fields" standing out prominently. These accumulations of sediment clods lying in the ancient fields of the oasis, are relics of ancient tree and shrub plantations, widely spread, especially in the southern oasis. This observation is confirmed by the inscriptions. Text CIH 375 enumerates by name 13 palm-groves in the area of the Yasrān oasis alone, which is irrigated by the water of the Adhana wadi by means of sluices and canals conducting the waters of the dam. Al-Hamdānī, too, relates that, during a visit to the Mārib oasis, he saw a sunken *arāk* shrub, at whose root was a black palm trunk. One of his companions was of the opinion that this was a remnant of palms from pre-Islamic times (*Iklīl*, viii, 96, 2-4). In his time, date-palms remained only in Ruḥāba (*Ṣifa*, 102, 21), the region lying beyond the dam on both sides of the Adhana wadi.

The reasons which led to the neglect of the dam constructions and to their being left continuously to decay, and which finally reached a point so that they could not be renewed any more, may also have had a political and social background. The constant disputes between the individual principalities and dynasties of ancient South Arabia resulted in the loss of a strong central power and the disintegration of a well-organised society. This led to the growing influence of foreign powers, namely of Ethiopia and later of Sāsānid Persia. Moreover, the intensified penetration of North Arabian tribes brought about an increasing bedouinisation and a decline of rural culture based on agriculture and irrigation. A decrease of the population as a whole was probably connected with this. The Arab authors of the early Islamic period hold the same view. The fact that the last dam-burst is mentioned in the Ḳurʾān as *sayl al-ʿarim*, and the significance of this event for the town of Mārib and its surroundings, have caused Islamic tradition to deal in detail with this catastrophe and its consequences. Occasionally, information about the dam and the oasis themselves crept in, even if distorted and exaggerated. According to the Arab authors, too, events which had happened before the dam-burst, and the bursting of the dam itself, led to the Mārib oasis being abandoned by its inhabitants. The migration of entire South Arabian tribes towards the north is to be connected with it. Thus e.g. the Banū Ghassān and the Azd are said to have come from there and to have spread over various regions of the Arabian peninsula. The Banū Ghassān are even said to have established their era after the year of the dam-burst (*ʿām al-sayl*) (al-Masʿūdī, *Tanbīh*, ed. de Goeje, Leiden 1894, 202, 14-15). This would admittedly mean that the *sayl al-ʿarim* event has to be dated much earlier than it in fact took place. Through late Sabaean inscriptions we meanwhile know, however, that dating this last catastrophe in the 3rd, 2nd or 1st centuries A.D., or even earlier, as assumed by many Muslim authors and also some European scholars of the 18th and 19th centuries, is untenable. The Arab author who comes closest to the real date is Yāḳūt, who relates that the bursting of the dam took place in the period of the sovereignty of the Abyssinians (*Muʿdjam*, iv, 383, 20). Only al-Masʿūdī dares to attribute the bursting to natural causes, when he writes that the water gradually undermined the dam constructions built by man (*Murūdj*, iii, 370, 9-371, 2 = § 1254). To be sure, it cannot be completely excluded that traditions about a catastrophic bursting of the dam of a much earlier date have also crept into the legends which attached themselves to the *sayl al-ʿarim*. The most current version of the legend of the migration from the Mārib oasis is the following: a ruler of Mārib, ʿAmr b. ʿĀmir of the Azd, nicknamed al-Muzayḳiyāʾ, was married to Ẓarīfa, who had visions and dreams which she was also able to interpret. Evil omens being communicated to her, she warned ʿAmr, and one day she sent him to the dam, where he saw how a giant rat with iron teeth and big claws, called Khuld, was about to trundle away boulders and to undermine the dam. Thus warned and informed about the coming catastrophe of the bursting of the dam, ʿAmr decided to sell his possession at the lower end of the dam and to leave the country. However, in order to hide the real motive, he simulated a brawl with his son during which the latter slapped his face openly. This feigned defamation of the family presented him with the pretext of giving up his possessions, which could then be sold satisfactorily. After that, ʿAmr, with numerous followers, migrated from the Mārib oasis still in good time before the bursting of the dam set in (according to other versions, he only left after the event). His descendants spread over extensive parts of Arabia. After ʿAmr al-Muzayḳiyāʾ had left, the people of Mārib agreed upon a new king, who is, however, said not to have been designated as *tubbaʿ*. (For examples of detailed and embellished versions of this legend, see e.g. Wahb b. Munabbih, *Kitāb al-Tīdjān*, Ṣanʿāʾ 1979, 273-97; al-Masʿūdī, *Murūdj*, iii, 378, 2-392, 7 = §§ 1264-76; Yāḳūt, *Muʿdjam*, iv, 383, 20-385, 10; Ibn Saʿīd al-Maghribī, *Nashwat al-ṭarab*, 114, 13-117, 10, 16; al-Khazradjī, *al-ʿUḳūd al-luʾluʾiyya*, 9, 1-15, 3; a version which is divergent in some respects is given by Ibn al-Mudjāwir, *Taʾrīkh al-Mustabṣir*, 195, 5-197,

15, where the dam, as in al-Hamdānī, *Ṣifa* 110, 26, is called *sadd al-maʾzimayn* "the dam of the two closely joining places".)

The name of the ancient Sabaean capital has been transmitted in two forms in the ancient South Arabian inscriptions. The early inscriptions up to the 2nd century A.D., have always the form *mryb*; after that time, the form *mrb* appears. Two texts from the 2nd century A.D. still have both forms side by side. Inscriptions Fa 71 has *mryb* in lines 17-18, but *mrb* in line 6, while inscription Ja 576 has *mryb* in line 3, but *mrb* in line 2. The place-name *mryb* may originally have been a *nomen loci* of a root *ryb* of unknown meaning, which possibly has a parallel in Hebrew Məribā, a spring in the desert (Exodus, xvii, 7, and repeatedly), in as much as one does not admit the meaning "quarrel", given in the Old Testament. For the pronunciation of *mryb* as Maryab, reference can be made to the rendering by ancient authors: Μαρίαβα as Μητρόπολις in Strabo, xvi, 4, 768, after Erastosthenes, and *ibid.*, xvi, 4,778, after Artemidoros, as well as Μαρούαβα, *ibid.*, xvi, 4, 782, distorted either from Μαρύαβα or from Μαρίαβα or Σάβα, and also the *regia tamen omnium Mareliabata*, probably miswritten from Mareiaba, in Pliny, *Naturalis historia*, vi, 32, 155. The pronunciation Marīb may be inferred from the renderings Maribba in Pliny, *Naturalis historia*, vi, 32, 157, Mariba, *ibid.*, vi, 32, 160, and Mariba or, in the Greek version, Μαρίβα in the *Monumentum Ancyranum* = *Res gestae divi Augusti*, 26,5. In his *Introduction* to *Geography*, Book vi, ch. 6, Ptolemy has the name Μάρα μητρόπολις, but in his *Canon of the noteworthy cities* he has Μάραβα. A transition from a form Marīb to Mārib or Maʾrib is easier to explain than a change from Maryab to Mārib. When describing Mārib, al-Hamdānī too (*Iklīl*, viii, 104, 1-3) still gives both names Marīb and Maʾrib side by side, but explains them as being the names of two Arabian tribes, on the basis of a line of poetry which he transmits. In one of the fragments of the Ethiopian inscriptions from Mārib, the name of the town occurs as Mārəb (DJE 1 + 2, 13; see W.W. Müller, *Zwei weitere Bruchstücke der äthiopischen Inschrift aus Mārib*, in *Neue Ephemeris für Semitische Epigraphik*, i [1972], 62-3 and 66). Remarkable are the forms in which Mārib evidently appears in Syriac sources, namely *mrʾb* (*b-mrʾb mdhittā*, in the town of Mārib; see A. Moberg, *The Book of the Himyarites*, Lund 1924, 5b, 8-9), and *mwrb* (*men mwrb*, from Mārib; see I. Shahîd, *The Martyrs of Najrân. New documents*, Brussels 1971, xxix, 4). *Mrʾb* is certainly not the rendering of the *mryb* of the inscriptions, as Moberg, *op. cit.*, pp. xcii-xciii, seems to admit, for at that time the latter had not been in use for a long period. It is rather a miswriting for *mʾrb*, while *mwrb* could reflect a Syriac pronunciation Mōrib for Mārib. In Arabic tradition, the placename always appears as Maʾrib, which is probably formed secondarily from Mārib. The Arab lexicographers seem indeed undecided as to the root under which to put the name. The *Lisān al-ʿArab* and the *Tādj al-ʿarūs* give the name Maʾrib both under *ʾrb* and *mrb*, while Nashwān al-Ḥimyarī gives it only under *mrb* (see ʿAẓīmuddīn Aḥmad, *Die auf Südarabien bezüglichen Angaben Našwān's im Šams al-ʿulūm*, Leiden 1916, 96,19). Yāḳūt (*Muʿdjam*, iv, 382, 17-20) even tries, unsatisfactorily, to give three explanations at a time for the name Maʾrib, namely as *nomen loci* of *arab* or of the verbs *aruba* and *ariba*. Immediately afterwards he remarks (*ibid.*, iv, 382, 20-1) that Mārib is the name of each of the Sabaean kings. In this connection, one might think of the ancient South Arabian word *mrʾ* "lord", especially as a designation of the king in his quality of sovereign of the founders of dedicatory inscriptions, the more so because Nashwān al-Ḥimyarī transmits a gloss according to which *mārī* means "lord" in the Ḥimyaritic language (see O. Blau, in *ZDMG*, xxv [1871], 591, n. 7).

After the death of the Persian governor Bādhān [*q.v.* in Suppl.], the Prophet Muḥammad appointed representatives for the various towns of the Yemen, among them Abū Mūsā al-Ashʿarī [*q.v.*] as representative for Mārib (see al-Ṭabarī, i, 1852, 19-20 and 1983, 9). From then on, Mārib is enumerated as a separate *mikhlāf* under the *makhālīf* of the Yemen (al-Hamdānī, *Ṣifa*, 102, 19). For al-Hamdānī, in the first half of the 4th/10th century, Mārib is still a town full of curiosities (*Iklīl*, viii, 95, 5). He counts it among the places to which God has shown mercy (*Iklīl*, viii, 191, 7-8), and names it among the towns where treasures are said to be hidden (*Iklīl*, viii, 194, 3-7). Certainly, the dam had been destroyed so that the two halves of the oasis, having been raised too high to be reached by the floods of the *sayl*, had become desolate (*Iklīl*, viii, 95, 7-96, 1). But the distributing constructions, which led the water from the reservoirs of the dam to the fields, were still standing there as if their builders had finished their work only the day before (*Iklīl*, viii, 96, 6-7). Moreover, even of the dam itself a piece had survived on the left-hand side; at the lower part it is said to have been 15 ells wide (*Iklīl*, viii, 96,10-97,1). This, however, was probably not the former lowest part of the dam. According to the words of al-Hamdānī, the dam was based on the foundation-wall which, between the side-walls, was joined to the reservoirs with mighty ashlars hewn from the rocks, and to the base by molten lead (*Iklīl*, viii, 99, 1-2). The building of such wonderful works as the dam constructions was therefore ascribed to the legendary Luḳmān b. ʿĀd, according to some (*Iklīl*, viii 99, 3; al-Masʿūdī, *Murūdj*, iii, 366, 3-4 = § 1251; al-Bakrī, *Muʿdjam*, 1171, 2; Yāḳūt, *Muʿdjam*, iv, 383, 1), while others were of the opinion that they had been erected by Ḥimyar b. Sabaʾ and al-Azd b. al-Ghawth, a descendant of Kahlān (*Iklīl*, viii, 99, 3 ff.). According to other traditions, the dam was begun by Yashdjub b. Yaʿrub and finished by Ṣaʿb Dhu 'l-Ḳarnayn al-Ḥimyarī (Wahb b. Munabbih, *Kitāb al-Tīdjān*, 58, 15 and 273, 19-274, 8), or built by ʿAbd Shams Sabaʾ b. Yashdjub (Yāḳūt, *Muʿdjam*, iv, 382, 22-3), who are said to have directed there 70 rivers and floods from far away (Ibn Saʿīd al-Maghribī, *Nashwat al-ṭarab*, 86, 16-7). It is also said that the dam was begun by ʿAbd Shams, continued by Ḥimyar and finished by Ṣaʿb (al-Khazradjī, *al-ʿUḳūd al-luʾluʾiyya*, 7, 6-9). The building of the Mārib dam is occasionally also ascribed to Bilḳīs [*q.v.*], the legendary queen of Sabaʾ (al-Damīrī, *Ḥayāt al-ḥayawān*, Cairo 1309/1892, i, 270, 31), or she is said to have repaired it (see R.G. Stiegner, *Die Königin von Sabaʾ in ihren Namen*, 75). Finally, the irrigation works are said to have been built by a king, not mentioned by name, after he had consulted wise men (Masʿūdī, *Murūdj*, iii, 369, 3-370, 7 = § 1254). As al-Hamdānī rightly observed, the *sayl* of the Adhana wadi collected its water from many places and numerous sites of the Yemen (*Iklīl*, viii, 97, 10; detailed information in *Ṣifa*, 80, 12-23). Other authors even relate that the plantations in the Mārib oasis were so extensive that a horseman needed more than a month to cross them and that, in doing so, he found himself continuously in the shadow of the trees (al-Masʿūdī, *Murūdj*, iii, 367, 2-5 = § 1252; Ibn Saʿīd al-Maghribī, *Nashwat al-ṭarab*, 114, 20-115,1; it is even said that it took him six months (al-Khazradjī, *al-ʿUḳūd al-luʾluʾiyya*, 8,9-10). If a woman or servant

walked under the trees of the two gardens with a basket on the head, it used to fill of itself with fruits in a short time, without it being necessary to pluck them by hand or to pick them up from the ground (Ibn Rusta, *al-Aᶜlāḳ al-nafīsa*, 114, 7-10; Ibn Saᶜīd al-Maghribī, *Nashwat al-ṭarab*, 115, 9-10; al-Khazradjī *op. cit.*, 8, 5-7). According to a tradition, when shown the kingdom of heaven, Abraham asked for two earthly items only, namely the Ghūṭa of Damascus and the two gardens of Sabaʾ in Mārib (Ibn ᶜAsākir, *Taʾrīkh madīnat Dimashḳ*, ii, 195, 11-2; Aḥmad al-Rāzī, *Taʾrīkh madīnat Ṣanᶜāʾ*, Damascus 1974, 191 and 407, 17-408, 2). The fame and vanished glory of Mārib are also sung in numerous lines of poetry (see al-Hamdānī, *Iklīl*, viii, 98 ff.; Nashwān al-Ḥimyarī, *al-Ḳaṣīda al-ḥimyariyya*; *et alii*), and until today the former capital of the Sabaeans has remained an inexhaustible theme for Yemeni poets, as is shown e.g. by the anthology published by ᶜAbduh ᶜUthmān and ᶜAbd al-ᶜAziz al-Maḳāliḥ under the title *Maʾrib yatakallamu* "Maʾrib speaks" (Taᶜizz 1971).

According to al-Hamdānī, there lies, to the east of Mārib in the desert of Ṣayhad, the *Djabal al-milḥ*, the salt mountain (*Ṣifa*, 102, 25-6), which he mentions once again among the wonders of the Yemen because its equal is not found throughout the world and its salt is rich and pure like crystal (*Ṣifa*, 201, 8-9). The Prophet Muhammad had given the salt of Mārib as a fief to Abyaḍ b. Ḥammāl when the latter came to him with a delegation and requested it as such (Abū Dāwūd, *Sunan*, ch. *Imāra*, *bāb* 36; al-Tirmidhī, *Sunan*, ch. *Aḥkām, bāb* 39). What is meant here is the salt-mine at the Djabal Ṣāfir, which can be reached from Mārib with camels in three days' journey along a waterless road. In earlier times, the Banū ᶜAbīda supplied from there almost the entire Yemeni highlands with salt. Since the salt traffic passes through Mārib, this commodity is called in the Yemen Mārib salt (*milḥ Māribī*; Ḥayyim Ḥabshūsh, *Ruʾyat al-Yaman*, 116, 16) until today. Among the products of the Mārib region, al-Hamdānī calls special attention to the sesame, whose oil is quite bright, pure and of good quality (*Ṣifa* 199, 9-10). Until today it is considered as the best in all Yemen.

In later Islamic times, the place Mārib which already al-Muḳaddasī (*Aḥsan al-taḳāsīm*, 89, 2) quotes only as *ḳaryat Mārib*, did not play a rôle of importance. Its name emerges sporadically in Yemeni chronicles, mostly in combination with warlike events, as when troops of the *Imām* moved from Ṣaᶜda through the Djawf to Mārib, or opponents of the *Imām* settled there. In 418/1027 there appeared in Nāᶜiṭ a man who claimed the imāmate. He went to Mārib where he was received, and proclaimed himself *imām* under the title al-Muᶜīd li-dīn Allāh. He succeeded even in obtaining entrance into Ṣanᶜāʾ and in winning adherents in various parts of the Yemen until he was killed by people from ᶜAns (Yaḥyā b. al-Ḥusayn, *Ghāyat al-amānī*, 243-4). Around 1050/1640, Mārib came under the sovereignty of Sharīf Ḥusayn b. Muḥammad b. Nāṣir who, at the head of a cavalry unit of the Dhū Ḥusayn, the Dhū Muḥammad and the Yām, had helped to expel the Turks from the Yemen. He adopted the title of *amīr* and ruled in Mārib, which remained a more or less independent principality. C. Niebuhr, who also collected in 1763 in Ṣanᶜāʾ information about Mārib, called it "the as yet most prominent town in the Djawf" (*Beschreibung von Arabien*, Copenhagen 1772, 277). Although consisting of only 300 houses, most of which were in wretched condition, it was still surrounded by a wall with three gates. A poor Sharīf was in power, who, apart from Mārib, commanded only a few villages and was hardly able to defend this area against his neighbours. When E. Glaser visited Mārib in 1888, the place counted hardly more than 600 inhabitants in some 80 houses of several storeys. In 1350/1932, Mārib was occupied by the *Imām* Yaḥyā's troops, commanded by ᶜAbd Allāh al-Wazīr, and the last *amīr* of the reigning *Ashrāf*, Muḥammad b. ᶜAbd al-Raḥmān, was deposed.

In cultural and scientific life in Islamic times, Mārib was hardly of any significance either. The *nisba* al-Māribī occurs only very sporadically. Apart from Abyaḍ b. Ḥammāl already mentioned, it is borne only by an informant who transmitted the request to leave the Mārib salt as a fief, namely Yaḥyā b. Ḳays al-Māribī (al-Dhahabī, *Mushtabih*, ed. de Jong, Leiden 1881, 465, 5; according to this source, *al-Māribī* should be read instead of *al-Māzinī* in al-Balādhurī, *Futūḥ*, 73, 7). Other scholars, mostly traditionists, who bore the *nisba* al-Mārībī in the early Islamic period, are mentioned by Yāḳūt (*Muᶜdjam*, iv, 388, 9-21). For the later time, ᶜAbd Allāh al-Ḥibshī, *Maṣādir al-fikr al-ᶜarabī al-islāmī fi 'l-Yaman*, Ṣanᶜāʾ 1978, 316, was able to name only one bearer of the *nisba* al-Māribī.

During the Yemeni civil war of 1962-6, Mārib's fate was uncertain. Already in the beginning of October 1962 it was captured by the Royalists, but in March 1963 it was conquered by the Republicans who received Egyptian air support. In summer 1965, the Royalists succeeded in occupying Mārib again. During these combats, the houses of Mārib, which stand closely together on the ancient site, were largely destroyed by air attacks. Most of the inhabitants left the place and settled down in the neighbourhood, which explains the astonishingly low present number of the population. Until the present day, numerous houses of Old Mārib lie in ruins. At the foot of the hill of the old town lie in the *Masdjid* Sulaymān (with ancient columns), the residence of the governor (*muḥāfiẓ*), the police station, the military garrison, a water-pump installation, a number of huts covered with sheet-iron, shops and a restaurant. Formerly, Mārib could only be reached from Ṣanᶜāʾ by means of cross-country vehicles after an eight to twelve hours' difficult drive on tracks and through passes by three different routes, with a length between 170 and 220 km. Since 1981 the place has been linked with the capital Ṣanᶜāʾ by a road of about 150 km. length. After this convenient connection had been established, the flights between Sanᶜāʾ and Mārib with obsolete DC-3 aeroplanes, which had existed for years with occasional interruption, could be discontinued.

MĀRIDA, Spanish Mérida, from the Latin Eme-

rita, a town in the south-west of Spain, in the modern province of Badajoz, where it is the capital of a *partido*, on the right bank of the Guadiana. Now somewhat decayed, it has only about 35,000 inhabitants. It is on the Madrid-Badajoz railway and is also connected by rail with Cáceres in the north and Seville in the south.

The ancient capital of Lusitania, Augusta Emerita, was founded in 23 B.C., and under the Roman empire attained remarkable importance and prosperity. Numerous remains of Roman buildings still testify to the position it held in the Iberian peninsula in those days: a bridge of 64 arches, a circus, a theatre, and the famous aqueduct of *los Milagros*, of which there are still standing ten arches of brick and granite. Merida under the Visigoths became the metropolis of Lusitania and, according to Rodrigo of Toledo, was fortified and strongly defended, which explains why the Muslim conquerors led by Mūsā b. Nuṣayr [*q.v.*] had some difficulty in taking it. The Arab leader on landing in Spain in Ramaḍān 93/June 712 first took Medina-Sidonia and Carmona, then Seville. He next laid siege to Mérida, before which he stayed for several months; but the inhabitants in the end capitulated and the town surrendered on 1 Shawwāl 94/30 June 713. From Mérida, Mūsā b. Nuṣayr continued his advance to Toledo.

Under the Arab governors, Mérida seems to have very soon become a rallying point for a large number of rebels of Berber and Spanish origin. It was there that Yusuf al-Fihrī endeavoured to organise a movement against that organised for his own benefit by ʿAbd al-Raḥmān al-Dākhil in 141/758. At a later date, a Berber named Aṣbagh b. ʿAbd Allāh b. Wānsūs rebelled there against al-Ḥakam I in 190/805 and the *amīr* of Cordova had for the next seven years to undertake summer campaigns against him before bringing him to reason. Another rebellion broke out in Mérida in 213/828, and the town had to be besieged in 217/832 and again in 254/868. In the reign of the *amīr* ʿAbd Allāh it was the headquarters of ʿAbd al-Raḥmān b. Marwān al-Djillīkī ("the Galician"), an Arabic name which concealed that of a Christian nationalist leader. Mérida definitely returned to its allegiance in the reign of ʿAbd al-Raḥmān III al-Nāṣir, when it submitted in 316/928 to the *ḳāʾid* Aḥmad b. Ilyās.

From the 5th/11th century, Mérida began to decline in favour of Badajoz, especially when the latter town became the capital of the independent little kingdom of the Afṭasids [*q.v.*]. It remained in the hands of the Muslims till the beginning of the 7th/13th century. In 625/1228 it was retaken by Alfonso IX of Léon, but never recovered its former importance.

The Arab geographers who mention Mérida describe its Roman ruins in detail; they also mention the Muslim citadel, the foundation inscription of which has been preserved. It was built in 220/835 by the governor ʿAbd Allāh b. Kulayb b. Thaʿlaba by order of the Umayyad ʿAbd al-Raḥmān II.

MĀRIDĪN [see MĀRDĪN].

AL-**MĀRIDĪNĪ** [see AL-MĀRDĪNĪ].

MAʿRIFA (A.) "Knowledge, cognition".

1. As a term of epistemology and mysticism

I. Lexicographical study. Like *ʿirfān*, the word *maʿrifa* is a noun derived from the verb *ʿarafa*. According to the lexicographers, it is a synonym of *ʿilm* [*q.v.*]. Ibn Manẓūr (*LA*) notes that *ʿarafa* may be used in place of *iʿtarafa* ("to recognise"), in the sense that *maʿrifa* is that which enables a person to recognise, to identify a thing. On the other hand, *iʿtarafa* signifies "to ask somebody for information (*khabar*) regarding something". It is the reply which makes recognition of this thing possible. When an animal is lost, "a man comes who recognises it (*yaʿtarifu-hā*), that is to say, he describes it by an attribute (*ṣifa*) which makes known (*yuʿlimu*) that it belongs to him". According to a tradition related by Ibn Masʿūd, people were asked if they knew their Lord. They replied: "If He makes Himself recognised to us, we know Him." Consequently, from a philological point of view, the *maʿrifa* which causes recognition and which thereby gives knowledge (*ʿilm*) of its subject, always contains the indication of an attribute through which its subject is identified. The *ḥadīth* of Ibn Masʿūd is explained thus: "If God describes Himself by means of an attribute through which we can authenticate Him, then we know Him."

In his *Dictionary of technical terms*, al-Tahānawī lists several senses of the word *maʿrifa*, which he identifies with the word "knowledge" while noting particular connotations which are sometimes given to it to distinguish it from *ʿilm*. (1) In the first place, *maʿrifa* is knowledge, in the absolute sense of perception (*idrāk*), whether in the form of a concept, or in the form of a judgment. (2) It is the perception of a concept; in the case of a judgment it is called knowledge. (3) It is the perception of what is simple (*basīṭ*), whether it is a concept of the quiddity or a judgment regarding the conditions of this quiddity; or it is the perception of something which is composite (*murakkab*), whether it be a concept or a judgment. But according to technical terminology, perception of the composite is specifically called knowledge. In addition, according to the lexicographers, the correct statement is "I have cognition of God (*ʿaraftu 'llāh*)" and not "I have knowledge of God (*ʿalimtu-hu*)", because God is a simple entity. Consequently, that which is in relation to *maʿrifa* is simple, whereas that which is in relation to knowledge is multiple (*mutaʿaddid*) and thus composite. (4) It is the perception of the particular, notion (*mafhūm*) or verdict (*ḥukm*); or the perception of the universal, notion or sentence. But the perception of universals is more specifically called knowledge or speculation (*naẓar*). According to al-Tahānawī, it is most probable that in principle, the word *maʿrifa* is used to apply to a concept, and the word knowledge to apply to a judgment. Then there are ramifications. Thus it may be considered that definitions (2) and (4) are ramifications of definition (3), since the particular and the concept resemble the simple, and the universal and the judgment resemble the composite. (5) It is the perception of a particular by means of a proof or indication (*dalīl*); this is called *maʿrifat istidāliyya*, cognition by proof. This is reminiscent of what the *LA* states regarding cognition by *ṣifa*. The language itself clearly marks the connection

between *dalīl* and cognition; it is said *dalaltu bi 'l-ṭarīk* in the sense of "I have made the way known (*ʿarraftuhu*), as the *LA* notes. One also considers the meaning that grammarians give to the word *maʿrifa* to indicate the determination of a noun, as opposed to *nakira*. It is the condition of a noun applied to a thing taken in itself (*bi-ʿaynihi*) and the article which determines it (by *taʿrīf*) acts in such a way that the object that it signifies may be pointed to (*mushār bihi*) with a positive designation (*ishāratan waḍʿiyya*). The noun is furthermore, in a general sense, that which is indicated by a meaning (*mā dalla ʿalā 'l-maʿnā*). It thus seems that there is indeed a connection between *maʿrifa*, in the sense of the perception of a particular by means of *dalīl*, and *maʿrifa* in the sense of determination of a noun which makes known an "essence" definable in itself. (6). It is the perception that comes after ignorance (*djahl*). Thus it cannot be said that God is cognisant (*ʿārif*); it must be said that He is knowing (*ʿālim*). In this sense, the word *ʿilm* has a general meaning, and the word *maʿrifa* a particular meaning. (7) It is a technical term employed by Ṣūfis.

II. *Maʿrifa* in mystical thought. Al-Tahānawī relates that it is usually (*ʿurfan*) considered to be the knowledge (*ʿilm*) which precedes ignorance (*nakara*). The use of the word *nakara* in place of *djahl* is interesting (cf. above, *nakira*). It is the knowledge (*ʿilm*) which does not admit doubt (*shakk*) since its object, the *maʿlūm*, is the Essence of God and his attributes. Cognition of the Essence consists in knowing (*an yuʿlama*) that God is existent (*mawdjūd*), one (*wāḥid*), sole and unique (*fard*); that He does not resemble any thing; and that nothing resembles Him. Cognition of the attributes consists in knowing Him as living, omniscient, hearing, seeing, speaking, etc. It is thus seen how regularly the word "knowledge" or the verb "to know" intervene in definitions of *maʿrifa* among the mystics.

It is necessary to distinguish *maʿrifa* based on proving indications which, by means of "signs" (*āyāt*) constitute the proof of the Creator. Certain people see things, then see God through these things. In reality, *maʿrifa* is realised only for those to whom there is revealed something of the invisible (*al-ghayb*), in such a way that God is proved simultaneously by manifest and by hidden signs. Such is the *maʿrifa* of men "anchored in knowledge" (*al-rāsikhīn fī 'l-ʿilm*; cf. Ḳurʾān, III, 7; IV, 162). Then there is the *maʿrifa* of direct testimony (*shuhūdiyya*) which asserts itself as evidence (*ḍarūriyya*); it is this which gives cognition of the signs through Him who has instituted them, and this is the prerogative of the just (*al-ṣiddīḳīn*, cf. Ḳurʾān, LVII, 19: *hum al-ṣiddīḳūn wa 'l-shuhadāʾ ʿinda rabbihim*). These are the men of contemplation (*aṣḥāb al-mushāhada*).

III. Definitions given by the Ṣūfis, and the mystical tradition. It is related that God said to David in a revelation. "Do you understand what it is to know Me? Cognition of Me is the life of the heart in the contemplation which it has of Me." Al-Shiblī said, "When you are attached to God, not to your works, and when you look at nothing other than Him, then you have a perfect *maʿrifa*." Cognition has been compared to the sight of God in the Other Life; "Just as He is known here below without perception, so He will be seen in the other life without perception (*idrāk*)" (al-Tahānawī), for it is said in the Ḳurʾān (VI, 101), "Vision will not comprehend Him, but He, He will comprehend vision." The Ṣūfis cite the following *ḥadīth* of the Prophet, "If you knew God by a true *maʿrifa*, the mountains would disappear at your command." Cognition is linked to various conditions (*aḥwāl*) with which *taṣawwuf* deals. Thus Abū Yazīd al-Biṣṭāmī [*q.v.*] said, "True *maʿrifa* is life in the memory of God (*dhikr*)." Similarly, al-Tahānawī quotes Abū ʿAlī (perhaps al-Djuzdjānī, 3rd/9th century), "The fruit of *maʿrifa* is that one bears with patience (*ṣabr*) proofs when they come; that a man gives thanks (*shukr*) when he receives a benefit; and that he gives his consent (*riḍā*) to God, when he is struck with a hateful evil." The father-in-law of al-Ḳushayrī [*q.v.*], Abu 'l-Daḳḳāḳ, said, "One of the signs of the cognition that a man has of God, is the entry into him of reverential fear (*hayba*). One of the signs that it is growing, is that this fear grows. *Maʿrifa* necessarily entails quietude (*sakīna*) as knowledge entails rest." *Maʿrifa* assumes not only the abolition of the consciousness of self at the level of the soul, the empirical self, but an absence of self at the level of the heart and the spirit. Abū Ḥafṣ (ʿUmar b. Maslama al-Ḥaddād, born near Nīshāpūr, d. *ca.* 260/874) said, "Since I have cognition of God, there enters into my heart neither truth nor falsehood. Cognition necessarily entails for the man his absence (*ghayba*) from himself, in such a way that the memory of God reigns exclusively in him, that he sees nothing other than God and that he turns to nothing other than to Him. For, just as the man who reasons has recourse to his heart, to his reflection and to his memories, in every situation which is presented to him and in every condition which he encounters, so the *ʿārif* has his recourse in God. Such is the difference between him who sees through his heart and him who sees through his Lord." In the same context, al-Bistāmī said, "The creature has its conditions, but the *ʿārif*, the cognisant one, does not have them, because his traits are effaced and his ipseity (*huwiyya*) is abolished in the ipseity of One Other than him (God). His features become invisible beneath the features of God." Also worthy of quotation is al-Wāsiṭī (pupil of Djunayd and of al-Nūrī, d. 320/932), "*Maʿrifa* is not authentic when there remains in the man an independence which dispenses with God and the need for God. For to dispense with God and to have need of Him are two signs that the man is awake and that his characteristics remain, and this on account of his qualifications. Now the *ʿarif* is entirely effaced in Him whom he knows. How could this—which is due to the fact that one loses his existence in God and is engrossed in contemplation of Him—be true, if one is not a man devoid of any sentiment which could be for him a qualification, when one approaches existence?" The following are other conditions which are related to *maʿrifa*. Ibn Abi 'l-Ḥawwārī (3rd/9th century) said, "He who knows God best and he who fears Him the most." Ibn ʿAṭāʾ, the friend of al-Ḥallādj, thought that *maʿrifa* depends on three things: reverential fear, modesty (*ḥayāʾ*) and intimacy with God (*uns*). In fact, he who has cognition of God is in intimacy (*anasa*) with Him. The following are some definitions and qualifications of the one who knows God. It has been said, "The *ʿārif* is he who acts for the pleasure of his Lord, without gaining anything for himself by this action." Seeing that some teachers taught that having once arrived at cognition, man no longer acts, al-Djunayd took issue with this opinion: "Those who have the cognition (*al-ʿārifūn*) of God, draw their actions from God and turn to God in their actions. If they needed to last for a thousand years, acts of piety would not be diminished by a jot." The same Djunayd said, "That man is not truly an *ʿārif*, so long as he is not like the earth which is trodden by the pious man and the licentious alike, like the cloud which extends its shade over all things, and like the rain which drenches the one that it likes and the one

that it does not like." In some instances, the definition adopts a dialectical twist. Thus Yaḥyā b. Muʿādh (a native of Rayy, who settled and died in Nīshāpūr in 248/872), said, "The *ʿārif* is the man who is there without being there." Al-Djunayd added, "who is distinct without separation."

In general, it is to be noted that all these conceptions, while placing *maʿrifa* above demonstrative and speculative knowledge, do not absolutely imply an esoteric vision. All or most depend on certain features which make of *maʿrifa* an illuminative cognition whose brightness has the power to stun. Thus Ruwaym, a Ṣūfī of Baghdād (d. 303/915), said, "For the *ʿārif*, *maʿrifa* is a mirror; when he looks at it, his Lord shines there for him (*tadjallā lahu*)", and Sahl b. ʿAbd Allāh al-Tustarī notes that "the final stage of *maʿrifa* consists in two things: amazement (*dahash*) and confusion (*ḥayra*)". The same notion is found in the writings of Dhu 'l-Nūn al-Miṣrī.

Some interesting analyses, and important conclusions, are to be found in the work of Farid Jabre, *La notion de maʿrifa chez Ghazālī*, Beirut 1958. Comparing al-Ghazālī with Plotinus, he writes (p. 134), "The former aspires towards an abstract ideal world, the 'well-guarded Table', archetype of revealed knowledge, the latter seeks to lose himself ontologically in the One... It is here that *maʿrifa* and *gnosis* diverge fundamentally: the latter is achieved in ecstasy... which is not simply vision... but unitive vision, and the former in the loss of consciousness of the self." Al-Ghazālī indeed belongs to the line of mystics whose conceptions have been related in this article.

IV. *Maʿrifa* in the thought of Ibn ʿArabī. It seems that Ibn ʿArabī makes no distinction in usage between the words "knowledge" and "cognition". For him, there is one *maʿrifa* which is attained through the light of intelligence (*bi-nūr al-ʿaḳl*): this is cognition of the divine nature (*maʿrifat al-ulūhiyya*) and of what is necessary, impossible, possible and not impossible for it. It is evident therefore that what is in question is a rational cognition, in other words, knowledge. On the other hand, there is a *maʿrifa* which is attained by the light of faith (*bi-nūr al-īmān*), by means of which intelligence (*al-ʿaḳl*) seizes the Essence and the qualifications which God ascribes to Himself. It is this second *maʿrifa* which has to be that of the mystics (cf. *Futūḥāt*, ed. ʿUthmān Yaḥyā, i, 203, no. 289). Ibn ʿArabī devoted ch. 177 of the *Futūḥāt* to "cognition of the status of cognition." Nobody has knowledge (*ʿilm*) except He who knows (*ʿarafa*) what is through its essence. Whoever knows what is through some thing which is added to its essence, is a *muḳallid* who intimates that which is added thus by means of that which he receives from it. Every cognisant being that is not God thus has cognition through *taḳlīd* in conforming to the data of the senses and of reason. Since he is compelled to imitate, the man of good judgment (*al-ʿāḳil*) who wishes to know God, must imitate Him in that which He has made known (*akhbara*) of Himself in His Books and through the mouths of His Messengers. When he wishes to know things, not relying on his own faculties but through force of obedience (*bi-kathrat al-ṭāʿāt*), he comes into a state where God is his hearing, his sight and all his faculties. Then he knows all things through God, and God through God. This was the answer given by Dhu 'l-Nūn when he was asked by what means he knew his Lord: "I know my Lord through my Lord; without Him, I would not know Him." Those who rely on their own senses, know that senses and reason can be mistaken (as al-Ghazālī pointed out in the *Munḳidh*). They seek to distinguish the cases where they are mistaken and the cases where they are justified. But since they make this distinction with faculties which can be mistaken, they can never know whether what they classify as true is not false and *vice versa*. Here there is a serious malady (*dāʾ ʿudāl*), which can be avoided only by those who in all things have knowledge only through God. As for knowing what it is that causes such men to have knowledge from God, this is something which our error-prone faculties are incapable of establishing. Since we see that we can have knowledge only through *taḳlīd*, all that remains for us is to imitate "him who is called the Messenger and that which is designated as the Word of God." We conform to these models to the point at which God becomes the totality of our faculties. We will thus be able to determine the cases where we shall take possession of truth. The man who arrives at this state is then, as the Ḳurʾān expresses it (XII, 108; LXXV, 14), *ʿalā baṣīratⁱⁿ*. *Maʿrifa*, in its highest degree, is thus this *baṣīra*, this interior view of realities which neither the senses nor reason are capable of attaining.

Ibn ʿArabī distinguishes three ranks of categories of knowledge (*marātib al-ʿulūm*). The first is that of the knowledge of intelligence, founded on necessary principles and the demonstrations based on them. This is not under discussion here. The second is that of the knowledge of states (*ʿilm al-aḥwāl*), to which the only access is through taste (*dhawḳ*), such as the knowledge of the sweetness of honey or the bitterness of bile. This definition also accords with the taste-oriented cognition of the Ṣūfīs. The third rank is that of knowledge of secret things (*ʿulūm al-asrār*). It is superior to the category of intelligence (*fawḳ ṭawr al-ʿaḳl*); it is the knowledge of the infusion of the breath of the Spirit of Holiness in the human spirit (*ʿilm nafth Rūḥ al-Ḳuds fi 'l-rawʿ*). It is the prerogative of the prophet (*al-nabī*) and of the saint (*al-walī*). It includes two types. The first is apprehended by the intelligence, as in the first rank of knowledges, but not as a result of speculation (*naẓar*). The second type is of two kinds. One is linked to knowledge of the second rank, to *dhawḳ*, but is superior (*ashraf*). The other is a knowledge of information (*min ʿulūm al-akhbār*). This is evidently concerned with information the veracity (*ṣidḳ*) of which is guaranteed; this is the information given by the prophets (cf. *Futūḥāt*, ed. Yaḥyā, i, 138-40, nos. 64-8). Consequently, *maʿrifa* in its highest degree, where *baṣīra* is exercised, seems to accord well with the different aspects of the *ʿulūm al-asrār*.

A further division is found (*ibid.*, i, 153, no. 100): "The axis of the knowledge which belongs to men of God (*ahl Allāh*) consists of seven questions. For whosoever knows them (*ʿarafa-hā*), there is nothing in the knowledge of Realities (*ʿilm al-ḥaḳāʾiḳ*) which presents a difficulty. These are: cognition (*maʿrifa*) of the Names of God; the cognition of epiphanic emanations (*tadjalliyāt*); cognition of the Word addressed by God to man in the form of the language of the Law; cognition of disclosure through imagination (*al-kashf al-khayālī*); and cognition of sicknesses and remedies. A detailed study of these *maʿārif* forms the object of ch. 177 of the *Futūḥāt*, to which the reader is referred. All that is noted here is that it seems that among all these cognitions, there is one which is distinct in the sense that is operates in all the others; this is the cognition of disclosure through imagination. In particular, that which Ibn ʿArabī says concerning cognition of the Names of God depends on a symbolic vision which is the act of the imagination. Here we refer to the work of H. Corbin, *L'imagination créatrice dans le soufisme d'Ibn ʿArabi*,[2] Paris 1977.

V. The Yazdān-shanākht of al-Suhrawardī. This Persian title is the equivalent of *maʿrifat Allāh*. Corbin has analysed it in his *Oeuvres philosophiques et mystiques d'al-Suhrawardī*, Tehran-Paris 1970, ii, 117-31. Here the author examines the development of human cognition, estimative and intellective. Corbin writes in this context: "There is certainly a measure of Avicennism in all this, but it is possible in addition to discern the premisses of the philosophy of Ishrâq." In fact, this treatise which aspires towards prophetic cognition, towards mystical charismas and visions in dreams or in states of trance, is definitely less original than Corbin suggests. It calls to mind the *Kitāb al-Fawz al-aṣghar* of Miskawayh (tr. Arnaldez, Tunis 1986). But it is in relation to the philosophy of *ishrāḳ* that Corbin defines true *maʿrifa*: "In contrast to *representative* cognition, which is cognition of the abstract or logical universal (*ʿilm ṣūrī*), this is a case of *presential* cognition, which is unitive and intuitive, of an essence absolutely true in its ontological singularity (*ʿilm ḥuḍūrī ittiṣālī, shuhūdī*), a presential illumination (*ishrāḳ ḥuḍūrī*) which the soul, the being of light, brings to bear on its object; it makes itself present in making itself present to itself" (*Histoire de la philosophie islamique*, in the series *Idées*, NRF, Paris 1964, 291).

VI. Conclusion. *Maʿrifa* has frequently been translated as gnosis. The Greek γνωσίς probably denotes purely and simply cognition. But the word "gnosis" has taken on a particular sense; it denotes, not one, but several systems which undoubtedly have common features, but which differ considerably from one another. There are thus several *gnoses*: Basilidian, Valentinian, Ismāʿīlī, *Ishrāḳī*, Shīʿī, etc. Corbin has written (*Avicenne et le récit visionnaire*, Berg International, 1979, 23), "But ultimately it remains a case of a spiritual attitude which is fundamentally the same: a deliverance, a salvation of the soul obtained not merely through cognition, but through cognition which is precisely gnosis." But this is nothing more than a nominal definition. The notion of salvation through cognition is certainly present in the gnoses, but it is also to be found in the systems inspired by Plato and by Neo-Platonism, in which it is taught that the cognition of intelligibles by the human intellect liberates man and even assures his survival after physical death. Yet there is nothing gnostic in these systems. In criticising the gnostics, Plotinus characterises the gnoses by other features entirely, in particular by the multiplicities of intermediaries, standing as so many entities between the First Principle and the world below, according to a succession of manifestations whose link with the mythologies is apparent. Thus it is undoubtedly true that there is a *maʿrifa* in the gnoses, and that *maʿrifa* can be of gnostic type, esoteric and initiatory. But it is definitely a misuse to translate *maʿrifa* automatically as "gnosis". Were it not so, it would be necessary to render the plural *al-maʿārif* by "the gnoses" (listed above), which would obviously be unacceptable.

Bibliography: Given in the text.

(R. Arnaldez)

2. As a term denoting secular knowledge

Hence opposed to *ʿilm* and almost synoymous with *adab*, see ʿilm.

MARĪNIDS (Banū Marīn), a Berber dynasty of the Zanāta group, which ruled the western Maghrib (Morocco) from the middle of the 7th/13th century to the middle of the 9th/15th.

A considerable number of contemporary sources, chronicles, literary works, inscriptions, collections of judicial decisions (*fatwās* and *nawāzil*), Italian, Aragonese and French archive documents make it possible to paint a fairly complete picture of the history of Morocco under the Marīnid dynasty. The historian Ibn Khaldūn, their most famous contemporary, reproduced in his *Kitāb al-ʿIbar* the genealogical descent, largely mythical, of the Marīnid tribes in the context of the Zanāta family, and designates the desert between Figuig and Sidjilmāsa as the terrain which they originally frequented. It is to be believed that the arrival of Arab tribes in the region from the south during the 5th and 6th/11th-12th centuries was the cause of various demographic mutations which obliged the Marīnid tribes to proceed towards the north and to settle in the plains of the north-west of what is now Algeria. Nomadic shepherds and breeders of sheep, the Banū Marīn gave their name to the wool (merino) that they produced and which, being of superior quality, was, as early as the beginning of the 8th/14th century, exported to Europe through the agency of Genoese merchants. An Italian document which tells of 49 consignments of wool called "merinus", purchased in Tunis in 1307, also supports the theory that the dynasty was not unconnected with the introduction of the sheep of this name in the Iberian peninsula.

The appearance of the Marīnids in the works of Arab chroniclers dates from the 6th/12th century, first in reference to local conflicts, then as a political factor, from the time of their participation in the battle of Alarcos, in Spain, alongside the Almohads (591/1195) [see al-muwaḥḥidūn]. After 610/1213-14, they maintained a slow but persistent penetration into the inhabited areas of the zone which they had habitually frequented, where the Almohad régime was in the process of rapid disintegration. At the start, their activity consisted only in claiming dues from the towns and charging protection dues, and the Almohads conducted an ambiguous policy towards them, fighting them at times and collaborating with them at others. By the middle of the 7th/13th century, the Almohads were no longer able to resist forcibly the physical occupation and settlement of the Marīnids in the large towns. United under the leadership of the house of ʿAbd al-Ḥaḳḳ, which at this point became the dynastic family, they captured Meknès in 642/1244, Fās in 646/1248, Sidjilmāsa in 653/1255 and finally Marrakesh, the capital, in 668/1269. Only recently converted to Islam, the Marīnids showed no particular reformatory zeal at the time of their occupation of Morocco, unlike their Almoravid and Almohad predecessors. They did, however, as a result of their encounters with jurists and city dwellers, cultivate a sense of mission which had a religious ingredient, wishing to provide the Muslims with just and prosperous government, which the Almohads were no longer able to offer (M. Shatzmiller, *Islam de campagne et Islam de ville: le facteur religieux à l'avènement des Merinides*, in *SI*, li [1980], 123-36).

Following the seizure of Marrakesh, the history of the Marīnids is divided into two periods of approximately equal length, corresponding to two phases: a first phase (668-759/1269-1358) characterised by military exploits, urban expansion and governmental stability, and a second phase (759-870/1358-1465) which sees a slow erosion of the political structures, a territorial regression and internal division. Almost all the Marīnid sovereigns of the first phase (see the dynastic list) were distinguished by the vigour of their military campaigns and the length of their reigns. From the start, the Marīnids displayed a remarkably dynamic military strength: with a series of campaigns

conducted in Spain against Castile (674/1275, 676/1277, 682/1283), the sultan Abū Yūsuf Yaʿḳūb established the central position which the Marīnid factor was to occupy in the diplomatic scene of the western Mediterranean basin during the 7th and 8th/13th and 14th centuries. For their Mag̲h̲ribī co-religionists, this constant *Drang nach Osten* of Marīnid policy constituted a permanent threat which was realised from time to time, the most violent episode being the prolonged siege of Tlemcen under the sultan Abū Yaʿḳūb Yūsuf (698-706/1299-1307). The high point of Marīnid history was reached under the sultan Abu 'l-Ḥasan ʿAlī with the seizure of Tlemcen (737/1337) and of Tunis (748/1347) and the temporary subjection of the entire Mag̲h̲rib (R. Thoden, *Abu 'l-Hasan ʿAli. Merinidenpolitik zwischen Nordafrika und Spanien in den Jahren 710-725H/1310-1351*, Freiburg 1973).

The chroniclers of the period, al-ʿUmarī and Ibn Marzūḳ, supply numerous details regarding the composition, the routine, the equipment and the pay of the army. Composed of regular and irregular units, its striking force seems to have been constituted by Zanāta horsemen (40,000 in the time of Abu 'l-Ḥasan). The Arab tribes also supplied horsemen, while Andalusians were recruited as unmounted archers. In addition to its numerical importance, the army was frequently engaged in training exercises and equipped with catapults and fire-throwers. A Christian militia, commanded by an "alcayt" and recruited in Aragon, Castile and Portugal from 1306 onwards, with other non-indigenous elements including Kurds and negroes, constituted the regular army and the personal bodyguard of the sovereign. The Christians, between 2,000 and 5,000 at the time of Abu 'l-Ḥasan, were paid once every three months at the rate of 5 to 50 gold *dīnārs* per month, part of their salary being paid to their respective sovereigns. In the turbulent years of the second phase, this militia took an active part in the increasingly numerous palace revolutions. The remainder of the army was also registered in the *Dīwān* and paid in kind. Only the chieftains of tribes received land in *iḳṭāʿ*.

The only point of weakness was constituted by the fleet, which, in spite of the abundant supply of wood and the existence of ship-building yards at Ceuta and Salé, was never large enough to compete with the Aragonese fleet. The archives of the court of Aragon testify, in fact, that for naval battles, such as the seizure of Ceuta in 678/1279, Catalan ships were hired at a high price by the Marīnid sovereigns. On the other hand, a Marīnid unit of Zanāta horsemen participated in 1285 in the European campaign against France and in 1307, 7,000 Marīnids were in the service of the Naṣrids of Granada.

The first phase of Marīnid history was also an age of major architectural activity, and the Marīnid monuments of the early period reflect the energy and the material wealth of the time. These consist primarily of three new urban conurbations, New Fez, al-Binya near Algeciras and al-Manṣura near Tlemcen; of *zāwiyas*; of the necropolis of Chella; of the arsenals of Ceuta and Salé; of a *ḳaṣaba* at Meknès; of mosques at al-ʿUbbād, al-Manṣūra and Taza; of fortifications; of a hospital for the insane at Fās; of hydraulic wheels in numerous towns, of fountains and gardens; but most of all, of magnificent *madrasas*, four at Fās and one at Salé, which, renowned for the beauty of their decoration and their Hispano-Moorish style, remain the Marīnid monuments *par excellence*. The material prosperity of the Marīnid state and the image that it adopted at this time, as champion of Mag̲h̲ribī Islam, explains the large number of pious donations (*waḳf k̲h̲ayrī*) made by members of the dynasty to the benefit of public institutions in their own towns and in captured towns, as well as those of the holy cities of the East. The chronicles, the *fatwās* and the inscriptions of *waḳfs* all attests to the donation of goods, property and land by the sultans Abū Saʿīd, Abu 'l-Ḥasan and Abū ʿInān to the benefit of *madrasas*, mosques and libraries.

Like its two contemporary dynasties, the ʿAbd al-Wādids and the Ḥafṣids [*q.vv.*], the Marīnid state maintained the demographic, social and governmental structures of the Almohads, as well as the physical aspects of their civilisation. In addition to the Arab and Berber ethnic variety—the human wealth of the Marīnid state—the demographic composition of the countryside, still agrarian and tribal, was coloured by the distinction between the sedentary population of the plains and that of the mountain regions. While the countryside remained linguistically and socially, even religiously, almost entirely Berber, the nomadic shepherds, islamised to a small extent, became more and more arabised. In the towns, largely arabised and absolutely islamised, tribal loyalty gave way to familial aristocracy. Under the Marīnids, the towns gathered in Andalusian elements in ever-increasing numbers. The ethnic variety was completed by the existence of Jewish and Christian communities in the urban centres. While the Christians were merchants, priests and soldiers, more numerous in the coastal towns but still a small minority, the Jews, an indigenous element reinforced by immigrants from Spain, were more numerous and more active in all aspects of the life of the country.

The Marīnid court resided at Fās, which replaced Marrakesh as the seat of the administrative apparatus. A Marīnid sultan, bearing the title of *amīr al-muslimīn*, and later also that of *amīr al-muʾminīn*, was the supreme sovereign of his country, his involvement in government varying largely according to his personal inclination. Thus the sultan Abu 'l-Ḥasan was involved in all the bureaucratic activities of his state, especially the administration of the army, taxation—he even introduced a landownership and fiscal reform in the Mag̲h̲rib—intellectual and religious activity, and even the administration of justice to citizens who complained of abuses on the part of his agents.

The responsibilities of the vizier, who was at certain times subordinate to the chamberlain, were on a day-to-day basis in the charge of various functionaries; head of finances, head of chancellery, chief of police, admiral, town governor, head of *ḳaṣaba*, senior *ḳāḍī*, head of the mint and head of the *muḥtasibs*. The Berber democratic and consultative nature of the Marīnid government was maintained by the existence, throughout its history, of the council of chiefs of the Marīnid tribes, which was convened at the invitation of the sovereign and mainly discussed military affairs. The economic life of Morocco under the Marīnids attests to a prosperity which was unconnected with the rise, in the 8th/14th century, of the kingdom of Mali [*q.v.*] and the development of the gold trade. This prosperity was reflected in three sectors: agriculture, urban industry and trade with Africa and Europe. Agriculture was dominated by a system of land-ownership largely similar to that of the Ḥafṣids: land was classified into three categories, these being public land (*d̲j̲azāʾ*), from which territory was leased to individuals and granted as *iḳṭāʿ*; *mulk* (private property); and land endowed for religious institutions and individuals (*ḥubus*).

The Marīnid dynasty

- ʿAbd al-Ḥakk al-Marīnī
  - 1. Abū Saʿīd ʿUthmān I 614-38/1217-40
  - 2. Abū Maʿrūf Muḥammad 638-42/1240-44
  - 3. Abū Yaḥyā Abū Bakr 642-56/1244-58
    - Abū Ḥafṣ ʿUmar 656-8/1258-9
  - 4. Abū Yūsuf Yaʿḳūb 656-85/1258-86
    - 8. Abū Saʿīd ʿUthmān II 710-31/1310-31
      - Abū ʿAlī ʿUmar 714-33/1314-33 (Sidjilmāsa)
        - Abū Muḥammad ʿAbd al-Ḥalīm 763-4/1361-2
        - Abū Mālik ʿAbd al-Muʾmin 764-5/1362-3
      - 9. Abū l-Ḥasan ʿAlī 731-49/1331-51
        - Abū ʿAlī Manṣūr 749-52/1348-51
        - 10. Abū ʿInān Fāris 749-59/1348-58
          - 11. Abū Zayyān Muḥammad II 759/1358
          - 12. Abū Yaḥyā Abū Bakr 759-60/1357-8
          - Abū Zayd ʿAbd al-Raḥmān 776-84/1374-83 (Marrakech)
          - 19. Abū Fāris Mūsā 786-8/1384-6
        - 21. Abū Zayyān Muḥammad V 788-9/1386-7
        - 13. Abū Sālim Ibrāhīm 760-2/1359-61
          - 18. Abū l-ʿAbbās Aḥmad 775-86/1373-84
            - 22. Abu l-ʿAbbās Aḥmad 789-96/1387-93
              - 20. Abū Zayyān IV 788/1386
              - 23. Abū Fāris ʿAbd al-ʿAzīz 796-9/1393-6
              - 24. Abū ʿĀmir ʿAbd Allāh 799-800/1396-7
              - 25. Abū Saʿīd ʿUthmān III 800-23/1398-1420
                - Abū ʿAbd Allāh Muḥammad 823-30/1420-7
                - 26. ʿAbd al-Ḥakk 823-69/1420-65
        - 14. Abū ʿAmr Tashfīn 762/1361
        - 15. Abū Zayyān Muḥammad II 763-7/1361-5
        - 16. Abū Fāris ʿAbd al-ʿAzīz 767-74/1365-72
          - 17. Abū Zayyān Muḥammad III 774-6/1372-4
    - 5. Abū Yaʿḳūb Yūsuf 685-706/1286-1307
      - 6. Abū Thābit ʿĀmir 706-8/1307-8
      - 7. Abū l-Rabīʿ Sulaymān 708-10/1308-10

According to al-ʿUmarī, the revenues of *iḳṭāʿ* land were reserved for senior chiefs of the army, high dignitaries of the court, palace secretaries, *ḳāḍīs* and Ṣūfī *shaykhs*. The Marīnid *fatwās* attest to the existence of small and medium-sized plots of land, cultivated by the owner with one or more tenant-farmers. There is no indication of the existence of large agricultural holdings, except those in the possession of members of the reigning family. All co-operation in this regard was regulated by one of three agricultural contracts agreed upon by Muslim jurists, *muzāraʿa, mughārasa* and *musāḳāt*; *khamāsa* also existed. The sources speak of abundant yields of fruit and vegetables, cultivated in the countryside but also in the proximity of towns, wheat being the major exported product.

The local industries of the towns, textiles, tanneries, building, metal-working, ceramics, foodstuffs and glassware, gave rise to an important craft milieu which achieved prominence in the 8th/14th century with its participation in royal processions, where members of each profession marched in a group displaying a flag showing the tools of its trade, as well as written texts. Commerce with Christian countries passed especially through the town of Ceuta, but other Atlantic ports were also frequented from the 7th/13th century (660/1262), Salé, Safi, Arzila and Anfa, where in 705/1305 an agent was in residence, acting on behalf of Majorcan merchants. The duties levied by Marīnid customs on imported and exported goods varied from one port to another. Christians imported into Marīnid Morocco wine, cotton, pepper, flour, finished silk, camphor, cinnamon, metals, cloth, linen, fine fabrics, ropes, tackle, gum, lac, cloves, gall-nuts, brazil wood, jewellery. They exported copper, wax, cotton goods, coral, wool, salt, leather, and above all wheat, which was cheaper than in Ifrīḳiya and held as a monopoly by the palace administration. No less important for Marīnid Morocco was trade with Black Africa across the Sahara, whence caravans brought salt, ivory, ostrich-feathers, gum and incense, musk, Guinea pepper, ambergris, and above all gold from the Sudan in ingot and powder form, which arrived through the town of Sidjilmāsa. The vigour of external commerce explains the importance of Ceuta and of Sidjilmāsa throughout the Marīnid period, as well as the aggressive Maghribī policy of the Marinids, which had the object of gaining control of the revenues of the Oriental, Saharan and European trade which converged in the coastal cities of the Maghrib. An abundance of yellow metal characterises the Marīnid economy, as is manifested by the payments in gold (*dīnārs*) made by Marīnid sovereigns especially to Spanish monarchs and recorded in their archive documents. Silver was scarce. The Marinids struck gold *dīnārs* of high quality; they followed the tradition introduced by the Almohads in minting a double *dīnār*, the *dīnār dhahabī* of the sources, of a weight of 4.57 gr., alongside the traditional *dīnār* with inscription in *naskhī* and *kūfī*, the *dīnār fiḍḍī* or *ʿashrī* of the Marīnid sources, of 2.26 g., thus called because it was worth ten *dirhams*. Coins found indicate the existence of halves, quarters and eighths for *dīnārs* and *dirhams*. The Marīnids also maintained the square shape of the Almohad *dirham*, with an inscription also in Almohad style and in *naskhī* script. The quality of the striking seems, however, inferior. Marīnid coinage was struck at Azemmour, Ceuta, Sidjilmāsa, Fās, Marrakesh, and Salé, as well as in Maghribī towns occupied by the Marīnids: Tlemcen, Algiers, Bougie, Tunis and Tarifa. The taxes levied on the subjects of the Marīnid state were usually numerous, for the most part non-Ḳurʾānic and, except during the reform introduced under Abu 'l-Ḥasan, leased out to *wulāt*. In addition to *maghārim* and *mukūs* of all kinds [see MAKS], three major taxes were in evidence: the rural population paid the *khiras*, which corresponded to the canonical *kharādj* [*q.v.*], also imposed on citizens who cultivated fruit trees; city and country dwellers also paid the *ḳānūn*, a capital tax similar to the *djizya* [*q.v.*] levied on the Jews; shepherds paid the *ḥukr*, a tax on the lands used for pasture, and each user of the irrigation systems also paid a tax on the water.

The diverse manifestations of religious and intellectual life and of literary production under the Marīnids were to a large extent conditioned by the changes undergone by urban society and by the development of new political and social structures. Thus from the earliest days of the dynasty, the sovereigns had to deal with a numerically strong and powerful religious establishment, which claimed for itself the role of spokesman of society and was in evidence especially at Fās. The popular revolts which took place in this city obliged the Marīnids to confront the opposition of an autonomist urban movement to their régime, and to neutralise it by the creation of their own religious and intellectual circles. In order to achieve this aim, there was introduced into Morocco for the first time the institution of the *madrasa* [*q.v.*], which led to the creation of a body of Zanāta *fuḳahāʾ* whose loyalty to the régime could not be doubted. At the same time, because of the hostility of the city dwellers, even the administrative and literary circles of the court had to be recruited from among the new immigrants from Andalusia, from Ifrīḳiya, from the central Maghrib and even from the countryside (Shatzmiller, *Les premiers Mérinides et le milieu religieux de Fès: l'introduction des médersas*, in *SI*, xliii [1976], 109-18).

In general, the religious life of the period was marked by the restoration of Mālikism as an official rite, a process which had been well advanced under the last Almohads, but even more by the diffusion of Ṣūfism which, spreading to the countryside and practised in a particularly Maghribī form, degenerated into maraboutism. In the towns, Ṣūfism was also practised, but in a more refined form, with the participation of the sultans, the dignitaries and the men of letters.

Literary production under the Marīnids was multiple and varied, with Oriental and Andalusian elements of style and structure playing a dominant role. The areas cultivated were classical: *fiḳh*, biography, hagiography, poetry, geography (Ibn Baṭṭūṭa and al-ʿAbdarī) at the same time as philosophy and natural sciences (Ibn al-Bannāʾ). Only history experienced an extraordinary development in this period, both in general and in detail, a phenomenon illustrated by the composition of the great regional histories of the mediaeval Maghrib (Ibn ʿIdhārī and Ibn Khaldūn) and the appearance of local history, of towns and of dynasties, the mouthpiece of the social milieu and of territorial nationalism. The Marīnid sovereigns encouraged the writing of their history, driven by a desire for legitimisation which their authority lacked.

The decline which struck the Marīnid dynasty, immediately after its period of greatest prosperity, continued throughout the second phase of its history. This process was characterised by a crisis of succession of which the *Kitāb al-ʿIbar* provides the details: a multitude of children of the Marīnid family were successively placed in power by innumerable revolts on the part of Arab and Berber tribes and by palace

revolutions, while real power passed into the hands of viziers. The absence of a strong central authority provoked a movement of political and territorial disintegration in the regions far from the capital, especially in the south, but also in the north, where the activity of pirates provoked Castilian and Portuguese attacks on Tetuan and Ceuta. The weakening of the authority of the Marīnid dynasty was accelerated by socio-religious changes, which took place in proximity to the major towns and disrupted their stability. Since the dynasty was extinguished, in 870/1465, not by a palace revolution but by a popular uprising led by the *sharīfs*, which was nothing other than a renaissance of the cult of Idrīs, it is necessary to credit these movements with real importance. The fact that the country passed once again under the domination of a Berber family, the Waṭṭāsids, related to the Marīnids, demonstrates that in spite of its development, urban autonomism was not sufficiently powerful to check the demographic and military might of the tribal countryside. It remains true, however, that under the Marīnid dynasty there were introduced into Morocco, for the first time, the idea and the political structures of national and geographical unity which were to become modern Morocco.

Bibliography: Vol. iii of the *Bayān* of Ibn ʿIdhārī, Tetuan 1963, supplies useful information on the beginnings of the dynasty, but the most complete account of its history is given by Ibn Khaldūn in the *Kitāb al-ʿIbar*, of which the section dealing with the Maghrib has been edited and translated into French by M.G. de Slane under the title of *Histoire des Berbères*, 2 vols., Algiers 1852-6 (new ed., i-iii, Paris 1925-34, and iv, containing the history of the Marīnids and the index, 1956); two other chronicles which provided source material for the *Histoire des Berbères* are the anonymous *al-Dhakhīra al-saniyya*, ed. M. Ben Cheneb, Algiers 1921, and the *Rawḍ al-ḳirṭās* of Ibn Abī Zarʿ, ed. and Latin tr. C.J. Tornberg, Uppsala 1843 (ed. Rabat 1972); the history of the town of Fās which occupies the first part of the *Rawḍ al-ḳirṭās* is the theme of the chronicle intitled *Zahrat al-ās*, of al-Djaznāʾī, ed. and French tr. A. Bel, Algiers 1923; an almanac of the Marīnid sovereigns was composed at about the end of the 8th/14th century by Ibn al-Aḥmar and is preserved in his two chronicles which are almost identical: the *Rawḍat al-nisrīn*, French ed. and tr. G. Bouali and G. Marçais, Paris 1917, and the *al-Nafḥa al-nisrīniyya*, still in manuscript form. Two chronicles describe Marīnid Morocco under the reign of Abu 'l-Ḥasan: *al-Musnad al-ṣaḥīḥ al-ḥasan* of Ibn Marzūḳ, ed. and Spanish tr. M. J. Viguera, Algiers 1981 and Madrid 1977 respectively, and the *Masālik al-abṣār* of al-ʿUmarī, French tr. M. Gaudefroy-Demombynes, Paris 1927, 137-223; historical sources on the Marīnids are examined in M. Shatzmiller, *L'historiographie mérinide, Ibn Khaldūn et ses contemporains*, Leiden 1982, where there is a more complete bibliography for this period. A general history of the Marīnids was composed by H. Terrasse in his *Histoire du Maroc*, Casablanca 1950, ii, 3-99; Ch.-E. Dufourcq described and analysed the relations of the first Marīnids with Aragon in *L'Espagne catalane et le Maghrib au XIII^e et XIV^e siècles*, Paris 1966; J. Caille included a chapter intitled *Les Marseillais à Ceuta au XIII^e siècle,* in *Mélanges d'histoire et d'archéologie de l'Occident Musulman*, Algiers 1957, ii, 21-31; on Fās under the Marīnids, see R. Le Tourneau, *Fès avant le Protectorat*, Casablanca 1949; Marīnid coinage is described by H. Hazard, *The numismatic history of late medieval North Africa*, New York 1952, 192-227, 275-8; and the architecture by G. Marçais, *L'architecture musulmane d'Occident*, Paris 1954, 261-361, and A. Bel, *Inscriptions arabes de Fès*, in *JA* (1915-19). A quite uncritical catalogue of the literary production of the period is given by M, Benchekroun, *La vie intellectuelle marocaine sous les Mérinides et les Waṭṭāsides*, Rabat 1974; equally uncritical and based exclusively on Arab authors are the articles of M. al-Manūnī collected in *Waraḳāt ʿan al-ḥaḍra al-maghribiyya fī ʿaṣr Banī Marīn*, Rabat 1980. The Jewish communities of Marīnid Morocco are studied by D. Corcos, *The Jews of Morocco under the Marinids*, in *JQR*, liv, 271-87, 55, 55-81, 137-150; Shatzmiller, *An ethnic factor in a medieval social revolution: the role of Jewish courtiers under the Marinids*, in *Islamic society and culture, essays in honour of Professor Aziz Ahmed*, New Delhi 1983, 149-65; and M. Garcia-Arenal, *The revolution of Fās in 869/1465 and the death of sultan ʿAbd al-Ḥaqq al-Marīnī*, in *BSOAS*, xli, 43-66. On the Marīnid *waḳf*, see Shatzmiller, *Some social and economic aspects of "wakf khayrī" in fourteenth century Fez,* in *Internat. Seminar on Social and Economic Aspects of the Muslim Waḳf*, Jerusalem 1979. On Ṣūfism, see P. Nwyia, *Ibn ʿAbbād de Ronda (1332-1390)*, Beirut 1961. Finally to be noted is a new study of the history of the Marīnids by M. Kably, *Société, pouvoir et religion au Maroc à la fin du Moyen Âge*. Paris 1986.

(MAYA SHATZMILLER)

AL-MARĪS, the term applied to the area of the ancient kingdom of Nobatia, northernmost of the Nubian Christian kingdoms, and occasionally also to its people.

Broadly, it encompassed the area from Aswān to the northern border of al-Muḳurra [*q.v.*], and was under the control of the king of Dunḳula [see DONGOLA], the "Lord of Muḳurra and Nubia". The northern frontier, according to al-Manūfī, quoting al-Djāḥiẓ, was indicated by two rocks jutting into the Nile five miles beyond Aswān; the southern limit was at Bastū (and variants) where al-Muḳurra proper began. The capital was at Faras, and there were also important forts, including Ḳaṣr Ibrīm. The administration was vested in the "Lord of the Mountain" (*Ṣāḥib al-Djabal*, or "Lord of the Horses", *Ṣāḥib al-Khayl*, in Ibn al-Furāt), the Eparch of Nobatia, under the authority of the king at Dunḳula. This official's duties were to receive correspondence and visitors destined for the king, and to control passage southward into Nubia. The population of al-Marīs contained an admixture of Arabs, and al-Masʿūdī mentions a case in 218/833 between the king of Nubia and the Muslim citizens of Aswān who owned estates in al-Marīs. The king held that land could not be sold since it was his property, worked by his subjects only in their capacity as his slaves. The case was judged in favour of the purchasers. According to Yūsuf the Egyptian, there was a bishop of al-Marīs (perhaps the bishop of Pachoras (Faras)). The provinces of al-ʿAlī and al-Djabal, part of al-Marīs, were apparently ceded to Egypt by the treaty of 674/1276, and the Muslim Banu 'l-Kanz [*q.v.*] gradually became prominent in the region, eventually taking the throne at Dunḳula. Several of the Arab writers tell of the Marīsī wind, which brought a pestilence to Egypt, so that people began, when the wind arrived, to buy ointments and shrouds for their funerals. The designation "Maurotania" in Abba Mina's Coptic *Life of the patriarch Isaac* (*ca.* 700 A.D.), would appear

to refer to al-Marīs. The term al-Marīs is found in Arabic texts from at least the 1st/7th to the 10th/16th centuries.

MĀRISTĀN [see BIMĀRISTĀN].

MARITSA [see MERIČ].

MĀRIYA, a Copt maiden, according to one statement, daughter of a man named Shamʿūn, who was sent with her sister Sīrīn by the Muḳawḳis [*q.v.*]in the year 6 or 7/627-9 to Muḥammad as a gift of honour (according to another authority there were four of them). The Prophet made her his concubine, while he gave Sīrīn to Ḥassān b. Thābit [*q.v.*]. He was very devoted to her and gave her a house in the upper town of Medina, where he is said to have visited her by day and night; this house was called after her the *mashraba* of the mother of Ibrāhīm. To the great joy of the Prophet, she bore him a son whom he called Ibrāhīm, but he died in infancy. According to tradition, an eclipse of the sun took place on the day of his death, an interesting statement by which we can get the date exactly—if the story is true—as 27 January 632, that is, only a few months before Muḥammad's death. Māriya's beauty and Muḥammad's passionate love for her excited such jealousy among his other wives that, to pacify them, he promised to have nothing more to do with the Copt girl, a promise which he afterwards withdrew. Abū Bakr and ʿUmar honoured her and gave her a pension which she enjoyed till her death in Muḥarram 16/February 637. There is no reason to doubt the essential correctness of this story, as there is no particular bias in it and it contains all sorts of details which do not look in the least like inventions, so that it is exaggerated scepticism when Lammens supposes that the "mother of Ibrāhīm", after whom the *mashraba* was called, was some Jewess. On the other hand, in view of the fact that all the marriages of Muḥammad after the *hidjra* were childless, it would have been surprising if evil-minded people had not cast suspicions on the paternity of Ibrāhīm, and that this actually happened is evident from some traditions, the object of which is to defend Māriya from this suspicion.

On the other hand, it is not so easy to justify the part which Ḳurʾānic exegesis makes Māriya play in the exposition of sūra LXVI. In this sūra, the Prophet speaks in a very indignant tone against one of his wives, because she has betrayed a secret to another, which he had imparted to her under a promise of the strictest secrecy. At the same time, Allāh blames him, because, in order to please his wives, he had bound himself by oath to refrain from something which is not definitely stated and because he does not use the right granted him by Allāh to release himself from his oath. In addition, there is a word of warning to the two women who had disobeyed him and a threat to all his wives that he might divorce them in order to marry more pious ones (cf. XXXIII, 28-9). According to the usual explanation, the two wives are Ḥafṣa and ʿĀʾisha, and the revelation is said to have been provoked by the fact that Ḥafṣa, on returning unexpectedly to her house, found Māriya and the Prophet in an intimate tête-à-tête and that on a day which by rotation belonged to her (or ʿĀʾisha). In his embarrassment, he pledged himself by oath to have no more relations with the Copt girl. But after Ḥafṣa's breach of faith, Allāh tells him to release himself from his oath. This explanation fits very well in some respects, and that the promise of continence is connected with marital complications is illuminating. That there are *ḥadīth*s, which explain his quarrel with his wives quite differently, does not mean very much, for they are no doubt invented to drive out of currency the popular, less edifying version. But, on closer examination, there is one flaw which makes the latter uncertain, for it does not answer the question how Muḥammad could call the situation in which Ḥafṣa caught him and Māriya a secret that he is said to have entrusted to her.

(F. BUHL).

AL-**MARIYYA** is the Arab name for the Spanish town of Almería. According to some authors, it was originally called Mariyyat Badjdjāna, for it had been the port or maritime suburb of Pechina (Badjdjāna) [*q.v.*], the ancient Roman Urci. Today, Almería is the chief town of the province (which has the same name) in the most easterly part of Andalusia on the Mediterranean coast. It is surrounded by bare mountains with steppe-like vegetation, and this means that its countryside is very similar to that of some parts of the North African coastline opposite. The only part not surrounded by rocky mountains is the area towards Cape Gata, and it has always been a region of low rainfall. The land is very eroded and marked by numerous *ramla*s, which have been hollowed out by raging torrents during the times when it does rain. By contrast, the Rio de Almería valley, the Andarax (Andarash), is a green fertile zone producing an abundance of fruit. This land of violent contrast has been witness to many splendid years of the Islamic era and has been described often in great detail by Arab writers, from East and West alike.

The Islamic history of Almería is closely linked with that of Pechina which, thanks to its own location on the coast, existed before Almería, gave it birth and saw it develop. Soon after its rapid conquest from 93/713 to 95/715, it was populated mainly by Yemeni Arabs throughout a large area extending almost as far as the Guadix (Wādī Ash), but there were also several Berber settlements, especially in the region of the lower Almerian Alpujarra. During its 765 years of Islamic history, this territory of Almería experienced various changes of fortune.

The small village and port of al-Mariyya became

more important than the neighbouring Aguilas, and it was an administrative dependency of the *kūra* (the *iklīm*, according to al-Idrīsī) of Pechina. Before they were controlled by al-Mariyya, the towns of Berja (Bardja) and Dalías (Dalāya) were also dependent on Pechina. Dalías was the birthplace of al-ʿUdhrī, the well-known geographer of the 5th/11th century, who provided a careful description of al-Mariyya with much interesting information (see *Tarṣīʿ al-akhbār*, ed. ʿAbd al-ʿAzīz al-Ahwānī, Madrid 1965, index). Other towns are Adra and the fortresses of Vélez Rubio (Bālīsh), Belicena (Balisāna), Purchena (Barshāna), Senés (Shanish), Andarax (Andarash), to name but a few mentioned by al-Idrīsī (*Opus geographicum*, v, 537, 562-4) and by Abu 'l-Fidā. All these towns, as well as Vera (Bayra) and some others, were taken as dependencies of Naṣrid Granada during the last centuries of Islamic rule.

The region of al-Mariyya is surrounded by steeply sloping sierras which make overland communications difficult. The town was established in 344/955 by order of ʿAbd al-Raḥmān III al-Nāṣir [*q.v.*]; its special maritime importance arises from the fact that it faces the North African ports of Ténès and other Algerian and Tunisian ports, as well as Alexandria and the extreme Eastern Mediterranean. Arab geographers, therefore, chose an apt name for it, "the gateway to the East" and "the key to commerce and trade of every kind". The name of al-Mariyya (*sic*, not al-Māriyya) has given rise to various explanations. The idea of "watch-tower" could have come from the time when men reported there for guard duty, for it was a look-out post during the raids by the Normans, and later by the Maghribīs, which occurred in the mid-3rd/9th century and the 4th/10th century. A number of defensive towers (*mahāris*) were built then along the coast to house garrisons and where people could lead a life of service in *ribāṭs* [*q.v.*]. Al-Rābiṭa, which is mentioned by al-Idrīsī, is only a day's journey away. Yākūt, *s.v.*, gives free rein to his imagination when he considers the original meaning of this town name.

All writers seem to agree that this city was a recent one (*muhdatha*), and not, like the others, from the distant past (*azaliyya*), founded by the Arabs as a place in which "to practise the life of service in a *ribāṭ*", according to al-ʿUdhrī and the anonymous *Dhikr al-Andalus* (Rabat ms.). Al-Nāṣir turned it into the main port and arsenal for all the country's ships and also into a *madīna*. He gave it a fortress on a very rocky hill to the west, at the bottom of which was the district of al-Ḥawḍ; this was an area enclosed by a series of walls with a great number of markets, inns and baths. The population of Pechina, situated several kilometres inland, was absorbed by al-Mariyya, and it was used as a naval base and the point of embarkation for maritime raids against Chistian countries. During the period of the caliphate, it was a defensive bastion against the threat of the Fāṭimids. There was more commercial activity here than in any other port of al-Andalus, and it was open to the influence of all kinds of travellers to and from North Africa and the Eastern Mediterranean. According to L. Torres Balbás (*Almería islámica*, in *al-And.*, xxii [1957], 411-53, which includes a plan of the town in the 14th century) at the end of the 4th/10th century the *madīna* comprised a rectangle of a little more than 19 hectares in area, excluding the fortress which was called *kalʿat Khayrān*, enlarged by the ʿĀmirid *fatā* Khayrān in 410/1019-20. He had also had a wall constructed from Mt. Laham, to the north of the town, to the sea. Within this area, the city was able to shelter about 27,000 people, according to L. Torres Balbās (*Extensión y demografía de las ciudades hispano-musulmanas*, in *SI*, iii [1955], 55-6). The town grew and became even more splendid during the time of Khayrān (d. 429/1038) and Zuhayr, the two slaves who seized Almería and its territory at the time of the *fitna*, and during that of the *mulūk al-ṭawāʾif*.

Shortly after the assassination of Zuhayr in 429/1037-8, al-Mariyya passed to ʿAbd al-ʿAzīz b. Abī ʿĀmir of Valencia, who controlled it from Dhu 'l-Kaʿda 429/Sept. 1038 to Radjab 433/Feb.-March 1042. According to Ibn ʿIdhārī (*Bayān*, iii, 191-2), the *amīr* of Valencia was also the ruler of Tudmīr (Murcia) and he sent his son ʿAbd Allāh to be the governor of al-Mariyya. But he stayed only a short time; he soon died and was replaced by Abu 'l-Aḥwaṣ Maʿn b. Ṣumādiḥ al-Tudjībī. In 433/1042 he revolted against the ʿĀmirid ruler of Valencia, declared his independence and ruled the town as his own territory until his death in 443/1052. The town certainly prospered under him, but it prospered even more so under his son Abū Yaḥyā Muḥammad b. Maʿn b., Ṣumādiḥ, who took the title of al-Muʿtaṣim; it became a centre of culture, with one of the most famous of the literary courts of al-Andalus until the time of the Almoravids (see R. Dozy, in *Recherches*[3], 211-81). During the period of the *mulūk al-ṭawāʾif*, al-Mariyya maintained relations (though not always friendly ones) with the neighbouring *taifas* of Granada (see H.R. Idris, *Les Zīrīdes d'Espagne*, in *al-And.*, xxix [1964], 39-145), with Denia, Valencia, and even with Cordova and Seville. This had the effect of reducing the extent of the territorial possessions of the Banū Ṣumādiḥ.

Under the Almoravids, al-Mariyya achieved its fullest economic potential. It can be argued that it prospered most in the second half of the 5th/11th century and the first half of the 6th/12th century; then it suffered the first Christian conquest, in 1147, by Alfonso VII of Castile, which is celebrated in the *Chronica Adephonsi Imperatoris*. Its economic development and its military and naval importance showed itself in the commercial and industrial ventures that were undertaken and its growth as a city and artistic centre. Beginning with al-Idrīsī, many geographers from the 6th/12th to the 8th/14th centuries, including the compiler al-Makkarī, agree that the cloth and brocade (*dībādj*) produced there were as fine as the products of Cordova; the town became highly renowned for this and without rival in al-Andalus. Among the materials and brocades which had built up the reputation of the town's industry were cloth of gold (*washy* [*q.v.*]) (which was also made at Malaga) [*q.v.*], siglaton, baldachin, and all sorts of silk, which was known to be better (and more expensive) than that from other areas. There was an obvious eastern influence on the manufacture of textiles, as can be seen from the names given to some of the cloths, like *iṣfahānīs* and *djurdjānīs*, which sound Persian, and *ʿattābī*, which was probably ʿIrāḳī. Al-Zuhrī (*Kitāb al-Djaʿrāfiya*, ed. M. Hadj-Sadok, in *BEO*, xxi [1968], 101/206) mentions other white-coloured fabrics brocaded with gold, which, according to many sources, were favoured by the women of al-Mariyya for their garments. Other reliable authorities claim that there were 800 or 1,000 factories for *ṭirāz* in the town, and that there were as many looms for producing other fabrics as well. Naturally, this would have given employment to a considerable number of weavers.

Beside textiles, other industries included the building of warships (in the *dār al-ṣināʿa*) and the

manufacture of tools and weapons from copper and iron. Agricultural products of the region came especially from the valleys of the Andarax and the Almanzora (*wadī 'l-Manṣūra*) where there were olive trees, vineyards, a large variety of fruit trees, banana plantations and sugar-cane. The marble from the Macael quarries in the Sierra Filabres was particularly famous because it was used for covering plinths and for paving palaces, especially the one called *al-ṣumādiḥiyya* (see L. Seco de Lucena, *Los palacios del taifa almeriense al-Muʿtaṣim*, in *Cuadernos de la Alhambra*, iii [1967], 15-20; J. Bosch Vilá, *Mocárabes en el arte de la taifa de Almería?*, in *Cuad. Hist. Isl.*, viii [Granada 1977], 156). Mine-working in the area was to produce silver and gold; some writers say there were precious stones. The marble was also used to make columns, capitals, tombstones (*maḳbariyya*) and fountains.

From the time when the town was taken by the Christians in 1147 and its recapture by the Almohads in 1157, the commercial and cultural prosperity there dwindled. The most eminent citizens emigrated to North Africa, and several of the more densely populated and busier areas of the town were destroyed. Muḥammad b. Yaḥyā al-Ramīmī (or Rumaymī), who had recognised the authority of Ibn Hūd [see HŪDIDS], was to be assassinated in al-Mariyya. These factions and subsequent internal political struggles considerably weakened the influence of the capital and, after it had been incorporated into the kingdom of Granada by Muḥammad I in Shawwāl, 635/May-June 1238, it ended its Islamic life under the Naṣrids. There was a major attack on the town in August 1309 when it was besieged by the Aragonese of James II (see R. Basset, *Le siège d'Alméria en 709*, in *JA*, 10th ser., x [1907], 275 ff.; I.S. Allouche, *La relation du siège d'Alméria en 709 (1305-1310) d'après de nouveaux manuscripts de la Durrat al-ḥijāl*, in *Hespéris*, xvi [1933], 122-38; E. Lévi-Provençal, *Un "zajal" hispanique sur l'expédition aragonaise de 1309 contre Alméria*, in *al-And.*, vi [1941], 377-99). It continued to suffer from internal troubles and was involved in the dynastic rivalries and civil wars which weakened the kingdom of Granada and cast a shadow over the future of the Muslims of al-Andalus. Al-Zaghal, the uncle and enemy of Boabdil, took refuge there, and it was delivered into the hands of the kings of Castile on 22 December 1489.

(J. BOSCH VILÁ)

MARḲAB, observatory [see MARṢAD].

AL-**MARḲAB**, a fortress situated on the Syrian coast.

The name of al-Marḳab, from the root *raḳaba* "observe, watch", denotes any elevated site from which it is possible to see and observe, such as the summit of a mountain, of a fortified castle or of a watch-tower (*LA*, ed. Beirut 1955, i, 424-8; Yāḳūt, ed. Beirut 1957, v, 108-9). Arab authors generally call this stronghold al-Marḳab; also found are Ḳalʿat Marḳab and Ḥiṣn Marḳab. There are also Arabic transcriptions such as Mār Kābūs for Markappos, Mār Kābān for Marckapan, Mār Ghātūm for Margathum or Mārghat for Margat. In western works various spellings are encountered, including El-Marcab, Margat and Margath, Markab or Marqab.

1. Geography of the site. On current maps, the castle is situated at 35°27' E. by 35°10' N., between Lādhiḳiyya [*q.v.*] and Ṭarṭūs, standing at an altitude of 1,187 ft./362 m. at the summit of a broad and steeply-sloping basalt promontory, separated from a plateau of lava deposits. This barely accessible summit is one of the western foothills of the Djabal Anṣāriyya range which extends towards the north, evidence of very ancient volcanic activity marked by streams of basalt in the regions of al-Marḳab.

The castle affords a unique panorama towards the east over land consisting of calcareous hills with outcrops of quaternary and pliocene clay, the territory of the Assassins or Ḥashīshiyya [*q.v.*], and towards the west over the coastal plain which is fringed by basaltic sand and intended with small coves. At the foot of the castle there is a cove which is sheltered from the wind and capable of accommodating ships of limited tonnage; Walpole (*Travels*, iii, 289) noticed here in the 19th century some remains of masonry, possibly relics of mediaeval harbour installations. At this latitude the coast is one-and-a-half days' sailing distance from Cyprus.

The castle overlooks the main coastal road, at the point where the coastal expanse is narrowest. It is also at the foot of al-Marḳab that the road from Ḥamāt [*q.v.*] by way of Masyaḍ [*q.v.*] reaches the sea.

The barrier constituted by the basalt mass of al-Marḳab is skirted to the north by the Nahr Bāniyās, which is swollen by a prolific water-source upstream from Bāniyās, and to the south by the Nahr Markiya, which flows between al-Marḳab and Khirāb Markiya (ruins of Maraclea, Marachea); this coastal stream, according to *The initerary from Bordeaux to Jerusalem*, constituted the northern frontier of Phoenicia. According to William of Tyre, this place marked the frontier between the Principality of Antioch and the County of Tripoli.

2. History. Among the early Arab geographers and travellers who made mention of al-Marḳab, al-Idrīsī (*Opus geographicum*, 644, tr. Jaubert, 130) says that "it is a fortress built on a mountain inaccessible from all directions"; Yāḳūt says in his *Muʿdjam* that "it is a town and a castle overlooking the shore of the Syrian Sea. It protects the city of Bulunyās and the coast of Djabala [*q.v.*]. All those who have passed by it say that they have never seen anything of comparable might." At the beginning of the 8th/14th century, Ibn Baṭṭūṭa (i, 183) visited al-Marḳab and mentions it as one of the great castles of Syria constructed on the summit of a high mountain and recalls that Sultan Ḳalāwūn [*q.v.*] captured it from the Christians (in 684/1285). His contemporary al-Dimashḳī (ed. Mehren, 208) says that "Ḥiṣn al-Marḳab is an impregnable fortress on a 'tongue of land' overlooking the sea". Abu 'l-Fiḍāʾ is more laconic, saying only that "al-Marḳab and Buluniyās are situated on the coast of Ḥimṣ; al-Marḳab is the name of the castle overlooking the sea". Finally, al-Ḳalḳashandī, in the 9th/15th century, stresses that "al-Marḳab is mentioned neither in the *Taʿrīf* nor the *Masālik al-abṣār*"; he used material from Abu 'l-Fiḍāʾ in his *Ṣubḥ* (iv, 145-6), saying that "it is a fortress near the coast of "the Roman Sea" (*al-Baḥr al-Rūmī*) in the

fourth region and according to the *Zīdj*, (corrective tables of the Ptolemaic measures, one dating from 360/961, the other from 691/1292) situated at long. 60°, lat. 34°45'. It is a powerful and finely-constructed fortress overlooking the sea; at a distance of about one parasang, the town of Bilinyās (sic = Bāniyās) is located."

According to the chronicle of Abū Ghālib Humām b. al-Faḍl al-Muhadhdhib al-Maʿarrī, quoted in Yāḳūt, and according to the *Taʾrīkh ak-Ḳilāʿ wa 'l-ḥuṣūn* of Usāma b. Munḳīdh quoted in Abu 'l-Fidāʾ (ed. Reinaud and de Slane, 255), the fortress was built by the Muslims in 454/1062. Al-Dimashḳī (ed. Mehren, 208) states that al-Markab was constructed with stones from previous ruins, often with well-cut blocks found on the site, and attributes its foundation to al-Rashīd. It is hardly probable that the person in question is Hārūn al-Rashīd, considered by Van Berchem (*Voyage*, 304, n. 4) to be a proverbial expression, and even less likely is the opinion of G. Le Strange (*Palestine*, 506) that the reference is to Rashīd al-Dīn (Sinān) a contemporary of Ṣalāḥ al-Dīn. It is not impossible that the Rashīd mentioned by Usāma b. Munḳidh and then by al-Dimashḳī could be Rashīd [al-Dawla Maḥmūd b. Naṣr], who was Mirdāsid *amīr* of Ḥalab in 452-3/1060-1 and again from 454/1062 to 468/1075, a supposition which is not contradicted by the secondary use of ancient materials and which is confirmed by the presence of relics dating back to the 5th/11th century. The citadel was intended to block the advance of the Byzantines, who controlled the province of al-Anṭākiya, towards the south.

In 494/1101, al-Markab and its hinterland were in the hands of the Banū Muḥriz, who were also in command of the castle of Ḳadmūs. In the course of an expedition conducted in 497/1104 by the Byzantines against the Syrian coast, the Admiral Cantacuzenus, having been repulsed before the citadel of Lādhiḳiyya, disembarked at Buluniyās (Bāniyās) and took possession, according to Anna Comnena in the *Alexiad* (ʿΑλεξίας, ed. B. Leib, III, liv, XI, 48), of the important strategic point known as al-Markab (τὸ καλούμενον Μαρχαπιν, the Marchapin of the historians) and of other fortified sites in the region such as Sāfīthā (τό τε 'Αργυρόκαστρον) and Djabala (τὰ Γάβαλα).

In 506/1116-17 the heights of al-Markab represented the frontier of the principality of Antioch. In 510/1116-17 the crops failed as a result of inclement weather and drought and the situation was aggravated by financial inflation; Ibn Muḥriz, master of al-Markab, was placed in an increasingly difficult position, in that he did not have the means to maintain the citadel and was threatened by the Franks. He even went to the extent of offering to cede the castle to Ṭughtakīn. The Atabeg of Damascus sent the *ḳāḍī* Ibn Ṣulayḥa, the former master of Djabala, to his aid. On the advice of Ṭughtakīn, Ibn Ṣulayḥa took possession of the fortress and allowed the family of the Banū Muḥriz to remain there. The same year, Roger of Antioch, having concluded a treaty with the eunuch Luʾluʾ who governed Aleppo, marched against al-Markab. Pons de Saint-Gilles, Count of Tripoli, came to his aid, but following a quarrel, they abandoned the siege.

Soon afterwards the Atabeg of Damascus negotiated an agreement with the Franks, ceding al-Markab in exchange for Rafanea and the cessation of their attacks on Ḥamāt and Ḥimṣ. Ibn Muḥriz resisted the attacks of Renaud Mazoyer, the master of Bulunyās/Bāniyās, eventually negotiating with him in 511/1117-18. Renaud took possession of the castle, promising Ibn Muḥriz that he would be allowed to remain, but the new castellan expelled him twenty-five days later, allotting to him in exchange the fortress of Manīḳa in the Djabal Baḥra.

Thus Renaud Mazoyer, High Constable of the principality of Antioch, belonging to an important family mentioned in the *Lignages*, became the first Frankish governor of al-Markab, with territory embracing the mountainous hinterland as far as Abū Ḳubays, which overlooked the valley of the Ghāb [*q.v.*]. Frankish and Armenian settlers were established at al-Markab.

After the death of Roger of Antioch at the battle of Ager Sanguinis at Sarmada on 17 Rabīʿ I 513/28 June 1119, the situation in the principality became tense, and the Mazoyers had difficulty retaining control of the stronghold.

If the Syrian historian al-ʿAẓīmī [*q.v.*] is to be believed, it seems that the Muslims occupied al-Markab between 525/1130 and 534/1140 during the dispute between the Franks of Antioch and the Franks of Tripoli. The situation caused anxiety to the Franks, as freedom of movement in the coastal area was threatened. According to the Genoese historian Caffaro (d. 1166), the castle of al-Markab was taken from the Muslims by trickery in 534/1140 and seized by Renaud II Mazoyer, who proceeded to undertake fortifications, the relics of which may be found among the construction works of 582/1186. These fortifications had been demanded of him by the Prince of Antioch, anxious to reinforce the southern frontier of his domain.

In 551/1156 and 552/1157 several earthquakes affected the Syrian coast, but the most violent was that of 12 Shawwāl 565/29 June 1170 which was felt throughout Syria and in Cyprus and which, having damaged the castles of the Djabal Anṣāriyya, cannot have spared al-Markab.

In 577/1181 Bohemond III, excommunicated by the Latin Patriarch of Antioch Aimery de Limoges, was obliged to deal with a revolt on the part of the latter's partisans, among whom was Renaud II Mazoyer, who seems to have received the Patriarch at al-Markab. In order to meet the cost of maintaining the castle and its garrison, the castellan of al-Markab was obliged to sell, piecemeal, to the Order of the Hospitallers, his huge domains, part of which lay in the Rūdj between Anṭākiya and Afāmiya [*q.v.*]. After the death of Renaud II, his son Bertrand Mazoyer, having insufficient resources at his disposal, renounced his claims to the castle; on the advice of the Patriarch Aimery and with the consent of the Prince of Antioch, he ceded to Roger de Moulins, Grand Master of the Hospitallers, by an act of donation concluded at al-Markab on 9 Dhu 'l-Ḳaʿda 581/1 February 1186, the castle with all its territories and dependencies including Bāniyās, Ḳadmūs, ʿUlayḳa and Abū Ḳubays. On 30 June 1186 Pope Urban III appointed Brother Henry as castellan.

"The fief of Markab corresponded approximately to the bishopric of Boulouniyas (Valania); after 1188 the bishop of Valania and his hierarchical superior, the archbishop of Apamea, were constrained by the military situation to take refuge within the walls of Markab" (Cl. Cahen, *Syrie*, 519).

After the victory of Ḥiṭṭīn [*q.v.*], Ṣalāḥ al-Dīn was intent on the reconquest of Syria. In Djumāda I 584/July 1188, coming from Ṭarṭūs, he was obliged to pass by the foot of al-Markab on the narrow coastal road dominated by the Burdj al-Ṣabī, linked to the castle by a wall. In his advance along the coast he had been followed by the Norman fleet of Sicily,

commanded by the Admiral Margaritus of Brindisi. The ships moored in the cove of al-Marḳab, and their crews showered missiles on the Ayyūbid army, which was only able to continue its northward march with the protection of a veritable palisade erected along the sea-shore, as described by ʿImād al-Dīn al-Iṣfahānī (tr. Massé, 125-6). In the principality of Antioch, only the city itself and the fortress of al-Marḳab remained in the hands of the Crusaders at the end of Ṣalāḥ al-Dīn's campaign.

The Prince Isaac Comnenus, who became the independent ruler of Cyprus in 1184, gave the Crusaders an unfriendly reception on his island and was taken prisoner, at the battle of Tremithoussia on 5 Djumāda I 587/31 May 1191, by Richard Cœur-de-Lion, who incarcerated him at al-Marḳab, where he remained until his death in 591/1195.

By means of the tribute levied on the Assassins of Djabal Bahra and their own resources, the Hospitallers were able, after 588/1192, to restore the defences of al-Marḳab. This site, with Ḥiṣn al-Akrād, became one of the most important items in the defensive apparatus of the Crusaders against the Muslim domain, an apparatus comprising ʿAkkār, ʿArḳa, Ḳulayʿat, Sāfīthā (Chastel Blanc), ʿUrayma, Ḳalʿat Yaḥmūr (Chastel Rouge) and Ṭarṭūs, in addition to the towers and subsidiary points linking these various places.

In 601/1204, a general chapter of the Order of the Hospitallers was held at al-Marḳab under the presidency of the Grand Master. From the beginning of the 7th/13th century, the garrison of al-Marḳab was in a state of constant conflict with the chieftain of Aleppo. In 601/1204-5, al-Malik al-Ẓāhir Ghāzī [*q.v.*], whose domain bordered on that of al-Marḳab, sent an army to attack the castle; several towers were destroyed but when its leader was killed by an arrow the army withdrew.

In the account of his travels in Syria in 1212, Wilbrand von Oldenburg gives the most complete description available of al-Marḳab: "A huge and very strong castle, defended by a double wall and surrounded by numerous towers. It stands on a high mountain. This castle belongs to the Hospitallers and is the most powerful defence of the whole country... The "Old Man of the Mountains" and the Soudan of Aleppo pay to it every year a tribute of 2,000 marks. Each night, four Knights of the Hospital and twenty-eight soldiers mount guard. In addition to the garrison, the Hospitallers maintain 1,000 persons there. The territory surrounding the fortress yields every year crops in excess of 500 loads of sheaves. The provisions gathered there are sufficient to last five years." (Laurent, *Peregrinatores*, 170). The same author informs us that "for quite a long time, Margat has been an episcopal seat" and that the bishop of Valania (Bāniyās) had transferred his residence there. In this period, pilgrims embarked from al-Marḳab en route for Suwaydiyyya in the Principality of Antioch, with the aim of avoiding the Muslim towns and territories of the coast.

On the eve of the Fifth Crusade, in 613/1216, Pope Honorius III, successor to Innocent III, sent Jacques de Vitry to preach the Holy War in Syria, where he visited all the Crusaders' strongholds and praised especially the might of al-Marḳab. In the same period, Yāḳūt wrote that al-Marḳab "is a castle such that all men declare that they have never seen its equal" (v, 108).

The following year, in Djumāda II 614/September 1217, Andrew II, king of Hungary, disembarked at ʿAkkā with a Crusader army; at the beginning of Ramaḍān 614/early December 1217 he suffered a defeat before Mount Tabor (Djabal Thawr) and subsequently returned to Europe. Before leaving Syria, he halted at al-Marḳab; he was impressed by its defences and made a substantial donation towards their maintenance. At the end of 614/early 1218, the castellan of al-Marḳab enlarged his territory and made himself master of Djabala, whose ruler and inhabitants were obliged to perform an act of allegiance to the Hospitallers.

Having refused Frederick II, the excommunicated German Emperor, any support for his crusade in 1229, the Hospitallers received no aid from him towards the upkeep of al-Marḳab and Ḥiṣn al-Akrād.

In Rabīʿ II 628/February 1231, the troops of Aleppo began once more to pillage the neighbourhood of al-Marḳab; a truce was concluded at the end of spring 628/1231. In 639/1242, the truce was revoked and the Grand Master of the Order, Pierre de Vieille Bride, resumed a campaign of harassment against the territory of Aleppo from al-Marḳab.

Towards the middle of the 7th/13th century, al-Marḳab became an official episcopal seat when the bishop of Valania (Bāniyās) transferred his residence there.

From 659/1261, Sultan Baybars [*q.v.*] launched offensives against the strongholds of the Hospitallers, who paid a heavy price for their defence. The frantic appeals of the Grand Master of the Order, Hugues Revel, went unanswered. But, inasmuch as the Mamlūk sultans feared a revival of the Crusades and an expedition of Christians from Cyprus or from the West, al-Marḳab, like Ḥiṣn al-Akrād, retained its strategic value. An agreement was reached between the Hospitallers and the Templars regarding the possessions of the Hospitallers in the region of al-Marḳab.

In 665/1267, a treaty was concluded between Baybars and Hugues Revel in regard to these two fortresses for a period of ten years, ten months and ten hours; the enforcement of his treaty, accompanied by considerable sums of money, was supervised by the *nāʾib* of the sultan at Ḥimṣ. In 666/1268, Baybars took possession of Antioch, and seized Djabala and Lādhiḳiyya. In 1270, the sultan pillaged the neighbourhood of al-Marḳab and of Ḥiṣn al-Akrād. In Shaʿbān 669/March-April 1281, after the capture of Ḥiṣn al-Akrād by Baybars, the Hospitallers were left with only one fortress, al-Marḳab; the Grand Master of the Order was only able to obtain a truce of ten years and ten days—negotiated through the intermediary of the *amīr* Sayf al-Dīn Balabān al-Dawādār (*Manhal*, no. 689)—in exchange for the cession of half of the coastal region (*sāḥil*) of Ṭarṭūs, al-Marḳab and Bāniyās and on condition that no new fortresses were to be constructed.

In Djumāda II 678/October 1279, taking advantage of the unrest which broke out in Syria with the accession of Sultan Ḳalāwūn, the Hospitallers launched a raid in the direction of Buḳayʿa [*q.v.*], but withdrew when attacked by the Muslims. On reaching the coast, they turned and routed the Muslims. After the defeat of the Armeno-Mongolian troops, the sultan commanded the *amīr* Sayf al-Dīn Balabān al-Ṭabbākhī (*Manhal*, no. 692), governor of Ḥiṣn al-Akrād, to lay siege to al-Marḳab. In Shawwāl 679/February 1281, the Hospitallers made a sortie and repelled the Muslims, inflicting heavy losses. On 22 Muḥarram 680/13 May 1281, a truce of ten years and ten months was concluded between Ḳalāwūn and Nicholas Lorgne, the Grand Master of the Hospitallers.

In autumn 680/1281, the latter appealed in writing for help from Edward I, King of England; in September 1281 a Mongol invasion took place in Syria. Ḳalāwūn succeeded, in Djumāda II/October, in repelling the Mongols near Ḥimṣ, whither the Hospitallers of al-Marḳab had sent a contingent to aid the Ilkhān.

In 682/1283, the pilgrim Burchard de Mont Sion mentions in his account the "castrum Margath"—whose defensive might he extols—as belonging to the Hospitallers of St. John and as the residence of the Bishop of Valania (Laurent, *Peregrinatores*, 30, 70).

In 1285, the sultan sought to punish the Hospitallers of al-Marḳab for the assistance that they had provided to the Mongols. Having assembled at Damascus, in great secrecy, a considerable quantity of siege materials, Ḳalāwūn appeared before al-Marḳab on 10 Ṣafar 684/17 April 1285. The siege lasted 38 days, and was especially remarkable for the work of the Muslim sappers and miners who dug numerous tunnels under the walls. An exploding mine caused the collapse of the angle of the salient (*bashūra*) near the Ram Tower at the southern extremity and sowed panic among the attackers, who withdrew on 17 Rabīʿ I/23 May. Discovering the number of tunnels dug around the castle, the Hospitallers abandoned the struggle; the *amīr* Fakhr al-Dīn Muḳrī received the surrender, and Ḳalāwūn entered the castle on 19 Rabīʿ I/25 May, having given *amān* to the vanquished. Aware of the strategic importance of al-Marḳab, the sultan, after installing a strong garrison, repaired the defences as is indicated by the large inscription on white marble (cf. *RCEA*, xiii, no. 4858). Among the eye-witnesses to the siege were Abu 'l-Fidā', then eleven years old, and his father, as well as the historian Ibn ʿAbd al-Raḥīm, who completed the *Chronicle* of Ibn Wāṣil. The best account of the capture of al-Marḳab is to be found in the biography of Ḳalāwūn entitled *Tashrīf al-ayyām wa 'l-ʿuṣūr bi-sīrat al-sulṭān al-Malik al-Manṣūr* (see the text in M. van Berchem and Fatio, *Voyage*, 310-15, where the French translation by Reinaud is also provided).

In the treaty concluded on 1 Rabīʿ II 684/6 June 1285 between Ḳalāwūn and Leo III of Armenia, al-Marḳab is mentioned among the possessions of the Mamlūk sultan; the district (*niyāba*) of al-Marḳab is the sixth dependency of the *mamlaka* of Ṭarābulus. The maintenance of the fortress was charged to the private resources of the sultan. Curiously, al-Marḳab is mentioned neither in the *Masālik* of al-ʿUmarī (mid-8th/14th century), nor in the *Taʿrīf*. When Ibn Baṭṭūṭa visited al-Marḳab, he found there outside the walls a suburb used as a stopping place by foreign travellers, who were not permitted to enter the castle.

At the end of the 8th/14th century and the beginning of the 9th/15th (*Ṣubḥ*, xii, 463, 464) the *nā'ib* of Ḳalʿat al-Marḳab was an *amīr* of twenty; he was *wālī* of the eastern regions and had the duty of ensuring night and day the defence of the coast, the maintenance of observation-posts (*adrāk*) and guard-towers (*shawānī*) and was also required to deter potential enemies, the place being only a day's sailing time from Cyprus.

In the 9th/15th century, in the *Zubda* (ed. J. Gaulmier, 71), Khalīl al-Ẓāhirī mentions among the important sites of the province of Ṭarābulus, "the fortress of Marḳab which is clearly impregnable and controls a territory containing numerous villages".

In the course of his travels in Palestine and Syria in 842/1476, the sultan Ḳā'itbāy passed by the foot of al-Marḳab in Djumādā II/mid-October (Devonshire, 10), but did not halt there.

From the time of the period of the Burdjiyya Mamlūks [*q.v.*], al-Marḳab is primarily mentioned in the texts in its capacity as a state prison. Among the unwilling guests of this castle were: Sayf al-Dīn Aynabak al-Badrī, *atabak al-ʿasākir* (*Manhal*, no. 622; Ibn Taghrībirdī, *Nudjūm*, xi, 154) and his kinsman Sayf al-Dīn Ḳaratāy Ibn ʿAbd al-ʿAzīz al-Ashrafī (*Manhal*, no. 1850), both imprisoned in 778/1376-7. Djardamur, known as Akhū Ṭāz (*Manhal*, no. 831; Ibn Ḳāḍī Shuhba, 84) was sent there on the order of Ḳidjmās in Shaʿbān 784/October 1382, an experience which did not prevent him becoming governor of Damascus in 791/1389 (Laoust, *Governeurs*, 16). In 785/1383, Sayf al-Dīn Aḥmad Aḳbughā b. ʿAbd Allāh al-Dawādār (*Manhal*, no. 478; Ibn Ḳāḍī Shuhba, 106, 113; *Nudjūm*, xi, 202, 303) joined him there and was freed a few months later at the same time as the former.

In 791/1389, three *amīrs* were incarcerated there: Naṣr al-Dīn Ibn al-Hadhbānī, *nā'ib* of Ḥamāt (Ibn Ḳāḍī Shuhba, 291), Timurbughā known as Mintāsh (*Manhal*, no. 722) and Bahādur al-Shihābī al-Ṭawāshī (*Manhal*, 702) who arrived there in Djumādā II/June.

In 800/1397-8, Sayf al-Dīn Shaykh Ibn ʿAbd Allāh al-Ṣafawī al-Khāṣṣakī (*Manhal*, no. 1184) arrived as a prisoner at the castle and died there a year later. The *amīr akhūr kabīr* Īnāl Bay b. Ḳidjmās al-Ẓāhirī (*Manhal*, no. 621) was imprisoned there in 805/1402-3. In the same year, Sūdūn min ʿAlī Bak al-Ẓāhirī known as Ṭāz (*Manhal*, no. 1126; *Nudjūm*, xii, 177, 298) was transferred from the prison of al-Iskandariyya to al-Marḳab. Sayf al-Dīn Baktimur Djillak al-Ẓāhirī, *nā'ib* of Ṭarābulus (*Manhal*, no. 676) was present there for a short period; imprisoned in 810/1408, he was freed the same year. Sayf al-Dīn Manku Bāy al-Azdamūrī (H. Sauvaire, *Description de Damas*, in *JA* [1895], xi, 308, no. 135) was interned there for a period of time on the orders of al-Malik al-Mu'ayyad Shaykh and then released in 818/1415. The *amīr* Ḳānī-Bay b. ʿAbd Allāh al-Muḥammadī (*Manhal*, no. 1811; Darrag, *L'Égypte sous Barsbay*, 14) governor of Damascus who, following a rebellion in 818/1415 was recalled to Cairo, was appointed governor of Tripoli in Rabīʿ II 821/May 1417; shortly after this he suffered a defeat at the hands of the Turcomans, was dismissed and imprisoned at al-Marḳab, where he stayed for two years before being freed. Finally, in Rabīʿ II 905/November 1499 (Ibn Iyās, *Mamelouks*, 466), the sultan al-Malik al-Ẓāhir Ḳānsawh ordered the imprisonment at al-Marḳab of the *amīr* Khayr-Bak, prefect of the province of al-Gharbiyya, but then released him.

After his return from Florence, in autumn 1027/1618, the *amīr* Fakhr al-Dīn b. Maʿn [*q.v.*] took steps to strengthen his power in Syria; he succeeded in gaining the support of a number of places which had belonged to Yūsuf Ṣayfā, including al-Marḳab.

Among the travellers of the 18th century, Richard Pococke, who passed through Syria *ca.* 1740, noted in his *Description* (ii, 200) that the castle of al-Marḳab, of which he gives a good description, was the residence of the governors of the region and that it could be reached from Bāniyās in an hour and a half by way of a steep incline, in a south-easterly direction. In his *Voyage* (ed. Gaulmier, 284), Volney mentioned, in the Syrian coast "various villages, which were formerly fortified towns" including "the precipitous site of Merkab". He gives no description of it and in fact does not seem to have seen it.

3. Description of the fortress. Numerical and alphabetical references are those of the plan drawn up by E. G. Rey (*Arch. milit.*), copied by Max

van Berchem and Ed. Fatio (*Voyage*) and by P. Deschamps (*Terre Sainte Romane*, 140-1).

The configuration of the terrain is responsible for the plan of the castle, which is shaped like an isosceles triangle with its base line facing north. The latter measures 350 m., while the east and west walls each measure 400 m.; the area is more than three hectares. In the southern part is the "body of the site" separated from the remainder of the surface by a wall; the space located to the north of this internal defence is the "bailey", used as a farmyard and containing some outbuildings, enabling the population and the livestock of the immediate vicinity to be gathered within the walls in the event of hostilities.

On the west from of the perimeter wall of al-Marḳab, some 50 m. above the southern point of the triangle, is a rectangular tower (1), in the short southern side of which a door is located, giving access to the castle; further along are two square towers (2,3) both typical of the architecture of the period between 1140 and 1186. At approximately the mid-point of this slightly concave face, is a large square barbican (A) to which access is gained by a stepped north-south ramp, then turning at a right-angle, by a small west-east bridge with three arches above the ditch. This entrance permitted access to the "bailey" which extended towards the north and east and to the entrance giving access to the "body of site", the castle as such. It is fitted with a loggia supported by four corbels; the door is framed with two archery apertures and provided with a trap-door and a portcullis. Continuing towards the north, are found four semi-circular towers (4,5,6,7) lacking their battlements and curtains and in a poor state of repair. In the north-west angle is a large tower (8) which was restored after the siege of 1285. The north face of the perimeter, slightly concave, measures 350 m. This face is in a badly ruined state, with the relics of two towers, one in about the centre and the other (9) further east, 75 m. from the larger tower in the angle (10).

The eastern face is convex as far as tower 16. As on the remainder of the diagram, the perimeter wall with its archery apertures is double; it overlooks quite steep inclines and juts out at this point over a ditch, both sides of which are bricked from a depth of 5 to 7 m. There are the remains of five towers (11 to 15). It is from tower 16 that there began the east-west wall which separated the "body of the site" from the huge expanse of the "bailey", and the stones of which were used in the 19th century by local peasants for the construction of their houses.

The semi-circular tower R, 11.2 m. in diameter, constructed astride the double perimeter wall, comprises several stories. On its defensive front it has a stone "jacket" 17 m. in diameter (16). With the donjon (L), it is the finest construction of al-Marḳab. To the north of this tower, there was a defensive emplacement (Q) and a square tower (P). In 1211 the perimeter towers of al-Marḳab greatly impressed Wilbrand von Oldenburg, who said of them that they were "built to support the heavens rather than to provide defence".

By the entry A, there is access to the "bailey"; proceeding further east, a second door (O) is found, also provided with solid defensive structures and its right-angled passage opening on the courtyard (G). The latter is surrounded by a "series of buildings suitable for the accommodation and subsistence of a large garrison"; its southern side was limited by the "body of the site".

To the west, there is a building with a large vaulted hall (J), and on the first floor is a room (F). "From the window of this room," wrote P. Deschamps (*Terre Sainte*, 169), "there is an excellent view of the sea." Opposite the large hall, on the facing side of the court-yard, are some buildings "which were places of domestic use. In one of them, are two bread-ovens" and two millstones. The castle maintained five years' reserve of food.

Built on to the south-east wall of these premises (I), there is a building (S) with two superimposed stories, cradle-vaulted and 46 m. long to correspond with the tower (R).

To the south of the "body of the site" are located a chapel (H), a donjon (L), a hall (K) and two other halls (M, N).

The Gothic chapel (H) dates from 1186. It is of rectangular shape with two doors, the one to the north opening on the courtyard (G), the other an ogival portal opening to the west and allowing descent to the parvis by way of a flight of steps. The nave, 23 x 10 m., with walls more than 5 m. thick, has two spans of arched ribs; it is larger than that of Ḥiṣn al-Akrād. Two small sacristies open on the sides of the chancel, that on the north side apparently showing the remnants of a fresco. This chapel has retained foliated capitals which resemble those of the first stage of construction of the cathedral of Ṭarṭūs [*q.v.*]. Following the Muslim occupation, a *miḥrāb* was constructed in the south wall.

The donjon (L), built on the southern angle of the castle, is a powerful tower with circular south front facing a nearby and potentially threatening escarpment. This tower is 21 m. high with basalt walls 5 m. thick, and in the interior are the remnants of a great hall.

Lower down, before the donjon, is a projecting structure (C) the base of which is protected by a "batter". The south face, 21 m. in breadth, is rounded in its central section—hence, by allusion to the prow of a ship, its technical name of "Ram Tower". At the top, under the watch-posts of this tower, a monumental inscription (*RCEA*, xiii, no. 4858), on a long band of white marble, written in enormous Mamlūk *nasḵẖī* characters, commemorates its construction by sultan Ḳalāwūn in 684/1285.

A huge building (K) in three stories was constructed at the same time as the donjon (L), as is proved by "the common staircase which serves their upper rooms". This structure, shaped like a parallelogram, has three archery apertures opening towards the south-east and three doors, including a small one opening to the west on a triangular space giving access to the donjon or to the parvis of the church and the courtyard.

To the west of the donjon and the building (K), there are two buildings in two stories of vaulted rooms: M, in which there is a room "decorated with finely sculpted marble capitals", and N, closely linked to the donjon with which it shares a partition and a common passage.

The *birka* at al-Marḳab, as in many other places, is located outside the perimeter wall. In this case it is a stone-built reservoir 40 m. long and 10 m. wide; currently, it is less than 4 m. deep. Laid out on a north-south bearing, it was fed with water from mountain springs situated to the north. In times of peace, it supplied the needs of the men and livestock living within the perimeter of al-Marḳab. During sieges, the garrison made use of a reservoir and above all a well in the interior of the castle.

Ernest Renan, in 1863, referring to the testimony of his two colleagues, Thobois and Lockroy, wrote (*Mission*, 106) in regard to al-Marḳab: "Here there is

no sculpture or fine decoration, the design is that of a French 12th century castle. It is evident that in Syria the Crusaders did not have a uniform style of construction. Each of the nations which took part in its building followed its own taste, and all were subject to the constraints of the materials which they found."

According to the testimony of W. N. Thomson, to which Ritter (*Erdkunde*, xvii, 883) and M. van Berchem (*Voyage*, 305 n.), refer, "it seems that the fortress was still in a good state of repair before the middle of the 19th century".

4. The village of al-Markab. In an assessment of tithes, dating from 589/1193, it is noted that al-Markab exported must, wine, sumac, almonds, figs and pottery. The same products are mentioned in an agreement signed between the Order of the Hospital and the Templars in 630/1233. The "wine of Margat" was extolled by the traveller Burchard de Mont Sion at the end of the 13th century.

This is probably the suburb, built to the north and east at the foot of the slopes of the castle, which is mentioned by Ibn Baṭṭūṭa (i, 183). It was in the spring of 726/1325 that the latter, coming from Lādhiḳiyya, passed before the fortress of al-Marḳab, of which he said that it resembled Ḥiṣn al-Akrād, constructed on a high eminence; he noted that it was forbidden to enter the castle and that foreigners were obliged to halt in an exterior suburb.

In the early 19th century, the castle of al-Marḳab does not seem to have greatly attracted the interest of travellers. When George Robinson visited Syria and Palestine in 1828, he took the coastal road and passed through Bāniyās on his way to Tripoli; he marked al-Marḳab on his map, but made no mention of it in the text of his account (ii, 94).

The Ottoman *ḳāʾimmaḳām* resided in the castle of al-Marḳab, administrative centre of the district of the same name which comprised some 1,500 inhabitants, for the most part Nuṣayrīs. In 1884, at the request of the *Ḳāʾimmaḳām*, the seat of government was transferred to Bāniyās.

In 1893, according to V. Cuinet, the *ḳaḍāʾ* of al-Marḳab was situated to the south of the *sandjaḳ* of Lādhiḳiyya; it was then bounded to the north by the *ḳaḍāʾ* of Djabala, to the east by the *vilāyet* of Syria, to the south by the *sandjaḳ* of Tripoli and to the west by the Mediterranean. This *ḳaḍāʾ* was divided administratively "into three nahiés which are *Marqab*, *Qadmous* and *Ghaouabi*. It contains 393 towns, villages and hamlets. The nahiés are administered directly by the caïmakam (deputy governor), with the exception of that of Qadmous which has a resident mudir in a fort of the nahié of Ghaouabi" (Cuinet, 169-70).

The total population of the *ḳaḍāʾ* rose to 39,671 inhabitants, including 27,121 Anṣāriyya. There were almost 200 schools there for 2,060 pupils. The main agricultural products were olives and onions, tobacco and silk which was sold for the most part to merchants in Beirut. Also found in the *ḳaḍāʾ* of al-Marḳab was the raising of livestock, especially goats.

In 1895, Max van Berchem and Ed. Fatio noted (*Voyage*, i, 308) that "the mosque, recognised from a distance by a cupola and a minaret-lantern white-washed with lime, contains some Arabic inscriptions. The most important are two decrees announcing the abolition of taxes, promulgated by two governors of the province of Tripoli, one under Sultan Barqūq in 795/1393, the other under Sultan Jaqmaq in 868/1463" (Wiet, *Décrets*, nos. 8, 166).

In 1914 al-Marḳab was the regional centre, as it was again in 1920. Between 1920 and 1937, this *ḳaḍāʾ* comprised three *nāḥiyas*: al-Marḳab, Ḳadmūs and Ennaya. In 1938 there were, between Bāniyās and al-Marḳab, five Sunnī villages, of which one, close to the foot of the castle comprised 832 inhabitants in 1945. These villages were dependent upon the *ḳaḍāʾ* of Bāniyās. In the neighbourhood there were Maronite, Greek Catholic and Greek Orthodox villages.

Since 1968 this region has experienced considerable economic prosperity with the development of the I.P.C. pipeline and the petroleum port of Bāniyās.

5. The isolated tower. At a distance of 1,500 m. in a direct line from the castle, in the coastal plain, on an isolated hillock, stands a tower called Burdj al-Ṣabī ("Tower of the Boy").

This is a massive square guard-tower, 15 m. high, constructed of blocks of black basalt, held together with white mortar. On each face are constructed five archery apertures 2 m. high in walls 2.8 m. thick. A low door opens in the south-west face, giving access to a groin-vaulted hall; in one of the walls a staircase is constructed, leading to an upper room and thence to a terrace. This guard-tower was closely linked to the castle; its role was to watch over the small bay of the port of al-Marḳab and to control the coastal road. It is possible that there was a tunnel linking the tower to the castle, permitting the garrison, in time of siege, an outlet to the road or to the port.

The traces of a long defensive wall, which was covered over, are still visible; apparently in the Middle Ages it linked the coast to the castle. The road passed through a gate in the wall and, in all probability, there would have been a customs-post here.

6. The place of pilgrimage. Nearby, 150 m. from the goat to the south of the castle of al-Marḳab, is a cave called "el Basiyeh" where, according to popular belief, the Virgin Mary sheltered with the Infant Jesus. At the end of the 19th century this was a place of pilgrimage much visited by the Christian and Muslim inhabitants, especially on 8 September, feast of the Nativity of the Virgin.

MĀRK(I)SIYYA, Marxism.

1. *Terminology.* Marxism is denoted in numerous Islamic languages by a pure borrowing from Anglo-French forms, already adopted by the Russian: *marksizm* (or *marksism*) in Turkish, Persian, Pus̲h̲tu, Uzbek, etc. (Albanian *marksízëm*). Elsewhere, an abstract form has been derived from the name of Karl Marx: Arabic *mārksiyya* (often *mārkisiyya* on account of the antipathy of the phonological system to a succession of three consonants), Urdu *mārks-vād* ("tendency of Marx"). In some languages there is a distinction, as there is in Russian, between an individual Marxist, *mārksist*, and a Marxist concept or practice, *mārksīstī* in Persian, Pus̲h̲tu etc., *marksīstīk* in Uzbek (Russian *marksistski* as opposed to *marksist*). In Arabic, both adjective and substantive are *mārksī*. On the same model, more recently terms have been coined for "Marxism-Leninism", "Marxist-Leninist" etc.

2. *The concept.* In the Muslim world as elsewhere, that which is called Marxism is most often conceived as a complete doctrine claiming to explain the world and society, upheld by a school of thought and by a social and political movement designed to bring into reality the conclusions which it draws from this doctrine. There are orthodox forms of the doctrine and of the movement, in other words forms consistent with the thought of the founders (Karl Marx, 1818-83 and Friedrich Engels, 1820-95) and with the reality of things, as opposed to deviant, heretical and erroneous forms. This orthodox concept, official doctrine in the USSR, is almost universally adopted, among other places, in the Muslim world, following the tradition of religious or classical religious tendencies attached to a particular founder (cf. *mānawiyya, ḥanafiyya*, etc.). But its supporters ultimately make of "Marxism" a particular (though very general) science, like physics.

Specialists without affiliation to a "Marxist" organisation tend towards a quite different vision. "Marxian" ideas (those of Marx and Engels) in questions of sociology, economics, philosophy, politics, etc., qualified, fluctuating and often recast by themselves, have formed the basis of multiple doctrinal syntheses, starting with Engels himself. Groupings of political and social campaigners have set themselves up, declaring that they take as their guide one of these syntheses which they claim to be the sole legitimate interpretation, a "scientific", complete and consistent doctrine. One of these groupings, the Communist Bolshevik Party of Russia, on coming to power in Russia in November (October in the Julian calendar) 1917, codified under the title of Marxism-Leninism the interpretation propounded by its leader Vladimir Ilič Ulyanov, known as Lenin (1870-1924). Under its direction, a large number of Communist Parties were formed, united in the Communist International (Komintern according to the abbreviated Russian form) between 1919 and 1943, and some of these gained power after 1945. Differences of interpretation have continued to appear in these parties (whether in power or not), with dissident groups and parties seceding from them.

It is not to be denied that there are common traits in all these doctrinal syntheses, in certain ideas which are the basis of them or which derive from them. It is only in this sense that it is possible to speak of a "Marxism" which would encompass the many variants. On the level of history, it is also possible to speak of a Marxist ideological movement, comprising numerous branches, derived in the final analysis from the ideas and activities of Marx. Clearly, these terms should be used with caution.

3. *Knowledge of Marx and of Marxism before 1917.* In the 1890s, when there was for the first time talk of "Marxism" or "Scientific Socialism" as a complete and coherent doctrine, there emerged, within the vast

European socialist movement, organisations calling themselves "Social Democrats" (united after 1889 in the Second International) which claimed inspiration from this doctrinal synthesis and tolerated numerous variations.

In the first decade of this century, a few isolated intellectuals from the Muslim world became aware of these ideas in Europe, through reading or through contact with organisations. Thus, in Paris, the Tatar student from Simbirsk, Yūsuf Akčura, who published in 1902 in the Young Turk periodical *Shūrā-yi ümmet* (Cairo-Paris) an economic analysis of the Eastern question with reference to Marx, and the Copt Salāma Mūsā in 1908. For them, as for many others, Marx was an eminent socialist thinker alongside others.

In the Russian empire, the Russian Social Democratic Labour Party, founded in 1898, encompassed or influenced Marxist factions and study groups among Muslim intellectuals and workers, at Kazan from 1902 (among Tatars) and at Baku from 1904 onwards (with Iranians, Armenians, Georgians, etc.). At Baku, one group adopted the name of "Muslim Social Democratic Party *Hümmet*" (with the sense of energy, effort, co-operation, from the Arabic *himma*). In Iran itself, a social-democratic group was in existence at Tabrīz already in 1905 (with many Armenian members at least), requesting advice from the Marxist theoreticians Georgii V. Plekhanov and Karl Kautsky. At about this date, another group adopted the name of Social Democratic Party of Iran (*firḳa-yi idjtimāʿiyyūn-ʿāmmiyyūn-i Īrān*). In the course of the Iranian Revolution, the latter seems, through the intermediary of a more substantial clandestine organisation, the *mudjāhidīn*, to have taken action aimed at a profound social revolution, invoking the Ḳurʾān and the *Sharīʿa*.

In the Ottoman empire, tendencies of the same order existed within the Christian minorities. From 1911 to 1914, Yūsuf Akčura, who resided there after having been one of the leaders of the movement of the Muslims of Russia during the revolution of 1905, appointed the German Marxist economist of Russian Jewish origin Alexander Helphand, known as Parvus, to edit (with personal editorial responsibility) the economic column of his journal *Türk Yurdu* at Istanbul.

The more radical social democrats of the colonising countries sometimes supported the nationalists of the Muslim lands and guided them in the direction of social struggle. An outstanding example was the Dutch social-democrat H. J. F. M. Sneevliet who, taking up residence in 1913 in the Dutch East Indies, founded there in 1914 the Indian Social Democratic Association (Indische Sociaal Democratische Vereeniging) whose members included other Dutchmen, Eurasians and a few Indonesians.

4. *Knowledge of Marx and Marxism after 1917.* Within the Russian Social Democratic Labour Party and the Second International, V. I. Lenin defended his own stance and defined the other tendencies as "an anti-Marxist current in the bosom of Marxism". He thus made the struggle for an exclusive orthodoxy a primary pre-occupation for his own tendency, that of the majority (Russian *bolsheviki*) in the Party (a temporary majority in this case), which became virtually an autonomous party in 1912 and seized power in Russia in October/November 1917.

The new Soviet power, endowed with considerable means and considering itself the first territorial resort of a world-wide revolution, consequently saw as a priority the diffusion of the works of Marx and Engels, as well as those which condensed their doctrine according to the canonical interpretation, the writings of Lenin in the first instance.

The same applied to all the communist parties (united in the Third International from 1919 to 1943) which were founded throughout the world on the model and the inspiration of the Russian Communist (Bolshevik) Party and of the parties and groups produced by schisms within the communist movement. Each grouping added to the so-called "classic" works of the founders other texts, those of the successive supreme leaders of the Soviet Union (especially Lenin and Stalin), those of the leaders of the various national parties, those of heads of groups of tendencies (above all Leon Trotsky), those of certain theoreticians considered particularly orthodox, or text-books defining the various orthodoxies. Meanwhile the Second ("Socialist") International continued to attempt a parallel diffusion of texts, but on a much smaller scale and with much less exclusive reference to a Marxist orthodoxy.

This massive activity of editing and diffusion was naturally performed in the languages relevant to each party or group. The Soviet state also published translations of selected texts into the many languages of the Union or of the outside world. In the Muslim countries, parties, groups and sub-groups undertook the diffusion of works published in Soviet (and later Chinese) editions and (often in association with the latter) in editions emanating from the Communist publishers of the major western countries. Often, in times of isolation or difficulty, they produced and diffused, by improvised means, their own translations and the texts of local leaders.

There exists no general bibliography of this immense literature, written in so many languages. Only a bibliography of bibliographies of editions of the "classics" of Marxism, edited in the USSR and elsewhere in the Azeri, Albanian, Bashkir, Kazakh, Tatar and Uzbek languages, is to be found in L. Levin, *Bibliografiya bibliografiy proizvedeniy K. Marksa, F. Éngel'sa, V. I. Lenina*, Moscow 1961 (see index by language).

For the purposes of a typical example, it may be noted that one of the texts most widely translated and distributed in the Stalinist era was the second section of Chapter iv of the *Istoriya vsesoiuznoy kommunističeskoy partiy (bolshevikov), kratkii kurs*, "History of the Party of the Soviet Union (Bolshevik), short course", Moscow 1938. The sub-title was "course composed by a commission of the Central Committee of the C(b)P of the USSR, approved by the Central Committee of the C(b)P of the USSR, 1938". The section in question (it was leaked out that the author was Stalin himself) entitled "Historical materialism and dialectical materialism", set out to summarise (in 30 pages in the French edition of Moscow) "the theoretical basis of communism, the theoretical principles of the Marxist Party". Every communist group considered it a duty to distribute this text, reckoned to be fundamental. Cf. for example, in Arabic, Yūsuf Stālīn, *al-Māddiyya al-dāylaktīkiyya wa 'l-taʾrīkhiyya*, Baghdād, Maṭbaʿat al-Rashīd, 1944, 50 pp., in the collection *Rasāʾil al-baʿth* "Essays of the Renaissance" (there was no connection here with the still embryonic Baʿth Party).

5. *The Marxist groupings.* Bearing in mind that which has been stated above, it is difficult to characterise a group as Marxist unless (directly or indirectly) it expressly declares itself so. On the other hand, it is not possible here to give a complete list of the many Marxist groupings in the Muslim world. Such a list would have to include: (a) Marxist study

groups; (b) groups and parties which called themselves "social democrats" before 1919 (some of them continuing to do so today), those which declared themselves "communists" (Arabic *shuyūʿī*, in other languages usually transcriptions of the European or Russian word) after this date; (c) groups and parties which adopt other designations, but which declare themselves inspired by Marxism and whose ideological and political programmes are to be identified with those of social democratic and communist parties, such as the *Tūda* ("Masses") Party of Iran; (d) trade unions and so-called mass or popular organisations (of women, students, youth, peace campaigners, etc.), such as communist parties customarily create around themselves, in order to be assured permanently of a number of sympathisers, when it is established that these "popular" groups closely follow the line of a Marxist movement, mostly of a communist movement; (e) groups, parties or organisations which declare themselves "socialist", groupings or association which are attached to them, but only when they state categorically that their main inspiration is from Marxism.

6. *Attitudes to Marxism.* In the Muslim world, attitudes in regard to what is known and understood from Marxist ideas have varied as much as have attitudes in regard to organisations, and then states, which declared themselves Marxist or were supposed to be so, the whole being most often considered as constituting a coherent unity.

The attitude of men of religion has been influenced above all by the atheism which they considered to be the corner-stone of Marxist thought and even to be the major innovation of Marx, thus displaying their ignorance of the irreligious tendencies of European thought before Marx and alongside the Marxists. The anti-religious policies and atheistic propaganda of the Soviet State have inevitably reinforced this concept, still very widespread. The connection in actual fact of this philosophical atheism with Marxist economic and social principles has evoked memories of Muslim religious history: the Ismāʿīlī heresy being especially perceived on the basis of accounts of the Carmathian [see ḲARMAṬĪ] "communism" and the Nizārī terrorism [see ISMĀʿĪLIYYA], with its supposedly non-Muslim instigators, the "communists" Plato and Mazdak. Against these ideas, prominence was given to the right of private property guaranteed by the Ḳurʾān and the *Sunna*.

A quite different attitude, developed especially in certain circles after the Second World War, has seen in Marxism a kind of encyclopaedic scientific and philosophical synthesis giving sure guidance on action in the social sphere. Its role has been compared with that played by the Aristotelian encyclopaedia in the mediaeval Muslim world (cf. A. Laroui, *L'idéologie arabe contemporaine*, Paris 1967, 152 f.).

Attitudes have been particularly influenced by the policies of states claiming to be Marxist. During the 1920s and again after the Second World War, a series of states and movements have seen in them allies against Euro-American imperialism. In many cases, the sympathy engendered by this alliance was extended into attraction towards the doctrine reckoned to be basic to the general attitude of Marxist states and movement. In other cases, alliance of the external level has been able to coincide with the persecution of local Marxists.

Nationalists of Muslim countries have been able to denounce the internationalism which is an essential principle of the Marxist movement, with its antipathy towards total and unhesitating adherence to purely national objectives. Similarly, they have denounced the nationalisms which could be disguised by this theoretical internationalism: the Russian nationalism of the Soviet State, the nationalism of the communist parties of the colonialist countries (France, Britain, etc.), Zionist Jewish nationalism, etc.

7. *Influence of Marxist ideas.* The Marxist movement, most often indirectly, has diffused in the Muslim world ideas and elements of *Weltanschauung* which, although alien in many cases, it has systematised and popularised in its own way. They have been widely adopted, even in circles hostile to theories and political initiatives emanating from the Marxist movement.

This applies in the case of appeal in a voluntarist vein for the structural transformation of the social sphere, the traditional structures being judged to constitute permament causes of exploitation and oppression. Dissatisfaction with the established order and the demand for justice are given a great value at the expense of the traditional attitude of Islam (among other religions and philosophies), which sees in this a culpable rebellion against the order willed by God. Transformation cannot be achieved by a moral change, by conversion, but by an organised struggle on the part of the disadvantaged against the privileged, by pressures exerted by strikes, demonstrations, electoral campaigns and the like (reformism) or by a genuine civil war, a revolution. Circumstances having favoured the revolutionary options, the term "revolution" (Ar. *thawra*) and its synonyms (*inḳilāb*, etc.) have acquired a quasi-mystical quality.

The Marxist movement, born in Europe, had given the primary role to the transformation, reformist or revolutionary according to the tendencies, of industrial European society. In its communist branch, it had however also appealed for the revolt of colonised or dependent peoples, reckoned to be exploited and oppressed by the western ruling classes just like the proletarians of the industrial world. This appeal was taken up to the point of a complete inversion of priorities. Some doctrinarians, starting with the Tatar Mīr Saʿīd Sulṭān Ghaliev (see below) in Soviet Russia in the 1920s, placed on the primary level the struggle of "proletarian nations" against the totality of industrial nations, reckoned to exploit and oppress them with the complicity of and for the partial benefit of their own proletarians.

This theme of the exploitation of the colonial world by the industrial capitalist world which robbed it of its riches had been developed by Lenin as an appendix to the primary doctrine of internal exploitation. It had enormous success in all circles of the Islamic world. The term of imperialism which expressed this process, often confused with that of "colonialism" (Ar. *istiʿmāriyya*), was taken up by the most anti-Marxist elements and became a *leitmotif* (with some conceptual efforts to distinguish in a more precise fashion between "colonialism" and "imperialism" *imbiryāliyya*, etc.).

The diffusion of these dynamic ideas has been combined with an internal evolution, complex in origin, which tended towards a veiled secularisation, a recoil from specifically religious values (the quest for salvation, etc.) in favour of the primacy of earthly activism (which has always been regarded as important in Islam). This activism is often invested in the defence and promotion of the Muslim *umma* or one of its parts, but this objective henceforward takes precedence over piety and religious observance. Biographies of Muḥammad place far greater emphasis

on his earthly works than on his rôle as a messenger of the divine will.

There are limits to the influence exerted by concepts more or less Marxist in source in the world of Islam. The nationalism which is such a dominant force in this world (including the form of nationalism attached to the Muslim *umma* [see ḲAWMIYYA]) inspires distrust, to say the least, of any analysis of the classical Marxist type which identifies, within the struggling nation itself, exploiters and oppressors to be resisted. The vision of an end of history and an egalitarian classless society has not easily taken root, traditional Islam with its hierarchies of wealth and power being considered to constitute already a society without classes as such. Similarly, the internationalism which is fundamental to Marxism (although often abandoned in practice) could hardly be expected to tempt a public opinion moulded by nationalism.

A very widespread moralism also spurns the essential determinism of Marxism (even though Marxists have often been inconsistent on this subject in practice). Finally, in spite of the logical possibility of dissociating from atheism the political, sociological, social and strategic conclusions of historical Marxism, in spite of the sporadic efforts by communist parties to emphasise this dissociation, there is avoidance of any affiliation which could be interpreted as a public proclamation of atheism or (perhaps even more repugnant) a calling into question of the supra-human origin of the sacred books, the Ḳurʾān in particular. Atheistic propaganda, often amounting to restraint of religion in the communist states (without going in general to the extreme lengths of Albania, which has radically suppressed churches and mosques), causes unease, even among the leaders of movements or states which have chosen for strategic reasons to ally themselves with the former in a given period.

8. *Marxist view of Islam and the Muslim world.* Marx and Engels were not greatly interested in Islam as a religion, and as such it was subject to their general criticism of religious consciousness. Only the late reading by Engels of a book by the Anglican priest and orientalist Charles Forster, *The historical geography of Arabia* (London 1844) awakened in him reflections communicated to his friend and briefly commented upon by the latter (Marx and Engels, *Briefwechsel*, i, Berlin 1949 (= Moscow 1935), 568-90, letters of 18 (?) May, 2, 6 and 14 June 1853. At the end of his life, Engels, inspired by the revolt of the Sudanese *Mahdī* [see AL-MAHDIYYA], compared Muslim revolts to the religous uprisings of the Christian Middle Ages, more "progressive" in his opinion (*Zur Geschichte des Urchristentums*, in *Die Neue Zeit*, xiii/1 (1894-5), 4 ff., 36 ff. = Marx-Engels, *Werke*, Berlin 1963, xxii, 446-73, at p. 450). In general, both authors tend to explain the religious phenomena of Islam in terms of historical sociology and insist on the "stagnant" character of the "Orient" in general (cf. also *Marxisme et Algérie*, texts edited by R. Gallissot and G. Badia, Paris 1976).

The two founders followed much more closely the international events affecting the Ottoman Empire, the "Eastern Question". A favourable attitude towards the Ottoman Empire, inspired by their hatred of Russia, Turkey's enemy and supposedly the bastion of international reaction, led them to take a certain interest in Ottoman institutions following the example of their ally against Russia, the passionately Turcophile (and Turcophone) British parliamentarian, David Urquhart (1805-77), a conservative romantic. Towards the end of his life, Engels was at pains to dampen the enthusiasm ("sentimentalist" and "poetic") of French Marxists (the Guesdists) for the revolt of ʿUrābī, in his opinion a *pasha* like any other (cf. his letter to E. Bernstein, 9 August 1882, in Marx-Engels, *Werke*, Berlin 1967, xxxv, 349 ff.).

The Marxist theoreticians of the Second International showed even less interest in the world of Islam, with the exception of Parvus (see above) and some examples of the destruction of the "natural economy" by capitalism in Kabylia mentioned Rosa Luxemburg, quoting the Russian sociologist M.M. Kovalevskiy. Indignation at the traumas wrought by colonisation was counter-balanced, as it had been among the founders, by the conviction that socialist revolution could only be produced in the industrialised world as a result of the maximum development of capitalism. Only subsequently would the event have world-wide repercussions.

After the Russian Revolution, the Third International included in its strategy the insurrection of colonies against the capitalist metropolises, while maintaining the priority of revolution conducted by the proletariat in these metropolises themselves. This often led to more or less elaborated attempts at analysis, both on the part of communist parties (and eventually dissident factions) established in the colonial and dependent countries, including Islamic countries, and on the part of those of the metropolises whose duty it was to support, even encourage, the revolt of their colonies.

In Soviet Russia itself (subsequently transformed into the Union of Soviet Socialist Republics), the Tatar Mīr Saʿīd Sulṭān Ghaliev and his companions, originally from nationalist and reformist [see IṢLĀḤ. 5. Central Asia, in Suppl.] circles but impregnated with Marxist ideas, adhered to the Bolshevik Communist Party and initially collaborated with the new power. Sulṭān Ghaliev then elaborated his doctrine on the specificity and the globally "proletarian" nature of Muslim society, the primacy of the Muslim East in the struggle against world capitalism, the "progressive" and "democratic" nature of the Muslim religion. Expelled from the Party in 1923, his ideas evolved still further. He drew up plans for a Colonial Communist International and for a Socialist State of Tūrān, researching Muslim and Turco-Mongolian sources for Marxist concepts. He was forced to go underground and finally eliminated.

Studies of Islam and of the Muslim peoples have been developed in the USSR, naturally on Marxist lines as soon as the level of somewhat generalised conclusions has been reached. Particular attention is paid to the Muslim peoples of the Union, from among whom specialists have emerged. Advantage has been taken of the pre-revolutionary tradition of Russian orientalism which took a special interest in problems of economic and social history. In the communist states of Eastern Europe, studies have followed the same model on the basis of somewhat different academic orientalist traditions. In addition to numerous detailed studies, attempts at synthesis have been hampered by the ideological monopoly of the Party which reserves for itself the right to any general conclusion, however minor. Interpretations have also been required to follow the lines inspired by fluctuations of official ideology in general and above all by successive strategic attitudes adopted in relation to Islam, the Muslim populations of the interior and the Muslim states of the exterior.

The communist parties of the capitalist countries or of the Third World have undertaken virtually no general study of Islam. But they have sometimes encouraged their members to study a particular Muslim country or patronised their works. Outside or

on the margin of the orbit of communist states and parties, Marxist or quasi-Marxist studies have been published in increasing numbers with, in general, a great deal more originality.

Among the most interesting studies are economics-based analyses of contemporary developments in the Muslim world, some of them written by natives of these countries. More generally, intellectuals of the Muslim world tend to take as their guide in numerous domains the neo-Marxist synthesis codified in the Soviet Union, presented as "*the* authentic Marxism" and regarded as a kind of new science throughout the Third World. For this reason there is frequent recourse to the works inspired by this synthesis even in circles hostile to the political, social and ideological options of the states and parties laying claim to Marxism.

(M. RODINSON)

MARMARA DEÑIZI, the Turkish name of the Sea of Marmara.

1. The Sea itself.

(a) *Geography*. This is a small sea within the borders of Turkey, communicating with the Aegean Sea through the Dardanelles [see ČANAḲ-ḲALʿE BOGHAZÎ] and with the Black Sea through the Bosphorus [see BOGHAZ-IČI]. Istanbul is the most prominent city on its shore.

The Sea has a surface area of 11,350 km.²; its greatest length, from the Dardanelles to the end of the Gulf of Izmit, is 260 km; its width between Silivri on the Thracian side and Bandirma on the Anatolian side is 80 km. Its greatest depth reaches 1,355 m.roughly in its geographical centre, but it is much shallower around the central depression, mostly under 200 m. The salinity of its water is relatively low, from 22/1000 near the surface to 38.5/1000 at 30 m. and deeper. A surface current flows towards the Dardanelles, while a deeper counter-current moves in the opposite direction.

In antiquity, it was called Propontis, and was thus distinguished from the Dardanelles and the Bosphorus; this distinction was continued by mediaeval European authors, but not by the Muslim ones, who usually bracketed all three phenomena under the term al-Khalīdj "The Strait", often specified as that of Constantinople: Khalīdj al-Ḳusṭanṭīniyya or al-Khalīdj al-Ḳusṭanṭīnī. This lack of terminological discrimination on the part of early Muslim authors was symptomatic of their unfamiliarity with the exact configuration of the area, although some seem to have been aware of the considerable variation in the width of this "Strait"; thus al-Masʿūdī, writing in 345/956 (*Tanbīh*, 66) states that the width at "Filās" is 40 miles. A hint of this sea appears on al-Idrīsī's map of A.D. 1154, although there too we find the usual single name of Khalīdj al-Ḳusṭanṭīniyya. The attempts by the Arabs to conquer Constantinople, especially those of 97-9/715-17, during which their fleets sailed through the Sea of Marmara, were obviously too brief and transitory to leave a clearer idea of this sea. The difficulty of sailing through the Dardanelles, and the fact that armies and travellers usually crossed from Anatolia to Thrace through this strait, may also have attracted the Muslims' attention thither and have obscured the small sea between it and Constantinople. A better understanding of the actual geographical nature of the area appears in Abu 'l-Fidāʾ's *Taḳwīm al-buldān*, composed by 721/1321, where the Sea of Marmara is described without, however, being assigned a name: "When travellers have entered it [i.e. the Khalīdj al-Ḳusṭanṭīniyya], it widens and resembles a lake (*birka*)..." Abu 'l-Fidā's lack of any specific name for the Sea of Marmara is also illustrated by a reference to the Marmara Island as "one of the islands of the Mediterranean (Baḥr al-Rūm)", with the remark that "it is in the midst of al-Khalīdj al-Ḳusṭanṭīnī" (*Taḳwīm*, 34, 188-9).

(b) *History*. The Sea of Marmara came permanently within the Dār al-Islām with the Turkish conquest of Byzantine territory. The *beylik* of Ḳarasî [*q.v.*] was the first Turkish principality to reach the Sea of Marmara, occupying, during the first half of the 8th/14th century, its southern shore from the Ḳapîdaghî peninsula to the Dardanelles. Ḳarasî, extending also along the Anatolian side of the Dardanelles and along the adjacent part of the Aegean shore, became a maritime power: its principal naval base was Edindjik on the Gulf of Erdek. The experience of Ḳarasî sailors, gained in their encounters with the Byzantines, proved useful to the Ottomans after the latter had absorbed Ḳarasî towards the middle of the 8th/14th century and after they had further extended Turkish domination to the remaining, eastern part of the Anatolian coast of the Sea of Marmara. At that point, the arsenal of Edindjik was joined by other naval installations such as Mudanya, Ḳaramürsel and Izmid. Although these shipyards and bases were eventually eclipsed by those of Gallipoli [see GELIBOLU] and Ḳāsîmpasha, those on

Marmara's southern shore, so significant in the incipient period of Turkish maritime history, retained their importance, some of them to this day.

In contrast to the southern, Anatolian shore of the Sea of Marmara, the northern, Thracian shore was occupied by the Turks more gradually and as a by-product of the Ottoman penetration into the Balkans and of the eventual conquest of Constantinople. Lacking the bays and natural or man-made harbours characteristic of the southern shore, the northern shore never played a similar role in Turkish maritime affairs, except for Istanbul itself, of which the Ḳadîrg͟ha Limanî was developed by Meḥemmed II and had some importance until Selīm I founded the arsenal of Ḳāsîmpas͟ha on the Golden Horn.

After the Ottomans had established themselves in Rumelia and had taken Constantinople, the Sea of Marmara became a Turkish lake and has remained so to this day; a certain limitation on Turkish sovereignty over this sea, however, has existed since the 19th century, for the special status of the Straits of the Dardanelles and the Bosphorus affects Marmara as well. Its secure domination by the Ottomans was in part responsible for the relatively uneventful place this sea had in Ottoman naval history, and for the neglect it received in Ottoman literature. The Sea of Marmara is not described in the text of the *Kitāb-i Baḥriyye*, the 10th/16th century Turkish portolan by Pīrī Reʾīs [*q.v.*], although the first, "draft" version does include brief chapters on the Marmara Island and the Princes' Islands, and its map does appear in some manuscripts. It is still anonymous in the *Tuḥfat al-kibār fī asfār al-biḥār* by the 11th/17th century author Kātib Čelebi (*q.v.*]: "It (i.e. the Mediterranean) ends at Bozd͟ja-ada (= Tenedos). Between the inner side of the Strait (i.e. the Dardanelles) and Istanbul, there is a small sea whose circumference amounts to 700 miles... There are islands in it: Marmara, Imralî, Ḳîzîl adalar (= the Princes' Islands)..." (1729 ed., p. 2b). In the *D͟jihān-nümā*, the cosmography by the same author, however, there is already a reference to this sea as "Baḥr-i Marmara" (1732 ed., p. 667). This name, derived from that of the Marmara Island, had begun to appear since the 16th century on European maps and in atlases in such forms as Mar de Marmora, and Kātib Čelebi, whose *D͟jihān-nümā* was in part a translation of such works, may have followed their example.

2. The island after which the Sea of Marmara is named.

Marmara, the classical Proconnesos, is the largest island in this sea, with an area of 200 km.[2] It is the principal one in a cluster that includes Avs͟ha (also called Türkeli), Pas͟halimanî, and a few other smaller ones, near the Ḳapîdag͟hî peninsula, the latter originally also an island but eventually linked to the southern shore by a process of marine sedimentation. Marble quarries, exploited on Marmara Island since antiquity, gave rise to its later name. The population of these islands was until the recent exchange chiefly Greek-speaking, but was then replaced by Turkish immigrants from Crete and Bulgaria. While fishing, fruit and olive growing, and vegetable gardening (and until recently, lumber exportation, which has disappeared with the completion of deforestation), were the traditional occupations of the population, tourism has now taken precedence as the main industry of these islands, with regular boat service between Istanbul, Marmara (the chief town and harbour on Marmara Island) and Avs͟ha. Administratively, the Marmara Islands form a *bucak* within the *ilçe* of Erdek of the *il* of Balıkesir.

The second group of islands within the Sea, the Princes' or Prince Islands, in Turkish simply Adalar or Kızıl Adalar, is a cluster situated between 13 and 22 km. to the south-east of Istanbul and about 5 km. from the Anatolian coast. They consist of four larger islands (Kınalı, Burgaz, Heybeli and Büyükada) and five small ones. Together they form an *ilçe* within the *il* of Istanbul; Büyükada, Heybeli, and Burgaz-Kınalı form individual *bucaks* within this *ilçe*. The largest of these, Büyükada, lit. "the large island", was called in Byzantine times Prinkipo, but its classical name as mentioned by Pliny, that of Megale (*Naturalis historiae...*, v, 151) was a semantic ancestor of the Turkish name. In the Byzantine period, these islands were the occasional place of banishment or seclusion for members of the ruling family or for other important persons; in recent times, they have been the favourite resort of Istanbul's wealthier citizens. Heybeli harbours two establishments which train officers for the Turkish navy: the preparatory Deniz Lisesi, and the higher Deniz Harp Okulu, the latter the continuation of an older school at Ḳāsîmpas͟ha, whence it had moved in 1851.

Aside from these two groups of islands, there is the isolated Imralı, Byzantine Kalolimni, an elongated island near the beginning of the Gulf of Gemlik. After the departure of its Greek-speaking population during the population exchange in the early years of the Turkish Republic, the island remained uninhabited until in 1935 a penitentiary was placed on it, the inmates practising some of the traditional occupations of the former inhabitants.

3. Administrative organisation.

In administrative terms, during the Ottoman period the greater part of the coasts of the Sea of Marmara was usually within the *eyālet* of D͟jazāʾir-i Baḥr-i Safīd [*q.v.*], the special province under the Ḳapudan Pas͟ha [*q.v.*] administered from Gallipoli.

Today, these shores are distributed among six *ils*, named after their administrative centres: Istanbul, Izmit (also called by its historical name of Kocaeli), Bursa, Balıkesir, Çanakkale and Tekirdağ.

(S. Soucek)

MARRĀKUS͟H (popular pronunciation *Merrāks͟h*, in French Marrakech, English Marrakesh) a town in Morocco, and one of the residences of the sovereign.

The form Marrakech, adopted by the administration of the protectorate, is of recent origin. Down to

about 1890 the town was always known as Morocco. The kingdom of Morocco, distinct in origin from those of Fās and the Sūs, finally gave its name to the whole empire. At one time it only consisted of the country south of the wādī Umm Rabīᶜ as far as the range of the Great Atlas.

Marrakesh is situated in 31° 37' 35 '' N. lat. and 7° 59' 42'' E. long. (Greenw.). Its mean height above sea-level is about 1,510 feet. The town is 150 miles south of Casablanca. It is through the latter that almost all the traffic with the coast passes at the present day. It used to go via Safi which is the nearest port (100 miles). Sīdī Muḥammad b. ᶜAbd Allāh [*q.v.*] in 1765 tried to supplant it by Mogador (115 miles) where he built a town and harbour through which at the end of the 18th century most of the trade between Marrakesh and Europe passed.

The temperature which is very mild in winter is very hot in summer. The average maxima of 39°6 in the month of August 1927 have nothing unusual and imply extreme temperatures reaching or passing 50° on certain days. Rainfall is low (284.5 mm. in 1927, against 706.5 in Rabat and 1,007.3 in Tangier). But water fed by the snows of the Atlas is found at no great depth. It is collected by a system of long subterranean tunnels (*k̲h̲aṭṭāra*, plur. *k̲h̲aṭāṭīr* [see KANĀT] which bring it to the surface by taking advantage of the very slight slope of the surface. This method of obtaining water has enabled the vast gardens which surround the town to be created. The Almohads and the dynasties which succeeded them also built aqueducts and reservoirs to supply the town with water from the springs and streams of the mountains.

Contrary to what was until quite recently believed, Marrakesh has for long been the most thickly populated town of the empire. The census of 7 March 1926 gave 149,263 as the total population, 3,652 Europeans, 132,893 Muslims, 12,718 Jews. In 1936 the figures were respectively 190,314, 6,849, 157, 819 and 25,646; in 1947, the city had a total of 241,000 inhabitants. The probable growth of the population is not sufficient to explain the difference between the present-day figures and the old estimates, almost all far below the truth and varying greatly among themselves: from 20,000 (given by Diego de Torres in 1585 and Höst in 1768), 25,000 (Saint Olon, 1693), 30,000 (Ali Bey al-Abbassi, 1804), 40 to 50,000 (Gatell, 1864, and E. Aubin, 1902), 50,000 (Lambert, 1868), 60,000 (Beaumier, 1868), 80 to 100,000 (Washington, 1830) up to the obviously exaggerated figure of 270,000 given by Jackson in 1811.

About 40 miles north of the Atlas, the vast silhouette of which, covered by snow for eight months of the year fills the background, Marrakesh is built in a vast plain called the Ḥawz which slopes very gently towards the wādī Tansift, which runs 3 miles north of the town. The extreme uniformity of the plain is broken only in the north-west by two rocky hills called Gillīz (1,700 feet) and Kudyat al-ᶜAbīd. In 1912 at the time of the French occupation, there was built a fort which commands Marrakesh. The European town called the Gueliz lies between this hill and the walls of the old town.

The wādī Issīl, a left-bank tributary of the Tansift, a stream often dried up but transformed into a raging torrent after storms, runs along the walls of the town on the east. To the north of Marrakesh as far as the Tansift and to the east stretches a great forest of palm-trees, the only one in Morocco north of the Atlas. It covers an area of 13,000 hectares and possesses over 100,000 palm-trees but the dates there only ripen very imperfectly.

The town is very large. The ramparts of sun-dried mud which run all round it measure at least 7 miles in length. The town in the strict sense does not occupy the whole of this vast area. The part built upon forms a long strip which starting from the *zāwiya* of Sīdī bel ᶜAbbās in the north runs towards the *ḳaṣaba* (*ḳaṣba*) which stands at the southern end of the town. On the two sides lie great gardens and estates among which we find in the neighbourhood of the chief gates inside the walls, isolated quarters grouped like so many villages around their *sūḳ* and the mosque.

The town consisted mainly of little low houses of reddish clay, often in ruins, among which were scattered huge and magnificent dwellings without particularly imposing exteriors built either by the viziers of the old Mak̲h̲zen (e.g. the Bāhiya, the old palace of Bā Ḥmād [*q.v.* in Suppl.], vizier of Mawlāy al-Ḥasan) or by the great *ḳāʾids*, chiefs of the tribes of the country around. The narrow and overhung streets in the central area broaden towards the outskirts into sunny and dusty squares and crossroads. The colour, the picturesque architecture, the palm trees, the branches of which appear over the walls of the gardens, the presence of a large negro population, all combine to give the town the appearance of a Saharan *ḳṣar* of vast dimensions.

The centre of the life of the city is the D̲j̲āmaᶜ al-Fnā, a vast, irregular, ill-defined open space, surrounded in the early years of this century by wretched buildings and reed huts, overshadowed by the high minaret of the Kutubiyya Mosque. Its name comes, according to the author of the *Taʾrīk̲h̲ al-Sūdān*, from the ruins of a mosque which Aḥmad al-Manṣūr had undertaken to build there; "As he had planned it on a wonderful scale, it had been given the name of mosque of prosperity (*al-hanā*); but his plans being upset by a series of unfortunate events, the prince was unable to finish the building before his death and it was therefore given the name of mosque of the ruin (*d̲j̲āmiᶜ al-fanāʾ*)". This origin having been forgotten; an attempt was later made to explain the name of the square from the fact that the heads of rebels used to be exposed there. It was there also that executions took place. Lying on the western edge of the principal agglomeration of buildings at its most thickly populated part, close to the *sūḳ*, connected with the principal gates by direct and comparatively quiet roads, D̲j̲āmaᶜ al-Fnā is the point of convergence of the roads. At all hours swarming with people, it is occupied in the morning with a market of small traders: barbers, cobblers, vendors of fruit and vegetables, of medicines, of fried grasshoppers, of tea and of soup (*ḥarīra*); in the evening, it is filled with acrobats and jugglers (Awlād Sīdī Aḥmad ū Mūsā of Tazerwalt), sorcerers, story-tellers, fire-eaters, snake charmers and *s̲h̲lūḥ* dancers. The audience consists mainly of people from the country who have come into town on business and want to enjoy the distractions of the town for a few hours before going home. These visitors are always very numerous in Marrakesh. Besides the regular inhabitants there is a floating population, the number of which may be of the order of 10,000 persons. For Marrakesh is the great market for supplying not only the Ḥawz but also the mountain country, the Sūs and especially the extreme south, Dādes, Darᶜa (Draᶜ) and the Anti-Atlas. Marrakesh used to be the starting-point for caravans going through the Sahara to trade with Timbuktu. They brought back chiefly Sudanese slaves for whom Marrakesh was an important market. The conquest of the Sudan by France put an end to this traffic.

To the north of the Djāmaʿ al-Fnā begin the *sūḳs*, which are very large. As in Fās and in the other large towns, the traders and artisans are grouped by trades under the authority of the *muḥtasib* [*q.v.*] The most important *sūḳs* are those of the cloth merchants (*ḳīsāriyya*), of the sellers of slippers, of pottery, of basket work, of the embroiderers of harness, of the dyers and of the smiths. An important Thursday *sūḳ* (*al-khamīs*) is held outside and inside the walls around the old gate of Fās which has taken the name of the market (Bāb al-Khamīs). This *sūḳ* was already in existence in the 10th/16th century.

There is no industry to speak of in Marrakesh. The most important is the making of leather (tanning). The manufacture of slippers occupied 1,500 workmen who produce over 2,000 pairs each working day. There are the only articles manufactured in the town that are exported. They are sold as far away as Egypt and West Africa. For the rest, Marrakesh is mainly an agricultural market. The whole town is a vast fondouk (*funduḳ*) in which are warehoused the products of the country, almonds, carraway seeds, goat-skins, oils, barley, wool, to be exchanged either for imported goods (sugar, tea, cloth) or for other agricultural produce (wheat, oil, which the tribes of the mountains and of the extreme south for example do not have).

The town is divided into 32 quarters, including the *mellāḥ* or Jewish quarter. We may further mention outside the walls near the Bāb Dukkāla a quarter called al-Ḥāra where the lepers lived. Until the 1920s, the gates of the town were closed during the night. The superintendents of the quarters (*muḳaddamīn*) had watchmen (*ʿassāsa*) under their orders. The old custom long survived of firing a salvo at midnight on the Djāmaʿ al-Fnā as a curfew.

Marrakesh being an imperial town, the sultan, who only stayed there at long intervals, was represented in his absence by a *khalīfa*, a prince of the imperial family (usually the son or brother of the sovereign). The role of this *khalīfa* was not purely representative, for he was a true viceroy, who formerly governed the territories to the South. The governor of the town is today a *pasha*, assisted by a delegate (*nāʾib*) and several *khalīfas*. One of the latter supervises the prisons and the administration of justice. Another has the title of *pasha* of the *ḳaṣba*. He governs the southern part of the town which includes the imperial palace and the Jewish quarter. Formerly, the *pasha* of the *ḳaṣba* was independent of the *pasha* of the town and served to counterbalance the power of the latter. He commanded the *gīsh*, an armed contingent furnished by the warlike tribes (Ūdāya, Ayt Immūr, etc.) settled in the vicinity of the town by the sultans of the domain lands. The *pasha* of the *ḳaṣba* only retains of his former powers certain rights of precedence and honorary privileges.

Muslim law is administered in Marrakesh by three *ḳāḍīs*: one is established at the mosque of Ibn Yūsuf; the other at the mosque of al-Mwāsīn and the third at the mosque of the *ḳaṣba*. The latter's competence does not extend beyond the limits of his quarter. That of the others extends over the whole town and even over the tribes of the area governed from it who have no local *ḳāḍīs*.

Marrakesh is not numbered like Fās, Rabat and Tetuan among the *ḥaḍariyya* towns, i.e. it has not, like them, an old-established citizen population, of non-rural origin, with a bourgeoisie whose tone is given by the descendants of the Moors driven from Spain. In the 10th/16th century, however, Marrakesh did re-receive a colony of Moriscoes large enough to give one quarter the name Orgiba Djadīda, a reminiscence of Orgiba, a town of Andalusia from which they came. The foundation of the population consists of people of the tribes for the most part Berbers or Arabs strongly mixed with Berber blood. Shlūḥ (*tashelḥit*) is much spoken in Marrakesh although the language of the tribes around the town (Rḥāmma, Ūdāya) is Arabic. The movements of the tribes, the coming and going of caravans, the importation of slaves from the Sudan have resulted in a constant process of mixing in the population, and the old Maṣmūda race which must, with the Almoravids, have been the primitive population of Marrakesh is only found in combination with amounts difficult to measure of Arab, Saharan and negro blood. Even to-day this process is going on: the newcomers come less from the valleys of the Atlas than from the Sūs, the Draʿ and the Anti-Atlas, from the extreme south which is poor and overpopulated. The greater number of these immigrants soon become merged in the population of the town; but the *Enquête sur les corporations musulmanes*, conducted by L. Massignon in 1923-4 (Paris 1925) yielded some very curious information about the survival in Marrakesh of vigorous groups of provincials, specialising in particular trades: the makers of silver jewellery (at least those who are not Jews) owe their name of *tāgmūtiyyīn* to the fact that they originally came from Tagmut in the Sūs; the Mesfīwa are charcoal-burners and greengrocers, the Ghīghāya, salters; the people of the Ṭodgha, gatherers of dates and *khaṭāṭīriyya*, i.e. diggers of wells, who specialise in water-channels (*khaṭāṭīr*); those of Tafilalt, porters and pavers; those of Warzarāt, watercarriers and of Tattaʿ (Anti-Atlas), restaurateurs; of the Draʿ, water-carriers and *khaṭāṭīriyya*, etc. This division is not the result of specialisation in their original home nor of privileges granted by the civic authorities but arises from the fact that artisans once settled in Marrakesh have sent for their compatriots when they required assistance. Thus groups grew up, sometimes quite considerable. The list of the corporations of Marrakesh gives a total of about 10,000 artisans. These corporations lost much of their power under the pressure of the Makhzen. Some of them, however, still retained a certain social importance: in the first place that of the shoemakers which is the largest (1,500 members); then come the tanners (430), the cloth (237) and silk (100) merchants; the *Fāsī* wholesalers, then some groups of skilled artisans, highly esteemed but of less influence, embroiderers of saddles, makers of mosaics, carpenters, sculptors of plaster, etc.

Religious and intellectual life. Mosques are numerous in Marrakesh. Some of them will be the subject below of brief archaeological studies. Those which play the most important part in the religious life of the city are the mosque of al-Mwāsīn, the mosque of ʿAlī b. Yūsuf, both close to the *sūḳs*, that of Sīdī bel ʿAbbās and that of the *ḳaṣba*. Then come the Kutubiyya, the mosque of the Bāb Dukkāla, of the Bāb Aylān, of Berrīma, and the Djāmaʿ Ibn Ṣāliḥ. There are also many little mosques in the various outlying quarters. But although it can claim illustrious men of learning, Marrakesh is not like Fās, a centre of learning and of teaching. The Almohads built schools and libraries there, brought the most illustrious scholars, philosophers and physicians from Spain, like Ibn Ṭufayl, Abū Marwān Ibn Zuhr (Avenzoar) and Abu 'l-Walīd Ibn Rushd (Averroes) who died at Marrakesh in 595/1198. These great traditions did nor survive the dynasty. At the beginning of the 10th/16th century, in the time of Leo Africanus, the library of the Almohad palace was used as a poultry house and the *madrasa* built by the

Marīnids was in ruins. In the inter-war period, in the town of the Kutubiyya there was not a single bookseller. A certain number of *ṭolba* still live in the *madrasas* (Ibn Yūsuf, Ibn Ṣāliḥ, Sīdī bel ʿAbbās, Berrīma, Ḳaṣba) but the teaching in Marrakesh has neither the prestige nor the traditions which still give some lustre to the teaching at al-Ḳarawiyyīn in Fās, much decayed as it is. Although they attempt to imitate the customs of Fās (they celebrate notably the "festival of the sultan of the *ṭolba*" [see FĀS] every spring), the students are far from holding in Marrakesh the position their comrades enjoy in Fās, even though a dahir of 1357/1938 established a *madrasa* of Ibn Yūsuf intended, like the Ḳarawiyyīn, for the training of *ḳāḍīs*. One should note that the city now possesses a modern university.

The devotion of the people of Marrakesh expends itself particularly on the cult of saints, not at all orthodox but dear to the Berbers. Their town has always been famous for the great number of *walīs* who are buried in its cemeteries and who justify the saying: "Marrakesh, tomb of the saints". But in the time of Mawlāy Ismāʿīl, the Shaykh Abū ʿAlī al-Ḥasan al-Yūsī by order of the prince organised, in imitation of the old established cult of the Sabʿatu Ridjāl (the seven saints of the Ragrāga, around the Djabal al-Ḥadīd, among the Shyāḍma), a pilgrimage to the Sabʿatu Ridjāl of Marrakesh, including visits to seven sanctuaries and various demonstrations of piety. The following are the names of the seven saints in the order in which they ought to be visisted: (1) Sīdī Yūsuf b. ʿAlī al-Ṣanhādjī, a leper, d. 593/1196-7, buried outside the Bāb Aghmāt on the spot where he had lived; (2) the *ḳāḍī* ʿIyāḍ, 476-544/1083-1149 [*q.v.*], *ḳāḍī* of Ceuta, then of Granada, a learned theologian, author of the *Shifāʾ*, buried beside the Bāb Aylān; (3) Sīdī bel ʿAbbās al-Sabtī, patron saint of Marrakesh and the most venerated of the saints of the region, 542-601/1130-1204. He came to Marrakesh when the town was being besieged by the Almohads and settled there, at first in a hermitage on the Djabal Gillīz where a *ḳubba* dedicated to him can still be seen. But the principal pilgrimage is to his tomb at the northern end of the town over which Abū Fāris b. Aḥmad al-Manṣūr built a *zāwiya* and an important mosque at the beginning of the 11th/17th century; (4) Sīdī Muḥammad b. Slīmān al-Djazūlī, d. in 870/1465 at Afughal among the Shyāḍma, a celebrated Ṣūfī, founder of the Djazūlī brotherhood. His body was brought to Marrakesh in 930/1523 by Aḥmad al-Aʿradj the Saʿdian; (5) Sīdī ʿAbd al-ʿAzīz al-Tabbāʿ, a pupil of al-Djazūlī, d. 914/1508; (6) Sīdī ʿAbd Allāh al-Ghazwānī, popularly called Mawlā (Mūl) 'l-Ḳṣūr, d. 935/1528; (7) Sīdī ʿAbd al-Raḥmān al-Suhaylī, called the Imām al-Suhaylī, a native of the district of Malaga, d. 581/1185, and buried outside the Bāb al-Rabb.

It is quite an arbitrary choice that these seven individuals have been chosen as the Sabʿatu Ridjāl. Others could equally well have been chosen, as the town of Marrakesh and the cemeteries which stretch before it, contain a very large number of other venerated tombs. The principal ones are mentioned in the article by H. de Castries, *Les Sept Patrons de Merrakech*, in *Hespéris* (1924). Legend of course plays a great part in the cults of the various saints. We may mention for example the sayings and songs which perpetuate the memory of Lallā ʿŪda, mother of the sultan Aḥmad al-Manṣūr, a real personage much transformed by the popular imagination. The various trade corporations have chosen patron saints. Thus Sīdī Yaʿḳūb is the patron of the tanners, Sīdī bel ʿAbbās of the soapmakers and lacemakers, Sīdī Masʿūd "slave" of Sīdī Muḥammad b. Slīmān is the patron of the masons, Sīdī ʿAbd al-ʿAzīz al-Tabbāʿ of the dyers, etc. The majority of the artisans are also affiliated to the religious brotherhoods. In Massignon's investigation may be found details of the attraction which some of the latter had for certain trades.

The Jews. At the foundation of Marrakesh, the Jews had no permission to settle in the town. They came there to trade from Aghmāt Aylān where they lived. Al-Idrīsī relates that under ʿAlī b. Yūsuf they had not even the right to spend the night in Marrakesh and that those who were caught within the walls after sunset were in great danger of losing their lives and property. They settled there at a later date. At the beginning of the 10th/16th century there was, according to Marmol, in Marrakesh a ghetto of over 3,000 houses. It lay near the *sūḳ* on the site now occupied by the mosque of al-Mwāsīn. When this mosque was built by sultan ʿAbd Allāh al-Ghālib, the more scrupulous refused to pray there for some time on the pretext that it occupied the site of a Jewish cemetery. It was ʿAbd Allāh al-Ghālib who, in about 967/1560, settled the Jews on the site they occupied lately, along the wall of the *ḳaṣba* to the east, where the stables of the palace had been. At the beginning of the 11th/17th century, there was here, according to the French traveller Mocquet, "like a separate town, surrounded by a good wall and having only one gate guarded by the Moors; here live the Jews who are over 4,000 in number and pay tribute". A century later, there were about 6,000 Jews and many synagogues. The Jewish quarter, called *mellāḥ* [see MALLĀḤ] after the example of the Jewish quarter of Fās (the name *mellāḥ* is attested for Marrakesh as early as the end of the 10th/16th century), was placed, as regards policing, under the authority of the *pasha* of the *ḳaṣba* but otherwise is administered by an elected Jewish committee. Questions of personal law were judged by a rabbinical tribunal of three members nominated and paid by the Makhzen. The Jews of Marrakesh early began to leave the bounds of the *mellāḥ*. The older ones wore the ritual costume: gaberdine, skullcap and black slippers, but the younger generations emancipated themselves from this dress. The Jews have little influence on the corporations of Marrakesh. They are limited to certain trades (jewellers, tinsmiths and embroiderers of slippers) and share with the people of Fās the wholesale trade. They trade particularly with the Shlūḥ of the mountains.

History. The Roman occupation never extended so far as the region of Marrakesh. It is quite without probability that some writers, following the Spanish historian Marmol, have sought at Aghmāt or at Marrakesh the site of *Bocanum Emerum* (Βόκκανον Ἡμεροσκοπεῖον of Ptolemy), a town of Tingitana, the site of which is now unknown. The earliest historians agree that the place where Marrakesh was built by the Almoravids was a bare marshy plain where only a few bushes grew. The name Marrakesh gives no clue to the origin of the town. The etymologies given by the Arab authors are quite fanciful (see Deverdun, *Marrakech*, 64 ff.). It was, it appears, in 449/1057-8 that the Almoravids advanced from Sūs north of the Atlas and took Aghmāt Urīka. It was there that they settled at first. But after the campaign of 452/1060 in the course of which they conquered the country of Fazāz, Meknès and of the Lawāta near Fās, they wanted to make their position more permanent and independent by creating a kind of camp, which could be used as a base for their further campaigns and

would threaten the Maṣmūda of the mountains and could be used as a connecting link between the south from which they came and the kingdom of Fās. Yūsuf b. Tas͟hfīn therefore purchased from its owner an estate on the frontier between two Maṣmūda tribes, the Haylāna and the Hazmīra, and pitched his camp there. So far was he from thinking of founding a great capital, a thing for which this Saharan nomad felt no need, that at first he lived in a tent here, beside which he built a mosque to pray in and a little *ḳaṣba* in which to keep his treasures and his weapons; but he did not build a surrounding wall. The native Maṣmūda built themselves dwellings surrounded by palisades of branches beside the Almoravid camp. The town grew rapidly to a considerable size, if it is true, that, in the reign of ʿAlī b. Yūsuf it had at least 100,000 hearths, but it did not lose its rural character until Ibn Tūmart appeared and the threat of the Almohad movement revived by him forced ʿAlī b. Yūsuf to defend his town and surround it by a rampart which was built in eight months, probably in 520/1126. Some historians give the date 526/1132, but it is certain that the walls were already built in 524/1130, when the Almohads attacked Marrakesh for the first time. Marrakesh, the creation and capital of the Almoravids, was to be the last of their strongholds to yield. When Ibn Tūmart had established his power over the tribes of the mountains he tried to attack Marrakesh; he then sent an Almohad army under the command of the *s͟hayk͟h* al-Bas͟hīr, who, after defeating the Almoravids in the vicinity of Ag͟hmāt, pursued them to the gates of Marrakesh. The Almohads could not enter the town but established themselves before its walls. After 40 days' siege, ʿAlī b. Yūsuf received reinforcements and made a successful sortie which forced the attackers to retreat. This was the battle of al-Buḥayra (D̲jumādā I-II 524/May 1130 from the name of a large garden, *Buḥayrat al-Raḳāʾiḳ*, near which it was fought. It lay to the east of the town before the Bāb Dabbāg͟h and the Bāb Aylān. Al-Bas͟hīr was slain and Marrakesh respited for 17 years. Ibn Tūmart died a few months later. It is hardly likely that ʿAbd al-Muʾmin should have made soon after his accession, as the *Ḳirṭās* says, a new attempt to take Marrakesh. The memoirs of al-Bayd͟haḳ which give such full details of all the events of this period make no mention of it. They show on the contrary the Almohad armies busied at first in conquering the country before occupying the capital, taking Tadla, Salé, Taza, Oran, Tlemcen and Fās and only returning to lay siege to Marrakesh after the whole country had been occupied and the capital alone held out as the last stronghold of the doomed dynasty. It was in the summer of 541/1146 that ʿAbd al-Muʾmin laid siege to Marrakesh. He made his headquarters at Gillīz and, seeing that the siege would be a long one, at once had houses built in which to instal himself and his army. The siege lasted eleven months. An unsuccessful sortie by the Almoravids seems to have hastened the fall of the town. Disgusted by lack of success and by famine, a number of chiefs of the besieged went over to the enemy. ʿAbd al-Muʾmin had scaling-ladders made and distributed them among the tribes. The assault was made and, according to Ibn al-At͟hīr, the defection of the Christian soldiery facilitated its success. The Almoravid sultan Isḥāḳ, a young boy who had sought refuge in the fortress, was slain, along with a large number of the Almoravids. This event took place in 541/S͟hawwāl 6 March-3 April 1147, according to the majority of the historians.

The Almohad dynasty which came from the south naturally took Marrakesh as its capital. It was here that ʿAbd al-Muʾmin and his successors usually resided when they were not in the country. The town prospered exceedingly under their rule. They gave it many important public buildings: the *ḳaṣba*, mosques, schools, a hospital, aqueducts and magnificent gardens. During this period of prosperity, there were very few events of particular interest in the history of Marrakesh. In 547/1152-3 according to Ibn K͟haldūn, in 549/1154-6 according to al-Bayd͟haḳ and the *Ḳirṭās*, the Banū Amg͟hār, brothers of the Mahdī Ibn Tūmart, entered the town and tried to raise the inhabitants against ʿAbd al-Muʾmin who was away at Salé. The rising was speedily put down and ended in the massacre of the rebels and their accomplices. But on the decline of the dynasty, i.e. after the battle of Las Navas de Tolosa (609/1212 [see AL-ʿIḲĀB]) and the death of al-Nāsir, son of al-Manṣūr, Marrakesh became the scene of the struggle between the royal family descended from ʿAbd al-Muʾmin and the Almohad *s͟hayk͟h*s descended from the companions of Ibn Tūmart who, quoting traditions of the latter, claimed the right to grant investiture to the sultans and to keep them in tutelage. Abū Muḥammad ʿAbd al-Wāḥid, brother of al-Manṣūr, was strangled in 621/1224. His successor al-ʿĀdil was drowned in a bath in the palace (624/1227) and the Almohad *s͟hayk͟h*s appointed as his successor the young Yaḥyā b. al-Nāṣir, while Abu 'l-ʿUlā Idrīs al-Maʾmūn, brother of al-ʿĀdil, was proclaimed in Spain. The whole country was soon in the throes of revolution. Yaḥyā, fearing the defection of the fickle Almohads, fled to Tinmal (626/1228). Disorder reigned in Marrakesh, where a governor named by al-Maʾmūn was finally appointed. But four months later, Yaḥyā returned to Marrakesh with fresh troops, put al-Maʾmūn's governor to death and after staying seven days in the town was forced to go to Gillīz to fight a battle (627/1230), for al-Maʾmūn had arrived from Spain to take possession of his kingdom. Ferdinand III, king of Castile, had given in return for various concessions, a body of 12,000 Christian horsemen with whose assistance al-Maʾmūn defeated Yaḥyā and his followers, entered Marrakesh and installed an anti-Almohad regime there, marked not only by a terrible massacre of the *s͟hayk͟h*s and their families but by a new orientation in religious matters quite opposed to that of the preceding reigns. On his arrival in Marrakesh, al-Maʾmūn mounted the pulpit of the mosque of the *ḳaṣba*, recited the *k͟huṭba*, solemnly cursed the memory of Ibn Tūmart and announced a whole series of measures, some of which are given by the *Ḳirṭās* and Ibn K͟haldūn and which show he intended to do everything on opposite lines to his predecessors. His innovations revived the discontent so that two years later (629/1232) while al-Maʾmūn and his militia were besieging Ceuta, Yaḥyā again occupied Marrakesh and plundered it. Al-Maʾmūn at once turned back to the rescue of his capital but died on the way (30 D͟hu 'l-Ḥid̲jd̲ja 629/17 October 1232). His widow, al-Ḥabāb, succeeded in getting her son al-Ras͟hīd, aged 14, proclaimed by the leaders of the army, including the commander of the Christian mercenaries. In return she gave them Marrakesh to plunder if they could reconquer it. But the people of the town, learning of this clause in the bargain, made their own terms before opening their gates to the new sultan. The latter had to grant them *amān* and pay the Christian general and his companions the sum they might have expected from the plunder of the capital—according to the *Ḳirṭās*, 500,000 *dīnārs*.

In 633/1235-6, a rebellion of the K͟hloṭ [see K͟HULṬ] drove al-Ras͟hīd out of Marrakesh, and he took refuge

in Sidjilmāsa while Yaḥyā recaptured Marrakesh. Al-Rashīd, however, succeeded in retaking it and Yaḥyā finally was assassinated. It was in the reign of the Almohad al-Saʿīd (646/1242-8) that the Marīnids who had arrived in the east of the country in 613/1216, seized the greater part of the kingdom of Fās. His successor ʿUmar al-Murtaḍā proclaimed in 646/1248, found himself in 658/1260 reduced to the solitary kingdom of Marrakesh, to the south of the Umm al-Rabīʿ. In 660/1261-2, the Marīnid Abū Yūsuf Yaʿḳūb b. ʿAbd al-Hākḳ came to attack Marrakesh. He encamped on mount Gillīz, whence he threatened the town. Al-Murtaḍā sent his cousin, the *sayyid* Abu 'l-ʿUlā Idrīs, surnamed Abū Dabbūs, to fight him. The *amīr* ʿAbd Allāh b. Abū Yūsuf was slain in the battle and his father lost heart, abandoned his designs on Marrakesh and returned to Fās at the end of Radjab 661/beginning of June 1262.

From this time, one feels that the dynasty was lost although peace was made, which moreover showed the humiliation of the Almohads who consented to pay tribute; but they were to destroy themselves. Falling into disfavour with his cousin al-Murtadā, Abū Dabbūs, this great-grandson of ʿAbd al-Muʾmin, who in the preceding year had defended Marrakesh against the Marīnid sultan, sought refuge with the latter and obtained from him the assistance necessary to overthrow al-Murtaḍā, on condition that he shared the spoils. Victorious and proclaimed sultan in Muḥarram 665/October 1266, Abū Dabbūs forgot his promises. Abū Yūsuf Yaʿḳūb came in person to remind him of them. He laid siege to Marrakesh in 665-6/1267, but Abū Dabbūs had a stroke of good fortune, for the Marīnid had to raise the siege to go and defend the kingdom of Fās against an attack by the sultan of Tlemcen, Yaghmurāsen. The campaign being over, Abū Yūsuf Yaʿḳūb returned to Marrakesh. He entered it in Muḥarram 668/Sept. 1269. The *Ḳirṭās* tells us that he gave *amān* to the inhabitants and to the surrounding tribes, whom he overwhelmed with benefits and ruled with justice and remained seven months to pacify and organise the country. By accepting Marīnid rule, however, Marrakesh lost for two-and-a-half centuries its position as a capital. The new dynasty made Fās its capital.

Its sultans however, did not neglect Marrakesh, especially during this period (end of the 7th/13th and first half of the 8th/14th century). The chronicles record many sojourns made by them there but its great days were over. The town began to lose its inhabitants. Abu 'l-Ḥasan ʿAlī was the only Marinid to undertake buildings of any importance at Marrakesh (a mosque and a *madrasa*). In the absence of the sovereign, the government of the town and district was entrusted to powerful governors as befitted a large town remote from the central authority. For nearly 20 years, from 668 to 687/1269-88, this office was held by Muḥammad b. ʿAlī b. Muḥallī, a chief greatly devoted to the Marīnids, says Ibn Khaldūn, and allied by marriage to the family of their ruler. But in Muḥarram 687/ February 1288, fearing treachery from Muḥammad b. ʿAlī, Abū Yaʿḳūb Yūsuf threw him into prison and gave his office to Muḥammad b. ʿAṭṭū al-Djānātī, a client and confidant of the royal family, to whom the sultan further entrusted his son Abū ʿĀmir. Abū Yaḳūb had not left Marrakesh six months when the young prince Abū ʿĀmir rebelled there and proclaimed himself sovereign at the instigation of the governor Ibn ʿAṭṭū (Shawwāl 687/November 1288). Abū Yaʿḳub hastened to Marrakesh which he took after several days siege. The young Abū ʿĀmir had time to escape and seek refuge in the mountains among the Maṣmūda tribes, after plundering the treasury.

The custom of giving the governorship of Marrakesh to a prince of the ruling family was kept up. Towards the end of Dhu 'l-Ḳaʿda 706/May 1307, under the walls of Tlemcen, the sultan Abū Thābit gave his cousin Yūsuf, son of Muḥammad b. Abī ʿIyāḍ b. ʿAbd al-Ḥaḳḳ, the governorship of Marrakesh and the provinces depending on it. By the end of the year, Yūsuf rebelled and proclaimed himself independent at Marrakesh after putting to death the governor of the town, al-Hādjdj Masʿūd. Defeated by the imperial troops on the banks of the Umm al-Rabīʿ, the rebel fled to the mountains, plundering Marrakesh on his way (Radjab 707/January 1308). The punishment inflicted on the rebels was severe. Yūsuf b. Abī ʿIyāḍ, handed over by a *shaykh* with whom he had taken refuge, was put to death and the heads of 600 of his followers went to adorn the battlements of the town. Abū Saʿīd ʿUthmān stayed at Marrakesh on several occasions. He did much rebuilding in 720/1320. Peace and comparative prosperity seem to have reigned there under the rule of Abu 'l-Ḥasan until this prince, as a result of reverses suffered in his struggle with the Ḥafṣids, found his own son, the ambitious Abū ʿInān, rebelling against him. During the troubles which now broke out, Ibn Khaldūn tells us, the town was seriously threatened with being sacked by the Maṣmūda of the mountains led by ʿAbd Allāh al-Saksīwī. Abū ʿInān was able to consolidate his power and avert this danger. The struggle between father and son ended in the region of Marrakesh. Abu 'l-Ḥasan, defeated at the end of Ṣafar 757/May 1350, near the town, sought refuge in the mountains with the *amīrs* of the Hintāta and died there just after becoming reconciled to his son and designating him his successor (Rabīʿ II 753/June 1352).

During the course of the 8th/14th century, the *amīrs* of the Hintāta played a very important part in the country. The position of the tribe on an almost inaccessible mountain, from which it commanded Marrakesh, gave its chiefs comparative independence and predominating influence among the other Maṣmūda. Abū ʿInān took no steps against the *amīr* ʿAbd al-ʿAzīz who had given asylum to the fugitive Abu 'l-Ḥasan. He retained him in the command of his tribe, which he gave a few years later to his brother ʿĀmir. In 754/1353 the latter, becoming chief of all the Maṣmūda tribes and sufficiently powerful to keep under his thumb the governor of Marrakesh al-Muʿtamid, son of Abū ʿInān, very soon succeeded in making himself completely independent. He received and for a time held as hostages two rebel Marīnid princes Abu 'l-Faḍl, son of the sultan Abū Sālim, and ʿAbd al-Raḥmān, son of sultan Abū ʿAlī. Quarrelling with his protégé Abu 'l-Faḍl whom he had made governor of Marrakesh, he retired into his mountains and for several years defied the armies of the sultan. He was in the end captured and put to death in 771/1370.

After the death of ʿAbd al-ʿAzīz, the pretender Abu 'l-ʿAbbās, son of Abū Sālim, had himself proclaimed in Fās with the help of his cousin ʿAbd al-Raḥmān b. Abī Ifellūsen, himself a pretender to the throne. The latter as a reward for his services was given the independent governorship of Marrakesh and the country round it (Muḥarram 776/June 1374). The empire was thus completely broken up. The two rulers soon began to quarrel but then signed a treaty of peace in 780/1378. There was a new rupture and a

new truce two years later after Marrakesh had been besieged for two months without result. Abu 'l-Abbās in the end took Marrakesh in Djumādā 784/July-August 1382, and ᶜAbd al-Raḥmān was slain. Abu 'l-ᶜAbbās, dispossessed in 1384 and exiled to Granada, succeeded in reconquering his kingdom in 789/1387 and sent to Marrakesh as governor his son al-Muntaṣir. This event is the last recorded by Ibn Khaldūn. From the time when his record ceases and throughout the 9th/15th century, we are incredibly poor in information about the history of Marrakesh. The south appears to have continued to form a large governorship in the hands of princes of the royal family. The only information at all definite that we have comes from a Portuguese historian who records that during the three years which followed the capture of Ceuta by the Portuguese (1415-18), Morocco was a prey to the struggles among the pretenders. While Abū Saᶜīd ᶜUthmān was ruling in Fās, Mawlāy Bū ᶜAlī, king of Marrakesh, was fighting against another Marīnid prince called Fāris. The "kingdom" or governorship of Marrakesh does not seem to have completely broken the links which bound it to the kingdom of Fās, for the governors of Marrakesh supplied contingents to the army which tried to retake Ceuta. But they very soon ceased to take part in the holy war in the north of Morocco, and their name is not found among the opponents of the Portuguese. Marrakesh by 833/1430 seems to have become *de facto* if not *de jure* independent but we do not know within fifty years at what date the Hintāta *amīrs* established their power; they were descended from a brother of ᶜĀmir b. Muḥammad. They were "kings" of Marrakesh when in 914/1508 the Portuguese established themselves at Safi, taking advantage of the anarchy prevailing, for the power of the Hintāta *amīrs* hardly extended beyond the environs of their capital and they could not effectively protect their tribes against the attacks of the Christians. By 1512 the Portuguese governors of Safi had succeeded in extending their power over the tribes near Marrakesh (Awlād Mṭāᶜ) and the town lived in fear of the bold raids which on several occasions brought the Portuguese cavalry and their Arab allies into the district. The king of Marrakesh, overawed, entered into negotations in 1514, but the terms were nothing less than his paying tribute as vassal and the building of a Portuguese fortress at Marrakesh. Agreement could not be reached. The occupation of Marrakesh remained the dream of the Portuguese soldiers. An attack on the town led by the governors of Safi and Azemmūr failed (9 Rabīᶜ I 921/23 April 1515). This was the period when in reaction against the anarchy and foreign invasions the Saᶜdian *sharīfs* began to come to the front in Sūs. Aḥmad al-Aᶜradj, who appeared in 919/1513 to the north of the Atlas, had himself recognised as leader of the holy war and accepted as such by the local chiefs, even by al-Nāṣir, king of Marrakesh. In Ṣafar 920/April 1514, it is recorded that he was in Marrakesh with the king. At the end of 927/1521, al-Aᶜradj established himself peacefully in Marrakesh which he found partly depopulated by famine and married the daughter of the king Muḥammad b. Nāṣir called Bū Shenṭūf. The latter in 930/1524 having tried to kick against the tutelage of his too powerful son-in-law al-Aᶜradj and his brother Maḥammad al-Shaykh, seized the *ḳaṣba*, which seems till then to have been held by Bū Shenṭūf. They disposed of the latter by having him assassinated in the following year (932/1525). Marrakesh became the Saᶜdian capital. The king of Fās, Aḥmad al-Waṭṭāsī, tried unsuccessfully to take it in Ramaḍān 933/June 1527. It remained in the hands of al-Aᶜradj till 961/1554, when it was seized by his brother Maḥammad al-Shaykh, up till then king of Sūs. After the assassination of Maḥammad al-Shaykh in 964/1557, al-Aᶜradj was put to death at Marrakesh with seven of his sons and grandsons, so as to secure the crown for Mawlāy ᶜAbd Allāh al-Ghālib. The whole of the latter part of the century was for Marrakesh a period of great prosperity. ᶜAbd Allāh al-Ghālib built a series of important public works: rearrangement of the palace and of the provision storehouses in the *ḳaṣba*; in the town, the *madrasa* Ibn Yūsuf and the al-Mwāsīn mosque, etc. Aḥmad al-Manṣūr finished his brother's work by building in the *ḳaṣba* from 986 to 1002/1578 to 1594 the famous al-Badīᶜ palace. The sultan, enriched by several years of peace and good government, and by the gold brought from the conquest of the Sūdān (1000/1591-2), lived almost continually in Marrakesh, to which he restored a splendour and a prosperity that it had not enjoyed since the end of the 6th/12th century. But the death of al-Manṣūr opened a period of trouble and civil war "sufficient to turn white the hair of an infant at the breast", to use the expression of the historian al-Ifrānī. While Abū Fāris, son of al-Mansūr, was proclaimed at Marrakesh, another son, Zaydān, was chosen sultan at Fās. A third brother, al-Shaykh, came and took Fās, then sent against Marrakesh an army led by his son ᶜAbd Allāh, who seized the town on 21 Shaᶜbān 1015/22 December 1606. But Zaydān, who sought refuge first in Tlemcen, then made his way to the Sūs, via Tafilalt and coming suddenly to Marrakesh, had himself proclaimed there while ᶜAbd Allāh b. al-Shaykh, while escaping with his troops, was attacked in the midst of the gardens (*jnān Bekkār*) and completely defeated (29 Shawwāl 1015/25 February 1607). In Djumādā II/October of the same year, ᶜAbd Allāh returned after defeating Zaydān's troops on the Wādī Tifālfalt (10 Djumādā II/2 October, 1607), fought a second battle with them at Rās al-ᶜAyn (a spring in Tansift), regained possesion of the town and revenged himself in a series of massacres and punishments so terrible that a portion of the population having sought refuge in the Gillīz, proclaimed as sultan Muḥammad, great-grandson of Aḥmad al-Aᶜradj. ᶜAbd Allāh was forced to fly (7 Shawwāl 1016/25 January 1608). Zaydān, recalled by a section of the populace, regained possession of his capital in a few days. The struggle between Zaydān and his brother al-Shaykh, in the year following, centred round the possession of Fās. Zaydān failed in his plans to retake it and henceforth Fās, given over completely to anarchy, remained separate from the kingdom of Marrakesh. On these happenings, a marabout from Tafilalt, named Abū Maḥallī [*q.v.* in Suppl.], attempted to intervene 1020/1611) to put an end to the fighting among the pretenders, which was inflicting great suffering on the people. His intervention only made matters worse. He took Marrakesh on 19 Rabīᶜ I 1021/20 May 1612. Zaydān took refuge in Safi and succeeded in again gaining possession of his capital with the help of an influential marabout in Sūs, called Yaḥyā b. ᶜAbd Allāh. After a battle near Gillīz, Zaydān withdrew into Marrakesh on 17 Shawwāl 1022/30 November 1613. But Yaḥyā, succumbing to ambition, rebelled himself at the end of 1027/1618, against the ruler whose cause he had once so well sustained. Zaydān had again to take refuge in Safi. He was soon able to return to Marrakesh, taking advantage of the discord that had broken out in the enemy ranks. ᶜAbd al-Malik, son and successor of Zaydān, has left only the memory of his cruelty and

debauchery. He was murdered in Shawwāl 1040/May 1631. The renegades, who killed him, also disposed of his brother and successor al-Walīd in 1636. A third brother, Maḥammad al-Shaykh al-Aṣghar, succeeded him but had only a semblance of power. He managed however to reign till 1065/1655, but his son Aḥmad al-ʿAbbās was completely in the hands of the Shabbāna, an Arab tribe who assassinated him and gave the throne to his *ḳāʾid* ʿAbd al-Karīm, called Ḳarrūm al-Ḥādjdj, in 1659. "The latter", says al-Ifrānī, "united under his sway all the kingdom of Marrakesh and conducted himself in an admirable fashion with regard to his subjects". His son Abū Bakr succeeded him in 1078/1668, but only reigned two months until the coming of the Fīlālī sultan al-Rashīd, already lord of Fās, who took Marrakesh on 21 Ṣafar 1079/31 July 1668. Called to Marrakesh by the rebellion of his nephew Aḥmad b. Muḥriz, al-Rashīd met his death there in the garden of al-Agdāl, his head having been injured by a branch of an orange tree against which his horse threw him when it stumbled.

Mawlāy Ismāʿīl had some difficulty in getting himself proclaimed at Marrakesh, which preferred his nephew, Aḥmad b. Muḥrīz. Ismāʿīl forced his way in on 9 Ṣafar 1083/4 June, 1672. In the following year, Marrakesh again welcomed Aḥmad b. Muḥriz. After a siege of more than two years (Dhu 'l-Ḥidjdja 1085-Rabīʿ II 1088/March 1675-June 1677), Ismāʿīl reoccupied Marrakesh and plundered it. He passed through it again in 1094/1683 on his way to the Sūs to fight Aḥmad b. Muḥriz who was still in rebellion. Marrakesh was no longer the capital. Mawlāy Ismāʿīl took an interest in it and destroyed the palaces of the *ḳaṣba* to use the materials for his works in Meknès. In Ramaḍān 1114/February 1703, a son of Mawlāy Ismāʿīl, Muḥammad al-ʿĀlim, rebelled against his father, seized Marrakesh and plundered it. Zaydān, brother of the rebel, was given the task of suppressing the rising, which he did, plundering the town once more.

Anarchy again broke out after the death of Ismāʿīl. Its centre was Meknes. Mawlāy al-Mustaḍī, proclaimed by the ʿAbīd in 1151/1738, was disowned by them in 1740 and replaced by his brother ʿAbd Allāh. He sought refuge in Marrakesh. His brother al-Nāṣir remained his *khalīfa* in Marrakesh till 1158/1745, while al-Mustaḍī tried in vain to reconquer his kingdom. Marrakesh finally submitted in 1159/1746 to Mawlāy ʿAbd Allāh, who sent his son Sīdī Muḥammad there as *khalīfa*. The governorship and then the reign of the latter (1171-1204/1757-90) formed one of the happiest periods in the history of Marrakesh. Sīdī Muḥammad completely restored the town, made it his usual residence, received many European embassies there, including a French one led by the Comte de Breugnon in 1767, and developed its trade. Peace was not disturbed during his long reign except for a riot raised by a marabout pretender named ʿUmar, who at the head of a few malcontents tried to attack the palace in order to plunder the public treasury. He was at once seized and put to death (between 1766 and 1772, according to the sources). On the death of Sīdī Muḥammad b. ʿAbd Allāh, the situation remained very unsettled for several years. After taking the oath of allegiance to Mawlāy Yazīd (18 Shaʿbān 1204/ 3 May 1790), the people of Marrakesh took in his brother Mawlāy Hishām and proclaimed him. On hearing this, Yazīd abandoned the siege of Ceuta, returned to Marrakesh, plundered it and committed all kinds of atrocities (1792). Hishām, supported by the ʿAbda and the Dukkāla, marched on Marrakesh. Yazīd, wounded in the battle, died a few days later in the palace (Djumādā II 1206/February 1792). Marrakesh remained faithful to the party of Mawlāy Hishām, but very soon the Rḥāmna abandoned him to proclaim Mawlāy Ḥusayn, brother of Hishām. He established himself in the *ḳaṣba* (1209/1794-5). While the partisans of the two princes were exhausting themselves in fighting, Mawlāy Slīmān, sultan of Fās, avoided taking sides in the struggle. The plague rid him at one blow of both his rivals (Ṣafar 1214/July 1799), who had in any case to submit some time before. The last years of the reign of Mawlāy Slīmān were overcast by troubles in all parts of the empire. Defeated at the very gates of Marrakesh, he was taken prisoner by the rebel Shrārda. He died at Marrakesh on 13 Rabīʿ I 1238/28 November 1822. Mawlāy ʿAbd al-Raḥmān (1824-59) did much for the afforestation of Agdāl and restored the religious buildings. His son Muḥammad completed his work by repairing tanks and aqueducts. These two reigns were a period of tranquillity for Marrakesh. In 1862, however, while Sīdī Muḥammad b. ʿAbd al-Raḥmān was fighting the Spaniards at Tetwan, the Rḥāmna rebelled, plundered the Sūḳ al-Khamīs and closely blockaded the town, cutting off communications and supplies, until the Sulṭān, having made peace with Spain, came to relieve the town (Dhu 'l-Ḥidjdja 1278/June 1862). Mawlāy al-Ḥasan hardly ever lived in Marrakesh, but he stopped there on several occasions, notably in October 1875, to punish the Rḥāmna and the Bū 'l-Sbaʿ, who had rebelled, and in 1880 and 1885, to prepare his expeditions into the Sūs.

During the last years of the reign of Mawlāy ʿAbd al-ʿAzīz (1894-1908), it was at Marrakesh that the opposition to the European tastes and experiments of the sultan made itself most strongly felt. The xenophobia culminated in the murder of a French doctor named Mauchamp (19 March 1907), and the spirit of separatism in the proclamation as sultan of Mawlāy ʿAbd al-Ḥafīẓ, brother of ʿAbd al-ʿAzīz and governor of the provinces of the south (24 August 1907). But ʿAbd al-Ḥafīẓ becoming ruler of the whole empire (24 August 1907) and having signed the treaty of 24 March 1912 establishing the protectorate of France and of Spain over Morocco, the anti-foreign movement broke out again in the south. The Mauritanian marabout al-Ḥība [see AḤMAD AL-HĪBA in Suppl.] had himself proclaimed and established himself in Marrakesh. He only held out there for a brief period. His troops having been defeated at Sīdī Bū ʿUthmān on 6 September 1912, the French troops occupied Marrakesh the next day.

Relations with Europe. Five minor friars sent by St. Francis were put to death at Marrakesh on 16 January 1220, for having attempted to convert Muslims and having insulted the Prophet Muḥammad in their discourses. Their martyrdom attracted the attention of the Holy See to Marrakesh. A mission and a bishopric were established by Honorius III in 1225 to give the consolations of religion to the Christians domiciled in Morocco: merchants, slaves and mercenaries in the sultan's army. In the Almoravid period, the sultans had Christian mercenaries recruited from prisoners reduced to slavery or from the Mozarab population of Spain whom they had from time deported to Morocco by entire villages. In 1227, Abu 'l-ʿUlā Idrīs al-Maʾmūn, having won his kingdom with the help of Christian troops lent by the king of Castile, found himself bound to take up quite a new attitude to the Christians. He granted them various privileges, including permission to build a church in Marrakesh and worship openly there. This

was called Notre Dame and stood in the *ḳaṣba*, probably opposite the mosque of al-Manṣūr: it was destroyed during a rising in 1232. But the Christian soldiery continued to enjoy the right to worship, at least privately, and the bishopric of Marrakesh supported by a source of income at Seville, existed so long as there was an organised Christian soldiery in Morocco, i.e. to the end of the 8th/14th century. The title of Bishop of Marrakesh was borne till the end of the 10th/16th century by the suffragans of Seville (cf. Father A. Lopez, *Los obispos de Marruecos desde el siglo XIII*, in *Archivo Ibero-Americano*, xlii [1920]). A Spanish Franciscan, the prior Juan de Prado, who came to re-establish the mission, was put to death in 1621 at Marrakesh. A few years later (1637), a monastery was re-established beside the prison for slaves in the *ḳaṣba*. It was destroyed in 1659 or 1660 after the death of the last Saᶜdian. Henceforth the Franciscans were obliged to live in the *mellāḥ* where they had down to the end of the 18th century a little chapel and a monastery. As to the Christian merchants, they had not much reason to go to Marrakesh in the Middle Ages. Trade with Europe was conducted at Ceuta from which the Muslim merchants carried European goods into the interior of the country. In the 16th century, ᶜAbd Allāh al-G͟hālib had a *fondaḳ* or "bonded warehouse" built in the *sūḳ* where the Christian merchants were allowed to live; but the majority of those who came to Marrakesh preferred to settle in the Jewish quarter. It was here also that foreign ambassadors usually lodged, at least when they were not made to encamp in one of the gardens of the palace.

Monuments. The present enceinte of Marrakesh is a wall of clay about 20 feet high, flanked with rectangular bastions at intervals of 250 to 300 feet. Bāb Ag͟hmāt, Bāb Aylān and Bāb Dabbāg͟h which still exist more or less rebuilt, are mentioned in the account of the attack on Marrakesh by the Almohads in 524/1130. Bāb Yīntān and Bāb al-Mak͟hzen, mentioned at the same time, have disappeared. Bāb al-Ṣāliḥa (no longer in existence: it stood on the site of the *mellāḥ*) and Bāb Dukkāla (still in existence) figure in the story of the capture of the town by the Almohads (542/1147). The plan of the wall has therefore never changed. It has been rebuilt in places from time to time, as the clay crumbled away, but it may be assumed that a number of pieces of the wall, especially on the west and south-west, are original, as well as at least three gates all now blocked up, to which they owe their survival, but have lost their name. According to Abu 'l-Fidāʾ (8th/14th century), there were in Marrakesh seventeen gates; twenty-four at the beginning of the 10th/16th century, according to Leo Africanus. It would be very difficult to draw up an accurate list, for some have been removed, others opened, since these dates or the names have been altered. Ibn Faḍl Allāh al-ᶜUmarī (beginning of the 8th/14th century) adds to the names already mentioned those of Bāb Nfīs, Bāb Muḥriḳ, Bāb Messūfa, Bāb al-Raḥā, all four of which have disappeared, Bāb Tag͟hzūt, Bāb Fās (now Bāb al-K͟hamīs) and Bāb al-Rabb, which still exist. The only important changes, which have been made in the walls of Marrakesh since they were built, have been the building of the *ḳaṣba* in the south and in the north the creation of the quarter of Sīdī bel ᶜAbbās. The *zāwiya* which as late as the 10th/16th century stood outside the walls beyond the Bāb Tag͟hzūt, was taken into the town with all its dependencies.

The *Ḳaṣba*. The little *ḳaṣba* and the palace of Dār al-ᶜUmma built by Yūsuf b. Tas͟hfīn, lay north of the present "Mosque of the Booksellers" or Kutubiyya. ᶜAlī b. Yūsuf added in the same quarter other palaces called Sūr al-Ḥad͟jar, or Ḳaṣr al-Ḥad͟jar because they were built with stones from the Gillīz, while all the other buildings in the town were of brick or clay. It was here that the first Almohads took up their quarters. According to a somewhat obscure passage of the *Istibṣār*, Abū Yaᶜḳūb Yūsuf seems to have begun the building of a "fort" in the south of the town but it was Yaᶜḳūb al-Manṣūr who built the new *ḳaṣba* (585-93/1189-97); that is to say he joined to the south wall of the town a new walled area within which he built palaces, a mosque, and a regular town. Nothing remains of the Almohad palaces, but from pieces of wall and other vestiges one can follow the old wall, at least on the north and the east side. There also the line of the wall has hardly changed. The magnificent gateway of carved stone by which the *ḳaṣba* is now entered, must be one of al-Manṣūr's buildings. Its modern name of Bāb Agnaw (the dumb mute's = Negro's Gate) is not found in any old text. It probably corresponds to Bāb al-Kuḥl (Gate of the Negroes?), often mentioned by the historians.

Ibn Faḍl Allāh al-ᶜUmarī, in the 8th/14th century, Leo Africanus and Marmol in the 10th/16th have left us fairly detailed descriptions of the *ḳaṣba*, in spite of a few obscure passages. In the Almohad period, the *ḳaṣba* was divided into three quite distinct parts. One wall in the northwest, around the mosque of al-Manṣūr which still exists, contained the police offices, the headquarters of the Almohad tribes and the barracks of the Christian soldiery. From this one entered through the Bāb al-Ṭubūl a second enclosure in which around a huge open space, the "Cereque" of Marmol (*asārāg*), were grouped the guard houses, the offices of the minister of the army, a guest-house, a *madrasa* with its library and a large building called *al-saḳāʾif* (the porticoes), the "Acequife" of Marmol, occupied by the principal members of the Almohad organisation, the "Ten", the "Fifty", the *ṭolba* and the pages (*ahl al-dār*). The royal palace, sometimes called the Alhambra of Marrakesh, in imitation of that of Granada, was entered from the Asārāg and occupied the whole area east of the *ḳaṣba*. The palaces of al-Manṣūr were still in existence at the beginning of the 10th/16th century when the Saᶜdians took possession. ᶜAbd Allāh al-G͟hālib incorporated them in the new palaces which he was building. Aḥmad al-Manṣūr added, in the gardens to the north, the famous al-Badīᶜ palace celebrated for its size and splendour. Only a few almost shapeless ruins remain of it, but its plan is perfectly clear. Mawlāy Ismāᶜīl had it destroyed in order to use its materials. The *ḳaṣba* remained so completely in ruins that Sīdī Muḥammad b. ᶜAbd Allāh, when he became governor of Marrakesh in 1159/1746, was obliged to live in a tent until his new buildings were finished. It is to him that we owe an important part of the present palace with its inner garden, ᶜArṣat al-Nīl. Other works were later undertaken by Mawlāy Slīmān and his successors. Some large unfinished buildings date only from Mawlāy ᶜAbd al-Ḥafīẓ. A number of gates, in addition to the Bāb Agnaw, give admittance to the *ḳaṣba*: these are Bāb Berrīma and Bāb al-Aḥmar in the east, Bāb Ig͟hlī and Bāb Ḳsība in the west. The palace has vast gardens belonging to it: Jnān al-ᶜAfīya, Agdal, Jnān Riḍwān, Maʾmūniyya and Manāra. The latter, two miles west of the town, contained in the 10th/16th century a pleasure house of the sultans. The palace of Dār al-Bayḍāʾ, situated in the Agdal, took the place of a Saᶜdian palace. It was rebuilt by Sīdī Muḥammad b. ᶜAbd Allāh and has since been restored. As to the gardens of the Agdal, they seem to

have been created in the 6th/12th century by ᶜAbd al-Muʾmin.

Mosques. Nothing remains of the early Almoravid mosques, in the building of one of which Yūsuf b. Tas͟hfīn himself worked along with the masons as a sign of humility. But the Friday mosque of ᶜAlī b. Yūsuf, where Ibn Tūmart had an interview with the sultan, although several times rebuilt, still retains its name. The Almohads, on taking possession of Marrakesh, destroyed all the mosques on the pretext that they were wrongly oriented. The mosque of ᶜAlī b. Yūsuf was only partly destroyed and was rebuilt. ᶜAbd Allāh al-G͟hālib restored it in the middle of the 10th/16th century. The present buildings and the minaret date from Mawlāy Slīmān (1792-1822).

Kutubiyya. When the Almohads entered Marrakesh, Abd al-Muʾmin built the first Kutubiyya of which some traces still remain and it has been possible to reconstruct its plan. As it was wrongly oriented he built a new mosque, the present Kutubiyya, in prolongation of the first but with a slightly different orientation. It takes its name from the 100 booksellers' shops which used to be around its entrance. It is a very large building with seventeen naves, which with its decoration in carved plaster, its stalactite cupolas, the moulding of its timberwork, its capitals and magnificent pulpit (*minbar*) of inlaid work, is the most important and the most perfectly preserved work of Almohad art. The minaret, begun by ᶜAbd al-Muʾmin, was only finished in the reign of his grandson al-Manṣūr (591/1195). It is 230 feet high and its powerful silhouette dominates the whole town and the palm groves. It is the prototype of the Giralda of Seville and of the tower of Ḥassān at Rabat. It is decorated with arcatures the effects of which were formerly heightened by paintings still visible in places, with a band of ceramic work around the top.

The mosque of the *ḳaṣba* or mosque of al-Manṣūr is the work of Yaᶜḳūb al-Manṣūr. It was begun in 585-91/1189-95 and built in great splendour. It has been profoundly altered, first by ᶜAbd Allāh al-G͟hālib the Saᶜdian, then in the middle of the 18th century by Muḥammad b. ᶜAbd Allāh, then more recently by Mawlāy ᶜAbd al-Raḥmān (1822-59). The minaret of brick is intact and magnificently ornamented with green ceramics. The lampholder supports a *d̲j̲āmūr* of three bowls of gilt copper, which occupy a considerable place in the legends of Marrakesh. They are said to be of pure gold and to be enchanted, so that no one can take them away without bringing on himself the most terrible misfortunes. This legend is often wrongly connected with the *d̲j̲āmūr* of the Kutubiyya.

Among the religious monuments of Marrakesh of archaeological interest may also be mentioned the minarets of the mosque of Ibn Ṣāliḥ (dated 731/1331) and of the sanctuary of Mawlā 'l-Ḳṣūr, built in the Marīnid period in the Almohad tradition, and two Saᶜdian mosques: the mosque of al-Mwāsīn or mosque of the S͟harīfs, which owes its origin to ᶜAbd Allāh al-G͟hālib, and that of Bāb Dukkāla, built in 965/1557-8 by Lālla Masᶜūda, the mother of the sultan Aḥmad al-Manṣūr.

Madrasas. An Almohad *madrasa*, built "to teach the children of the king and others of his family in it", formed part of the buildings of Yaᶜḳūb al-Manṣūr. This royal school was presumably different from what were later the Marīnid *madrasas*. It stood on the great square in front of the palace and was still in existence in the time of Leo Africanus. The Marīnid Abu 'l-Ḥasan in 748/1347 built another *madrasa*, also described by Leo. It lay north of the mosque of the *ḳaṣba*, where traces of it can still be seen. The *madrasa* of Ibn Yūsuf is not, as is usually said, a restoration of the Marīnid *madrasa*. It was a new building by ᶜAbd Allāh al-G͟hālib, dated by an inscription of 972/1564-5 and the only surviving example of a Saᶜdian *madrasa*.

Saᶜdian tombs. The two first founders of the dynasty rest beside the tomb of Sīdī Muḥammad b. Slīmān al-D̲j̲azūlī in the Riyāḍ al-ᶜArūs quarter. Their successors from 964/1557 were buried to the south of the mosque of the *ḳaṣba*. There was a cemetery there, probably as early as the Almohad period, which still has tombs of the 8th/14th century. The magnificent *ḳubba*s which cover the tombs of the Saᶜdian dynasty must have been built at two different periods. The one on the east under which is the tomb of Maḥammad al-S͟hayk͟h seems to have been built by ᶜAbd Allāh al-G͟hālib. The other, with three chambers, seems to have been erected by Aḥmad al-Manṣūr (d. 1012/1603) to hold his tomb.

AL-**MARRĀKUSHĪ** [see ʿABD AL-WĀḤID; IBN AL-BANNĀʾ].

AL-**MARRĀKUSHĪ**, ABŪ ʿALĪ AL-ḤASAN B. ʿALĪ, astronomer of Maghribī origin who worked in Cairo. In *ca.* 680/1281-2, he compiled a compendium of spherical astronomy and astronomical instruments entitled *Kitāb Djāmiʿ al-mabādiʾ wa 'l-ghāyāt fī ʿilm al-mīḳāt*, which is perhaps the most valuable single source for the history of Islamic astronomical instrumentation.

In this work, which exists in several manuscript copies, al-Marrākushī presented a detailed discussion of the standard problems of spherical astronomy [see MĪḲĀT. 2. Astronomical aspects], and then dealt with different kinds of plane sundials, the armillary sphere, the planispheric astrolabe, the universal plate known as the *shakkāziyya*, the trigonometric grid called *al-rubʿ al-mudjayyab*, and a variety of aquadrants for determining time from solar altitude [see AṢṬURLĀB and RUBʿ]. Most of the material was apparently culled from earlier sources which are not identified by the author and which have not yet been established. Those earlier scholars whom he does mention do not appear to be his major sources. The compendium does contain several tables computed specifically for Cairo, and these appear to be original to al-Marrākushī. Rather surprisingly, he makes no reference to and does not exploit the *Zīdj ḥākimī* of the 4th/10th century Egyptian astronomer Ibn Yūnus [*q.v.*], which included an exhaustive account of spherical astronomy and also contained numerous tables for Cairo.

Al-Marrākushī's work was highly influential in later Islamic astronomy in Rasūlid Yemen, in Mamlūk Egypt and Syria, and in Ottoman Turkey. Most of the surviving manuscripts are of Egyptian, Syrian or Turkish provenance. His work was apparently unknown in the Maghrib and the Islamic East.

The first half of al-Marrākushī's treatise dealing with spherical astronomy and sundials was translated by J.J. Sédillot, and the second half dealing with instruments summarised by L.A. Sédillot. Al-Marrākushī's sundial theory has been studied by K. Schoy. A detailed study of this work, and an investigation of its sources, has yet to be conducted. An uncritical edition was prepared by the late Egyptian scholar Shaykh Ḥasan al-Bannāʾ, but this has not been published.

Al-Marrākushī is usually described as a Maghribī scientist because of his *nisba*. Unfortunately, we have no biographical information on him of any consequence. Whatever his origin, his *magnum opus* was clearly compiled in Cairo. Apparently neither of the Sédillots realised that he was writing there, and Sédillot *père* misdated him to 660/1261-2 in spite of the fact that his solar tables and star catalogue are computed for 680/1281-2.

MARRĀSH, FRANSĪS B. FATḤ ALLĀH B. NAṢR, Syrian scholar and publicist of the *Nahḍa* (1835-74 according to M. ʿAbbūd and S. al-Kayyālī, or 1836-73 according to Brockelmann, Dāghir and al-Ziriklī).

He was born and died at Aleppo, coming from a Melkite Christian family of literary men (Brockelmann, S II, 755), and in the opening stages of the modern Arabic literary renaissance, the *Nahḍa* [*q.v.*], tried to introduce "critical reasoning" into a sphere at that time in a state of cultural effervescence. For this, he employed pseudo-scientific terms in order to prove, in his early works, the need for freedom and peace in the world, and then in his later works, the existence of God and the divine law (the *sharīʿa* which, in his eyes, goes beyond the sphere of the Islamic law alone). In order to free human thought from the yokes of tradition and respect for the ancients, he used extra-literary methods, the discoveries of the botanical, geological and zoological sciences; but, so as not to frighten off his public, he did not endeavour to free himself from traditional forms of expression (*sadjʿ*, the *maḳāma* genre, numerous poetic citations). The whole of his work involved religion and history in an epistemological revision, and in this, he contributed with Faris al-Shidyāḳ and Faraḥ Anṭūn [*q.vv.*] in the development of critical reasoning, fed by multi-disciplinary aspects of knowledge, in contemporary Arab thought.

He was aided in this by his milieu. Aleppo was at that time a lively centre of thought about the Arab future, within a society still under Ottoman rule. It was in the French religious schools that the Marrāsh family learnt Arabic with French and other foreign languages (Italian and English). The father, Fatḥ Allāh, and the brother, ʿAbd Allāh, achieved a certain literary fame. A young sister, Maryāna, born in 1848 (Brockelmann, S II, 756, erroneously calls her "daughter"; Dāghir, ii, 697), was to conduct a literary salon and seems to have been the first Arab woman to write in the daily newspapers (*al-Djinān* and *Lisān al-ḥāl*).

Since he was 4 years old, as a consequence of measles, Fransīs Marrāsh began to lose his sight. He studied science and learnt medicine with an English physician in Aleppo. He continued his studies in 1867 at Paris, where he had already been in 1850 for treatment for his eyes. But as his sight deteriorated, he had to return to Aleppo completely blind. During the last

years of his life, he was able to dictate a relatively abundant body of work.

His biographers reproach him for using a linguistic style at times incorrect and inelegant (Dāghir, ii, 693; al-Ziriklī; Ḳusṭākī; M. ʿAbbūd, 115), but they speak with appreciation of the quality of his personal thought and insight (*kātib mabādiʾ wa-tafkīr... min al-ṭirāz al-awwal*, Dāghir, ii, 693) at a time when *bidʿa*, innovativeness and originality, were still viewed with disfavour by traditional cultural circles. From the titles onwards, his works reveal a clearly marked-out form and a new range of contents: *Dalīl al-ḥurriyya al-insāniyya* "Guide to human liberty", Aleppo 1861, 24 pp.; *al-Mirʾāt al-ṣafiyya fi 'l-mabādiʾ al-ṭabīʿiyya* "The clear mirror of natural principles", Aleppo 1861, 60 pp. of pseudo-scientific text; *Taʿziyat al-makrūb wa-rāḥat al-matʿūb* "Consolation of the anxious and repose of the weary one", Aleppo 1864, a philosophical and pessimistic discourse on nations of the past; *Ghābat al-ḥaḳḳ* "The forest of truth" (Brockelmann, S II, 756: *Ghāyāt al-ḥaḳḳ*), Aleppo 1865, Cairo 1298/1881, Beirut 1881, his most famous and most often printed work, "almost a novel" (Dāghir, ii, 695; ʿAbbūd, 131; Kayyālī, 57), a kind of apocalyptic vision and pleading for the liberty of peoples and for peace; *Riḥla ilā Bārīs*, a description of his trip to Paris, Beirut 1867; *al-Kunūz al-fanniyya fi 'l-rumūz al-maymūniyya* "Artistic treasures concerning the symbolic visions of Maymūn", a poem of almost 500 verses, a kind of symbolic vision whose hero is called Maymūn; *Mashhad al-aḥwāl* "The witnessing of the stages of human life", Beirut 1870, 1883 (Brockelmann, S II, 756, gives an edition of 1865 [?]), these editions testifying to the work's success, as confirmed by ʿAbbūd—with its 130 pp. (this in the 1870 edition, 75 being in verse and 55 in prose), the book sets forth the author's philosophical ideas on beings and things: minerals, vegetable and plant life, animals and human kind; *Durr al-ṣadaf fī gharāʾib al-ṣadf* "The pearl of nacre concerning the curious aspects of change", a social narrative which appeared at Beirut in 1872; *Mirʾāt al-ḥasnāʾ* "The mirror of the beautiful one", Beirut 1872, 1883, a collection of poems; and his posthumous work, *Shahādat al-ṭabīʿa fī wudjūd Allāh wa 'l-sharīʿa* "The proofs of nature for the existence of God and the divine law", Beirut 1892.

In his articles published in *al-Djinān*, Buṭrus al-Bustānī's journal [see AL-BUSTĀNĪ, 2., in Suppl.], he reveals himself as favourable to women's education, which he limited however to reading, writing, and a little bit of arithmetic, geography and grammar. He wrote that it is not necessary for a woman "to act like a man, neglect her domestic and family duties, or that she should consider herself superior to the man" (*al-Djinān*, 1872, 769-70, cited by A. al-Maḳdisī, 268-9). He nevertheless closely followed his sister Maryāna's studies not suspecting that the first poem which she would publish in the public press—actually in *al-Djinān*—would be her elegy on him (ʿAbbūd, 173).

(N. TOMICHE)

MARRIAGE [see ʿMAHR, MARʾA, NIKĀḤ, ʿURS].

MARS [see AL-MIRRĪKH].

MARSĀ [see MĪNĀʾ].

MARSĀ ʿALĪ [see ṢIḲILLIYYA].

MARṢAD (A.) originally means a place where one keeps watch, whence comes the meaning of observatory, also described by the word *raṣad*.

The first astronomical observations carried out in the Islamic world seem to date back to the end of the 2nd/8th century, i.e. to the period when Indo-Persian astronomical materials were introduced and the first Ptolemaic data appeared. According to Ibn Yūnus (d. 399/1009), Aḥmad b. Muḥammad al-Nihāwandī (174/790) made some observations in Djundīshāpūr in the time of the minister Yaḥyā b. Khālid b. Barmak (d. 190/805) and used their results in his *Zīdj mushtamil*, unfortunately lost. The same Ibn Yūnus informs us, on the other hand, that in 159/776 the first determination of the obliquity of the ecliptic was made with a result of 23°31', but he does not cite the one responsible for these observations, who may have been al-Nihāwandī himself.

The first systematic programme of observations concerning which we have solid information is that which was implemented under the patronage of the caliph al-Maʾmūn [*q.v.*] (198-218/813-33) who gave an impulse to this research, perhaps because of his own interest in astronomy or his desire to achieve a permanent solution of the problem presented by the contradictory parameters used by the three astronomical schools known to Muslims: Indian, Persian and Greek (D. Pingree, *The Greek influence on early Islamic mathematical astronomy*, in *JAOS*, xciii [1973], 38-9). This second hypothesis would also explain the careful measurement of a meridian degree undertaken on al-Maʾmūn's order, in the Syrian desert (between the towns of al-Raḳḳa and Palmyra) and in ʿIrāḳ (between Baghdād and Kūfa and on the Sindjar plain; see T. Bychawski, *Measurement of one geographical degree undertaken and carried out by the Arabs in the IXth century*, in *Actes du IXᵉ Congrès International d'Histoire de Sciences*, Barcelona-Paris 1960, 635-8). The observations encouraged by al-Maʾmūn were undertaken in Baghdād and Damascus, not simultaneously, it seems, but consecutively, although we possess a reference to the collation of the results of an observation of the autumnal equinox carried out in the two towns. In Baghdād, the observations took place in al-Shammāsiyya quarter, but the sources do not say if there was an observatory, properly speaking, in a building reserved for this purpose; in any case, the insistence in the introduction of the *zīdj* attributed to Hayhā b. Abī Manṣūr (d. *ca.* 215/830) on the use of the "circle" (*dāʾira*) of al-Shammāsiyya makes us think of a large scale instrument requiring a fixed installation and a minimal permanent space (cf. J. Vernet, *Las "Tabulae Probatae"*, in *Homenaje à Millás Vallicrosa*, ii, Barcelona 1956, 508, repr. in *Estudios sobre historia de la ciencia medieval*, Barcelona-Bellaterra 1979, 198). The situation was the same in Damascus, where the observations took place in the monastery of Dayr Murrān on Mount Ḳāsiyūn [*q.v.*]; a sun-dial ten cubits high (about 5 m.) was built there and a marble wall dial, whose interior radius also measured ten cubits. In any case, it was not necessary for the installations to be of a permanent character, for the

programmes were brief; in Baghdād the observations were carried out in 213/828 and 214/829 under the direction of Yaḥyā b. Abī Manṣūr with the collaboration of Sanad b. ʿAlī and al-ʿAbbās b. Saʿīd al-Djawharī. They had to be interrupted for a year, to be repeated later in Damascus, where they took place at the end of a solar year between 216 and 217/831-2, under the direction of Khālid b. ʿAbd al-Malik al-Marwarrūdhī, perhaps with the assistance of Sanad b. ʿAlī and ʿAlī b. ʿĪsā al-Asṭurlābī. The question as to whether Ḥabash al-Ḥāsib (d. between 250 and 260/864-74) was involved in these observations, especially as head of the team in Damascus, has been much discussed, but there does not seem to be sufficient proof and Ḥabash himself, in the introduction of his *zīdj* where he alludes to these observations, does not say that he took part personally. The caliph's death, in 218/833, interrupted, according to some sources, the programme of observations, but the matter is not clear, for, on the one hand, some evidence shows that this work preceded al-Maʾmūn's death and, on the other, we possess some references to later observations carried out by al-Maʾmūn's astronomers in Damascus (Khālid in 219/834) and in Baghdād (Khālid, ʿAlī b. ʿĪsā al-Ḥarrānī and Sanad b. ʿAlī in 230-1/843-4). It is furthermore possible that the observations in question survived to be followed up by a later imitator or that the latter to which allusion is to be made (such as those of Ḥabash in Baghdād between 210 and 220/825-33 and in 250/864) were carried out on the fringe of the official programme laid down by the caliph.

The observers of al-Maʾmūn's time seem to have given themselves to the systematic observation of the sun and moon, although observations were also made of the fixed stars and no doubt of the planets. The results of these labours were recorded in a certain number of *zīdj*s, outstanding among which are those attributed to Yaḥyā b. Abī Manṣūr and Ḥabash. As far as the sun is concerned, these *zīdj*s improve upon the Ptolemaic parameters, and it is also known that al-Maʾmūn's astronomers established a new method, which offers some advantages as against that of Ptolemy, for establishing the parameters of the solar (W. Hartner and M. Schramm, *Al-Bīrūnī and the theory of the solar apogee: an example of originality in Arabic science*, in A.C. Crombie (ed.), *Scientific change*, London 1963, 208-9). Various calculations of the obliquity of the ecliptic (see al-Bīrūnī, *Taḥdīd nihāyāt al-amākin*, ed. P. Boulgakov, in *RIMA*, viii [1962], 90-1) and of the duration of the tropical year were undertaken. However, the observation of the moon, stars and planets proved to be less fruitful, and we can only say, by way of example, that the estimation of the precession of the equinoxes (1 every 66 years) obtained by Yaḥyā b. Abī Manṣūr (following an observation of the autumnal equinox carried out on the 27 Radjab 215/19 September 830) is suspect, for D. Pingree (*Precession and trepidation in Indian astronomy before A.D. 1200*, in *Jnal. of the Hist. of Astronomy*, iii [1972]), has demonstrated that the parameter cited above is of Sanskrit origin.

The status given to astronomical observations by al-Maʾmūn's patronage was to be followed by a period during which the same work had to be pursued, on a lower level, in small private observatories: this is the case with the brothers Muḥammad and Aḥmad b. Mūsā b. Shākir who observed the sun and fixed stars between 225 and 225/840-69, principally in Baghdād, but also in Sāmarrā and Nīshāpūr. This activity of the Banū Mūsā is easily explained, for they had at their disposal a considerable fortune and became patrons of other scholars, among whom figured Thābit b. Ḳurra [*q.v.*] (d. 288/901), who also made observations himself, but is distinguished essentially by his use of the results of those which dated back to antiquity and al-Maʾmūn's period. Between the 3rd and 4th/9th-10th centuries, attention should be drawn to the work undertaken by al-Mahānī (observation of conjunctions and eclipses of the sun and moon between 239 and 252/853-66), the 30 years (273-305) of systematic observations of al-Battānī [*q.v.*] in al-Raḳḳa which are crystallised in his famous *zīdj* (edited by C.A. Nallino, Milan 1899-1907) and the labours of the Banū Amādjūr in Baghdād between 271 and 321/885-933, who made observations not only of the sun but also of the moon and planets.

The 4th/10th century had already begun when the interest of the Buwayhid dynasty in astronomy brought a revival of official patronage which facilitated the undertaking of very extensive work; Abu 'l-Fadl Ibn al-ʿAmīd [*q.v.*], minister of the ruler of al-Rayy, Rukn al-Dawla (d. 366/977), subsidised the construction of a large-scale instrument with which Abu 'l-Faḍl al-Harawī and Abū Dja ʿfar al-Khāzin [*q.v.*] made solar observations in 348/950. This same minister also had in his service ʿAbd al-Raḥmān al-Ṣūfī (d. 376/986), who was also patronised, in Iṣfahān, by another Buwayhid, ʿAḍud al-Dawla (d. 372/983). Al-Ṣūfī's important stellar observations resulted in a systematic revision of Ptolemy's catalogue of stars; simultaneously, Ibn al-Aʿlam, also for ʿAḍud al-Dawla, made some planetary observations which are recorded in his famous *zīdj* (cf. E. S. Kennedy, *The astronomical tables of Ibn al-Aʿlam*, in *JHAS*, i [1977], 13-21). This work was further developed under Sharaf al-Dawla (372-9/982-9), who commanded Abū Sahl al-Ḳūhī to observe the seven planets, which resulted in the construction of an observatory in the royal palace garden at Baghdād where some large-scale instruments were used. Astronomers such as Abu 'l-Wafāʾ al-Būzdjānī [*q.v.*] and Aḥmad b. Muhammad al-Ṣāghānī must have taken part in the first observations, which took place in 378/988. Unfortunately, this Baghdād observatory had an ephemeral existence, for its activities ended with the death of Sharaf al-Dawla. Even so, the patronage of Fakhr al-Dawla (366-87/977-97) supported the solar observations of al-Khudjandī [*q.v.*] (d. 390/1000) carried out in Rayy with the help of a large sextant called *al-sudus al-fakhrī*. The Buwayhids' example must obviously have awakened a desire to emulate it among members of other dynasties, and this was the case with the Kākwayhid ʿAlāʾ al-Dawla Muḥammad (d. 433/1041-2) who supplied Ibn Sīnā [*q.v.*] (370-428/980-1037), with funds to carry out observations of the planets in Hamadān around 414/1023-4, and with Maḥmūd of Ghazna (d. 421/1030), under whose patronage al-Bīrūnī [*q.v.*] (362-442/973-1050) also made certain observations and wrote a main part of his astronomical work.

From the 4th/10th century onwards, observations began to take place further west. In Egypt, there emerges the remarkable figure of Ibn Yūnus (d. 399/1009), despite the fact that the account according to which this astronomer is said to have had at his disposal a well-equipped observatory, thanks to the patronage of the Fāṭimid caliph al-Ḥākim (386-411/996-1021), appears entirely legendary; he probably had at his disposal only a private observatory, although a number of his observations (described in the introduction to his *zīdj*) were carried out in various places in the town between 367/977 (or 380/990) and

398/1007), such that we may assume that he used essentially portable instruments and obtained excellent results. In al-Andalus, the first observations known from documents are those of Maslama al-Madjrīṭī [*q.v.*] (d. *ca.* 398/1107; see J. Vernet and M. A. Catalá, *Las obras matemáticas de Maslama de Madrid*, in *al-And.*, xxx [1965], 15-47; repr. in *Estudios sobre historia de la ciencia medieval*, Barcelona-Bellaterra 1979, 241-71), while far more remarkable work in this respect was carried out by Azarquiel/al-Zarḳalī (d. 493/1100), of whom we know that, with the assistance of several collaborators, he made observations of the sun, moon and fixed stars for more than 25 years, first in Toledo, then in Cordoba (J. M. Millás-Vallicrosa, *Estudios sobre Azarquiel*, Madrid-Granada 1943-50, 279); yet there does not seem to be any proof of an organised observatory.

The observatory as an institution, if not permanent, at least longer lasting than the examples mentioned until now, seems to be an Eastern development dating from the later Middle Ages. The most obvious antecedent, although not well-known, is the observatory founded by Malik Shāh (465-85/1072-92) around 467/1074, perhaps in Iṣfahān and where ʿUmar al-Khayyām [*q.v.*] (440-526/1048-1131), in collaboration with other astronomers, completed a *zīdj* and effected the reform of the Persian solar calendar [see further, DJALĀLĪ]. This observatory stayed active for about 18 years, until the death of the ruler, whose son, Sandjar b. Malik Shāh, patronised the planetary observations carried out in Marw by al-Khāzinī (between about 509 and 530/1115-35). With regard to the observatory of Malik Shāh, there appears for the first time the idea that the minimum time necessary to complete a programme of observations is 30 years (a revolution of Saturn). Naṣīr al-Dīn al-Ṭūsī [*q.v.*] (597-672/1201-74) was to recall this minimum period in the course of his negotations with the Mongol sultan Hülegü with a view to creating the Marāgha observatory; facing resistance from the ruler, the astronomer agreed to complete the same work in twelve years (a revolution of Jupiter). In the 9th/15th century, al-Kāshī (d. 833/1429), the principal astronomer of the Samarḳand observatory, was also to speak of a minimum period of between 10 and 15 years.

Hülegü Khān (d. 663/1265) founded, at the suggestion of Naṣīr al-Dīn al-Ṭūsī, the Marāgha observatory, on a hill situated near the town. It is the first large-scale Islamic observatory whose organisation and structure we know about in detail; it contained several buildings, including a residence for Hülegü, a mosque and a rich library (the sources speak of 400,000 volumes, which is a traditional figure). It had large-size instruments and was financed by the official revenues of pious foundations (*awḳāf*); this is the first time that we see an observatory subsidised in a manner ordinarily reserved for schools, hospitals and libraries. The motives behind this undertaking seem to have been, for Hülegü, basically astrological. The most important astronomers of the age, whose names are mainly associated with important modifications to the Ptolemaic system and undertakings, before the observatory's foundation, by Muʾayyad al-Dīn al-ʿUrḍī (d. 666/1266; see the work of G. Saliba, in *JHAS*, iii [1979], 3-18 and iv [1980], 220-34, and in *Isis*, lxx [1979], 571-6), participated in the observatory's work. Outstanding among them, apart from al-Ṭūsī and al-ʿUrḍī, are Muḥyī 'l-Dīn al-Maghribī (d. between 680 and 690/1281-91) and Ḳuṭb al-Dīn al-Shīrāzī [*q.v.*] (634-710/1236-1311). The observatory, founded in 657/1259, survived Hülegü. On the death of al-Ṭūsī (672/1274), the *Zīdj-i īlkhānī* had already been composed, i.e. some astronomical tables which constitute the basic result of the work completed in Marāgha. The observations thus lasted more than 12 years, and we know that they were pursued after al-Ṭūsī's death, until the end of the period of 30 years corresponding to a revolution of Saturn: following these new observations (around 672-703/1274-1304) some corrections were made to the *Zīdj-i īlkhānī*. It seems, on the other hand, that there was some activity at the observatory until around 715/1316 and that it was in ruins in 740/1339. So it was the first Islamic observatory to enjoy a remarkable longevity (55 or 60 years) and give birth not only to al-Ṭūsī's *zīdj* but also to that of Muḥyī 'l-Dīn al-Maghribī.

Marāgha provided a model for several imitations among which may be cited the observatory of Sham (a suburb of Tabrīz) which was built by the ruler Ghāzān Khān (694-703/1295-1304) and survived 15 or 16 years (*ca.* 701-17/1300-17). However, no observatory of the size of that at Marāgha appears before the 9th/15th century. Thanks to the patronage of the great prince Ulugh Beg [*q.v.*], governor of the Samarḳand region, in 823/1420 an important *madrasa* was founded in that town. It specialised in the teaching of astronomy at the heart of what constituted the nucleus of a scientific circle frequented by Ulugh Beg, who was himself a mathematician and astronomer of note (see A. Sayılı, *A letter by al-Kâshî on Ulugh Bey's scientific circle in Samarquand*, in *Actes du IXᵉ Congrès Intern. d'Hist. des Sciences*, Barcelona-Paris 1960, ii, 586-91; E.S. Kennedy, *A letter of Jamshīd al-Kāshī to his father. Scientific research and personalities at a fifteenth century court*, in *Orientalia*, xxix [1960], 191-213, republ. in *idem* (ed.), *Studies in the Islamic exact sciences*, Beirut 1983, 722-44). It was in this same year that the observatory of Samarḳand was to be founded, situated on a hill near to the town, consisting of several buildings and equipped with huge instruments such as a large meridian axis, remains of which were excavated in 1908. The principal astronomers who made observations in Samarḳand were Ghiyāth al-Dīn al-Kāshī [*q.v.*] (d. *ca.* 833/1429), Ḳāḍīzāda al-Rūmī (d. between 840 and 850/1436-46) and ʿAlī b. Muḥammad al-Ḳūshdjī (d. 879/1474). Ulugh Beg was assassinated in 853/1449, but the observatory continued to function under his son and successor ʿAbd al-Laṭīf, and the building remained standing for the 50 years which followed the death of its founder. Some systematic observations were carried out there, at least during the key period of 30 years, and it was then that the *Zīdj-i gurgānī* or *zīdj* of Ulugh Beg was prepared (see L. Sédillot, *Prolégomènes des tables astronomiques d'Oloug Beg*, Paris 1847, 1853).

The Samarḳand observatory was twice imitated, firstly in the 10th/16th century, in Istanbul, where Taḳī 'l-Dīn b. Maʿrūf b. Aḥmad (932-93/1525-85) founded one in 982/1575 thanks to the patronage of Sultan Murād III (982-1004/1574-95); the building was completed in 985/1577. This establishment is said to have been a large observatory in a category analogous to those of Marāgha and Samarḳand, but an unfortunate astrological prediction about a comet carried out by Taḳī 'l-Dīn in this same year 985/1577, as well as the hostility of the most conservative sectors of society, made the sultan order the destruction of the buildings in 988/1580.

The last large Islamic observatories are those which were founded by Djay Singh (Savai Jayasiṁha II), *māharādjā* of Ambēr from 1111/1699 (d. 1156/1743) who, wishing to bring up to date the astronomy of his

time, dedicated himself to collecting manuscripts of Sanskrit, Persian and Arabic astronomical works, as well as European printed books of astronomy (D. Pingree, *Islamic astronomy in Sanskrit*, in *JHAS*, ii [1978], 315-30; D. A. King, *A handlist of the Arabic and Persian astronomical manuscripts in the Maharaja Mansingh II Library in Jaipur*, in *ibid.*, iv [1980], 81-6). Not satisfied with the results obtained with the *zīdjs* of Ulugh Beg and Ibn al-Shāṭir (705-77/1306-75), he constructed five observatories in Djaypūr (the capital which he had founded in 1141/1728), Dihlī, Banāras, Mathurā and Udjdjayn. Those of Banāras and Mathurā seem to have been built after 1147/1734. These observatories were equipped with large metal and stone instruments (the stone ones are mostly still standing), conforming to their models in Marāgha and Samarkand. Djay Singh also patronised the preparation of astronomical tables with rules in Persian, which were dedicated to the Mughal Emperor Muḥammad Shāh in 1141/1728 and were given the title *Zīdj-i djadīd-i Muḥammad Shāhī*. This *zīdj* was later to be rewritten (the introduction was written after 1147/1734) and we are not clear as to their relationship with the work carried out in the observatories, which were abandoned on the death of their founder (see G. R. Kaye, *The astronomical observatories of Jai Singh*, Memoirs of the Archeological Survey of India. Imperial series, Calcutta 1918, repr. Varanasi 1973; *idem*, *A guide to the old Observatories at Delhi, Jaipur, Ujjain and Benares*, Calcutta 1920; W. A. Blanpied, *The astronomical program of Raja Sawai Jai Singh II and its historical context*, in *Jap. Stud. Hist. of Science*, xiii [1974], 87-126).

Bibliography: Given in the article. The basic monograph which has been quite extensively drawn upon is the work of A. Sayılı, *The observatory in Islam and its place in the general history of the observatory*, Ankara 1960. On the connections between observatories and *zīdjs*, see E. S. Kennedy, *A survey of Islamic astronomical tables*, in *Transactions of the American Philosophical Society*, N.S., xlvi (Philadelphia 1956), 123-75; A. Bausani, *The observatory of Marāghe*, in *Quaderni del Seminario di iranistica*, ix (Venice 1982), 125-51.

(J. Samsó)

al-**MARṢAFĪ**, al-Ḥusayn, Egyptian scholar and teacher (1815-90) from a family originating from the village of Marṣafā, near Banha; his father taught at the al-Azhar Mosque. Al-Ḥusayn became blind at the age of three; however, he underwent the programme of studies usual for boys destined to teach at al-Azhar and reached the rank of master in 1840-5. He was remarkable for the interest that he showed in his classes in belles-lettres, something rare among teachers at that period in Egypt. In 1872, ʿAlī Pasha Mubārak [*q.v.*] Minister of Public Education, appointed him professor of Arabic linguistic disciplines in the Dār al-ʿUlūm [*q.v.*], the school that he founded for teachers, with a more modern orientation than al-Azhar. Al-Marṣafī taught there until 1888. His importance as a teacher and author stems from the fact that he is regarded as the first to have formulated what was to become the attempt at a renaissance (*nahḍa*) in regard to literature. His lectures were first published in the review *Rawḍat al-Madāris*, then in a separate work, *al-Wasīla al-adabiyya ilā 'l-ʿulūm al-ʿarabiyya* (i, 216 + 7 pp., 1289/1875; ii, 704 pp., 1292/1879); a second work on the art of writing remains unpublished: *Dalīl al-mustarshid fī fann al-inshāʾ*; it was described and analysed by Muḥammad ʿAbd al-Djawād in his study on al-Marṣafī (see *Bibl.*).

The thought of Ḥusayn al-Marṣafī is entirely favourable to the spread of the European "enlightenment"; in this he is very close to men such as Rifāʿa al-Ṭahṭāwī [*q.v.*] and ʿAlī Mubārak, who enlivened the new schools' system founded and developed in Egypt by Muḥammad ʿAlī [*q.v.*] and his successors. A revival of the art of writing (*inshāʾ*) is necessary for the use of the élite of modern Egypt, after the centuries of decadence, and in view of the catastrophic situation of this art in the 19th century. Al-Marṣafī takes as his guide Ibn Khaldūn, in the chapters of his *Muḳaddima* where he speaks of teaching language and belles-lettres; in *al-Wasīla*, he presents both a synthetic, clear account of the disciplines of the Arabic language (*lugha, ṣarf, naḥw, balāgha, badīʿ, ʿarūḍ* [*q.vv.*]), stripped of the commentaries and glosses which until then almost always accompanied them, and also a choice of relatively numerous examples, referring especially to Umayyad and ʿAbbāsid prose. Al-Marṣafī's teaching was regarded as formulating the general programme to be followed, if one wished to revive Arabic language and letters, by a great number of Egyptian writers and teachers who had a diffuse but effective influence on the educational system. The best known are ʿAbd Allāh Fikrī and Ḥifnī Nāṣif. This programme for reviving the language was gradually spread through almost all the Arab countries—with or without reference to al-Marṣafī—from the last years of the 19th century, thanks to the efforts of the reformists [see iṣlāḥ. i and muḥammad ʿabduh].

Al-Marsafī was also interested in the history of political ideas; in October 1881, he published an essay, the *Risālat al-Kalim al-thamān* (Cairo 68 pp.) on eight words of political vocabulary in frequent use, he said, in modern debates; *umma*, nation or community according to language, territory or religion; *waṭan*, fatherland; *ḥukūma*, government; *ʿadl*, justice; *ẓulm*, injustice; *siyāsa*, politics; *ḥurriyya*, liberty; and *tarbiya*, education. If it is read in the light of the debates of the time, his position appears to be that of a moderate, an advocate of a reasonable modernity, legitimised by constant reference to moral and cultural examples from the glorious ages of Islam; the author seems reserved and anxious about the haste of some (doubtless the partisans of ʿUrābī, officers, groups of intellectuals and notables) who would like to modify institutions prematurely to create a true parliamentarianism. The matter of greatest urgency for al-Marṣafī is the spreading among the élite as well as the masses of a reformed education (*tarbiya, adab*), modern in some of its forms, but based on an Islam whose faith and practices would be purified of the innovations (*bidaʿ*, sing. *bidʿa* [*q.v.*]) accumulated during the ages of decadence. This essay was re-published in 1903 by Muḥammad Masʿūd, one of the men involved in editing al-*Muʾayyad*, the journal with a moderate Islamic bias run by Shaykh ʿAlī Yūsuf; this is an indication that he could still represent those expressing a moderate, stable opinion.

Delanoue, *Moralistes et politiques musulmans dans l'Egypte du XIXᵉ siècle (1798-1882)*, Cairo 1982, ii, 357-79, 650-1; for the political debates of the period, see A. Schölch, *Ägypten den Ägyptern! Die politische und gesellschaftliche Krise der Jahre 1878-1882 in Ägypten*, Zürich-Fribourg 1973 (Eng. tr. *Egypt for the Egyptians! The socio-political crisis in Egypt 1878-82*, London 1981).

(G. Delanoue)

MARTHIYA or *marthāt* (A., pl. *marāthī*) "elegy", a poem composed in Arabic (or in an Islamic language following the Arabic tradition) to lament the passing of a beloved person and to celebrate his

merits; *rithā'*, from the same root, denotes both lamentation and the corresponding literary genre.

1. In Arabic literature.

The origin of the *marthiya* may be found in the rhymed and rhythmic laments going with the ritual movements performed as a ritual around the funeral cortège by female relatives of the deceased, before this role became the prerogative of professional female mourners (cf. M. Gaudefroy-Demombynes, *Ibn Qotaiba. Introduction au Livre de la poésie et des poètes*, Paris 1947, pp. xvii-xviii). It was in fact customary for the mother, a sister or a daughter of the deceased, originally perhaps with the intention of appeasing his soul, and in any event as a means of perpetuating his renown, to commemorate his noble qualities and exploits and to express the grief of the family and the tribal group, in a short piece composed in *sadj*ʿ, normalisation in verse form being a later development. These improvisations, probably of a rather stereotyped nature, have not been handed down to posterity, but one fairly scanty specimen (see J. Wellhausen, *Skizzen und Vorarbeiten*, i, 1884, 47), said to be the work of the mother of Ta'abbaṭa Sharran [*q.v.*] has survived.

With the transition from *sadj*ʿ to verse, it seems that women retained their role in the lamentation and the celebration of the deceased, and there are many *marāthī* traditionally credited to more or less obscure pre-Islamic poetesses; outstanding examples are Dakhtanūs, mourning the death of her father Laḳīṭ b. Zurāra [*q.v.*] in the Shiʿb Djabala (*Aghānī*, ed. Beirut, xi, 137-8) and al-Khirniḳ, who was responsible for a number of elegies, most of them concerning her brother Ṭarafa [*q.v.*] and her husband, preserved by the *ruwāt* (see L. Cheikho, *Shuʿarā' al-Naṣrāniyya*, 321-7); the most renowned is unquestionably al-Khansā' [*q.v.*], who gave *rithā'* a polished form and to this very day enjoys unanimous admiration (see N. Rhodokanskis, *al-Ḫansā' und ihre Trauerlieder*, Vienna 1904).

In the early years of Islam, Laylā al-Akhyaliyya [*q.v.*] enhanced her reputation with elegies, much appreciated by local critics, in which she mourns the death of Tawba b. al-Ḥumayyir (*Aghānī*, ed. Beirut, xi, 212-20) and even that of ʿUthmān b. ʿAffān (Ibn Ḳutayba, *Shiʿr*, ed. Cairo, ii, 123, 417-8). On account of their extreme sensivity (and, according to Ibn Rashīḳ, *ʿUmda*, ii, 123, their low capacity for endurance), women are able to express unreservedly their grief at the death of a member of the family and to celebrate merits which ultimately reflect upon the entire group; they give to their compositions a passionate tone of such intensity and spontaneity that the expert connoisseur of Arabic poetry, Père Cheikho, did not hesitate to gather together the more or less authentic works of these poetesses in his *Riyāḍ al-adab fī marāthī shawāʿir al-ʿArab*, Beirut 1897.

Men were also active in this area, and without entirely taking the place of women, composed verse pieces of various lengths which offer variations on the common themes. It is worthy of note that a number of pre-Islamic poets, Mutammim b. Nuwayra [*q.v.*] for example, owe their reputations almost entirely to their elegies, and that among the four compositions regarded as most successful by the critics, there figures, alongside the *marāthī* of Ibn al-Rūmī, al-Sharīf al-Raḍī and Mihyār al-Daylamī (see below), an *ʿayniyya* which has become proverbial (although it is probably in part apocryphal on account of the Ḳur'ānic influence discernible in it) by a poet of the last years of the Djāhiliyya, Labīd [*q.v.*], who mourns his half-brother Arbad, killed by lightning (Ibn Ḳutayba, *Shiʿr*, ed. Cairo, 236-7; *Aghānī*, ed. Beirut, xv, 300-1). Some authors, no doubt sensitive to the sincere expression of profound emotions, go so far as to place the *marāthī* of the Bedouin above their other poetic works; al-Djāḥiẓ (*Bayān*, ed. Hārūn, ii, 320) quotes without comment the reply given by one of them when asked why their elegies were the best of their poems: "Because we speak [our verses], as our hearts burn [with grief]". This affirmation of the sincerity and the poignancy of their feelings does not however explain the fact (judging from the texts currently available, which probably reflect the true position) that these poets continue to refrain from expressing their sorrow at the death of a mother, a wife, a daughter or a sister (the lines of a Bedouin on his wife in the *ʿIḳd* of Ibn ʿAbd Rabbih, ed. Cairo 1348/1926, ii, 181, are perhaps of a later date).

In fact, it is to a male parent or member of the group that the *marāthī* are addressed; the intention is to exalt the deceased by presenting his death as a loss felt by the entire clan or tribe; there is, on the other hand, the hope of continuing to benefit from his protection, and to this end he is implored not to go far away (*lā tabʿad*; the reading *lā tabʿud*, in *LA*, root *bʿd*, is inappropriate since it would mean "do not perish"), he is promised revenge if he has been a victim of murder, and there are forceful expressions of hatred for his enemies. In spite of the repetition, in the prologue, of clichés and hackneyed themes ("weep, mine eye"; the impossibility, since the event, of finding sleep; etc.), the lyrical passages are not of a solely conventional nature, and images of some originality are sometimes to be found.

In the guise of consolation, the themes of lamentation and eulogy are supplemented by a *leitmotif* concerning the unavoidable and irreparable nature of death. The fact that nobody, neither man nor animal, is capable of escaping it, is sometimes illustrated by the imagery of the hunt; outstanding examples are three episodes inserted in the masterpiece ascribed to the *mukhaḍram* poet Abū Dhu'ayb [*q.v.*], a sixty-seven verse elegy of questionable authenticity in which the poet mourns the passing, in the same year (or the same day), of five of his sons, in variously described circumstances (see *Dīwān al-Hudhaliyyīn*, Cairo 1384/1965, i, 1-21).

It might be expected that a radical change would affect the concept of the *marthiya* following the birth of Islam, but the teachings of the Ḳur'ān inspire only minor additions and slight differences in tone which do not significantly alter the content of the poems, except perhaps where the author mourns the death of a group rather than that of an individual or members of the same family. During the wars and expeditions which took place in the lifetime of the Prophet, there were many poets, in both camps, who mourned the deaths of their comrades and hurled defiance at their adversaries. This applies, for example, to Ḍirār b. al-Khaṭṭāb, giving to the Ḳurayshites notice of the death of Abū Djahl [*q.v.*] at Badr and calling upon his fellow-tribesmen to avenge him (Ibn Hishām, *Sīra*, ed. Saḳḳā *et alii*, ii, 27-8), also to Umayya b. Abi 'l-Ṣalt [*q.v.*] who, after the same battle, mourns the Ḳurayshites slain by the Muslims, against whom he likewise incites the members of his tribe (*Sīra*, ii, 30-3; Ibn ʿAbd Rabbih, *ʿIḳd*, Cairo 1346/1928, ii, 194-5); the Prophet is said to have forbidden the circulation of this poem (*Aghānī*, ed. Beirut, iv, 126). Jewish poets did not hesitate to lament the massacre of their co-religionists and to threaten their enemies (e.g. Sammāk, in *Sīra*, ii, 198, 200, after the death of Kaʿb b. al-Ashraf [*q.v.*]).

Compositions of this type are sometimes ripostes addressed to Muslim poets, who were not slow to reply in their turn; the *Sīra* echoes these exchanges, while it gives prominence to the poems of Muslims, significant among whom are Kaʿb b. Mālik, Ibn Rawāḥa and in particular Ḥassān b. Thābit [*q.vv.*]. The *Dīwān* of the last-named contains a number of *marāthī* inspired by the death of Ḥamza b. ʿAbd al-Muṭṭalib [*q.v.*], also by the deaths of the combatants who fell at Biʾr Maʿūna and at Muʾta (*Dīwān*, ed. W. ʿArafāt, *GMS*, xxv/1, London 1971, respectively 321, 450 and 504 (?); 207; 98, 295, 323). Among some thirty elegies which figure in this *Dīwān*, it is to be noted that one of them (234) breaks with tradition in that it concerns the poet's daughter, that two or possibly three, where Ḳurʾānic inspiration is more clearly discernible, are dedicated to the Prophet (269, 272, 455), one to Abū Bakr (125), two to ʿUmar (273, 499), eight to ʿUthmān (96, 120, 122, 311, 319, 320, 511) and the others to various individuals, but a large part of this enormous composition is definitely apocryphal. In general, it may be said that the difference between the works of the early Muslim poets and those of their pagan predecessors consists in the fact that they refrain from calling for vengeance and confine themselves to promising the fires of Hell to their adversaries killed in combat, while they stress the consolation gained by the certain knowledge that the Muslims who have achieved the status of martyrdom are already in Paradise (e.g. Ḥassān, *Dīwān*, 338, vv. 17-18; tr. R. Blachère, in *HLA*, 432). The expression *ṣallā l-ilāh ʿalā*... "May God bestow his blessing upon (the deceased)" would also appear to be characteristic. To all these elements, and to the eulogy addressed to the departed, there is added a sense of the superiority of Islam, a concept belonging to the *mufākhara* [*q.v.*] which to some extend takes the place of the glorification of the group typical of the work of pre-Islamic poets.

Thus *rithāʾ* may become an instrument of politico-religious propaganda. Following the defeat of the pagans, it is the opponents of established authority, Shīʿīs and Khāridjīs, who make use of it. Conversely, the Umayyads and, later, the ʿAbbāsids, also have recourse to this medium, in their case as a means of self-defence. In a brief survey it is impossible to take account of all the poems inspired by dramatic incidents such as the execution, for the crime of proclaiming his Shīʿī beliefs in Mecca, of a certain Khandaḳ (see the two eulogies dedicated to him by Kuthayyir [*q.v.*] in *Aghānī*, ed. Beirut, xii, 170-1, 173-5; *Dīwān*, ed. H. Pérès, ii, 148-54, 156-66). The assassination of ʿAlī b. Abī Ṭālib understandably gave rise, over the centuries, to a considerable number of *marāthī*, but a drama which deeply affected the Shīʿī poets was the murder of his son al-Ḥusayn and his companions at Karbalāʾ [*q.v.*]; this tragic event, which later inspired the emergence of the genre known as the "passion play" (*taʿziya* [*q.v.*]) has been evoked by poets relatively close, chronologically, to the deed itself, for example, al-Aʿshā of Hamdān [*q.v.*] (see R. Geyer, *K. al-Ṣubḥ al-munīr*, London 1928, no. 5); one Ibn al-Aḥmar author of a piece on the episode (a piece of popular verse? see R. Blachère, *HLA*, 514); Sulaymān b. Ḳatta (see Muṣʿab al-Zubayrī, *Nasab Ḳuraysh*, 41; al-Masʿūdī, *Murūdj*, § 1910 and ref.); al-Sayyid al-Ḥimyarī [*q.v.*], who hopes that the grave of the martyr will be well-tended, according to the pure pre-Islamic tradition (*Dīwān*, Beirut, n.d., 470-2) or even Muslim b. Ḳutayba (*Murūdj*, § 1906); the tradition was preserved by later poets, the most prominent being Diʿbil (*Shiʿr Diʿbil*, ed. Ashtar, Damascus 1384/1964, 141) and al-Sharīf al-Raḍī [*q.v.*], who appeals for vengeance in five lengthy and highly-regarded poems. Diʿbil [*q.v.*] bemoans the fate of the Ahl al-Bayt [*q.v.*] in a poem which has enjoyed wide acclaim (rhyme *-ātī*, metre *ṭawīl*; *op. laud.*, 71-7), while in his *rithāʾ*, al-Riḍā takes the opportunity to recall the misfortunes of members of the Prophet's family, celebrating their merits and abusing their enemies rhyme *-arī*, metre *basīṭ*; (*op. laud.*, 110-13). However, the *Maḳātil al-Ṭālibiyyīn* of Abu 'l-Faradj al-Iṣfahānī (Cairo 1949, ²1970) constitutes a long lament studded with verses borrowed from various elegies. Contrary to these, one may point out the poem of al-Ṣanawbarī (d. *ca.* 334/945-6 [*q.v.*]) on the pilgrims killed by the Carmathians [see KARMAṬĪ] in 317/930 discussed and translated by C.E. Bosworth in *Arabica*, xix/3 (1972), 222-39.

The Khāridjīs, far from mourning the losses that they have suffered, celebrate their dead in often-improvised pieces, rejoicing in the idea that the slain have earned the palm of martyrdom in the course of heroic action and include in their poetry passages from the Ḳurʾān which testify to their religious fervour (see Iḥsān ʿAbbās, *Shiʿr al-Khawāridj*, Beirut 1963, 32-3, 79 and *passim*).

To a certain extent, these compositions are reminiscent, with the sincerity of the feelings expressed, of the *marāthī* of the Bedouin. The latter are also perpetuated in the works of the major poets of the Umayyad era; thus some twenty elegies of classical construction are to be found in the *Dīwān* of al-Farazdaḳ [*q.v.*] and in that of Djarīr [*q.v.*]; the latter, however, breaks with tradition—much to the indignation of the former (*Dīwān*, ed. Ṣāwī, Cairo 1354/1936, 465-74, in particular 471)—in devoting several verses to the death of his wife Khālida, at the beginning of a rather mixed but nonetheless moving poem (*Dīwān*, ed. Ṣāwī, Cairo n.d., 199-210; tr. Blachère, *HLA*, 579); it is for mourning the passing of a woman and not for expressing his own grief that al-Farazdaḳ rebukes Djarīr, for he himself has no scruples about lamenting the demise of his father (*Dīwān*, 210, 611, 674, 676) and of his two sons (270-3, 764-5, 885-6), besides various individuals and the victims of an epidemic (491). It is nevertheless possible to discern the presence of a number of women among the departed loved ones of poets (see e.g. Ibn ʿAbd Rabbih, *ʿIḳd*, ed. Cairo 1346/1928, ii, 179-81; Abu Tammām, *Ḥamāsa*, Cairo n.d., i, 380: poetry of a certain Mālik/Muwaylik al-Mazmūm), and at a slightly later date a Muslim b. al-Walīd [*q.v.*] is observed refusing to drink wine after the death of his wife, an event which he evokes in a few discreet verses (*Dīwān*, ed. S. Dahhān, Cairo n.d., 341).

The 2nd/8th century sees the birth of the poetic genre known as "ascetic poems" (*zuhdiyyāt* [*q.v.*]), which involves reflection on death and no doubt influences *rithāʾ*, in which gnomic themes, present since the pre-Islamic period, become increasingly numerous. Abū Nuwās [*q.v.*], himself the author of *zuhdiyyāt* (see ʿA.A. al-Zubaydī, *Zuhdiyyāt Abī Nuwās*, Cairo 1959), has left no less than twenty *marāthī* in memory of distinguished persons, scholars and poets, friends and parents (although in some cases the individuals mourned were not yet dead), and even including himself (*Dīwān*, ed. Ghazālī, Cairo 1953, 572-95; cf. E. Wagner, *Abū Nuwās*, Wiesbaden 1965, 349-60). It is often, in fact, the natural or violent death of an eminent person, the death in battle of an acquaintance or the demise of a distinguished scholar which inspires the poets. Thus Ibn Durayd [*q.v.*] writes funeral

orations for al-Shāfiʿī and al-Ṭabarī [*q.vv.*] and for his relatives slain in battle, demanding that they be avenged (*Dīwān*, ed. Ibn Sālim (A. Ben Salem), Tunis 1973, 67-72, 89-97). Being unable to revive the classic themes, the poets of the 3rd/9th century concentrate their efforts on the form, but they are not the first to act in this manner, since the fact that many of their predecessors, beginning with Ḥassān, dedicated more than one elegy to the same person would seem to prove that they were at pains to revise their compositions. Nevertheless, we may still find some masterly works which are appreciated by Arab critics. Ibn al-Rūmī [*q.v.*], in his *marāthī*, allows his sentiments to overflow, gives expression to his sensivity and develops his own philosophy of existence; in particular, he mourns his wife, his mother, his brother, his sons (see *Dīwān*, ed. K. Kaylānī, Cairo 1924, 13, 80, 97, 104, 224, 326, 351), and his *dāliyya* (*ibid.*, 29) on the death of his younger son is regarded as one of the finest examples of the genre.

It is worth noting in passing that from the 2nd/8th century onwards, even more so from the 3rd/9th century onwards, a new form becomes frequent, the letter of condolence (*taʿziya* [*q.v.*]) addressed to the parents of the deceased; when it is in verse, it is virtually indistinguishable from the *marthiya* proper, but it is often written in prose (see e.g. Ibn ʿAbd Rabbih, *ʿIkd*, ed. cit., ii, 197-202), even when produced by the pen of poets like Ibn al-Muʿtazz [*q.v.*] (see al-Ṣūlī, *Awrāk*, ii, 288 ff.), and it should be noted that at least one writer composed a true *marthiya* in prose form; in fact, in the course of his campaign aimed at opposing the supremacy of poetic composition in Arabic literature, al-Djāḥiẓ [*q.v.*] wrote a long *risāla* on the death of Abū Ḥarb al-Ṣaffār in which free prose, albeit blended with poetic reminiscence, permits an extent of detail and an expression of feelings which the constraints of metre would render impossible (ed. Ṭ. al-Ḥādjirī, in *al-Kātib al-Miṣrī*, iii/9 [1946], 38-44; translated in Pellat, *The life and works of Jāḥiẓ*, 116-24 = *Arabische Geisteswelt*, 187-97).

The theorists of poetry (Ḳudāma, *Naḳd al-shiʿr*, ed. S. A. Bonebakker, Leiden 1956, 49-55; Ibn Rashīḳ *ʿUmda*, ii, 117-26; etc.) do not give inordinate attention to the *marthiya*, essentially because they regard it as comparable with panegyric [see MADĪḤ], in the sense that it is a celebration of one or several individuals. It is in fact a kind of bipartite *ḳaṣīda* [*q.v.*], of which the dominant characteristic is the absence of the *nasīb* [*q.v.*] which would in effect have been out of place. There exist, however, a few exceptions, of which the most significant is a *ḳaṣīda* by Durayd b. al-Ṣimma [*q.v.*] where he mourns the death of a murdered brother (in *Aṣmaʿiyyāt*, ed. Ahlwardt, Leipzig 1902, 23-4); however, Ibn Rashīḳ (*ʿUmda*, ii, 121-2) justifies this deviation from the rule on the grounds that the poem was composed a year after the murder and that in the meantime the victim had been avenged. Further examples are supplied by Ibn al-Zibaʿrā (*Sīrā*, ii, 141-2), al-Aʿshā of Hamdān and a few others.

Laments over the remains of an abandoned encampment are thus replaced by a prologue, in which sorrow ignites and tears flow freely, also by more or less banal observations concerning the fragility of human life, the cruelty of destiny (*dahr*), the patience (*ṣabr*) which is necessary and always displayed, and other clichés among which the equivalents of "a single person is lacking and all is desolate" or "ubi sunt qui ante nos in mundo fuere" are not uncommon (see Becker, *Ubi sunt...*, *Festschrift E. Kuhn*, Munich 1916, 87-105; M. Lidzbarski, *Ubi sunt...*, in *Isl.* viii [1918], 300; cf. P. Keseling, *Ubi sunt...*, in *ibid.*, xvii [1928], 97-100). The *raḥīl* is similarly omitted, sometimes being replaced by an account of the circumstances of the death, especially of a violent death, but it is virtually impossible to delineate an overall scheme, since the various elements overlap one another, and reflections on death intrude on more than one occasion into the posthumous eulogy. The latter effectively resembles the *madīḥ*, to the point of confusion with it, not however without certain differences of detail. Ḳudāma (*op. laud.*, 49) in fact recommends the use of the past tense to indicate that the portrait drawn by the poet is no longer a present reality, not however saying, for example, "he was generous" but employing expressions such as "generosity has vanished", "after his passing, generosity is no more", etc. (this dictum does not inhibit Muḳātil b. ʿAṭiyya from saying of Niẓām al-Mulk "the vizier was (*kān*) a jewel...", al-Ibshīhī, *Mustaṭraf*, Cairo n.d., ii, 365). There is no rule that forbids lamentations over the destruction of an object (see below, with regard to cities) or the loss of an animal (the funeral eulogy of a cat figures in *Madjānī 'l-adab*, v, 135), and the poet is entitled to make reference to the sadness of Nature and of domestic animals; but he must beware of committing blunders, saying for example that a horse subjected by his master to harsh treatment in the course of his exploits is saddened by the latter's passing, whereas in fact this is for him liberation. It is the moral qualities of the deceased which should be celebrated: intelligence, courage, generosity, decency. Thus Ḳudāma approves particularly of three verses by Aws b. Ḥadjar [*q.v.*], who enumerates generosity, valour, energy, strength (or munificence, since the reading *al-tuḳā* cannot be accepted) and perspicacity (see the *Dīwān* of Aws, ed. M.Y. Nadjm, Beirut 1381/1960, 53-5). It need hardly be said that the poets do not restrict themselves to these qualities, but the rule enunciated by the critic proves that, even in the context of *rithāʾ*, spontaneity is bridled, or tends to be so. The anthologists of the Middle Ages (see *Bibl.*) reserve an important amount of space for *marāthī*, but, always inclined to include only poems which are to their own personal taste, they adopt a system which precludes an overall judgment of the real structure and content of compositions arranged separately and often in the form of brief fragments, quite insufficient to allow generalisation without excessive risk of error.

The disintegration of the ʿAbbāsid empire brought virtually no change to the various aspects of *marthiya*, which seems however to become more and more influenced by "professional" exigencies. It is at the beginning of the 5th/11th century that Mihyār al-Daylamī [*q.v.*] achieves renown with his successful *rithāʾ* of ʿAlī or of al-Ḥusayn (see *Dīwān*, Cairo 1344-50/1925-31, ii, 259-62, 367-70, iii, 109, etc.) and especially with the *mīmiyya* in which he mourns the death of his master al-Sharīf al-Raḍī (*Dīwān*, iii, 366-70), regarded as a masterpiece. Previously, the proliferation of provincial dynasties had increased the number of occasions for the composition of elegies of a nature more formal and elaborate than personal and spontaneous; a tendency which has already been seen to emerge takes on a definitive form in the work of al-Mutanabbī [*q.v.*], who revives the classical theme of destiny, pays tribute to the deceased and adds a panegyric in praise of an heir from whom he expects some reward, but without making mention of his own qualities (see R. Blachère, *Motanabbî*, 46, 119, 250). This is not unlike the approach to the family of the

deceased noted by ᶜAlī Dj. al-Ṭāhir in the poetry of the Saldjūḳ period (*al-Shiᶜr al-ᶜarabī fi 'l-ᶜIrāḳ wa-bilād al-ᶜAdjam fi 'l-ᶜaṣr al-saldjūḳī*, Baghdād 1958-61, ii, 108-113). This author holds in high regard a *rāʾiyya* and a *ḳāfiyya* of al-Ṭughrāʾī [*q.v.*] dedicated, respectively, to the memory of a wife and of a concubine (see *Dīwān al-Ṭughrāʾī*, ed. ᶜA. Dj. al-Ṭāhir and Y. al-Djabūrī, Baghdād 1396/1976, 151-5, 264-5), and rightly criticises the *maṭlaᶜ* of the famous elegy of Djarīr (see above), who in his long *ḳaṣīda* manages to devote only a few verses to the memory of his wife. Otherwise, the *marthiya* continues to be largely conventional in character, and ᶜUmar Mūsā Bāshā (*Adab al-duwal al-mutatābiᶜa: ᶜuṣūr al-Zankiyyīn wa 'l-Ayyūbiyyīn wa 'l-Mamālīk*, Beirut 1386/1967, 579) finds nothing new that is worthy of note in traditional *rithāʾ*; he does however make one honourable exception in the case of Usāma Ibn Munḳidh [*q.v.*], who mourns, in a moving *ḳaṣīda*, the demise of members of his family who were victims of an earthquake at Shayzar (*Dīwān*, Cairo 1953, 304-5, 307-9). This same literary historian lays emphasis on the *marāthī* of Muslim warriors slain during the Crusades and is appreciative of certain poems by ᶜImād al-Dīn al-Iṣfahānī [*q.v.*] on the death of ᶜImād al-Dīn Zangī, the death of Nūr al-Dīn and in particular that of Ṣalāḥ al-Dīn (Abū Shāma, *K. al-Rawḍatayn*, Cairo 1287-8, i, 45-6, 244-5, ii, 215-6) which lack neither emotion nor vigour in the description of events (*Adab al-duwal al-mutatābiᶜa*, 505-12). As with the Khāridjīs of former times, warriors are impelled to seek the palm of martyrdom (*ṭalab al-shahāda*) which is the supreme reward (cf. E. Sivan, *L'Islam et la Croisade*, Paris 1968, 62). But this is not the only theme to be developed by the poets of the period, who engage in a propaganda whose elements E. Sivan (*op. laud.*) has analysed on the basis of a meticulous study of the poetry of the time; they reveal their fear of seeing recaptured cities falling again into the hands of the Christians, criticise those in authority for not having foreseen the defeats and mourn the loss of places seized from the Muslims.

The characteristic feature of this type of *marthiya* is the introduction, as objects of lamentation, on the one hand, of cities destroyed or damaged by wars and conquests, on the other, of local dynasties which are overturned. Omissions excepted, the oldest specimen of this type is the long *ḳaṣīda* of 135 verses in which Abū Yaᶜḳūb al-Khuraymī [*q.v.*] describes in pathetic terms the desolation of Baghdād during the war which saw the confrontation between al-Amīn and his brother al-Maʾmūn (see al-Ṭabarī, iii, 873-80; *Dīwān al-Khuraymī*, ed. ᶜA. Dj. al-Ṭāhir and M. Dj. al-Muᶜaybid, Beirut 1971, 27-37); this poet is also the author of several interesting elegies, for his brother (*Dīwān*), 24), for Khuraym (40-4, 44-6, 55) and for his own son (56-8). Another well-known *ḳaṣīda* is the *mīmiyya* which begins, conventionally, with the evocation of sleeplessness and tears, and was dedicated by Ibn al-Rūmī to Baṣra, describing the condition of the town following its sacking by the Zandj (*Dīwān*, ed. K. Kaylānī, 419). The conquest of Baghdād by the Mongols and the death of the caliph al-Mustaᶜṣim were also to inspire compositions in similar vein, in particular two *ḳaṣīdas* in which Shams al-Dīn Maḥmūd al-Kūfī bewails the tragic fate of the capital (see Ibn Shākir al-Kutubī, *Fawāt*, ed. ᶜAbd al-Ḥamīd, Cairo n.d., i, 497-501).

Previous to this, in Ifrīḳiya, where traditional *rithāʾ* was extensively cultivated (and still by women; see Ḥ. Ḥ. ᶜAbd al-Wahhāb, *Shahīrāt al-Tūnisiyyāt*, Tunis 1353, 25), the invasion by the Banū Hilāl and the destruction of al-Ḳayrawān (Kairouan) gave rise to the composition of poems describing "the pitiable lot of the people of Kairouan, the ruin of the once glorious city, the emotion inspired by the disaster" (Ch. Bouyahia); the best-known of these poems are the work of poets contemporary with the events: Ibn Sharaf (in Ibn Bassām, *Dhakhīra*, iv/1, 177-9); Ibn Rashīḳ (*Dīwān*, ed. Yāghī, Beirut n.d., 204-12) and al-Ḥuṣrī (*Dīwān*, ed. M. Marzūkī and al-Djilānī b. al-Ḥādjdj Yaḥyā, Tunis 1963, 125-7); all three have been the object of a study by Ch. Bouyahia, in *La vie littéraire en Ifriqiya sous les Zirides*, Tunis 1972, 332-40.

In al-Andalus, where the tradition of classical *rithāʾ* remained strong and vigorous, it is again the collapse of dynasties and the loss of towns to the Christians during the *reconquista* which inspire poems much appreciated by critics and enthusiasts. Quite apart from descriptions of the dramatic events in Cordova during the *fitna* which preceded the fall of the Umayyads (such as e.g. Ibn Shuhayd, *Dīwān*, ed. Pellat, Beirut 1963, 64-6 (authenticity of attribution suspect), 154-6, vv. 54 ff.) and from a series of elegies collected by H. Pérès (*Poésie andalouse*, 99 ff.), notably those by Ibn al-Ghassāl on the conquest of Barbastro by a Norman army, by al-Waḳḳāshī (preserved in a Spanish translation only) on the conquest of Valencia by the Christians (to the references in Pérès, 107 add A. R. Nykl, *La elegía árabe de Valencia*, in *Hispanic Review*, viii [1940], 9-17) or by Ibn Khafādja [*q.v.*] on the burning of that city by the Cid, three poems deserve particular attention. The first comes from the pen of Ibn al-Labbāna [*q.v.*] and concerns the exile of al-Muᶜtamid and the end of the ᶜAbbādids (in Ibn Khāḳān, *Ḳalāʾid al-ᶜiḳyān*, ed. Paris, 25-6; cf. 32-5); the second was composed by Ibn ᶜAbdūn [*q.v.*] after the fall of the Afṭasids, and the historical allusions which it contains inspired Ibn Badrūn to compile a lengthy commentary on it (ed. Dozy, Leiden 1846); finally, the greatest significance is accorded to the *nūniyya* of al-Sharīf al-Rundī (d. 584/1285), on the fate of al-Andalus after the loss, in 664/1266, of several places in the provinces of Murcia and Jerez (see al-Maḳḳarī, *Azhār al-riyāḍ*, i, 47-50). However, a poem well-known in North Africa was inspired by the capture of Granada in 897/1492, the work of an anonymous poet who describes the advance of the Christians and the progressive loss of the last places occupied by Muslims, while evoking the hardships suffered by citizens under siege and the feelings of sadness of those Andalusians driven from their land (see M. Soualah, *Une élégie andalouse sur la guerre de Grenade*, Algiers 1914-19). This work is largely documentary in character, as is also another (anonymous) *ḳaṣīda* composed in 1501 and appealing for aid to the Ottoman Sultan Bāyazīd II (886-918/1481-1512) and depicting the dramatic predicament of the Moriscoes after the reconquest (text in al-Maḳḳarī, *Azhār al-riyāḍ*, i, 108-15, edited and translated with commentary by J.T. Monroe, *A curious Morisco appeal to the Ottoman Empire*, in *al-And.*, xxxi/1-2 [1966], 281-303).

In general, when the lamentation is applied to places, the poets mourn over the *aṭlāl*, ruins not to be regarded with greater significance than in the pre-Islamic period; they bewail the destruction of buildings (mosques in particular), atrocities committed by the enemy and the slaughter of peoples condemned to exile; the emotions experienced by the survivors give rise to lyrical developments which are supplemented by the nostalgia of émigrés and their desire to return to their lost homeland, where life was so enjoyable. Mustapha Hassen (*Recherches sur les poèmes inspirées par la perte ou la destruction des villes dans*

la littérature arabe du III^e/IX^e siècle à la prise de Grenade en 897/1492, unpubl. thesis, Sorbonne 1977) has, in the course of his analysis of the poetical texts, noted a total of 96 items, containing slightly fewer than 2,000 verses, of which almost half were composed by Andalusians, a little more than a quarter by easterners, and the rest by Ifrīḳiyans. No doubt it would be possible to find a number of specimens of the same type dating back to a period earlier than the conquest of Granada, but the total collected so far is quite sufficiently instructive. It would be appropriate at this stage to add to the list more recent poems which the end of Islamic domination in al-Andalus has continued to inspire.

In Morocco, the destruction of the *zāwiya* of al-Dilāʾ [*q.v.* in Suppl.] inspires to this very day (see M. Ḥadjdjī, *al-Zāwiya al-dilāʾiyya*, Rabat 1384/1964, 270-2) occasional poems, having been lamented by numerous poets, whose number probably includes al-Yūsī [*q.v.*], who has the most compelling of nuances (see ʿA. Gannūn, *al-Nubūgh al-maghribī*[2], Beirut 1964, 80, 277-8; Lakhdar, *Vie littéraire*, 101-2).

Still in the Maghrib, there is also a *ḳaṣīda* by a Tunisian, Aḥmad al-Ḳlībī, on the conquest of Algiers by the French (see Ḥ.Ḥ. al-Ghazzī, *al-Adab al-tūnisī fi 'l-ʿahd al-ḥusaynī*, Tunis 1972, 54-62). This event was also to be bewailed in poems of dialectical Arabic [see MALḤŪN], specimens of which are reproduced by, for example, Gen. E. Daumas, *Mœurs et coutumes de l'Algérie*[3], 1858, 160-74. In dialectical Algerian Arabic, an interesting poem is the *Complainte arabe sur la rupture du barrage de Saint-Denis-du-Sig* (in 1885), published and translated by G. Delphin and L. Guin, Paris-Oran 1886. The popular poetry of the Maghrib, which is so full of panegyrics of the Prophet, some of which are sung at funeral ceremonies along with the *Burda* [*q.v.*], are hardly *marāthī* proper; the most remarkable is probably that which ʿAbd al-ʿAzīz al-Maghrāwī composed on the death of the sultan al-Manṣūr al-Dhahabī in 1012/1603 (see Abū ʿAlī al-Ghawthī, *Kashf al-ḳināʿ ʿan ālāt al-samāʿ*, Algiers 1322/1904, 85). The review *Hunā 'l-Djazāʾir = Ici-Alger*, in its 19th issue (1953), 14-5, published an elegy of 162 verses, also in *malḥūn*, by Muḥammad Ibn Gīṭūn on the death of his wife, but this piece appears quite exceptional.

We thus arrive at the contemporary period, in the course of which the tradition has been perpetuated in Arabic-speaking circles. More or less improvised pieces of verse are still recited over the grave of the deceased, even in the countryside (see e.g. P.A. Jaussen, *Coutumes des Arabes au pays de Moab*[2], Paris 1948, 96-7, who gives an idea of what the pre-Islamic conventions may have been), while more polished poems are published in newspapers and periodicals or prepared with a view to public recitation at ceremonies taking place forty days after the demise (*ḥaflat al-arbaʿīn*) or on the occasion of its anniversary (*taʾbīn al-faḳīd*). Some celebrated individuals in the Muslim world have inspired a host of *marāthī* (about twenty, for example in memory of Muḥammad ʿAbduh) and it is to be noted that the *Dīwān* of the ʿIrāḳī poet al-Zahāwī [*q.v.*] contains several pages of lamentation over the death of Saʿd Zaghlūl [*q.v.*]. This politician has also been celebrated by a considerable number of poets, prominent among whom is Aḥmad Shawḳī [*q.v.*], a remarkably prolific writer of *rithāʾ*; in fact, he has left a legacy of no fewer than 53 elegies (the whole of vol. iii of the *Shawḳiyyāt*, ed. Maḥmūd Abu 'l-Wafāʾ, Cairo 1384/1964) relating to parents, personalities of Egypt, the Muslim world and even of Europe (Hugo, Tolstoy, Verdi); as in classical *marthiya*, gnomic themes dominate the prologue and are followed by an appeal to the deceased, then by a eulogy in his honour; these compositions also convey an echo of the major political, cultural and social events of the time (see A. Boudot-Lamotte, *Aḥmad Šawqī, l'homme et l'œuvre*, Damascus 1977, 158-77). A similar point is made by J. Majed (*La presse littéraire en Tunisie de 1904 à 1955*, Tunis 1979, 350-1) with reference to the funeral tributes paid to poets by their colleagues, who take advantage of the occasion to proclaim their determination to maintain the struggle in the literary, political or social domain. Finally, with the *marthiya* may be associated the laments on the hardships of the times, on the deterioration of morals and on the deplorable situation in the world to be found in such prose works like the *Dhamm al-zamān* by al-Djāḥiẓ or such verse works like the *Marthiyat al-ayyām al-ḥāḍira* by Adonis.

From this brief survey, it emerges that *rithāʾ* occupies a position of importance in Arabic literature, both on account of its volume and its content and in spite of distinct differences, belongs to the same overall scheme as panegyric, to which it is subsidiary. Many poets, major or minor, have cultivated this genre which has enabled some of them to express sentiments all the more sincere because, in most cases, they had no reason to expect reward from the heirs of the deceased. No doubt attention should be drawn to the role of convention and of "professionalism"—which is by no means scanty—but the impression is often gained that of all verse, *marāthī* contain the greatest essence of true poesy.

Bibliography: More or less complete *marāthī* figure in a large number of *dīwāns*, some published, others unpublished, and the present article has been able to give only an imperfect idea of them; some editors have taken the trouble to classify the poems by genre or at the very least to indicate separately, in the table of contents (which is otherwise of no great importance) those which belong to *ghazal, madīḥ*, etc., with the result that the task of researchers is made much easier. Furthermore, the anthologists of the Middle Ages (Abū Tammām, Buḥturī, Ibn al-Shadjarī, Ḳurashī, etc.) have generally reserved a special section for *rithāʾ* (and it is worth noting that the *Bāb al-marāthī* follows immediately after the *Bāb al-ḥamāsa* which gives its name to Abū Tammām's selection). Ibn ʿAbd Rabbih, in his *ʿIḳd* (ed. Cairo 1346/1928, ii, 158-202) classes the chosen specimens according to the nature of the deceased: son, brother, husband, concubine, wife, daughter, *ashrāf*, and he includes epitaphs and *taʿāzī*. Several scholars have even devoted monographs to *marāthī*, among which that of Ibn al-Aʿrābī survives in part (ed. W. Wright, *Opuscula arabica*, Leiden 1859, 97-136); the *K. al-Taʿāzī wa 'l-marāthī* of Mubarrad is said to exist in ms. in the library of Maḥmūd Muḥammad Shākir. Some texts figure in collections of biographies (Ibn Sallām, Ibn Ḳutayba, *Aghānī*, Ibn Khallikān, Ibn Shākir al-Kutubī, etc.), in works of criticism, *adab*, and also in historico-literary works (see e.g. Masʿūdī, *Murūdj*, ed. Pellat, Ar. index, root *r-th-y*). To the works of criticism and literary history mentioned in the article may be added A. Trabulsi, *La critique poétique des Arabes*, Damascus 1955, 226-8. General histories of Arabic literature do not reserve a separate place for *rithāʾ*, but useful information is to be found in R. Blachère, *HLA* (index, s.v. *thrène*). Finally, a very exhaustive study, of which much profitable use has been made in the present

article, is that of M. Abdesselem, *Le thème de la mort dans la poésie des origines à la fin du III^e/IX^e siècle*, Tunis 1977. (CH. PELLAT)

2. In Persian literature.

The term *marthiya* in Persian is used primarily to designate poems in memory of someone who has died, wherein that person's good qualities are mentioned and regret is expressed at his death. This discussion will include *marthiyas* written for secular public figures, those written for family members and close friends, and those written for religious figures, especially for al-Ḥusayn. Sometimes included in the category *marthiya* but not discussed here are poems lamenting old age and the loss of youth, poems complaining about the unfortunate state of the times, conventional gravestone inscriptions and chronograms.

Unlike the classical elegy, the *marthiya* is not a genre defined by its form. It is a thematic category of Persian poetry, appearing principally in the monorhyme forms of the *ḳaṣīda*, the *ḳiṭʿa*, the *rubāʿī* and the *ghazal*; the strophic forms of *tarkīb-band* and *tardjīʿ-band*; and the *mathnawī* form of rhyming hemistiches. After 1500, the popular religious *marthiya* began to develop certain formal characteristics of its own. In general, the language and style of *marthiyas* followed the language and style of the times in which they were written. The conventional imagery differs, however, among the public, private, and religious *marthiyas*.

The earliest known *marthiya* in New Persian is a *ḳaṣīda* in Manichaean script reconstructed by Henning (*A locust's leg*, London 1962, 98-104) and dated before the first half of the 3rd/9th century. It shows a blending of Islamic and Manichaean elements and is probably a crypto-Manichaean allegory. It is spoken from the grave by the deceased himself. The poem that established many stylistic characteristics of the Persian *marthiya* is Farrukhī Sīstānī's [*q.v.*] striking *ḳaṣīda* of 69 lines for Sultan Maḥmūd of Ghazna [*q.v.*] (*Dīwān*, ed. Dabīr-Siyāḳī, Tehran 1335/1956, 90-3). The poem begins with the speaker describing the changed look of Ghazna as he walks about the city after a years's absence. He notices the grief expressed by different classes of society, questions an anonymous companion about what has happened, and begins to imagine reasons why the ruler has not appeared that morning. Not until line 21 does he allude to Maḥmūd's death. He expresses his own grief at the loss, calls upon the dead ruler to arise and resume his normal activities, finally becomes reconciled to the situation, and concludes by mentioning Maḥmūd's successor and praying for the dead sultan's happiness in heaven.

Some specific characteristics of Farrukhī's poem that often appear in later *marthiyas* are (1) the device of the speaker questioning a companion, or posing rhetorical questions about what has happened; (2) the use of euphemisms for dying, such as "he has gone"; (3) the speaker addressing the deceased directly as if he were still living; (4) the speaker making excuses for the absence of the deceased; (5) the frequent use of words such as *dardā* and *darīghā* meaning "alas"; (6) the use of images appropriate to the status of the deceased, often as a means to enumerate the subject's praiseworthy qualities; (7) descriptions of man and nature grieving for the dead; (8) the frequent use of anaphora; (9) the mention of the successor to the deceased; and (10) the use of a prayer for the happiness of the deceased in heaven.

The influence of Farrukhī can be seen in *marthiyas* written up to the 20th century. For example, Masʿūd Saʿd Salmān [*q.v.*] (d. 515/1121-2) in a *marthiya* for ʿImād al-Dawla Abu 'l-Ḳāsim has the speaker refuse to believe the bad news, address the deceased directly, praise his successor and wish the subject well in heaven. The theme of the infidelity and unpredictability of fortune, which becomes very common in *marthiyas* after this, is used prominently in this poem (*Dīwān*, ed. R. Yāsimī, Tehran 1339/1960, 215-18) Amīr Muʿizzī [*q.v.*] (d. 519-21/1125-7) in a *marthiya* for Niẓām al-Mulk, has the speaker ask questions in disbelief, uses anaphora, addresses the deceased directly and wishes him well in heaven (*Dīwān*, ed. ʿA. Iḳbāl, Tehran 1318/1939, 476). Anwarī [*q.v.*] begins his *marthiya* for Madjd al-Dīn b. Abī Ṭālib b. Niʿma, the *naḳīb* of Balkh, by stating that the city of Balkh is in an uproar because Madjd al-Dīn did not hold his audience that day. The speaker questions a chamberlain, thinks up excused for the *naḳīb*'s absence, blames fortune for this loss, uses anaphora and the word *darīghā*, and prays for his well-being in heaven (*Dīwān*, ed. Mudarris Raḍawī, Tehran 1337/1958, i, 46-8). Among other famous *marthiyas* that display these conventions one can mention Saʿdī's *marthiya* for Saʿd b. Abū Bakr, Muḥtasham Kāshānī's for Shāh Ṭahmāsp and Abu 'l-Ḳāsim Lāhūtī's for Lenin.

A variation of this form of public *marthiya* is the poem which combines mourning for the deceased and congratulations to the successor in approximately equal proportions. The earliest example is by Abu 'l-ʿAbbās Rabindjanī (*fl.* 331/942-3) where he mourns the death of the Sāmānid ruler Naṣr b. Aḥmad and congratulates his successor Nūḥ b. Naṣr (text and tr. in G. Lazard, *Les premiers poètes persans*, 2 vols., Paris and Tehran 1964, i, 87; ii, 68). Other examples may be found in the *dīwāns* of Djamāl al-Dīn Muḥammad b. ʿAbd al-Razzāḳ Iṣfahānī, Khʷādju Kirmānī, and ʿUrfī Shīrāzī.

The *marthiyas* written for relatives and close friends are very personal in tone, in contrast with the more formal and distant tone of those written for public figures. Less emphasis is placed on the universal mourning of man and nature and more on the poet's own feelings. The poet does not adopt the persona of a puzzled observer who must discover what has caused the public grief, although other themes and devices typical of Farrukhī may be present, such as the use of anaphora, the direct address of the deceased, words meaning "alas", and prayers for well-being in heaven. Fate is often blamed for the untimely death, and if the deceased died young, much use is made of images of gardens, flowers, young shoots, and the seasons of spring and autumn. An early example is Firdawsī's [*q.v.*] *marthiya* for his son which comes at the beginning of the story of Bahrām Čūbīn in the *Shāh-nāma*. Masʿūd Saʿd Salmān's *marthiya* for his son is apparently the first use of the *tarkīb-band* form for a *marthiya* (*op. cit.*, 543-8). The most moving expressions of grief for the loss of a relative in all of classical Persian poetry are those of Khāḳānī Shīrwānī [*q.v.*] for his son Rashīd al-Dīn. Khāḳānī was one of the most prolific writers of *marthiyas* before the Ṣafawid period, and his *Dīwān* (ed. M. ʿAbbāsī, Tehran 1336/1957) contains over 50 of these poems. In three of his *marthiyas* for his son, Khāḳānī displays his mastery of language and the poetic tradition, and his freedom from the restraints of conventional imagery. He begins one (*Dīwān*, 147-50) with the son's illness and ends with his death. The father orders many preparations to cure the boy, but when he dies, Khāḳānī demands these back. In a powerful use of the *radīf* "*bāz dihīd*" ("give back") the

poet proceeds through a long list of folk medicines and spells, and ends by asking for his son back. Another (*op. cit.*, 142-6) begins with 33 lines containing imperative verbs expressing the sense "weep and mourn and contemplate this tragedy". He then orders various parts of his house and articles of clothing to be destroyed, his hair to be cut, and his face scratched. The abundant use of images of death and mourning and imperative verbs constitutes an unusual and striking innovation within the poetic tradition. Equally as compelling is a third *marthiya* (*ibid.*, 371-4) cast in the words of the dying son to his father. This is reminiscent of the crypto-Manichaean poem mentioned above, and also anticipates certain characteristics of the post-Ṣafawid religious *marthiyas*, especially the motif of a speaker anticipating his own death and describing the mourning that will follow it.

Some other particularly moving *marthiyas* of this sort are Kamāl al-Dīn Ismāʿīl's for his son who was drowned (*Dīwān*, ed. H. Baḥr al-ʿUlūmī, Tehran 1348/1969, 429-32), and Humām Tabrīzī's cycle of 16 short *ghazals* on the death of his beloved (*Dīwān*, ed. R. ʿAywaḍī, Tabrīz 1351/1972, 170-6). Djāmī's [*q.v.*] *marthiya* for his brother in the form of a *tarkīb-band* of seven stanzas (*Dīwān*, ed. H. Raḍī, Tehran 1341/1962, 115-18) echoes closely in the first stanza a line from Saʿdī's *marthiya* for Abū Bakr b. Saʿd Zangī (*Hanūz dāgh-i nakhustīn durust nā-shuda būd*...), and includes (*taḍmīn*) a *ghazal* written by his brother. Muḥammad Taḳī Bahār's [*q.v.*] *marthiya* for his father (*Dīwān*, Tehran 1344/1965, i, 1-2) with its images of the setting sun, night, dark mourning clothes, and of poetry and writing, shows a clear departure from convention.

A special category of "personal" *marthiyas* consists of the poems that poets write on the death of other poets. Among these may be mentioned Rūdakī's short *marthiya* for Shahīd Balkhī, Labībī's for Farrukhī (with invective against ʿUnṣurī), Sanāʾī's for Muʿizzī, Bahār's for Djamīl Ṣadīḳī al-Dhahāwī, Īradj Mīrzā, Parwīn Iʿtiṣāmī and ʿIshḳī, and the collection of *marthiyas* by twelve contemporary poets for Furūgh Farrukhzād which were published in *Djāwidāna-yi Furūgh Farrukhzād* (Tehran 1347/1968).

An unusual exception to the rule that *marthiyas* are composed in verse is the prose *marthiya* for Muḥammad b. Ghiyāth al-Dīn Balban (d. 683/1284-5) by Ḥasan Dihlāwī [*q.v.*] (in M.A. Ghani, *Pre-Mughal Persian in Hindūstān*, Allahabad 1941, 428-34). This begins with a complaint about the tyranny of fate, then recounts the circumstances of Muḥammad's death, describes all nature as mourning and ends with prayers for his happiness in heaven. It uses many of the conventional images of verse *marthiyas*, and has poetry interspersed throughout.

With the spread of Shīʿī Islam in the early Ṣafawid period came the mourning ceremonies associated with the month of Muḥarram and centring on *ʿāshūrāʾ*, the day of al-Ḥusayn's death. The religious *marthiyas* that were written to recall the events at Karbalāʾ developed in two directions: long courtly poems in the classical tradition, and various less formal popular genres.

Just as Farrukhī had established a model for writing secular courtly *marthiyas*, so Muḥtasham Kāshānī (d. 996/1587-8) created the model for the courtly religious *marthiya* with his famous twelve-stanza *tarkīb-band* on the death of al-Ḥusayn (*Dīwān*, ed. M. ʿA. Kirmānī, Tehran 1344/1965, 280-5). Reminiscent of Farrukhī's *marthiya*, Muḥtasham's begins with questions asking why the world and the heavens are in tumult. Anaphora are used prominently. Important images are those of shipwreck, floods of tears, waves and seas of blood, thirst, date palms and gardens, and the world and the heavens weeping. These images, and those of light and darkness which later became common in the *taʿziya* [*q.v.*], are the basic images of the religious *marthiya* in Persian. A great number of *tarkīb-bands* were written after the example of Muḥtasham, and this remained the principal courtly form for the religious *marthiya* until the 20th century. *Ḳaṣīdas* were also written, the most strikingly original being that of Ḳāʾānī [*q.v.*] for al-Ḥusayn. Employing the device, first used by Rūdakī, of short questions and answers in each line, Ḳāʾānī produced a powerful, ritual-like poem describing and lamenting the tragedy at Karbalāʾ (text and tr. in Browne, *LHP*, iv, 178-81).

The popular forms of the Shīʿi *marthiya* are the *taʿziya*, the *rawḍa* and *nawḥa*. The *rawḍa* takes its name from Kamāl al-Dīn Ḥusayn b. ʿAlī Kāshifī's [*q.v.*] *Rawḍat al-shuhadāʾ*, from which readings and recitations, called *rawḍa-khʷānī*, were given. The *marthiyas* in *rawḍa-khʷānī* sometimes involve considerable oral improvisation on well-known Karbalāʾ themes, and thus do not necessarily follow a prescribed literary form. Two popular 19th century books of *marthiyas* and Karbalāʾ accounts which have been reprinted many times are the *Ṭūfān al-bukāʾ* of Muḥammad Ibrāhīm b. Muḥammad Bāḳir Harawī Ḳazwīnī "Djawharī" (d. 1253/1837-8) and Muḥammad Ḥusayn b. ʿAbd Allāh Shahrābī Ardjastānī's *Ṭarīḳ al-bukāʾ*. The latter seems to have been written especially for *naḳḳāls* and *rawḍa-khʷāns*.

The *nawḥas*, which are sung on occasions involving breast-beating (*sīna-zanī*) of self-flagellation with chains (*zandjīr-zanī*), are a genre of strophic poems in classical metres which often have unconventional rhyme-schemes and arrangements of lines and refrains within the stanza. The number and placement of stresses in each line are important in *nawḥas*, those for breast-beating having a more rapid rhythm than those for chain-flagellation.

Bibliography (in addition to references given in the text): a popular anthology of *marthiyas* was compiled by Ḥ. Kūhī Kirmānī under the title *Sūgwarīhā-yi adabī dar Īrān*, Tehran 1333/1954 (uncritical); Zayn al-ʿĀbidīn Muʾtaman, *Shiʿr wa adab-i Fārsī*, Tehran 1346/1967, 74-106; Zahrā Iḳbāl (Nāmdār), *Elegy in the Qajar period*, in P. Chelkowski, ed., *Taʿziyeh: ritual and drama in Iran*, New York 1979, 193-209 (uncritical).

3. In Turkish literature.

Funeral laments, inscribed in stone or recorded in Uyghur manuscripts, belong to the pre-Islamic heritage of the Turks. For the *marthiya* proper to Islamic Turkish literature, the poetic forms were the *ḳaṣīda*, or among the Ottoman Turks, preferably the stanzaic *tardjīʿ-band* or *tarkīb-band*. Ottoman *marthiyas* present the same varied and cultivated style which we know from *dīwān* poetry. Bāḳī's (d. 1008/1600) elegy on sultan Süleymān is regarded as the classical masterpiece, but it has behind it a long tradition of formal *marthiyas* by Aḥmedī, Sheykhī, Ḳiwāmī, Aḥmed Pasha, Nedjātī, Kemālpashazāde and Lāmiʿī, who composed "parallels" in the same metre and with the same *radīf* (N. M. Çetin, art. *Terci*, in *İA*, xii, 172). Underneath the high-flown imagery, a current of real feeling could flow. Closeness to the sultan could give power, office, and wealth; it was small wonder that the death of a sovereign caused real anxiety. The favour of the princes, too, potential successors to the throne, could raise poets to high positions. When a

prince or a high dignitary died, the poets in his entourage lost not only a friend but often their livelihood. Nedjātī (d. 915/1509), who mourned two princes in moving *marthiyas*, lived on a pension, but survived his last patron prince Maḥmūd by only two years. The abolition of the princes' courts in the 10th/16th century removed from the Anatolian countryside many centres of culture. At the central court in Istanbul, fear and flattery did not always prevail. When the much-loved prince Muṣṭafā was executed (960/1533), poets and prose writers expressed their grief, and Tashlīdjalī Yaḥyā (d. 990/1582) in his famous *marthiya* took some risk when he openly accused the Grand Vizier.

Ghazālī (d. 942/1535 [*q.v.*]) lived in retirement in Mecca after he had written in praise of the executed Iskender Čelebi. In the grand tradition of Ottoman *marthiyas*, but in a different vein, is the *Marthiya-yi gurba*, in which the urbane Meʾālī [*q.v.*] (d. 942/1535-6) commemorates his deceased cat with a mock solemnity in stanzas, from which also genuine affection emerges. In this way, the imagery of the *marthiya*, steeped in the panegyric convention, could be used for a deeper vein of feeling, for political criticism or for gentle irony. The form was in use until the end of the 19th century. The elegy written by Ghālib Dede [*q.v.*] on the death of his friend Esrār Dede belongs to the last great examples of Turkish *dīwān* literature. ʿĀkif Pasha (d. 1845) wrote a short moving *marthiya* on the death of his child. The lyrical poem *Maḳber*, written by ʿAbdülḥaḳḳ Ḥāmid Tarhan upon the death of his young wife in 1885, has been classed as the greatest *marthiya* after Bāḳī's elegy (S. E. Siyavuşgil, in *İA*, i, 71). Not completely removed from the urban tradition, the unlettered and the peasants have *marthiyas* of their own. In Turkish folklore, lyrical compositions expressive of grief, *aghît*, have survived; they commemorate the deceased, treat of general aspects of death or express sorrow over collective calamities (P. N. Boratav, in *PhTF*, ii, cf. *chanson funèbre*). Whereas the sufferings caused by the Russo-Turkish war of 1877-8 inspired Namîḳ Kemāl [*q.v.*] to write his impassioned *Waṭan merthiyesi*, popular poets had already since 1683 turned to elegies upon the loss of Rumelian cities to the Christian enemy, such as Buda, Belgrade, Sarajevo, Banyaluka and Bügürdelen. The popular *aghît* lives to this day; about twenty such compositions lamenting Atatürk's death are known. Religious *marthiyas* on the martyrs of Karbalāʾ belong to the *maḳtal* genre.

(B. Flemming)

4. In Urdu literature.

Marthiya (pls. in Urdu, *marthiyē*, *marāthī*) is one of the oldest forms of Urdu poetry. Two types exist, secular and religious, but the second is by far the more important; indeed, it is almost always assumed whenever Urdu writers mention *marthiya*. Moreover, it is usually about the Karbalāʾ martyrs, especially the *Imām* al-Ḥusayn b. ʿAlī b. Abī Ṭālib. Shorter poems on this theme may be termed *nawḥa* or *salām*, the latter normally containing a word such as *salām*, *salāmī*, *mudjrā* or *mudjrāʾī* in the first few verses. Urdu critics often begin their accounts with the pre-Islamic Arabic *marthiya*, and also postulate some slight debt to Persian elegists such as Muḥtashim (Shiblī, *Muwāzana*, 1-9). Yet they regard the form it took in 19th century Lucknow as peculiarly Indian—perhaps the only truly indigenous major Urdu poetical genre.

Its early development goes back to Dakkani, that form of Urdu used in southern India, which is related to the literary language which emerged in northern India somewhat as Chaucer's English is to that of Shakespeare. The ʿĀdil Shāh [*q.v.*] sultans of Bīdjāpūr (895-1047/1489-1686) and the Ḳuṭb Shāhs [*q.v.*] of Golkondā (901-1098/1496-1687) were Shīʿīs, patrons of poetry, and sometimes poets themselves. They encouraged the reciting of *marthiyē* in Muḥarram, and even had *ʿĀshūrā-khānas* built specially for the purpose. Thus though, like other Urdu poetical forms, it was at first court poetry, because of its religious nature it was taken by princes to the people, to form a corporate religio-literary and social activity. It probably played an important part in the development of the *mushāʿara* (public poetical recital or competition) which became—and still remains—a phenomenon of Indo-Pakistani literary and social life. In the Deccan, from the 10th/16th century onwards, numerous poets composed *marthiyas*; some specialised in it. The researches of Naṣīr al-Dīn Hāshimī and Muḥyī al-Dīn Ḳādirīzōr (see *Bibl.*) have brought hundreds of examples to light from manuscripts in the Subcontinent and Europe, including an important two-volume collection in Edinburgh University Library. Thus the Dakkanī *marthiya* can now be seen as the ancestor of the north-Indian *marthiya* which reached its apogee in the works of Anīs and Dabīr in the mid-19th century. Its spread northward was a by-product of the subjugation of the Deccan sultanates by the armies of the Emperor Awrangzīb (1097-8/1686-7).

Nevertheless, the 19th century Lucknow *marthiya*, varied in content but invariably in *musaddas* form, and frequently extending to between 100 and 200 stanzas (300-600 vv.), is a far cry from the modest elegies of early Dakkanī poets. To begin with, *musaddas* was rarely used in the Deccan. An isolated exception by Yatīm Aḥmad (Hāshimī, 379, gives two stanzas) dates from the Mughal period. It would appear that in Bīdjāpūr and Golkondā, the great majority of *marāthī* were in "*ghazal* form"—that is, monorhyme, the rhyme also coming at the end of the first hemistich of the first verse. Among other forms occasionally used were *mathnawī* and quatrains. To take an early poet, Sultan Muḥammad Ḳulī Ḳuṭb Shāh (976-

1020/1568-1611) wrote 5 *marāthī* (*Kulliyyāt*, 56/1 - 56/8, 57-60), one in *mathnawī*, the rest in *ghazal* form. Of the latter, the longest, no. 5, has a good deal of internal rhyme, usually in the middle of the hemistich, thus suggesting quatrains. After the Mughal conquest, quatrains gained ground, and this trend continued in northern India in the 18th century. But *ghazal* form was not completed eliminated, as can be seen from the *marāthī* of Sawdā' (1125-95/1713-81) (*Kulliyyāt*, ii, 134-333) and Mīr Taḳī Mīr (1135-1223/1722-1810) (*Kulliyyāt Mīr*, 1203-1325). The quatrains used in *marthiya* differed from *rubāʿiyyāt* in their rhyme scheme, which was *aaaa, bbba, ccca*, etc., that is *tarkīb-band*. They are called *murabbaʿ* or *čaw-maṣraʿ*. By the end of the 18th century, this was considered the normal verse-form for *marthiya*.

Certainly, both Sawdā' and Mīr tried out *musaddas* of various kinds in about 10% of their elegies; but it was in Lucknow, where both poets gravitated late in life, that *marthiya* became inextricably associated with *musaddas*, with the rhyme scheme *aaaabb, ccccdd, eeeeff*, etc. The credit is usually given to Mīr Ḍamīr, of the generation before Anīs. It may be that Anīs' father, Mīr Khalīḳ, also had a hand in it, if only we could date poems attributed to him and could be sure they were not composed by his celebrated son (see Shiblī, *op. cit.*, 15).

The disturbed situation in Dihlī, due to Afghān and Marāṭhā incursions, attracted many of its poets to Lucknow, whose Nawwābs were poets and patrons of poetry; and as they were also Shīʿīs, they encouraged elegiac poetry. In its progress from the Deccan via Dihlī to Lucknow, the *marthiya* changed in length, scope and content, as well as in prosody. In the Deccan, it began as a short lament, ranging from 5 verses (10 hemistiches) to 20—rarely 30, even allowing for the possibility that some examples which have survived may be mere fragments. Nor did its length increase significantly in the early Mughal era. In fact, it resembled the *nawḥa* or *salām* of northern India. The poet's task was *rōna awr rulāna* (lit. "to weep and cause weeping"). Thus the rhyme often included repeated interjections of sorrow, such as *wā'ē*, *wā*, *waylā*, *āh*, *hā'ē* and *hayf*: other evocative words such as *Ḥusayn*, *Ḥusaynā*, *Karbalā* and *muṣībatā* were also used in rhyme. The effect was heightened by the chanting (*sōz khʷānī*) in which elegies were recited. There were also realistic, if brief, descriptions of the blood-stained body or shroud or the martyr. Heaven and earth were said to be thunderstruck by his death. Yet despite its small compass, the Dakkanī *marthiya* foreshadows, spasmodically, almost all the elements in the content of that of the 19th century. The various characters, their words, their feelings, and their exploits, are to be found. For example, the unhistorical marriage of al-Ḥusayn's daughter Sakīna to his nephew Ḳāsim is alluded to by Hāshim ʿAlī (d. after 1169/1756) and his contemporary Ghulāmī (Ḳādirī, 293, 297).

Brevity inhibited the development of these themes. But some long *mathnawīs* on the Karbalā' martyrdoms were written in the Deccan, predating the 19th century Lucknow "epic" *marthiya*. Whether they had any direct influence on it is hard to say. Both Shāh Muḥammad's *Djang-nāma* and Walī Wēlūrī's *Rawḍat al-shuhadā'* date from around 1730. However, the latter, which begins with the Prophet's death and ends with Karbalā', might better be described as a sequence of separate elegies. Another *Rawḍat al-shuhadā'*, by a certain Muḥkam, dates from 1806.

Sawdā' was a major elegist, and composed 91 *marāthī*. Though their average length is only about fifty verses, he was able to extend the battle-scenes, characterisation and dramatic content. He seems an obvious half-way house between the *marthiya* of the Deccan and that of Lucknow. He was often been criticised for his lack of sincerity in lamentation.

The Lucknow "epic" *marthiya* may be said to have begun with Mīr Ḍamīr and reached its climax with Mīr Babar ʿAlī Anīs (1802-74) and Mīrzā Salāmat ʿAlī Dabīr (1803-75), who composed more than a thousand *marāthī* each. *Sōz-khʷānī* often gave way to declamation (*taḥt al-lafẓ*), thus enhancing the dramatic impact. Despite the great length of many elegies, which has already been mentioned, so varied and extended was the content that no one *marthiya* told the whole Karbalā' story in full. This was doubtless necessitated by the circumstances and the popularity of the form which led the poets to go on writing *marthiyē*. Variety was achieved by the selection of incidents as well as variation in treatment. Yet some readers may regret that no full-fledged Karbalā' epic resulted. Characterisation, dialogue, description of scenes and nature, battle preparation and the battle itself, all played their part, without neglecting the original aim of lamentation. From the literary point of view, no devices of *faṣāḥat-o-balāghat* were neglected, with rich vocabulary and telling similes and metaphors. Critics have analysed the content-sequence as follows (Riḍwī, *Rūḥ-i-Anīs*, Introd., 14-15: Afḍal Ḥusayn, *Ḥayāt-i-Dabīr*, i, 137-40):

1. *čihra* (*maṭlaʿ/tamhīd*) - introductory verses setting the tone, with no restriction at to details.
2. *rukhṣat* - the martyr-hero's farewell to his nearest and dearest.
3. *sarāpā* - a description of the hero from head to foot.
4. *āmad* - the army's preparation for battle, perhaps including a detailed description of the hero's horse.
5. *radjaz* - the hero's battle oration.
6. *djang* (*laṛā'ī*) - the actual battle, stressing the hero's valour, often including a description of his sword.
7. *shahādat* - the death of the martyr, either al-Ḥusayn or some member of his family.
8. *bayn* - the lamentation of the martyr's family and friends, of the poet himself, and of all believers.

But the above scheme was not mandatory: there were really only two thematic essentials to qualify a poem as a *marthiya*—it must be a lament, and must involve the martyrs of Karbalā'.

There was both mutual influence and intense rivalry between Anīs and Dabīr. Lucknow split into two camps, and a considerable literature of comparison was generated. Both were outstanding poets, and some consider Anīs the greatest of all Urdu poets. If he is preferred to Dabīr, it may be because on the whole he exhibits less pedantry and straining after effect. Two such giants were hard to equal; and before their deaths, the Lucknow principality ended with the exile of Nawwāb Wādjid ʿAlī to Calcutta after the Indian Mutiny (1857-8). Though *marthiya* continued into the present century, with encouragement at other courts such as Rampur and Hyderabad, its great days were over. Those interested in the contemporaries and successors of Anīs may consult Ṣiddīḳī, 713-39, and Saksena, 137-9. To the present writer, the *marāthī* of Anīs's brother Mu'nis seem to merit reassessment.

The importance of *marthiya* in Urdu literary history has been widely recognised. Ḥālī (*Muḳaddima-yi-shiʿr-o-shāʿirī*, 182-91) describes Anīs's *marthiya* as "the creation of a new form which greatly extended the range of Urdu poetry, increasing its vocabulary, ending its stagnation and breathing new life into it." It is also said to have demonstrated the suitability of *musaddas* for long poems, Ḥālī's famous *musaddas*, *Madd-o-jazr-i-Islām*, being a prime example.

Secular *mart͟hiya* has existed alongside the religious type throughout its history, but it has received scant attention, and examples are hard to come by. Zōr (130-31, 258) gives an elegy on Awrangzīb in 5 verses of mixed Dakkanī-Persian *mat͟hnawī*. The poet, Mīr D͟jaʿfar ʿAlī (1068-1125/1658-1713), was born in north India, but accompanied the Emperor's son to the Deccan.

In the 19th century, the ʿAlīgaŕh Movement revived interest in secular *mart͟hiya*. Ḥālī himself composed five of them plus two shorter elegiac pieces (*Kulliyyāt-i-naẓm-i-Ḥālī*, Lahore 1968, i, 327-62), in various verse-forms. His elegy of the poet G͟hālib in ten stanzas of ten verses each is an often-quoted masterpiece. Among others often praised are that of S͟hiblī Nuʿmānī (1857-1914) on his brother and that of Muns͟hī Nawbat Rāʾe Naẓar on his son. Nationalism and independence in the Subcontinent have led to a proliferation of the form in newspapers and magazines.

Bibliography: For general accounts, Ram Baku Saksena, *A history of Urdu literature*, Allahabad 1927, 123-39; Muhammad Sadiq, *A history of Urdu literature*, London 1964, 145-63, contains useful extracts with English translations, including two Dakkanī elegies; ʿAbd al-Salām Nadwī, *S͟hiʿr al-Hind*, Aʿẓamgaŕh n.d., ii, 353-68, concentrates on generalities and the secular *mart͟hiya*; most studies of individual poets and introductions to *dīwāns* contain short histories of the form; for Dakkanī elegy, Naṣīr al-Dīn Hās͟himī, *Dakkan mēn Urdū*, 6th enlarged edition, Lucknow 1963, 62-4, 90-7, 183-5, 287-319 (fundamental), 321-45, 362-84, 489-98, 545-6; Sayyid Muḥyī al-Dīn Ḳādirī Zōr, *Urdū s͟hāhpārē*, Hyderabad, Deccan n.d., i, 130-1, 137-8, 144-6 (on Walī Wēlūrī), 152-71, 258, 264-79, 293-316; both these two books give the Urdu texts of many *marāt͟hī*, those in the second being more substantial, especially for Dakkanī elegists of the early Mug͟hal period; for individual Dakkanī elegists, Muḥammad Ḳulī Ḳuṭb S͟hāh, *Kulliyyāt*, ed. Sayyid Muḥyī al-Dīn Ḳādirī Zōr, Hyderabad, Deccan 1940, $\frac{56}{1}$ - $\frac{56}{8}$, 57-60; S͟hāhī (Sultan ʿAlī ʿĀdil S͟hāh II) *Kulliyyāt S͟hāhī*, ed. Sayyid Mubāriz al-Dīn Rifʿat, ʿAlīgaŕh 1962, 90, 192-215, though of 16 *marāt͟hī* included, only one, no. 16 in 28 vv., can confidently be attributed to this poet; Baḥrī, *Kulliyyāt Baḥrī*, ed. Muḥammad Ḥāfiẓ Sayyid, Lucknow 1939, 96-7, including the text of 5 *marāt͟hī* for the 18th century northern Indian elegy; S͟hayk͟h Čānd, *Sawdāʾ*, Hyderabad n.d., 282-315; *Kulliyyāt Sawdāʾ*, ed. ʿAbd al-Bārī Āsī, Lucknow 1932, i (Introd.) 17, ii, 134-333; Mīr Taḳī Mīr, *Kulliyyāt Mīr*, ed. ʿIbādat Brēlwī, Karachi-Lahore 1958, 1203-1333; Afsōs, *Kulliyyāt Afsōs*, ed. Sayyid Ẓahīr Aḥsan, Patna 1961, 262-86; for the 19th century Lucknow *mart͟hiya*, Abu 'l-Layt͟h Ṣiddīḳī, *Lakhnāʾō kā dabistān-i s͟hāʿirī*, Lahore 1955, 661-743; S͟hiblī Nuʿmānī, *Muwāzana-yi-Anīs-o-Dabīr*, Lucknow 1924; Mīr Ḍamīr, *Mad͟jmūʿa-yi-mart͟hiyē-yi-Ḍamīr*, i, Cawnpore 1898; art. *Anīs*, by Sayyid Amd͟jad Alṭāf, in *Urdu Encyclopaedia of Islam*, iii, 500-5; which lists editions of this poet's works from the Lucknow five-volume ed. of 1876 onwards; Sayyid Masʿūd Ḥasan Riḍwī's *Rūḥ-i-Anīs*, Allahabad n.d., contains selected *marāt͟hī* and a useful introduction; art. *Dabīr*, by Muḥammad S͟hafīʿ, in *Urdu Encyclopaedia of Islam*, xii, 208-10; Afḍal Ḥusayn, *Ḥayāt-i-Dabīr*, i, Lahore 1913, ii/l, 1915; Muʾnis, *Mad͟jmūʿa-yi-marāt͟hī-yi-Muʾnis*, 3 vols., Cawnpore 1912; for an account of Lucknow in the era of Anīs and Dabīr, Abdul Halim Sharar, *Lucknow: the last phase of an oriental culture*, tr. and ed. E. S. Harcourt and Fakhir Hussain, London 1975, esp. 83-4, 147; for the ʿAlīgaŕh attitude to *mart͟hiya*, see Alṭāf Ḥusayn Ḥālī, *Muḳaddima-yi-s͟hiʿr-o-s͟hāʿirī*, Lahore 1950, 180-93. (J. A. Haywood)

5. In Swahili literature.

The word *mart͟hiya* is not used in Swahili literature; the word for an elegy is *lalamiko* "lament". It is very much a living tradition among Swahili men of letters to compose praising poems for great men who have died. The custom is well-known in Bantu Africa outside the sphere of Islamic influence, so that it may well have been in use among the Swahili before the advent of Islam in the late Umayyad period. Among the Bantu peoples, songs of lament have been recorded by De Rop, Rycroft, Van Wing and others.

Few songs of lament in Swahili have come down to us from any earlier period than the present century, except the *Inkishafi*, which laments in eighty stanzas the fall of the ancient city of Pate (the ruins of which have not yet been excavated) written probably before 1232/1820, by Sayid Abdallah bin Ali bin Nassir, a Swahili of Arabic origin. His contemporary Muyaka bin Hajji al-Ghassaniy (whose family name also betrays his Arabic ancestry) (d. *ca.* 1250/1837) wrote secular verse on personal as well as political subjects, and quatrains on love and philosophy. One of his poems may be called an elegy. It begins thus:

"Do not remind me of that time
when both my parents were alive
when friends and kinsmen filled the house...
Today I have remained alone
with none to help or counsel me
alone with thoughts that no-one shares..."

In Tanga, Hemedi al-Buhriy, who also wrote in the second quarter of the 19th century, composed the *Utenzi wa Kutawafu Nabii*, the Epic on the Death of the Prophet, in which he inserts a few lines of what may have been an elegy on Muḥammad, see J. W. Allen's edition, p. 39. In Lamu, Muhammad bin Abu Bakari Kijumwa wrote an elegy on the death of Professor Alice Werner, of the School of Oriental Studies in London, whom he had served as an informant in 1913. The poem is dated 1354/1935-6. It begins:

"The hearts are full of grief and their
sadness cannot be measured..."

Mohamed Bin Nasor Shaksi wrote an elegy on the death of the Governor of the Kenya Coast, Sir Mbaraka Ali Hinawy, in 1959. It begins: "We pray to Thee, O Majesty, O Lord without a peer..." Some of the best elegies were written in the last twenty years, first at the death of the author Shaaban Robert (1962), then at the death of the poet and Minister of Justice in Tanzania. Sh. Amri K. Abedi, in 1964. The latter had himself composed a now famous lament at the death of his friend Shaaban Robert, which begins thus: *Hae msiba mzito* "Woe! A grave misfortune..". The complete text was published, together with many other elegies that were composed by Swahili poets in both Kenya and Tanzania for the same sad occasion, by the present writer in *Swahili. Journal of the East African Swahili Committee*, xxxiii (1963), in Dar es Salaam. The same journal published the elegies written at the death of Amri Abedi (*Swahili*, xxxv/1 [1965], 4-18).

It is evident that the majority of Swahili elegies which have been published belong to the secular tradition of mourning the death of great men. Some of the finest pieces of Swahili lyric are among them, which is all the more remarkable since very little real lyric verse in the Western sense has been written in

Swahili; there is for instance hardly any nature-lyricism. The probable reason for the excellence of elegiac poetry in Swahili is the popular predilection for nostalgia common not only among the Swahili but also among other Bantu-speaking peoples, notably the Zulu. The mood of feeling that in the past everything was better, when good men and great leaders were still alive, is a natural one for people who are so deeply attached to their parents, their grandparents, their aunts and uncles, that they will always go to their elders for advice and guidance. The demise of such senior friends creates a mood of loneliness and aimlessness which explains the refrains of several of the elegies, e.g. Amri Abedi's on Shaaban Robert (tr. in the original metre): "Our language is still tender/who will be its foster father? Now that Shaaban has departed,/he that nursed it like an infant!"

In the purely Islamic elegies, these feelings of nostalgia and solitude are projected on the demise of the Prophet Muḥammad, as in the elegiac hymn probably composed by Sharifu Badruddini in Lamu, which begins: "Longing fills the hearts of people..." The people need guidance in all matters of daily life and so, in Swahili literature, the time when the Holy Prophet walked on earth is described as one of happiness, since all men knew then what to do.

Bibliography: On songs of lament in a Bantu language, see especially A. de Rop, *Gesproken Woordkunst der Nkundo*, Tervuren 1956, 62-85. On the *Inkishafi*, see Knappert, *Four centuries of Swahili verse*, London 1979, 127-37; on Muyaka bin Hajji, see *op. cit.*, 146, where the full text and translation of this elegy are given; for text and full translation of Amri Abedi's elegy on Shaaban Robert, see *op. cit.*, 285-7. The same work gives a bibliography of Swahili poetry, including the works of J. W. T. Allen, on 314-16. For Ahmad Basheikh Husayn's elegy on Sir Mbarak Ali Hinawy, written in 1959 a few years before his own death, see Knappert, *op. cit.*, 258-60.

(J. KNAPPERT)

MARTOLOS, a salaried member of the Ottoman internal security forces, recruited predominantly in the Balkans from among chosen land-owning Orthodox Christians who, retaining their religion, became members of the Ottoman *ʿaskerī* caste [*q.v.*]. The word almost certainly originated from the Greek, either *amartolos* (ἁμαρτωλός), "corrupt", "gone astray", or *armatolos* (ἁρματολός), "armed", "weapon-carrying". It was shortened to *martolos* (sometimes *martuloz*, with the occasional plural *martulosān*, مارتلوسان) in Ottoman Turkish, whence it entered Bulgarian and then Serbian. By the end of the 9th/15th century it had entered Hungarian and was often used by Europeans to describe Christian sailors on the Danube River who served the Ottomans as rowers on light wooden barques called *nassad*. Its use by the Ottomans, however, was much broader.

In the mid-9th/mid-15th century, the conquering Turks assigned *martolos* in the Balkans as armed police, mounted and foot, who occasionally participated in war, but usually acted in their locales as peacetime border patrols, castle guards, security forces for important mines, guards for strategic passes (*derbend*) and, occasionally, tax collectors. Because of their military positions, *martolos* were able to keep their lands within the *tīmār* system [*q.v.*], *Martolos* were not limited to the Balkans, however, as some were used as spies and messengers as early as the 8th/14th century conquest of western Anatolia (see Anhegger, in *İA*, vii, 342). *Martolos* in the Balkans were almost always led by Muslims (*martolos bas̲h̲ī*, *martolos ag̲h̲asī*, *martolos bas̲h̲bug̲h̲u*). They remained loyal to the Sultan for more than two centuries because the Ottomans rewarded them with daily-wage *ʿaskerī* status, though they remained Christian; their positions were heritable; and they were exempt from the *d̲j̲izya* [*q.v.*] and various local taxes.

When in the 11th/17th century local Balkan antagonisms against Ottoman rule increased, Christian *martolos* serving against rebellious haiduks caused hostility, some *martolos* joining with the anti-Ottoman revolutionaries. By 1104/1692 Istanbul no longer allowed Christians to serve as *martolos* in the Balkans, and by 1135/1722 the Rumeli governor, ʿOt̲h̲mān Pas̲h̲a, merged the institution of *martolos* with the Muslim *pandor* (local security police) (Orhonlu, 89). By the 13th/19th century, a few *martolos* persisted in northern Macedonia, but these were effectively replaced by new institutions brought about by the *Tanẓīmāt* reforms.

Bibliography: The term is briefly explained in Pakalın, s.v. *Martulos*, ii, 409-10, and Midhat Sertoğlu, *Resimli Osmanlı tarihi ansiklopedisi*, Istanbul 1958, 197. It exists in numerous western language studies, e.g. S. Kakuk, *Recherches sur l'histoire osmanlie des XVI^e et XVII^e siècles, les éléments osmanlis de la langue hongroise*, Budapest 1973, 268. References to the institution in standard sources for Ottoman history may be found in E. Rossi's *EI*[1] article and in his addition in *EI*[1] *Suppl.* The most extensive bibliography on the formation of the institution is in R. Anhegger, *Martolos*, in *İA*, vii, 341-4, and in C. Orhonlu, *Osmanlı imparatorluğunda derbend teşkilâtı*, Istanbul 1967, 79-90. For the Balkans, see M. Vasić, *Die Martolosen im Osmanischen Reich*, in *Zeitschr. für Balkanologie*, Jahrgang ii (1964), 172-89, or the Turkish translation, M. Vasiç, *Osmanlı imparatorluğunda martoloslar*, in *TD* xxxi (1977), 47-64; and M. Vasich, *The Martoloses in Macedonia*, in *Macedonian Review*, vii/1 (1977), 30-41.

(E. ROSSI - [W. J. GRISWOLD])

MARTYR, MARTYRDOM [see S̲H̲AHĪD; S̲H̲AHĀDA].

MAʿRŪF AL-KARK̲H̲Ī, ABŪ MAḤFŪẒ B. FĪRŪZ or FĪRŪZĀN, d. 200/815-16, one of the most celebrated of the early ascetics and mystics of the Bag̲h̲dād school.

While it is possible that the *nisba* al-Kark̲h̲ī may be connected with the eastern ʿIrāḳī town of Kark̲h̲ Bād̲j̲addā, it is more likely that it derives from his association with the Kark̲h̲ area of Bag̲h̲dād. It is generally thought that his parents were Christians, although Ibn Tag̲h̲rībirdī (ed. Juynboll and Matthes, i, 575) maintains that they were Ṣābians of the district of Wāsiṭ. Among his teachers in the tenets of Ṣūfism were Bakr b. K̲h̲unays al-Kūfī and Farḳad al-Sabak̲h̲ī (al-Makkī, *Ḳūt al-ḳulūb*, Cairo 1310, i, 9). He himself was an important influence on another famous Ṣūfī of the earlier period, Sarī al-Saḳaṭī [*q.v.*], who was in turn the teacher and master of one of the most famous exponents of Ṣūfism, al-D̲j̲unayd [*q.v.*]. The story of his conversion to Islam at the hands of the S̲h̲īʿī *Imām* ʿAlī b. Musā al-Riḍā and his attempt to persuade his parents to the same course is now generally regarded as untrue. Among the sayings attributed to him are: "Love cannot be learned from men; it is in God's gift and derives from His Grace"; "Saints may be known by three signs; their concern for God, their preoccupation with God and their taking refuge in God"; and "Ṣūfism means recognising the divine realities and ignoring that which bears the mark of created beings". Maʿrūf has always been venerated as a saint, and his tomb at Bag̲h̲dād, on the west bank of the

Tigris, is still an object of pious resort and pilgrimage. Al-Ḳus̲h̲ayrī relates that prayer at his tomb was generally regarded as propitious in obtaining rain. Maʿrūf's name appears in many of the *silsilas* of the Ṣūfī orders.

(R. A. NICHOLSON - [R. W. J. AUSTIN])

MAʿRŪF AL-RUṢĀFĪ (1875-1945), leading poet of modern ʿIrāḳ and one extremely audacious and outspoken in expressing his political views. He was born in Bag̲h̲dād in 1875 to his father ʿAbd al-G̲h̲anī Maḥmūd, of Kurdish descent and from the D̲j̲abbāriyya tribe (between Kirkūk and Sulaymāniyya in N. ʿIrāḳ), who was a pious man and worked as a gendarme outside Baghdad; for this reason, Maʿrūf was brought up and educated by his devoted mother Fāṭima bint D̲j̲āsim at her father's house (she was of the Ḳarag̲h̲ūl Arabic tribe, a branch of S̲h̲ammar, who inhabited the Ḳarag̲h̲ūl quarter in Bag̲h̲dād).

Maʿrūf was sent to a *kuttāb* in Bag̲h̲dād where he learnt reading and reciting the Ḳurʾān by heart. After three years of primary school, he joined al-Rus̲h̲diyya al-ʿAskariyya school. In his fourth year there, he failed his examinations and was unable to continue his secular studies which would have paved him the way for high military or government service. Hence he switched to religious studies under the supervision of the celebrated scholar Mahmūd S̲h̲ukrī al-Ālūsī (1857-1924 [*q.v.*]), and others such as S̲h̲ayk̲h̲ ʿAbbās al-Ḳaṣṣāb and Ḳāsim al-Ḳaysī, for twelve years. He was a distinguished student and became a devoted Ṣūfī. In appreciation of this, his master al-Ālūsī gave him the name of Maʿrūf al-Ruṣāfī, in contrast to the name of the celebrated Ṣūfī scholar Maʿrūf al-Kark̲h̲ī (which derived from the name of the western bank of the river Tigris), and thus Maʿrūf's family name became attributed to the eastern bank of the river.

There is no indication in the various biographical sources as to how he sustained himself during these years of his religious and literary studies and how he became a completely secular poet. What is known is that he was compelled to work as a teacher in two primary schools in Bag̲h̲dād until he left for a third school in Mandalī in Diyālā because of a higher wages.

Later, he attempted to return to Bag̲h̲dād and passed there an examination in Arabic language and literature with distinction, so that he was appointed a teacher at a secondary school until 1908. During these years, he published poems in well-known Egyptian periodicals such as *al-Muʾayyad* and *al-Muḳtaṭaf*, as did other famous poets of ʿIrāḳ, e.g. al-Zahāwī [*q.v.*], there being no periodical of distinction in ʿIrāḳ at that time. He became well-known in other Arab countries as well as among the Arab emigrants in America.

However, by this stage of his life, his poetry was already devoid of religious tendencies and completely secular, favouring freedom of thought, against tyranny, urging his people into scientific and cultural revival following the European model, describing and praising modern inventions, defending the victims of social injustice and lamenting the deteriorating conditions to which the Ottoman Empire, and especially ʿIrāḳ, was reduced. He also supported the slogan of the French Revolution, adopted by the Committee of Union and Progress (C.U.P.) as *Ḥurriyya. ʿAdāla, Musāwāt* ("Liberty, Justice and Equality"), as it appears in his poems published in *Dīwān al-Ruṣāfī*, Beirut 1910.

After the Young Turk Revolution of 10 July 1908, he translated into Arabic the rallying-song of their poet Tewfīḳ Fikret, which became a school song in many Arab countries. It seems that his sympathy with the ideology of the C.U.P. induced the Bag̲h̲dād branch of C.U.P. headed by Murād Bey Sulaymān (the brother of Maḥmūd S̲h̲ewḳat [*q.v.*]), to invite him to edit the Arabic part of the bilingual political and cultural journal (*Bag̲h̲dād* (6 August 1908) which was the party's bulletin.

Al-Ruṣāfī celebrated the declaration of the *Dustūr* (or Constitution of 10 July 1908) with both poetry and action. According to Ḳāsim al-K̲h̲aṭṭāṭ (*Maʿrūf al-Ruṣāfī, s̲h̲āʿir al-ʿArab al-kabīr*, Cairo 1971, 52-5), al-Ruṣāfī with a group of his Jewish and Christian friends entered the al-Wazīr mosque on a Friday and removed forcibly the Muslim preacher from his pulpit and delivered a speech in favour of the C.U.P. ideology. Al-Ruṣāfī's behaviour roused tremendous anger among the religious and conservative circles of Bag̲h̲dād, who demanded that he be hanged and who demonstrated in front of the *Wālī* or governor Nāẓim Pas̲h̲a, so that the latter, out of fear for al-Ruṣāfī's life, put him in preventive custody.

However, at the beginning of 1909, at the request of Aḥmed D̲j̲ewdet, the editor of the newspaper *Iḳdām*, al-Ruṣāfī arrived in Istanbul via Beirut in order to produce an Arabic version of his periodical, which it was hoped would create a new understanding between the two main groups of the Ottoman Empire, the Turks and the Arabs, and would serve as the voice of the C.U.P. Al-Ruṣāfī was disappointed to learn that the editor had not been able to get the financial support needed to publish the Arabic part. So he left for Salonika, and there Maḥmūd S̲h̲ewḳat, the commander of the 3rd Army Corps of Macedonia, marched with his army on Istanbul, deposed the Sultan ʿAbd al-Ḥamīd II [*q.v.*] on 13 April 1909, and removed his supporters, the reactionaries headed by Darwīs̲h̲ Waḥdatī, who had been raised to power on 31 March 1909. In his poem *Ruḳyat al-ṣarīʿ* ("An incantation for the fallen victim") (*Dīwān*, 6th ed., Beirut (?) 1958, 162-4), al-Ruṣāfī rebuked the Ottoman government for its tyranny, as being against Islamic tradition, and he called for a republican government (*d̲j̲umhūriyya*), in order to achieve progress and freedom as in Europe. In his poem *Fī Silānīk* (*ibid.*, 382-8), he described the revolution and his journey with the army to Istanbul againt the Sultan. In his poem *Tammūz al-ḥurriyya* ("July, the month of freedom") (*ibid.*, 388-9) he greeted the Young Turk Revolution, and expressed his joy at the deposition of ʿAbd al-Ḥamīd.

On his return to ʿIrāḳ via Beirut, where he was received with courtesy by men of letters headed by Amīn al-Rīḥānī, he became short of money, but fortunately the owner of al-Maktaba al-Ahliyya helped him by buying his *Dīwān*. The poems were edited and rearranged by Muḥyī al-Dīn K̲h̲ayyāṭ and

provided with a preface (Beirut 1910). This edition as well as the following ones were full of printing errors. The edition of Dār al-ᶜAwda, Beirut 1970, contains less errors, but the new edition annotated by Muṣṭafā ᶜAlī, al-Ruṣāfī's close friend and disciple, published in 4 vols. by the ᶜIrāḳi government, Baghdād 1974, is the only authorised and complete edition. The pornographic poems of al-Ruṣāfī, except his poem *Badāᶜa lā khalāᶜa* (*Dīwān*, 6th edn., 283-5), are excluded from all editions, and the ᶜIrāḳi authorities never allowed their publication. In the former editions many verses and poems which were against King Fayṣal I, his officials, and against the Regent ᶜAbd al-Ilāh, Nūrī al-Saᶜīd and others, were not included.

Back home he resumed his work at the newspaper *Baghdād*, but soon, in 1909, he reviewed a new invitation, this time from "The Arab Friends' Association" headed by al-Zahāwī and Fahmī al-Mudarris in Istanbul, to edit their daily newspaper *Sabīl al-rashād* ("The Path of Reason"). In Istanbul he also gave lectures in two high schools on Arabic language and literature (collected in *Nafḥ al-ṭīb fi 'l-khiṭāba wa 'l-khaṭīb*, Istanbul 1331/1917), and taught Ṭalᶜat Pasha, a leading member of C.U.P., the Arabic language. It may be that his connection with Ṭalᶜat helped him to be elected as a deputy in the Ottoman Chamber of Deputies on behalf of the Muntafiḳ district of ᶜIrāḳ from 1912 onwards. He also married a widow named Balḳīs, but they had no children. He mentions her twice in his *Dīwān* (78, 244): in the first poem, when she is asking him "not to depart, while his ambitions forced him to", and in the second poem dedicated to the al-Djamīl family, asking them for support to be able to travel to Turkey in order to see "the person whom his heart is longing for". It seems that he later divorced her officially in 1925 because he was not able to sustain her.

Al-Ruṣāfī's main concern was the maintenance of the unity of the Ottoman Empire through the unity of all its religious and national groups, as well as its revival according to the ideology of the C.U.P. For this reason, he attacked the Arab Congress in Paris (17-23 June 1913) and censured its members in his satiric poem *Mā hākadhā* ("Not in this way") (*Dīwān*, 402-5, cf. also 405-7), accusing them of jeopardising the unity of the Empire, besides encouraging French ambitions in Syria and causing enmity between Christians and Muslims. In fact, al-Ruṣāfī was a great defender of the Arab spiritual and cultural revival within the framework of the Ottoman Empire, and a vehement critic of the European powers who were aiming at its destruction. When World War I broke out, he composed a poem *al-Waṭan wa 'l-djihād* ("The homeland and the holy war") (*Dīwān*, 489-91) calling all the Muslims to defend Islam and criticising the Egyptians for backing the British, and he expressed his hope that ᶜIrāḳ would defeat the approaching enemy. This solidarity with the Ottoman Empire explains also why al-Ruṣāfī, in his poetry, did not lament those Arab nationalists who were hanged by Djamāl Pasha (1916). On the other hand, he attacked the Sharīf Ḥusayn of Mecca for his revolt against the Ottomans (10 June 1916); he neither celebrated an Arab government being established in Damascus and headed by Prince Fayṣal b. al-Ḥusayn (1918) nor lamented the latter's expulsion from Syria (1919); and in his poetry he did not as much as mention the ᶜIrāḳī revolt against the British in 1920.

After the war ended in 1918, al-Ruṣāfī left Istanbul for Damascus, where Prince Fayṣal formed his Arab government, but he was given the cold shoulder because of his former satirical poems against Fayṣal's father the Sharīf Ḥusayn and the Arab nationalists. In fact, al-Ruṣāfī did not expect a reception of this kind from his former colleague in the Ottoman Parliament Prince Fayṣal, and was disappointed, because he considered his stand as having been honest and proper in the interests of the Ottoman Empire (*Dīwān*, 420-3).

For this reason, he accepted a job at the Teachers' Training College (*Dār al-Muᶜallimīn*) in Jerusalem (1918-21), where he became the focus of social and literary activities together with the Palestinian writers Isᶜāf Nashāshībī, Khalīl Sakākīnī and ᶜĀdil Djabr (*Dīwān*, 141, 428, 515). In 1921 the Director of the College, Khalīl Ṭūṭaḥ, published al-Ruṣāfī's collection of 17 school songs with their musical settings under the title *Madjmūᶜat al-anāshīd al-madrasiyya* (lith., Jerusalem 1921, with an introduction by Isᶜāf al-Nashāshībī).

Safa Khulusi in his article *Maᶜrūf al-Ruṣāfī in Jerusalem* (in *Arabic and Islamic garland ... Studies presented to Abdul-Latif Tibawi* ... London 1977, 147-52) has discussed this period in the life of al-Ruṣāfī. Khulusi thinks that the poem which al-Ruṣāfī composed after attending a lecture which Prof. A. Sh. Yehuda gave on Arab civilisation at the invitation of Rāghib Nashāshībī, the Mayor of Jerusalem, and which was attended by Sir Herbert Samuel, the British High Commissioner for Palestine, succeeded in diverting the attention from the resolutions of the Palestinian Arab Congress held at Haifa in December 1920 and deflated the opposition to Samuel's policy. In this poem, al-Ruṣāfī praised the lecturer and the speech of Sir Herbert Samuel, as well as the Arab-Jewish blood ties, denying the accusation of their mutual enmity, and finally expressing the Arab's fear of being expelled from their homeland *Ilā Herbert Samuel*, *Dīwān*, 429-37). The poem evoked strong protests from Arab nationalists, and the Lebanese Maronite poet Wadīᶜ al-Bustānī, who lived in Haifa, composed a poem rebuking al-Ruṣāfī. This strong campaign against him persuaded al-Ruṣāfī to accept an invitation to return to Baghdād in order to become the editor of a newspaper in support of Ṭālib Pasha al-Naḳīb, who claimed the throne of ᶜIrāḳ.

One of the main questions asked by some Arab writers, and especially by the ᶜIrāḳi writer Hilāl Nādjī in his *al-Ḳawmiyya wa 'l-ishtirākiyya fī shiᶜr al-Ruṣāfī*, Beirut 1959, 108-9, is why al-Ruṣāfī did not deal with the Palestinian question and why he did not attack in his poetry the Zionist Movement in Palestine. The answer may be that al-Ruṣāfī was a great supporter of science, progress, socialism, woman's liberation, equality, freedom of thought and self-determination, as Hilāl Nādjī himself observed in his work and as is clear from several poems in al-Ruṣāfī's *Dīwān* (see e.g. *Yawm Singhāfūra*, 473). It seems that he found all these qualities among the Jewish settlers in Palestine, hence admired them and did not criticise their projects.

Al-Ruṣāfī left for ᶜIrāḳ, but the expulsion of al-Naḳīb to India by the British in order to pave the way for Prince Fayṣal to become King of ᶜIrāḳ put an end to the publication of the newspaper. Instead, al-Ruṣāfī was appointed a deputy director of the office of translations, which he considered below his capability and his glorious previous career. He felt that he was being neglected and humiliated, at the time when what he called "flatterers and those devoid of talents" were attaining high and influential positions (*Dīwān*, 426-8). At the end of 1922 he left for Beirut and decided not to return to ᶜIrāḳ, but when he heard of the elections to the first ᶜIrāḳi Parliament he returned

to Baghdād. There he published his daily newspaper *al-Amal* (1 October-20 December 1923) whose editorials were his own, flattering British policy in ᶜIrāḳ. He also tried to make peace with King Fayṣal I, but to his great disappointment was not elected as an M. P. At the end of 1923 he was appointed Inspector of Arabic language in the Ministry of Education and gave lectures at the Teachers' College in Baghdād on Arabic Literature, lectures that were partly published in *Durūs fī taʾrīkh ādāb al-lugha al-ᶜArabiyya*, Baghdād 1928.

During this period he was in bad financial circumstances, and wrote the most vicious poems against King Fayṣal I, his government (especially against officials of the Ministry of Education) and the British (*Dīwān*, 448-50, 460-71); some of these poems remained unpublished and circulated orally or in handwriting. In his poem *Ḥukūmat al-intidāb* ("The Mandatory Government") (*Dīwān*, 461), he satirised the ᶜIrāḳi government as "False flag, constitution and parliament", and affirmed that the government was enslaved by the British. In a poem, not included in his *Dīwān* (see Khaṭṭāt, *Ruṣāfī*, 139, and Hilāl Nādjī, *Ṣafaḥāt min ḥayāt al-Ruṣāfī*, Cairo 1962, 80), he accused King Fayṣal I of doing nothing but "counting days and receiving his salary" and cursed him and his palace, imploring its destruction. In order to escape from his poverty, he wrote panegyrical poems to ᶜAbd al-Muḥsin al-Saᶜdūn and others, asking for financial support.

By the help of Saᶜdūn, he succeeded in being elected as a member of the ᶜIrāḳi Chamber of Deputies (19 May 1928), but Saᶜdūn's suicide on 13 November 1929 was a great loss to him, and he elegised him in several poems (*Dīwān*, 318-26). Later on, however, al-Ruṣāfī succeeded several times in being elected for a period of eight years in all between 11 November 1930 and 22 February 1939.

Between 1933-4 al-Ruṣāfī lived in Fallūdja in Diyāla; there he wrote his work *al-Shakhṣiyya al-Muḥammadiyya, aw ḥall al-lughz al-muḳaddas* ("Muḥammad's personality, or the solving of the holy mystery"). S. A. Khulusi called it a *magnum opus*, adding that "according to his closest friends, he advised that it should not be published before the year A.D. 2000," and stated that the book was described as "heretical and ... that it abounds in many objectionable views" (*Maᶜrūf ar-Ruṣāfī*, in *BSOAS*, xiii/3 [1950], 619). A microfilm of the ms. is kept in the Irāḳī Academy of Sciences.

From the middle of 1941, after the *coup d'état* of Rashīd ᶜĀlī al-Kīlānī, he returned to Baghdād, where he lived in poverty. He supported the *coup* with his poetry, satirising the British and the Regent ᶜAbd al-Ilāh, as well as Nūrī al-Saᶜīd and other officials whom he accused of corruption. With the failure of the *coup*, followed by a massacre of the Jews known as the *Farhūd*, the British occupied Baghdād (2 June 1941). Later on, al-Kīlānī's four lieutenant-colonels ("The Golden Square") were caught and hanged. Al-Ruṣāfī composed a long elegy on the failure of the *coup* and the hanging of some of its leaders, and threatened that a day would come and that the royal family would be destroyed by the army (Khaṭṭāṭ, 159-60; Nādjī, *al-Ishtirākiyya*, 44-5). However, he was not arrested, and was left without support until he was forced to sell cigarettes in a small shop.

In 1944 he published his *Rasāʾil al-taᶜlīḳāt* (Baghdād 1944), which contained three refutations of two of Zakī Mubārak's works *al-Taṣawwuf al-Islāmī* (1938) and *al-Nathr al-fannī* (1934), and a third one of Caetani's work on the life of Muḥammad in his *Annali de l'Islam* (Milan 1905). Al-Ruṣāfī's views on monism expressed in his refutation of *al-Taṣawwuf al-Islāmī* caused tremendous criticism and anger and he was accused of blasphemy. *Fatwās* were given against him and for the banning of his book. It seems that these attacks induced him to write his will, in which he affirmed that he was a Muslim who believed in God and in Muḥammad, and that he believed in the essence of the religion but not in its trivialities (Muṣṭafā ᶜAlī, *al-Ruṣāfī, ṣilatī bihi, waṣiyyatuhu, muʾallafātuh*, Cairo 1948, 43, and Khaṭṭāṭ, 188-9).

By the end of 1944, he was allotted 40 ᶜIrāḳī *dīnārs* a month by a rich and influential political personality, Muẓhir al-Shāwī (d. 1958), to the end of his life, which came on 16 March 1945.

The great fame of al-Ruṣāfī is based upon his political and social poetry. The 6th edn. of *Dīwān al-Ruṣāfī* (Beirut ?1958) is divided into 11 sections of different length: (1) On the universe (8 poems); (2) Social topics (63 poems); (3) Philosophy (9 poems); (4) Descriptions (59 poems); (5) Conflagrations (3 poems); (6) Elegies (24 poems); (7) On women (8 poems); (8) History (11 poems); (9) Politics (42 poems); (10) War (8 poems); (11) Short Poems (111 poems, the shortest being of 2 verses, some of them improvised at receptions and parties and the longest being of 29 verses). These sections contain altogether 346 poems. The longest poem is of 104 verses of monorhyme, a biographical poem on Abū Bakr al-Rāzī (*Dīwān*, 358-66), and a narrative poem (Poverty and illness) (*ibid.*, 94-102) in 51 quintets. However, the division of the poems into these precise sections is arbitrary. Most poems are of monorhymes, in which each verse is divided into two hemistichs, and in the opening ones, both hemistichs are rhymed. A few poems are of stanzaic form, such as one poem in couplets; one poem is of three hemistichs to each stanza; two in quartets; four in quintets, and three *muwashshaḥs* in the classical ten hemistichs form. Of the four quintets, one is a versification according to the modern theory of the formation of the universe entitled *al-Arḍ* ("The globe") (*Dīwān*, 27-32), and the second is a narrative poem on the consequence of poverty in ᶜIrāḳ (*ibid.*, 94-102). He composed poems in difficult rhymes which are avoided by other poets such as *z, ṣ, ẓ, ḍ, ṭ* and *n*, and at least eight poems, in the last hemistichs of which the numerical value of letters gives the date of their composition (*ᶜalā ḥisāb al-djummal*), a method which was used in the post-classical period. However, most of his poems are undated. Others were composed on the metre and rhyme of well-known classical examples, especially those of al-Mutanabbī and al-Maᶜarrī [*q.vv.*], and some have even quotations from pre-Islamic poets and others.

At the end of his life, he became free of this classical influence on style and metaphors and was able to use in his political poetry a spontaneous and more flexible style. The influence of al-Mutanabbī is clear also in his personal behaviour, his pride, his honesty and his endearing way in expressing his ideas. Like al-Mutanabbī, he used proverbial sayings, and boasted of his character and poetry in his panegyrics in which he asked for alms, while the influence of al-Maᶜarrī on him was clear in his philosophical outlook and his ideas on religion and God, including his scepticism and monism. Unlike Ibn Sīnā [*q.v.*], al-Ruṣāfī was sceptical about the eternity of the soul and its ascent to heaven (*Dīwān*, 182, 116, 189) and about religion as a divine revelation: for him, religion was, rather, an invention of wise thinkers for the benefit of mankind (*ibid.*, 187, 189). But like William Blake, he

believed in the harmony and unity of body and soul (*ibid.*, 192-3), and even if the soul was supposed to be eternal, he would be inclined to think that it had no awareness of life. On the other hand, he urged on the Arabs the need for a scientific and cultural revival, for unity and liberty, and he defended the freedom of women, especially of Muslim ones, in his poems on women's affairs and in others. He also defended freedom of thought, behaviour and the press, and held that it was up to a free man to violate customs and traditions if he felt it necessary. He backed the oppressed, the persecuted and the victims of society, poverty and illness, and called for social security and equality. He rebuked the Arabs for their stagnation and apathy and for boasting of their old and glorious history. A unique poem which shows his attitude towards the oppressed and against religious fanaticism is his poem "The orphan's mother" (*Dīwān*, 39-42). In this, he relates the story of an Armenian widow and her orphaned son, both victims of religious fanaticism and racial hatred, her husband having been killed in the massacre of the Armenians in Turkey in 1915, and he declares that Islam is innocent of such cruelty. He also described new technical inventions such as the telegraph, the railway, the car, the watch, etc., and admired the inventions of the steam engine and of electricity.

He favoured long metres which suited his declamatory and rhetorical tone, such as *ṭawīl, wāfir, kāmil, basīṭ* and *khafīf*. Thought, not the emotions, dominated his poetry. He expressed his ideas in a direct and denotative style, not metaphorically or symbolically, and was fond of a classical vocabulary.

In his scientific works, he witnessed to his wide and profound knowledge of Arabic language and literature as well as of Islam and its history; yet he depended more on his talent and what he had studied during his youth. His published works, according to the chronological order of appearance are as follows:

(1) *al-Ruʾyā* [a novel] by Nāmiḳ Kemāl, tr. from Turkish into Arabic by al-Ruṣāfī, Baghdād 1909.
(2) *Dīwān al-Ruṣāfī*, Beirut 1910, 2nd ed. Beirut 1932, 6th ed. Beirut (?) 1958, with new poems added. New edn., Beirut, Dār al-ᶜAwda 1971, with new poems added. Also Baghdād, Maṭbaᶜat al-Ḥukūma 1974, 4 vols. ed. and annotated by Muṣṭafā ᶜAlī.
(3) *Madjmūᶜat al-anāshīd al-madrasiyya*, lith., with notes, Jerusalem 1921.
(4) *Dafᶜ al-hudjna fī irtiḍākh al-lukna*, Istanbul 1331/1912 (Arabic vocabulary used in the Turkish language and vice versa).
(5) *Nafḥ al-ṭīb fi 'l-khiṭāba wa 'l-khaṭīb*, Istanbul 1336/1917.
(6) *Tamāʾim al-tarbiya wa 'l-taᶜlīm*, Beirut 1924 (versified didactic and scientific subjects, for school children).
(7) *Muḥāḍarāt al-adab al-ᶜarabī*, Baghdād 1339/1921.
(8) *Muḥāḍara fī ṣalāḥ al-lugha al-ᶜarabiyya li 'l-tadrīs*, Baghdād 1926.
(9) *Durūs fī taʾrīkh al-lugha al-ᶜarabiyya*, Baghdād 1928.
(10) *Rasāʾil al-taᶜlīḳāt*, Baghdād 1944.
(11) *ᶜAlā bāb sidjn Abī al-ᶜAlāʾ*, Baghdād 1946 (a commentary on Ṭaha Ḥusayn's *Maᶜa Abī al-ᶜAlāʾ fī sidjnih*).
(12) *ᶜĀlam al-dhubāb*, Baghdād 1945 (a commentary on *Risālat ᶜālam al-dhubāb* by Dr. Fāʾiḳ Shākir).
(13) *al-Adab al-rafīᶜ fī mīzān al-shiᶜr*, Baghdād 1968 (on Arabic prosody—metre and rhyme).

There are 6 other unpublished works which are still in ms., the most important of which is *al-Shakhṣiyya al-Muḥammadiyya*.

Bibliography: The first detailed biography on al-Ruṣāfī was written by the Egyptian scholar Badawī Ṭabāna, *Maᶜrūf al-Ruṣāfī, dirāsa adabiyya li-shāᶜir al-ᶜIrāḳ wa-biʾatihi al-siyāsiyya wa 'l-idjtimāᶜiyya*, Cairo 1947. Muṣṭafā ᶜAlī, al-Ruṣāfī's close friend, corrected many details of this book which he thought wrong in his work *Adab al-Ruṣāfī*, Baghdād 1947. Later on, Muṣṭafā ᶜAlī wrote another book, *al-Ruṣāfī, ṣilatī bihi, waṣiyyatuhu, muᶜallafātuh*, Cairo 1948, and his lectures in the Maᶜhad al-Dirāsāt al-ᶜĀliya in Cairo were published in his book *Muḥāḍarāt ᶜan Maᶜrūf al-Ruṣāfī*, Cairo 1953. Other friends of al-Ruṣāfī wrote also about him, including Nuᶜmān Māhir al-Kanᶜānī and Sa ᶜīd al-Badrī, *al-Ruṣāfī fī aᶜwāmihi al-akhīra*, Baghdād 1950; Saᶜīd al-Badrī, *ᶜĀrāʾ al-Ruṣāfī*, Baghdād 1951; ᶜAbd al-Ṣāḥib Shukr, *ᶜAbḳariyyat al-Ruṣāfī*, Baghdād 1958; Saᶜīd al-Badrī, *Dhikrā al-Ruṣāfī*, Baghdād 1959; Ṭālib al-Sāmarrāʾī, *al-Ruṣāfī dhālika al-insān*, Baghdād 1959. Other books on Ruṣāfī are Hilāl Nādjī, *Ṣafaḥāt min ḥayāt al-Ruṣāfī wa-adabih*, Cairo 1962, which contains poems and letters by al-Ruṣāfī praising the generosity of ᶜAbd al-Madjīd and Muẓhir al-Shāwī. Another important book by Nādjī is *al-Ḳawmiyya wa 'l-ishtirākiyya fī shiᶜr al-Ruṣāfī*, Beirut 1959. See also ᶜAbd al-Laṭīf Sharāra, *al-Ruṣāfī*, Beirut 1964; Djalāl al-Ḥanafī, *al-Ruṣāfī fī awdjih wa-ḥaḍīḍih*, Baghdād 1962; and Ḳāsim al-Khaṭṭāṭ, Muṣṭafā ᶜAbd al-Laṭīf al-Saḥartī and Muḥammad ᶜAbd al-Munᶜim Khafādjī, *Maᶜrūf al-Ruṣāfī shāᶜir al-ᶜArab al-kabīr, ḥayātuh wa-shiᶜruh*, Cairo 1971; at the end of this last book there is a comprehensive bibliography of books and articles in Arabic language only (381-9). Beside the two articles in English by Safa Khulusi mentioned above in the text, see Brockelmann, S III, 488-9; L. Massignon, *EI*¹, art. s.v.; Y. A. Dāgher, *Maṣādir al-dirāsa al-adabiyya, ii/*1: *al-Rāḥilūn (1800-1955)*, Beirut 1956, 388-92; Yūsuf ᶜIzz al-Dīn *Shuᶜarāʾ al-ᶜIrāḳ fī 'l-ḳarn al-ᶜishrīn* Baghdād 1960, 17-28, where he gives an interview made by Kāmil al-Djādirdjī with al-Ruṣāfī before his death; Salma Kh. Jayyusi, *Trends and movements in modern Arabic poetry*, Leiden 1977, i, 188-93. (S. MOREH)

MĀRŪN AL-NAḲḲĀSH [see AL-NAḲḲĀSH].

MĀRŪT [see HĀRŪT WA-MĀRŪT].

MARW AL-RŪDH, a town on the Murghāb river in mediaeval Khurāsān, five or six stages up river from the city of Marw al-Shāhidjān [*q.v.*], where the river leaves the mountainous region of Gharčistān [see GHARDJISTĀN] and enters the steppe lands of what is now the southern part of the Ḳara Ḳum [*q.v.*]. The site seems to be marked by the ruins at the modern Afghān town of Bālā Murghāb (in lat. 35° 35' N. and long 63° 20' E.) described by C. E. Yate in his *Northern Afghanistan or letters from the Afghan Boundary Commission*, Edinburgh and London 1888, 208; the modern settlement of Marūčak or Marw-i Kūčik apparently marks the dependency of Marw al-Rūdh mentioned by the mediaeval geographers as-Ḳaṣr-i Aḥnaf. At present, Bālā Murghāb falls within the post-1964 administrative reorganisation Bādghīs province of Afghānistān.

Marw al-Rūdh's name, "Marw on the river", or that of "Little Marw" served to distinguish it from the larger centre of Marw al-Shāhidjān. The pre-Islamic name of the place was in MP Marvirōt, Armenian Mrot, later, giving the Arabic *nisbas* of al-Marwarrūdhī and al-Marrūdhī. The foundation of the town was attributed to Bahrām Gūr. In 553 a

Nestorian bishopric of Marw al-Rūdh is mentioned, and at the time of the Islamic conquest in 32/652 the local governor Bādhām became a client of the Arabs (Marquart, *Ērānšahr*, 75-6; Markwart-Messina, *A catalogue of the provincial capitals of Ērānshahr*, Rome 1931, 44; M.A. Shaban, The *ʿAbbāsid revolution*, Cambridge 1970, 21-2). In the early ʿAbbāsid period, *ca.* 160/777, in the governorships of Ḥumayd b. Ḳaḥṭaba and ʿAbd al-Malik b. Yazīd, Marw al-Rūdh, Ṭālaḳān and Gūzgān were in the hands of the Khāridjite rebel Yūsuf al-Barm al-Thaḳafī (Gardīzī, *Zayn al-akhbār*, ed. Ḥabībī, 126).

The geographers of the 4th/10th century describe it as being in a flourishing agricultural region, with dependent settlements such as Diza and Ḳaṣr (or Diz)-i Aḥnaf and with its Friday mosque built on wooden columns in the middle of the covered market. Al-Muḳaddasī states that in his time (*ca.* 370/980) it depended administratively on the local rulers, the Shīrs, of Gharčistan and that the appearance and speech of the local people resembled that of the mountain peoples of Gharčistān (314; see also al-Iṣṭakhrī, 269-70; Ibn Ḥawḳal², 441-2, tr. Kramers and Wiet, 427; *Ḥudūd al-ʿālam*, 105, comm. 328, spelling the name as Marūd). The district flourished under the Saldjūḳs. Malik-Shāh built defences at the nearby town of Pandj-dih, and Sandjar built Marw al-Rūdh's wall, 5,000 paces in circumference and still standing in Mustawfī's time (158-9, tr. 155). The area was much fought-over in the warfare of the Ghūrids and Khʷārazm-Shāhs, and a sharp battle took place near Marw al-Rūdh between the Ghūrid rivals for supremacy in Khurāsān Ghiyāth al-Dīn Muḥammad and Sulṭān-Shāh (Djuwaynī-Boyle, i, 298). Marw al-Rūdh must accordingly have escaped the devastations which the Mongols wrought at Marw al-Shāhidjān, but appears to have become ruinous in Tīmūrid times.

S. Soucek, *An historical geography of Iran*, Princeton 1984, 35-6; Barthold, *Turkestan*³, 79. (C. E. BOSWORTH)

MARW AL-SHĀHIDJĀN or simply MARW, the city which dominated the rich but notoriously unhealthy oasis region of classical and mediaeval Islamic times along the lower course of the Murghāb river on the northeastern fringes of Persia, also called "Great Marw". Formerly within the historic province of Khurāsān [*q.v.*], the seat of pre-Islamic wardens of the marches and often of provincial governors in Islamic times, its site ("Old Merv") and the nearby modern settlement of Bairam Ali (see below) fall today within the Turkmenistan SSR. The name Marw al-Shāhidjān "Royal Marw" clearly relates to Marw's role as the seat of representatives of royal authority, guarding this bastion of the Iranian world against barbarians from the Inner Asian steppes, and is contrasted with the name of the smaller town of Marw al-Rūdh [*q.v.*] "Marw on the river", situated further up the river. Concerning the basic element of the name, Marw, we find in Avestan Moᵘry-, and in OP Marghu, MP Marv, indicating the existence of both a labialised form like Marv and a spirantised one like Margh (see Markwart-Messina, *A catalogue of the provincial capitals of Ērānshahr*, Rome 1931, 45-6). The Arabic *nisba* is *al-Marwazī*, cf. al-Samʿānī, *Ansāb*, facs. ed. Margoliouth, f. 523b.

As a result of the work of V. A. Zhukovski (*Razvalinî starogo Merva*) and W. Barthold (*K istorii oroshenīya Turkestana*, reprinted in *Sočineniya*, iii, Moscow 1965, see 136-56), we are better informed on the history of Marw than on that of any other town in Persia or Central Asia. Literary sources alone are not sufficient to enable us to fix the date to which history goes back in the valley of the Murghāb. Archaeology alone could supply the information, but the archaeology of this region has not yet adequately been studied. We are therefore only able to give the following facts. In the Achaemenid period (6th-4th centuries B.C.), we find a highly developed agricultural community in the region of the Murghāb incorporated in the Persian state. Details on this point are given by Greek writers of antiquity, in particular, the geographers and historians of the campaigns of Alexander the Great (336-323 B.C.). The Greeks found in this region not only a settled population but also a rural society practising agriculture on a very high level. They grew the vine and made good wine.

Classical sources refer to the Murghāb as the Margus river and to the region of Marw as Margiana; authors like Pliny attribute the foundation of the city to Alexander, but it seems that we are on surer ground in attributing this, or conceivably its refounding, to the slightly later Seleucid king Antiochus I Soter (280-261 B.C.). To this same period belongs the building of the wall intended to protect the agricultural zone from the nomads of the steppe, then inhabited by the predecessors of the Turkish people. There is no reason, it seems, to doubt the date of the foundation of Marw, but only archaeology can settle the question definitely. To what date does the earliest building in the area of Marw, that is, the citadel, belong? The fact that already several centuries before our era we find agriculture highly developed shows that the valley of the Murghāb had a system of artificial irrigation. The rapid development of the oasis of Marw was due not only to this but also to the fact that in the Parthian period the great caravan route which linked Western Asia with China passed through Marw. The caravan from Western Asia went from Marw to Balkh, thence via the Darwāz and the northern part of Badakhshān, then on to the Alāy, Kāshgar and finally to China. In the Sāsānid period, the trade-route was moved further north. Caravans went from Marw to Čardjūy, Samarḳand and Semirečye or the land of the Seven Rivers. Marw was not only an emporium on the trade-route but a great industrial city. It is, however, only after the Arab conquest that history gives us ample details of the life of the city.

By utilising the information supplied by the Arab historians and geographers, we can obtain a fair picture of what Marw was like in their period and in antiquity. To understand the part played by Marw in the economic life of Western Asia and Central Asia, we have to study all that the Arab geographers and administrative historians of the 4th/10th century tell us about the system of irrigation. These sources record a highly-organised system of supervision and upkeep of the irrigation canals, under a *mutawallī* or *muḳassim al-māʾ*, corresponding to the general Persian term for a local irrigation official, *mīr-āb* [see MĀʾ. 6. Irrigation in Persia]. Ibn Ḥawḳal and al-Muḳaddasī report that this chief of irrigation had an extensive staff to keep the channels in repair, including a group of divers (*ghawwāṣūn*). There was a dam across the Murghāb above the city, and the supply of water from this store was regulated and measured by a metering device, called by al-Muḳaddasī a *miḳyās* on analogy with the famous Nilometer [see MIḲYĀS], comprising essentially a wooden plank with intervals marked at

each *sha*ʿ*īra*. An office called the *dīwān al-kastabzūd* (< Pers. *kāst u afzūd* "decrease and increase") kept a record of all those entitled to shares in the water. See on all this, E. Wiedemann, *Beitrag X. Zur Technik bei den Arabern*, in *SBPMS Erlg.*, xxxviii (1906), 307-13 = *Aufsätze zur arabischen Wissenschaftsgeschichte*, i, Hildesheim 1970, 272-8; C.E. Bosworth, *Abū* ʿ*Abdallāh al-Khwārazmī on the technical terms of the secretary's art*, in *JESHO*, xii (1969), 151 ff.

It is to the 2nd-7th/8th-13th centuries that the great economic prosperity of the oasis of Marw belongs, with a highly developed system of exchanges. Numerous technical and agricultural methods of cultures were developed, except the cultivation of wheat, which was imported from the valleys of Kashka-Daryā and Zarafshān. The people cultivated the silkworm. Shortly before the coming of the Mongols, there was at Kharaḳ to the south-west of Marw a "house" called al-Dīwakush, where sericulture was studied. Al-Iṣṭakhri, 263, says that Marw exported the most raw silk; its silk factories were celebrated. The oasis was also famous for its fine cotton which, according to al-Iṣṭakhrī, was exported, raw or manufactured, to different lands; see on the textiles of Marw, R.B. Serjeant, *Islamic textiles, material for a history up to the Mongol conquest*, Beirut 1972, 87-90. The district of Marw also contained a number of large estates which assured their owners considerable revenue. According to al-Ṭabarī (ii, 1952-3), in the 2nd/8th century whole villages belonged to one man. In the absence of legal documents, little is known of the life of the peasants. It is evident, however, that they were bound by feudal bonds to their lords (*dihḳāns*), and paid them at the time of the Arab conquest in kind and in the 2nd-4th/8th-10th centuries in kind and money. No evidence of the amount of these payments has come down to us. The town, built in the centre of a highly cultivated area, was destined to have a brilliant future. If we also remember that it had become one of the great emporiums on the caravan routes between Western and Central Asia and Mongolia and China, we can easily realise how the city grew so rapidly with its manufactures, markets and agriculture. At the present day, within the area of the old region of Marw, we can see three sites of ancient towns: 1. Gavur-Ḳaʿla, corresponding to the town of Marw of the Sāsānid and early Muslim period; 2. Sulṭān-Ḳalʿa quite close to the preceding on the west side. This is the Marw of the 2nd-7th/8th-13th centuries, which was destroyed by the Mongols in 1221; and lastly 3. ʿAbd Allāh-Khān-Ḳalʿa south of Sulṭān-Ḳalʿa-Marw, rebuilt by Shāh Rukh in 812/1409. This is all that remains of the famous city, including its nearer environs.

The citadel of Marw, contemporary with the town built on the Gavur-Ḳalʿa area, goes back to a date earlier than that of the town itself. The latter (Gavur-Ḳalʿa) must be recognised as the earliest site (called *shahristān*); it grew up around the castle of a great lord (*dihḳān*), i.e. around the citadel itself. The *shahristān* can hardly be earlier than the beginnings of the town of Marw, but it will only be by excavation that the problem of the date of the earliest habitations in the citadel will be settled.

The Arabs on their arrival found the western quarter so much increased that it was by then the most important part of the town. It is to this part that the Arab geographers give the name of *rabaḍ*. The market was at first on the edge of the *shahristān* near the "Gate of the Town", not far from the western wall, and one part of it extended beyond this wall as the Razīḳ canal. The great mosque was built by the Arabs in the middle of the *shahristān* (al-Muḳaddasī, 311). Little by little, with the moving of the life of the town towards the *rabaḍ*, the administrative and religious centre of the town was moved thither also. On the bank of the Razīḳ Canal was built the second mosque which at the beginning of the 3rd/9th century was allotted by al-Maʾmūn to the Shāfiʿīs. In the middle of the 2nd/8th century, in the time of the revolutionary leader Abū Muslim, the centre was moved still farther westward to the banks of the Mādjān Canal. At this date, the town was gradually occupying the site of the *rabaḍ*. The town of Marw in the 2nd-7th/8th-13th centuries was therefore no longer Gavur-Ḳalʿa, but the town of which ruins still exist to the west of the latter, now known as Sulṭān-Ḳalʿa. But the *shahristān* did not lose its importance at once. The site of the old town on Sulṭān-Ḳalʿa is in the form of a triangle, elongated from north to south with an area equal to that of Gavur-Ḳalʿa. It is surrounded by a fine wall built of unbaked brick, with several towers and other buildings belonging to the fortress. The latter was rebuilt by order of Sultan Malik-Shāh [*q.v.*] in 462-72/1070-80. It is one of the most splendid buildings of the period.

In the time of the Arab geographers, the two towns with their suburbs were surrounded by a wall, remains of which still exist. As regards the wall built in the time of Antiochus I, its remains were still visible in the 4th/10th century and are mentioned by al-Iṣṭakhrī, 260, under the name of al-Rāy.

The social structure of the town of Marw in the period when it took the place of Sulṭān-Ḳalʿa changed a great deal, like the social and economic life of Western and Central Asia generally. The growth of cities, the development of urban life, the exchange of city products for those of the country and those of the nomads of the steppes, the expansion of caravan traffic, now no longer limited to the trade in luxuries, all these encouraged the growth of new classes of society. It was no longer the *dihḳans* who were the great lords of the town of Marw in the 2nd-7th/8th-13th centuries, although in Gavur-Ḳalʿa, however, their *kūshk*s existed down to the end of the 6th/12th century; it was the rich merchants and an aristocracy of officials who were masters. Although both were connected with the local aristocracy, it was no longer agriculture but trade and property in the town which were their sources of wealth. Similarly, a change was taking place in the position of the artisans who had long ceased to be the serfs of the *dihḳans*. Down to the 3rd/9th century, a number of men still paid feudal dues to the *dihḳans*. From then onwards, they seem to have been free. The appearance of the town also changed as regards both topography and buildings. While in the *shahristān* (Gavur-Ḳalʿa) the bazar was at the end of the town and in part outside of it, when the *rabaḍ* attracted urban life to it, the markets and workshops became the centre of the town. Marw (Sulṭān-Ḳalʿa) became in the 5th/11th century a commercial city of the regular oriental type. It was traversed by two main streets, one running north and south, and the other east and west; where they intersected was the *čārsū*, the centre of the market, roofed by a dome; the shops had flat roofs. It was there also that were to be found the little shops of the artisans, and although the literary sources only mention the money-changers', the goldsmiths' and the tanners' quarters, there also must have been the quarters of the weavers, coppersmiths, potters, etc. It was not only the administrative and religious centre, for it also contained the palaces, the mosques, *madrasas* and other buildings. For example, to the

north of the čārsū was the great mosque, already built in the time of Abū Muslim, which survived till the Mongol invasion, if we may believe Yāḳūt. It must, however, have been frequently rebuilt. Yāḳūt also says that beside the great mosque was a domed mausoleum, built on the tomb of Sultan Sandjar; its mosque was separated from it by a window with a grill. The great dome of the mausoleum of turquoise blue could be seen at a distance of a day's journey. Within the walls which surrounded the mosque was another mosque built at the end of the 6th/12th century which belonged to the Shāfiʿīs. In the period of Yāḳūt, it seems that the domed building erected by Abū Muslim in baked brick, 55 cubits in height, with several porticoes—which is said by al-Iṣṭakhrī to have served as a *dār al-imāra* or "house of administration"—no longer existed. It used to stand close to the great mosque built by Abū Muslim. The town of Marw in this period—in addition to its great wall—had inner ramparts which separated the different quarters of the town. The city was famous for its libraries, and Yāḳūt spent nearly two years there just before the Mongol cataclysm working in these libraries (on the topography of mediaeval Marw, see Le Strange, *Lands*, 397-403).

Regarding the history of Marw, the city was under the Sāsānids the seat of the *Marzbān* of the north-eastern marches, Marw being the farthest outpost of the empire, beyond which lay the city-states of Soghdia, the kingdom of Khʷārazm and steppe powers like the Western Turks. Marw may be the Ho-mo (for Mo-ho) of the Chinese Buddhist traveller Hiuen-tsang, and on a Chinese map of the early 14th century it appears as Ma-li-wu (Bretschneider, *Mediaeval researches*, ii, 103-4). Nestorian Christianity flourished there until the Mongol period, and its ecclesiastical leaders are often mentioned as present at synods; before 553 it was a bishopric, and thereafter a metropolitanate (see Marquart, *Ērānšahr*, 75-6). It was the metropolitan Īlīyā who buried the body of the slain Yazdigird III at Pā-yi Bābān (al-Ṭabarī, i, 2881, 2883), and there was a monastery of Masardjasān lying to the north of Sulṭān-Ḳalʿa (*ibid.*, ii, 1925; Yāḳūt, *Buldān*, ii, 684).

The last Sāsānid Yazdigird fled before the invading Arabs to Marw and was killed there in 31/651 by the *Marzbān* Māhūī Sūrī, so that the city acquired in Persian lore the opprobrious name of *khudāh-dushman* "inimical to kings" (al-Ṭabarī, i, 2872). It was conquered in this year for the Arabs by the governor of Khurāsān ʿAbd Allāh b. ʿĀmir b. Kurayz [*q.v.*], who made a treaty with Māhūī on the basis of a large tribute of between one and two million *dirhams* plus 200,000 *djarībs* of wheat and barley; the local *dihḳāns* of the oasis were to be responsible for the tribute's collection, and the soldiers of the Arab garrison were to be quartered on the houses of the people of Marw. There was thus from the start a basic difference in settlement pattern from that in the great *amṣār* of ʿIrāḳ and Persia, where the Arabs built distinct encampments as centres of their power. ʿAbd Allāh b. ʿĀmir left a garrison of 4,000 men in Marw, and then in 51/671 Ziyād b. Abīhi [*q.v.*] sent out 50,000 families from Baṣra and Kūfa, who were then settled in the villages of the oasis by the governor al-Rabīʿ b. Ziyād al-Ḥārithī. A process of assimilation with the local Iranian population now began, especially as some Arabs began to acquire taxable land in the countryside, and so became financially subject to the *dihḳāns*. These atypical social conditions of the Marw oasis may have contributed to Marw's role in the later Umayyad period as the focal point in the east for the ʿAbbāsid *daʿwa*, for the propaganda of the Hāshimiyya *duʿāt* seems early to have made headway among the settled and assimilated Arab elements. Some ʿAbbāsid agents were discovered there and executed in 118/736, and soon afterwards, a committee of twelve *nuḳabāʾ*, headed by Sulaymān b. Kathīr al-Khuzāʿī, was formed. Abū Salama al-Khallāl [*q.v.*] was in Marw in 126/746, and two years later Abū Muslim [*q.v.*] arrived as representative of the ʿAbbāsid *imām* Ibrāhīm b. Muḥammad b. ʿAlī b. ʿAbd Allāh b. ʿAbbās. Abū Muslim took advantage of the tribal strife of Ḳays and Yaman, and the assimilated population of Arabs, whose fiscal grievances had not been fully redressed by the tentative reforms of the Umayyad governor Naṣr b. Sayyār [*q.v.*] in 121/739, aided by Yamanīs against Naṣr and his North Arab supporters, so that by early 130/748, Abū Muslim was in control of Marw (thus the interpretation of M.A. Shaban, *The ʿAbbāsid revolution*, Cambridge 1970, 129 ff., 138 ff.; idem, *Islamic history A.D. 600-750 (A.H. 132), a new interpretation*, Cambridge 1971, 84-5, 173-5, 177, 182-5).

Under the early ʿAbbāsids, Marw continued to be the capital of the east, despite a humid and unpleasant climate (it was notorious for the guinea worm, *filaria medinensis*), and was for instance the seat of al-Maʾmūn whilst he was governor of the eastern provinces and whilst he was caliph until the year 202/817, when he left for Baghdād. The Ṭāhirid governors of Khurāsān, however, followed here by their supplanters the Ṣaffārids, preferred to make their capital at Nīshāpūr, although Marw remained the chief commercial centre of Khurāsān, and continued to flourish under the Sāmānids. Nevertheless, the disorders in Khurāsān during the last decades of Sāmānid rule, when power was disputed by ambitious military commanders, seem adversely to have affected Marw's prosperity. Al-Muḳaddasī, writing *ca.* 980, says that one-third of the *rabaḍ* or outer town was ruinous, and the citadel too had been destroyed; moreover, the city was racked by the sectarian strife and factionalism which seems to have been rampant in the towns of Khurāsān at this time (311-12; on the Shāfiʿī *madhhab* in Marw—where the Ḥanafīs in fact had a preponderance—see H. Halm, *Die Ausbreitung der šāfiʿitischen Rechtsschule von den Anfängen bis zum 8./14. Jahrhundert*, Wiesbaden 1974, 83-90).

But under the Saldjūḳs, the fortunes of Marw revived. It transferred its allegiance from the Ghaznawids to the Türkmens in 428/1037, and became the capital of Čaghrī Beg Dāwūd [*q.v.*], ruler of the eastern half of the newly-established Saldjūḳ empire, and from *ca.* 1110, that of Sandjar [*q.v.*], viceroy of the east. The latter's father Malik-Shāh had built a wall of 12,300 paces round the city, which in Sandjar's time underwent attack from various of the Saldjūḳ's enemies, such as the Khʷārazm-Shāh Atsïz [*q.v.*], who in 536/1141-2 raided Marw and carried off the state treasury. It was at Marw that Sandjar built his celebrated mausoleum, 27 m. square in plan and called the *Dār al-Ākhira* "Abode of the hereafter" (see on this, G. A. Pugačenkova, *Puti razvitiya arkhitekturï Yuzhnogo Turkmenistana*, Moscow 1958, 315 ff.). Under Sandjar's rule, the Türkmens of the steppes around Marw were under the control of a Saldjūḳ *shiḥna* or police official, but when in 548/1153 these Oghuz or Ghuzz rebelled against this control and defeated Sandjar, Marw fell under the nomads' control, and the latter held on to it, together with Balkh and Sarakhs, until the Khʷārazm-Shāhs imposed their rule in northern Khurāsān. Marw suffered terribly in the time of the first Mongol inva-

sions, when Khwārazmian rule was overthrown. It was savagely sacked by Toluy's followers (beginning of 618/1221). According to Ibn al-Athīr, xii, 256, 700,000 people were massacred, and according to Djuwaynī, tr. Boyle, i, 163-4, 300,000; even if one allows for the customary hyperbole, it nevertheless remains true that Marw's prosperity was dealt a blow from which it took two centuries to recover. Mustawfī found Marw still largely in ruins in the mid-8th/14th century, and with the sands of the Ḳara Ḳum encroaching on the arable lands of the oasis (*Nuzha*, 156-7, tr. 153-4).

What then remains of the town of the 2nd-7th/8th-13th centuries—in addition to the wall already mentioned? The whole site of Sulṭān-Ḳalʿa is covered with mounds and hillocks, formed on the sites of ancient buildings. Everywhere one sees great piles of bricks, whole and broken, and fragments of pottery, plain and glazed. In the centre, like a memorial of the great past, rises the domed mausoleum of Sultan Sandjar mentioned by Yāḳūt, one of the finest buildings of the 6th/12th century. The question arises whether it had any connection with the "house of administration" with a dome and several porticoes mentioned by al-Iṣṭakhrī. The Marw of this period contains numerous buildings within the area of Sulṭān-Ḳalʿa, as well as outside its walls, especially the western suburb, the subject since 1946 of archaeological investigations by M.E. Masson. In 808/1406 the Tīmūrid ruler Shāhrukh endeavoured to restore prosperity to this region, which had at one time been a flourishing oasis. Ḥāfiẓ-i Abrū gives us details of his scheme. The dam was rebuilt on its old site and the water restored to its old channel; but only a portion of the oasis could be irrigated. The town was rebuilt, but not on the old site because water could not be brought in sufficient quantity to Sulṭān-Ḳalʿa. The town of Marw of this period corresponds to the old town of ʿAbd Allāh-Khān-Ḳalʿa (popular legend wrongly attributing its building to the Shaybānid ʿAbd Allāh b. Iskandar (991-1006/1583-98 [*q.v.*]), the area of which was much less than that of Marw of the Mongol period, covering about three hundred square poles. The town of Marw of this period cannot be compared with that of the pre-Mongol period. In time, Marw and its oasis declined more and more. In the period of the Ṣafawid kingdom, it was the object of continual attacks on the part of the Özbegs, which could not help affecting it.

An almost mortal blow was dealt it at the end of the 18th century. Maʿṣūm Khān (later called Shāh Murād), son of the *atalïḳ* [*q.v.* in Suppl.] Dāniyāl Biy of the newly-founded Mangït [*q.v.*] dynasty of *amīrs* in Bukhārā, attacked the Ḳādjār Türkmen local lord of Old Marw, Bayram ʿAlī Khān, killing him in 1785. Shāh Murād also destroyed the Sulṭān-Band, the dam across the Murghāb 30 miles/48 km. above Marw, and thereby reduced the economic prosperity of the region (F.H. Skrine and E.D. Ross, *The heart of Asia, a history of Russian Turkestan and the Central Asian khanates from the earliest times*, London 1899, 206). Consequently, the traveller Alexander Burnes found Marw in ruins and the surrounding district in complete neglect (*Travels into Bokhara*, London 1834, ii, 23 ff., 37-8, 258-60).

In 1884 the Marw oasis was occupied by the Russian army, and secured in the following year from an Afghān threat by General Komarov's victory. From 1887 onwards, attempts were made, with considerable success, to revive the agricultural prosperity of the devastated region by the building of two dams on the Murghāb, that of Hindū-Kush and that of Sulṭān-Band. The Transcaspian railway line from Krasnovodsk to Bukhārā, Samarḳand and Tashkent passed through ʿAshkābād and Marw, and from Marw a branch was built southwards to Kushka on the Afghān frontier. In Tsarist times within the *oblast* of Transcaspia, Marw has since 1924 come within the Turkmenistan S.S.R. In 1935 the modern settlement of Bairam Ali was founded in the Marw region, and this town is now the chef-lieu of the *rayon* of the same name. In 1969 it had a population of 31,000, with flourishing cotton textile and dairy products industries (see *BSE*³, ii, 534).

(A. YU. YAKUBOVSKII - [C. E. BOSWORTH])

AL-**MARWA** [see AL-ṢAFĀ].

MARWĀN I B. AL-**ḤAKAM** B. ABI 'L-ʿAṢ, Abu 'l-Ḳāsim and then Abū ʿAbd al-Malik, first caliph of the Marwānid branch of the Umayyad dynasty [*q.v.*], reigned for several months in 64-5/684-5.

Marwān, born of al-Ḥakam's wife Āmina bt. ʿAlḳama al-Kināniyya, stemmed from the same branch of the Umayyad clan of Ḳuraysh, sc. Abu 'l-ʿĀṣ, as the Rightly-guided caliph ʿUthmān, and was in fact ʿUthmān's cousin. The sources generally place his birth in A.H. 2 or 4 (*ca.* 623-6), but it may well have occurred before the *Hidjra*; in any case, he must have known the Prophet and was accounted a Companion. He became secretary to ʿUthmān when he already had a considerable reputation for his profound knowledge of the Holy Book (al-Madāʾinī, in al-Balādhurī, *Ansāb*, v, 125: *min aḳraʾ al-nās li'l-Ḳurʾān*), and doubtless helped in the recension of what became the canonical text of the Ḳurʾān in that caliph's reign [see ḲURʾĀN. 3]. Also during this reign, he took part in an expedition into North Africa, and it was apparently his share of the rich plunder from this which laid the foundations of Marwān's extensive personal fortune, invested in property in Medina; and it is further mentioned that he was for a while a governor in Fārs. He was wounded at the *Yawm al-dār*, the defence of ʿUthmān's house in Medina against the insurgents of the Egyptian army in 35/656, and fought at the Battle of the Camel with ʿĀʾisha and her allies [see AL-DJAMAL], but seized the opportunity personally to slay Ṭalḥa, whom he regarded as the most culpable person in the murder of ʿUthmān. Somewhat surprisingly, he then gave allegiance to ʿAlī after the battle.

During Muʿāwiya's caliphate, Marwān was governor of Baḥrayn and then had two spells as governor of Medina, 41-8/661-8 and 54-7/674-7, alternating with his kinsmen Saʿīd b. al-ʿĀṣ and al-Walīd b. ʿUtba. It was during these years that he acquired from the caliph the estate, with its lucrative palm groves, of Fadak [*q.v.*], which he subsequently passed on to his sons ʿAbd al-Malik and ʿAbd al-ʿAzīz. It is possible that Muʿāwiya latterly grew suspicious of Marwān's ambitions for his family, especially as the family of Abu 'l-ʿĀṣ was perceptibly more numerous than that

of Ḥarb, Muʿāwiya's grandfather; Marwān himself had, according to al-Balādhurī, *Ansāb*, v, 164, ten sons and two daughters, and al-Thaʿālibī, *Laṭāʾif*, 136, tr. 107-8, states that he further had ten brothers and was the paternal uncle of ten of his nephews. It may have been fears of the family of Abu ʾl-ʿĀṣ that impelled Muʿāwiya to his adoption (*istilḥāḳ*) of his putative half-brother Ziyād b. Sumayya [see ZIYĀD B. ABĪHI] and to the unusual step of naming his son Yazīd as heir to the caliphate during his own lifetime. There was certainly a lack (with the exception of al-Walīd b. ʿUtba, Muʿāwiya's nephew) of mature, experienced Sufyānids to succeed Muʿāwiya, whereas at the time of the expulsion of the Umayyads from the Ḥidjāz (see below), Marwān was the most senior of the Umayyads and the only one whom the Prophet had known (*shaykh kabīr* in the sources, probably referring as much to his prestige and authority as to his age).

When the difficulties arose in 60/680 over Yazīd b. Muʿāwiya's succession, involving a refusal of allegiance by the cities of the Ḥidjāz, Marwān advised the governor of Medina, al-Walīd b. ʿUtba, to use force against the rebels. After the withdrawal of the expeditionary force of Muslim b. ʿUḳba al-Murrī and its return to Syria (beginning of 64/autumn 683), the Umayyads and their clients who had been previously expelled but had returned with Yazīd's troops, comprising principally members of the lines of al-ʿĀṣ under ʿAmr b. Saʿīd al-Ashdaḳ [*q.v.*] and of Abu ʾl-Āṣ under Marwān, were forced by the partisans of the anti-caliph ʿAbd Allāh b. al-Zubayr [*q.v.*] to abandon their properties in the Ḥidjāz and flee to Syria for a second time. Marwān was back in Syria by the beginning of 684, and some accounts say that he went in the first place to Palmyra rather than to the court of the ephemeral caliph Muʿāwiya II b. Yazīd [*q.v.*] at Damascus. With the latter's death, and in face of the widespread support, even in Palestine and northern Syria, for a Zubayrid caliph, Marwān despaired of any future for the Umayyads as rulers, and was himself inclined to give his allegiance to ʿAbd Allāh b. al-Zubayr. But heartened by the urgings of ʿUbayd Allāh b. Ziyād b. Abīhi [*q.v.*], Marwān allowed his own candidacy to go forward at the meeting of Syrians at al-Djābiya [*q.v.*] convoked to hail a successor to Muʿāwiya II, and with the support of the leader of Djudhām, Rawḥ b. Zinbāʿ, was hailed as caliph, with Khālid b. Yazīd b. Muʿāwiya [*q.v.*] and ʿAmr b. Saʿīd al-Ashdaḳ named as next heirs. With this acclamation and the support of the Kalb under Ibn Baḥdal [see ḤASSĀN B. MĀLIK], Marwān was able to defeat the Ḳays under al-Ḍaḥḥāk b. Ḳays al-Fihrī [*q.v.*] at the battle of Mardj Rāhiṭ [*q.v.*], probably to be placed in July or early August 684. Then shortly after his installation as caliph in Damascus, Marwān married Umm Hāshim Fākhita bt. Abī Hāshim b. ʿUtba, the widow of Yazīd I and mother of his two sons; this diplomatic alliance gave him a link with the Sufyānids.

Marwān was now able to consolidate his position in Syria and Palestine. His short reign was filled with military activity, beginning with the expulsion of the Zubayrid governor, ʿAbd al-Raḥmān b. ʿUtba al-Fihrī, called Ibn Djaḥdam, from Egypt. Marwān seems to have secured that province by Radjab 65/February-March 685, leaving there as governor his son ʿAbd al-ʿAzīz. Although the sources are confused here, it seems that Marwān's forces also repelled a Zubayrid attack on Palestine led by Muṣʿab b. al-Zubayr [*q.v.*]. It is possible, but not certain, that a Marwānid army itself invaded the Ḥidjāz under Ḥubaysh b. Duldja, but was repelled at al-Rabadha [*q.v.*] to the east of Medina. Marwān certainly took steps to secure ʿIrāḳ, which had declared for the Zubayrid cause, sending an army under ʿUbayd Allāh b. Ziyād which by-passed the hostile Ḳaysī centre of Ḳirḳīsiya in al-Djazīra and had reached al-Raḳḳa when the news of Marwān's death arrived.

This last event took place in the spring of 65/685, possibly as a result of a plague which was affecting Syria at this time. The date of Marwān's death is variously given in the sources: Elias of Nisibin has 7 May, and the Islamic historians such dates as 3 Ramaḍān/13 April (al-Masʿūdī, *Tanbīh*) and 29 Shaʿbān-1 Ramaḍān/10-11 April (Ibn Saʿd, al-Khalīfa b. Khayyāṭ, al-Ṭabarī). The place of his death is given by several authorities as Damascus (Ibn Saʿd, al-Ṭabarī, al-Masʿūdī, *Tanbīh*), but by al-Yaʿḳūbī and al-Masʿūdī, *Murūdj*, as al-Ṣinnabra on the Lake of Tiberias, a place used, it seems, as a winter residence by the early Umayyads. The length of his reign is placed at between six and ten months. Even less certain is Marwān's age when he died; the sources make him at least 63, but he may well have been over 70.

On the occasion of the successful outcome of the Egyptian expedition, Marwān had taken the opportunity to vest the succession in his own sons ʿAbd al-Malik and ʿAbd al-ʿAzīz [*q.vv.*], and it was accordingly the former who succeeded to the caliphate in Damascus after Marwān's death, apparently without opposition (at least, at this moment) from the two heirs designated at al-Djābiya, ʿAmr b. Saʿīd and Khālid b. Yazīd, but now set aside.

Marwān's life had been crowded with action, above all in its later years, filled with military campaignings and the negotiations surrounding his succession to the caliphate. He seems to have suffered severe after-effects from various wounds, and his tall and emaciated frame earned him the nickname of *khayṭ bāṭil* "insubstantial, gossamer-like thread" (see al-Thaʿālibī, *Laṭāʾif*, 35-6, tr. 56). His brusqueness and lack of the social graces resulted in his being described as *fāḥish* "uncouth". Later, anti-Umayyad tradition stigmatised him as *ṭarīd ibn ṭarīd* "outlawed son of an outlaw", associating him with his father al-Ḥakam who was allegedly exiled by the Prophet to Ṭāʾif, and as *abu ʾl-djabābira* "father of tyrants" because his son and five of his grandsons subsequently succeeded to the caliphate. But he was obviously a military leader and statesman of great skill and decisiveness, amply endowed with the qualities of *hilm* [*q.v.*] and *dāhiya*, shrewdness, which characterised other outstanding members of the Umayyad clan. His attainment of the caliphate, starting from a position without many natural advantages beyond his own personal qualities (for he had no power-base in Syria and had spent the greater part of his career in the Ḥidjāz), enabled his successor ʿAbd al-Malik to place the Ummayyad caliphate on a firm footing so that it was able to endure for over 60 years more.

Bibliography: 1. Sources. The main historical sources for early Islam all contain relevant material. See al-Khalīfa b. Khayyāṭ, *Taʾrīkh*, index; Yaʿḳūbī, *Taʾrīkh*, ii, 304-6 and index; Ṭabarī, index; Kindī, *Wulāt Miṣr*, ed. Guest, 42-8; Masʿūdī, *Murūdj*, iv, 271-4, 277-9, v, 197-209 = §§ 1596-7, 1601-2, 1961-72 and index; idem, *Tanbīh*, 292, 304, 307-12, tr. Carra de Vaux, 383, 395, 399-404. There are biographical sections devoted to Marwān in Ibn Saʿd, v, 24-30; Balādhurī, *Ansāb al-ashrāf*, v, ed. Goitein, 125-64; Ibn Ḳutayba, *Maʿārif*, ed. ʿUkkāsha, 353-5; Ibn al-

Athīr, *Usd al-ghāba*, ii, 33-5 (al-Ḥakam), iv, 348-9 (Marwān). *Adab* works like Ibn ʿAbd Rabbihi's *ʿIkd*, Iṣfahānī's *Aghānī* and Thaʿālibī's *Laṭāʾif al-maʿārif* (here cited ed. Abyārī and Ṣayrafī, and Eng. tr. Bosworth, *The book of curious and entertaining information*) contain much anecdotal material.

Hawting, *The first dynasty of Islam: the Umayyad caliphate A.D. 661-750*, London and Sydney, 1986, 46-8. (C. E. Bosworth)

MARWĀN II b. Muḥammad b. Marwān b. al-Ḥakam, the last of the Umayyad caliphs of Syria (reigned 127/744 to 132/749-50) was, on his father's side, a grandson of the caliph Marwān I [*q.v.*], but there are variant accounts concerning his mother and the year of his birth. It is frequently reported that his mother was a non-Arab woman (sometimes specified as a Kurd) who passed into the possession of Marwān's father Muḥammad after ʿAbd al-Malik's defeat of Muṣʿab b. al-Zubayr and his general Ibrāhīm b. al-Ashtar in 72/691. Some reports say that the woman was already pregnant when Muḥammad took possession of her and that she gave birth to Marwān "on the bed of Muḥammad". A number of the *nasab* works fail to refer to Marwān's mother, a fact which perhaps confirms that at least she was not known to belong to one of the important Arab families. If his mother was indeed pregnant when taken from the Zubayrids, then 73/692 would be a likely year for his birth, but al-Ṭabarī, ii, 940, has a specific reference to it under 76/695-6. Statements of his age at the time of his death in 132/750 vary between 58 and 69. In tradition two *laḳabs*, again variously explained, are attached to Marwān's name: al-Djaʿdī and Ḥimār al-Djazīra (or simply al-Ḥimār, "the ass"). The former is usually said to be derived from the *ism* of Djaʿd b. Dirham [see IBN DIRHAM] who, it is asserted, acted as Marwān's tutor (*muʾaddib*; see *Fihrist*, i, 337-8; cf. Ibn al-Kalbī, *Djamharat al-nasab*, Kuwayt 1983, 156-7). The explanation of the name al-Ḥimār is equally uncertain; in modern works it is often claimed that it refers to Marwān's resolution and bravery in battle, but Bar Hebraeus (*Chronography*, tr. Wallis Budge, i, 111) says that it referred to Marwān's fondness for "the ass's flower" (for the *ward al-ḥimār*, i.e. the peony?, or chrysanthemum?, see Dozy, *Suppl.*, s.v. *ward*). Al-Ṭabarī's story (ii, 1912) about the Abyssinian who insulted Marwān's forces by performing lewd actions involving an ass's penis on the walls of Ḥimṣ does not seem to be an attempt to account for the name but rather implies that it was already current.

Information on Marwān's career before his seizure of the caliphate centres on his activities in the Ādharbāydjān, Armenia and Caucasus region. Following the defeat of al-Djarrāḥ b. ʿAbd Allāh al-Ḥakamī by the Khazars in 112/730, it seems that Marwān accompanied his cousin Maslama b. ʿAbd al-Malik [*q.v.*] who had been appointed over the region by the caliph Hishām with the task of restoring the position of the Muslims in Armenia and the southern Caucasus. Having distinguished himself in the fighting, Marwān became governor of Ādharbāydjān and Armenia for Hishām, although there is some confusion as to whether he immediately succeeded Maslama as governor in 114/732, as al-Ṭabarī (ii, 1562, 1573) implies, or whether he rather followed Saʿīd b. ʿAmr al-Ḥarashī in the office (al-Balādhurī, *Futūḥ*, 207). If the latter is the case, then the beginnings of Marwān's governorship should probably be dated to 116/734 or 117/735. As governor, he supported in Armenia the Bagratids against the rival Mamikonians, sending Gregory and David Mamikonian into exile when they refused to accept his appointment of Ashot Bagrat as Biṭrīḳ of Armenia. Faced with the continuing threat from the Khazars to the north, the Armenians cooperated with the Muslims, and Armenian forces played an important part in the expedition which Marwān led into the Caucasus in 119/737 (J. Laurent, *L'Arménie entre Byzance et l'Islam*, Paris 1919, 339-40 (2nd ed. by M. Canard, Lisbon 1980, 422); R. Grousset, *Histoire de l'Arménie*, Paris 1947, 315-19; D. M. Dunlop, *The history of the Jewish Khazars*, Princeton 1954, 80-7). It is noteworthy too that Armenian troops are later reported to have played a part in helping Marwān to establish his authority over Syria following the death of Yazīd b. al-Walīd (e.g., Dennett, *Marwān b. Muhammad*, 240, citing the chronicle of Levond).

Two passages of al-Ṭabarī (ii, 1941, 1944) refer to Marwān's adopting the military formation known as the *kurdūs* (pl. *karādīs*) and abandoning that called the *ṣaff* (pl. *ṣufūf*). A *kurdūs* was a relative small and compact detachment of soldiers (usually cavalry), while the *ṣufūf* were the more traditional long lines in which the Arabs organised themselves for battle. It has sometimes been suggested that Marwān was the first to introduce the *kurdūs* formation into the Muslim armies and that his experience in fighting on the northern borders where Byzantine influence was strong (χοορτις has been proposed as the source of the Arabic word; S. Fraenkel, *Aramäischen Fremdwörter*, 239) led him to do so. However, whether Marwān was really the first to use this formation among the Muslims is doubtful (R. Levy, *The social structure of Islam*, Cambridge 1957, 430) and it is notable that al-Ṭabarī's reports do not, in any case, relate to the period of Marwān's fighting on the northern frontier but to the later fighting against Khāridjites in Mesopotamia after he had seized the caliphate.

It seems that Marwān had already contemplated marching south into Syria and taking a hand in affairs when Walīd II was overthrown and killed and Yazīd III became caliph in Djumāda II 126/April 744, but had been foiled by the dissent of the Kalbīs in his army led by Thābit b. Nuʿaym. During the short caliphate of Yazīd III, Marwān then acted as governor of Mesopotamia, basing himself in the Ḳaysī centre of Harrān. With the death of Yazīd III in Dhu 'l-Ḥidjdja 126/September 744, he refused to accept the authority of the nominated successor, Ibrāhīm brother of Yazīd III, and crossed the Euphrates with his army. At this stage, it seems that he did not put himself forward as a candidate for the caliphate but merely as the champion of the two sons of the murdered Walīd II, who were imprisoned in Damascus. With the support of the Ḳaysī contingent of Ḳinnasrīn, he established control over Ḥimṣ and northern Syria and then defeated a Kalbī force led by Sulaymān b. Hishām at ʿAyn al-Djarr on the road from Damascus to Baalbek. In the aftermath of this

battle the two sons of Walīd II were murdered in Damascus, Ibrāhīm and Sulaymān b. Hishām fled to the Kalbī centre of Palmyra, and Marwān was able to enter Damascus. There, it is said on the initiative of Abū Muḥammad of the Sufyānid branch of the Umayyad family, who claimed that the two sons of Walīd II had named Marwān as their successor, he was recognised as caliph and given the *bayʿa* in Ṣafar 127/December 744. Subsequently, Ibrāhīm and Sulaymān b. Hishām accepted his authority and were granted *amān*. Marwān did not, however, choose to remain in Syria but moved back to Harrān in Mesopotamia where, presumably, he felt more secure. For the first time an Umayyad caliph attempted to rule from outside Syria.

Faced, however, with a rebellion in Syria he soon had to return there. The rebellion started among the Kalb of Palestine led by Thābit b. Nuʿaym and quickly spread to the north where Ḥimṣ came out in opposition to Marwān. In Shawwāl 127/July 745 Marwān in person obtained the resubmission of Ḥimṣ and then sent a force south to relieve Damascus, under attack from Yazīd b. Khālid al-Ḳasrī. Yazīd was defeated and killed, and Marwān's army went on to capture Thābit b. Nuʿaym who was attacking Tiberias. Thābit was executed and the Kalbī settlement of al-Mizza near Damascus put to fire. Finally, al-Abrash al-Kalbī in Palmyra agreed to surrender to Marwān, and it seemed that his rule over Syria was again secure. At this point he called the Umayyad family together and had the *bayʿa* given to his two sons as his successors. But the opposition to Marwān in Syria was not yet over. When he raised a Syrian contingent to join the Mesopotamian army under Yazīd Ibn Hubayra [see IBN HUBAYRA], which was attempting to establish Marwān's authority in ʿIrāḳ, it deserted as it passed by al-Ruṣāfa where Sulaymān b. Hishām lived, and the Syrians recognised Sulaymān in opposition to Marwān. Sulaymān took possession of Ḳinnasrīn and attracted support from the rest of Syria. Withdrawing most of his Mesopotamian troops from Ibn Hubayra's force, Marwān attacked and defeated Sulaymān near Ḳinnasrīn and the vanquished Umayyad fled with the remnants of his army to Ḥimṣ and thence, leaving his forces there under the command of his brother, to Kūfa via Palmyra. Marwān now besieged Ḥimṣ for the second time, and when the town finally submitted after several months he had its walls rased together with those of several other major Syrian towns. By the summer of 128/746 Marwān had finally established his control over Syria.

The extension of his authority over ʿIrāḳ and all of Mesopotamia took even longer. Initially, he had attempted to weaken the governor of ʿIrāḳ appointed by Yazīd III, ʿAbd Allāh b. ʿUmar b. ʿAbd al-ʿAzīz, and to replace him with the Ḳaysī al-Naḍr b. Saʿīd al-Ḥarashī. Both rival governors were then overwhelmed, in 127/745, by the Khāridjite movement which had begun in Mesopotamia among the tribe of Shaybān and which is associated with the leadership of al-Ḍaḥḥāk b. Ḳays al-Shaybānī. The latter established himself in Kūfa but in the spring of 128/746 returned north and occupied Mawṣil, seeking to take advantage of Marwān's difficulties in Syria. Marwān's son ʿAbd Allāh, however, was able to hold the Khāridjites in check until Marwān had completed his subjugation of Ḥimṣ and could divert his forces to the east to deal with the threat. In the late summer Marwān defeated and killed al-Ḍaḥḥāk, under whom Sulaymān b. Hishām now fought, and the Khāridjites had to abandon Mawṣil. In the following year they were finally driven out of Mesopotamia and their danger ended when Marwān was able to withdraw men from ʿIrāḳ to deploy against them and their new leader Abū Dulaf. That Marwān was able to withdraw men from ʿIrāḳ was a consequence of the victories there in late 129/spring 747 of his general Yazīd Ibn Hubayra, who had defeated both the Khāridjite governor of Kūfa and the ʿAlid ʿAbd Allāh b. Muʿāwiya [*q.v.*], until then holding sway over large areas of western and south-western Iran.

The domination which Marwān had established by the end of 129/summer of 747 was to be ended two years later by the rising of the Hāshimiyya which had already begun in Khurāsān in Ramaḍān 129/June 747. By Rabīʿ II 132/November 749 the armies of the Hāshimiyya had destroyed Umayyad rule in Persia and ʿIrāḳ and the ʿAbbāsid caliphate had been proclaimed in Kūfa. In Djumādā II 132/January 750 Marwān himself led his forces in a last attempt to defeat the insurgents at the battle of the Greater Zab, and the destruction of his army there signalled the end of Umayyad power. Marwān himself escaped with a small band of supporters and fled through Syria to Egypt pursued by an ʿAbbāsid force. They finally caught him in Dhu 'l-Ḳaʿda 132/June 750 at Būṣīr in the province of Ushmūnayn in Upper Egypt, and there the last Umayyad caliph fell after a short struggle.

Marwān's career illustrates some of the weaknesses affecting the later Umayyad caliphate. He had obtained power as a result of his close links with the predominantly Ḳaysī army of the north Mesopotamian frontier in opposition to the Kalbī-based régime of Yazīd III. This close identification of the caliph with a particular faction clearly diminished the religious and moral claims of the Umayyad caliphate. Furthermore, his attempt to move the centre of the caliphate to Mesopotamia reflects the way in which Syria, hitherto the base of Umayyad rule, had itself been engulfed by the factionalism among the Arabs. It may seem that Marwān was unfortunate in that, having finally consolidated his authority over the central provinces, he was so soon overthrown by a movement which originated outside his control. In reality, however, the Umayyad state had been so weakened by its fundamental inability to satisfy the demands of Islam and by the factionalism among the Arab soldiers that it is doubtful whether even Marwān's forceful and energetic personality could have significantly prolonged it.

Bibliography: In addition to the indices to the more important Arabic works of *taʾrīkh* and *adab*, such as Ṭabarī, Yaʿḳūbī, Balādhurī, *Futūḥ*, Masʿūdī, *Murūdj*, and Ibn ʿAbd Rabbihi, *ʿIḳd* (for which the *Analytical indices*, to the Cairo 1321 edition, prepared by M. Shāfiʿ, Calcutta 1935, are useful), see the entries on Marwān II in Balādhurī, *Ansāb al-ashrāf*, and Ibn ʿAsākir, *Taʾrīkh madīnat Dimashḳ*, the relevant parts of which are still in ms.; for a summary of the latter, see the article on Marwān in Ṣalāḥ al-Dīn al-Munadjdjid, *Muʿdjam Banī Umayya*, Beirut 1970; for the references to Marwān in the *K. al-Aghānī*, the compiler of which, Abu 'l-Faradj al-Iṣfahānī, is claimed as a descendant of his, see Aghānī, *Tables alphabétiques*. Furthermore, the Syriac, Armenian and Georgian sources listed in the secondary literature cited in the second paragraph above are important for specific aspects of Marwān's career from a non-Muslim viewpoint. 1927); D. C. Dennett, *Marwan Ibn Muhammad: the passing of the Umayyad caliphate*, unpubl. Ph.D. thesis, Harvard 1939; Abū Djayb al-Saʿdī, *Marwān b. Muḥammad wa-asbāb suḳūṭ al-dawla al-umawiyya*, Beirut 1972; P. Crone, *Slaves on horses*, Cambridge 1980; Hannelore Schönig, *Das Sendschreiben des ʿAbdalḥamīd b. Yaḥyā (gest. 132/750) und den Kronprinzen ʿAbdallāh b. Marwān II*, Stuttgart 1985.

(G. R. Hawting)

MARWĀN al-Akbar b. **ABĪ ḤAFṢA** and **MARWĀN** al-Aṣghar b. **ABI 'l-DJANŪB**, the most famous members of a family which included several poets; al-Thaʿālibī characterises it as the most poetic of families in Islam, with six poets amongst its members.

The origins of the family's ancestor Abū Ḥafṣa Yazīd are obscure. He was a *mawlā* of the Umayyad Marwān b. al-Ḥakam, whom he aided on various historical occasions during the caliphate of ʿUthmān and under ʿAlī. It is impossible to decide exactly whether he was of Persian or Jewish origin. Freed by Marwān, he was entrusted with certain posts, including the collecting of the taxation from Medina. He married a girl from B. ʿAmīr of the Yamāma, and his descendents were always to have close relations with that region of Arabia. One of them, Marwān al-Aṣghar, claimed that this woman was the granddaughter of al-Nābigha al-Djaʿdī, which would explain the poetic talent of the family. The ancestor Yazīd wrote verses (the *Fihrist* however, describes him as *muḳill*). His son Yaḥyā was held in esteem by ʿAbd al-Malik b. Marwān and had relations with Djarīr. The *Fihrist* attributes to him a *dīwān* of 20 leaves, of which only a small part has come down to us. The eulogy which he addressed to al-Walīd b. ʿAbd al-Malik on the occasion of his accession to the caliphate is especially prosaic and conventional.

It is his grandson, Abu 'l-Simṭ Marwān b. Sulaymān, who can be considered as the first important poet of the family. He left the Yamāma for Baghdād, thus confirming the fact that it was impossible to attain literary fame when living remote from the capital. With a personality which was moreover strange, sordidly avaricious, clumsy and unscrupulous, he would arrive at the palace clad in rags, despite the enormous sums which the caliphs gave him for his poems. He seems to have steered his career forward with intelligence and prudence, and attached himself to the great personality of Abu 'l-Walīd Maʿn b. Zāʾida [*q.v.*], to whom he came to owe his fame. He wrote for him numerous eulogies and a famous elegy in *-lā* considered as a model of its kind, and so fine that both al-Manṣūr and al-Mahdī took offence at a piece of praise which they considered excessive. Each of them is reputed to have excluded him from their *madjlis* for a whole year for this reason. But he was always recalled and found fresh favour with the ruler. This is attributable to the fact that he showed himself as a fierce opponent of the ʿAlids and on every occasion proclaimed forth the legitimacy of the ʿAbbāsids. He was one of that group of poets who, like e.g. Manṣūr al-Namarī, based their existence on their fidelity to the ruling power. He was accordingly rewarded with a prodigality which all the historians of literature stress. He was assassinated and died in *ca.* 181/797 in obscure circumstances.

Marwān b. Abī Ḥafṣa must be considered as a great classical poet. His supple and lexically straightforward vocabulary, and his clear syntax, contributed to his aim as a panegyrist who carefully sought formulae which would appear striking to his audience's minds. He was a master of the well-turned utterance; his poetry is expansive, strongly rhythmical, and his phrases follow each other in a continuous movement which gives his *ḳaṣīda* the strength of an oratorical period. He was thus, at the end of the 2nd/8th century, one of the best representatives of *shiʿr minbarī*. Moreover, he worked over his poems with great care, as e.g. Zuhayr and al-Ḥuṭayʾa had done before him. He would read them over to grammarians in order to get their advice on his language, which does not seem to have been of the purest. It is said that Bashshār corrected his verses. Al-Aṣmaʿī, a severe judge if ever there was one, considered him as a *muwallad* who never mastered the language. In the *ḥalḳa* of the philologist Yūnus, which he frequented in company with Khalaf al-Aḥmar, he was caught out over the explanation of a word used by Zuhayr. Yet Ibn al-Aʿrābī considered him to be the last of the great poets. In fact, these verdicts are not contradictory, but simply show an evolution. The poets of the 2nd/8th century no longer mastered all the Arabic lexicon, and scholars could thus catch them out. Marwān represents indeed the type of these utterers of set pieces who, illustrating the academic tradition of poetry, were to serve in the 3rd/9th century as the definition of the aesthetic of that kind of beauty described as poetic.

The *Fihrist* attributes 100 leaves to Idrīs, Marwān's brother, but it is the name of his grandson Abu 'l-Simṭ Marwān b. Abi 'l-Djanūb which found a niche in posterity as the last good poet of this family. It is correct that this particular person knew how to take up a central position on the scene. He was even more a professional eulogist than his grandfather, and was successively brought into the circles of al-Maʾmūn, al-Muʿtaṣim and then al-Wāthiḳ. The latter reproached him for being excessively close to his brother al-Mutawakkil and exiled him. Al-Mutawakkil's succession signalled his return to grace, and he went on to become one of the liveliest elements of the caliphal circles of literature. As well as the considerable sums which he got for his poems, he was awarded the governorship of the Yamāma and Baḥrayn. Al-Muntaṣir ordered him to return to the Yamāma, where all trace of him is lost.

Marwān b. Abi 'l-Djanūb kept up the anti-ʿAlid tradition characteristic of the whole family since the time of its founder. The most shining part of his fame came from his remarkable gift as a satirist. Recovering once more the verse of the swashbucklers of the 1st/7th century, he directed his shafts against several members of the court circle, in particular, ʿAlī b. al-Djahm, his favourite target, and ʿAlī b. Yaḥyā b. al-Munadjdjim. He was savage and coarse, and quick to discover chinks in people's armour; he used any weapon to hand, and did nor scruple to use mendacity when he was short of arguments, all of which gave great joy to the caliph, who took a keen pleasure in following these kinds of clashes.

Marwān al-Aṣghar seems to us inferior as a poet to his grandfather. He was most at ease in attacking people, and his eulogies, even if they contain some fine verses, use above all the conventional material of this type of poetry. Caught between Abū Tammām on one side, and al-Buḥturī and Ibn al-Rūmī on the other, it was hard for him to aspire to the top positions. Moreover, he lacked the inspiration of Diʿbil and the nobility of tone of ʿAlī b. al-Djahm. After him, talent left the family. His son Muḥammad and his grandson Futūḥ, to whom the *Fihrist* attributes 50 and 100 leaves respectively, were merely hack versifiers.

(J.E. Bencheikh)

MARWĀNIDS, the branch of the Umayyad dynasty of Arab caliphs in early Islam, who formed the second, and most long-lasting line of this dynasty, the first line being that of Sufyānids, that of Muʿāwiya I b. Abī Sufyān b. Ḥarb [*q.v.*], his son and his grandson (41-64/661-83). With the death of the child Muʿāwiya II b. Yazīd [*q.v.*], the caliphate passed to Muʿāwiya I's second cousin Marwān b. al-Ḥakam b. Abi 'l-ʿĀṣ, of the parallel branch of the Aʿyāṣ [*q.v.* in Suppl.]. Marwān and his descendants now formed the Marwānid line of the Umayyads (64-132/684-750), his son and successor ʿAbd al-Malik [*q.v.*] being the progenitor of all the subsequent caliphs with the exceptions of ʿUmar II [*q.v.*], son of ʿAbd al-Malik's brother ʿAbd al-ʿAzīz, and the last caliph Marwān b. Muḥammad b. al-Ḥakam.

For the general history of the dynasty, see UMAYYADS, and also the articles on individual rulers.

(Ed.)

MARWĀNIDS, a dynasty of Kurdish origin who, having ousted the Ḥamdānids [*q.v.*], ruled Diyār Bakr from 380/990-1 to 478/1085. The founder of the dynasty, a Kurdish chief named Bādh, seized the city of Mayyāfāriḳīn [*q.v.*] after the death of the Būyid ruler ʿAḍud al-Dawla (373/983), and then took Āmid, Naṣībīn and Akhlāṭ (Ibn al-Athīr, ix, 25; Ibn al-Azraḳ, 49-52). Badh successfully fended off attacks both from a Būyid army sent against him and from the Hamdānids, but was killed by a coalition of Ḥamdānid and ʿUḳaylid forces after his unsuccessful attempt to take Mawṣil (380/990).

The dynasty itself, however, takes its name not from Bādh but from Marwān, a miller who had married Bādh's sister. It was their son Abū ʿAlī al-Ḥasan b. Marwān who, having withdrawn after Bādh's death in 380/990 to Ḥiṣn Kayfā, married his uncle's widow, routed the Ḥamdānids on two occasions and took possession of Mayyāfāriḳīn and Āmid (Ibn al-Azraḳ, 59-60; Ibn al-Athīr, ix, 50). After his murder at Āmid in 387/997, his brother Mumahhid al-Dawla Saʿīd ruled until 401/1011. These two precarious reigns paved the way for the accession of a third brother, Naṣr al-Dawla Aḥmad [*q.v.*], whose rule marks the apogee of Marwānid power.

Naṣr al-Dawla was recognised as ruler of Diyār Bakr by the Būyid *amīr* Sulṭān al-Dawla, by the Fāṭimid caliph al-Ḥākim, and by the Byzantine emperor, all of whom soon sent envoys and congratulatory messages to him (Ibn al-Azraḳ. 103). Indeed, Naṣr al-Dawla in his long reign (401-83/1011-61) was to practise a skilful policy of accommodation and self-preservation with all three powers. He also had to contend with Bedouin Arab dynasties such as the ʿUḳaylids and the Mirdāsids [*q.vv.*], who wielded power in Northern Syria and al-Djazīra, and to whom he was forced to cede Naṣībīn and Edessa respectively.

The 6th/12th century chronicler of al-Djazīra, Ibn al-Azraḳ al-Fāriḳī, gives in his chronicle a very full account of Marwānid rule. Naṣr al-Dawla was fortunate to have the services of two capable viziers, Abu 'l-Ḳāsim al-Ḥusayn al-Maghribī, who died in office (428/1037), and whose biography is given by Ibn Khallikān [see AL-MAGHRIBĪ, BANŪ] and the even more famous Fakhr al-Dawla Ibn Djahīr [see DJAHĪR, BANŪ]. Under Naṣr al-Dawla, Diyār Bakr enjoyed a high level of stability and commercial and cultural prosperity. The Marwānid court at Mayyāfāriḳīn was frequented by prominent *ʿulamāʾ* and poets, such as the Shāfiʿī *ʿālim* ʿAbd Allāh al-Kāzarūnī (d. 455/1063) (Ibn al-Athīr, ix, 52) and the poet al-Tihāmī (d. 416/1025-6) (Ibn al-Azraḳ, 82). Nāṣir-i Khusraw visited Mayyāfāriḳīn in 438/1046 and was much impressed by it (*Safar-nāma*, ed. Muḥammad Dabīr-Siyāḳī, Tehran 1335/1956, 8-11).

Naṣr al-Dawla emerges as a flamboyant ruler with political acumen and extravagant tastes. His religious stance appears to have been a pragmatic one, suitable for the ruler of a vulnerable buffer state surrounded by greater powers of the most divergent confessional loyalties. It seems likely that he ruled a predominantly Christian population in the towns of Diyār Bakr and that he enjoyed a good relationship with Byzantium. Indeed, the emperor Constantine X asked him for help in procuring the release of the Georgian prince Liparit from the Saldjūḳ sultan Ṭoghrïl (Ibn al-Athīr, ix, 372-3). It is probable that Naṣr al-Dawla was persuaded for a short while from 430/1038-9 to give the *khuṭba* in favour of the Fāṭimid al-Mustanṣir (Ibn Khaldūn, *ʿIbar*, iv, 318), but it is also noteworthy that in that same reign, ʿAbd Allāh al-Kāzarūnī went to Mayyāfāriḳīn and spread the Shāfiʿī *madhhab* throughout Diyār Bakr (Ibn al-Athīr, ix, 52).

In traditional fashion, Naṣr al-Dawla is praised for strengthening the frontiers and for building bridges and citadels, and these laudatory statements of Ibn al-Azraḳ are confirmed by the evidence of Marwānid inscriptions found on the walls of Āmid. Indeed, according to the evidence of an inscription dated 445/1053-4 on a marble slab in the Bāb Ḥiṭṭa in Jerusalem, Naṣr al-Dawla was also responsible for establishing two houses for the use of pilgrims there (Burgoyne, 118-21). The sources comment on the immense wealth accumulated by Naṣr al-Dawla. He is also said to have possessed 360 concubines who did not, however, prevent him from meticulous observance of the morning prayer. He was interested in gastronomical pleasures, too, and sent his cooks to Egypt to learn to culinary arts of that country (Ibn al-Athīr, x, 11).

When the Saldjūḳ sultan Ṭoghrïl advanced into Diyār Bakr (448/1056-7), he did not aim at abolishing the Marwānid state, so Naṣr al-Dawla recognised his suzerainty and kept his lands. Ṭoghrïl wrote to him confirming his role as a frontier lord fighting the infidels and exhorting him to continue in this task (Ibn al-Athīr, ix, 275).

On the death of Naṣr al-Dawla (453/1061), the power and prestige of the dynasty declined markedly. His son Niẓām al-Dīn Naṣr succeeded him, at first only in Mayyāfāriḳīn and then two years later (having overcome his brother Saʿīd) in Āmid too. On the death of Niẓām al-Dīn (472/1079) his son Nāṣir al-

Dawla Manṣūr, the last Marwānid ruler, came to power. The vizier Ibn Djahīr, who had left Diyār Bakr for Baghdād, used his influence with Malik-Shāh and Niẓām al-Mulk to persuade them to bring the Marwānid dynasty to an end and to seize their treasures. In 478/1085 Diyār Bakr fell to Ibn Djahīr and direct Saldjūḳ control was imposed (Ibn al-Athīr, x, 93-4). Ibn Djahīr took their treasury for himself and the last Marwānid ruler Manṣūr was given Djazīrat Ibn ʿUmar, where he lived on until 489/1096.

MARWĀNIYYA, a branch of the Khalwatiyya Ṣūfī order [*q.v.*] in Egypt, named after Marwān b. ʿĀbid al-Mutaʿāl (d. 1329/1911). His father, ʿĀbid al-Mutaʿāl b. ʿAbd al-Mutaʿāl (d. 1299/1881-2), had been initiated into the Khalwatiyya order by Ḥusayn al-Muṣaylihī (cf. Mubārak, *Khiṭaṭ*, xv, 45), a *khalīfa* [*q.v.*] of Muḥammad al-Ḥifnī's disciple Muḥammad b. ʿAbd Allāh al-Shintināwī. ʿĀbid al-Mutaʿāl later obtained *al-khilāfa* and acted as a *shaykh* of his own Khalwatiyya order, which had not yet differentiated itself, either in name or in practice, from Muṣṭafā Kamāl al-Dīn al-Bakrī's version of the Khalwatiyya, as transmitted by al-Bakrī's *khalīfa* al-Ḥifnī. From early 1912 onwards, under ʿĀbid al-Mutaʿāl's son, Marwān, the order was presented under a name of its own, al-Marwāniyya. The original *silsila* [*q.v.*] going back to al-Bakrī was dropped and replaced by another *silsila* which was identical with ʿĀbid's genealogy (cf. ʿAbd al-Mutaʿāl al-Ḥamzāwī al-Marwānī, *Tahdhīb al-isʿāfāt al-rabbāniyya bi 'l-awrād al-Marwāniyya*, Cairo 1330/1912, 61-4). In addition, the order's link with the Khalwatiyya tradition, which had been cultivated and propagated by Muṣṭafā Kamāl al-Dīn al-Bakrī, was cut when the reading of Yaḥyā al-Shirwānī al-Bākūbī's *Wird al-sattār*—which according to al-Bakrī, is the pivot of Khalwatiyya ritual—was abandoned and when, at the same time, private and communal reading (in the *ḥadras* [*q.v.*]) of al-Bakrī's *aḥzāb* [see ḤIZB]) was replaced by the reading of *ṣalawāt* and other liturgical texts attributed to ʿĀbid's ancestor Marwān al-Khalfāwī (d. 730/1329-30).

A discussion of the various factors which account for the introduction of these alterations and for the concomitant rise of the Marwāniyya, in conjunction with additional details and references, is to be found in F. de Jong, *The Ṣūfī orders in post-Ottoman Egypt, 1911-1981* (in preparation), ch. 3. The Marwāniyya is one of the officially recognised Ṣūfī orders in Egypt (cf. Mashyakhat ʿUmūm al-Ṭuruḳ al-Ṣūfiyya, *Ḳānūn raḳm 118 li-sana 1976 m. bi-shaʾn Niẓām al-Ṭuruḳ al-Ṣūfiyya....*, Cairo n.d., 29).

MĀRWĀŔ [see DJŌDHPŪR]

AL-**MARWAZĪ**, ABŪ BAKR AḤMAD B. MUḤAMMAD B. AL-ḤADJDJĀDJ B. ʿABD AL-ʿAZĪZ, the preferred disciple of Aḥmad b. Ḥanbal [*q.v.*], who, it is said, appreciated al-Marwazī's piety and virtues. His mother was originally from Marw al-Rūdh, whence his *nisba*, whilst his father was a Khʷārazmian. Hardly any of the events of his life are known, in as much as he seems to have lived within his master's shadow, although he is depicted as once setting out on an expedition in the midst of a crowd of admirers.

The biographical notices devoted to him stress Abū Bakr al-Marwazī's role in the transmission of *ḥadīths* gathered by Ibn Ḥanbal, as well as in the formation of quite a number of Ḥanbalīs, amongst whom al-Barbahārī [*q.v.*] is especially cited. They also contain *responsa* of the Imām in reply to various questions concerning, for example, outside the sphere of *fiḳh* properly defined, the rules of conduct which a Muslim should observe in society.

He was so close to his master that it was he who closed his eyes at the latter's death, and on his own death, on 7 Djumādā I 275/17 September 888, he was buried at his feet in the Cemetery of Martyrs (*maḳābir al-shuhadāʾ*) in Baghdād.

Bibliography: Khaṭīb Baghdādī, *Taʾrīkh Baghdād*, iv, 123-5; Abū Yaʿlā al-Farrāʾ, *Ṭabaḳāt al-Ḥanābila*, Cairo 1371/1952, 56-63; Nābulusī, *Ikhtiṣār Ṭabaḳāt al-Ḥanābila*, Damascus 1350/1931-2, 32-4; H. Laoust, *La profession de foi d'Ibn Baṭṭa*, Damascus 1958, index; idem, *Le Hanbalisme sous le califat de Bagdad*, in *REI*, xxvii (1959), 76. (ED.)

AL-**MARWAZĪ**, ABU 'L-FAḌL AḤMAD B. MUḤAMMAD AL-SUKKARĪ, Arabic poet of Marw, *floruit* later 4th/10th or early 5th/11th century. Al-Thaʿālibī quotes specimens of his light-hearted and witty poetry, and also of an interesting *muzdawadja* in which he turned Persian proverbs into Arabic *radjaz* couplets, a conceit said to be one of his favourite activities.

Bibliography: Thaʿālibī, *Yatīma*, Damascus 1304/1886-7, iv, 22-5, Cairo 1375-7/1956-8, iv, 87-90; C. Barbier de Meynard, *Tableau littéraire du Khorassan et de la Transoxiane au IVe siècle de l'hégire*, in *JA*, Ser. 5, i (1853), 205-7. (ED.)

AL-**MARWAZĪ**, ABŪ ṬĀLIB ʿAZĪZ AL-DĪN ISMĀʿĪL B. AL-ḤUSAYN B. MUḤAMMAD... b. ʿAlī b. al-Ḥusayn b. ʿAlī b. Abī Ṭālib, a Ḥusaynī who seems to have devoted himself to the study of genealogies, although he is also credited with knowledge of astronomy and, like so many others, he was a composer of verse. His ancestors had left Medina and settled first in Baghdād, then in Ḳum(m) and finally in Marw, where he was born on 22 Djumādā 572/26 December 1176. He embarked on traditional studies in his native city, then, when 22 years old, he followed the pilgrims as far as Baghdād but refrained from completing the pilgrimage; he concluded his education as a pupil of eminent teachers of the period, in the capital of the caliphate, at Nīshāpūr, Rayy, Shīrāz, Tustar, Harāt and Yazd. In 614/1217, when Yāḳūt met him in Marw, he already had to his credit a series of works dealing especially with genealogies, but consisting in some cases of presenting in the form of ancestral trees (*tashdjīr*) the information contained in earlier works. Among his original writings figures a *Kitāb al-Fakhrī* on the genealogies of the Ṭālibīs which was commissioned from him by Fakhr al-Dīn al-Rāzī (543-606/1149-1209 [*q.v.*]) when the latter passed through Marw; it is not inconceivable that this explains the attribution to al-Marwazī of the *Fakhrī* of Ibn al-Ṭiḳṭaḳā (7th-8th/13th-14th century [*q.v.*]),

which was dedicated to Fakhr al-Dīn ʿIsā b. Ibrahim al-Mawṣil (see the edition of the *Fakhrī* by H. Derenbourg, Paris 1895, 14, no. 2, 16).

The information available on Abū Ṭālib al-Marwazī (see for example al-Suyūṭī, *Bughya*, 194; F. Bustānī, *Dāʾirat al-maʿārif*, iv, 401-2) is derived exclusively from the article which Yāḳūt (d. 626/1229) devoted to him (in *Udabāʾ*, vi, 142-50) during his lifetime; this explains the fact that the date of his death is nowhere mentioned.

Bibliography: Given in the article.

(Ch. Pellat)

AL-MARWAZĪ, Sharaf al-Zamān Ṭāhir, presumably a native of Marw [see marw al-shāhidjān] or a descendant of such a native, physician and writer on geography, anthropology and the natural sciences, died after 514/1120. He acted as physician to the Saldjūḳ sultan Malik-Shāh [*q.v.*] and possibly to his successors down to the time of Sandjar [*q.v.*]; little else is known of his life. His main fame comes from his book the *Ṭabāʾiʿ al-ḥayawān*, which is essentially zoological in subject, but also with valuable sections on human geography, i.e. the various races of the world, extant in an India Office ms., Delhi, Arab 1949. Sections of this, in which the author reveals borrowings from *inter alia* the lost *Kitāb al-Masālik wa 'l-mamālik* of Abū ʿAbd Allāh Muḥammad b. Aḥmad al-Djayhānī and his family [see al-djayhānī in Suppl.], have been edited and translated by Minorsky as *Sharaf al-Zamān Ṭāhir Marvazī on China, the Turks and India*, London 1942.

MARY [see maryam].

MĀRYĀ or **MAREA**, a Tigre-speaking tribe some 40,000 strong in the upland region on the left bank of the river ʿAnsabā, north-west of Keren in western Eritrea [*q.v.*] They claim descent from a Saho warrior of the same name, who is said to have settled in the region with seventeen soldiers during the 14th century. This data seems to be confirmed by the *Gadla Ewosṭāṭēwos* (Turaiev, *Acta S. Eustathii*, 37-8), where the Ethiopian saint Ewosṭāṭēwos is said to have visited "the two Māryā" on his way to Jerusalem in *ca.* 1337 (cf. C. Conti Rossini, in *RSO*, ix, 452-5; Bermudez, *Breve relaçao*, 117). Until today, the tribe is indeed split into two sections of nobles, the *Māryā Ḳayiḥ* or "Red Māryā" and the *Māryā Ṣallīm* or "Black Māryā", who are by far the most numerous. The distinction must represent two migrations, for the "Black" are traditionally regarded as "the first born" and in a higher position than the "Red", which is contrary to the meaning of *ḳayiḥ* (*ḳayy*) in Amharic. On several occasion, such as the death of the chief of the "Black", the "Red" had to give presents to the other group. The tribe consists further of families who are vassals to the nobles. The descendants of the warrior Māryā became very numerous and subjugated the local tribes. Called *tigre* because of their origin—the term means "serf caste" in this context—these vassal tribes were in fact Ethiopians and Bedja [*q.v.*], whose language was taken over by the ruling class. The latter's Saho language has been long since forgotten.

The distinction between "Black" and "Red" is now entirely a territorial one, the two groups living in strictly defined plateaux, divided by deep ravines. The "Black" occupy the lower regions with abundant water, keeping camels and vast numbers of goats. The "Red" live in more elevated regions with little water, do not keep camels but have many sheep. The land around the semi-permanent encampments is cultivated by the *tigre*, who also care for the animals. They have to supply the nobles with milk, butter and grain, make special offerings of animals at the marriages and deaths of the ruling class, and help them to pay off blood money, which with the Māryā is very high amounting to 800 head of cattle.

Until the beginning of the 19th century, the Māryā were Ethiopian Christians. Ruins of churches are scattered about their land, e.g. at Erota. Somewhere between 1820 and 1835 (Münzinger, *Ostafrikanische Studien*, 228), the Māryā and the Bayt Asgedē were among the first of the Tigre-speaking tribes to join Islam under the influence of Muslim traders, the revival of missionary activities caused by Wahhābism and the preaching of Sayyid Aḥmad b. Idrīs al-Fāsī (1760-1837), a Maghribī *shaykh* settled in Mecca, the serf caste having already adopted Islam earlier. Foremost among the Islamic missionaries were the ʿĀd Shaykh, descendants of Shaykh al-Amīn (generally corrupted to Lamīn) b. Ḥamad, who gained a great reputation through his miracles and whose tomb became the centre of a special cult. Although some of the clans still bear Christian names, like the ʿĀd Te-Mikāʾēl, a section of the "Red", the Māryā and their vassals are all Muslims. In many respects, Islamic law has considerably, and positively, influenced the life of the tribe. The right of the first-born son to inherit his father's estate to the exclusion of the daughters has been modified, while the old custom of enslaving the vassals who were unable to pay the nobles has been weakened. Differences in the penal code between punishments for crimes committed by nobles or by vassals have been disappearing. Under Italian rule, the more onerous duties of the vassals were considerably lightened. The rigid noble-serf relationship was, however, still very strong until recently.

(E. Cerulli - [E. van Donzel])

MARYAM, Mary, the mother of Jesus. The Arabic form of the name is identical with ܡܪܝܡ and μαριάμ which are used in the Syriac and the Greek Bible, in the New as well as in the Old Testament. In the latter it corresponds to the Hebrew מִרְיָם. Al-Bayḍāwī considers the name to be Hebrew; but the vowelling would seem to indicate a Christian source, according to A. Jeffery, *Foreign vocabulary of the Qurʾān*, Baroda 1938, s.v. The name Maryam, like others with the same suffix, such as ʿAmram, Bilʿam, points to the region between Palestine and Northwestern Arabia as its home. According to Muslim interpretation, the name means "the pious" (*al-ʿābida*; cf. the commentaries on sūra III,31). It occurs frequently in the Ḳurʾān in the combination [ʿĪsā] Ibn Maryam "[Jesus] the son of Mary" (sūra II,82, 254; III, 31-2; IV, 156, 169; V, 19, 50, 76, 82, 109, 112, 114, 116; IX, 31; XIX, 35; XXIII, 52; XXXIII,7; XLIII, 57; LVII, 27; LXI, 6, 14), no father being mentioned, because, according to Muslim tradition also, ʿĪsā had no earthly father. In the majority of these passages, ʿĪsā is clearly regarded as the higher of the two. Yet Maryam's place is important [see ʿīsā and the Bibl. there listed].

Maryam is mentioned in the Ḳurʾān, from the earliest to the later Medinan sūras.

(a) Maryam's special privileges; the annunciation.

To the first Meccan period belongs sūra XXIII, 52: "And we made the son of Maryam and his mother a sign; and we made them abide in an elevated place, full of quiet and watered with springs". Here some have seen the first allusion in the Ḳurʾān to the virgin birth. This idea is accentuated in sūra XIX,20, where Maryam says to the spirit (i.e. the angel) who announces to her the birth of a male child: "How should I have a male child, no human man having touched me?" In sūra LXVI, 12, the conception is ascribed to this divine spirit (cf. Luke, i, 34-5: "And Mary said to the angel, How can this be, since I have no husband? And the angel said to her, The Holy Spirit will come upon you, and the power of the Most High will overshadow you").

The virgin birth is also mentioned in sūra LXVI, 12 (Medinan): "And Maryam bint ʿImrān who kept her body pure. Then we breathed into it from our spirit. She acknowledged the truth of the words of her Lord and of his book and she belonged to the obedient".

A third mention of the annunciation and the virgin birth is in sūra III, 37-8: "When the angels said, O Maryam, verily Allah has elected thee and purified thee and elected thee above the women of all created beings. O Maryam, be obedient unto thy Lord and prostrate thyself and bow down with those who bow down" (cf. Luke, i, 28). The commentators remark on these verbs: *iṣṭafā* (chosen: twice) and *ṭahara*: Maryam was miraculously preserved from all bodily impurity and from spiritual failings. There is discussion too as to whether Maryam is the best of all women without exception, bearing in mind the veneration accorded to Fāṭima. Al-Rāzī, followed by al-Ḳurṭubī, takes it in an absolute sense, while most say "of that time" (R. Arnaldez, *Jésus fils de Marie prophète de l'Islam*, Paris 1980, 77). Maryam is generally held, in Muslim tradition, to be one of the four best women that ever existed, together with Āsiya [*q.v.*], Khadīdja [*q.v.*] and Fāṭima [*q.v.*] (Aḥmad b. Ḥanbal, *Musnad*, iii, 135), and the chief of the women of Paradise (Ibn Ḥanbal, iii, 64, 80). For a comparison of Mary with Fāṭima, based on Sunnī and Shīʿī interpretations of verses in sūra III and XIX, see J.D. McAuliffe, *Chosen of all women*: *Mary and Fatima in Qur'ānic exegesis*, in *Islamochristiana*, vii (1981), 19-28.

According to tradition, the annunciation took place in the following way: Djibrīl appeared to Maryam in the shape of a beardless youth with a shining face and curling hair, announcing to her the birth of a male child. She expressed her amazement, but, on the angel's reassuring answer, she complied with the will of God.

Thereupon the angel blew his breath into the fold of her shirt, which she had put off. When the angel had withdrawn, she put on the shirt and became pregnant. The annunciation took place in the cavern of the well of Silwān, whither Maryam had gone, as usual, to fill her pitcher; she was then 10 or 13 years of age; and it was the longest day of the year. In Christian tradition also, the voice of the angel was heard by Mary for the first time when she had gone to fill her pitcher. According to a different tradition, ʿĪsā's spirit entered Maryam through her mouth (al-Ṭabarī, *Tafsīr*, vi, 22).

(b) Maryam's religious importance.

It has been pointed out that the Ḳurʾān seems to refer to a belief that Maryam was considered as a third deity, or a divine person; and that she and her son were venerated together as gods. Such may be reflected in sūra V, 79: "Al-Masīḥ, the son of Maryam, is an Apostle only, who was preceded by other Apostles, and his mother was an upright woman; and both were wont to take food". This verse would appear to refute any veneration of ʿĪsā and his mother as divine persons, elevated above human needs. With it may be compared sūra IV, 169: "O people of the book, beware of exaggeration in your religion and say of Allāh nothing but the truth. ʿĪsā b. Maryam is only the Apostle of Allāh and his word, which he conveyed unto Maryam and a spirit that came forth from him. Believe, therefore on Allāh and his Apostles and say not 'three'. Beware of this, this will be better for you. Allāh is but one God", etc. Clearer is sūra V, 116: "And when Allāh said, O ʿĪsā b. Maryam, hast thou said to the people, Take me and my mother as two Gods besides Allāh? He answered: Far be it, that I should say to what I am not entitled. If I should have said it, thou wouldst know it", etc.

The commentaries also describe the Trinity as consisting of Allāh, ʿĪsā and Maryam. Al-Bayḍāwī, however, admits that in sūra IV, 169, there could be an allusion to the Christian doctrine of one God in three hypostases: Father, Son and Holy Spirit.

The question has often been asked why the Ḳurʾān sees fit to refute an apparent belief in Maryam as one of the persons of the Trinity. It seems likely that what is here reflected is a background of folk-religion, and the veneration accorded to Mary within the Church, rather than any specific beliefs. Christian sects giving undue importance to Mary were not very significant. The Trinity is a notoriously difficult concept: and in an expression quoted by al-Ṭabarī, vi, 171, Father, Son, *wa-zawdj mutabbiʿat*[un] *minhumā*, *zawdj* is probably a misreading of the same consonantal outline, *rūḥ* (cf. J. Abd el-Jalil, *Marie et l'Islam*, Paris 1950, 66).

Attempts, however, have been made to trace the background of the Ḳurʾān's statements. Maracci has made a reference to Epiphanius, *Adv. Haereses*, Haeres. lxxviii, § 23, where this author speaks of women in Arabia who venerated Mary as God, and offered her cakes, from which the heresy is often called that of the Collyridians. Sale, in his *Preliminary discourse*, 45, mentions the Mariamites, who worshipped a Trinity consisting of God, Christ and Mary, referring to a passage in the work of al-Makīn. There could have been an identification of ʿĪsā with the Holy Spirit (cf. sūra IV, 169, as translated above) thus leaving a vacant place in the Trinity. A different explanation is attempted by Sayous, *op. cit.*, in *Bibl.*, 61.

The Story of Maryam and ʿĪsā.

Many of the features narrated in the Ḳurʾān agree, partly or wholly, with narratives in the apocryphal gospels. Sūra XXIII, 52 (see above), mentions the elevated place that was prepared for ʿĪsā and his mother. It is not clear which tradition might be here alluded to. According to Luke, i, 39, Mary went to mountains to visit Elisabeth. In the *Protoevangelium Jacobi* (ch. xxii; Syriac text, 20) it is Elisabeth who flees together with John to a mountain, which opens to protect them against their presecutors. The Muslim commentators mention Jerusalem, Damascus, Ramla and Egypt as being possibly meant by the "elevated place". Maracci thinks of Paradise.

In two passages of the Ḳurʾān there is a fuller narrative of ʿĪsā's birth and what is connected with it: sūra XIX (named *Maryam*), 1-35, and in sūra III, 31-

42 (for a very detailed analysis of relevant passages, cf. Schedl, *op. cit.*, in *Bibl.*, 189-99, 402-10).

Sūra XIX opens with the story of Zakariyyāʾ and Yaḥyā (1-15); then follows the story of Maryam and ʿĪsā (16-34). Sūra III, 31-42, contains: (a) the birth of Maryam; (b) the annunciation of Yaḥyā (33-6); and (c) the annunciation of ʿĪsā (37-41). The comparison of sūra XIX with sūra III makes it probable that Muḥammad became acquainted with the story of the birth of Maryam later than with those of Yaḥyā and ʿĪsā.

(a) The birth of Maryam. This story is found in a Christian tradition corresponding closely with that which is contained in the *Protoevangelium Jacobi* and *De nativitate Mariae*. Mary's father is called ʿImrān in the Ḳurʾān, Joachim in Christian tradition; Ibn Khaldūn (*ʿIbar*, ii, 144) is also acquainted with the name Ioachim. Maryam is called a sister of Hārūn (sūra XIX, 29), and the use of these three names ʿImrān, Hārūn and Maryam, has led to the supposition that the Ḳurʾān does not clearly distinguish between the two Maryams, of the Old and New Testament. The Ḳurʾān names two families as being especially chosen: those of Ibrāhīm and of ʿImrān (sūra III, 32). It is the family of ʿImrān, important because of Moses and Aaron, to which Maryam belongs. It is not necessary to assume that these kinship links are to be interpreted in modern terms. The words "sister" and "daughter", like their male counterparts, in Arabic usage can indicate extended kinship, descendance or spiritual affinity. This second ʿImrān, together with Hārūn, can be taken as purely Ḳurʾānic. M. Hamidullah's literal rendering of *ukht Hārūn* in a marginal note of his translation of the Ḳurʾān (p. 289) as "Sœur Aaronide" would indicate this (Arnaldez, 33-4). M. Hamidullah also refers to Maryam as "membre par adoption de la famille de ʿImrān" (*Le Prophète de l'Islam*, Paris 1959, i, 415). Muslim tradition is clear that there are eighteen centuries between the Biblical ʿAmram and the father of Maryam.

ʿImrān's wife, ʿĪsā's grandmother, is not mentioned by name in the Ḳurʾān. In Christian as well as in Muslim tradition, she is called Ḥanna. It is only in Muslim tradition that her genealogy is worked out. She is a daughter of Fāḳūdh and a sister of Ishbāʿ, the Biblical Elisabeth.

Fāḳūdh
- Ḥanna married ʿImrān
  - Maryam
    - ʿĪsā
- Ishbāʿ married Zakariyyāʾ
  - Yaḥyā
According to a different genealogy, Ishbāʿ and Maryam were sisters, daughters of ʿImrān and Ḥanna (al-Masʿūdī, *Murūdj*, i, 120-1 = §§ 117-18; al-Ṭabarī, *Tafsīr*, iii, 144).

ʿImrān
- Ishbāʿ
  - Yaḥyā
- Maryam
  - ʿĪsā
For further discussion, cf. A.M. Charfi, *Christianity in the Qur'ān commentary of Ṭabarī* (English translation), in *Islamochristiana*, vi (1980, 110; and A. Ferré, *La vie de Jésus dans Ṭabarī*, in *Islamochristiana*, v (1979), 11.

ʿImrān and Ḥanna were old and childless. One day the sight of a bird in a tree, which was feeding her young, aroused Ḥanna's desire for a child. She prays God to fulfil her desire, and vows, if her prayer should be heard, to dedicate the child to the temple. She had, however, forgotten that, according to Jewish law, this would be impossible if she should give birth to a female child (cf. *Protev. Jacobi*, chs. iii, iv; Syriac text, 4). Compare with this sūra III, 31: "How the wife of ʿImrān said, O my Lord, I have vowed to thee what is in my womb. Now accept [this vow] from me, thou art the hearing, the knowing. And when she had given birth to the child, she said, O my lord, I have given birth to a female child... and I have called her Maryam".

Then the Ḳurʾān relates how she invoked on behalf of Maryam and her posterity Allāh's protection from Satan. On this verse is based the well-known *ḥadīth* "Every child that is born, is touched (or stung) by Satan and this touch makes it cry, except Maryam and her son" (al-Bukhārī, *Anbiyāʾ*, *bāb* 44; *Tafsīr*, sūra III, 31; Muslim, *Faḍāʾil*, trad. 146, 147; Aḥmad b. Ḥanbal, *Musnad*, ii, 233, 274-5, 288, 292, 319, 368, 523). This tradition is used in support of the impeccability (*ʿiṣma*) of ʿĪsā, Maryam and the Prophets in general (cf. al-Nawawī, *ad* Muslim, *loc. cit.*, and al-Bayḍāwī, *ad* sūra III, 31).

A modern commentator, Muḥammad ʿAbduh, insists that their privilege of preservation from Satan does not set them on a higher plane than Muḥammad; all three share the quality of *ʿiṣma* (*Tafsīr al-Manār*, Cairo 1367/1947, iii, 291-2). It has also been suggested that this idea of unique privilege could come from a Christian source (Arnaldez, 46-7).

The Ḳurʾān further relates (vs. 32) that the child grows up in a chamber in the temple (*miḥrāb*; cf. the κοιτῶν in *Protoev. Jacobi*, vi; Syriac text 5-6) under the divine grace and under Zakāriyyāʾ's care. According to Muslim tradition, ʿImrān had died before the birth of Maryam, and Zakāriyyāʾ claimed authority over her on account of his being her uncle; the rabbis did not recognise his claim; his right was proved by an ordeal, consisting in the parties throwing their pens or arrows (*aḳlām*) in a river; the only one that floated was that of Zakāriyyāʾ (cf. sūra III, 39). Christian tradition knows of an ordeal only in the case of Joseph, who, because a dove comes forth from his staff, is recognised as Maryam's guardian.

As often as Zakāriyyāʾ enters Maryam's *miḥrāb*, he finds her provided with food in a miraculous way (vs. 32). This feature also belongs to Christian tradition (*Protoev. Jacobi*, ch. viii; Syriac text. 7). The person of Joseph is not mentioned in the Ḳurʾān. In Muslim tradition, he takes care of Maryam, his cousin, because Zakāriyyāʾ is no longer able to do so, on account of old age.

Muslim tradition speaks of one Djuraydj a carpenter who is betrothed to Maryam; he is the first to notice her pregnancy and to be convinced by her of its miraculous nature, as brought about directly by the power of God. (A. Charfi, 115-16; Abd al-Jalil; L. Cheikho, *Mawlid Maryam al-ʿadhrāʾ fī taḳlīd al-Islām*, in *Machriq*, xxiv [1926], 682-6).

The undoubted parallels between the Ḳurʾānic account and material found in the apocryphal gospels do not, however, indicate direct dependence, but are more indicative of the folklore aspect of religion, much fuller than would be implied by the canonical text of the Gospels, itself the product of careful selec-

tion. Possibly apocryphal gospels and the Ḳur'ānic stories reveal a common folklore tradition. For such stories, cf. J. Robson, *Muhammadan teaching about Jesus*, in *MW*, xxi (1939), 37-54, and idem, *Stories of Jesus and Mary*, in *MW*, xl (1950), 236-43.

(b) The annunciation of Yaḥyā. See this art. and also ZAKARIYYĀ'.

(c) The annunciation and birth of ʿĪsā. The more detailed narrative is that of sūra XIX, 16-17. Maryam retires to "a place situated eastward", where she hides herself behind a curtain. The commentaries do not know whether a place to the east of Jerusalem is meant, or the eastern part of her house, to which she retired every month. It is said that this is the origin of the *ḳibla* of the Christians.

In 17-21 the story of the annunciation is given (cf. above), followed by that of ʿĪsā's birth, which, according to some Muslim traditions, followed the conception either immediately or very soon. The pains of childbirth came upon Maryam when she was near the trunk of a palm. "She said, would to God I had died before this, and had become a thing forgotten, and lost in oblivion. And he who was beneath her [i.e. the child, or Djibrīl, or the palm] called to her, saying, Be not grieved; God has provided a rivulet under thee; and shake the trunk of the palm and it shall let fall ripe dates upon thee, ready gathered. And eat and drink and calm thy mind". This story may, perhaps, be considered as a parallel to the Christian tradition in which it is related that, during the flight to Egypt, the babe Jesus ordered a palm in the desert to bow down in order to refresh Mary by its dates; whereupon the palm obeyed and stayed with its head at Mary's feet, until the child ordered it to stand upright again and to open a vein between its roots in order to quench the thirst of the holy family (Apocryphal Gospel of Matthew, ch. xx). The Ḳur'ān goes on (v. 26): "And when thou seest any man, say, I have vowed a fast unto the Merciful; so I may not speak to any man today". The commentaries say this was meant to avoid importunate questions. This feature is not in Christian tradition; yet in the *Protoev. Jacobi* it is said (ch. xii; Syriac text, 11) that Mary, who was then 16 years of age, hid herself from the Israelites. According to Muslim tradition, she stayed in a cavern during forty days. The Ḳur'ān continues (XIX, 28): "Then she brought him to her people, carrying him. They said, O Maryam, now thou hast done a strange thing. O sister of Hārūn, thy father was not a bad man, neither was thy mother a harlot. Then she pointed to the child". Then the child begins to speak, one of the well-known miracles ascribed to ʿĪsā. The "very shameful calumny" which the Israelites brought forth against Maryam is also mentioned in sūra IV, 155.

As to the words "O sister of Hārūn" (cf. above), it may be added that, according to the commentaries, this Hārūn was not Moses' brother, but one of Maryam's contemporaries, who was either a wicked man, with whom she is compared in this respect, or her pious brother.

A legend about loaves of bread which Maryam gave to the Magi is mentioned by al-Masʿūdī, iv, 79-80 = § 1405.

The flight to Egypt is not mentioned in the Ḳur'ān, unless the "elevated place" (sūra XXIII, 52; cf. above) should be an allusion to it. According to Muslim tradition, which is acquainted with it, the abode lasted 12 years. After the death of Herod the family returned to Nāṣira.

After his alleged death (according to Muslim teaching: see ʿĪSĀ), he consoled his mother from heaven. According to others it was Mary Magdalene. The stories of the *Transitus Mariae* have not obtained a place in Muslim tradition. Instead of these, there is a narrative of how Maryam went to Rome in order to preach before Mārūt (Nero), accompanied by John (the disciple) and Shimʿūn the coppersmith. When Shimʿūn (Simon Peter?) and Tadāwus (Thaddaeus?) were crucified with their heads downward, Maryam fled with John. When they were persecuted the earth opened and withdrew them from their persecutors. This miracle was the cause of Mārūt's conversion.

Maryam in popular Muslim devotion.

Maryam is much venerated in Muslim folk tradition, often along with Fāṭima (see above). Muslim women have taken her as an example and as a recourse in time of trouble, often visiting Christian shrines. Christian and Muslim traditions both honour her memory at Maṭariyya near Cairo, and in Jerusalem. In Jerusalem is Ḥammām Sittī Maryam (the bath of Maryam), near St. Stephen's Gate, where it was believed Maryam once bathed; the place would be visited by women seeking a cure for barrenness (R. Kriss and H. Kriss-Heinrich, *Volksglaube im Bereich des Islam. I. Wallfahrtswesen und Heiligenverehrung*, Wiesbaden 1960, 169; T. Canaan, *Mohammedan saints and sanctuaries in Palestine*, in *Jnal. of the Palestine Oriental Soc.*, iv/1-2 [1924], 1-84).

Some plants have been nemed after Maryam; (a) *Maryamiyya* or *mêramiyeh*, *Salvia triloba, Labiatae*, said to have acquired its sweet scent when Mary wiped her forehead with its leaves (T. Canaan, *Plant-lore in Palestinian superstition*, in *JPOS*, viii/3 [1928], 129-68). G.M. Crowfoot and L. Baldensperger, *From cedar to hyssop. A study of the folklore of plants in Palestine*, London 1932, describe the Miriamiya or "Sage of Vertue", and mention references to it by earlier travellers in Palestine (79-81). (b) *Kaff al-ʿAdhrā'*, *Anastatica hierochuntia, Cruciferae*, the dried seed-heads of which can last for years and are blown around the desert, the seeds germinating when water is available. The seed-head is thought to resemble a fist, hence the name; the *kaff* or "hand" is well-known as a protection against the evil eye [see KHAMSA]; it can be seen painted or carved, or worn as an amulet, generally known in Muslim circles as *kaff Fāṭima*. This plant, however, has in time past been used not to avert the evil eye—though this concept may also have been present—but as a birth charm, soaked in water when a woman was in labour, and the water sometimes given to her to drink. Known as *kaff Fāima bint al-Nabī* or *kaff Maryam*, it was sold in Egypt (Crowfoot and Baldensperger, *op. cit.*, 196; idem, *The Rose of Jericho*, in *JPOS*, xi/1 [1931], 7-14); Violet Dickson, *Wild flowers of Kuwait and Bahrain*, London 1955, 16, remarks on its frequency in Central Arabia. Cf. Dalman, *Arbeit und Sitte in Palästina*, Gütersloh 1935, i, 54, for its location in Palestine. The plant can still be found, but its folk usage seems to have died out.

(A. J. Wensinck - [Penelope Johnstone])

MARZBĀN-NĀMA (also known in the Arabicised form *Marzubān-nāma*), a work in Persian prose containing a variety of short stories used as moral examples and bound together by one major and several minor framework stories. It is essentially extant in two versions written in elegant Persian with many verses and phrases in Arabic. They were made from a lost original in the Ṭabarī dialect independently of each other in the early 13th century. The oldest version, entitled *Rawḍat al-ʿuḳūl*, was completed in 598/1202 by Muḥammad b. Ghāzī al-Malaṭyawī (or Malaṭī) and was dedicated to the Saldjūḳ sultan of Rūm, Rukn al-Dīn Sulaymān Shāh. Manuscripts are preserved in Leiden (described in detail by M. Th. Houtsma, *Eine unbekannte Bearbeitung des Marzbān-nāmeh*, in *ZDMG*, lii [1898], 395-92) and Paris (cf. E. Blochet, *Catalogue des manuscrits persans*, iv, Paris 1934, 18-21; extracts are contained in the introduction to Ḳazwīnī's edition of the *Marzbān-nāma*; the first chapter was edited and translated into French by Henri Massé, *Le Jardin des Esprits, 1re partie*, in *Publications de la Société des études iraniennes*, 14, Paris 1938). Much better known is the second version by Saʿd al-Dīn al-Warāwīnī who presented his work to Abu 'l-Ḳāsim Rabīb al-Dīn, vizier to the Ildeñizid Atabeg of Ādharbydjān, Özbek b. Muḥammad (607-22/1210-25) [see ILDEÑIZIDS]. It bears the title of the original and still exists in many copies. This version was published by Mīrzā Muḥammad Ḳazwīnī in the Gibb Memorial Series (London-Leiden 1908; repr. Tehran 1352/1973 with additional notes).

According to Malaṭyawī, the author of the *Marzbān-nāma* was a descendant of the Ziyārid Ḳābūs b. Wushmagīr (reigned 366-71/977-81 [*q.v.*]), but Warāwīnī mentions Marzbān b. Sharwīn as the "originator of the book" (*wāḍiʿ-i kitāb*). He belonged to the Bāwandids, a dynasty of Ṭabaristān claiming descent from the Sāsānid prince Kāwūs who was a brother of Khusraw Anūshirwān. He was the father of Kay-Kāwūs's grandmother and is named al-Marzubān b. Rustam b. Sharwīn in the *Ḳābūs-nāma* (ed. Tehran 1345/1967, 5). This form of the name corresponds to that given by Ibn Isfandiyār in *Taʾrīkh-i Ṭabaristān*, written in 613/1216-17, where it is specified that he ruled as an *iṣfahbad* of Pirīm, or Firīm [see FIRRĪM in Suppl.], the stronghold of the Bāwandids which is also called Shahriyārkūh (cf. *An abridged translation of the history of Ṭabaristan*, by E.G. Browne, Leiden 1905, 86). It is most likely that he should be identified with al-Marzubān b. Sharwīn whose name occurs on coins dated 371/981 and 374/984-5 (cf. W. Madelung in *Cambridge history of Iran*, iv, Cambridge 1975, 217; see also the discussion in Ḳazwīnī's introduction). The language used in the ancient *Marzbān-nāma* was, in the words of Warāwīnī, "the language of Ṭabaristan and old, original Persian (*fārsī-yi ḳadīm-i bāstān*)". He refers probably to an archaic form of Persian, perhaps not unlike the *pahlawī* in which the source of Gurgānī's *Wīs u Rāmīn* is said to have been written, with an admixture of the local dialect. During the 4th/10th century a language of this kind was used in Māzandarān for literary purposes, but only a few lines of poetry have survived. Ibn Isfandiyār ascribes to Marzbān a *dīwān* in Ṭabarī verse called the *Nīkī-nāma*.

The *Marzbān-nāma* is mainly a collection of moralistic fables like the book of *Kalīla wa-Dimna*, to which it is often compared. It also contains, however, tales in which animals play no part and anecdotes about ancient kings and philosophers. The major framework is provided by the story of a prince who, after the succession of his brother to the throne, wants to withdraw to a life of seclusion. At the request of the grandees of the state he agrees to compose a book containing "wise counsels and useful directions for the conduct of life in this world". Through this book the new king should be made aware of the wicked character of his vizier. In the course of a disputation with the king and the vizier concerning his intentions, the prince starts to tell a long series of stories.

The versions in classical Persian were both made by members of the caste of secretaries serving in the chancelleries of mediaeval Islamic states. Their principal aim was to transform a comparatively simple text into a model of the style which was current in official correspondence. Warāwīnī mentions in his preface several works which are stylistically akin to his own work. Among these are the *Maḳāmāt* of Ḥamīdī, historical texts, *inshāʾ* collections as well as other collections of tales.

The differences between the two versions are considerable. Warāwīnī states that the original *Marzbān-nāma* had nine chapters. In the *Rawḍat al-ʿuḳūl*, an additional chapter contains moral teachings of an Islamic nature which contrast with the rest of the book. The latter version has also many stories which are not present in the work of Warāwīnī, who declares that he made a selection from the contents of the original. Houtsma suggested that the two adapters may have had access to different versions of the ancient text. The principal story is only in Warāwīnī's case a true framework story, as Gabrieli noted, but it is impossible to make out whether this is conformable to the original design or not.

The *Marzbān-nāma* of Warāwīnī was rendered into Turkish by Ṣadr al-Dīn Sheykhoghlu in the second half of the 8th/14th century. The latter work was translated again into Arabic by Ibn ʿArabshāh [*q.v.*] in 852/1448 under the title *Fākihat al-khulafāʾ wa-mufākahat al-ẓurafāʾ*. Another Turkish translation, also based on Warāwīnī, is the *Djewāhir ül-ḥikem* by Urfalī Nüzhet ʿÜmer Efendi (d. 1191/1778).

(J. H. Kramers - [J. T. P. de Bruijn])

MARZPĀN, Arabised form Marzubān, "warden of the march", "markgrave", from Av. *marəza* and M. Parth. *mrz* "frontier", plus *pat* "protector". The MP form *marzpān* suggests a north Iranian origin. It began to be used as the title of a military governor of a frontier province in the Sāsānid empire in the 4th or 5th centuries A.D. when *marz*, *marzpan*, and *marzpanutʿin* (marzpānate) appear as loan words in Armenian, and *marzbanā* as a loan word in Syriac. The NP form *marzbān*, *marzvān* or *marzabān* was Arabised as *marzubān* (pl. *marāziba*, *marāzib*), possibly as early as the 6th century A.D. Arabic also formed a verb *marzaba* ("to appoint someone as *marzubān*"), the noun *marzaba* ("marzubānate") and the adjective *marzubānī*. The later Syriac forms *marzubanā* and *marzuwanā*, and the later Armenian form *marzavan*, probably came from the Arabic or NP.

A *marzpān* of Bēth Aramāyē is attested from the time of Shāpūr II (309-79) until the early 6th century, while the marzpānate of Fīrūz Shāpūr (Anbār) and that of the land irrigated by the Euphrates are also said to have been established by Shāpūr II. In the 5th and 6th centuries, Naṣībīn was under a *marzpān* who commanded at least 7,000 men in 504, and a *marzpān* was in command of Āmid during the Byzantine siege of 504-5. After the reorganisation of the Sāsānid empire into four quarters under Khusraw I Anūshirwān (531-79), the *marzpān* became a high-ranking military and administrative official in the new system. According to al-Yaʿḳūbī, the *marzpān* was a provincial governor (*raʾīs al-balad*) after the *ispabadh* [*q.v.*]) and *pātkōspān* and above the district governor or *shahrīdj*. But in a description of this system anachronously ascribed to Ardashīr I (226-41), al-Masʿūdī claims that the *marzpān* was the deputy of the *iṣpabadh*, and under Hurmizd IV (579-90) and Khusraw II Parwīz (591-628), military officials of the imperial quarters are sometimes called *marzpān*. In fact, al-Masʿūdī also says that a *marzpān* was the lord of a quarter of the empire, a general, a *wazīr* or the governor of an administrative district. Such military officials were not supposed to assist each other without royal permission.

There seems to have been a category of great *marzpāns* in the late Sāsānid period who were haughty grandees (*nakhāwira*), brave horsemen, officers in charge of people just below the king, who lived at the capital and were employed as royal envoys and generals. Abū Muḥammad al-ʿAbdī described Khusraw II Parwīz as surrounded by noble *marāziba*, and the land of the *marāziba* of Kisrā was confiscated by the Muslims in the Sawād, along with that of the royal family. The great nobleman al-Hurmuzān is sometimes called a *marzubān*. However, in the early 7th century *marzpān* was still used for the military governor of the frontier districts of al-Ḥīra, Hadjar and the Djazīra, as well as for the governors of Bābil and Khuṭarniyya and of Balad.

Arabic accounts of the Muslim conquest of Sāsānid territories use *marzubān* for local leaders who organised the defence or concluded treaties at Anbār, al-Madhār/Maysān, Dast-i Maysān, Sūs, Iṣfāhān, Rayy, Ardabīl/Ādharbāydjān, Fārs, Kirmān, Zarang/Sidjistān, Nīshāpūr, Ṭūs, Sarakhs and Marw. This may be due to the military nature of their activity or because some of them, such as al-Hurmuzān, were great nobles, and it need not be taken as a title in every case. *Marzubān* appears to have been used in a generic sense for the *shahrīdj* of Fārs (just as Pāpak is called the *marzpān* and *shahridār* of Pārs in the *Kār-nāmak*), for the *padhghōsbān* of Iṣfahān, for the *iṣpahbādh* of Sidjistān and for the *kanārang* of Khurāsān. The Hephthalite ruler of Harāt, Bādghīs and Pūshang is also called a *marzubān*. At Marw and Marw al-Rūd, *marzubān* survived as the title of local Iranian officials under Muslim rule, and in 105/723 Muslim b. Saʿīd al-Kilābī appointed Bahrām Sīs as *marzubān* at Marw to collect taxes from the Zoroastrians or Madjūs [*q.v.*]. *Marzubān* was also used for the local notables and the *iṣpahbadh* of Ṭabaristān from the 1st/7th until the 3rd/9th century.

Meanwhile, Marzubān or Marzabān came to be used as a proper name, at first for powerful officers such as the second Persian governor of al-Yaman, al-Marzubān b. Wahrīz. It is also said to have been the name of Dhu 'l-Ḳarnayn, of a sword belonging to the Banū ʿĀʾidh of Makhzūm and of a district north of Samarḳand. Marzubāna was used as a woman's name, and al-Marzubānī was used as a *nisba* for someone who had an ancestor named al-Marzubān. *Marzubān* was also used metaphorically in poetry for a ruler or master, or for a leader of the Madjūs; *marāziba* were compared to lions, and a lion was called "the *marzubān* of roaring" and *marzubānī*.

(J.H. Kramers - [M. Morony])

MARZUBĀN b. RUSTAM [see marzbān-nāma].

al-**MARZUBĀNĪ** Abū ʿUbayd Allāh Muḥammad b. ʿImrān b. Mūsā b. Saʿīd b. ʿUbayd Allāh al-Khurāsānī al-Baghdādī al-Kātib, was one of the most versatile and prolific of Arab scholars in the vast field of *adab* during the 4th/10th century.

1. Life. His wealthy and influential family resided in Khurāsān, and his father was deputy to the *ṣāḥib Khurāsān* at the caliphal court in Baghdād, where al-Marzubānī was born in Djumādā II 297/February-March 910 or in the year before. Here he devoted himself to the study of *ḥadīth* under the guidance of well-known traditionists such as Abū Bakr ʿAbd Allāh b. Abī Dāwūd al-Sidjistānī and ʿAbd Allāh b. Muḥammad b. ʿAbd al-ʿAzīz al-Baghawī. He studied *lugha* and *akhbār* with the most renowned scholars of his time, such as Ibn Durayd, Ibn al-Anbārī, Nifṭawayh and Abū Bakr al-Ṣūlī. His house was situated in the ʿAmr al-Rūmī road in the eastern half of the city, not far from the Tigris, set in the midst of gardens, and was a centre for Baghdād's scholarly and literary circles. His *madjālis* frequently lasted several days and were accompanied by food and drink, and whoever felt inclined towards staying found accommodation in al-Marzubānī's hospitable house. According to his own report, he could accommodate up to fifty people. Echoes of these assemblies are found in literature, e.g. in the so-called *Amālī* of al-Sharīf al-Murtaḍā (d. 436/1044) i.e. the *Ghurar al-fawāʾid wa-durar al-ḳalāʾid*, Cairo 1373/1954, index. The personality of this distinguished and generous man, who, as his works show, stood above the constant quarrels of the religio-political parties and trends, must have been extremely impressive. The powerful Būyid *amīr* ʿAḍūd al-Dawla (d. 372/983 in Baghdād) thought very highly of him. Whenever he was in town and riding past al-Marzubānī's residence, he would wait at the gate until the honoured *shaykh* had shown himself, so that the *amīr al-umarāʾ* was convinced of his well-being. Al-Marzubānī died at about 85 years old, according to our calendar, on Friday, 2 Shawwāl 384/9 November 994. At his burial on his estate, Abū Bakr al-Khʷārazmī (d. 403/1012), the *shaykh al-Ḥanafiyya*, led the funeral prayers.

It is striking that only a few of his pupils are named in the biographical literature, in particular, two Ḥanafī *ḳāḍīs*, a Rāfiḍī from Ḳum [*q.v.*] and a relater of *akhbār*. Al-Khaṭīb al-Baghdādī (d. 463/1071 [*q.v.*]) refers to them in his *Taʾrīkh Baghdād*, iii, 135 f., as well as to his own teacher al-Azharī (x, 385), a narrow-minded traditionalist. The latter accused the unorthodox and active scholar of being a drunkard, a Muʿtazilī, an untrustworthy relater and—according to others—a liar. The last accusation is corrected by al-Khaṭīb with the remark that he was not a liar, but that it was the *madhhab* and *riwāya* which he followed. Both seemed ambiguous to the average intellect. Someone who published the *akhbār* of Abū Ḥanīfa alongside the *akhbār* of the Muʿtazila, or who collected the Shīʿī *ashʿār* alongside the *shiʿr* of Yazīd b. Muʿāwiya, or who mingled the principle of *idjāza* with that of *samāʿ*, could not possibly pass the rigid criteria of form accepted by the guardians of tradition. Once these accusations, against a man who frequently moved in Shīʿī circles, had been taken up by the eloquent and influential Ibn al-Djawzī (d. 597/1200 [*q.v.*]) (*Muntaẓam*, vii, 177) in Baghdād—at that time under the influence of Ḥanbalism—then a like judgement, more or less founded on prejudice, was decisive and emphatic. The reputation of the *ṣāḥib akhbār wa-riwāya li ʾl-ādāb*, as al-Khaṭīb spoke of him, was thereby marred. The fact that al-Marzubānī's contemporaries valued his works more than those of al-Djāḥiẓ [*q.v.*] or that his colleague in Baghdād, the well-known philologist Abū ʿAlī al-Fārisī (d. 377/987 [*q.v.*]) counted him, the younger of the two, amongst the *maḥāsin al-dunyā*, could not improve his impaired reputation. His admirable—and admired—monumental work was soon neglected and, later on, became almost completely obscured. This must have happened because it was not in agreement with the criteria of the customary forms of tradition and because people were prejudiced about the author.

Al-Marzubānī's contemporary and admirer, the renowned bookseller in Baghdād, Ibn al-Nadīm (d. 380/990 [*q.v.*]), has listed more than fifty titles, along with the number of folios and often with a short summary of the contents in his *Fihrist*, 132 ff. (tr. Dodge, 289-95) of the year 377/987. The later bio-bibliographers like Yāḳūt, *Udabāʾ*, vii, 50 ff., Ibn al-Ḳifṭī, *Inbāh*, iii, 182 ff., and al-Ṣafadī, *Wāfī*, iv,

236 f., more or less took over this bibliography, counting altogether more than 45,000 folios. Only remnants of this tremendous work survive and these—with only one exception—are not even the original versions, but excerpts and adaptations. For this, the fault may well lie not only with the already-mentioned prejudices but also with the terrible floods which befell Baghdād a few years before the Mongol conquest of the city (656/1258).

2. Works. We know concerning al-Marzubānī's 18-volume collection of biographies of scholars, the *K. al-Muḳtabas fī akhbār al-nuḥāt wa 'l-udabā' wa 'l-shuʿarā' wa 'l-ʿulamā'*, that the autograph, consisting of over 3,000 folios, was kept in the library of the Niẓāmiyya Madrasa, situated on the east bank of the Tigris. During the opening years of the 7th/13th century, two excerpts were made of this single manuscript, namely a *muntakhab* in four volumes and a *mukhtār* in at least two volumes. In the middle of the same century, the *Muntakhab* was extracted into one volume, which has been preserved and bears the title *Nūr al-ḳabas al-mukhtaṣar min al-Muḳtabas* (= *Die Gelehrtenbiographien des Abū ʿUbaidallāh al-Marzubānī in der Rezension des Ḥāfiẓ al-Yaġmūrī*, ed. R. Sellheim, Teil I. Text, Wiesbaden-Beirut 1964 [Bibliotheca Islamica, 23a]). It contains 125—of about 150 in all—biographies, hence approximatively one-seventeenth of the original version. The other excerpt, the *Mukhtār*, of which only the first part has survived, has not as yet been published. The traditions in this volume which, as a rule, begin with an *isnād*, only partially correspond to those in the *Nūr al-ḳabas*. The compiler diverges considerably, in the sequence of the 33 biographies as well as in the transmission within the individual biographies, from those of the *Nūr al-ḳabas*.

(2) His *K. al-Muwashshaḥ fī ma'ākhidh al-ʿulamā' ʿalā 'l-shuʿarā'* consisted of 300 folios according to the bibliography of Ibn al-Nadīm. It exists in its complete form and in two editions: Cairo 1343/1924 and ed. ʿAlī Muḥammad al-Bidjāwī, Cairo 1965. In this delightful piece of *adab* writing, an anthology compiled under the aspect of erudite critical standards, the author refers to numerous oral and written sources. For details, see Munīr Sulṭān, *al-Marzubānī wa 'l-Muwashshaḥ*, Alexandria 1978, and Muḥammad ʿAlawī Muḳaddam in *Madjalla-yi Dānishkada-yi Adabiyyāt wa-ʿulūm-i insānī*, Mashhad, xiii/1 = fasc. 49 (1356/1978), 1-34.

(3) His *K. al-Muʿdjam fī asmā' al-shuʿarā'* originally consisted of 1,000 folios with the famous verses of about 5,000 poets, arranged in alphabetical order. Only the second half has been preserved, and that moreover with numerous omissions and lacunae. It exists in two editions: ed. F. Krenkow, Cairo 1354/1935, repr. Beirut 1402/1982 and ed. ʿAbd al-Sattār Aḥmed Farādj, Cairo 1379/1960; cf. Ibrāhīm al-Samarrā'ī, *Min al-ḍā'iʿ min Muʿdjam al-shuʿarā' li 'l-Marzubānī*, Beirut 1404/1984.

(4) His *K. Ashʿār al-nisā'* is supposed to have included 500 or 600 folios. ʿAbd al-Ḳādir al-Baghdādī (d. 1093/1682 [*q.v.*]) still quoted from it in his *Khizānat al-adab*, i, 10, and iv, 565. In an old manuscript, 59 folios of the third part are preserved and contain *akhbār* and verses by almost 60 women, members of sixteen different ancient Arabian tribes. The fragment was published by Sāmī Makī al-ʿĀnī and Hilāl Nādjī, Baghdād 1396/1976.

(5) The *Akhbār al-Sayyid al-Ḥimyarī* (d. 179/795?; Sezgin, ii, 458 ff.) is not listed in al-Marzubānī's bibliography. This booklet, published in Nadjaf by Muḥammad Hādī al-Amīnī in 1385/1965, was probably just a fragment of al-Marzubānī's 6,000 or even 10,000-folio anthology, bearing the title *al-Mustanīr*, with accounts of the recent poets ranging from Bashshār b. Burd up to Ibn al-Muʿtazz [*q.vv.*]. Also, it could possibly be from his anthology of 5,000 folios called *al-Mufīd*, containing works of the lesser known poets of the Djāhiliyya and of Islam. The *K. al-Mufīd* was subdivided into several sections, e.g. sections on the one-eyed, the blind, etc., poets, and on Shīʿī, Khāridjī, Jewish, Christian, etc. poets. It also had a section on Sayyid al-Ḥimyarī (see *Fihrist*, 132, tr. Dodge, 289 f.). Of course, al-Marzubānī also dealt with the above-named poet in his *Muʿdjam* (see above no. 3), but only briefly (the passage has not been preserved); furthermore, he is quoted with verses by al-Ḥimyarī by the Sharīf al-Murtaḍā (see above) in his *Ṭayf al-khayāl*, Cairo 1381/1962, 104-7.

(6) *Akhbār shuʿarā' al-Shīʿa* is a short *talkhīṣ* made by Sayyid Muḥsin al-Amīn al-ʿĀmilī (d. 1371/1951), ed. Muḥammad Hādī al-Amīnī, Nadjaf 1388/1968. It contains *akhbār* and verses by 27 Shīʿī poets, without however one single *isnād*. If this piece really does go back to al-Marzubānī, whose name is only on the title page, then it could be a fragmentary piece from al-Marzubānī's *al-Mufīd* (see no. 5).

(7) His *K. al-Riyāḍ* (or *al-Mutayyamīn*), consisting of 3,000 folios, is also about poets, viz. those enslaved by love. Quotations, though sparse, can be found in the genre of amatory literature, see L.A. Giffen, *Theory of profane love among the Arabs: the development of the genre*, New York 1971, 18 ff., and S. Leder, *Ibn al-Ǧauzī und seine Kompilation wider die Leidenschaft*, diss. Frankfurt/Main 1982, Beirut 1983, index.

(8) His *K. Shiʿr Yazīd b. Muʿāwiya*, which Ibn Khallikān (tr. de Slane, iii, 67), impressed by the poetry, himself memorised, comprises three sheets, hence approximately 30 folios; cf. *Shiʿr Yazīd b. Muʿāwiya b. Abī Sufyān*, collected and edited by Ṣalāḥ al-Dīn al-Munadjdjid, Beirut 1982.

Bibliography (in addition to the works mentioned in the article): Brockelmann, S I, 190 f. S III, 1217; F. Krenkow, in *Islamica*, iv (1930), 272-82; O. Rescher, *Abriss der arabischen Litteraturgeschichte*, Stuttgart 1933, ii, 264; Ziriklī, *Aʿlām*, vii, 210; Kaḥḥāla, xi, 97 f. (R. SELLHEIM)

AL-**MARZŪḲĪ**, ABŪ ʿALĪ AḤMAD B. MUḤAMMAD B. AL-ḤASAN, philologist who acted as a tutor to certain of the Būyids of Iṣfahān and who died in Dhu 'l-Ḥidjdja 421/December 1030. The vizier the Ṣāḥib Ibn ʿAbbād [*q.v.*], whom he had antagonised by neglecting to rise on his entry, nevertheless recognised al-Marzūḳī's value, at the same time dubbing him (in Yāḳūt, *Udabā'*, xviii, 215) a weaver (*ḥā'ik*), probably without any pejorative intention, since it is possible that he worked at this trade in his youth. Apart from this, we have hardly any details about his life, and it is merely known that he studied the *Kitāb* of Sībawayh under the direction of al-Fārisī (d. 377/987 [*q.v.*]) and himself became a master to whom al-Suyūṭī (*Bughya*, 159) gives the unexpected title of *imām*.

The Arab authors who devote a brief notice to him, Yāḳūt (*Udabā'*, v, 34-5) and al-Suyūṭī (*loc. cit.*), and also Brockelmann (S I, 502), enumerate a series of philological works (*Amālī*, *Gharīb al-Ḳur'ān*, *Alfāẓ al-shumūl wa 'l-ʿumūm*) and commentaries concerned mainly with such poetical anthologies as the *Mufaḍḍaliyyāt*, the *Dīwān al-Hudhaliyyīn* and above all the *Ḥamāsa* of Abū Tammām whose introduction taken from ms. Köprülü 1308 has been commented upon by al-Ṭāhir Ibn ʿĀshūr, Tunis 1377/1958.

However, the sole work of al-Marzūḳī to have been published is his *Kitāb al-Azmina wa 'l-amākin*, printed at Hyderabad in 1332/1914. This is a work on the

anwāʾ [*q.v.*] and is characterised by the fact that the author adds to the traditional ideas gathered by the *ruwāt* in the Arabian peninsula and put in order by philologists of the Ibn Ķutayba type, more general concepts and ideas in which outside pieces of information, which are used to make instructive comparisons, are also taken into account.

Bibliography: Given in the article.

(CH. PELLAT)

MASʿĀ [see SAʿY].

MASĀʾIL WA-ADJWIBA (A.), "questions and answers", a technique of argumentation in mediaeval Islam. The pattern of question (*suʾāl*, pl. *suʾālāt*, *asʾila*) and answer (*djawāb*, pl. *djawābāt*, *adjwiba*) has strongly influenced, both in form and content, numerous Arabic writings in virtually all fields of knowledge. Unsolved problems, or questions and objections propounded by a third person, are followed by answers or explanations and refutations. Sometimes the author, at the request of a third person, composed a monograph on a group of themes, and even dedicated it to him. Besides, the pattern of questions and answers often became a literary topos: as a justification for his work, the author, in his introduction, advances the plea that he composed it because of solicitations and requests of another person (Freimark, 36 ff.). Finally, the pattern also turned into a technique of scientific research or presentation, without any dialogue between teacher and pupil or between two opponents. Ancient and Patristic-Byzantine literatures show parallels with these structures: cf. ἐρωτήσεις, ἀπορίαι, ζητήματα-ἀποκρίσεις, λύσεις, προβλήματα and the Byzantine ἐρωταποκρίσεις, in evidence since the 12th century A.D. The mediaeval *quaestiones et responsiones* also belong to this genre. Since the pattern may have sprung from motives which are inherent in the matter, external influence from similarly-structured works of Christian origin or from Aristotelian-Peripatetic methodology (cf. Aristoteles, *Metaphysics*, iii, 1; *Prior and posterior analytics*, *Topics*) can only be proved after study of each individual case.

The oldest Islamic questions-and-answer literature endeavours to solve philological and textual problems of the Ķurʾān text. Mention may here be made of the answers given by ʿUmar to questions about *ķirāʾāt*, *iʿrāb*, *tanzīl* and meanings (*maʿānī*) of the Ķurʾān (Abbott, 110), and of the *Masāʾil* (*suʾālāt*) of the Khāridjī leader Nāfiʿ b. al-Azraķ (d. 65/685) on 200 difficult words in the Ķurʾān, to which ʿAbd Allāh b. ʿAbbās answered with references to ancient Arabic poetry. This philological interest, especially present in the oldest Ķurʾān exegesis, increasingly made way for textual interpretation as a source of Islamic law and as a starting-point of Islamic theology. Thus there have come down to us *masāʾil* collections of Mālik b. Anas and Aḥmad b. Ḥanbal [*q.vv.*] containing answers to legal, dogmatic and ethical questions, transmitted and partly edited by their pupils. Probably the most important *masāʾil* collection of Aḥmad b. Ḥanbal comes from al-Khallāl (d. 311/923) and is called *Kitāb al-Djāmiʿ li-ʿulūm* (or *al-Musnad min masāʾil*) *Aḥmad b. Ḥanbal*. Its aim to give answers on legal questions culminates in the development of the Islamic institution of the *futyā*, the act of giving a *fatwā* [*q.v.*]. This institution can be compared with Roman *jus respondendi*; as Goldziher has shown, it has influenced Jewish circles.

On the basis of Ķurʾānic texts, an apologetic literature was developed which tried to prove the superiority of Islam by means of the question-answer pattern. An example is the *Kitāb al-Masāʾil* attributed to ʿAbd Allāh b. Salām (d. 43/663-4), a Jew from Medina, and probably composed by a Jewish renegade. It consists of a collection of questions put before the Prophet, at whose answers Ibn Salām is said to have been converted to Islam. The work is based on a scholastic principle which appears in an already developed stage in the disputation of Leontius of Byzantium (d. *ca.* 543) with the heretics. Reaching back to Aristotelian dialectics, this Aristotelian, influenced by Neo-Platonism, was familiar with the scholastic technique of question and refuting answer (cf. Grabmann, i, 104 ff., 107 f.). It is conceivable that Leontius' contest with the Nestorians, which was to be continued and which, more than 200 years later, reached a climax in John of Damascus and, after him, in Theodorus Abū Ķurra (cf. Griffith, *Controversial theology*, 33 ff.), favoured in Syrian circles the development of a similar scholastic technique. Through disputations and polemics between Christians and converts to Islam, this technique may have become known to Islamic circles and have been accepted as a stimulating example in the practice of Islamic disputation (cf. Cook, *Origins*). The pattern of question (in the form of a conditional clause) and refuting answer or argument (*ḥudjdja*) (often presented in the form of a main clause expressing an irrealis) is already found in al-Ḥasan b. Muḥammad b. al-Ḥanafiyya (d. *ca.* 100/718), *al-Risāla fi ʾl-radd ʿala ʾl-Ķadariyya* (ed. Van Ess, *Anfänge*). Further examples from the early Islamic period are the discussion between the caliph al-Mahdī and the patriarch Timothy I, which took place between 170/786-7 and 178/794-5 (see Putman, 191, etc.), and the *Kitāb al-Masāʾil wa ʾl-adjwiba* (ed. Hayek; cf. Griffith, *ʿAmmār*, 149 ff.), a defence of Christian doctrine against the Muʿtazila by the Christian apologist ʿAmmār al-Baṣrī (first half of the 3rd/9th century). The principle of thesis and antithesis used here follows the tradition of the Christian Aristotelians, and marked the apologetic literature of Christian converts to Islam. One may compare al-Ḥasan b. Ayyūb (4th/10th century) in Ibn Taymiyya (*al-Djawāb*, ii, 318,6, 319 *in fine*, etc.). Moreover, the question-answer pattern is also found in the dogmatic literature of Islam, as well as in its learned literature in general.

At an early stage, debates with opponents from their own circles took the place of disputes with non-Islamic doctrines. One may quote the above-mentioned refutation of the Ķadariyya by al-Ḥasan b. Muḥammad b. al-Ḥanafiyya; the debate on knowledge (*maʿrifa*) inside the Muʿtazila as related by al-Djāḥiẓ (d. 255/868-9) in his *al-Masāʾil wa ʾl-djawābāt fi ʾl-maʿrifa*; the discussion on the theodicy problem between al-Naẓẓām, ʿAlī al-Aswārī, Abu ʾl-Hudhayl, Bishr b. al-Muʿtamir, al-Murdār, al-Ashadjdj, al-Iskāfī) and Djaʿfar b. Ḥarb (see Daiber, *Muʿammar*, 260 f.), noted down in a protocol by ʿAbd al-Ķāhir b. Ṭāhir al-Baghdādī (*al-Farķ*, 198,15-200,17; shorter version in *al-Milal*, 136,11-138,3); and also the protocol of a discussion on the Ķurʾan between the Ḥanbalī Ibn Ķudāma al-Maķdisī and an Ashʿarī opponent from Damascus (ms. Leiden Or. 2523), which took place between 589/1193 and 595/1199. This protocol, rewritten as an independent theological treatise (ms. Manisa 6584-5), clearly shows the traces of the traditional technique of debating by way of question and answer, as well as the *reductio ad absurdum*. An example from the fields of philosophy and cosmology is the collection of question and answers of al-Ghazālī, inspired by his *Maķāṣid al-falāsifa* and preserved in Hebrew (ed. Malter). The disputes (*munāẓarāt*), held and afterwards written down by Fakhr al-Dīn al-Rāzī, have a

theological-philosophical and juridical character. For an example of the discussion on grammar in the 5th/11th century, see Samir.

The Islamic technique of disputation is directly linked to the questions discussed (cf. Van Ess, *Beginnings*) and in particular cases, Christian peripatetical examples of perhaps Syriac origin may have been followed (cf. Cook, *Origins*). Like Judaeo-Christian Hellenism (see Van Ess, *Disputationspraxis*, 54 ff.), Islam in the sphere of disputation developed a technique which became more and more the pattern of scientific treatises. In Ibāḍī circles [see IBĀḌIYYA] in the Mag̲h̲rib, there was even compiled a handbook of theological disputation, the *Kitāb al-D̲j̲ahālāt*, whose actual form (*terminus ante quem* 5th/11th century) certainly contains older material (Van Ess, *Untersuchungen*, 43 ff.). The question-answer pattern has become here a didactic principle, used to prepare future missionaries for their task. Later, this technique was elaborated in the so-called *d̲j̲adal* literature, developed under the influence of the *Organon* of Aristotle, and intended to teach Islamic theologians as well as jurists the art of dialectic discussion. One may compare the Ḥanbalīs Ibn ʿAḳīl (see G. Makdisi, *Scholastic method*, 650 ff.; idem, *Dialectic*) or Ibn Surūr al-Maḳdisī, whose *Kitāb al-D̲j̲adal* (composed *ca.* 630/1232) has survived in manuscript (ms. Berlin 5319, fols. 17a-32). Makdisi has drawn attention to the resemblance between Ibn ʿAḳīl and the *sic et non* method used by Peter Abelard (*Scholastic method*, 648 f., 657 ff.; revised in *Rise*, 253 ff.). It remains to be proved in detail whether the method of Abelard (see for this, Grabmann, ii, 200 ff.) and his predecessors offers more than "mere parallels", and whether its origin is due to Arabic models (Makdisi).

In medical literature, the question-answer pattern served an exclusively didactic purpose, namely the transmission of specific knowledge. The *al-Masāʾil al-ṭibbiyya*, or *al-Masāʾil fi ʾl-ṭibb*, of Ḥunayn b. Isḥāḳ [*q.v.*], preserved also in Syriac and Latin, which summarises in catechetical form the most important medical knowledge (see Ullmann, *Medizin*, 117 f.; idem, *Natur- und Geheimwissenschaften*, 458), became widely spread. Medical works of Galen and Hippocrates were summarised in the same way by Ḥunayn (see Ullmann, *Medizin*, 117, 206). For other medical handbooks in the question-answer pattern, see *ibid.*, 110, 166, 209, etc. From the fields of philosophy, physics and logic, mention may be made of the *Masāʾil mutafarriḳa* of al-Fārābī, and of the anonymous Syriac collection of definitions (ed. Furlani). From such didactical question-answer books it is only one step to the *ḥudūd* (definition) literature [*q.v.*] which could fall back on classical models (see Fuhrmann, part ii). Examples are al-Kindī's *Kitāb Ḥudūd al-as̲h̲yāʾ wa-rusūmihā*, and Ibn Sīnā's *Kitāb al-Ḥudūd*. Like in Syriac (cf. Baumstark, 131 ff.; Daiber, *Bar Zoʿbī*), traditions of Greco-Hellenistic dihairesis literature may have been of influence here.

To the list of the above-mentioned works, which might be divided into question-answer literature of "dialectical" and "didactical" character, should certainly be added the Greco-Arabic tradition of the *Problemata physica* (*al-Masāʾil al-ṭabīʿiyya*). The *Problemata physica* study the reasons and causes (διὰ τί) of phenomena in nature, and often use the following paradox: "Why does phenomenon X have the effect Y, but does phenomenon Xa not have the effect Ya"? The very complex history of the tradition of the Greek texts (see Flashar, 297 ff.) is reflected in the Arabic material (see, for the time being, Ullmann, *Medizin*, 92-6; idem, *Natur- und Geheimwissenschaften*, 458; Daiber, in *Gnomon*, xlii [1970], 545 f.; Sezgin, iii, 50; vii, 216; on further mss., see Daiber, *Graeco-Arabica and Philosophica in Indian libraries*, forthcoming). Numerous Arabic collections of the *Problemata*, ascribed to Aristotle, are closely related to the *Problemata inedita*, ascribed to Alexander of Aphrodisias, while others appear to be extracts from the *Problemata physica*, ascribed to Aristotle (cf. e.g. Book x in ms. 2234 of Tehran University, and see for this R. Kruk). The only, almost complete, manuscript of Ḥunayn b. Isḥāḳ's Arabic translation in 17 *maḳālāt* (mentioned also by Ibn Abī Uṣaybiʿa [*q.v.*] in his *History of physicians*), is ms. Manisa 1790/3; an edition of the Arabic text, with its translation in Hebrew, is in preparation. The Arabic text goes back to a Greek original, which was definitely more complete than the Greek text known so far. Moreover, Syriac (Job of Edessa, 769-835 A.D.) and Arabic (Balīnās, at the turn of the 8th century A.D.) traditions seem to have utilised collections of the *Problemata* of Greek origin, which have not been preserved (cf. Weisser, 55 ff., 210, 215). For other collections of the *Problemata*, which have not been identified so far, and which, in the Arabic texts, are ascribed to Theophrastus, Proclus and Galen, see Ullmann, *op. cit.* The *Problemata physica* are often quoted and commented upon in Arabic: Rhazes, Ḳusṭā b. Lūḳā, ʿAbd al-Laṭīf al-Bag̲h̲dādī (*Maḳālatāni fi ʾl-ḥawāss wa ʾl-masāʾil al-ṭabīʿiyya*, Kuwait 1972), Ibn al-Hayt̲h̲am, Fak̲h̲r al-Dīn al-Rāzī and ʿĪsā b. Māssa. To this can be added the adaptations of two different collections of *Problemata* by Abu ʾl-Farad̲j̲ b. al-Ṭayyib in ms. Nuruosmaniye 3610 (new number 3095), written before 1076/1665: fols. 1b-21b (Alexander of Aphrodisias) and fols. 22a-33b (Aristotle). Moreover, there is the short extract (starting with Aristotle. *Problemata physica*, ii, 3) in ms. Princeton 2988 by Sulaymān b. Aḥmad, not further known.

Not related to the *Problemata physica* is the *Risāla fi ʾl-asʾila al-ṭabīʿiyya* (ms. Washington, Army Medical Library A 82), a question-answer discussion, possibly fictitious, between al-Ḥārit̲h̲ b. Kalada [*q.v.* in Suppl.] (an older contemporary of the Prophet) and the Sāsānid ruler Kisrā Anūs̲h̲irwān on practical questions of human health. This *Risāla* has become known (Sezgin, iii, 203) and published (by al-ʿAzzāwī) under the title *al-Muḥāwarāt fi ʾl-ṭibb baynahu wa-bayna Nūs̲h̲irwān*. The text is one of the numerous examples in which the question-answer pattern serves only to transmit knowledge, and thus has a didactic purpose. The master, the scholar, answers questions of a pupil, someone who tries to find information, but whose name is often not mentioned. This transmission of knowledge occasionally takes the form of learned correspondence. Thus the Christian Yaḥyā b. ʿAdī (d. 974 A.D.) answers fourteen questions on logic, physics and metaphysics asked by Ibn Abī Saʿīd b. ʿUt̲h̲mān b. Saʿīd al-Mawṣilī (see Endress, 97 f.); the Būyid vizier Abu ʾl-Faḍl Ibn al-ʿAmīd (d. 360/970) informs ʿAḍud al-Dawla [*q.v.*], at the latter's request, on all sorts of questions on natural science in letters, preserved in manuscript (ʿIrāḳ Museum, Bag̲h̲dād 594; a different text in ms. Leiden Or. 184) (see Daiber, *Briefe*); Ibn Yaʿīs̲h̲ (d. 643/1245) answers grammatical questions put before him by a group of scholars from Damascus (ed. R. Sellheim). A famous example is the change of ideas between Frederick II of Hohenstaufen and the Orient. In his *Ad̲j̲wiba ʿan al-asʾila al-ṣaḳaliyya* (cf. Kattoura 42 f.; al-Taftāzānī, 108 ff., 178 ff.), the Spanish mystic and philosopher Ibn Sabʿīn, between 1237 and 1242 A.D., informs Frederick II about the problems of the eternity of the world, the essence of theology (ed. Yaltkaya, 24-26;

tr. M. Grignaschi), and the categories, the soul and the difference, in this subject, between Aristotle and his commentator Alexander of Aphrodisias. In his *Kitāb al-Istibṣār fī-mā tudrikuhu al-abṣār*, preserved in manuscript (Brockelmann, i, 385), the Egyptian scholar al-Ḳarāfī reports on physico-astronomical and physiological-optical questions which Frederick II put before the Arab scientist Kamāl al-Dīn b. Yūnus (tr. Wiedemann). The texts mentioned show the extent of the scientific relations of Frederick II with the Orient (see also Suter).

Occasionally, reciprocal criticism went hand in hand with the exchange of ideas between scholars. We may mention the *Asʾila waʾl-adjwiba* between al-Bīrūnī, Ibn Sīnā and the latter's pupil Abū Saʿīd al-Maʿṣūmī on questions about Aristotle's *De caelo* and about physics, or the answers of Ibn Sīnā to al-Bīrūnī's questions on metaphysics (ed. Ülken, *Ibn Sina risaleleri*, ii, 2-9; ed. M. Türker, in *Beyruni'ye armağan*, Ankara 1974, 103-12). Other correspondents of Ibn Sīnā (ed. Ülken, *op. cit.*, and ed. al-Kurdī, *Djāmiʿ al-badāʾiʿ*, 152 ff.) were Abu 'l-Faradj b. al-Ṭayyib, Abū Saʿīd b. Abī 'l-Khayr, Abū ʿUbayd al-Djūzdjānī, ʿAlāʾ 'l-Dawla b. Kākawayh, Abū Ṭāhir b. Ḥassūl, Miskawayh (*Masāʾil ʿan aḥwāl al-rūḥ*; cf. Michot) and Abu 'l-Ḥusayn al-Sahlī; also Ibn Zaylā [*q.v.*] and his *Madjālis al-sabʿa bayn al-shaykh wa 'l-ʿĀmirī*, preserved in manuscript (Rağip Paşa 1461, fols. 150a-162b).

Finally, from the fields of metaphysics and mysticism we may mention the correspondence between ʿUmar Khayyām and Ibn Sīnā's pupil Abū Naṣr Muḥammad b. ʿAbd al-Raḥīm al-Nasawī (ed. Nadwī, 375 ff. = ed. al-Kurdī, 165 ff.), and the exchange of letters between ʿAbd al-Razzāḳ al-Ḳāshānī (al-Kāshī) and Simnānī (8th/14th century) on the unity of being (see Landolt). In some cases there were also personal attacks during the learned arguments, as is clear from a polemic altercation in the 5th/11th century between Ibn Buṭlān and Ibn Riḍwān on medical and philosophical questions.

The examples given above and taken from Arabic literature show the overall importance of the dialogue. In the search for truth and its causes, the striving for knowledge (*ʿilm*) found expression in the question-answer literature, in which the didactic element often appears consciously linked to the dialectic one which tried to persuade and refute. The technique of the *reductio ad absurdum* was developed and afterwards refined under the influence of the methods of Aristotelian logic. The result was often a quasi-logical reasoning, consisting in an attempt to show the incompatibility of certain theses by proving the untenability of their conclusions (cf. Perelman/Olbrechts-Tyteca, § 45 ff., 48). This type of reasoning became a standard pattern of learned Arabic literature. In this connection, it is important to note that dialogue and discussion in different cultures have led to similar techniques. This does not however, exclude the possibility that questioning and answering in Islam were stimulated by Hellenism and by Christian, and to a lesser extent Jewish, converts and opponents.

AL-MASĀLIK WA 'L-MAMĀLIK (A.) "routes and kingdoms", name given by R. Blachère (*Extraits des principaux géographes arabes du Moyen Age*, Beirut-Algiers 1934, 110-200; 2nd corrected printing by H. Darmaun, Paris 1957) to what he considered as a particular genre of Arabic geographical literature, because several works, which bear the title of *Kitāb al-Masālik wa 'l-mamālik*, present common characteristics. Nevertheless, not all those which, in his eyes, constitute this genre were given the title which has been retained, and furthermore, the *K. al-Masālik wa 'l-mamālik* which is perhaps the oldest, that of Ibn Khurradādhbih (d. between 272 and 300/885 and 912), does not form part of the genre, for we may see it simply as a manual for the use of the secretaries of the administration. Blachère thus places under this rubric the *K. al-Buldān* of al-Yaʿḳūbī (d. after 278/891), then as a group, the *K. Ṣuwar al-arḍ* of al-Balkhī (d. 322/934), the *K. al-Masālik wa 'l-mamālik* of al-Iṣṭakhrī (d. after 340/951) and the *K. Ṣūrat al-arḍ* of Ibn Ḥawḳal (d. after 367/977), the *K. Aḥsan al-taḳāsīm* of al-Muḳaddasī (d. after 378/988), the *K. al-Masālik wa 'l-mamālik* of al-Bakrī (d. 487/1094) and finally the *Nuzhat al-mushtāḳ* of al-Idrīsī (d. 560/1166), an expanded version of which, the *Rawḍ al-uns* or *K. al-Masālik [wa 'l-mamālik]*, does not seem to have come to light. A. Miquel, who often cites the *masālik wa 'l-masālik* (in *La géographie humaine du monde musulman*, i, Paris 1967, 2nd ed. 1973, index), devotes to this genre a fairly long chapter (267-330) which he entitles the "advent of genuine human geography" and in which he studies separately the works of al-Iṣṭakhrī and Ibn Ḥawḳal, adds to Blachère's list the *K. al-Masālik wa 'l-mamālik* of al-Muhallabī (d. 380/990) and simply mentions al-Bakrī and al-Idrīsī who (269, n. 1) "hardly do anything more than complete the data of the *masālik* works for Spain and the Maghrib".

Leaving aside the two latter ones cited, all the authors illustrative of the genre isolated by Blachère are easterners living at the end of the 3rd/9th century or in the 4th/10th one, i.e. in a period when the Shīʿī movement began to enjoy some remarkable successes. As against the geographers who preceded them, they were for the most part travellers who, to the data already taken traditionally by their predecessors from treatises of cosmography and geography based directly or indirectly on Greek science and particularly on Ptolemy [see BAṬLAMIYŪS], and to the information relating to the routes, distant lands and peoples who inhabit them that they could derive from

various written or oral sources, now added first-hand documentation gathered in the regions that they describe. In this regard, a passage of the *K. Ṣūrat al-arḍ* of Ibn Ḥawḳal is very revealing, for it presents a totally characteristic lay-out (see Blachère, *Extraits*, 110-1; Ar. text in the 2nd ed. of the *Ṣūrat al-arḍ*, 329, and Fr. tr. Kramers-Wiet, almost identical to that of Blachère, i, pp. IX-X and ii, 321-2).

Regarding the form given to these works, these authors (with the exception of al-Idrīsī) do not follow the division of the world into climates [see IḲLĪM], but distinguish large regions, roughly corresponding to the *mamālik* [see MAMLAKA], within which they describe the routes that they traverse, their localities and the men who live there. "The authors of whom we are about to speak", writes Blachère (*Extraits*, 115), "are concerned purely with description. All their attention is directed to the recording of the general features of a country, assessing how the details relating to each place, in the past, bear on their present life. All this is no doubt written down in a generally monotonous style". However, this genre assumes a literary aspect which contrasts with the dryness of the administrative manuals, without giving as important a place to *adab* as do a Djāḥiẓ or an Ibn al-Faḳīh, just as it avoids the fables and marvellous accounts of certain other travellers who had the opportunity to go beyond the borders of the Islamic empire. Nevertheless, the eastern authors of the group do not know the Christian world and even have a poor acquaintance with the Muslim West, with the exception of Ibn Ḥawḳal whose work constitutes, on certain points, a unique historical source, for his chapters on the Maghrib, Spain and Sicily can be regarded as original. Generally, history in these works occupies a place which is not negligible, but it is doubtless the sedentary al-Bakrī who supplies in this regard the most information, while al-Idrīsī, who questioned, at the court of the Normans of Sicily, some travellers and Christian pilgrims, is quite well-informed on the routes, towns and states of Europe, not to mention the fact that he himself navigated the length of the coasts.

It was with a purely didactic purpose that Blachère marked out from the rest of the geographical literature the genre of the *masālik wa 'l-mamālik*, whose limits are far from being settled. In fact, even if the adoption of the title in question by a certain number of Arab authors of the Middle Ages has not failed to be noted by the historians of literature, other classifications can be proposed. For example, in his article DJUGHRĀFIYĀ of the Suppl. of the *EI*[1], although dating from 1936, J. H. Kramers puts into the same "literary group" Ibn Khurradādhbih, al-Sarakhsī, al-Yaʿḳūbī, Ibn al-Faḳīh, Ibn Rusta, Ḳudāma, al-Djāḥiẓ and al-Djayhānī, and treats separately the school of al-Balkhī. As for S. Maqbul Ahmad, who was entrusted with the same article DJUGHRĀFIYĀ in the *EI*[2], he also alludes (ii, 579a) to the works which have received "the generic title of *al-Masālik wa 'l-Mamālik*", but he divides the geographical literature of the 3rd and 4th/9th-10th centuries into two large categories, comprising firstly (described as the ʿIrāḳī school) Ibn Khurradādhbih, al-Yaʿḳūbī, Ibn al-Faḳīh, Ḳudāma, Ibn Rusta, al-Masʿūdī and al-Djayhānī, and secondly (the school of al-Balkhī) al-Iṣṭakhrī, Ibn Ḥawḳal and al-Muḳaddasī. Despite a certain convergence, the classifications, as we see, are appreciably different and invite us to proceed with some caution in handling the concept of *masālik wa 'l-mamālik*.

Bibliography: Apart from the works cited in the article, see the articles of the *EI* regarding the geographers concerned. (CH. PELLAT)

MASĀMIʿA, members of a Baṣran family of the tribe of Shaybān of the confederacy of Bakr b. Wāʾil, prominent in the Umayyad period. They traced their ancestry to Djaḥdar b. Ḍubayʿa, a participant in the war of Basūs [*q.v.*] (Ibn al-Kalbī-Caskel, *Ǧamharat an-nasab*, i, table 155; *Ḥamāsa*, ed. Freytag, i, 252 ff.; *Aghānī*[3], v, 43 f., 48 ff, 55). But apart from the report that Mismaʿ b. Shihāb died as an apostate from Islam in eastern Arabia (according to the poetry cited by al-Balādhūrī, *Futūḥ*, 84; differently al-Ṭabarī, i, 1971), little is heard of them until they settled in Baṣra in the wake of the conquests. Here they joined the ranks of the tribal chiefs (*ashrāf, ruʾūs al-ḳabāʾil*) around whom Sufyānid politics revolved. They were one of the four families on which the Baṣrans prided themselves (see Ibn al-Faḳīh, *Buldān*, 170, tr. H. Massé, Damascus 1973, 207-8; Pellat, *Milieu*, 33 and index).

Mālik b. Mismaʿ, the most famous member of the family, fought for ʿĀʾisha at the battle of the Camel (allegedly already then as commander of the Bakr b. Wāʾil) and threw in his lot with the Umayyads thereafter (al-Ṭabarī, i, 3179, 3220 f.; ii, 765 f.). In the civil war which broke out at the death of Yazīd b. Muʿāwiya, he negotiated the alliance (*ḥilf* [*q.v.*]) between the Bakr b. Wāʾil and Azd in Baṣra and played a major role in the subsequent feud between these two tribes and the Tamīm (64/683-4), emerging as the undisputed leader of the Bakr b. Wāʾil, whom he later conducted in battle against al-Mukhtār in 67/686-7 (al-Ṭabarī, i, 448 ff., 720, 726; al-Balādhurī, *Ansāb*, ivb, 105 ff.; v, 253, 259). Having joined the pro-Umayyad Djufriyya, a group of Baṣrans who unsuccessfully tried to oust Muṣʿab from Baṣra in 69/688-9 or 70/689-90 (not 71/690-1, as stated by Caskel, *Ǧamhara*, ii, s.v. "Mālik b. Mismaʿ" and Crone, *Slaves on horses*, Cambridge 1980 117; cf. Wellhausen, *Arab kingdom*, 190; al-Masʿūdī, ed. Pellat, Arabic index, s.v.), he fled to the Yamāma, but returned on ʿAbd al-Mālik's reconquest of ʿIrāḳ in 72/691. He died shortly thereafter (al-Ṭabarī, ii, 799 ff.; al-Balādhurī, *Ansāb*, ivb, 156 ff., 160 ff., 165; Pellat, *Milieu*, 270)). His brothers Muḳātil b. Mismaʿ and ʿĀmir b. Mismaʿ were also men of some prominence (for references, see Crone, *loc. cit.*).

Under the Marwānids, the family retained its leadership of the Bakr b. Wāʾil and, on the whole, its Umayyad sympathies. Thus Nūḥ b. Shaybān b. Mālik b. Mismaʿ commanded the *khums* of Bakr b. Wāʾil against the Muhallabids in Baṣra in 101/720 (al-Ṭabarī, ii, 1380), while other members of the family were at various times governors of Fasā and Darābdjird, Sīstān and Sind (Crone, *op. cit.*, 117 f.). But they played no role in the third civil war or the ʿAbbāsid revolution.

In the caliphate of al-Mahdī, ʿAbd al-Mālik b. Shihāb al-Mismaʿī commanded a naval expedition to Sind and acted as deputy governor there for a short while (al-Ṭabarī, iii, 460 f., 476 f., 491). Yet, unlike the Muhallabids or the Ḳutaybids, also Baṣran families of major importance in the Umayyad period, the Masāmiʿa failed to effect a political comeback under the ʿAbbāsids.

Bibliography: Practically all chronicles dealing with the Umayyad period have something to say about the Masāmiʿa. The most important references are given in the article, to which however should be added Ibn Ḥazm, *Djamhara*, ed. Hārūn, 320-1. (P. CRONE)

MAṢĀMIDA [see MAṢMŪDA].

MĀSARDJAWAYH (in Persian Māsargōye), sometimes called Māsardjīs, is one of the few physi-

cians from the Umayyad period who are known by name, and probably the first to translate a medical book into Arabic.

So far, endeavours to identify and date him have been unsuccessful. He is said to have been of Judaeo-Persian origin and to have lived in Baṣra. Occasionally he is indicated as a Syrian (*suryānī*), which is probably to be explained by the translation which he allegedly made from Syriac into Arabic of the *Kunnās͟h* (ταvδέχτης) of Ahrun [*q.v.* in Suppl.], translated into Syriac by a certain Gōsiōs. According to Ibn D̲j̲ulḏj̲ul [*q.v.*], this was done under the caliphs Marwān (64-5/684-5) or ᶜUmar b. ᶜAbd al-ᶜAzīz b. Marwān (99-101/717-20). The latter is said to have drawn the *Kunnās͟h* out of the oblivion of his library and to have taken care that the translation became widely known. According to other authors, Māsard̲j̲awayh met Abū Nuwās, and so must have lived at the end of the 2nd/8th or the beginning of the 3rd/9th centuries. Totally mistaken are two places in Abū Sulaymān al-Sid̲j̲istānī, mentioned here only for completeness's sake. This author dates him back to Greek Antiquity, see *The Muntak͟hab Ṣiwān al-ḥikmah of... as-Sijistānī*, ed. D. M. Dunlop, The Hague, etc. 1979; on p. 20, l. 341, Māsard̲j̲awayh appears amidst the pupils of Hippocrates; and on p. 88, ll. 1860-3, he is ranged after Aesopus and Theophrastes and before the sophist Mūrūn (?) and Brasidas.

Two of the works ascribed to Māsard̲j̲awayh have not come down to us: one about the benefit and harm of the potency of food-stuffs (*Kitāb Ḳuwā 'l-aṭᶜima wa-manāfiᶜihā wa-maḍārrihā*), the other about the benefit and harm of the potency of medicinal drugs (*Kitāb Ḳuwā 'l-ᶜaḳāḳīr wa-manāfiᶜihā wa-maḍārrihā*). On the other hand, a treatise on substitute drugs has been preserved: *Fī Abdāl al-adwiya wa-mā yaḳūm maḳām g͟hayrihi minhā*, see H. Ritter and R. Walzer in *SB Pr. Ak. W.*, Phil.-Hist. Kl. (1934), 831; Eng. tr. M. Levey, *Substitute drugs in early Arabic medicine, with special reference to the texts of Māsarjawaih, al-Rāzī, and Pythagoras*, Stuttgart 1971, 35-45. This short treatise has great similarity with the corresponding works of Galen and Paulus Aiginetes. It shows also that, during this early stage of translating activity, botanical nomenclature was already highly developed. In medical literature, Māsard̲j̲awayh is often quoted, especially in al-Rāzī's *Ḥāwī*, who calls him either Māsard̲j̲awayh or, more often, al-Yahūdī. The quotations have been put together by Ullmann, *Medizin*, 24, to which may be added Ibn al-ᶜAwwām, *Filāḥa*, tr. Clément-Mullet, ii/1, 88; the two quotations from Ibn Ḳutayba, *ᶜUyūn*, Cairo 1343-9/1925-30, ii, 102,4-103,3 and 108,3-5, have been translated by E. Wiedemann, *Aufsätze zur arabischen Wissenschaftsgeschichte*, Hildesheim-New York 1970, ii, 168 f. and 172 (the last quotation contains a remarkable observation about the beneficial effect of green colour on the eyes). These fragments still need careful analysis in order to answer the question whether the term "the Jew" indeed always indicates Māsard̲j̲awayh. For Ibn Abī Uṣaybiᶜa, i, 163, 24 f. this question is settled in the affirmative.

A son of Māsard̲j̲awayh, ᶜĪsā b. Māsard̲j̲īs, who, according to his name, was probably converted to Christianity, also followed the medical profession, and is said to have composed writings on colours (*K. al-Alwān*), smells and tastes (*K. al-Rawāʾiḥ wa 'l-ṭuᶜūm*), see Ibn al-Nadīm, *Fihrist*, 297, 17-8; Ibn al-Ḳifṭī, 247, 4-6; Ibn Abī Uṣaybiᶜa, i, 204, 9-10.

Bibliography: Ibn al-Nadīm, *Fihrist*, ed. Flügel, 297, ll. 6-8; Ibn D̲j̲ulḏj̲ul, *Ṭabaḳāt al-aṭibbāʾ wa 'l-ḥukamāʾ*, ed. F. Sayyid, 61; Ṣāᶜid al-Andalusī, *Ṭabaḳāt al-umam*, tr. R. Blachère, Paris 1935, 157; Ibn al-Ḳifṭī, *Ḥukamāʾ*, ed. J. Lippert, 324-6; Ibn Abī Usaybiᶜa, *ᶜUyūn al-anbāʾ*, ed. A. Müller, i. 163-4 and 204, 22. 7-8; Ibn al-ᶜIbrī (Barhebraeus), *Taʾrīk͟h muk͟htaṣar al-duwal*, ed. Ṣāliḥānī, 192-3; L. Leclerc, *Histoire de la médecine arabe*, Paris 1876, i, 79-81; M. Ullman, *Die Medizin im Islam*, Leiden-Cologne 1970, 23 f., 293; Sezgin, *GAS*, iii, 206 f. (A. Dietrich)

MAṢAWWAᶜ Ar. form, also Muṣawwaᶜ; in Ethiopic, Meṣwāᶜ, Meṭwāᶜ, in Tigre and Tigriñña, Bāṣeᶜ, in Bed̲j̲a, Bāḍeᶜ = Ar. Bāṣiᶜ/Bāḍiᶜ (see al-Masᶜūdī, *Murūd̲j̲*, ed. Pellat, vi, 184 *s.v.*, but also S. Tedeschi (*Bibl.*), an island and port in Eritrea [*q.v.*] on the Red Sea, at 15° 38' N. and 39° 28' E., opposite the Dahlak [*q.v.*] archipelago. The islands of Masawwaᶜ, the site of the deep-water harbour, and Tawlūd are linked to each other and to Arkiko on the mainland (for this name, see Basset, *Histoire*, i, 128-9; Crawford, *The Fung kingdom*, 127) by causeways. From the north, the roadsteads are protected by the D̲j̲arār and ᶜAbd al-Ḳādir peninsulas. With a recorded annual average temperature of 31° C., the port is among the world's hottest places, the annual rainfall being only 7 inches.

According to popular etymology, the name is derived from Ethiopic *měšūwāᶜ* "cry, loud call". A fisherman from Dahlak, driven by a storm to the then inhabited island, is said to have related that its size was such that a man, shouting in a high voice (*ṣawᶜ*), could make himself heard from one end to the other (Conti Rossini, *Il Gadla Filpos*, 162). According to another version (Conti Rossini, *Documenti*, 16; cf. Esteves Pereira, *Historia de Minas*, 62), Ethiopian caravan leaders, arriving at D̲j̲arār, had to cry aloud for the barks of the island to come and fetch them. The island is in fact one km. long and *ca.* 250 m. wide.

The Masawwaᶜ region, known as Samhar, may have been visited as early as the third millennium B.C. when Egyptian ships sailed down the Red Sea. It became better known in history when the Greek Ptolemies developed a series of stations along the African coast [see badw, i, 887a]. The region, but not the actual port, is mentioned in the famous inscription carved in the port of Adulis about 240 B.C. at the time of Ptolemy III Energetes (246-221 B.C.), and copied by Cosmas Indicopleustes who visited the area about 525 A.D. (Mc Crindle, *The Christian topography*, 57). Artemidoros of Ephesus (*ca.* 100 B.C.), whose work is known through extracts by Strabo (*ca.* 20 B.C.), mentions on this coast the port of Sabā, identified with D̲j̲arār by Conti Rossini (*Storia*, 60, 103; *Comenti e notizie*, 17). In connection with Adulis, now Zula, the region is also mentioned in the well-known *Periplus of the Erythrean Sea* (tr. Schoff, 22-3, cf. 60). This Aksumite port in the gulf of the same name must have ceased to function somewhere about the middle of the first millennium A.D. (Kammerer, *Essai*, ch. 5), and its rôle may then have been taken over gradually by Masawwaᶜ, lying about 30 miles to the north.

In early Islam, Maṣawwaᶜ is mentioned as a place of exile and thus considered by Conti Rossini (*Storia*, 212) as being in Muslim hands. Because of his love of wine, the Arab poet Abū Miḥd̲j̲ān [*q.v.*] was banished by ᶜUmar to Bāṣiᶜ in 14/634 (Caetani, *Annali*, v, 224 ff.; Brockelmann, I, 40, S I, 701; Conti Rossini, *Storia*, 212). At the death of Marwān, the last Umayyad caliph, his son ᶜAbd Allāh, on his flight to D̲j̲udda, arrived at Bāḍiᶜ (al-Masᶜūdī, *Tanbīh*, 330).

According to al-Masʿūdī, who wrote in the 4th/10th century, the coastal plains, and consequently Maṣawwaʿ, were tributary to Ethiopia, and Bāḍiʿ lay on the littoral of *al-maʿādin*, "the mines", the territory of the Bedja [*q.v.*]. If by this term the hinterland of Masawwaʿ is meant (Bāḍiʿ is not to be identified with Badi or Airi island lying further north, see Crowfoot, *Some Red Sea ports*), al-Masʿūdī indicates that the Bedja were working the Eritrean gold mines (Conti Rossini, *Storia*, 278) and that the port played a rôle in the gold traffic.

During the 6th-8th/12th-14th centuries, Maṣawwaʿ was under the sovereignty of the *amīr* of Dahlak, who called himself *sulṭān*. The Ethiopians, however, as in the time when the *amīr* depended on Aksum, continued to indicate him as *sĕyuma baḥr* "prefect of the sea", in opposition to the *baḥr nagāš* "ruler of the sea [-province]", who resided at Debārwā (Debaroa). Relations between Ethiopia and the *nāʾib* of the *amīr* at Maṣawwaʿ must have been uneasy, at least occasionally, as may be concluded from the capture of the port by Isaac, son of Negus Dawit I (1381- *ca.* 1410). In the 10th/16th century still, the sovereignty of Maṣawwaʿ was linked to that of Dahlak (de Barros, *Decada*, ii, 1. viii, ch. 1; Basset, *Inscriptions*; Esteves Pereira, *Os Portugueses*) The *(Is) di mas(ua)* on Fra Mauro's map is perhaps identical with Maṣawwaʿ (Kammerer, *La Mer Rouge*, iii/3, 20). An impression of the commercial activity in this and other ports on both sides of the Red Sea in the early 16th century can be gained from Ludovico di Varthema (*Travels*, 31, 37-8). Andrea Corsali (*Historiale description*, 32-3), Tomé Pires (*Suma oriental*, 43) and Duarte Barbosa (*The Book*, 16). According to the author of the *Cartas das novas* (Thomas, *Discovery of Abyssinia*, 67), there was a large number of boats at anchor at Maṣawwaʿ, including two from Gudjarāt, when he arrived there in 1521. Soon, however, foreign trade in the Horn of Africa was to suffer severely from the Portuguese interference with local commerce. The discovery and development of the trade route round Cape of Good Hope, Aḥmad Grāñ's invasion of the highlands [see ḤABASH, ḤABASHA] and the emergence of Turkish influence in the Red Sea caused the decline of Maṣawwaʿ, which remained however the main port of Ethiopia.

When a Portuguese exploratory mission landed in Maṣawwaʿ in 1520, the town was completely Muslim. According to Alvarez (Beckingham-Huntingford, *The Prester John*, i, 58), the Portuguese transformed the mosque into a church, but did not occupy the port, although the Ethiopian king Lebna Dengel strongly wished them to build a fortress there (*ibid.*, ii, 479 ff.). The information of the "Zorzi Itineraries" (Crawford, *Ethiopian itineraries*, 90, 159), according to which king David (= Lebna Dengel) gave the port to the Portuguese, may refer to the mission of 1520, to some earlier expedition, to negotiations, or to mere rumour.

With the disembarkation of Cristovão da Gama in 1541 [see ḤABASH], Maṣawwaʿ began its rôle as entrance-gate into Ethiopia for Western missionaries and travellers, even after Özdemir Pasha [*q.v.*] had conquered the port and Arkiko in 1557, which then became one of the *sandjaks* of the Ottoman province of Ḥabesh ([*q.v.*], and also Orhonlu, *Habeş eyaleti*, 33 ff.). The difficulties between Turks and Western missionaries, both Catholic and Protestant, are described in the former's correspondence (Beccari, *Rerum*; Lobo, *A voyage*, 140 ff.; Aren, *Evangelical pioneers*; M. Kropp, in *Oriens Christianus*, lxvi [1982], 247). Turkish relations with Ethiopia, hostile at first, remained uneasy later on. After the combined forces of the Ottomans and *baḥr nagāš* Yisḥāk had been defeated in 1578 by the Ethiopian king Sarṣa Dengel (Conti Rossini, *La guerra*), Maṣawwaʿ and Arkiko remained in Turkish hands, but Turkish power declined rapidly. A pasha was first established in Dahlak, and later in Maṣawwaʿ, but actual power was soon left to a local Balaw chieftain from a Bedja family of the Samhar region, who acted as *nāʾib* (see Bombaci, *Notizie*, 79-86; idem, *Il viaggio*, 259-75) or deputy of the Turkish pasha, who had taken up residence in Suʾākin [*q.v.*]. After the expulsion of the Roman Catholic missionaires from Ethiopia in 1633, King Fāsiladas made an agreement with the pasha that the latter should execute all priests who might try to enter Ethiopia. The situation at Maṣawwaʿ in 1634 is described by Barradas (Beccari, *Rerum*, i, 295-302). The Turkish presence in the port, and especially the extortions by the *nāʾib*, remained a source of irritation to the Ethiopian kings (al-Ḥaymī, *Sīrat al-Ḥabasha*; Van Donzel, *Foreign relations*, index *s.vv.* Turks, Massawa), the more so because imports and exports were not unimportant (Van Donzel, *op. cit.*, Appendix iv; Bruce, *Travels*, iii, 54; Beccari, *Rerum*, index *s.v.* Maçua). In 1693 the *nāʾib* Mūsā b. ʿUmar b. ʿĀmir b. Kunnu tried to use extortion against the Armenian merchant Khōdja Murād, who had returned from the Dutch East Indies with gifts for the Ethiopian king. When Murād refused to pay, his goods were confiscated. King Iyāsu I ordered the delivery of foodstuffs to Maṣawwaʿ to be suspended, and started preparations to attack the *nāʾib*, who then submitted (Van Donzel, *op. cit.*, 83). According to the French traveller Charles Jacques Poncet (*ca.* 1700, see Foster, *The Red Sea*, 154), the fortress in Maṣawwaʿ was not very strong, and the arrival of an English vessel "cast terror into the whole island". On learning of the arrival of this ship at Maṣawwaʿ, the Ethiopian monks made a disturbance before the palace in Gondar, probably fearing a punitive expedition from what they thought to be Portuguese. Poncet also relates that the Pasha received him with great civility, at the recommendation of the emperor of Ethiopia, who was greatly afraid because he could easily starve the port or refuse to furnish it with water. The inhabitants of the island were obliged to fetch it from Arkiko on the mainland (Foster, *op. et loc. cit.* On the cisterns on the island, according to local tradition built by the "Furs", see Conti Rossini, *Storia*, 295-6; Puglisi, *Alcuni vestigi*, 35-47). Although claiming power over the port, the Ethiopian kings were never in fact master over it, as is also clear from the *Annals* of King Iyāsu II (1730-55) (see Guidi, *Annales Iyāsu II*, 127-30, 143-7, 155). Power remained in the hand of the *nāʾib*. When Bruce arrived in Maṣawwaʿ in 1768, the Porte had annexed the government of the port to the pasha of Djudda, but the *nāʾib* did not pay tribute either to him or to the Ethiopian king (Bruce, *Travels*, iii, 5-6). The number of Banians or Indian merchants, in whose hands trade had formerly been (Van Donzel, *Foreign relations*, index *s.v.*), was reduced to six, who made but a poor livelihood (Bruce, *Travels*, iii, 55).

In the first decades of the 19th century, the *nāʾib* still exercised some power. According to Salt (*A voyage*, 138, 147), the *nāʾib* Idrīs tried to prevent the English from opening a communication with Ethiopia, but came then under pressure from both the Sharīf of Mecca on the one side and from Ras Wolde Sellāsie of Tigre on the other. Salt was told by the Ras that the road by Bure, south of Amphila Bay (see the map in Salt, *A voyage*, opp. p. 137), was preferable to the route by Maṣawwaʿ, but Nathaniel Pearce wrote to him that the only road into Ethiopia was by

Maṣawwaʿ (*ibid.*, 152). He added that the *nāʾib* would not allow guns to pass through his country. In 1844, almost three centuries after their first attempt, the Turks tried again to get a foothold on the mainland by occupying Arkiko. But again they were forced back on to Maṣawwaʿ, which in 1846 was leased to Muḥammad ʿAlī [*q.v.*], and now became an important element in Egyptian, British, Italian and Ethiopian policies. The lease, having expired at the death of Muḥammad ʿAlī in 1849, was renewed in 1865 in favour of Ismāʿīl Pas̲h̲a [*q.v.*]. Egyptian rule was welcomed by the local nomads who, during the anarchy of the last years of king Tēwodros of Ethiopia, had been suffering from the hill tribes. Soon some of the latter too began to seek Egyptian protection. In 1872 the Swiss Werner Münzinger, consul of France in Maṣawwaʿ since 1865, resigned from his post and entered the service of the Egyptians. Having allegedly paid £ 1,000,000 to the Porte, Ismāʿīl Pas̲h̲a created the so-called Eastern Sudan, i.e. Taka, Suʾākin and Maṣawwaʿ, and appointed Münzinger as governor in 1873. Münzinger initiated a plan to link Maṣawwaʿ with the Egyptian possessions in the north-east, and constructed the causeways to the mainland. On each of them was a gate, watched by a guard who collected a toll from every passer-by (Rohlfs, *Meine Mission*, 31 ff.; Conti Rossini, *Documenti*, 16). He also fortified the port, made himself "protector" of the Bilen tribes and occupied the Keren region. The Turkish practice of having a *nāʾib* of Balaw origin was continued, and a member of his family was appointed *sirdār* [*q.v.*] of the troops in Maṣawwaʿ. When the European powers left Egypt with a free hand with regard to Ethiopia, Ismāʿīl Pas̲h̲a appointed the Dane Søren Adolph Arendrup as commander of the Egyptian troops in Maṣawwaʿ, and three Egyptian expeditions set out against Ethiopia [see ḤABAS̲H̲. i]. After the Egyptian *débâcle* near Gura in 1876, rumours spread in Maṣawwaʿ that the Ethiopian King Yohannes was going to attack the port. But the king wanted peace with Egypt, insisting however that Maṣawwaʿ should be restored to his kingdom. The peace treaty, arranged by C. G. Gordon, left Egypt still in control of the Keren region and the port, where the anti-Ethiopian policy was continued by Muk̲h̲tār Bey, the Egyptian governor of Maṣawwaʿ. He gave asylum to Fitawrāri Debbeb, an Ethiopian rebel and cousin of King Yohannes, who sold his loot openly in the markets of Arkiko and Maṣawwaʿ and who had brought trade with the coast to a standstill. After Muk̲h̲tār Bey had been replaced by Mason Bey, an American who had been in the service of the Egyptian government, a treaty between Great Britain, Egypt and Ethiopia was signed at Adowa in 1884 by king Yohannes and Rear-Admiral Sir William Hewett. The actual control of Egypt, and consequently of the ports on the Red Sea coast which had been occupied by the Egyptians, lay indeed in the hands of Great Britain after the revolt of ʿUrābī Pas̲h̲a [*q.v.*]. Under British protection, free transit through Maṣawwaʿ was given for all goods, including arms and ammunition, to and from Ethiopia. A general reservation with respect to the lawful claims of the Porte, explicitly mentioned in Lord Granville's instruction to Admiral Hewett, was ignored in the Treaty. Nor did the Treaty contain any concrete agreement about the possession of Maṣawwaʿ. In a letter to Queen Victoria, King Yohannes, aware that the removal of the Egyptian garrison would leave the port open to him, expressed the hope that "the gates of heaven would open for her as she had opened Maṣawwaʿ for him". In her answer, the Queen regretted being unable to accede to the King's wish regarding the port (Zewde Gabre-Sellasie, *Yohannes IV*, 152). Indeed, by now another European power had appeared on the scene.

Wary of the French expansion in the Red Sea [see DJIBŪTĪ], and in view of financial difficulties in Egypt, Great Britain had been seeking an alliance with Italy. Already in 1881, an Egyptian appeal to use force against Italy after the establishment of an Italian colony in Assab [*q.v.*], had been rejected by the British government. In 1882 Italy had even been invited to participate in restoring order in Egypt. In the years 1881-3 expenditure had exceeded revenue in the port of Maṣawwaʿ (Zewde Gabre-Sellasie, *op. cit.*, 160); hence retaining possession of the port was not considered to be "in the true interests of Egypt" (*ibid.*, 161). Having thus been given a free hand in the Red Sea, Italy landed a military expedition in Maṣawwaʿ, where on 5 February 1885, the Italian flag was flying side-by-side with the Egyptian one over the palace and the forts. King Yohannes was outraged, while Menelik, who was building up his own power in Shoa and had signed a secret treaty of friendship and trade with the Italians in 1883, acted as mediator between the Ethiopian king and Italy. The Italians quickly occupied Arafale and Arkiko, and when the Egyptian garrisons were gradually withdrawn, almost all major places between Assab and Maṣawwaʿ came into their power. Notwithstanding the Treaty of Adowa, the Italians did not allow free transit of ammunition and arms to King Yohannes, nor in the quantities which he desired. They also rejected any form of Egyptian authority, although this was recognised at first. Tension between the Ethiopians and the Italians led to an armed encounter at Dogali (1887), where the latter suffered defeat. Menelik offered mediation, which was accepted by Yohannes but refused by the Italians, who concluded another treaty with the future Negus. Yohannes, meanwhile convinced that Great Britain and Italy were acting in accord, and considering Sir Gerald Portal's mission to him as a feint, marched against Maṣawwaʿ in 1887. However, before reaching it he turned his attention again to the Mahdist forces. After his death in the battle of Ḳallabat (Metemma), the Italians signed the Treaty of Ucciali (Wuchali) with Menelik in 1889. Italian possession of Maṣawwaʿ was confirmed, but Menelik was permitted to import arms duty-free through the port (see the text of the famous Treaty in Zaghi, *Crispi*, 152; cf. Marcus, *Menelik II*, index s.v. Treaties). After their defeat at Adowa in 1896, the Italians were able to retain Eritrea and the port of Maṣawwaʿ, which played an important rôle during the Italo-Ethiopian war. Conquered by British forces in 1941, Maṣawwaʿ remained under British administration until the federation of Eritrea with Ethiopia in 1950.

In 1931 the population was estimated at 9,300 and in 1970 at 18,490. Imports consist mainly of industrial goods, while exports comprise oilseeds, nuts, hides, coffee, salt, fish and pearl. Local industries include a salt works, fish and meat processing enterprises, a cement plant and an ice factory. A thermal power plant serves outlying areas where manganese ore is mined. The volcanic deposits of the Danakil Plains contain sulphur, sodium and potassium, gypsum, rock salt and potash.

During their brief occupation of Eritrea, the coastal settlements on the Red Sea and the Harar region, the Egyptians introduced their Ḥanafī legal code, which was kept on by the Italians. Thus the Ḥanafī *mad̲h̲hab* is predominant in the coastal towns of Maṣawwaʿ, Arkiko, Zula, Assab, etc. Of the Ṣūfī orders in Islam, the Ḳādiriyya are well represented in Masawwaʿ. Its

founder, ᶜAbd al-Ḳādir al-Djīlānī [*q.v.*], is said to have died at the place of the mosque dedicated in his name. His anniversary (*ziyārat al-Djīlānī*) is celebrated by a pilgrimage and the accompanying ceremonies on 11 Rabīᶜ al-Awwal of each year.

(E. VAN DONZEL)

MASCARA [see AL-MUᶜASKAR].

MASCULINE [see MUDHAKKAR].

MASDJID (A.), mosque, the noun of place from *sadjada* "to prostrate oneself, hence "place where one prostrates oneself [in worship]". The modern Western European words (Eng. *mosque*, Fr. *mosquée*, Ger. *Moschee*, Ital. *moschea*) come ultimately from the Arabic via Spanish *mezquita*.

I. IN THE CENTRAL ISLAMIC LANDS

A. The origins of the mosque up to the Prophet's death.

The word *msgdʾ* is found in Aramaic as early as the Jewish Elephantine Papyri (5th century B.C.), and appears likewise in Nabataean inscriptions with the meaning "place of worship", but possibly, originally "stele, sacred pillar". The Syriac form *msgdʾ* and Amharic *masged* are late loans from Arabic, though Geᶜez *meshgād* "temple, church" may be a genuine formation from the verbal root *s - g- d* (itself certainly borrowed from Aramaic). The form *ms¹gd* "oratory, place of prayer" occurs also in Epigraphic South Arabian (A. F. L. Beeston *et alii*, *Sabaic dictionary*, Louvain-Beirut 1982, 125). The Arabic *masdjid* may thus have been taken over directly from Aramaic or formed from the borrowed verb (see A. Jeffery, *The foreign vocabulary of the Qurʾān*, Baroda 1938, 263-4).

1. The Meccan period. The word is used in the Ḳurʾān especially of the Meccan sanctuary (*al-Masdjid al-ḥarām*, sūra II, 139, 144, 145, 187, 192, 214; V, 3; VIII, 34; IX, 7, 19, 28; XVII, 1; XXII, 25; XLVIII, 25, 27); according to later sources, this was already the usage in the Meccan period (*ca.* al-Yaᶜḳūbī, *Taʾrīkh*. i. 285, 12). According to tradition, the term *al-Masdjid al-aḳṣā* (sūra XVII, 1) means the Jerusalem sanctuary (according to B. Schrieke, in *Isl.*, vi [1915-16], 1; cf. Horovitz, in *ibid.*, ix [1919], 159 ff., the reference is rather to a place of prayer in heaven); and in the legend of the Seven Sleepers,

masdjid means a tomb-sanctuary, probably Christian, certainly pre-Islamic (sūra XVIII, 20). The word is also applied to pre-Islamic sanctuaries, which belong to God and where God is invoked, although Muḥammad was not always able to recognise the particular cult associated with them. It is undoubtedly with this general meaning that the word is used in this verse of the Ḳurʾān: "If God had not taken men under his protection, then monasteries, churches and places of prayer (*ṣalawāt*) and *masādjid* would have been destroyed" (sūra XXII, 41). The word is also used in a *ḥadīth* of an Abyssinian church (al-Bukhārī, *Ṣalāt, bāb* 48, 54; Muslim, *Masādjid*, tr. 3) and in another of Jewish and Christian tomb-sanctuaries (al-Bukhārī, *Ṣalāt, bāb* 55; Muslim, *Masādjid*, tr. 3). Even Ibn Khaldūn can still use the word in the general meaning of a temple or place of worship of any religion (*Mukaddima, faṣl* 4, 6 at the end). There is therefore no question of a word of specifically Muslim creation. This is in entire agreement with Muḥammad's original attitude to earlier religions. Just as Abraham was a Muslim, so David had a *masdjid* (al-Ṭabarī, *Taʾrīkh*, i, 2408, 7 ff.).

To the Prophet, the Meccan sanctuary always remained the principal mosque, known as *Bayt Allāh* even before the time of the Prophet. It was a grave charge brought against the Ḳuraysh in the Meccan period that they drove the believers out of *al-Masdjid al-ḥarām* (sūra II, 214; V, 3; VIII, 34; XXII, 25; XLVIII, 25), which was considered all the more unjust as they worshipped the true lord of the sanctuary. To the true God belonged *al-masādjid* (sūra LXXII, 18, Meccan); it was therefore an absurdity for the godless to prevent the worship of God in "God's own mosques" (sūra II, 108). The result was that it was revealed in the year 9/630-1: "It is not right for polytheists to frequent the mosques of God" (sūra IX, 17 f.) and the opponents of the new religion were therefore excluded from the sanctuary. The *Sīra* agrees with the Ḳurʾān, that the sanctity of *al-Masdjid al-ḥarām* to which Muḥammad had been used from childhood was always regarded by him as indisputable. Like other Meccans, he and his followers regularly made the *ṭawāf* around the Kaʿba and kissed the Black Stone (e.g. Ibn Hishām, 183, 12 ff.; 239, 8; 251, 15); it is frequently stated that he used to sit in the *masdjid* like his fellow-citizens, alone or with a follower or disputing with an opponent (Ibn Hishām, 233, 16; 251, 15; 252, 14; 259; 260; 294; 18 f.). It is related that he used to perform the *ṣalāt* between the Yaman corner and the Black Stone, apparently from the narrator's context, very frequently (Ibn Hishām, 190, 9 ff.). After his conversion, ʿUmar is said to have arranged that believers performed the *ṣalāt* unmolested beside the Kaʿba (Ibn Hishām, 224, 13 f., 17 f.). How strongly Muḥammad felt himself attached to the Arab sanctuary is evident from the fact that he took part in the traditional rites there before the *hidjra* (sūra CVIII, 2); in the year 1/622-3, one of his followers, Saʿd b. Muʿādh, took part in the pilgrimage ceremonies, and in the year 2/623-4 he himself sacrificed on 10 Dhu 'l-Ḥidjdja on the *muṣallā* of the Banū Salima. He therefore, here as elsewhere, retained ancient customs where his new teaching did not directly exclude them. But when an independent religion developed out of his preaching, a new type of worship had to be evolved.

In Mecca, the original Muslim community had no special place of worship. The Prophet used to perform the *ṣalāt* in secret in the narrow alleys of Mecca with his first male follower ʿAlī and with the other earliest Companions also (Ibn Hishām, 159, 166, 13 ff.). The references are usually to the solitary *ṣalāt* of the Prophet, sometimes beside the Kaʿba (Ibn Hishām, 190, 9 ff.), sometimes in his own house (Ibn Hishām, 203, 6 f.). That the believers often prayed together may be taken for granted; they would do so in a house (cf. Ibn Hishām, 202). Occasionally also ʿUmar is said to have conducted the ritual prayer with others beside the Kaʿba (Ibn Hishām, 224) because ʿUmar was able to defy the Ḳuraysh. When the Prophet recited in the mosque the revelation, later abrogated, recognising Allāt, al-ʿUzzā and Manāt, according to the story, not only the believers but also the polytheists present took part in the *sudjūd* (al-Ṭabarī, i, 1192 f.). Abū Bakr is said to have had a private place of prayer (*masdjid*) in Mecca in his courtyard beside the gate; the Ḳuraysh, we are told, objected to this because women and children could see it and might be led astray by the emotion aroused (Ibn Hishām, 246; al-Bukhārī, *Ṣalāt, bāb* 86; *Kafāla, bāb* 14 etc.; *Maẓālim, bāb* 22).

In the dogma taught by Muḥammad, a sanctuary was not a fundamental necessity. Every place was the same to God, and humility in the presence of God, of which the ritual prayer was the expression, could be shown anywhere; hence the saying of the Prophet that he had been given the whole world as a *masdjid*, while earlier prophets could only pray in churches and synagogues (al-Wāḳidī, tr. Wellhausen, 403; *Corpus iuris di Zaid b. ʿAlī*, ed. Griffini, 50 and p. clxxix; al-Bukhārī, *Ṣalāt, bāb* 56; *Tayammum, bāb* 1; Muslim, *Masādjid*, tr. 1), and also the saying: "Wherever the hour of prayer overtakes thee, thou shalt perform the *ṣalāt* and that is a *masdjid*" (Muslim, *Masādjid*, tr. 1). That he nevertheless remained firmly attached to the traditional sanctuary of the Kaʿba, produced a confusion of thought which is very marked in sūra II, 136 ff. When in Medina he was able to do as he pleased, it must have been natural for him to create a place where he could be undisturbed with his followers and where they could perform the ritual *ṣalāt* together.

2. The foundation of the Mosque in Medina. According to one tradition, the Prophet came riding into Medina on his camel with Abū Bakr as *ridf* surrounded by the Banū Nadjdjār. The camel stopped on Abū Ayyūb's *fināʾ*. Here (according to Anas) the Prophet performed the *ṣalāt*, and immediately afterwards ordered the mostque to be built and purchased the piece of land from two orphans, Sahl and Suhayl, who were under the guardianship of Muʿādh b. ʿAfrāʾ, for 10 *dīnārs*, after declining to accept it as a gift; he lived with Abū Ayyūb until the mosque and his houses were completed. During this period he performed the *ṣalāt* in courtyards or other open spaces (al-Bukhārī, *Ṣalāt, bāb* 48; Muslim, *Masādjid*, tr. 1; Aḥmad b. Ḥanbal, *Musnad*, iii, 212 above; Ibn Hishām, 336; al-Ṭabarī, i, 1258 f.; al-Masʿūdī, *Murūdj*, iv, 140-1 = § 1469). According to this tradition, the building of the mosque was intended by the Prophet from the first and the choice of the site was left to the whim of his mount. According to another tradition, the Prophet took up his abode with Abū Ayyūb, but during the first period of his stay in Medina he conducted the *ṣalāt* in the house of Abū Umāma Asʿad, who had a private *masdjid*, in which he used to conduct *ṣalāt*s with his neighbours. The Prophet later expressed the desire to purchase the adjoining piece of ground, and he bought it from the two orphans, who according to this tradition, were wards of Asʿad (al-Balādhurī, *Futūḥ al-buldān*, 6; cf. Wüstenfeld, *Gesch. d. Stadt Medina*, 60). The site was covered with graves, ruins (*khirab*; also

ḥarth, al-Ṭabarī, i, 1259, 17; 1260, 1; cf. Aḥmad b. Ḥanbal, *Musnad*, iii, 212, 7, perhaps due to an old misreading) and palm-trees and was used as a place for keeping camels (and smaller domestic animals, al-Bukhārī, *Wuḍū'*, *bāb* 66). The site was cleared, the palms cut down and the walls built. The building material was bricks baked in the sun (*labin*) (Ibn Hishām, 337; al-Bukhārī, *Ṣalāt, bābs* 62, 65; according to one tradition they were baked at the well of Fāṭima, Wüstenfeld, *Stadt Medina*, 31); in plan it was a courtyard surrounded by a brick wall on a stone foundation with three entrances; the gateposts were of stone. On the *ḳibla* side (i.e. the north wall), at first left open, the stems of the palm trees which had been cut down were soon set up as columns and a roof was put over them of palm-leaves and clay. On the east side two huts of similar materials were built for the Prophet's wives Sawdā' and ʿĀ'isha; their entrances opened on to the court and were covered with carpets; they were later increased so that there were nine little houses for the Prophet's wives. When the *ḳibla* was moved to the south, the arbour at the north wall remained; under this arbour called *ṣuffa* or *ẓulla* the homeless Companions (*Ahl al-Ṣuffa* [*q.v.*]) found shelter (al-Bukhārī, *Ṣalāt, bābs* 48, 62; Wüstenfeld, *Medina*, 60 f., 66; al-Diyārbakrī, *Ta'rīkh al-Khamīs*, Cairo 1302, i, 387 ff.; on the *ṣuffa*, 387 in the middle; 391 after the middle; cf. L. Caetani, *Annali dell' Islām*, i, 377 f.). In seven months, the work was completed (Wüstenfeld, *Medina*, 59), according to others in the month of Ṣafar of the year 2 (Ibn Hishām, 339, 18 f.). The mosque was very simple. It was really only a courtyard with a wall round it; the *ṣuffa* already mentioned supplied a shelter on the north side, while on the south side, later the *ḳibla* side, an arbour was probably built also, for the Prophet used to preach leaning against a palm-trunk and this must have been on the *ḳibla* side. How large the arbours were cannot be ascertained. The mosque was the courtyard of the Prophet's houses and at the same time the meeting-place for the believers and the place for common prayer.

According to the sources, it was the Prophet's intention from the very first to build a mosque at once in Medina; according to a later tradition, Gabriel commanded him in the name of God to build a house for God (al-Diyārbakrī, i, 387 below); but this story is coloured by later conditions. It has been made quite clear, notably by L. Caetani (*Annali dell' Islām*, i, 432, 437 ff.) and later by H. Lammens (*Moʿâwia*, 8, 5, 62; idem, *Ziād*, 30 ff., 93 ff.) that the earliest *masdjid* had nothing of the character of a sacred edifice. Much can be quoted for this view from *Ḥadīth* and *Sīra* (cf. *Annali dell' Islām*, i, 440). The unconverted Thaḳafīs were received by the Prophet in the mosque to conduct negotiations and he even put up three tents for them in the courtyard (Ibn Hishām, 916; al-Wāḳidī-Wellhausen, 382); envoys from Tamīm also went freely about in the mosque and called for the Prophet, who dealt with them after he had finished prayers (Ibn Hishām, 933 f.; al-Wāḳidī-Wellhausen, 386). Ibn Unays brought to the *masdjid* the head of the Hudhalī Sufyān, threw it down before the Prophet and gave his report (Ibn Hishām, 981; al-Wāḳidī-Wellhausen, 225). After the battle of Uḥud, the Medina chiefs spent the night in the mosque (al-Wāḳidī-Wellhausen, 149). The Awsīs tended their wounded here (*ibid.*, 215 f.; al-Ṭabarī, i, 1491 f.); a prisoner of war was tied to one of the pillars of the mosque (al-Bukhārī, *Ṣalāt, bāb* 76, 82; cf. 75). Many poor people used to live in the *ṣuffa* (al-Bukhārī, *Ṣalāt, bāb* 58); tents and huts were put up in the mosque, one for example by converted and liberated prisoners, another by the Banū Ghifār, in whose tent Saʿd b. Muʿādh died of his wounds (*ibid.*, *bāb* 77; Ibn al-Athīr, *Usd al-ghāba*, ii, 297). People sat as they pleased in the mosque or took their ease lying on their backs (al-Bukhārī, *ʿIlm*, *bāb* 6; *Ṣalāt, bāb* 85; Ibn Saʿd, i, 124, 14); even so late as the reign of ʿUmar, it is recorded that he found strangers sleeping in a corner of the mosque (al-Mubarrad, *Kāmil*, 118, 15 ff.); the Prophet received gifts and distributed them among the Companions (Bukhārī, *Ṣalāt, bāb* 42); disputes took place over business (*ibid.*, *bābs* 71, 83) and in general, people conducted themselves as they pleased. Indeed, on one occasion some Sudanese or Abyssinians with the approval of the Prophet gave a display with shield and lance on the occasion of a festival (*ibid.*, *Ṣalāt, bāb* 69; *ʿĪdayn, bāb* 2, 25; *Djihād, bāb* 81); and on another a stranger seeking the Prophet, rode into the mosque on his camel (*ibid.*, *ʿIlm, bāb* 6). So little "consecrated" was this, the oldest mosque, that one of the *Munāfiḳūn* or "Hypocrites", ejected for scoffing at the believers, could call to Abū Ayyūb "Are you throwing me out of the *Mirbad Banī Thaʿlaba?*" (Ibn Hishām, 362, 10 f.).

All this gives one the impression of the headquarters of an army, rather than of a sacred edifice. On the other hand, the mosque was used from the very first for the general divine worship and thus became something more than the Prophet's private courtyard. Whatever the Prophet's intentions had been from the first, the *masdjid*, with the increasing importance of Islam, was bound to become very soon the political and religious centre of the new community. The two points of view cannot be distinguished in Islam, especially in the earlier period. The mosque was the place where believers assembled for prayer around the Prophet, where he delivered his addresses, which contained not only appeals for obedience to God but regulations affecting the social life of the community (cf. al-Bukhārī, *Ṣalāt, bābs* 70, 71); from here he controlled the religious and political community of Islam. Even at the real old sanctuaries of Arabia, there were no restrictions on what one could do; what distinguished the mosque from the Christian church or the Meccan temple was that in it there was no specially dedicated ritual object. At the Kaʿba also, people used to gather to discuss every day affairs and also for important assemblies, if we may believe the *Sīra* (Ibn Hishām, 183 f., 185, 1, 229, 8, 248, 257, 19). Here also the Prophet used to sit; strangers came to visit him; he talked and they disputed with him; people even came to blows and fought there (Ibn Hishām, 183-4, 185-6, 187-8, 202, 19, 257, 259; *Chron. d. Stadt Mekka*, ed. Wüstenfeld, i, 223, 11). Beside the Kaʿba was the *Dār al-Nadwa*, where important matters were discussed and justice administered (*ibid.*, see index). From the Medina mosque was developed the general type of the Muslim mosque. It depended on circumstances whether the aspect of the mosque as a social centre or as a place of prayer was more or less emphasised.

3. Other mosques in the time of the Prophet. The mosque of the Prophet in Medina was not the only one founded by Muslims in his lifetime, and according to tradition not even the first, which is said to have been the mosque of Ḳubā'. In this village, which belonged to the territory of Medina (see Wüstenfeld, *Geschichte der Stadt Medina*, 126), the Prophet on his *hidjra* stopped with the family of ʿAmr b. ʿAwf; the length of his stay is variously given as 3, 5, 8, 14 or 22 days. According to one tradition, he found a mosque there on his arrival, which had been built by the first emigrants and the Anṣār, and he per-

formed the *ṣalāt* there with them (see Wüstenfeld, *op. cit.*, 56; al-Balādhurī, *Futūḥ al-buldān*, 1; al-Diyārbakrī, i, 380-1). According to another tradition, the Prophet himself founded the mosque on a site, which belonged to his host Kulthūm and was used as a *mirbad* for drying dates or, according to others, to a woman named Labba, who tethered her ass there (Wüstenfeld, *Medina*, 131; Ibn Hishām, 335; al-Ṭabarī, i, 1260, 6; Ibn Saʿd, i/1, 6; Masʿūdī, *Murūdj*, iv, 139; al-Diyārbakrī, 1, 381; *al-Sīra al-Ḥalabiyya*, Cairo 1320, ii, 58-9). Out of this tradition arose a legend based on the story of the foundation of the principal mosque in Medina. The Prophet makes (first Abū Bakr and ʿUmar without success, then) ʿAlī mount a camel, and at the place to which it goes builds the mosque with stone brought from the Ḥarra; he himself laid the first stone, and Abū Bakr, ʿUmar and ʿUthmān the next ones (al-Diyārbakrī, i, 381). The Prophet is said to have henceforth visited the mosque of Ḳubāʾ every Saturday, either riding or walking, and the pillar is still shown beside which he conducted the service (al-Bukhārī, *Faḍl al-ṣalāt fī Masdjid Makka wa 'l-Madīna*, *bāb* 2, 4; Muslim, *Ḥadjdj*, tr. 94; al-Diyārbakrī, i, 382; al-Balādhurī, 5). We are occasionally told that he performed his *ṣalāt* on the Sabbath in the mosque at Ḳubāʾ when he went to the Banū 'l-Naḍīr in Rabīʿ I of the year 4/625 (al-Wāḳidī-Wellhausen, 161).

It is obvious that the customs and ideas of the later community have shaped the legend of this mosque. The only question is whether the old tradition that the mosque was founded either by the Prophet himself or even before his arrival by his followers is also a later invention. We thus come to the question whether the Prophet founded or recognised any other mosques at all than that of Medīna. Caetani, in keeping with his view of the origin of the mosque, was inclined to deny it, pointing to the fact that there was later an obvious tendency to connect mosques everywhere with the Prophet and that sūra IX, 108, strongly condemns the erection of an "opposition mosque" (*Masdjid al-Ḍirār*). The Ḳurʾān passage is as follows: "Those who have built themselves a *masdjid* for opposition (*ḍirār*) and unbelief and division among the believers and for a refuge for him who in the past fought against God and his Prophet; and they swear: We intended only good! God is witness that they are liars! Thou shalt not stand up in it, for verily a *masdjid* which is founded on piety from the first day of its existence has more right that thou shouldest stand in it; in it are men who desire to purify themselves" (sūra IX, 108-9). According to tradition, this was revealed in the year 9/630-1; when the Prophet was on the march to Tabūk, the Banū Sālim said to him that they had built a mosque to make it easier for their feeble and elderly people, and they begged the Prophet to perform his *ṣalāt* in it and thus give it his approval. The Prophet postponed it till his return, but then his revelation was announced, because the mosque had been founded by *Munāfiḳūn* at the instigation of Abū ʿĀmir al-Rāhib, who fought against the Prophet. According to one tradition (so Ibn ʿUmar, Zayd) the "mosque founded on piety" was that of Medina, from which the people wished to emancipate themselves; according to another (Ibn ʿAbbās), the reference was to that of Ḳubāʾ; Abū ʿĀmir and his followers were not comfortable among the Banū ʿAmr b. ʿAwf and therefore built a new mosque. According to some traditions, it was in Dhū Awān. The Prophet however had it burned down (al-Ṭabarī, i, 1704-5; Ibn Hishām, 357-8, 906-7; Ibn Saʿd, i/1, 6; al-Wāḳidī-Wellhausen, 410-11; al-Ṭabarī, *Tafsīr*, xi, 17 ff.; Wüstenfeld, *Medina*, 131; *al-Sīra al-Ḥalabiyya*, ii, 60; al-Balādhūrī, 1-2; Muslim, *Ḥadjdj*, *bāb* 93). If the connection with the Tabūk campaign is correct, the *Masdjid al-Ḍirār* is to be sought north of Medina; the "mosque founded on piety" would then be the mosque of Medina rather than that of Ḳubāʾ which lies to the south of it. There is in itself nothing impossible about the rejection in principle of any mosque other than that of Medina. We should then have to discard the whole tradition, for, according to it, the Prophet was at first not unfavourably disposed to the new mosque, and his wrath, according to the tradition, arose from the fact that it had been founded by a refractory party. But as a matter of fact, there are indications that a number of mosques already existed in the time of the Prophet; for example, the verse in the Ḳurʾān, "in houses, which God hath permitted to be built that His name might be praised in them, in them men praise Him morning and evening, whom neither business nor trade restrain from praising God and performing the *ṣalāt* and the giving of alms", etc. (sūra XXIV, 36-7). If this revelation, like the rest of the sūra, is of the Medinan period, it is difficult to refer it to Jews and Christians, and this utterance is quite clear: "Observe a complete fast until the night and touch thou them (i.e. women) not while ye are in the mosques" (sūra II, 183). This shows that there were already in the time of the Prophet several Muslim mosques which had a markedly religious character and were recognised by the Prophet.

That there were really public places of prayer of the separate tribes at a very early date is evident from the tradition that the Prophet in the year 2 offered his sacrifice on 10 Dhu 'l-Ḥidjdja/3 June 624 on the *muṣallā* of the Banū Salima. In addition, there are constant references to private *masādjid* where a few believers, like Abū Bakr in Mecca, made a place for prayer in their houses and where others sometimes assembled (al-Bukhāri, *Ṣalāt*, *bāb*s 46, 87; *Tahadjdjud*, *bāb* 30; cf. also *Adhān*, *bāb* 50).

B. The origin of mosques after the time of the Prophet.

1. Chief mosques. What importance the Medina mosque had attained as the centre of administration and worship of the Muslims is best seen from the fact that the first thought of the Muslim generals after their conquests was to found a mosque as a centre around which to gather.

Conditions differed somewhat according as it was a new foundation or an already existing town. Important examples of the first kind are al-Baṣra, al-Kūfa and al-Fusṭāṭ. Baṣra was founded by ʿUtba b. Ghazwān as winter-quarters for the army in the year 14/635 (or 16/637 or 638). The mosque was placed in the centre with the *Dār al-Imāra*, the dwelling of the commander-in-chief with a prison and *Dīwān* in front of it. Prayer was at first offered on the open space, which was fenced round; later, the whole was built of reeds and when the men went off to war the reeds were pulled up and laid away. Abū Mūsā al-Ashʿarī [*q.v.*], who later became ʿUmar's *wālī*, built the edifice of clay and bricks baked in the sun (*labin*) and used grass for the roof (al-Balādhurī, 346-7, 350; Ibn al-Faḳīh, 187-8; Yāḳūt, *Buldān*, i, 642, 6-9; cf. al-Ṭabarī, i, 2377, 14 ff.). It was similar in Kūfa, which was founded in 17/638 by Saʿd b. Abī Waḳḳās. In the centre was the mosque, and beside it the *Dār al-Imāra* was laid out. The mosque at first was simply an open quadrangle, *ṣaḥn*, marked off by a trench round it. The space was large enough for 40,000 persons. It seems that reeds were also used for building the walls here and later Saʿd used *labin*. On the south side (and

only here) there was an arbour, *ẓulla*, built (cf. al-Balādhūrī, 348, i: *ṣuffa*). The *Dār al-Imāra* beside the mosque was later by ʿUmar's orders combined with the mosque (al-Ṭabarī, i, 2481, 12 ff., 2485, 16, 2487 ff., 2494, 14; Yāḳūt, *Muʿdjam*, iv, 323, 10 ff.; al-Balādhuri, 275 ff., cf. *Annali dell' Islām*, iii, 846 ff.). The plan was therefore an exact reproduction of that of the mosque in Medina (as is expressly emphasised in al-Ṭabarī, i, 2489, 4 ff.); the importance of the mosque was also expressed in its position, and the commander lived close beside it. There was no difference in al-Fusṭāṭ, which, although there was already an older town here, was laid out as an entirely new camp. In the year 21/642, after the conquest of Alexandria, the mosque was laid out in a garden where ʿAmr had planted his standard. It was 50 *dhirāʿ*s long and 30 broad. Eighty men fixed its *ḳibla*, which, however, was turned too far to the east, and was therefore altered later by Ḳurra b. Sharīk [*q.v.*]. The court was quite simple, surrounded by a wall and had trees growing on it; a simple roof is mentioned; it must be identical with the above-mentioned *ẓulla* or *ṣuffa*. ʿAmr b. al-ʿĀṣ lived just beside the mosque and around it the *Ahl al-Rāya*. Like the house of the Prophet, the general's house lay on the east side with only a road between them. There were two doors in each wall except the southern one (Yāḳūt, *Buldān*, iii, 898-9; al-Maḳrīzī, *Khiṭaṭ*, iv, 4 ff.; Ibn Duḳmāḳ, *K. al-Intiṣār*, Cairo 1893, 59 ff.; al-Suyūṭī, *Ḥusn al-muḥāḍara*, i, 63-4; ii, 135-6; cf. *Annali dell' Islām*, iv, 554, 557, 563 ff.). We find similar arrangements made in al-Mawṣil in 20/641 (al-Balādhurī, 331-2).

In other cases, the Muslims established themselves in old towns either conquered or surrendered by treaty; by the treaty, they received a site for their mosque (e.g. al-Balādhūrī, 116, 14, 147, 2). But the distinction between towns which were conquered and those which were surrendered soon disappeared, and the position is as a rule not clear. Examples of old towns in which the Muslims established themselves are al-Madāʾin, Damascus and Jerusalem.—In Madāʾin, Saʿd b. Abī Waḳḳās after the conquest in 16/637 distributed the houses among the Muslims, and Kisrā's *Īwān* was made into a mosque, after Saʿd had conducted the *ṣalāt al-fatḥ* in it (al-Ṭabarī, i, 2443, 15 f.; 2451, 7 ff.). In Damascus, which was occupied in 14/635 or 15/636 by capitulation, according to tradition, the Church of St. John was divided so that the eastern half became Muslim, from which Muslim tradition created the legend that the city was taken partly by conquest and partly by agreement (al-Balādhūrī, 125; Yāḳūt, *Buldān*, ii, 591; Ibn Djubayr, *Riḥla*, 262; *JA*, ser. 9, vii, 376, 381, 404). As a matter of fact, however, the Muslims seem to have laid out their own mosque here just beside the church [see DIMASHK]; and close beside it again was the *Khaḍrāʾ*, the commander-in-chief's palace, from which a direct entrance to the *maḳṣūra* was later made (al-Muḳaddasī, 159, 4). Conditions here were therefore once more the same as in Medina. But the possibility of an arrangement such as is recorded by tradition cannot be rejected, for there is good evidence of it elsewhere; in Ḥimṣ, for example, the Muslims and Christians shared a building in common as a mosque and church, and it is evident from al-Iṣṭakhrī and Ibn Ḥawḳal that this was still the case in the time of their common authority, al-Balkhī (309/921) (al-Iṣṭakhrī[1], 61, 7 f.; Ibn Ḥawḳal[1], 117, 5; al-Muḳaddasī, 156, 15), and a similar arrangement is recorded for Dabīl in Armenia (al-Iṣṭakhrī[1], 188, 3 f.; Ibn Ḥawḳal[1], 244, 21; cf. al-Muḳaddasī, 377, 3 f.).

There were special conditions in Jerusalem. The Muslims recognised the sanctuary there, as is evident from the earlier *ḳibla* and from sūra XVII, 1 (in the traditional interpretation). It must therefore have been natural for the conquerors, when the town capitulated, to seek out the recognised holy place. Indeed, we are told that ʿUmar in the year 17/638 built a mosque in Jerusalem on the site of the temple of Solomon (F. Baethgen, *Fragmente syr. u. arab. Hist.*, 17, 110, following Īshōʿdᵉnaḥ, metropolitan of Baṣra after 700 A.D.; cf. for the 2nd/8th century Theophanes, quoted by Le Strange, *Palestine under the Moslems*, London 1890, 91 n.). That the *Ḳubbat al-Ṣakhra* [*q.v.*], which the Mosque of ʿUmar replaced, stands on the old site of the Temple is undoubted. How he found the site is variously recorded [see AL-ḲUDS]. The building was, like other mosques of the time of ʿUmar, very simple. Arculf, who visited Jerusalem about 670, says "The Saracens attend a quadrangular house of prayer (*domus orationis*, i.e. *masdjid*) which they have built with little art with boards and large beams on the remains of some ruins, on the famous site where the Temple was once built in all its splendour" (*Itinera Hierosolymitana*, ed. P. Geyer, 1898, 226-7, tr. P. Mickley, in *Das Land der Bibel*, ii/2, 1917, 19-20). It is of interest to note that this simple mosque, like the others, was in the form of a rectangle; in spite of its simple character it could hold 3,000 people, according to Arculf.

As late as the reign of Muʿāwiya, we find a new town, al-Ḳayrawān, being laid out on the old plan as a military camp with a mosque and *Dār al-Imāra* in the centre (Yāḳūt, *Muʿdjam*, iv, 213, 10 ff.). As al-Balādhūrī, for example, shows, the Muslim conquerors even at a later date always built a mosque in the centre of a newly-conquered town, at first a simple one in each town, and it was a direct reproduction of the simple mosque of the Prophet in Medina. It was the exception to adapt already existing buildings in towns. But soon many additional mosques were added.

2. Tribal mosques and sectarian mosques. There were mosques not only in the towns. When the tribes pledged themselves to the Prophet to adopt Islam, they had also to perform the *ṣalāt*. It is not clear how far they took part in Muslim worship, but if they concerned themselves with Islam at all, they must have had a Muslim place of meeting. Probably even before Islam they had, like the Meccans, their *madjlis* or *nādī* or *dār shūrā*, where they discussed matters of general importance (cf. Lammens, *Moʿâwia*, 205; *Ziād b. Abīhi*, 30 ff., 90-1; *Le Berceau de l'Islam*, 222 ff.). As the mosque was only distinguished from such places by the fact that it was also used for the common *ṣalāt*, it was natural for tribal mosques to come into existence. Thus we are told that as early as the year 5/626-7 the tribe of Saʿd b. Bakr founded mosques and used an *adhān* (Ibn Saʿd, i/2, 44, 7, not mentioned in Ibn Hishām, 943-4; al-Ṭabarī, i, 1722); it is also recorded of the Banū Djadhīma, who lived near Mecca, that they built mosques in the year 8/629-30 and introduced the *adhān* (al-Wāḳidī-Wellhausen, 351). How far one can rely on such stories in a particular case is however uncertain. A later writer like al-Diyārbakrī says of the Banu 'l-Muṣṭaliḳ that they *aslamū wa-banaw masādjida* (*Taʾrīkh al-Khamīs*, ii, 132, 20; cf. *Annali dell' Islām*, ii, 221); in the early sources, this is not found. Nor is the story told by Ibn Saʿd at all probable, that envoys from the Banū Ḥanīfa received orders to destroy their churches, sprinkle the ground with water and build a mosque (Ibn Saʿd, i/2, 56, 11 ff., while Ibn Hishām, 945-6, al-Ṭabarī, i, 1737 ff., and al-Balādhūrī, 86-7, say nothing about

it). But that there were tribal mosques at a very early date is nevertheless quite certain. The mosque at Ḳubāʾ was the mosque of the tribe of ʿAmr b. ʿAwf (Ibn Saʿd, i/1, 6, 6 and cf. above) and according to one tradition, the Banū Ghanm b. ʿAwf were jealous of it and built an opposition mosque (al-Balādhurī, 3; al-Ṭabarī, *Tafsīr*, i, 21). A Companion who had taken part in the battle of Badr, ʿItbān b. Malik, complained to the Prophet that he could not reach the *masdjid* of his tribe in the rainy season and wanted to build a mosque for himself (al-Bukhārī, *Ṣalāt*, *bāb* 46; Muslim, *Masādjid*, *bāb* 47). The Prophet himself is said to have visited the *masdjid* of the Banū Zurayḳ (al-Bukhārī, *Djihād*, *bābs* 56-8) and in the *masdjid* of the Banū Salima during the prayer, there was revealed to him sūra II, 139, which ordered the new *ḳibla*, wherefore it was called *Masdjid al-Ḳiblatayn* (Wüstenfeld, *Medina*, 62).

The tribal mosque was a sign that the independence of the tribe was still retained under Islam. Indeed, we hear everywhere of tribal mosques, for example, around Medina that of the Banū Ḳurayẓa, of the Banū Ḥāritha, of the Banū Ẓafar, of the Banū Wāʾil, of the Banū Ḥarām, of the Banū Zurayḳ (said to have been the first in which the Ḳurʾān was publicly read), that of the Banū Salima, etc. (see Wüstenfeld, *Gesch. d. Stadt Medina*, 29, 37 ff., 44, 50, 57, 136 ff.); the "mosque of the two *ḳibla*s" belonged to the Banū Sawād b, Ghanm b. Kaʿb b. Salima (Wüstenfeld, *Medina*, 41). This then was the position in Medina: the tribes usually had their own mosques, and one mosque was the chief mosque. This was probably the position within the Prophet's lifetime, for in the earliest campaigns of conquest, mosques were built on this principle. ʿUmar is said to have written to Abū Mūsā in Baṣra telling him to build a mosque *li 'l-djamāʿa* and mosques for the tribes, and on Fridays the people were to come to the chief mosque. Similarly, he wrote to Saʿd b. Abī Waḳḳāṣ in Kūfa and to ʿAmr b. al-ʿĀṣ in Miṣr. On the other hand in Syria, where they had settled in old towns, they were not to build tribal mosques (al-Maḳrīzī, *Khiṭaṭ*, iv, 4 below). It is actually recorded that the tribes in each *khiṭṭa* had their own mosques around the mosque of ʿAmr in Fusṭāṭ (cf. Ibn Duḳmāḳ, 62 below -67), and even much later, a tribal mosque like that of the Rāshida was still in existence (al-Maḳrīzī, *Khiṭaṭ*, 64, 4 ff.). Even in the chief mosque, the tribes had their own places (*ibid.*, 9, 12-10). We have similar evidence from ʿIrāḳ. In Baṣra, for example, there was a Masdjid Banī ʿUbād (al-Balādhūrī, 356, 2), one of the Banū Rifāʿa (Ibn Rusta, 201, 16), one of the Banū ʿAdī (Ibn al-Faḳīh, 191, 4) and one of the Anṣār (cf. Goldziher, *Muhammedanische Studien*, i, 77, n. 5); in Kūfa we find quite a number, such as that of the Anṣār (al-Ṭabarī, ii, 284, 13 f.), of the ʿAbd al-Ḳays (*ibid.*, ii, 657, 2, 9), of the Banū Duhmān (*ibid.*, 670, 4), of the Banū Makhzūm (*ibid.*, 734, 19), of the Banū Hilāl (*ibid.*, 1687, 8), of the Banū ʿAdī (*ibid.*, 1703, 4), of the Banū Dhuhl and Banū Ḥudjr (*ibid.*, 532, 8 f.), of the Djuhayna (*ibid.*, 533, 8), of the Banū Ḥarām (*ibid.*, iii, 2509, 10), and the ʿAbsīs even had several *masādjid* (al-Balādhūrī, 278, 12 f., see also 285, and Goldziher, *loc. cit.*).

During the wars, these tribal mosques were the natural rallying points for the various tribes, the mosque was a *madjlis*, where councils were held (al-Ṭabarī, ii, 532, 6 ff.) and the people were taught from its *minbar* (*ibid.*, 284); battles often centred for this reason round these mosques (e.g. al-Ṭabarī, ii, 130, 148, 6, 960). "The people of your mosque" *ahl masdjidikum* (*ibid.*, 532, 19) became identical with "your party". Gradually, as new sects arose, they naturally had mosques of their own, just as Musaylima before them is said to have had his own mosque (al-Balādhūrī, 90, 4 from below; Ibn Ḥanbal, *Musnad*, i, 404 below). Thus we read later of the mosques of the Ḥanbalīs in Baghdād, in which there was continual riot and confusion (Hilāl al-Ṣābī, *Kitāb al-Wuzarāʾ*, ed. Amedroz, 335). It sometimes happened that different parties in a town shared the chief mosque (al-Muḳaddasī, 102, 5), but as a rule it was otherwise. In particular, the Sunnīs and Shīʿīs as a rule had separate mosques (cf. Mez, *Die Renaissance des Islâms*, 63). It sometimes even happened that Ḥanafīs and Shāfiʿīs had separate mosques (Yāḳūt, *Buldān*, iv, 509, 9; al-Muḳaddasī, 323, 11). These special mosques were a great source of disruption in Islam, and we can understand that a time came when the learned discussed whether such mosques should be permitted at all. But the question whether one might talk of the *Masdjid Banī Fulān* was answered by saying that in the time of the Prophet, the *Masdjid Banī Zurayḳ* was recognised (al-Bukhārī, *Ṣalāt*, *bāb* 41; cf. *Djihād*, *bābs* 56-8, and al-Ṭabarī, *Tafsīr*, xi, 20, after the middle of the page).

3. Adaptation to Islam of older sanctuaries; memorial mosques. According to the early historians, the towns which made treaties with the Muslims received permission to retain their churches (al-Baladhūrī, 121, in the middle; al-Ṭabarī, i, 2405, 2407), while in the conquered towns the churches fell to the Muslims without any preamble (cf. al-Balādhūrī, 120 below). Sometimes also it is recorded that a certain number of churches were received from the Christians, e.g. fifteen in Damascus according to one tradition (*ibid.*, 124, 8, otherwise on 121; cf. *JA*, Ser. 9, vii, 403). It is rather doubtful whether the process was such a regular one; in any case, the Muslims in course of time appropriated many churches to themselves. With the mass conversions to Islam, this was a natural result. The churches taken over by the Muslims were occasionally used as dwellings (cf. al-Ṭabarī, i, 2405, 2407); at a later date, it also happened that they were used as government offices, as in Egypt in 146/763 (al-Maḳrīzī, iv, 35; cf. for Kūfa, al-Balādhūrī, 286). The obvious thing, however, was to transform the churches taken into mosques. It is related of ʿAmr b. al-ʿĀṣ that he performed the *ṣalāt* in a church (al-Maḳrīzī, iv, 6) and Zayd b. ʿAlī says regarding churches and synagogues, "Perform thy *ṣalāt* in them; it will not harm thee" (*Corpus iuris di Zaid b. ʿAlī*, ed. Griffini, no. 364). It is not clear whether the reference in these cases is to conquered sanctuaries; it is evident, in any case, that the saying is intended to remove any misgivings about the use of captured churches and synagogues as mosques. The most important example of this kind was in Damascus, where al-Walīd b. ʿAbd al-Malik in 86/705 took the church of St. John from the Christians and had it rebuilt; he is said to have offered the Christians another church in its stead (see the references above, in I. B. 1; and also *JA*, 9 Ser., vii, 369 ff.; Quatremère, *Hist. Sult. Maml.*, ii/1, 262 ff. and art. DIMASHK). He is said to have transformed into mosques a total of ten churches in Damascus. It must have been particularly in the villages, with the gradual conversion of the people to Islam, that the churches were turned into mosques. In the Egyptian villages there were no mosques in the earlier generations of Islam (al-Maḳrīzī, iv, 28-9, 30). But when al-Maʾmūn was fighting the Copts, many churches were turned into mosques in (*ibid.*, 30). It is also recorded of mosques in Cairo that they were converted churches. Accord-

ing to one tradition, the Rās͟hida mosque was an unfinished Jacobite church, which was surrounded by Jewish and Christian graves (al-Maḳrīzī, iv, 63, 64), and in the immediate vicinity al-Ḥākim turned a Jacobite and a Nestorian Church into mosques (*ibid.*, 65). When D̲j̲awhar built a palace in al-Ḳāhira, a *dayr* or monastery was taken in and transformed into a mosque (*ibid.*, 269); similar changes took place at later dates (*ibid.*, 240) and synagogues also were transformed in this way (Masd̲j̲id Ibn al-Bannāʾ, *ibid.*, 265). The chief mosque in Palermo was previously a church (Yāḳūt, *Buldān*, i, 719). After the Crusades, several churches were turned into mosques in Palestine (Sauvaire, *Hist. de Jérus. et d'Hébron*, 1876, 7; Quatremère, *Hist. Sult. Maml.*, i/2, 40).

Other sanctuaries than those of the "people of the scripture" were turned into mosques. For example a Masd̲j̲id al-S̲h̲ams between al-Ḥilla and Karbalāʾ was the successor of an old temple of S̲h̲amas̲h̲ (see Goldziher, *Muh. Stud.*, ii, 331). Not far from Iṣṭak̲h̲r was a Masd̲j̲id Sulaymān which was an old fire-temple, the pictures on the walls of which could still be seen in the time of al-Masʿūdī and al-Muḳaddasī (4th/10th century) (al-Masʿūdī, *Murūd̲j̲*, iv, 77 = § 1403; al-Muḳaddasī, 444). In Iṣṭak̲h̲r itself there was a *d̲j̲āmiʿ*, which was a converted fire temple (*ibid.*, 436). In Maṣṣīṣa, the ancient Mopsuestia, al-Manṣūr in 140/797-8 built a mosque on the site of an ancient temple (al-Balād̲h̲urī, 165-6) and the chief mosque in Dihlī was originally a temple (Ibn Baṭṭūta, iii, 151); as to Ṭāʾif, cf. Abū Dāwūd, *Ṣalāt*, *bāb* 10. Thus in Islam also, the old rule holds that sacred places survive changes of religion. It was especially easy in cases where Christian sanctuaries were associated with Biblical personalities who were also recognised by Islam: e.g., the Church of St. John in Damascus and many holy places in Palestine. One example is the mosque of Job in S̲h̲ayk̲h̲ Saʿd, associated with sūra XXI, 83, XXXVIII, 40; here in Silvia's time (4th century) there was a church of Job (al-Masʿūdī, i, 91 = § 84; Baedeker, *Paläst. u. Syrien*⁷, 1910, 147).

But Islam itself had created historical associations which were bound soon to lead to the building of new mosques. Even in the lifetime of the Prophet, the Banū Sālim are said to have asked him to perform the *ṣalāt* in their *masd̲j̲id* to give it his authority (see above, in I. A. 3). At the request of ʿItbān b. Malik, the Prophet performed the *ṣalāt* along with Abū Bakr in his house and thereby consecrated it as a *muṣallā*, because he could not reach the tribal mosque in the rainy season (al-Buk̲h̲ārī, *Ṣalāt*, *bāb* 47; *Tahad̲j̲d̲j̲ud*, *bāb* 36; Muslim, *Masād̲j̲id*, tr. 46; a similar story in al-Buk̲h̲ārī, *Ad̲h̲ān*, *bāb* 47, *Tahad̲j̲d̲j̲ud*, *bāb* 33, is perhaps identical in origin). After the death of the Prophet, his memory became so precious that the places where he had prayed obtained a special importance and his followers, who liked to imitate him in everything, preferred to perform their *ṣalāt* in such places. But this tendency was only an intensification of what had existed in his lifetime; and so it is not easy to decide how far the above stories reflect later conditions. Mosques very quickly arose on the road between Mecca and Medina at places where, according to the testimony of his Companions, the Prophet had prayed (al-Buk̲h̲ārī, *Ṣalāt*, *bāb* 89; al-Wāḳidī-Wellhausen, 421 ff.); the same was the case with the road which the Prophet had taken to Tabūk in the year 9/630-1 (Ibn His̲h̲ām, 907; al-Wāḳidī-Wellhausen, 394; there were 19 in all, which are listed in *Annali dell' Islām*, ii-246-7). Indeed, wherever he had taken the field, mosques were built; for example, on the road to Badr, where according to tradition Abū Bakr had built a mosque (al-Wāḳidī-Wellhausen, 39, also Wüstenfeld, *Medina*, 135). The mosque of al-Faḍīk̲h̲ was built on the spot where the Prophet had prayed in a leather tent during the war with the Banu 'l-Naḍīr in the year 4/625-6 (al-Wāḳidī-Wellhausen, 163; Wüstenfeld, *Medina*, 132). He is said to have himself built a little mosque in K̲h̲aybar during the campaign of the year 7/628-9 (al-Diyārbakrī, ii, 49-50; cf. *Annali dell' Islām*, ii, 19). Outside Ṭāʾif, a mosque was built on a hillock, because the Prophet had performed the *ṣalāt* there during the siege in the year 8/629-30, between the tents of his two wives, Umm Salama and Zaynab (Ibn His̲h̲ām, 872-3; al-Wāḳidī-Wellhausen, 369); in Liyya, the Prophet is said to have himself built a mosque while on the campaign against Ṭāʾif (Ibn His̲h̲ām, 872; al-Wāḳidī-Wellhausen, 368-9). Mosques arose in and around Medina, "because Muḥammad prayed here" (Wüstenfeld, *Gesch. d. Stadt Medina*, 31, 38, 132 ff.). It is obvious that in most of these cases, later conditions are put back to the time of the Prophet; in connection with the "Campaign of the Trench" we are told that "he prayed everywhere where mosques now stand" (al-Wāḳidī-Wellhausen, 208). Since, for example, the Masd̲j̲id al-Faḍīk̲h̲ is also called Masd̲j̲id al-S̲h̲ams (Wüstenfeld, *Medīna*, 132), we have perhaps here actually an ancient sanctuary.

Mosques became associated with the Prophet in many ways. In Medina, for example, there was the Masd̲j̲id al-Bag̲h̲la where footprints of the Prophet's mule were shown in a stone, the Masd̲j̲id al-Id̲j̲āba where the Prophet's appeal was answered, the Masd̲j̲id al-Fatḥ which recalls the victory over the Meccans, etc. (see Wüstenfeld, *Medina*, 136 ff.). In Mecca, there was naturally a large number of places sacred through associations with the Prophet and therefore used as places of prayer. The most honoured site, next to the chief mosque, is said to have been the house of K̲h̲adīd̲j̲a, also called Mawlid al-Sayyida Fāṭima, because the daughter of the Prophet was born there. This house, in which the Prophet lived till the *hid̲j̲ra*, was taken over by ʿAḳīl, ʿAlī's brother, and bought by him through Muʿāwiya and turned into a mosque (*Chroniken d. Stadt Mekka*, ed. Wüstenfeld, i, 423; iii , 438, 440). Next comes the house in which the Prophet held his first secret meetings. This was bought by al-K̲h̲ayzurān [*q.v.*], mother of Hārūn al-Ras̲h̲īd, on her pilgrimage in 171/788 and turned into a mosque (*Chron. Mekka*, iii, 112, 440). She also purchased the Prophet's birthplace, *Mawlid al-Nabī*, and made it into a mosque (*ibid.*, i, 422; iii, 439). If Muʿāwiya really bought the Prophet's house from his cousin, it was probably the right one; but the demand for places associated with the Prophet became stronger and stronger, and we therefore find more and more places referred not only to the Prophet, but also to his Companions. Such are the birthplaces of Ḥamza, ʿUmar and ʿAlī (*Chron. Mekka*, iii, 445), and the house of Māriya, the mother of the Prophet's son, Ibrāhīm (*ibid.*, i, 447, 466), who also had a mosque at Medina (Wüstenfeld, *Medina*, 133). There were also a Masd̲j̲id K̲h̲adīd̲j̲a (*ibid.*, i, 324) and a Masd̲j̲id ʿĀʾis̲h̲a (*ibid.*, iii, 454), a Masd̲j̲id of the "granted appeal" in a narrow valley near Mecca, where the Prophet performed the *ṣalāt* (*ibid.*, 453), a Masd̲j̲id al-D̲j̲inn, where the D̲j̲inn overheard his preaching (*ibid.*, i, 424; iii, 453), a Masd̲j̲id al-Raʾya, where he planted his standard at the conquest (*ibid.*, ii, 68 below and 71 above; iii, 13, 453), a Masd̲j̲id al-Bayʿa where the first homage of the Medinans was received (*ibid.*, i, 428; iii, 441). In the Masd̲j̲id al-K̲h̲ayf in Minā is shown the mark of the

Prophet's head in a stone into which visitors also put their heads (*ibid.*, iii, 438). Persons in the Bible are also connected with mosques, Adam, Abraham and Ismāʿīl with the Kaʿba, beside which the *Maḳām Ibrāhim* is shown, and in ʿArafa there is still a Masdjid Ibrāhīm (*ibid.*, i, 415, 425) and another in al-Zāhir near Mecca (Ibn Djubayr, *Riḥla*, Leiden-London 1907, 112). To these memorial mosques others were later added, e.g. the Masdjid Abī Bakr, Masdjid Bilāl, the Mosque of the Splitting of the Moon (by the Prophet), etc. (see Ibn Djubayr, *Riḥla*, 114 ff.; al-Muḳaddasī, 102-3; Snouck Hurgronje, *Mekka*, ii, 27; al-Batanūnī, *al-Riḥla al-Ḥidjāziyya*², Cairo 1329/1911, 52 ff.).

In al-Ḥidjāz, the Muslims thus acquired a series of mosques which became important from their association with the Prophet, his family and his Companions, and made Muslim history live. On the other hand, in lands formerly Christian, they took over sanctuaries which were associated with the Biblical history which they had assimilated (see Le Strange, *Palestine*, passim). Other mosques soon became associated with Biblical and Muslim story. The mosque founded by ʿUmar on the site of the Temple in Jerusalem was, as already pointed out, identified as *al-Masdjid al-Aḳṣā* mentioned in sūra XVII, 1, and therefore connected with the Prophet's night journey and the journey to Paradise. The rock is said to have greeted the Prophet on this occasion, and marks in a stone covering a hole are explained as Muḥammad's footprints (sometimes also as those of Idrīs; cf. Le Strange, *Palestine*, 136; al-Batanūnī, *Riḥla*, 165; Baedeker, *Palästina*, 1910, 52-3; cf. al-Yaʿḳūbī, *Taʾrīkh*, ii, 311). The name *al-Masdjid al-Aḳṣā* was used throughout the early period for the whole Ḥarām area in Jerusalem, later partly for it, and partly for the building in its southern part (Ibn al-Faḳīh, 100; Sauvaire, *Hist. Jérus. et Hébron*, 95, 121; cf. Le Strange, *Palestine*, 96-7). Then there were the mosques which had specifically Muslim associations, like the Masdjid of ʿUmar on the Mount of Olives where he encamped at the conquest (al-Muḳaddasī, 172).

In Egypt not only was an old Christian sanctuary called Maʿbad Mūsā (al-Maḳrīzī, iv, 269), but we are also told, for example, that the Mosque of Ibn Ṭūlūn was built where Mūsā talked with his Lord (al-Maḳrīzī, iv, 36); according to al-Ḳurdāʿī, there were in Egypt four Masdjids of Mūsā (Ibn Duḳmāḳ, ed. Vollers, 92); there was a Masdjid Yaʿḳūb wa-Yūsuf (al-Muḳaddasī, 200) and a Joseph's prison, certainly dating from the Christian period (al-Maḳrīzī, iv, 315). There was also a Mosque of Abraham in Munyat Ibn al-Khaṣīb (Ibn Djubayr, 58). The chief mosque of Ṣanʿāʾ was built by Shem, son of Noah (Ibn Rusta, 110). The old temple near Iṣṭakhr mentioned above was connected with Sulaymān (al-Masʿūdī, *Murūdj*, iv, 76-7 = § 1403; Yāḳūt, i, 299). In the mosque of Kūfa, not only Ibrāhīm but one thousand other prophets and one thousand saints, described as *waṣī*, are said to have offered their prayers; here was the tree Yaḳṭīn (sūra XXXVII, 146); here died Yaghūth and Yaʿūḳ, etc. (Yāḳūt, iv, 325; also Ibn Djubayr, 211-12), and in this mosque there was a chapel of Abraham, Noah and Idrīs (Ibn Djubayr, 212); a large number of mosques were associated with Companions of the Prophet. What emphasis was laid on such an association is seen, for example, from the story according to which ʿUmar declined to perform the *ṣalāt* in the Church of the Resurrection in Jerusalem, lest the Church should afterwards be claimed as a mosque.

4. Tomb-mosques. A special class of memorial mosques consisted of those which were associated with a tomb. The graves of ancestors and of saints had been sanctuaries from ancient times and they were gradually adopted into Islam. In addition, there were the saints of Islam itself. The general tendency to distinguish places associated with the founders of Islam naturally concentrated itself round the graves in which they rested. In the Ḳurʾān, a tomb-*masdjid* is mentioned in connection with the Seven Sleepers (sūra XVIII, 20) but it is not clear if it was recognised. As early as the year 6/627-8 the companions of Abū Baṣīr are said to have built a mosque at the place where he died and was buried (al-Wāḳidī-Wellhausen, 262). The Prophet is also said to have visited regularly at al-Baḳīʿ in Medina the tombs of martyrs who fell at Uḥud and paid reverence to them (*ibid.*, 143). Whatever the exact amount of truth in the story, there is no doubt that the story of the tomb-mosque of Abū Baṣīr is antedated. The accounts of the death of the Prophet and of the period immediately following reveal no special interest in his tomb. But very soon the general trend of development stimulated an interest in graves, which led to the erection of sanctuaries at them. The progress of this tendency is more marked in al-Wāḳidī, who died in 207/823, than in Ibn Isḥāḳ, who died in 151/768.

The collections of *Ḥadīth* made in the 3rd/9th century contain discussions on this fact which show that the problem was whether the tombs could be used as places of worship and in this connection whether mosques could be built over the tombs. The *ḥadīth*s answer both questions in the negative, which certainly was in the spirit of the Prophet. It is said that "*Ṣalāt* at the graves (*fi 'l-maḳābir*) is *makrūh*" (al-Bukhārī, *Ṣalāt*, *bāb* 52); "sit not upon graves and perform not *ṣalāt* towards them" (Muslim, *Djanāʾiz*, tr. 33); "hold the *ṣalāt* in your houses, but do not use them as tombs" (Muslim, *Ṣalāt al-musāfirīn*, tr. 28). On the other hand, it is acknowledged that Anas performed the *ṣalāt* at the cemetery (al-Bukhārī, *Ṣalāt*, *bāb* 48). We are also told that tombs cannot be used as *masādjid* (al-Bukhārī, *Ṣalāt*, *bāb* 48; *Djanāʾiz*, *bāb* 62). On his deathbed the Prophet is said to have cursed the Jews and the Christians because they used the tombs of their prophets as *masādjid*. *Ḥadīth* explains this by saying that the tomb of the Prophet was not at first accessible (al-Bukhārī, *Ṣalāt*, *bāb* 48, 55; *Djanāʾiz*, *bāb* 62; *Anbiyāʾ*, *bāb* 50; Muslim, *Masādjid*, tr. 3); as a matter of fact, its precise location was not exactly known (*Djanāʾiz*, *bāb* 96). The attacks in *Ḥadīth* insist that tomb-mosques are a reprehensible Jewish practice: "When a pious man dies, they built a *masdjid* on his tomb", etc. (al-Bukhārī, *Ṣalāt*, *bāb* 48, 54; Muslim, *Djanāʾiz*, *bāb* 71). Although this view of tomb-mosques is still held in certain limited circles (cf. Ibn Taymiyya and the Wahhābis), the old pre-Islamic custom soon also became a Muslim one. The expositors of *Ḥadīth* like al-Nawawī (on Muslim, *Masādjid*, tr. 3, lith. Dihlī 1319, i, 201) and al-ʿAsḳalānī, (Cairo 1329, i, 354) explain the above passages to mean that only an exaggerated *taʿẓīm* of the dead is forbidden so that tombs should not be used as a *ḳibla*; otherwise, it is quite commendable to spend time in a mosque in proximity to a devout man.

The name given to a tomb-mosque is often *ḳubba* [*q.v.*] a word which is used of a tent (al-Bukhārī, *Djanāʾiz*, *bāb* 62; *Ḥadjdj*, *bāb* 64; *Farḍ al-khums*, *bāb* 19; *al-Djizya*, *bāb* 15; Ṭarafa, *Dīwān*, vii, 1), but later came to mean the dome which usually covers tombs and thus became the general name for the sanctuary of a saint (cf. Ibn Djubayr, *Riḥla*, 114, 115; cf. Dozy, *Supplément*, s.v.). *Maḳām* also means a little chapel and

a saint's tomb (van Berchem, *CIA*, i, no. 72, etc.; cf. index). The custom of making a *ḳubba* at the tomb of a saint was firmly rooted in Byzantine territory, where sepulchral churches always had a dome (Herzog-Hauch, *Realenzyclopädie*[3], x, 784). The usual name however for a tomb-sanctuary was *mas͟hhad*; this is applied to places where saints are worshipped, among Muslim tombs particularly to those of the friends and relations of the Prophet (van Berchem, *CIA*, i, nos. 32, 63, 417, 544; al-Maḳrīzī, iv, 265, 309 ff.), but also to tombs of other recognised saints, e.g. Mas͟hhad D̲j̲ird̲j̲is in Mawṣil (Ibn D̲j̲ubayr, *Riḥla*, 236), etc.

The transformation of the tombs of the Prophet and his near relatives into sanctuaries seems to have been a gradual process. Muḥammad, Abū Bakr and ʿUmar are said to have been buried in the house of ʿĀʾis͟ha; Fāṭima and ʿAlī lived beside it. ʿĀʾis͟ha had a wall built between her room and the tombs to prevent visitors carrying off earth from the tomb of the Prophet. The houses of the Prophet's wives remained as they were until al-Walīd rebuilt them. He thought it scandalous that Ḥasan b. ʿAlī should live in Fāṭima's house and ʿUmar's family close beside ʿĀʾis͟ha's home in the house of Ḥafṣa. He acquired the houses, had all the houses of the Prophet's wives torn down and erected new buildings. The tombs were enclosed by a pentagonal wall; the whole area was called *al-Rawḍa* "the garden"; it was not till later that a dome was built over it (Wüstenfeld, *Medina*, 66 ff., 72-3, 78 ff., 89). In the cemetery of Medina, al-Baḳīʿ [see BAḲĪʿ AL-G̲H̲ARḲAD], a whole series of *mas͟hāhid* came to be built where tombs of the family and of the Companions of the Prophet were located (*ibid.*, 140 ff.; Ibn D̲j̲ubayr, *Riḥla*, 195 ff.). It is often disputed whether a tomb belonged to one or the other (e.g. al-Ṭabarī, iii, 2436, 2). Such tomb-mosques were sacred (*muḳaddas*; Ibn D̲j̲ubayr, *Riḥla*, 114, 13, 17), and they were visited *li 'l-baraka*. The name *al-Rawḍa* of the Prophet's tomb became later applied to other sanctuaries (*ibid.*, 46, 16; 52, 11). Separate limbs were revered in some mosques, like the head of al-Ḥusayn in Cairo, which was brought there in 491/1098 from ʿAsḳalān (ʿAlī Pās͟ha Mubārak, *al-K̲h̲iṭaṭ al-d̲j̲adīda*, iv, 91 ff.; cf. Sauvaire, *Hist. Jérus. et Hébr.*, 16); his head was also revered for some time in the *Mas͟hhad al-Raʾs* in Damascus (according to Ibn S̲h̲ākir, *JA*, ser. 9, vii, 385).

Gradually, a vast number of Muslim tombs of saints came into existence; and to these were added all the pre-Islamic sanctuaries which were adopted by Islam. No distinction can therefore be drawn between tomb-mosques and other memorial mosques. It was often impossible to prove that the tomb in question ever really existed. In the Mas͟hhad ʿAlī, for example, ʿAlī's tomb is honoured, but Ibn D̲j̲ubayr leaves it in doubt whether he is really buried there (*Riḥla*, 212) and many located his grave in the mosque at Kūfa and elsewhere (al-Masʿūdī, *Murūd̲j̲*, iv, 289, v, 68 = §§ 1612, 1825; Ibn Ḥawḳal[1], 163). In ʿAyn al-Baḳar near ʿAkkā there was also a Mas͟hhad ʿAlī (Yāḳūt, iii, 759) and also in the Mosque of the Umayyads (Ibn D̲j̲ubayr, 267); on this question, cf. al-Muḳaddasī, 46. Names frequently become confused and transferred. In Mecca, between Ṣafā and Marwa there was a *ḳubba*, which was associated with ʿUmar b. al-K̲h̲aṭṭāb; but Ibn D̲j̲ubayr says that it should be connected with ʿUmar b. ʿAbd al-ʿAzīz (*Riḥla*, 115, 11 ff.). In D̲j̲īza there was a Mas͟hhad Abī Hurayra, where the memory of this Companion of the Prophet was honoured; it is said to have been originally the grave of another Abū Hurayra (Maḳrīzī, i, 335, 19). Wherever S̲h̲īʿīs ruled, there arose numerous tomb-mosques of the *Ahl al-Bayt*. In Egypt, Ibn D̲j̲ubayr gives a list of 14 men and five women of the Prophet's family, who were honoured there (*Riḥla*, 46-7). Islam was always creating new tombs of saints who had been distinguished for learning or asceticism or miracle-working, e.g. the tomb of al-S̲h̲āfiʿī in Cairo and Aḥmad al-Badawī in Ṭanṭa. There were mosques, chiefly old-established sanctuaries, of Biblical and semi-Biblical personages like Rūbīl (Reuben) and Āsiya the wife of Pharaoh (*ibid.*, 46). In and around Damascus were a number of mosques, which were built on the tombs of prophets and unnamed saints (Ibn D̲j̲ubayr, *Riḥla*, 273 ff.). In Palestine could be seen a vast number of tombs of Biblical personages (cf. Le Strange, *Palestine under the Moslems*, index, and Conder, in *Palestine Explor. Fund, Quarterly Statement*, 1871, 89 ff.), usually mosques with a *ḳubba*.

After the sanctuaries of persons mentioned in the Bible came those of people mentioned in the Ḳurʾān. For example, outside the *D̲j̲āmiʿ* in ʿAkkā was shown the tomb-mosque of the prophet Ṣāliḥ (Nāṣir-i K̲h̲usraw, *Safar-nāma*, ed. Schefer, 15, 1, tr. 49), and in Syria that of his son (Ibn D̲j̲ubayr, 46); that of Hūd was also shown near ʿAkkā (Nāṣir-i K̲h̲usraw, 16, 5, tr. 52), farther east, that of S̲h̲uʿayb and of his daughter (*ibid.*, 16, 12, tr. 53); the tomb of Hūd was also pointed out in Damascus and in Ḥadramawt (Yāḳūt ii, 596, 16); then we have peculiarly Muslim saints like D̲h̲u 'l-Kifl, the son of Job (Nāṣir-i K̲h̲usraw, 16, 4, tr. 52). Then there are the sanctuaries of saints who are only superficially Muslim but really have their origins in old popular superstitions, like al-K̲h̲aḍir, who had a *mas͟hhad* in Damascus (Yāḳūt, ii, 596, 9), or a saint like ʿAkk, founder of the town of ʿAkkā, whose tomb Nāṣir-i K̲h̲usraw visited outside the town (15, 6 from below, tr. 51). Such tombs were much visited by pious travellers and are therefore frequently mentioned in literature (on *mas͟hāhid* of the kinds mentioned here in ʿIrāḳ, see al-Muḳaddasī, 130; for Mawṣil, etc., *ibid.*, 146). In this way, ancient sanctuaries were turned into mosques, and it is often quite a matter of chance under what names they are adopted by Islam (cf. Goldziher, *Muh. Studien*, ii, 325 ff.). It therefore sometimes happens that the same saint is honoured in several mosques. Abū Hurayra, who is buried in Medina, is honoured not only in the above-mentioned tomb-mosque in D̲j̲īza but also at various places in Palestine, in al-Ramla and in Yubnā south of Ṭabariyya (K̲h̲alīl ed-Ḍāhiry, *Zoubdat Kachf el-Mamâlik* ed. P. Ravaisse, 42, 1 from below; Nāṣir-i K̲h̲usraw, 17, 1 from below, no. 59; Yāḳūt, iii, 512, 20; iv, 1007, 12; cf. *Symbolae Osloenses Fasc. Supplet.*, ii [1928], 31). The tomb of the Prophet Jonah is revered not only in the ancient Niniveh but also in Palestine.

Just as the *ḳubba* under which the saint lay and the mosque adjoining it were sanctified by him, so vice-versa a *ḳubba* and a mosque could cause a deceased person to become considered a saint. It was therefore the custom for the mighty not only to give this distinction to their fathers but also to prepare such buildings for themselves even in their own lifetime. This was particularly the custom of the Mamlūk sultans, perhaps stimulated by the fact that they did not found dynasties in which power passed from father to son. Such buildings are called *ḳubba* (van Berchem, *CIA*, i, nos. 82, 95, 96, 126, 138, etc.), exceptionally *zāwiya* (*ibid.*, no. 98), frequently *turba* (*ibid.*, no. 58, 66, 88, 106, 107, 116, etc.); the formula is also found: "this *ḳubba* is a *turba*" (no. 67); the latter word acquired the same meaning as *masd̲j̲id*, *mas͟hhad*, partly saint's grave

and partly sacred site (cf. Ibn Djubayr, *Riḥla*, 114, 196); but this word does not seem to be used of ordinary tomb-mosques, although the distinction between these and mosques in honour of saints often disappeared. In these *ḳubbas*, the regular recitation of the Ḳurʾān was often arranged and the tomb was provided with a *kiswa*. The mausoleum might be built in connection with a great mosque and be separated from it by a grille (Yāḳūt, iv, 509, 6 ff.).

5. Mosques deliberately founded. In the early period, the building of mosques was a social obligation of the ruler as representative of the community and the tribes. Very soon a number of mosques came into existence, provided by individuals. In addition to tribal mosques, as already mentioned, there were also sectarian mosques, and prominent leaders built mosques which were the centres of their activity, for example the Masdjid ʿAdī b. Ḥātim (al-Ṭabarī, ii, 130), the Masdjid Simāk in Kūfa (*ibid.*, i, 2653), the Masdjid al-Ashʿath, etc. As old sanctuaries became Islamised, the mosque received more of the character of a sanctuary and the building of a mosque became a pious work; there arose a *ḥadīth*, according to which the Prophet said: "for him who builds a mosque, God will build a home in Paradise"; some add "if he desire to see the face of God" (*Corpus iuris di Zaid b. ʿAlī*, ed. Griffini, no. 276; al-Bukhārī, *Salāt*, *bāb* 65; Muslim, *Masādjid*, tr. 4; *Zuhd*, tr. 3; al-Maḳrīzī, iv, 36). Like other sanctuaries, mosques were sometimes built as a result of a revelation in a dream. A story of this kind of the year 557/1162 is given by al-Samhūdī for Medina (Wüstenfeld, *Medina*, 91); and a similar one of a mosque in Damascus (*JA*, ser. 9, vii, 384); a mosque was also built out of gratitude for seeing the Prophet (*al-Madrasa al-Sharīfiyya*, al-Makrīzī, iv, 209). It was of course particularly an obligation on the mighty to build mosques. Even in the earliest period, the governors took care that new mosques were built to keep pace with the spread of Islam (cf. al-Balādhurī, 178-9). About the year 390/1000 the governor of Djibāl, Badr b. Ḥasanawayh, is said to have built 3,000 mosques and hostels (Mez, *Die Renaissance des Islâms*, 24, Eng. tr. 27). The collections of inscriptions, as well as the geographical and topographical works, reveal how the number of mosques increased in this way.

In Egypt, al-Ḥākim in the year 403/1012-13 had a census taken of the mosques of Cairo, and these were found to amount to 800 (al-Maḳrīzī, iv, 264); al-Ḳuḍāʿī (d. 454/1062) also counted the mosques, and his figure is put at 30,000 or 36,000 (Yāḳūt, iii, 901; Ibn Duḳmāḳ, ed. Vollers, 92; al-Maḳrīzī, iv, 264), which seems a quite fantastic figure (there is probably a *wa*-lacking before *alf*, i.e. 1,036). Ibn al-Mutawwadj (d. 730/1330) according to al-Maḳrīzī counted 480, and Ibn Duḳmaḳ (about 800/1398) gives in addition to the incomplete list of *djāmiʿ*s a list of 472 mosques, not including *madāris*, *khānaḳāhs*, etc.; the figure given by al-Maḳrīzī is smaller. The fantastic figure of 30,000 for Baghdād is found as early as al-Yaʿḳūbī (*Buldān*, 250). It is also an exaggeration when Ibn Djubayr was told in Alexandria that there were 12,000 or 8,000 mosques there (43). In Baṣra, where Ziyād built 7 mosques (Ibn al-Faḳīh, 191), the number also increased rapidly, but here again an exaggerated figure (7,000) is given (al-Yaʿḳūbī, *op. cit.*, 361). In Damascus, Ibn ʿAsākir (d. 571/1176) counted 241 within and 148 outside the city (*JA*, ser. 9, vii, 383). In Palermo, Ibn Ḥawḳal counted over 300, and in a village above it 200 mosques. In some streets there were as many as 20 mosques within a bowshot of one another; this multiplicity is condemned: everyone wanted to build a mosque for himself (Yāḳūt, i, 719; iii, 409, 410). As a matter of fact, one can almost say that things tended this way; al-Yaʿḳūbī mentions in Baghdād a mosque for the Anbārī officials of the tax-office (*Buldān*, 245), and several distinguished scholars practically had their own mosques. It occasionally happened that devout private individuals founded mosques. In 672/1273-4 Tādj al-Dīn built a mosque and a separate chamber in which he performed the *ṣalāt* alone and meditated (al-Maḳrīzī, iv, 90). The mosques thus founded were very often called after their founders, and memorial and tomb-mosques after the person to be commemorated. Sometimes a mosque is called after some devout man who lived in it (al-Maḳrīzī, iv, 97, 265 ff.) and a *madrasa* might be called after its head or a teacher (*ibid.*, iv, 235; Yāḳūt, *Udabāʾ*, vii, 82). Lastly, a mosque might take its name from its situation or from some feature of the building.

6. Al-Muṣallā. In addition to the mosques proper, al-Maḳrīzī mentions for Cairo eight places for prayer (*muṣallā*) mainly at the cemetery (iv, 334-5). The word *muṣallā* may mean any place of prayer, therefore also mosque (cf. sūra II, 119; cf. al-Maḳrīzī *Khiṭaṭ*, iv, 25, 16; idem, *Ittiʿāẓ*, ed. Bunz. 91, 17; Yāḳūt, *Buldān*, iv, 326, 3-5) or a particular place of prayer within a mosque (al-Ṭabarī, i, 2408, 16; al-Bukhārī, *Ghusl*, *bāb* 17; *Ṣalāt*, *bāb* 91). In Palestine, there were many open places of prayer, provided only with a *miḥrāb* and marked off, but quite in the open (cf. for Tiberias, Nāṣir-i Khusraw, ed. Schefer, 36). It is recorded of the Prophet that he used to go out at the two festivals (*al-Fiṭr* and *al-Aḍḥā*) to the place of prayer (*al-muṣallā*) of the Banū Sālima. A lance which the Negus of Ethiopia had presented to al-Zubayr was carried in front of him and planted before the Prophet as *sutra*. Standing in front of it, he conducted the *ṣalāt*, and then preached a *khuṭba* without a *minbar* to the rows in front of him (al-Ṭabarī, i, 1281, 14 ff.; al-Bukhārī, *Ḥayḍ*, *bāb* 6; *Ṣalāt*, *bāb* 90; *ʿĪdayn*, *bāb* 6). He also went out to the *muṣallā* for the *ṣalāt al-istisḳāʾ* (Muslim, *Istisḳāʾ*, tr. 1). This *muṣallā* was an open space, and Muḥammad is even said to have forbidden a building on it (Wüstenfeld, *Medina*, 127 ff.). This custom of performing the *ṣalāt* on a *muṣallā* outside the town on the two festivals became *sunna*. There is evidence of the custom for several towns. In Medina, however, a mosque was later built on the *muṣallā* (*ibid.*, 128) which also happened in other places. An early innovation was the introduction of a *minbar* by Marwān (*ibid.*, 128; al-Bukhārī, *ʿĪdayn*, *bāb* 6). When Saʿd b. Abī Waḳḳāṣ built a mosque in Kisrā's *Īwān* in al-Madāʾin, at the festival in the year 16/637, it was expressly stated that it was *sunna* to go out to it; Saʿd, however, thought it was a matter of indifference (al-Ṭabarī, i, 2451). Shortly after 300/912-13 a *muṣallā* outside of Hamadhān is mentioned (al-Masʿūdī, *Murūdj*, ix, 23 = § 3595). There was al-Muṣallā al-ʿAtīḳ in Baghdād; here a *dakka* was erected for the execution of the Ḳarmaṭian prisoners (al-Ṭabarī, iii, 2244-5; cf. 1659, 18); in Kūfa, several are mentioned (*ibid.*, ii, 628, 16; 1704, 8; iii, 367, 8-368) two in Marw (*ibid.*, ii, 1931, 2; 1964, 19; cf. Nāṣir-i Khusraw, tr. 274), one in Farghāna (Ibn Ḥawḳal[1], 393, 11). In Tirmidh, the *muṣallā* was within the walls (Ibn Ḥawḳal[1], 349, 18) which also happened elsewhere (*ibid.*, 378, 6-377). In Cairo, the two festivals were celebrated on the Muṣallā Khawlān (a Yemeni tribe) with the *khaṭīb* of the Mosque of ʿAmr as leader: according to al-Ḳuḍāʿī, the festivals were to be celebrated on a *muṣallā* opposite the hill Yaḥmūm,

then on al-Muṣallā al-Ḳadīm where Aḥmad b. Ṭūlūn erected a building in 256/870. The site was several times changed (al-Maḳrīzī, iv, 334-5; cf. al-Muḳaddasī, 200, 14-20). In 302, 306 and 308 the *ṣalāt al-ʿīd* was performed for the first time in the Mosque of ʿAmr (al-Maḳrīzī, iv, 20, 8 ff.; al-Suyūṭī, *Ḥusn al-muḥāḍara*, ii, 137 below; Ibn Ta**gh**rībirdī, ii, 194, 9 ff.). Ibn Baṭṭūṭa notes the custom in Spain (i, 20) and Tunis (i, 22) and also in India (iii, 154). Ibn al-Ḥādjdj (d. 737/1336-7) says that in his time the ceremonies still took place on the *muṣallā* but condemns the *bidaʿ* associated with them (*K. al-Madkhal*, Cairo 1320, ii, 82). It is also laid down in Muslim law, although not always definitely (see Juynboll, *Handbuch d. Islām. Ges.*, 1910, 127; I. Guidi, *Il Muḫtaṣar*, i, 1919, 136). The custom seems in time to have become generally abandoned. In the 9th/15th century the Masdjid Āḳsunḳur was expressly built for the *khuṭba* at the Friday services and at festivals (al-Maḳrīzī, iv, 107, 17).

C. The mosque as the centre for divine worship.

1. Sanctity of the mosque. The history of the mosques in the early centuries of Islam shows an increase in its sanctity, which was intensified by the adoption of the traditions of the church and especially by the permeation of the cult of saints. The sanctity already associated with tombs taken over by Islam was naturally very soon transferred to the larger and more imposing mosques. The expression *Bayt Allāh* "house of God", which at first was only used of the Kaʿba came now be applied to any mosque (see *Corpus iuris di Zaid b. ʿAlī*, no. 48, cf. 156, 983; *Chron. Mekka*, ed. Wüstenfeld, iv, 164; van Berchem, *CIA*, i, no. 10, 1. 18; Ibn al-Ḥādjdj, *K. al-Madkhal*, i, 20, 23; ii, 64, 68; cf. *Bayt Rabbihi*, *ibid.*, i, 23, 73; ii, 56). The alteration in the original conception is illustrated by the fact that the Mamlūk al-Malik al-Ẓāhir Baybars declined to build a mosque on a place for tethering camels because it was unseemly, while the mosque of the Prophet had actually been built on such a place (al-Maḳrīzī, iv, 91; Abū Dāwūd, *Ṣalāt*, *bāb* 22).

In the house of God, the *miḥrāb* and the *minbar* enjoyed particular sanctity, as did the tomb, especially in Medina (al-Bukhārī, *Faḍl al-ṣalāt fī masdjid Makka wa 'l-Madīna*, *bāb* 5). The visitors sought *baraka*, partly by touching the tomb or the railing round it, partly by praying in its vicinity; at such places "prayer is heard" (*Chron. Mekka*, iii, 441, 442). In the Masdjid al-Khayf in Minā, the visitor laid his head on the print of the Prophet's head and thus obtained *baraka* (*ibid.*, iii, 438). A mosque could be built on a site, the sanctity of which had been shown by the finding of hidden treasure (al-Maḳrīzī, iv, 75). There were often places of particular sanctity in mosques. In the mosques at Ḳubāʾ and Medina, the spots where the Prophet used to stand at prayer were held to be particularly blessed (al-Balādhurī, 5; al-Bukhārī, *Ṣalāt*, *bāb* 91; Wüstenfeld, *Medina*, 65, cf. 82, 109). In other mosques, places where a saint had sat or where a divine phenomenon had taken place, e.g. in the Mosque of ʿAmr and in the Azhar Mosque (al-Maḳrīzī, iii, 19, 52) or the Mosque in Jerusalem (al-Muḳaddasī, 170), were specially visited. Pious visitors made *ṭawāf* [see ḤADJDJ] between such places in the mosque (al-Maḳrīzī, iv, 20). Just as in other religions, we find parents dedicating their children to the service of a sanctuary, so we find a Muslim woman vowing her child or child yet unborn to the mosque (al-Bukhārī, *Ṣalāt*, *bāb* 74; al-Maḳrīzī, iv, 20). The fact that mosques, like other sanctuaries, were sometimes founded after a revelation received in a dream has already been mentioned (see 1. B. 5).

This increase in sanctity had as a natural result that one could no longer enter a mosque at random as had been the case in the time of the Prophet. In the early Umayyad period, Christians were still allowed to enter the mosque without molestation (cf. Lammens, *Moʿâwia*, 13-14; Goldziher, in *WZKM*, vi [1892], 100-1). Muʿāwiya used to sit with his Christian physician, Ibn Uthāl, in the mosque of Damascus (Ibn Abī Uṣaybiʿa, i, 117). According to Aḥmad b. Ḥanbal, the *Ahl al-Kitāb* (or *Ahl al-ʿAhd*) and their servants, but not polytheists, were allowed to enter the mosque of Medina (*Musnad*, iii, 339, 392). At a later date, entrance was forbidden to Christians and this regulation is credited to ʿUmar (Lammens, *op. cit.*, 13, n. 6). A strict teacher of morality like Ibn al-Ḥādjdj thought it unseemly that the monks who wove the mats for the mosques should be allowed to lay them in the mosque (*Madkhal*, ii, 57). Conditions were not always the same. In Hebron, Jews and Christians were admitted on payment to the sanctuary of Abraham until in 664/1265 Baybars forbade it (Quatremère, *Hist. Sult. Maml.*, i/2, 27).

According to some traditions, a person in a state of ritual impurity could not enter the mosque (Abū Dāwūd, *Ṭahāra*, *bāb* 92; Ibn Mādja, *Ṭahāra*, *bāb* 123). In any case, only the pure could acquire merit by visiting the mosque (Muslim, *Masādjid*, tr. 49; *Corpus iuris di Zaid b. ʿAlī*, no. 48), and in a later period it is specially mentioned that the *wuḍūʾ* cannot be undertaken in the mosque itself (*Madkhal*, ii, 47 below) nor could shaving (*ibid.*, 58-9).

It is always necessary to be careful not to spit in a mosque, although some traditions which are obviously closer to the old state of affairs say, "not in the direction of the *ḳibla*, only to the left!" (al-Bukhārī, *Ṣalāt*, *bābs* 33-4). The custom of taking off one's sandals in the mosque is found as early as the time of Abū ʿUbayd (2nd/8th century) (Yāḳūt, *Udabāʾ*, v, 272, 13-237) and according to Ibn al-Ḥādjdj's *Madkhal* (see below) is also mentioned by Abū Dāwūd. Al-Ṭabarī puts the custom back to the time of ʿUmar (i, 2408). That it is based on an old custom observed in sanctuaries is obvious (cf. on the history of the custom, F. Cumont, *Fouilles de Doura-Europos*, 1926, 60-1). The custom, however, seems not to have been always observed. In the 2nd/8th century in the Mosque of the Umayyads, the shoes were taken off only in the *maḳṣūra*, because the floor was covered with mats; but in 212/827 an Egyptian superintendent ordered that the mosque should only be entered with bare feet (*JA*, ser. 9, vii, 211, 217). The visitor on entering should place his right foot first and utter certain prayers with blessings on the Prophet and his family (which Muḥammad is said to have done!) and when he is inside perform two *rakʿas* (al-Bukhārī, *Ṣalāt*, *bāb* 47; *Tahadjdjud*, *bāb* 25; Muslim, *Ṣalāt al-musāfirīn*, trs. 12-13; al-Ṭabarī, iii, 2464, 2532). Certain regulations for decent conduct came into being, the object of which was to preserve the dignity of the house of divine service. Public announcements about strayed animals were not to be made, as the Bedouins did in their houses of assembly, and one should not call out aloud and thereby disturb the meditations of the worshippers (al-Bukhārī, *Ṣalāt*, *bāb* 83; Muslim, *Masādjid*, tr. 18; more fully in *Madkhal*, i, 19 ff.). One should put on fine clothes for the Friday service, rub oneself with oil and perfume oneself (al-Bukhārī *Djumʿa*, *bābs* 3, 6, 7, 19) as was also done with *ṭīb* for the *Ḥadjdj* (al-Bukhārī, *Ḥadjdj*, *bāb* 143).

A question which interested the teachers of morality was that of the admission of women to the mosques. That many did not desire their presence is evident from the *ḥadīth* that one cannot prevent them

as there is no *fitna* connected with it, but they must not be perfumed (Muslim, *Ṣalāt, bāb* 29; al-Bukhārī, *Djumʿa, bāb* 13; cf. *Chron. Mekka*, iv, 168). Other *ḥadīth*s say they should leave the mosques before the men (al-Nasāʾī, *Sahw, bāb* 77; cf. Abū Dāwūd, *Ṣalāt, bābs* 14, 48). Sometimes a special part of the mosque was railed off for them; for example, the governor of Mecca in 256/870 had ropes tied between the columns to make a separate place for women (*Chron. Mekka*, ii, 197 below). According to some, women must not enter the mosque during their menstruation (Abū Dāwūd, *Ṭahāra, bābs* 92, 103; Ibn Mādja, *Ṭahāra, bābs* 117, 123). In Medina at the present day, a wooden grille shuts off a place for women (al-Batanūnī, *al-Riḥla al-Ḥidjāziyya*, 240). At one time, the women stood at the back of the mosque here (Yāḳūt, *Udabāʾ*, vi, 400). In Jerusalem there were special *maḳṣūra*s for them (Ibn al-Faḳih, 100). Ibn al-Ḥādjdj would prefer to exclude them altogether and gives ʿĀʾisha as his authority for this.

Although the mosque became sacred, it could not quite cast off its old character as a place of public assembly, and in consequence, the mosque was visited for many other purposes than that of divine worship. Not only in the time of the Umayyads was considerable business done in the mosques (al-Ṭabarī, ii, 1118; cf. Lammens, *Ziād*, 98) which is quite in keeping with the *ḥadīth* (al-Bukhārī, *Ṣalāt, bābs* 70-1) which actually found it necessary to forbid the sale of wine in the mosque (*ibid.*, *bāb* 73), but Ibn al-Ḥādjdj records with disapproval that business was done in the mosques: women sit in the mosques and sell thread, in Mecca hawkers even call their wares in the mosques. The list given by this author gives one the impression of a regular market-place (*Madkhal*, ii, 54). Strangers could always sit down in a mosque and talk with one another (see al-Muḳaddasī, 205); they had the right to spend the night in the mosque; according to some, however, only if there was no other shelter available (*Madkhal*, ii, 43 below, 49 above; see below I.D.1b). It naturally came about that people also ate in the mosque; this was quite common, and regular banquets were even given in them (e.g. al-Maḳrīzī, iv, 67, 121-2; cf. in *Ḥadīth*: Ibn Mādja, *Atʿima, bābs* 24, 29; Aḥmad b. Ḥanbal, ii, 106, 10 from below). Ibn al-Ḥādjdj laments that in the Masdjid al-Aḳṣā people even threw the remains of their repast down in the mosque; animals were brought in, and beggars and water-carriers called aloud in them, etc. (*Madkhal*, ii, 53 ff.). It is even mentioned as a sign of the special piety of al-Shīrāzī (d. 476/1083) that he often brought food into the mosque and consumed it there with his pupils (Wüstenfeld, *Der Imâm Schâfiʿī*, iii, 298). Gradually, the mosques acquired greater numbers of residents (see below, I.D. 2b). In the Azhar Mosque, it was the custom with many to spend the summer nights there because it was cool and pleasant (al-Maḳrīzī, iv, 54). This was the state of affairs about 800/1398. Similar conditions still prevail in the mosques.

2. The mosque as a place of prayer. Friday mosques. As places for divine worship, the mosques are primarily "houses of which God has permitted that they be erected and that His name be mentioned in them" (sūra XXIV, 36), i.e. for His service demanded by the law, for ceremonies of worship (*manāsik*), for assemblies for prayer (*djamāʿat*) and other religious duties (cf. *Chron. Mekka*, iv, 164). The mosques were *maʿābid* (al-Maḳrīzī, iv, 117, 140). In Medina after a journey, the Prophet went at once to the mosque and performed two *rakʿa*s, a custom which was imitated by others and became the rule (al-Bukhārī, *Ṣalāt, bābs* 59-60; Muslim, *Ṣalāt al-musāfirīn*, tr. 11; al-Wāḳidī-Wellhausen, 412, 436). In this respect, the mosque played a part in public worship similar to that of the Kaʿba in Mecca at an earlier date and the Rabba sanctuary in Ṭāʾif. The daily *ṣalāt*s, which in themselves could be performed anywhere, became especially meritorious when they were performed in mosques, because they expressed adherence to the community. A *ṣalāt al-djamāʿa*, we are told, is twenty or twenty-five times as meritorious as the *ṣalāt* of an individual at home or in his shop (Muslim, *Masādjid*, tr. 42; Bukhārī, *Ṣalāt, bāb* 87; *Buyūʿ, bāb* 49). There are even *ḥadīth*s which condemn private *ṣalāt*s: "Those who perform the *ṣalāt* in their houses abandon the *sunna* of their Prophet" (Muslim, *Masādjid*, tr. 44; but cf. 48 and al-Bukhārī, *Ṣalāt, bāb* 52). If much rain falls, the believers may, however, worship in their houses (al-Bukhārī, *Djumʿa, bāb* 14). In this connection, a blind man was given a special *rukhṣa*; it is particularly bad to leave the mosque after the *adhān* (Muslim, *Masādjid*, tr. 45). It is therefore very meritorious to go to the mosque; for every step a man advances into the mosque, he receives forgiveness of sins, God protects him at the last judgment and the angels also assist him (Muslim, *Masādjid, bābs* 49-51; al-Bukhārī, *Ṣalāt, bāb* 87; *Adhān, bābs* 36, 37; *Djumʿa, bābs* 4, 18, 31; *Corpus iuris di Zaid b. ʿAlī*, nos. 48, 156, 983).

This holds especially of the Friday *ṣalāt* (*ṣalāt al-djumʿa*), which can only be performed in the mosque and is obligatory upon every free male Muslim who has reached years of discretion (cf. Juynboll, *Handbuch*, 86; Guidi, *Sommario del diritto Malechita*, i, 125-6. According to Ibn Hishām (290), this *ṣalāt*, which is distinguished by the *khuṭba*, was observed in Medina even before the *hidjra*. This is hardly probable and besides is not in agreement with other *ḥadīth*s (see al-Bukhārī, *Djumʿa, bāb* 11) but the origin of this divine worship, referred to in sūra LXII, 9, is obscure. The assemblies of the Jews and Christians on a particular day must have formed the model (cf. al-Bukhārī, *Djumʿa, bāb* 1). Its importance in the earlier period lay in the fact that all elements of the Muslim camp, who usually went to the tribal and particular mosques, assembled for it in the chief mosque under the leadership of the general. The chief mosque, which for this reason was particularly large, was given a significant name. They talk of *al-masdjid al-aʿẓam* (al-Ṭabarī, i, 2494; ii. 734, 1701, 1702, Kūfa; al-Balādhurī, 5; al-Ṭabarī, *Tafsīr*, xi, 21, centre; *ibid.* also *al-masdjid al-akbar*, Medina; cf. *al-masdjid al-kabīr*, al-Yaʿḳūbī, *Buldān*, 245) or *masdjid al-djamāʿa* (Yaḳūt, iii, 896, Fusṭāt; also al-Ṭabarī, ii, 1119; Ibn Ḳutayba, *Maʿārif*, ed. Wüstenfeld, 106). *masdjid li 'l-djumāʿa* (al-Maḳrīzī, iv, 4); *masdjid djāmiʿ* (al-Balādhurī, 289, Madāʾin; Yāḳūt, i, 643, 647, Baṣra); then *masdjid al-djamiʿ* (Yāḳūt, iii, 899; iv, 885; Ibn Ḥawḳal[1], 298, 315, 387; al-Yaʿḳūbī, 110, etc.). As an abbreviation we find also *al-djamāʿa* (Yāḳūt, i, 400; Ibn Baṭṭūṭa, iv, 343; cf. *masdjid al-djamāʿa*, al-Balādhurī, 348) and especially *djāmiʿ*. As the *khuṭba* was the distinguishing feature, we also find *masdjid al-khuṭba* (al-Maḳrīzī, iv, 44, 64, 87), *djāmiʿ al-khuṭba* (*ibid.*, iv. 55) or *masdjid al-minbar*, al-Muḳaddasī, 316, for *djāmiʿ*, 1. 8).

Linguistic usage varied somewhat in course of time with conditions. In the time of ʿUmar there was properly in every town only one *masdjid djāmiʿ* for the Friday service. But when the community became no longer a military camp and Islam replaced the previous religion of the people, a need for a number of mosques for the Friday service was bound to arise. This demanded mosques for the Friday service in the

country, in the villages on the one hand and several Friday mosques in the town on the other. This meant in both cases an innovation, compared with old conditions, and thus there arose some degree of uncertainty. The Friday service had to be conducted by the ruler of the community, but there was only one governor in each province; on the other hand, the demands of the time could hardly be resisted and, besides, the Christian converts to Islam had been used to a solemn weekly service.

As to the villages (*al-ḳurā*), ʿAmr b. al-ʿĀṣ in Egypt forbade their inhabitants to celebrate the Friday service for the reason just mentioned (al-Maḳrīzī, iv, 7). At a later period, then, the *khuṭba* was delivered exceptionally, without *minbar* and only with staff, until Marwān b. Muḥammad in 132/749-50 introduced the *minbar* into the Egyptian *ḳurā* also (*ibid.*, 8). Of a mosque in which a *minbar* had been placed, we are told *djuʿila masdjid*^an^ *li 'l-aʿyān* (al-Ṭabarī, i, 2451) and a village with a *minbar* is called *ḳarya djāmiʿa* (al-Bukhārī, *Djumʿa*, *bāb* 15; cf. *madīna djāmiʿa*, Ibn Ḥawḳal[1], 321), an idea which was regarded by al-Bukhārī (d. 256/870) as quite obvious. In introducing the *minbars* into the Egyptian villages, Marwān was apparently following the example of other regions. In the 4th/10th century, Ibn Ḥawḳal mentions a number of *manābir* in the district of Iṣṭakhr (1st edn., 182 ff.) and a few in the vicinity of Marw (*ibid.*, 316) and in Transoxania (*ibid.*, 378; cf. 384), and al-Muḳaddasī does the same for other districts of Persia (309, 317) and he definitely says that the *ḳurā* of Palestine are *dhāt manābir* (*ibid.*, 176; cf. al-Iṣṭakhrī[1], 58); al-Balādhurī (331) also uses the name *minbar* for a village mosque built in 239/853-4; in general, when speaking of the *ḳurā*, one talks of *manābir* and not of *djawāmiʿ* (cf. al-Iṣṭakhrī[1], 63). Later, however, the term *masdjid djāmiʿ* is used for a Friday mosque (Ibn Djubayr, 217). The conditions of primitive Islam are reflected in the teaching of the Ḥanafīs, who only permit the Friday service in large towns (cf. al-Māwardī, *al-Aḥkām al-sulṭāniyya*, ed. Enger, 177).

As to the towns, the Shāfiʿīs on the other hand have retained the original conditions, since they permit the Friday service in only one mosque in each town (see DJUMʿA and *op. cit.*, 178-8), but with the reservation that the mosque is able to hold the community. The distinction between the two rites was of importance in Egypt. When in 569/1173-4 Ṣalāḥ al-Dīn became supreme in Egypt, he appointed a Shāfiʿī chief *ḳāḍī* and the Friday service was therefore held only in the al-Ḥākim mosque, as the largest; but in 665/1266, al-Malik al-Ẓāhir Baybars gave the Ḥanafīs preference, and many mosques were therefore used as Friday mosques (al-Maḳrīzī, iv, 52 ff.; al-Suyūṭī, *Ḥusn al-muḥāḍara*, ii, 140; Quatremère, *Hist. Sult. Maml.* i/2, 39 ff). During the Umayyad period, the number of *djawāmiʿ* in the towns were still very small. The geographers of the 3rd/9th and 4th/10th centuries in their descriptions of towns as a rule mention only "the *djāmiʿ*". Ibn al-Faḳīh, *ca.* 290/903, sometimes says *masdjid djāmiʿ wa-minbar* (304-6, also *minbar* simply, 305). In keeping with the oldest scheme of town planning, it was very often in the middle of the town surrounded by the business quarters (Ibn Ḥawḳal[1], 298, 325; al-Muḳaddasī, 274-5, 278, 298, 314, 316, 375, 376, 413, 426, 427, etc.; Nāṣir-i Khusraw, ed. Schefer, 35, 41, 56) and the *dār al-imāra* was still frequently in the immediate vicinity of the chief mosque (Ibn Ḥawḳal[1], 298, 314; al-Muḳaddasī, 426).

Al-Iṣṭakhrī mentions as an innovation in Islam that al-Ḥadjdjādj built a *djāmiʿ* in al-Wāsiṭ on the west bank, although there was already one on the east bank (al-Iṣṭakhrī,[1] 82-3; cf. al-Yaʿḳūbī, *Buldān*, 322). Ibn Djubayr (*Riḥla*, 211) mentions only one *djāmiʿ* in Kūfa, called *Masdjid al-Kūfa* by Ibn al-Faḳīh, although he also mentions other mosques (173; cf. 174, 183 and al-Muḳaddasī, 116). In Baṣra, where al-Yaʿḳūbī (278/891) already mentions 7,000 mosques (*Buldān*, 361), al-Muḳaddasī (375/985) gives 3 *djawāmiʿ* (117). In Sāmarrāʾ, among many mosques, there was one *djāmiʿ* (al-Yaʿḳūbī, *Buldān*, 258, 259), which was later replaced by another (*ibid.*, 260-1); al-Mutawakkil also built one outside the original town (*ibid.*, 265; see also P. Schwarz, *Die ʿAbbāsiden-Residenz Sāmarrā*, 1909, 32). In Baghdād, al-Yaʿḳūbī mentions only one *djāmiʿ* for the eastern town and for the western (*Buldān*, 240, 245, 251, 253; the almost contemporary Ibn Rusta just mentions the old western town and its *djāmiʿ*, 109) although he gives the fantastic figures of 15,000 mosques in the east town (*ibid.*, 254) and 30,000 in the west (or in the whole town?, *ibid.*, 250). After 280/893-4 there was added the *djāmiʿ* of the eastern palace of the caliph (Mez, *Renaissance*, 388, Eng. tr. 410, quoting al-Khaṭīb al-Baghdādī, *Taʾrīkh Baghdād*; a private *djāmiʿ* of Hārūn al-Rashīd in the *Bustān Umm Mūsā* is mentioned by Ibn al-Ḳifṭī, *Taʾrīkh al-Ḥukamāʾ*, ed. Lippert, 433 below). These three *djawāmiʿ* are mentioned about 340/951 by al-Iṣṭakhrī (84), who also mentions one in the suburb of Kalwādhā. Ibn Ḥawḳal in 367/977 mentions the latter and also the Djāmiʿ al-Barāthā (164-5, of 329/940-1; Mez, *loc. cit.*), a fifth was added in 379/989, a sixth in 383/993 (Mez, 389, Eng. tr. 410-11); thus al-Khaṭīb al-Baghdādī in 460 (1058 gives 4 for West Baghdād, 2 for the east town (cf. Le Strange, *Baghdad*, 324). Ibn Djubayr in 581/1185 gives in the east town 3, and 11 *djawāmiʿ* (*Riḥla*, 228-9) for the whole of Baghdād. For Cairo, al-Iṣṭakhrī gives two *djāmiʿ*s: the ʿAmr and Ṭūlūn Mosques (49) besides that in al-Ḳarāfa, which was regarded as a separate town (cf. Ibn Rusta [*ca.* 290/903], 116-17). Al-Muḳaddasī, who wrote (375/985) shortly after the Fāṭimid conquest, mentions the ʿAmr mosque (al-Azhar), also one in al-Djazīra, in Djīza and in al-Ḳarāfa (198-200, 209; the *djāmiʿ* in al-Djazīra, also Djāmiʿ Miḳyās [cf. al-Maḳrīzī, iv, 75] is mentioned in an inscription of the year 485/1092; see van Berchem, *CIA*, i, no. 39). As these places were all originally separate towns, the principle was not abandoned that each town had only one *djāmiʿ*. The Fāṭimids, however, extended the use of Friday mosques and, in addition to those already mentioned, used the Djāmiʿ al-Ḥākim, al-Maḳs and Rāshida (al-Maḳrīzī, iv, 2-3). Nāṣir-i Khusraw in 439/1047 mentions in one passage the *djawāmiʿ* of Cairo, in another seven for Miṣr and fifteen in all (ed. Schefer, 134-5, 147). This was altered in 569/1173-4 by Ṣalāḥ al-Dīn (see above), but the quarters, being still regarded as separate towns, retained their own Friday mosques (cf. for the year 607/1210-11 in al-Ḳarāfa, al-Maḳrīzī, iv, 86).

After the Friday worship in Egypt and Syria was freed from restriction, the number of *djawāmiʿ* increased very much. Ibn Duḳmāḳ (*ca.* 800/1397-8) gives a list of only eight *djawāmiʿ* in Cairo (ed. Vollers, 59-78), but this list is apparently only a fragment (in all, he mentions something over twenty in the part of his book that has survived); al-Maḳrīzī (d. 845/1442) gives 130 *djawāmiʿ* (iv, 2 ff.). In Damascus, where Ibn Djubayr still spoke of "the *djāmiʿ*", al-Nuʿaymī (d. 927/1521) gives twenty *djawāmiʿ* (*JA*, ser. 9, vii, 231 ff.), and according to Ibn Baṭṭūṭa, there were in all the villages in the region of Damascus *masādjid djāmiʿa* (i, 236). The word *djāmiʿ* in al-Maḳrīzī always

means a mosque in which the Friday worship was held (vi, 76, 115 ff.), but by his time this meant any mosque of some size. He himself criticises the fact that since 799/1396-7 the *ṣalāt al-djumʿa* was performed in al-Aḳmar, although another *djāmiʿ* stood close beside it (iv, 76; cf. also 86).

The great spread of Friday mosques was reflected in the language. While inscriptions of the 8th/14th century still call quite large mosques *masdjid*, in the 9th/15th most of them are called *djāmiʿ* (cf. on the whole question, van Berchem, *CIA*, i, 173-4); and while now the *madrasa* [*q.v.*] begins to predominate and is occasionally also called *djāmiʿ*, the use of the word *masdjid* becomes limited. While, generally speaking, it can mean any mosque (e.g. al-Maḳrīzī, iv, 137, of the Muʾayyad mosque), it is more especially used of the smaller unimportant mosques. While Ibn Duḳmāḳ gives 472 *masādjid* in addition to the *djawāmiʿ*, *madāris*, etc., al-Maḳrīzī only gives nineteen, not counting al-Ḳarāfa, which probably only means that they were of little interest to him. *Djāmiʿ* is now on the way to become the regular name for a mosque of any size, as is now the usage, in Egypt and Turkey at least. In Ibn al-Ḥādjdj (d. 737/1336-7), *al-djawāmiʿ* is occasionally used in this general meaning in place of *al-masādjid* (*Madkhal*, ii, 50). Among the many Friday mosques, one was usually distinguished as the chief mosque; we therefore find the expression *al-djāmiʿ al-aʿẓam* (Ibn Baṭṭūṭa, ii, 54, 94; cf. the older expression *al-masdjid al-aʿẓam*, in *ibid.*, ii, 53). The principal *djāmiʿ* decided on such questions as the beginning and ending of the fast of Ramaḍān (*Madkhal*, ii, 68).

3. Other religious activities in the mosque. "The mentioning of the name of God" in the mosques, was not confined only in the official ritual ceremonies. Even in the time of the Prophet, we are told that he lodged Thaḳafī delegates in the mosque so that they could see the rows of worshippers and hear the nightly recitation (al-Wāḳidī-Wellhausen, 382). Although this story (which is not given in Ibn Hishām, 916) may simply be a reflection of later conditions, the recitation of the Ḳurʾān must have come to be considered an edifying and pious work at quite an early date. In the time of al-Muḳaddasī, the *ḳurrāʾ* of Naysābūr used to assemble on Fridays in the *djāmiʿ* in the early morning and recite till the *ḍuḥā*, (328), and the same author tells us that in the Mosque of ʿAmr in Egypt the *aʾimmat al-ḳurrāʾ* sat in circles every evening and recited (205). In the time of Ibn Djubayr, there were recitations of the Ḳurʾān in the Umayyad mosque after the *ṣalāt al-ṣubḥ* and every afternoon after the *ṣalāt al-ʿaṣr* (*Riḥla*, 271-2). Besides the recitation of the Ḳurʾān, there were praises of God, etc., all that which is classed as *dhikr*, and which was particularly cultivated by Ṣūfism. This form of worship also took place in the mosque. The *ahl al-tawḥīd wa 'l-maʿrifa* formed *madjālis al-dhikr*, and assembled in the mosques (al-Makkī, *Ḳūt al-ḳulūb*, i, 152). In the Mosque of the Umayyads and other mosques of Damascus, *dhikr* was held during the morning on Friday (al-Maḳrīzī, iv, 49). In the Masdjid al-Aḳṣā the Ḥanafīs held *dhikr*, and recited at the same time from a book (al-Muḳaddasī, 182). In Egypt, Aḥmad b. Ṭūlūn and Khumāwarayh allowed twelve men quarters in a chamber near the minaret in order to praise God, and during the night, four of them took turns to praise God with recitations of the Ḳurʾān and with pious *ḳaṣīdas*. From the time of Ṣalāḥ al-Dīn, an orthodox *ʿaḳīda* was recited by the *muʾadhdhins* in the night (al-Maḳrīzī, iv, 48). Ibn al-Ḥādjdj demands that the recitation of the Ḳurʾān aloud should take place in a mosque for the special purpose (*masdjid madjhūr*), as otherwise pious visitors are disturbed (*Madkhal*, ii, 53, 67). Mosques and, in particular, mausoleums, had as a rule regularly-appointed reciters of the Ḳurʾān. In addition there was, e.g. in Hebron and in a mosque in Damascus, a *shaykh* who had to read al-Bukhārī (or also Muslim) for three months (Sauvaire, *Hist. Jérus. et Hébr.*, 17; *JA*, ser. 9, iii. 261). In Tunis, al-Bukhārī was read daily in a hospital (al-Zarkashī, tr. Fagnan, *Rec. Soc. Arch. Constantine* [1894], 188).

Sermons were not only delivered at the *ṣalāt al-djumʿa*. In ʿIrāḳ, even in al-Muḳaddasī's time, one was preached every morning, according to the *sunna* of Ibn ʿAbbās (130), it was said. Ibn Djubayr, in the Niẓāmiyya in Baghdād, heard the Shāfiʿī *raʾīs* preach from the *minbar* on Friday after the *ʿaṣr*. His sermon was accompanied by the skilled recitations of the *ḳurrāʾ* who sat on chairs; these were over twenty in number (Ibn Djubayr, 219-22). In the same way, the calls of the *muʾadhdhins* to prayer to the Friday *khuṭba* were delivered to a musical accompaniment (see below, I. H. 4). The unofficial sermons, which moreover were not delivered in mosques alone, were usually delivered by a special class, the *ḳuṣṣāṣ* (pl. of *ḳāṣṣ*) (on these, cf. Goldziher, *Muh. Stud.*, ii, 161 ff.; Mez, *Die Renaissance des Islâms*, 314 ff.; and ḲĀṢṢ). The *ḳuṣṣāṣ*, who delivered edifying addresses and told popular stories, were early admitted to the mosques.

Tamīm al-Dārī is said to have been the first of these; in Medina in the caliphate of ʿUmar before the latter's decease, he used to deliver his orations at the Friday *ṣalāt*, and under ʿUmar he was allowed to talk twice a week in the mosque; in the reign of ʿAlī and of Muʿāwiya the *ḳuṣṣāṣ* were employed to curse the other side (al-Maḳrīzī, iv, 16-7). In the Mosque of ʿAmr in Cairo, by the year 38/658-9 or 39/659-60 a *ḳāṣṣ* was appointed, named Sulaym b. ʿItr al-Tudjībī, who was also *ḳāḍī* (*ibid.*, iv, 17, wrongly: Sulaymān; al-Kindī, *Governors and judges*, ed. Guest, 303-4). There are other occurrences of the combination of the two offices (Ibn Ḥudjayra [d. 83/702], al-Kindī, 317; Khayr b. Nuʿaym in the year 120/738, *ibid.*, 348; cf. al-Suyūṭī, *Ḥusn al-muḥāḍara*, i, 131, Djabr, according to Thawba b. Nimr, *Ḥusn*, i, 130 below; Ibrāhīm b. Isḥāḳ al-Ḳārī [d. 204], Kindī, 427; see also al-Maḳrīzī, iv, 18), which shows that the office of *ḳāṣṣ* was quite an official one. There is also evidence of the employment of *ḳuṣṣāṣ* in the mosques of ʿIrāḳ in the ʿAbbāsid period (Yāḳūt, *Udabāʾ*, iv, 268, v, 446). The *ḳāṣṣ* read from the Ḳurʾān standing and then delivered an explanatory and edifying discourse, the object of which was to instil the fear of God into the people (al-Maḳrīzī, iv, 18). Under the Fāṭimids also, the *ḳuṣṣāṣ* were appointed to the mosques; for example in 403/1012-13 the *imām* undertook the office in the Mosque of ʿAmr (al-Maḳrīzī, iv, 18, below) and the rulers had also a *ḳāṣṣ* in the palace. The *ḳuṣṣāṣ* were called *aṣḥāb al-karāsī*, because they delivered their discourses on the *kursī* (al-Makkī, *Ḳūt al-ḳulūb*, i, 152; Ibn al-Ḥādjdj, *Madkhal*, i, 159; cf. al-Maḳrīzī, iv, 121). Their discourse was called *dhikr* or *waʿẓ* or *mawʿiẓa*, whence the *ḳāṣṣ* was also called *mudhakkir* (al-Muḳaddasī, 205) or *wāʿiẓ*. Specimens of their discourses are given by Ibn ʿAbd Rabbihi (*al-ʿIḳd al-farīd*, Cairo 1321/1903, i, 294 ff.). It was not only the appointed officials who delivered such discourses in the mosque. Ascetics made public appearances in various mosques and collected interested hearers around them (cf. e.g. al-Maḳrīzī, iv, 135). In the Djāmiʿ al-Ḳarāfa, a whole society, the Banū Djawharī, delivered *waʿẓ* discourses from a *kursī* for three

months on end; their servant collected money in a begging-bowl during the discourse, and the *shaykh* distributed some of it among the poor (*ibid.*, iv, 121).

The *kaṣaṣ* was completely taken over by popular Ṣūfism and later writers would hardly reckon, as al-Makkī does, the "story-tellers" among the *mutakallimūn* (*Ḳūt al-ḳulūb*, i, 152). The whole system degenerated to trickery and charlatanry of all kinds, as may be seen in the *Maḳāma* [*q.v.*] literature (cf. thereon Yāḳūt, *Udabāʾ*, vi, 167-8, and see also Mez and Goldziher, *op. cit.*). Al-Maḳrīzī therefore distinguishes between *al-ḳaṣaṣ al-khāṣṣa*, the regular and seemly edifying discourse in the mosque, and *al-ḳaṣaṣ al-ʿāmma*, which consisted in the people gathering round all kinds of speakers, which is *makrūh* (iv, 17). Others also have recorded their objections to the *ḳuṣṣāṣ*. Ibn al-Ḥādjdj utters a warning against them and wants to forbid their activities in the mosque completely, because they deliver "weak" narratives (*Madkhal*, i, 158-9; ii, 13-14, 50). He says that Ibn ʿUmar, Mālik and Abū Dāwūd rejected them and ʿAlī ejected them from the *masdjid* of Baṣra. It is of little significance that al-Muʿtaḍid in 284/897 forbade people to gather round them, for he issued a similar interdict against the *fuḳahāʾ* and the reasons were evidently political (al-Ṭabarī, iii, 2165); it was for political reasons also, but with a very different motive, that ʿAḍud al-Dawla forbade their appearing publicly in Baghdād because they increased the tension between Sunnīs and Shīʿis (Mez, *op. cit.*, 319). As late as 580/1184, the *wuʿʿāẓ* still flourished in the mosques of Baghdād, as is evident from the *Riḥla* of Ibn Djubayr (219 ff., 224), and in the 9th/15th century there was in the Azhar mosque a *madjlis al-waʿẓ* as well as a *ḥalaḳ al-dhikr* (al-Maḳrizī, iv, 54).

When Ibn al-Ḥādjdj denounces speaking aloud in the mosque, it is in the interest of the pious visitors who are engaged in religious works and meditation. *Iʿtikāf* [*q.v.*], retirement to a mosque for a period, was adopted into Islām from the older religions.

The word *ʿakf* means in the Ḳurʾān the ceremonial worship of the object of the cult (sūra VII, 134; XX, 93, 97; XXI, 53; XXVI, 71; cf. al-Kumayt, *Hāshimiyyāt*, ed. Horovitz, 86, 15) and also the ritual stay in the sanctuary, which was done for example in the Meccan temple (sūra II, 119; XXII, 25). In this connection, it is laid down in the Ḳurʾān that in the month of Ramaḍān believers must not touch their wives "while ye pass the time in the mosques" (*ʿākifūn fi 'l-masādjid*, sūra II, 183), an expression which shows, firstly, that there were already a number of mosques in the lifetime of the Prophet, and secondly, that these had already to some extent taken over the character of the temple. The connection with the early period is evident from a *ḥadīth*, according to which the Prophet decides that ʿUmar must carry out a vow of *iʿtikāf* for one night in the Masdjid al-Ḥarām made in the Djāhiliyya (al-Bukhārī, *Iʿtikāf*, *bāb* 5, 15-16; *Farḍ al-khums*, *bāb* 19; *Maghāzī*, *bāb* 54; *Aymān wa 'l-nudhūr*, *bāb* 29). It is completely in keeping with this that the Prophet, according to the *ḥadīth*, used to spend ten days of the month of Ramaḍān in *iʿtikāf* in the mosque of Medina (al-Bukhārī, *Iʿtikāf*, *bābʿ*; *Faḍl Laylat al-ḳadar*, *bāb* 3), and in the year in which he died, as many as twenty days (*ibid.*, *Iʿtikāf*, *bāb* 17). During this period, the mosque was full of booths of palm branches and leaves in which the *ʿākifūn* lived (*ibid.*, *bāb* 13; cf. 6, 7). The Prophet only went to his house for some very special reason (*ibid.*, *bāb* 3). This custom was associated with the ascetism of the monks. The faithful were vexed, when on one occasion he received Ṣafiyya in his booth and chatted for an hour with her (al-Bukhārī, *Farḍ al-khums*, *bāb* 4; *Iʿtikāf*, *bāb* 8, 11, 12). According to another tradition, his *iʿtikāf* was broken on another occasion by his wives putting up their tents beside him, and he postponed his *iʿtikāf* till Shawwāl (al-Bukhārī, *Iʿtikāf*, *bāb*s 6, 7, 14, 18). According to Zayd b. ʿAlī, the *iʿtikāf* can only be observed in a chief mosque (*djāmiʿ*) (*Corpus iuris di Zaid b. ʿAlī*, no. 447). During the early period, it was one of the initiatory rites for new converts. In the year 14/1635 ʿUmar ordered the retreat (*al-ḳiyām*) in the mosques during the month of Ramaḍān for the people of Medina and the provinces (al-Ṭabarī, i, 2377). The custom persisted and has always been an important one among ascetics. "The man who retires for a time to the mosque devotes himself in turn to *ṣalāt*, recitation of the Ḳurʾān, meditation, *dhikr*, etc." says Ibn al-Ḥādjdj (*Madkhal*, ii, 50). There were pious people who spent their whole time in a mosque (*aḳāmū fīhi*; al-Maḳrīzī, iv, 87, 97); of one we were told that he spent his time in the *manāra* of the Mosque of ʿAmr (*iʿtakafa*, *ibid.*, 44). Al-Samhūdī says that during the month of Ramaḍān, he spent day and night in the mosque (Wüstenfeld, *Medina*, 95). Saʿd al-Dīn (d. 644/1246-7) spent the month of Ramaḍān in the Mosque of the Umayyads without speaking (Ibn Abī Uṣaybiʿa, ii, 192). Nocturnal vigils in the mosque very early became an established practice in Islam. According to *Ḥadīth*, the Prophet frequently held nocturnal *ṣalāt*s in the mosque with the believers (al-Bukhārī, *Djumʿa*, *bāb* 29), and by his orders ʿAbd Allāh b. Unays al-Anṣārī came from the desert for twenty-three successive nights to pass the night in his mosque in rites of worship (Ibn Ḳutayba, *Maʿārif*, ed. Wüstenfeld, 142-3). Out of this developed the *tahadjdjud* [*q.v.*] *ṣalāt*, particularly recommended in the law and notably the *tarāwīḥ ṣalāt*s [*q.v.*]. In Dihlī on these occasions, women singers actually took part (Ibn Baṭṭūṭa, iii, 155).

During the nights of the month of Ramaḍān, there were festivals in the mosques, and on other occasions also, such as the New Year, sometimes at the new moon, and in the middle of the month. The mosque on these occasions was illuminated: there was eating and drinking; incense was burned and *dhikr* and *ḳirāʾa* performed.

The Friday *ṣalāt* was particularly solemn in Ramaḍān, and in the Fāṭimid period, the caliph himself delivered the *khuṭba* (see al-Maḳrīzī, ii, 345 ff.; Ibn Taghrībirdī, ii/1, ed. Juynboll, 482-6, ii/2, ed. Popper, 331-3). The mosques associated with a saint had and still have their special festivals on his *mawlid* [*q.v.*]; they also are celebrated with *dhikr*, *ḳirāʾa*, etc. (cf. Lane, *Manners and customs*, chs. xxiv ff.). The saint's festivals are usually local and there are generally differences in the local customs. In the Maghrib, for example, in certain places the month of Ramaḍān is opened with a blast of trumpets from the *manābir* (*Madkhal*, ii, 69).

The mosque thus on the whole took over the role of the temple. The rulers from ʿUmar onwards dedicated gifts to the Kaʿba (Ibn al-Faḳīh, 20-1, and *BGA*, iv, *Indices*, *glossarium*, s.v. *shamsa*), and, as in other sanctuaries, we find women vowing children to the service of the mosque (al-Bukhārī, *Ṣalāt*, *bāb* 74; al-Maḳrīzī, iv, 20). *Ṭawāf* was performed, as at the Kaʿba, in mosques with saints' tombs as is still done, e.g. in Hebron; Mudjīr al-Dīn sees a pre-Islamic custom in this (Sauvaire, *Hist. Jérus. et Hébron*, 5). Especially important business was done here. In times of trouble, the people go to the mosque to pray for help, for example during drought, for which there is

a special *ṣalāt* (which however usually takes place on the *muṣallā*) [see ISTISḲĀʾ], in misfortunes of all kinds (e.g. Wüstenfeld, *Medina*, 19-20; al-Maḳrīzī, iv, 57); in time of plague and pestilence, processions, weeping and praying with Ḳurʾāns uplifted, were held in the mosques or on the *muṣallā*, in which even Jews and Christians sometimes took part (Ibn Tag̲h̲rībirdī, ii/2, ed. Popper, 67; Ibn Baṭṭūṭa, i, 243-4, cf. Quatremère, *Hist. Sult. Maml.*, ii/1, 35, 40; ii/2, 199) or for a period a sacred book like al-Buk̲h̲ārī's *Ṣaḥīḥ* was recited (Quatremère, *op. cit.* ii/2, 35; al-D̲j̲abartī, *Merveilles biographiques*, French tr., vi, 13). In the courtyards of the mosques in Jerusalem and Damascus in the time of Ibn Baṭṭūṭa, solemn penance was done on the day of ʿArafa (i, 243-4), an ancient custom which had already been introduced into Egypt in the year 27/647-8 by ʿAbd al-ʿAzīz b. Marwān (*ḳuʿūd* after the *ʿaṣr*; cf. al-Kindī, *Wulāt*, 50). Certain mosques were visited by barren women (Wüstenfeld, *Medina*, 133). An oath is particularly binding if it is taken in a mosque (cf. J. Pedersen, *Der Eid bei den Semiten*, 144); this is particularly true of the Kaʿba, where written covenants were also drawn up to make them more binding (*ibid.*, 143-4, *Chron. Mekka*, i, 160-1). It is in keeping with this idea of an oath that Jews who had adopted Islam in Cairo had to take oaths in a synagogue which had become a mosque (al-Maḳrīzī, iv, 265). The contract of matrimony (*ʿaḳd al-nikāḥ*) also is often concluded in a mosque (Santillana, *Il Muḫtaṣar*, ii, 548; *Madk̲h̲al*, ii, 72 below; Snouck Hurgronje, *Mekka*, ii, 163-4), and the particular form of divorce which is completed by the *liʿān* [*q.v.*] takes place in the mosque (al-Buk̲h̲ārī, *Ṣalāt*, *bāb* 44; cf. Pedersen, *Der Eid*, 114).

It is disputed whether a corpse may be brought into the mosque and the *ṣalāt al-d̲j̲ināza* performed there. According to one *ḥadīt̲h̲*, the bier of Saʿd b. Abī Waḳḳāṣ was taken into the mosque at the request of the Prophet's widow and the *ṣalāt* held there. Many disapproved of this, but ʿĀʾis̲h̲a pointed out that the Prophet had done this with the body of Suhayl b. Bayḍāʾ (Muslim, *D̲j̲anāʾiz*, tr. 34; cf. also Ibn Saʿd, i/1, 14-15). The discussion on this point is not unconnected with the discussions regarding the worship of tombs. In theory, this is permitted by al-S̲h̲āfiʿī, while the others forbid it (see Juynboll, *Handbuch*, 170; I. Guidi, *Il Muḫtaṣar*, i, 151). The matter does not seem to be quite clear, for Ḳuṭb al-Dīn says that only Abū Ḥanīfa forbids it, but he himself thought that it might be allowable on the authority of a statement by Abū Yūsuf (*Chron. Mekka*, iii, 208-10). In any case, it was a very general practice to allow it, as Ḳuṭb al-Dīn also points out. ʿUmar conducted the funeral *ṣalāt* for Abū Bakr in the Mosque of the Prophet and ʿUmar's own dead body was brought there; later it became a general custom to perform the ceremony in Medina close to the Prophet's tomb and in Mecca at the door of the Kaʿba; some even made a sevenfold *ṭawāf* with the corpse around the Kaʿba. This was for a time forbidden by Marwān b. al-Ḥakam and later by ʿUmar b. ʿAbd al-Azīz (Ḳuṭb al-Dīn, *loc. cit.*, Wüstenfeld, *Medina*, 77). The custom was very early introduced into the Mosque of ʿAmr (al-Maḳrīzī, iv, 7, 1 ff.). That later scholars often went wrong about the prohibition is not at all remarkable; for it is not at all in keeping with the ever-increasing tendency to found mosques at tombs. Even Ibn al-Ḥād̲j̲d̲j̲, who was anxious to maintain the prohibition, is not quite sure and really only forbids the loud calling of the *ḳurrāʾ*, *d̲h̲ākirūn*, *mukabbirūn* and *murīdūn* on such occasions (*Madk̲h̲al*, ii, 50-1, 64, 81). When a son of Sultan al-Muʾayyad died and was buried in the eastern *ḳubba* of the Muʾayyad mosque, the *k̲h̲aṭīb* delivered a *k̲h̲uṭba* and conducted the *ṣalāt* thereafter and the *ḳurrāʾ* recited for a week at the grave, while the *amīrs* paid their visits to the grave (al-Maḳrīzī, iv, 240, 2 ff.). In Persia, it was the custom for the family of the deceased to sit in the mosque for three days after the death and receive visits of condolence (al-Muḳaddasī, 440 below).

4. Mosques as objects of pilgrimage. As soon as the mosque became a regular sanctuary, it became the object of pious visits. This holds especially true of the memorial mosques associated with the Prophet and other saints. Among them, three soon became special objects of pilgrimage. In a *ḥadīt̲h̲* the Prophet says "One should only mount into the saddle to visit three mosques: al-Masd̲j̲id al-Ḥarām, the Mosque of the Prophet and al-Masd̲j̲id al-Aḳṣā" (al-Buk̲h̲ārī, *Faḍl al-ṣalāt fī masd̲j̲id Makka wa 'l-Madīna*, *bāb* 16; *D̲j̲azāʾ al-ṣayd*, *bāb* 26; *Ṣawm*, *bāb* 67; Muslim, *Ḥad̲j̲d̲j̲*, tr. 93; *Chron. Mekka*, i, 303). This *ḥadīt̲h̲* reflects a practice which only became established at the end of the ʿUmayyad period. The pilgrimage to Mecca had been made a duty by the prescription of the *ḥad̲j̲d̲j̲* in the Ḳurʾān. The pilgrimage to Jerusalem was a Christian custom which could very easily be continued, on account of the significance of *al-Masd̲j̲id al-Aḳṣā* in the Ḳurʾān. This custom became particularly important when ʿAbd al-Malik made it a substitute for the pilgrimage to Mecca (al-Yaʿḳūbī, *Taʾrīk̲h̲*, ii, 311). Although this competition did not last long, the significance of Jerusalem was thereby greatly increased. Pilgrimage to Medina developed out of the increasing veneration for the Prophet. In the year 140/757-8, Abū D̲j̲aʿfar al-Manṣūr on his *ḥad̲j̲d̲j̲* visited the three sanctuaries (al-Ṭabarī, iii, 129) and this became a very usual custom. Mecca and Medina, however, still held the preference. Although those of Mecca and Jerusalem were recognised as the two oldest (the one is said to be 40 years older than the other; Muslim, *Masād̲j̲id*, tr. 1; *Chron. Mekka*, i, 301), the Prophet is however reputed to have said "A *ṣalāt* in this mosque is more meritorious than 1,000 *ṣalāts* in others, even in *al-Masd̲j̲id al-Ḥarām*" (al-Buk̲h̲ārī, *Faḍl al-ṣalāt fī masd̲j̲id Makka wa 'l-Madīna*, *bāb* 1; Muslim, Ḥad̲j̲d̲j̲, tr. 89; *Chron. Mekka*, i, 303). The *ḥadīt̲h̲* is aimed directly against Jerusalem and therefore probably dates from the Umayyad period. According to some, it was pronounced because someone had commended performing the *ṣalāt* in Jerusalem, which the Prophet was against (Muslim, *loc. cit.*; al-Wāḳidī-Wellhausen, 349). The three mosques, however, retained their pride of place (Ibn K̲h̲aldūn, *Muḳaddima*, *faṣls* 4, 6; Ibn al-Ḥād̲j̲d̲j̲, *Madk̲h̲al*, ii, 55), and as late as 662/1264 we find Baybars founding *awḳāf* for pilgrims who wished to go on foot to Jerusalem (Quatremère, *Hist. Sult. Maml.*, i/1, 248).

Although these three mosques officially hold a special position, others also are highly recommended, e.g. the mosque in Ḳubāʾ [see AL-MADĪNA]. A *ṣalāt* in this mosque is said to be as valuable as an *ʿumra* or two visits to the mosque in Jerusalem (al-Diyarbakrī, *K̲h̲amīs*, i, 381-2). Attempts were also made to raise the mosque of Kūfa to the level of the three. ʿAlī is said to have told someone who wanted to make a pilgrimage from Kūfa to Jerusalem that he should stick by the mosque of his native town, it was "one of the four mosques" and two *rakʿas* in it were equal to ten in others (Ibn al-Faḳīh, 173-4; Yāḳūt, *Muʿd̲j̲am*, iv, 325); in another tradition, *ṣalāts* in the provincial mosques are said to be generally worth as much as the pilgrimage (al-Maḳrīzī, iv, 4), and traditions arose about the special blessings associated at definite times

with different holy places of Islam (al-Muḳaddasī, 183) and especially about their superior merits (Ibn al-Faḳīh, 174). The Meccan sanctuary, however, always retained first place, which was marked by the *ḥadjdj*. It was imitated by al-Mutawakkil in Sāmarrā᾿: he built a Kaᶜba as well as a Minā and an ᶜArafa there and made his *amīr*s perform their *ḥadjdj* there (al-Muḳaddasī, 122).

D. The component parts and furnishings of the mosque.

1. The development of the edifice. Except in the case of Mecca the earliest mosques as described above (B. 1) were at first simply open spaces marked off by a *ẓulla*. The space was sometimes, as in al-Fusṭāṭ, planted with trees and usually covered with pebbles, e.g. in Medina (Muslim, *Ḥadjdj*, tr. 95; al-Balādhurī, 6) and Fusṭāṭ (al-Maḳrīzī, iv, 8; Ibn Duḳmāḳ, iv, 62; Ibn Taghrībirdī, i, 77), which was later introduced in Baṣra and Kūfa, the courtyards of which were otherwise dusty (al-Balādhurī, 277, 348). These conditions could only last so long as the Arabs retained their ancient customs as a closed group in their simple camps. The utilisation of churches was the first sign of a change and was rapidly followed by a mingling with the rest of the population and the resulting assimilation with older cultures.

ᶜUmar made alterations in the mosques in Medina and in Mecca also. He extended the Mosque of the Prophet by taking in the house of ᶜAbbās; but like the Prophet, he still built with *labin*, palm trunks and leaves and extended the booths (al-Bukhārī, *Ṣalāt*, *bāb* 62; al-Balādhurī, 6). In Mecca also, his work was confined to extending the area occupied by the mosque. He bought the surrounding houses and took them down and then surrounded the area with a wall to the height of a man; the Kaᶜba was thus given its *finā᾿* like the mosque in Medina (al-Balādhurī, 46; *Chron. Mekka*, i, 306; Wüstenfeld, *Medina*, 68). ᶜUthmān also extended these two mosques, but introduced an important innovation in using hewn stone and plaster (*djaṣṣ*) for the walls and pillars. For the roof he used teak (*sādj*). The booths, which had been extended by ᶜUmar, were replaced by him by pillared halls (*arwiḳa*, sing. *riwāḳ*) and the walls were covered with plaster (al-Bukhārī, *Ṣalāt*, *bāb* 62; al-Balādhurī, 46; Wüstenfeld, *Medina*, 70). Saᶜd b. Abī Waḳḳāṣ is said to have already taken similar steps to relieve the old simplicity of the barely-equipped mosque in Kūfa. The *ẓulla* consisted of pillars of marble adorned in the style of Byzantine churches (al-Ṭabarī, i, 2489; Yāḳūt, iv, 324).

This was little in keeping with the simple architecture of the original town, for Baṣra and Kūfa had originally been built of reeds and only after several great fires were they built of *labin* (see above, I. B. 1; cf. Ibn Ḳutayba, *Maᶜārif*, ed. Wüstenfeld, 279). As to Ḳūfa, Saᶜd by ᶜUmar's orders extended the mosque so that it became joined up with the *Dār al-Imāra*. A Persian named Rūzbih b. Buzurdjmihr was the architect for this. He used fired bricks (*ādjurr*) for the building, which he brought from Persian buildings, and in the mosque he used pillars which had been taken from churches in the region of Ḥīra belonging to the Persian kings; these columns were not erected at the sides but only against the *ḳibla* wall. The original plan of the mosque was therefore still retained, although the pillared hall, which is identical with the *ẓulla* already mentioned (200 *dhirā*ᶜs broad), replaced the simple booth, and the materials were better in every way (al-Ṭabarī, i, 2491-2, 2494). Already under the early caliphs we can therefore note the beginnings of the adoption of a more advanced architecture.

These tendencies were very much developed under the Umayyads. Even as early as the reign of Muᶜāwiya, the mosque of Kūfa was rebuilt by his governor Ziyād. He commissioned a pagan architect, who had worked for Kisrā, to do the work. The latter had pillars brought from al-Ahwāz, bound them together with lead and iron clamps to a height of 30 *dhirā*ᶜs and put a roof on them. Similar halls, built of columns (here like the old booth in Medina called *ṣuffa*: al-Ṭabarī, i, 2492, 14; but also *ẓulla*, plur. *ẓilāl*: al-Ṭabarī, ii, 259-60) were added by him on the north, east and western wall. Each pillar cost him 18,000 *dirhams*. The mosque could now hold 60,000 instead of 40,000 (idem, i, 2492, 6 ff., cf. 2494, 7; Yāḳūt, iv, 324, 1 ff.; al-Balādhurī, 276). Al-Ḥadjdjādj also added to the mosque (Yāḳūt, iv, 325-6). Ziyād did similar work in Baṣra. Here also he extended the mosque and built it of stone (or brick) and plaster and with pillars from al-Ahwāz, which were roofed with teak. We are told that he made *al-ṣuffa al-muḳaddima*, i.e. the *ḳibla* hall, with 5 columns. This seems to show that the other sides also—as in Kūfa—had pillared halls. He erected the *Dār al-Imāra* close to the *ḳibla* side. This was taken down by al-Ḥadjdjādj, rebuilt by others, and finally taken into the mosque by Hārūn al-Rashīd (al-Balādhurī, 347, 348 above, 349; Yāḳūt, i, 642, 643). In Mecca also in the same period similar buildings were erected. Ibn al-Zubayr and al-Ḥadjdjādj both extended the mosque, and Ibn al-Zubayr was the first to put a roof on the walls; the columns were gilded by ᶜAbd al-Malik and he made a roof of teak (*Chron. Mekka*, i, 307, 309). The Mosque of ᶜAmr was extended in 53/673 with Muᶜāwiya's permission by his governor Maslama b. Mukhallad to the east and north; the walls were covered with plaster (*nūra*) and the roofs decorated; it is evident from this that here also the original booth of the south side was altered to a covered hall during the early Umayyad period. A further extension was made in 79/698 in the reign of ᶜAbd al-Malik (al-Maḳrīzī, iv, 7, 8; Ibn Duḳmāḳ, iv, 62). Thus we find that during the early Umayyad period, and in part even earlier, the original simple and primitive mosques were in some cases extended, in other cases altered. The alteration consisted in the old simple booth of the Mosque of the Prophet being gradually enlarged and transformed into a pillared hall with the assistance of the arts of countries possessing a higher degree of civilisation. In this way, what had originally been an open place of assembly developed imperceptibly into a court, surrounded by pillared halls. Very soon a fountain was put in the centre of the court, and we now have the usual type of mosque. The same plan is found in the peristyle of the houses and in the *aithrion* of a basilica like that of Tyre (Herzog-Hauch, *Realencyclopädie*[3], x, 780).

The great builders of the Umayyads, ᶜAbd al-Malik and his son al-Walīd I, made even more radical progress. The former entirely removed the original mosque in Jerusalem, and his Byzantine architects erected the Dome of the Rock as a Byzantine building (cf. Sauvaire, *Jérus. et Hébron*, 48 ff.). Al-Walīd likewise paid equally little attention to the oldest form of mosque, when, in Damascus, he had the church of St. John transformed by Byzantine architects into the Mosque of the Umayyads. As al-Muḳaddasī distinctly states, they wanted to rival the splendours of the Christian churches (159). The new mosques, which were founded in this period, were therefore not only no longer simple, but they were built with the help of Christians and other trained craftsmen with the use of material already existing in older buildings. Al-Ḥadjdjādj, for example, used materials from the sur-

rounding towns when building his foundation of Wāsiṭ (al-Ṭabarī, iii, 321; al-Balādhurī, 290). Columns from churches were now used quite regularly (e.g. in Damascus: al-Masʿūdī, *Murūdj*, iii, 408 = § 1292; Ramla: al-Muḳaddasī, 165; cf. al-Balādhurī, 143 ff.; for Egypt, see al-Maḳrīzī, iv, 36, 124-5). Sometimes, remains of the older style remained alongside the new. In Īrānshahr, al-Muḳaddasī found in the chief mosque wooden columns of the time of Abū Muslim along with round columns of brick of the time of ʿAmr b. al-Layth (316). The building activities of al-Walīd extended to Fusṭāṭ, Mecca and Medina (cf. Ibn al-Faḳīh, 106-7) where no fundamental alterations were made, but complete renovations were carried out. With these rulers, the building of mosques reaches the level of older architecture and gains a place in the history of art. There is also literary evidence for the transfer of a style from one region to another. In Iṣṭakhr, for example, there was a *djāmiʿ* in the style of the Syrian mosques with round columns, on which was a *baḳara* (al-Muḳaddasī, iii, 436-7; cf. for Shīrāz, 430). Al-Walīd also rebuilt the Mosque of the Prophet, in part in the Damascus style (*ibid.*, 80; al-Ḳazwīnī, ed. Wüstenfeld, ii, 71).

This revolution naturally did not take place without opposition, any more than the other innovations, which Islam adopted in the countries with a higher culture which it conquered. After the Mosque of the Prophet had been beautified by Christian architects with marble, mosaics, shells, gold, etc. and al-Walīd in 93/712 was inspecting the work, an old man said: "We used to build in the style of mosques; you build in the style of churches" (Wüstenfeld, *Medina*, 74). The disccusions on this point are reflected in *ḥadīths*. When ʿUmar enlarged the Mosque of the Prophet, he is reported to have said: "Give the people shelter from the rain, but take care not to make them red or yellow lest you lead the people astray", while Ibn ʿAbbās said: "You shall adorn them with gold as the Jews and Christians do" (al-Bukhārī, *Ṣalāt, bāb* 62). Ibn ʿAbbās here takes up the Umayyad attitude and ʿUmar that of old-fashioned people, according to whom any extension or improvement of the *ẓulla* was only permissible for strictly practical reasons. The conservative point of view is predominant in *Ḥadīth*. It is said that extravagant adornment of the mosques is a sign of the end of the world; the works of al-Walīd were only tolerated from fear of the *fitna* (Ibn Ḥanbal, *Musnad*, iii, 134, 145, 152, 230, 283; al-Nasāʾī, *Masādjid*, *bāb* 2; Ibn Mādja, *Masādjid*, *bāb* 2). The lack of confidence of pious conservatives in the great mosques finds expression in a *ḥadīth*, according to which the Prophet (according to Anas) said: "A time will come over my *umma* when they will vie with one another in the beauty of their mosques; then they will visit them but little" (al-ʿAsḳalānī, *Fatḥ al-Bārī*, i, 362). In *fiḳh*, we even find divergence from the oldest quadrangular form of the mosque condemned (Guidi, *Il Muḫtaṣar*, i, 71). Among the types which arose later was the "suspended" (*muʿallaḳ*), i.e. a mosque situated in an upper storey (e.g. in Damascus, *JA*, ser. 9, vol. v, 409, 415, 422, 424, 427, 430).

2. Details of the component parts and equipment of the mosque. — a. The Minaret [see on this, MANĀRA]. — b. The Chambers. The old mosque consisted of the courtyard and the open halls running along the walls: these were called *al-mughaṭṭā* (al-Muḳaddasī, 82, 158, 165, 182) because they were roofed over. When we are told that in Palestine, except in Jericho, towers were placed between the *mughaṭṭā* and the courtyard (*ibid.*, 182), this seems to suggest that the halls were closed, which would be quite in keeping with the winter climate of this region. The halls were particularly extensive on the *ḳibla* side, because assemblies were held here. The space between two rows of pillars was called *riwāḳ*, pl. *arwiḳa* or *riwāḳāt* (*ibid.*, 158, 159; al-Maḳrīzī, iv, 10, 11, 12, 49). Extension often took the form of increasing the number of the *arwiḳa*. In some districts, a sail-cloth was spread over the open space as a protection from the sun at the time of the worship (al-Muḳaddasī, 205, 430).

The courtyard was called *ṣaḥn*. The open space around the Kaʿba is called *Fināʾ al-Kaʿba* (*Chron. Mekka*, i, 307; Ibn Hishām, 822; cf. *Fināʾ Zamzam*: Yāḳūt, *Udabāʾ*, vi, 376). *Fināʾ* is also the name given to the open space around the mosque (al-Maḳrīzī, iv, 6). Trees were often planted in the courtyard: e.g. in the mosque of ʿAmr (see above, I. B. 1; when we read in al-Maḳrīzī, iv, 6, that it had no *ṣaḥn*, this probably means that this space, planted with trees, between the covered halls was very narrow). In Medina, at the present day, there are still trees in the *Rawḍa* (al-Batanūnī, *Riḥla*, 249); in Ibn Djubayr's time there were 15 palms there (*Riḥla*, 194). Other mosques in Cairo had trees growing in them (al-Maḳrīzī, iv, 54, 64, 65, 120; in al-Masdjid al-Kāfūrī, there were as many as 516 trees: *ibid.*, 266), as is still the case today. In other cases the court was covered with pebbles (see above, I. D. 1); but this was altered with a more refined style of architecture. Al-Muḳaddasī mentions that this was only found in Tiberias, out of all the mosques in Palestine (182). Frequently, as in Ramla, the halls were covered with marble and the courtyard with flat stone (*ibid.*, 165). In the halls also, the ground was originally bare or covered with little stones; for example in the mosques of ʿAmr until Maslama b. Mukhallad covered it with mats (see below). The floor of the Mosque of ʿAmr was entirely covered with marble in the Mamlūk period (al-Maḳrīzī, iv, 13-14, cf. in Shīrāz, Ibn Baṭṭūṭa, ii, 53). But in the mosque of Mecca, the *ṣaḥn* is still covered with little stones (al-Batanūnī, *Riḥla*, 99 below); 400 *dīnārs* used to be spent annually on this (*Chron. Mekka*, ii, 10-11). In Medina also, little pebbles were used (Ibn Djubayr, *Riḥla*, 190; Ibn Baṭṭūṭa, i, 263).

There were not at first enclosed chambers in the halls. A change in this respect came with the introduction of the *maḳṣūra* (on this word, cf. Quatremère, *Hist. Sult. Maml.*, i/1, 164, n. 46). This was a box or compartment for the ruler built near the *miḥrāb*. Al-Samhūdī gives the history of the *maḳsūra* in Medina (Wüstenfeld, *Medīna*, 71-2, 89). The traditions all agree that the *maḳṣūra* was introduced to protect the ruler from hostile attacks. According to some authorities, ʿUthmān built a *maḳṣūra* of *labin* with windows, so that the people could see the *imām* of the community (*ibid.*, and al-Maḳrīzī, iv, 7). According to another tradition, Marwān b. al-Ḥakam, governor of Medina after an attempt had been made on him by a Yamanī in the year 44/664, was the first to build a *maḳsūra* of dressed stone with a window (al-Balādhurī, 6 below; al-Ṭabarī, ii, 70). Muʿāwiya is then said to have followed his example. Others, again, say that Muʿāwiya was the first to introduce this innovation. He is said to have introduced the *maḳṣūrāt* with the accompanying guard as early as the year 40/660-1 or not till 44/664-5 after the Khāridjī attempt (al-Ṭabarī, i, 3465, 9; Ibn al-Faḳīh, 109, 3; al-Maḳrīzī, iv, 12, 11 ff.); according to one story because had had seen a dog on the *minbar* (al-Bayhaḳī, ed. Schwally, 393 below; cf. on the whole question, H. Lammens, *Moʿāwiya*, 202 ff.). This much seems to be certain,

that the *maḳṣūra* was at any rate introduced at the beginning of the Umayyad period, and it was an arrangement so much in keeping with the increasing dignity of the ruler that, as Ibn Khaldūn says, it spread throughout all the lands of Islam (*Muḳaddima*, Cairo 1322/1904-5, 212-13, *faṣl* 37). The governors built themselves compartments in the principal mosques of the provinces, e.g. Ziyād in Kūfa and Baṣra (al-Balādhurī, 277, 348) and probably Ḳurra b. Sharīk in Fusṭāṭ (al-Maḳrīzī, iv, 12). In Medina, we are told that ʿUmar b. ʿAbd al-ʿAzīz as governor (86-93/705-12) raised the *maḳṣūra* and built it of teak, but al-Mahdī had it taken down in 160/777 and a new one built on the level of the ground (*ibid.*, 7; Wüstenfeld, *op. cit.*; al-Balādhurī, 7 centre). We are further told that in 161/778, al-Mahdī prohibited the *maḳāṣīr* of the provinces, and al-Maʾmūn even wanted to clear all the boxes out of the *masādjid djāmiʿa*, because their use was a *sunna* introduced by Muʿāwiya (al-Maḳrīzī, iv, 12; al-Yaʿḳūbī, *Taʾrīkh*, ii, 571). But this attempt did not succeed. On the contrary, their numbers rapidly increased. In Cairo, for example, the Djāmiʿ al-ʿAskar built in 169/785-6 had a *maḳṣūra* (al-Maḳrīzī, iv, 33 ff.) and the mosque of Ibn Ṭūlūn had a *maḳṣūra* beside the *miḥrāb* which was accessible from the *Dār al-Imāra* (*ibid.*, 36, 37, 42; Ibn Taghrībirdī, ii, 8, 14). The *maḳṣūra* was found in the larger mosques. In the Djāmiʿ al-Ḳalʿa, Muḥammad b. Ḳalāwūn in 718/1318 built a *maḳṣūra* of iron for the sultan's *ṣalāt* (al-Maḳrīzī, iv, 132). According to Ibn Khaldūn, the *maḳṣūra* was an innovation peculiar to the Islamic world. The question must however be left open, whether in its introduction and development there may not be some connection with the boxes of the Byzantine court, at least, for example, when the Turks in the Yeshil Djāmiʿ in Bursa put the sultan's box over the door (R. Hartmann, *Im neuen Anatolien*, 27).

Although the *maḳṣūra* was introduced with the object of segregating the ruler and was therefore condemned by the strict as contrary to the spirit of Islam (e.g. *Madkhal*, ii, 43-4), *maḳāṣīr* were probably introduced for other purposes. Ibn Djubayr mentions three in the Mosque of the Umayyads: the old one built by Muʿāwiya in the eastern part of the mosque, one in the centre, which contained the *minbar*, and one in the west where the Ḥanafīs taught and performed the *ṣalāt*. There were also other small rooms shut off by wooden lattices, which could be sometimes called *maḳṣūra* and sometimes *zāwiya*. As a rule, there were quite a number of *zāwiyas* connected with the mosque which were used by students (*Riḥla*, 265-6). We find the same state of affairs in other mosques.

While the groups of the *ḳurrāʾ*, the students, the lawyers, etc. had originally to sit together in a common room, gradually the attempt was made to introduce separate rooms for some of them. Small compartments were either cut off in the main chamber or new rooms were built in subsidiary buildings. In the former case, we get the already mentioned *maḳāṣīr* or *zawāyā*. Ibn al-Ḥādjdj says that a *madrasa* was often made by the simple process of cutting off a part of the mosque by a balustrade (*darbazīn*) (*Madkhal*, ii, 44). Thus in the halls of the Mosque of ʿAmr there were several compartments for teaching, which were called *maḳṣūra* and *zāwiya*, in which studies were prosecuted (al-Maḳrīzī, iv, 20, 16, 25). In the Azhar Mosque, a *maḳṣūrat Fāṭima* was made in the time of the Fāṭimids, where she had appeared, and the *amīrs* in the following period made a large number of such *maḳāṣīr* (*ibid.*, 52, 53). In the Aḳṣā Mosque about 300/912-13, there were three *maḳṣūras* for women (Ibn al-Faḳīh, 100). These divisions might be a nuisance at the great Friday assemblies, and this is why al-Mahdī wanted to remove them in 161/778 from the *masādjid al-djamāʿāt* (al-Ṭabarī, iii, 486), and Ibn al-Ḥādjdj condemned them as works of the *mulk* and numbers them like other embellishments with the *ashrāṭ al-sāʿa* (*Madkhal*, ii, 43-4).

The *muʾadhdhins* not only lived in the minarets, where, at any rate in the Ṭūlūnid period, they held vigils (al-Maḳrīzī, iv, 48). They had rooms (*ghuraf*, sing. *ghurfa*) on the roof and these rooms in time came to be numerous (*ibid.*, 13, 14). All kinds of rooms were put in subsidiary buildings, for the *khaṭīb* (*ibid.*, 13), for judges, for studies, etc. In addition, there were dwelling-houses, not only for the staff but also for others. As already mentioned, devout men used to take up their residence in the mosque for a considerable period for *iʿtikāf* and any one at any time could take up his quarters in the mosque; he could sleep there and make himself at home. It therefore came quite natural to the devout to reside permanently in the mosque. Ascetics often lived in the minaret (see above), a *zāhid* lived on the roof of the Azhar mosque, others made themselves cells in the mosque, as a *shaykh* in Naṣībīn did (Ibn Djubayr, *Riḥla*, 240; cf. in Ḥarrān, 245) and as happened in Ṣalāḥ al-Dīn's time in the Mosque of the Umayyads (Ibn Abī Uṣaybiʿa, ii, 182). It was, however, very usual for them to live in the side rooms of the mosque, as was the case for example, in the Mosque of the Umayyads (Ibn Djubayr, 269; Ibn Baṭṭūṭa, i, 206). In particularly holy mosques like that in Hebron, houses for *al-muʿtakifūn* were built around the sacred place (Sauvaire, *Hist. Jérus. et Hébron*, 11-12) and also beside the Masdjid Yūnis at the ancient Niniveh (al-Muḳaddasī, 146). Kitchens were therefore erected with the necessary mills and ovens and cooked food (*djashīsha*) and 14-15,000 loaves (*raghīf*) were daily distributed to those who stayed there and to visitors (Sauvaire, 20; cf. Quatremère, *Hist. Sult. Maml.*, i/1, 231). Bread was also baked in the mosque of Ibn Ṭūlūn (Quatremère, *op. cit.*, i/1, 233) and kitchens were often found in the mosques (for al-Azhar, see al-Djabartī, *Merveilles*, iii, 238-9; Sulaymān Raṣad, *Kanz al-djawhar fī taʾrīkh al-Azhar*, 71 ff., 107 ff.). Those who lived in and beside the mosque were called *mudjāwirūn* (cf. al-Muḳaddasī, 146; for Jerusalem, Nāṣir-i Khusraw, 82, 91; for Mecca, Ibn Djubayr, 149; for Medina, Ibn Baṭṭūṭa, i, 279, where we learn that they were organised under a *ḳadīm*, like the North Africans under an *amīn* in Damascus; Ibn Djubayr, 277-8). They were pious ascetics, students and sometimes travellers. The students generally found accommodation in the *madāris*, but large mosques like that of the Umayyads or al-Azhar had always many students, who lived in them. The name of the halls, *riwāḳ*, was later used for these students' lodgings (cf. van Berchem, *CIA*, i, 43, n. 1; perhaps al-Maḳrīzī, iv, 54, 23). Strangers always found accommodation in the mosques (cf. above, I. C. 1). In smaller towns, it was the natural thing for the traveller to spend the night in the mosque and to get food there (Yāḳūt, iii, 385; al-Ḳifṭī, *Taʾrīkh al-Ḥukamāʾ*, ed. Lippert, 252). Travellers like Nāṣir-i Khusraw, Ibn Djubayr, Ibn Baṭṭūṭa and al-ʿAbdarī (*JA*, ser. 5, iv [1854], 174) were able to travel throughout the whole Muslim world from one mosque (or *madrasa* or *ribāṭ*) to the other. The traveller could even leave his money for safe keeping in a mosque (*Safar-nāma*, 51). Large endowments were bequeathed for those who lived in the mosques (Ibn Djubayr, *op. cit.*; Ibn Taghrībirdī, ii/2, 105 f.).

In later times, the rulers often built a lodge or pavilion (*manẓara*) in or near the mosque (al-Maḳrīzī, ii, 345; iv, 13; cf. on the word, Quatremère, *Hist. Sult. Maml.*, ii/2, 15).

There was often a special room with a clock in the mosques; this also is probably an inheritance from the church, for Ibn Rusta talks of similar arrangements in Constantinople (126 above). Ibn Djubayr (270) describes very fully the clock in the Mosque of the Umayyads (cf. *JA*, ser. 9, vii, 205-6). It was made in the reign of Nūr al-Dīn by Fakhr al-Dīn b. al-Sāʿātī (Ibn Abī Uṣaybiʿa, ii, 183-4; an expert was kept to look after it, *ibid.*, 191). There was a clock in the Mustanṣiriyya in Baghdād (Sarre and Herzfeld, *Arch. Reise*, ii, 170), and the Mosque of ʿAmr also a *ghurfat al-sāʿāt* (al-Maḳrīzī, iv, 13, 15). In the Mosque of Ibn Ṭūlūn is still kept a sundial of the year 696/1296-7; cf. van Berchem, *CIA*, i, no. 415), but the clocks were usually mechanical (see also Dozy, *Supplément*, s.v. *mindjāna*, and on the clock generally, E. Wiedemann, in *Nova Acta der K. Leop. Carol. Akad.*, c [Halle 1915]). In the Maghrib also we find mosqueclocks, e.g. in the Bū ʿInāniyya (*JA*, ser. 11, xii, 357 ff.).

The very varied uses to which the mosques were put resulted in their becoming storehouses for all sorts of things. In 668/1269-70, the Mosque of the Umayyads was cleared of all such things; in the courtyard there were, for example, stores for machines of war, and the *zāwiya* of Zayn al-ʿĀbidīn was a regular *khān* (*JA*, ser. 9, vii, 225-6).

c. The prayer-niche or *Miḥrāb* [see for this, MIḤRĀB].

d. The pulpit or *Minbar* [see for this, MINBAR].

e. The platform or *Dakka*. In the larger mosques, there is usually found near the *minbar* a platform to which a staircase leads up. This platform (*dakka*, popularly often *dikka*) is used as a seat for the *muʾadhdhins* when pronouncing the call to prayer in the mosque at the Friday service. This part of the equipment of a mosque is connected with the development of the service (cf. below, under I. H. 4, and C. H. Becker, *Zur Geschichte des islamischen Kultus*, in *Isl.*, iii [1912], 374-99 = *Islamstudien*, i, 472-500; E. Mittwoch, *Zur Entstehungsgeschichte des islamischen Gebets und Kultus*, in *Abh. Pr. Ak. W.* [1913], Phil.-Hist. Cl., no. 2). The first *adhān* call is pronounced from the minaret, the second (when the *khaṭīb* mounts the *minbar*) and the third (before the *ṣalāt*, *iḳāma*) in the mosque itself. These calls were at first pronounced by the *muʾadhdhin* standing in the mosque. At a later date, raised seats were made for him.

Al-Ḥalabī records that Maslama, Muʿāwiya's governor in Egypt, was the first to build platforms (here called *manābir*) for the calls to prayer in the mosques (*Sīra Ḥalabiyya*, ii, 111 below). This story, however, given without any reference to older authorities, is not at all reliable. It seems that a uniform practice did not come into existence at once. In Mecca, the *muʾadhdhins* for a time uttered the second call (when the preacher mounted the *minbar*) from the roof. As the sun in summer was too strong for them, the *amīr* of Mecca, in the reign of Hārūn al-Rashīd, made a little hut (*ẓulla*) for them on the roof. This was enlarged and more strongly built by al-Mutawakkil in 240/854-5, as his contemporary al-Azraḳī relates (*Chron. Mekka*, i, 332-3). The position in the mosque of ʿAmr in Cairo was similar. Here also the *adhān* was uttered in a chamber (*ghurfa*) on the roof, and in 336/947-8 there is a reference to its enlargement (al-Maḳrīzī, iv, 11). As late as the time of Baybars, when the many chambers were removed from the roof of the Mosque of ʿAmr,. the old *ghurfa* of the *muʾadhdhin* was left intact (*ibid.*, 14; cf. al-Kindī, *Wulāt*, ed. Guest, 469, n. 2). In the Mosque of Ibn Ṭūlūn, the *adhān* was pronounced from the cupola in the centre of the *ṣaḥn* (al-Maḳrīzī, iv, 40). Al-Muḳaddasī records in the 4th/10th century as a notable thing about Khurāsān that the *muʾadhdhins* there pronounced the *adhān* on a *sarīr* placed in front of the *minbar* (327). The *dukkān* "platform" in front of the *minbar* in the mosques of Shahrastān must have had the same purpose (*ibid.*, 357).

In the 8th/14th century, Ibn al-Ḥādjdj mentions the *dakka* as a *bidʿa* in general use, which should be condemned as it unnecessarily prevents freedom of movement within the mosque (*Madkhal*, ii, 45 above). In the year 827/1424 a *dakka* in the mosque of al-Ḥākim is mentioned (al-Maḳrīzī, iv, 61); the *dakkas* mentioned in inscriptions from Cairo all date from the period before and after 900/1495. Ibn al-Ḥādjdj mentions that, in addition to the large *dakka* used for the Friday worship, there was sometimes a lower one for ordinary *ṣalāts* (*Madkhal*, ii, 46-7) and says that in the larger mosques there were several *dakkas* on which *muʾadhdhins* pronounced the *adhān* in succession so that the whole community could hear it (*tablīgh*; *ibid.*, 45-6). Lane also mentions several *muballighs* in the Azhar Mosque (*Manners and customs*, Everyman's Library edn., 87, 2).

f. The reading-stand or *Kursī*; Ḳurʾāns and relics. In the mosques there is usually a *kursī* [*q.v.*], that is, a wooden stand with a seat and a desk. The desk is for the Ḳurʾān, the seat for the *ḳāṣṣ*, or reader, *ḳāriʾ*. Ibn Djubayr attended the worship in Baghdād at which a celebrated preacher spoke from the *minbar*, but only after the *ḳurrāʾ*, sitting on *karāsī* had recited portions of the Ḳurʾān (*Riḥla*, 219, 222). The *wāʿiẓ*, often identical with the *ḳāṣṣ*, sat on a *kursī* made of teak (Ibn Djubayr, 200. Yāḳūt, *Udabāʾ*, ii, 319; al-Maḳrīzī, iv, 121); sometimes he spoke from the *minbar* to which the *wāʿiẓ* often had access (cf. Ibn Djubayr; see Mez, *Renaissance des Islâms*, 320, Eng. tr. 332). The *ḳuṣṣāṣ* are called by al-Makkī *aṣḥāb al-karāsī*, which is in keeping with this (*Ḳūt al-ḳulūb*, i, 152, quoting *K. al-Madkhal*, i, 159). Several *karāsī* are often mentioned in one mosque (cf. for the Mosque of ʿAmr, al-Maḳrīzī, iv, 19). Whether the *karāsī* mentioned for the earlier period always had a desk cannot be definitely ascertained. The *karāsī* with dated inscriptions given by van Berchem in his *Corpus* all belong to the 9th/15th century (nos. 264, 302, 338, 359bis, 491). According to Lane, at the Friday service, while the people are assembling, a *ḳāriʾ* on the *kursī* recites sūra XVIII up to the *adhān* (*Manners and customs*, 86). The same custom is recorded by Ibn al-Ḥādjdj and condemned because it has a disturbing effect (*Madkhal*, ii, 44, middle).

The Ḳurʾān very soon received its definite place in the mosque, like the Bible in the church (cf. al-Bukhārī, *Ṣalāt*, *bāb* 91: they prayed at a pillar beside *al-muṣḥaf*). According to one tradition, ʿUthmān had several copies of his Ḳurʾān sent to the provinces (e.g. Nöldeke-Schwally, *Gesch. d. Qor.*, ii, 112-13); al-Ḥadjdjādj, a little later, is said to have done the same thing (al-Maḳrīzī, iv, 17). The mosques had many other copies beside the one kept on the *kursī*. Al-Ḥākim put 814 *maṣāḥif* in the Mosque of Ibn Ṭūlūn, where the founder had already put boxes of Ḳurʾāns (al-Maḳrīzī, iv, 36, 40; cf. al-Suyūṭī, *Ḥusn al-muḥāḍara*, ii, 138) and in 403/1012-13, he presented 1,289 copies to the Mosque of ʿAmr, some of which were written in letters of gold (al-Maḳrīzī, iv, 12; al-Suyūṭī, ii, 136). Even earlier than this there were so many that the *ḳāḍī* al-Ḥārith b. Miskīn (237-45/851-9)

appointed a special *amīn* to look after them (al-Kindī, *Wulāt*, 469); there are still a very large number in the Mosque of the Prophet (see al-Batanūnī, *Riḥla*, 241 above). Of particular value was the *muṣḥaf Asmāʾ*, belonging to the Mosque of ʿAmr, prepared by ʿAbd al-ʿAzīz b. Marwān, later bought by his son and afterwards by his daughter Asmāʾ; her brother left it in 128/746 to the mosque and it was used for public readings (see its whole history in al-Maḳrīzī, iv, 17-18). Besides it, another copy was for some time also used for reading, which was said to have lain beside ʿUthmān, when he was killed and to have been stained with his blood, but this one was removed by the Fāṭimids (*ibid.*, 19). In the time of Ibn Baṭṭūṭa, a Ḳurʾān for which the same claims were made was kept in Baṣra (ii, 10). On New Year's Day, when the Fāṭimid caliphs used to go in procession through the town, the caliph at the entrance to the Mosque of ʿAmr took up in his hands a *muṣḥaf* said to have been written by ʿAlī and kissed it (Ibn Taghrībirdī, ii/1, 472 middle); it was perhaps the *muṣḥaf Asmāʾ*. In Syria, Egypt, and the Ḥidjāz, in the 4th/10th century, there were Ḳurʾāns which were traced back to ʿUthmān (al-Muḳaddasī, 143; cf. Ibn Ḥawḳal[1], 117). One of the Ḳurʾāns made for ʿUthmān was shown in the Mosque of the Umayyads in Damascus in the time of Ibn Djubayr. It was produced after the daily *ṣalāt*s and the people touched and kissed it (*Riḥla*, 268). It was brought there in the year 507/1113-14 from Tiberias (al-Dhahabī, *Taʾrīkh*, Ḥaydarābād, 1337, ii, 25). Other Ḳurʾāns of ʿUthmān were shown in Baghdād and Cordova (see Mez, *Renaissance des Islâms*, 327, Eng. tr., 338-9) and Ibn Djubayr saw another in the Mosque of the Prophet; it lay in a desk on a large stand, here called *miḥmal* (*Riḥla*, 193; cf. thereon Dozy, *Supplément*, s.v.). The Fāḍiliyya *madrasa* also had a *muṣḥaf ʿUthmān*, bought by the Ḳāḍī al-Fāḍil for 30,000 *dīnār*s (al-Maḳrīzī, iv, 197) and there is one in Fās (*Archives Marocaines*, xviii [1922], 361). Valuable Ḳurʾāns like these had the character of relics and belonged to the *khizāna* of the mosque. They were often kept in a chest (*ṣandūḳ*) (Ibn Djubayr, *op. cit.*; for *al-muṣḥaf*, al-Bukhārī, *Ṣalāt*, *bāb* 95, Muslim has *al-ṣandūḳ*; see al-ʿAsḳalānī, *Fatḥ al-Bārī*, i, 385), also called *tābūt* (Ibn Djubayr, 104). In the Kaʿba, Ibn Djubayr saw two chests with Ḳurʾāns (84, 3). Ibn al-Faḳīh mentions 16 chests with Ḳurʾāns in the Jerusalem mosque (100). In the mosques there were also *ṣanādīḳ* for other things, such as lamps (al-Maḳrīzī, iv, 53; Wüstenfeld, *Medina*, 82 = Ibn Djubayr, 194), a *tābūt* for alms *Madkhal*, ii, 44, below), for the *bayt al-māl* or the property of the mosque (see below). There were also chests for rose-wreaths (*Madkhal*, ii, 50) which were in charge of a special officer. In the Mosque of ʿAmr there was a whole series of *tawābīt* (al-Maḳrīzī, iv, 9).

The Ḳurʾāns were not the only r e l i c s to be kept in the mosques. Bodies or parts of the bodies of saints (cf. above, B. 4, C. 1) and other *āthār* were kept and revered in mosques: the rod of Moses (in Kūfa, Yāḳūt, iv, 325, previously in Mecca, see Goldziher, *Muh. Stud.*, ii, 361), the Prophet's sandals (in Hebron, Ibn al-Faḳīh, 101, also in Damascus, where the Madrasa Ashrafiyya had his left and the Dammāghiyya his right sandal; *JA*, ser. 9, iii, 271-2, 402), his cloak (in Adhruḥ, al-Muḳaddasī, 178), hair from his beard (in Jerusalem among other places, al-Batanūnī, *Riḥla*, 165) and many other things (see Goldziher, *Muh. Stud.*, ii, 358 ff.; Mez, *Renaissance des Islâms*, 325-6, Eng. tr., 337-9). These relics were often kept in valuable reliquaries. The head of Ḥusayn was buried in a *tābūt* in his mosque in Cairo (Ibn Djubayr, 45). There was a black stone like that in the Kaʿba in a mosque in Shahrastān (al-Muḳaddasī, 433).

On the other hand, pictures and images were excluded from the mosques, in deliberate contrast to the crucifixes and images of saints in churches, as is evident from *Ḥadīth* (al-Bukhārī, *Ṣalāt*, *bāb*s 48, 54; *Djanāʾiz*, *bāb* 71; Muslim, *Masādjid*, tr. 3; cf. on the question, Becker, *Christliche Polemik und islamische Dogmenbildung*, in *ZA*, xxvi [1911] = *Islamstudien*, i, 445 ff.). It is of interest to note that in the earliest period, Saʿd b. Abī Waḳḳāṣ had no scruples about leaving the wall-paintings in the *Īwān* of Kisrā at Madāʾin standing, when it was turned into a mosque (al-Ṭabarī, i, 2443, 2451). The case was somewhat different, when, before the chief mosque in Dihlī, which had been a Hindu temple, two old copper idols formed a kind of threshold (Ibn Baṭṭūṭa, iii, 151), although even this is remarkable (cf. Snouck Hurgronje, *Verspreide Geschriften*, ii, 451 ff. = *ZDMG*, lxi [1907], 186 ff.). In some circles the opposition to pictures extended to other relics also. Ibn Taymiyya condemned the reverence paid to the Prophet's footprint, which was shown, as in Jerusalem, in a Damascus mosque also (Quatremère, *Hist. Sult. Maml.*, ii/2, 246).

g. C a r p e t s. Carpets [see on these, BISĀṬ in Suppl.] were used to improve the appearance of the mosques. The custom of performing the *ṣalāt* upon a carpet is ascribed by *Ḥadīth* to the Prophet himself. Anas b. Mālik performed the *ṣalāt* with him in his grandmother's house and the Prophet used a cloth or mat (*ḥaṣīr*), which had become black through wear; as a rule, he used a mat woven of palm leaves, *khumra* (al-Bukhārī, *Ṣalāt*, *bāb*s 19, 20, 21; *Ḥayḍ*, *bāb* 30; Muslim, *Masādjid*, tr. 47; Aḥmad b. Ḥanbal, *Musnad*, iii, 145). In any case, it is clear from al-Balādhurī that the *ṣalāt* was at first performed in the mosque simply in the dust and then on pebbles (al-Balādhurī, 277, 348; cf. al-Zurḳānī, *Sharḥ ʿalā ʾl-Muwaṭṭāʾ*, i, 283-4). Later, when the halls were extended, the ground, or the paving, was covered with matting.

The first to cover the ground in the Mosque of ʿAmr with *ḥuṣur* instead of *ḥaṣbāʾ* was Muʿāwiya's governor Maslama b. Mukhallad (al-Maḳrīzī, iv, 8; al-Suyūṭī, ii, 136; Ibn Taghrībirdī, i, 77). The different groups which frequented the mosque (cf. above) had their places on particular mats: when a *ḳāḍī* (middle of the 3rd/9th century) ejected the Shāfiʿīs and Ḥanafīs from the mosque, he had their *ḥuṣur* torn up (al-Kindī, *Wulāt*, 469). Ibn Ṭūlūn covered his mosque floor with ʿAbbādānī and Sāmānī mats (al-Maḳrīzī, iv, 36, 38). For the mosque of al-Ḥākim in the year 403/1012-13, al-Ḥākim bought 1,036 *dhirāʿ*s of carpeting for 5,000 *dīnār*s (al-Maḳrīzī, iv, 56; cf. for al-Azhar, *ibid.*, 50). In the year 439/1047-8 in the Mosque of ʿAmr, there were ten layers of coloured carpets one above the other (Nāṣir-i Khusraw, ed. Schefer, text, 31, tr. 149). In the Mosque at Jerusalem, 800,000 *dhirāʿ*s of carpets were used every year (Ibn al-Faḳīh, 100). In the Mosque in Mecca they were renewed every Ramaḍān (*loc. cit.*). On ceremonial occasions, the *minbar* was also draped with a carpet (*sadjdjāda*); in Medina, the *minbar* and the sacred tomb was always covered like the Kaʿba in Mecca (Wüstenfeld, *Medina*, 83; cf. Quatremère, *Hist. Sult. Maml*, ii/1, 91) and some, especially the teachers, had their skins (*farwa*), in some cases, also a cushion to lean upon. The doors were also covered with some material (al-Maḳrīzī, iv, 56). On feast-days, the mosques were adorned with carpets in a particularly luxurious fashion (see Ibn Taghrībirdī, ii/1, 483). The puritanical rejected all this as *bidʿa* and

preferred the bare ground (*Madkhal*, ii, 46, 49, 72, 74, 76), as the Wahhābīs still do.

h. Lighting. Where evening meetings and vigils were of regular occurrence, artificial lighting became necessary. Al-Azraḳī gives the history of the lighting of the Meccan Mosque. The first to illuminate the Kaʿba was ʿUḳba b. al-Azraḳ, whose house was next to the Mosque, just on the *maḳām*; here he placed a large lamp (*miṣbāḥ*). ʿUmar, however, is said previously to have placed lamps upon the wall, which was the height of a man, with which he surrounded the mosque (al-Balādhurī, 46). The first to use oil and lamps (*ḳanādīl*) in the mosque itself was Muʿāwiya (cf. Ibn al-Faḳīh, 20). In the time of ʿAbd al-Malik, Khālid b. ʿAbd Allāh al-Ḳasrī placed a lamp on a pillar of the Zamzam beside the Black Stone, and the lamp of the Azraḳ family disappeared. In the reign of al-Maʾmūn in 216/831, a new lamp-post was put up on the other side of the Kaʿba, and a little later two new lanterns were put up around the Kaʿba. Hārūn al-Rashīd placed ten large lamps around the Kaʿba and hung two lanterns on each of the walls of the mosque (*thurayyāt*; cf. Ibn Djubayr, *Riḥla*, 149, 150, 155, 271; van Berchem, *CIA*, i, no. 506). Khālid al-Ḳasrī had the *masʿā* also illuminated during the pilgrimage, and in 119/737 the torches called *nafāṭāt* were placed here, and ʿUmar b. ʿAbd al-ʿAzīz ordered the people, who lived in the streets of Mecca, to put up lamps on 1 Muḥarram for the convenience of those visiting the Kaʿba (*Chron. Mekka*, i, 200-2, cf. 458-9). In 253/867 Muḥammad b. Aḥmad al-Manṣūrī erected a wooden pole in the centre of the *ṣaḥn* and *ḳanādīl* on ropes were hung from it. This was, however, very soon removed (*ibid.*, ii, 196-7). About 100 years later, al-Muḳaddasī saw around the *ṭawāf* wooden poles on which hung lanterns (*ḳanādīl*), in which were placed candles for the kings of Egypt, Yemen, etc. (74). Ibn Djubayr describes the glass *ḳanādīl*, which hung from hooks in the Meccan Ḥaram (*Riḥla*, 103) and lamps (*mashāʿil*) which were lit in iron vessels (*ibid.*, 103, cf. 143). Similar silver and gold *ḳanādīl* were seen by him in Medina (*ibid.*, 192 at the top; see also Wüstenfeld, *Medina*, 83 ff.). According to Ibn al-Faḳīh (before 300/912), 1,600 lamps were lit every evening in Jerusalem (100), and in the next century al-Muḳaddasī says that the people of Palestine always burn *ḳanādīl* in their mosques, which were hung from chains as in Mecca (182). The illumination was thus very greatly increased. In the year 60/679-80, when ʿUbayd Allāh b. Ziyād was searching for his enemies in the mosque of Kūfa, the lamps were not sufficient, and large torches had to be used in searching the pillared halls (al-Ṭabarī, ii, 259-60). This, like what has already been said about Mecca, shows out of what modest beginnings this part of the mosque's equipment developed.

In the time of the ʿAbbāsids, lamps and lanterns were part of the regular furniture of the mosque. Al-Maʾmūn is said to have taken a special interest in this. He ordered lamps to be put in all the mosques, partly to assist those who wanted to read and partly to prevent crime (al-Bayhaḳī, 473). For this purpose, the *ḳanādīl*, already mentioned, hung on chains were used, as at the building of the mosque of Ibn Ṭūlūn (al-Maḳrīzī, iv, 36, 38), in the Azhar Mosque and elsewhere; they were often of silver (*ibid.*, 56, 63). Golden *ḳanādīl* were also used and were of course condemned by Ibn al-Ḥādjdj (*Madkhal*, ii, 54) as ostentatious. At the same time, candles (*shamʿ* or *shamaʿ*) were used in large numbers, the candle-sticks (*atwār*, sing. *tawr*) often being of silver (Ibn Djubayr, *Riḥla*, 45, 151, 194; cf. Wüstenfeld, *Medina*, 95, 100). About 400/1009-10, large candelabra were made in Egypt, which from their shapes were called *tannūr*, stoves. Al-Ḥākim presented the Mosque of ʿAmr with a *tannūr* made out of 100,000 *dirhams* of silver; the mosque doors had to be widened to admit it. He also gave it two other lamps (al-Suyūṭī, ii, 136 below; cf. Nāṣir-i Khusraw, text 51, tr. 148; Ibn Taghrībirdī, ed. Popper, ii/2, 105). In the Mosque of al-Ḥākim, in addition to lamps and candle lanterns, he also put 4 silver *tanānīr* and he made similar gifts to the Azhar and other mosques: the lamps were of gold or silver (al-Maḳrīzī, iv, 51, 56, 63; cf. Ibn Taghrībirdī, ii/2, 105). The *tanānīr* and other lanterns could also be made of copper (see van Berchem, *CIA*, i, nos. 502, 503, 506, 507, 511), as, for example, the celebrated candelabrum of the Mosque of Muʾayyad (al-Maḳrīzī, iv, 137) which was made for the mosque of Ḥasan but sold by it (*ibid.*, 118).

This great interest in the lighting of the mosque was not entirely based on practical considerations. Light had a significance in the worship and Islam here, as elsewhere, was taking over something from the Christian Church. When, in 227/842 the caliph was on his deathbed, he asked that the *ṣalāt* should be performed over him with candles and incense (*bi 'l-shamʿ wa 'l-bukhūr*) exactly after the fashion of the Christians (Ibn Abī Uṣaybiʿa, i, 165; cf. ii, 89). The dependence of Islam on Christianity is also seen in the story that ʿUthmān, when he was going to the evening *ṣalāt* in Medina, had a candle carried in front of him, which his enemies condemned as *bidʿa* (al-Yaʿḳūbī, *Taʾrīkh*, ii, 187). The Shīʿī bias does not affect the significance of this story. A light was used particularly in the *miḥrāb*, because it represented the holy cell, to which light belongs (cf. sūra XXIV, 35). Then, in Mecca, lamps were placed before the *imāms* in the *miḥrābs* and there were considerable endowments for such *miḥrāb* lamps (Ibn Djubayr, *Riḥla*, 103, 144). Light, as was everywhere the custom in ancient times, was necessary in mausoleums, and the documents of endowment show that a large number of oil-lamps were used in this way (cf. e.g. the document for al-Malik al-Ashraf's mausoleum, van Berchem, *CIA*, i, no. 252). But in the mosque generally the use of lights had a devotional significance and lamps might be endowed for particular individuals (cf. al-Muḳaddasī, 74, quoted above). The lamps so given by al-Ḥākim were therefore placed in the mosques with great ceremony, with blasts of trumpets and beating of drums (Ibn Taghrībirdī, ii/2, 105).

On ceremonial occasions a great illumination was therefore absolutely necessary. In the month of Ramaḍān, says Ibn Djubayr, the carpets were renewed and the candles and lamps increased in number, so that the whole mosque was a blaze of light (*Riḥla*, 143); on certain evenings, trees of light were made with vast numbers of lamps and candles and the minarets were illuminated (*ibid.*, 149-51, 154, 155). In the Mosque of the Prophet in the time of al-Samhūdī, forty wax candles burned around the sacred tomb, and three to four hundred lights in the whole mosque (Wüstenfeld, *Medina*, 100). On the *mawlid al-nabī*, says Ḳuṭb al-Dīn, a procession went from the Kaʿba in Mecca to the birthplace of the Prophet with candles, lanterns (*fawānīs*) and lamps (*mashāʿil*) (see *Chron. Mekka*, iii, 439). In the *ḥaram* of Jerusalem, according to Mudjīr al-Dīn, 750 lamps were lit by night and over 20,000 at festivals (Sauvaire, *Hist. Jérus. et Hébron*, 138). In the dome of the Ḳubbat al-Ṣakhra in 452/1060, a chandelier and 500 lamps fell down (*ibid.*, 69); at the taking of the town in 492/1099, the Franks carried off 42 silver lamps, each

of 3,600 *dirhams*, 23 lamps of gold and a *tannūr* of 40 *raṭls* of silver (*ibid.*, 71). It was similar, and still is, in Cairo and elsewhere in the Muslim world. For the *laylat al-wuḳūd* in the Mosque of ʿAmr, 18,000 candles were made for the Mosque of ʿAmr, and every night eleven-and-a-half *ḳinṭārs* of good oil were used (al-Maḳrīzī, iv, 21 and more fully, ii, 345-6). The four "nights of illumination" fell in the months of Radjab and Shaʿbān, especially *niṣf Shaʿbān* (Quatremère, *Hist. Sult. Maml.*, ii/2, 131; cf. also Snouck-Hurgronje, *Mekka*, ii, 77). In 1908 electric light was introduced into the Mosque of the Prophet (al-Batanūnī, *Riḥla*, 245-6).

(On the question in general of illumination, see Clermont-Ganneau, *La lampe et l'olivier dans le Coran*, in *Recueil d'Archéologie Orientale*, viii [1924], 183-228; on the copper candelabra, see A. Wingham, *Report on the analysis of various examples of oriental metal-work, etc. in the South Kensington Museum*, etc., London 1892; F. R. Martin, *Ältere Kupferarbeiten aus dem Orient*, Stockholm 1902; on glass lamps, see G. Schmoranz, *Altorientalische Glass-Gefässe*, Vienna 1898; van Berchem, *CIA*, i, 678 ff.; M. Herz Bey, *La Mosquée du Sultan Hasan* (*Comité de Conservation des Monuments de l'Art Arabe*), 1899, 8 ff.; see also the Bibliography in *Isl.*, xvii [1928], 217 ff.).

i. Incense. According to some traditions, even the Prophet had incense burned in the mosque (al-Tirmidhī, i, 116; see Lammens, *Moʿâwia*, 367, n. 8) and in the time of ʿUmar, his client ʿAbd Allāh is said to have perfumed the mosque by burning incense while he sat on the *minbar*. The same client is said to have carried the censer (*midjmar*: cf. Lammens, *loc. cit.*) brought by ʿUmar from Syria before ʿUmar when he went to the *ṣalāt* in the month of Ramaḍān (A. Fischer, *Biographie von Gewährsmännern*, etc., 55 n.). According to this tradition, the use of incense was adopted into Islam very early as a palpable imitation of the custom of the Church. In keeping with this is the tradition that, in Fusṭāṭ as early as the governorship of ʿAmr, the *muʾadhdhin* used to burn incense in the mosque (Ibn ʿAbd al-Ḥakam, 132; cf. *Annali dell' Islām*, iv, 565). The Ḳubbat al-Ṣakhra Mosque had incense burned in it during the consecration ceremony (Sauvaire, *Hist. Jérus. et Hébron*, 53).

Under the Umayyads, incense was one of the regular requirements of the mosque (*ṭīb al-masdjid*: al-Ṭabarī, ii, 1234, 10). Muʿāwiya is named as the first to perfume the Kaʿba with perfume (*khalūḳ*) and censer (*ṭayyaba*: Ibn al-Faḳīh, 20, 12). It became the custom to anoint the sacred tombs with musk and *ṭīb* (*Chron. Mekka*, i, 150, 10; Ibn Djubayr, *Riḥla*, 191, 9). Baybars washed the Kaʿba with rose-water (al-Maḳrīzī, iv, 96, 14). Incense, as well as candles, was used at burials (cf. de Goeje, *ZDMG*, lix [1905], 403-4; Lammens, *Moʿâwia*, 436, n. 9). Al-Muʿtaṣim's desire to be buried with candles and incense (*bukhūr*) exactly like the Christians (Ibn Uṣaybiʿa, i, 165, 12 f., cf. above) shows that they were aware that the custom bore much the same relation to the Christian usage as the mosque building did to the church. The consumption of incense in the mosques gradually became very large, especially at festivals (see for the Fāṭimids, Ibn Taghrībirdī, ii/1, 484, 12; ii/2, ed. Popper, 106, 3; al-Maḳrīzī, iv, 51; on vessels for holding incense, see the Bibliography in *Isl.*, xvii [1928], 217-18, and MAʿDIN. 4. In Islamic art).

j. Water-supply. Nothing is said of a water-supply in connection with the oldest mosques. The Mosque of Mecca occupied a special position on account of the Zamzam well. In the early days of Islam, two basins (*ḥawḍ*) are said to have been supplied by it, one behind the well, i.e. just at the side of the mosque for *wuḍūʾ* and one between the well and the *rukn* for drinking purposes; the latter was moved nearer the well by Ibn al-Zubayr. In the time of Sulaymān b. ʿAbd al-Malik, a grandson of ʿAbd Allāh b. ʿAbbās for the first time built a *ḳubba* in connection with Zamzam (*Chron. Mekka*, i, 299). At the same time, the governor Khālid al-Ḳasrī laid down lead piping to bring water from the well of al-Thabīr to the mosque, to a marble basin (*fisḳiyya*) with a running fountain (*fawwāra*) between Zamzam and the *rukn*, probably on the site of the earlier *ḥawḍ*. It was intended to supply drinking-water in place of the brackish water of Zamzam, but a branch was led on to a *birka* at the Bāb al-Ṣafā, which was used for ritual ablutions. The people, however, would not give up the Zamzam water and immediately after the coming to power of the ʿAbbāsids, the provision for drinking-water was cut off, only the pipe leading to the *birka* being retained (*ibid.*, i, 339-40). In Ibn Djubayr's time, there was, in addition to Zamzam, a supply of water in vessels and a bench for performing the *wuḍūʾ* (*Riḥla*, 89). Khalid's plan, arrangements for ablutions at the entrance and a running fountain in the *ṣaḥn*, seems to have been a typically Umayyad one and to have been introduced from the north. Such fountains were usual in the north, not only in private houses, but also for example in the *aithrion* (*atrium*) surrounded by pillars, which, from Eusebius's description, formed part of the church of Tyre (see Hauch, in Herzog-Hauch, *Realenzyclop. f. prot. Theol. u. Kirche*[3], x, 782).

The usual name for the basin, *fisḳiyya* (in Egypt now *fasḳiyya*), comes from *piscina*, which in the Mishna and in Syriac takes the form *piskīn* (see Levy, *Neuhebr. u. chald. Wörterbuch*, iv, 81b; Fraenkel, *Fremdwörter*, 124; *fisḳīna*, found in al-Azraḳī, *Chron. Mekka*, i, 340 is probably due to a slip). At the same time, however, *birka* or *siḳāya* or *ṣihrīdj*, which probably comes from the Persian (cf. Fraenkel, *op. cit.*, 287), or the old Arabic *ḥawḍ*, are also used. The arrangements for ablutions were called *maṭāhir* or *mayāḍiʾ*, sing. *miʾḍaʾa* (now usually *mēḍā*), "place for *wuḍūʾ*". The accommodation in Mecca just mentioned was later extended. Ibn Djubayr mentions a building at al-Zāhir, 1 *mīl* north of Mecca which contained *maṭāhir* and *siḳāya* for those performing the minor *ʿumra* (*Riḥla*, 111).

In Medina, Ibn Djubayr mentions rooms for *wuḍūʾ* at the western entrance to the mosque (*Riḥla*, 197, 13 f.; cf. the plan in al-Batanūnī, *Riḥla*, facing p. 244). At the same time, Ibn Zabāla mentions seventeen receptacles for water in the *ṣaḥn* in the year 199/814-15, probably for drinking-water; later (8th/14th century) a large basin surrounded by a railing is mentioned in the centre of the court. It was intended for drinking purposes, but became used for bathing and was therefore removed. Baths and latrines were built anew by al-Nāṣir's mother (Wüstenfeld, *Medina*, 99 ff.).

In Damascus, where every house, as is still the case, was amply supplied with water, Yāḳūt (d. 626/1229) found no mosque, *madrasa* or *khānaḳāh* which did not have water flowing into a *birka* in the *ṣaḥn* (Yāḳūt, ii, 590). Ibn Djubayr describes the arrangements in the Mosque of the Umayyads. In the *ṣaḥn*, as is still the case, there were three *ḳubbas*. The centre one rested on four marble columns, and below it was a basin with a spring of drinking-water surrounded by an iron grille. This was called *ḳafaṣ al-māʾ* "water-cage". North of the *ṣaḥn* was a Masdjid al-Kallāsa, in the *ṣaḥn* of which there was again a *ṣihrīdj* of marble with a

spring (Ibn Djubayr, *Riḥla*, 267). There was also running water in an adjoining *mashhad* (269), in the *khānaḳāh* and *madrasa* (271), and in a hall beside the living apartments there was again a *ḳubba* with a basin (*ḥawḍ*) and spring water (269). There were also *siḳāyāt* against the four outer walls of the mosque, whole houses fitted up with lavatories and closets (273); a century earlier, we are told that at each entrance to the mosque there was a *mīʾḍaʾa* (159). The whole arrangements correspond exactly to those made by Khālid al-Ḳaṣrī in Mecca in the Umayyad period and must therefore date from the Umayyads.

It was the same in other Syrian and Mesopotamian towns. In Sāmarrāʾ, al-Mutawakkil built in his new *djāmiʿ* a *fawwāra* with constant running water (al-Yaʿḳūbī, *Buldān*, 265). In Naṣībīn, the river was led through the *ṣaḥn* of the mosque into a *ṣihrīdj*; there was also a *ṣihrīdj* at the eastern entrance with two *siḳāyāt* in front of the mosque (Ibn Djubayr, *Riḥla*, 239). In Mawṣil in the mosque, which dated from the Umayyad period, there was a spring with a marble cupola over it (*ibid.*, 235). In Ḥarrān, there were in the *ṣaḥn* three marble *ḳubbas* with a *biʾr* and drinking-water (*ibid.*, 246), in Aleppo, two (*ibid.*, 253). In Kūfa, there were three *ḥawḍs* with Euphrates water in front of the Djāmiʿ (*ibid.*, 212), but in the mosque in a *zāwiya*, a domed building with running water (Yāḳūt, iv, 325, 326, here called *tannūr*; cf. Ibn al-Faḳīh, 173, Ibn Djubayr, 89, 267). It was the same in Āmid (Nāṣir-i Khusraw, ed. Schefer, 28) and in Zarandj in Sidjistān (Ibn Ḥawḳal[1], 298-9). The principal mosques of ʿIrāḳ had *mayāḍiʾ* at the entrances, for which, according to a remarkable note by al-Muḳaddasī, rents were paid (129, read *karāsī*?; cf. *maṣṭaba*: Ibn Djubayr, 89). In Palestine also, in al-Muḳaddasī's time, there were conveniences for ablutions at the entrances to the *djawāmiʿ* (*maṭāhir*: 182; *mayāḍiʾ*: al-Iṣṭakhrī[1], and in Ṣanʿāʾ in the 4th/10th century, beside each mosque, there was water for drinking and for *wuḍūʾ* (Ibn Rusta, 111). In Persia also, it was the custom to have a *ḥawḍ* in front of the mosque (al-Muḳaddasī, 318) and there was drinking-water in the mosque itself on a bench (*kursī*) in iron jars into which ice was put on Fridays (*ibid.*, 327). Not only at the Zamzam well but also in the mosques of ʿIrāḳ, men were appointed whose duty it was to distribute drinking-water (al-Ṭabarī, iii, 2165). The regular custom, therefore, was to have at the entrance to, or in front of the mosque, conveniences for *wuḍūʾ*, and in the court of the mosque itself a fountain as the traditional ornament and for drinking water. It was the exception for the *wuḍūʾ* to take place in the mosque itself.

In Egypt, at first the Mosque of Ibn Ṭūlūn was arranged similarly to the Syrian mosques. In the centre of the *ṣaḥn* there was a gilt dome, supported by sixteen marble columns and surrounded by a railing. This upper storey was supported by nineteen marble columns and below was a marble basin (*ḳaṣʿa*) with a running fountain (*fawwāra*); the *adhān* was called from the dome (al-Maḳrīzī, iv, 37; the description is not quite clear). People complained that there were no arrangements for washing (*mīʾḍaʾa*) there. Ibn Ṭūlūn replied that he had not made them because he had concluded the mosque would be polluted thereby. He therefore made a *mīʾḍaʾa* with an apothecary's shop behind the mosque (*ibid.*, 38, 39; *al-Suyūṭī*, ii, 139; Ibn Taghrībirdī, ii/10). This suggests that previously in Egypt, the washing arrangements had been directly connected with the mosque. After the fire of the year 376/986-7, the *fawwāra* was renovated by al-ʿAzīz (al-Maḳrīzī, iv, 40), and again in 696/1297 by Lādjīn, whose inscription still exists (*CIA*, i, no. 16). A new *mīʾḍaʾa* was built in 792/1390 beside the old one on the north, outside the mosque (al-Maḳrīzī, iv, 42).

The Mosque of ʿAmr first got a *fawwāra* in the time of al-ʿAzīz. In 378-9/998-9 his vizier Yaʿḳūb b. Killis installed one in the cupola, already in existence for the *bayt al-māl*. Marble jars were put there for the water (probably drinking-water) (al-Maḳrīzī, iv, 9, 11; cf. al-Suyūṭī, ii, 136; Yāḳut, iii, 899). A new water basin was installed by Ṣalāḥ al-Dīn beside his *manẓara* in the mosque. The water was led to the *fawwārat al-fisḳiyya* from the Nile. This was prohibited in the reign of Baybars al-Bunduḳdārī (658-76/1260-77) by the chief *ḳāḍī*, because the building was being affected by it (al-Maḳrīzī, iv, 14; al-Suyūṭī, ii, 137). The *amīr*, who restored it, brought the water for the *fisḳiyya* from a well in the street (al-Maḳrīzī, iv, 15).

Like Ibn Ṭūlūn, the Fāṭimids do not seem to have considered the *mīʾḍaʾa* indispensable. For the Azhar Mosque had originally no *mīʾḍaʾa*: as late as al-Ḥākim's *waḳf* document for the provision of *mīʾḍaʾa*, money is given only with the provision that something of the kind should be made (al-Maḳrīzī, iv, 51, 54). At a later date we hear of two *mīʾḍaʾa*'s, one at the adjoining Āḳbughāwiyya (*ibid.*, 54). On the other hand, there was already a *fisḳiyya* in the centre of the court, but whether it had existed from the first is not known. It had disappeared, when traces of it were found in 827/1424 in laying-out a new *ṣihrīdj* (*ibid.*, 54). The *fisḳiyya* of the Mosque of al-Ḥākim was not erected by the founder. Like that of the Mosque of ʿAmr, it was removed in 660/1262 by the *ḳāḍī* Tādj al-Dīn, but after the earthquake of 702/1302-3, it was again rebuilt and provided with drinking-water from the Nile (*ibid.*, 56, 57) and again renovated after 780/1378 (*ibid.*, 61). A small *mīʾḍaʾa*, later replaced by another, was in the vicinity of the entrance (*ibid.*, 61). Other Fāṭimid mosques had basins in the *ṣaḥn*, which were supplied from the Nile and from the Khalīdj (*ibid.*, 76, 81, 120).

The traditional plan was retained in the period following also. For example, we know that the *amīr* Ṭughān in 815/1412 placed a *birka* in the centre of the Djamiʿ of Āḳsunḳur which was covered by a roof supported by marble pillars and supplied by the same pipe as the already existing *mīʾḍaʾas* (al-Maḳrīzī, iv, 107, cf. 124, 138, 139, etc.). At the ceremonial dedication of mosques, it was the custom for the patron to fill the *birka* in the *ṣaḥn* with sugar, lemonade or other sweet things (e.g. at the Muʾayyadī, in 822/1419, al-Maḳrīzī, iv, 139; at the Madrasa of Djamāl al-Dīn in 811/1408-9, *ibid.*, 253; another in 757/1356, *ibid.*, 256).

The importance of the *birka* of the mosque, as a drinking-place, diminished as pious founders erected drinking fountains everywhere (cf. for Mecca, *Chron. Mekka*, ii, 116-18; also *BGA*, *Glossarium*, 211, s.v. *ḥubb*; 258, s.v. *sabīl*) and especially when it became the custom to build a *sabīl* with a boy's school in part of the mosque (see below, I. E. 4, end). A *ḥawḍ* for watering animals was also sometimes built in the vicinity of the mosque (al-Maḳrīzī, iv, 76). Sometimes also the *birka* of the *ṣaḥn* was used for washing. In the year 799/1397 the *amīr* Yalbughā made arrangements for this in the Aḳmar mosque so that one could get water for *wuḍūʾ* from taps from a *birka* put up in the *ṣaḥn* (al-Maḳrīzī, iv, 76). Al-Maḳrīzī condemns this addition, but only because there was already a *mīʾḍaʾa* at the entrance and the *ṣaḥn* was too small for the new one (*ibid.*), and not on grounds of principle; and it was only because the wall was damaged that the *amīr*'s gift was removed in 815/1412 (*ibid.*, 77). The custom of

using the water supply of the *ṣaḥn* for *wuḍū*ʾ survived in many places in Egypt. The arrangements were therefore usually called *miʾḍaʾa* or rather *mēḍā* (which is not found in the inscriptions). If they had taps, they were called *ḥanafiyya*; according to Lane's suggestion, because the Ḥanafīs only permitted ablutions with running water or from a cistern 10 ells broad and deep (*Lexicon*, s.v.; cf. *Manners and customs*. Everyman's Library, 69; cf. on the question M. Herz, *Observations critiques sur les bassins dans les ṣaḥns des mosquées*, in *BIE*, iii/7 [1896], 47-51; idem, *La mosquée du Sultan Ḥasan*, 2; Herz wrongly dates the modern usage from the Turkish conquest in 923/1517). In quite recent times, the *miʾḍaʾas* have often been moved outside to special buildings. Ibn al-Ḥādjdj condemns bringing water into the mosque, because the only object is for ablutions and ablutions in the mosque are forbidden by "our learned men" (*Madkhal*, ii, 47-8, 49); like shaving, ablutions should be performed outside the mosque in keeping with the Prophet's saying *idjʿalū maṭāhirakum ʿalā abwābi masādjidikum* (*ibid.*, ii, 58). It was in keeping with this principle that in earlier times the *miʾḍaʾa* was usually put at the entrance and the barbers took up their places before the entrance (cf. the name *Bāb al-Muzayyinīn* "The Barbers' Gate" for the main entrance to the Azhar mosque). *Miʾḍaʾas* were also to be found in hospitals; thus the "lower hospital" was given two in 246/957, one of which was for washing corpses (Ibn Duḳmāḳ, 99 below).

E. The mosque as a state institution.

1. The mosque as a political centre. Its relation to the ruler. It was inherent in the character of Islam that religion and politics could not be separated. The same individual was ruler and chief administrator in the two fields, and the same building, the mosque, was the centre of gravity for both politics and religion. This relationship found expression in the fact that the mosque was placed in the centre of the camp, while the ruler's abode was built immediately adjacent to it, as in Medina (and in Fusṭāṭ, Damascus, Baṣra, Kūfa). We can trace how this *dār al-imāra* or *ḳaṣr* (so for Kūfa: al-Ṭabarī, ii, 230-1; *ḳaṣr al-imāra, ibid.*, 234) with the growth of the mosque gradually became incorporated in it at Fusṭāṭ and Damascus and was replaced by a new building. The tradition remained so strong that, in Cairo, when the new chief mosque Djāmiʿ al-ʿAskar was being planned in 169/785-6, a *Dār Umarāʾ Miṣr* was built beside it with direct access to the mosque (al-Maḳrīzī, iv, 33-4), and when Ibn Ṭūlūn built his mosque, a building called the *Dār al-Imāra* was erected on its south side, where the ruler, who now lived in another new palace, had rooms for changing his robes, etc., from which he could go straight into the *maḳṣūra* (*ibid.*, 42).

The ʿAbbāsids at the foundation of Baghdād introduced a characteristic innovation, when they made the palace the centre of the city; the case was similar with Fāṭimid Cairo; but Sulaymān b. ʿAbd al-Malik in Ramla had already built the palace in front of the mosque (al-Balādhurī, 143). Later rulers, who no longer lived just beside the mosque, had special balconies or something similar built for themselves in or beside the mosque. Ṣalāḥ al-Dīn built for himself a *manẓara* under the great minaret of the mosque of ʿAmr (al-Maḳrīzī, iv, 13; al-Suyūṭī, ii, 137) and just to the south of the Azhar mosque, the Fāṭimids had a *manẓara* from which they could overlook the mosque (al-Maḳrīzī, ii, 345).

The caliph was the appointed leader of the *ṣalāt* and the *khaṭīb* of the Muslim community. The significance of the mosque for the state is therefore embodied in the *minbar*. The installation of the caliph consisted in his seating himself upon this, the seat of the Prophet in his sovereign capacity. When homage was first paid to Abū Bakr by those who had decided the choice of the Prophet's successor, he sat on the *minbar*. ʿUmar delivered an address, the people paid homage to him and he delivered a *khuṭba*, by which he assumed the leadership (Ibn Hishām, 1017; al-Ṭabarī, i, 1828-9; al-Diyārbakrī, ii, 75; al-Yaʿḳūbī, *Taʾrīkh*, ii, 142); it was the same with ʿUmar and ʿUthmān (*ibid.*, 157, 187).

The *khuṭba*, after the glorification of God and the Prophet, contained a reference to the caliph's predecessor and a kind of formal introduction of himself by the new caliph. It was the same in the period of the Umayyads and ʿAbbāsids (see for al-Walīd, al-Ṭabarī, ii, 1177 ff.; al-Amīn, *ibid.*, iii, 764; al-Mahdī, *ibid.*, iii, 398, 451, 457; cf. on this question also al-Bukhārī, *Aḥkām*, *bāb* 43). The *minbar* and the *khuṭba* associated with it was still more important than the imāmate at the *ṣalāt*, it was *minbar al-mulk* (*Ḥamāsa*, ed. Freytag, 656, v, 4). According to a *ḥadīth*, the Prophet carried the little Ḥasan up to the *minbar* and said, "This my son is a chieftain", etc. (al-Bukhārī, *Manāḳib*, *bāb* 25). This reflects the later custom by which the ruler saw that homage was paid to his successor-designate; this also was done from the *minbar* (cf. *khuṭiba yawm al-djumʿa li 'l-Muʿtaḍid bi-wilāyat al-ʿahd*, al-Ṭabarī, iii, 2131). The Fāṭimid caliph showed honour to a distinguished officer by allowing him to sit beside him on the *minbar* (al-Suyūṭī, ii, 91); in the same way, Muʿāwiya allowed Ibn ʿAbbās to sit beside him *ʿalā sarīrihi* (Ibn Abī Uṣaybiʿa, i, 119), but whether the reference is to the *minbar* is perhaps doubtful. The *bayʿa* could also be received by another on behalf of the caliph, but it had to be accepted on the *minbar*. Thus the governor of Mecca in 196/811-12 accepted on the *minbar* homage to ʿAbd Allāh al-Maʾmūn and the deposition of Muḥammad al-Amīn (al-Ṭabarī, iii, 861-2; cf. for al-Mahdī: *ibid.*, 389). There are other cases in which the solemn deposition of a ruler took place on or beside the *minbar* (*Aghānī*[2], i, 12; Wüstenfeld, *Medina*, 15). Even at a much later date, when spontaneous acclamation by the populace was no longer of any importance, the ceremonial installation on the *minbar* was still of importance (al-Maḳrīzī, iv, 94). It had become only a formality but still an important one. Homage was paid to the ʿAbbāsid caliphs in Egypt in the great *īwān* of the palace or in a tent in which a *minbar* had been put up, and similarly to the sultans whose investiture was read out from the *minbar* (cf. Quatremère, *Hist. Sult. Maml.*, i/1, 117, 149 ff., 183 ff.). If one dreamt that he was sitting on the *minbar*, it meant that he would become sultan (*ibid.*, ii/2, 103). The ʿAbbāsid caliph had, however, long had his own throne after the old Persian fashion in his palace (Ps. -al-Djāḥiẓ, *al-Tādj fī akhlāḳ al-mulūk*, ed. Aḥmad Zakī, Cairo 1914, 7 ff.; tr. Pellat, *Le livre de la couronne*, Paris 1954, 35 ff.) and so had the Fāṭimids (Ibn Taghrībirdī, ii/1, 457) and the Mamlūks (Quatremère, *op. cit.*, i/1, 87; cf. 147). When later we find mention of the *kursī 'l-khilāfa* (van Berchem, *CIA*, i, no. 33), *sarīr al-mulk* (*Chron. Mekka*, iii, 113), *sarīr al-salṭana* (al-Maḳrīzī, ii, 157; cf. *al-sarīr*, royal throne: Ibn Ḥawḳal[1], 282, 285; *kursī* similarly: cf. Ibn ʿArabshāh, *Vita Timuri*, ed. Manger, ii, 186) or *martabat al-mulk* (Quatremère, *op. cit.*, i/2, 61), the reference is no longer to the *minbar*. This does not mean that the ruler could no longer make public appearances in the mosques: thus in 648/1250, al-Muʿizz Aybak regularly gave audiences in *al-madāris al-ṣāliḥiyya* (Quatremère, *Hist. Sult. Maml.*, 17) and

memorial services for Baybars were held a year after his death in several mosques, *madāris* and *khawāniḳ* in Cairo (677/1278; *ibid.*, i/2, 164-5).

The caliph spoke chiefly from the *minbar* of the capital, but when he made the pilgrimage he also spoke from the *manābir* in Mecca and Medina (cf. e.g. al-Ṭabarī, ii, 1234; al-Yaʿḳūbī, ii, 341, 501; *Chron. Mekka*, i, 160). Otherwise, in the provinces, the governor stood in the same relation to the mosques as the caliph in the capital. He was appointed "over *ṣalāt* and sword" or he administered "justice among the people" and the *ṣalāt* (al-Ṭabarī, iii, 860), he had "province and *minbar*" under him (*ibid.*, ii, 611), *al-wilāyāt wa 'l-khuṭba* (al-Muḳaddasī, 337). Speaking from the *minbar* was a right which the caliph had delegated to him and it was done in the name of the caliph. ʿAmr b. al-ʿĀṣ therefore refused to allow people in the country to hold *djumaʿ* except under the direction of the commander (al-Maḳrīzī, iv, 7). This point of view was never quite abandoned. The *khuṭba* was delivered "in the name of" the caliph (*ibid.*, 94) or "for" him (*lahu*, *ibid.*, 66, 74, 198; Ibn Taghrībirdī, ii/1, 85 below; al-Muḳaddasī, 485 above), and in the same way an *amīr* delivered a *khuṭba* "for" a sultan (al-Maḳrīzī, iv, 213, 214). The sultan did not have the "secular" and the caliph the "spiritual" power, but the sultan exercised as a Muslim ruler the actual power which the caliph possessed as the legitimate sovereign and had formally entrusted to him. During the struggles between the different pretenders, there was thus a confession of one's politics if one performed the *ṣalāt* with the one or the other governor (al-Ṭabarī, ii, 228, 234, 258; *Chron. Mekka*, ii, 168). The pretenders disputed as to whether the one or the other could put up his standard beside the *minbar* (al-Ṭabarī, iii, 2009).

Like the caliph, the governor also made his formal entry into office by ascending the *minbar* and delivering a *khuṭba*; this was the symbol of his authority (e.g. al-Ṭabarī, ii, 91, 238, 242; *Chron. Mekka*, ii, 173; cf. *Ḥamāsa*, 660, vv. 2-3; al-Djāḥiẓ, *Bayān*, iii, 135). After glorifying God and the Prophet, he announced his appointment or read the letter from the caliph and the remainder of his address, if there was a war going on, was exclusively political and often consisted of crude threats. The *khuṭba* was not inseparably connected with the Friday service. The commander-in-chief could at any time issue a summons to the *ṣalāt* and deliver his *khuṭba* with admonitions and orders (see al-Ṭabarī, ii, as above and 260, 297-8, 300, 863, 1179) and it was the same when he left a province (*ibid.*, 241); a governor, who could not preserve his authority with the *khuṭba* was dismissed (*ibid.*, 592). Since war was inseparably associated with early Islam, and since the mosque was the public meeting-place of ruler and people, it often became the scene of warlike incidents. While the governor in his *khuṭba* was issuing orders and admonitions relating to the fighting, cheers and counter-cheers could be uttered (*ibid.*, 238) and councils of war were held in the mosque (al-Ṭabarī, i, 3415; ii, 284; al-Balādhurī, 267). Soon after his election ʿAbd al-Malik asked from the *minbar* who would take the field against Ibn al-Zubayr, and al-Ḥadjdjādj shouted that he was ready to go (*Chron. Mekka*, ii, 20). After the Battle of the Camel, ʿAlī sent the booty to the mosque of Baṣra and ʿĀʾisha looked for another mosque (al-Ṭabarī, i, 3178, 3223). Rowdy scenes occasionally took place in the mosques (al-Kindī, *Wulāt*, 18); Ziyād was stoned on the *minbar* (al-Ṭabarī, ii, 88); one could ride right into the mosque and shout to the governor sitting on the *minbar* (*ibid.*, 682); fighting often took place in and beside the mosque (*ibid.*, 960, 1701 ff.; Wüstenfeld, *Medina*, 13-14). Sometimes for this reason, the governor was surrounded by his bodyguard during the *ṣalāt* or the *minbar* or even clothed in full armour (al-Walīd: al-Ṭabarī, ii, 1234; al-Yaʿḳūbī, ii, 341; al-Ḥadjdjādj: al-Ṭabarī, ii, 254). *Ṣalāt* and sword were thus closely associated in reality.

It thus came to be the custom for the enemies of the ruler and his party to be cursed in the mosques. This custom continued the old Arab custom of regular campaigns of objurgation between two tribes, but can also be paralleled by the Byzantine ecclesiastical anathematisation of heretics (cf. Becker, *Islamstudien*, i, 485, *Zur Gesch. d. islamischen Kultus*).

The first to introduce the official cursing of the ʿAlids from the *minbar* of the Kaʿba is said to have been Khālid al-Ḳasrī (*Chron. Mekka*, ii, 36). The reciprocal cursing of Umayyads and ʿAlids became general (cf. al-Ṭabarī, ii, 12, 4; *Aghānī*[2], x, 102; Ibn Taghrībirdī, i, 248; see also Lammens, *Moʿâwia*, 180-1). Like the blessing upon the ruler, it was uttered by the *ḳuṣṣāṣ* (al-Maḳrīzī, iv, 16); it was even recorded in inscriptions in the mosque (Ibn Taghrībirdī, ed. Popper, ii/2, 63, 64; cf. also Mez, *Renaissance*, 61, Eng. tr., 64). As late as 284/897, al-Muʿtaḍid wanted to restore the anathematisation of Muʿāwiya from the *minbar* but abandoned the idea (al-Ṭabarī, iii, 2164). Anathemas were also pronounced on other occasions, for example, Sulaymān had al-Ḥadjdjādj cursed (*Chron. Mekka*, ii, 37), and al-Muʿtamid had Ibn Ṭūlūn solemnly cursed from the *manābir* (al-Ṭabarī, iii, 2048, 5 ff.); and other rulers had Muʿtazilī heretics cursed from the pulpits (see Mez, *op. cit.*, 198, Eng. tr. 206; cf. against Ibn Taymiyya, Quatremère, *Hist. Sult. Maml.*, ii/2, 256). Ibn Baṭṭūṭa describes the tumultuous scene with thousands of armed men uttering threats in a mosque in Baghdād when a Shīʿī *khaṭīb* was on the *minbar* (ii, 58).

In was very natural to mention with a blessing upon him the ruler in whose name the Friday *khuṭba* was delivered. Ibn ʿAbbās, when governor of Baṣra, is said to have been the first to pronounce such a *duʿāʾ* over ʿAlī (Ibn Khaldūn, *Muḳaddima*, *faṣl* 37, end); it is not improbable that the custom arose out of the reciprocal objurgations of ʿAlids and Umayyads; the *ḳuṣṣāṣ*, who had to curse the ʿAlids in the mosques, used to pray for the Umayyads (al-Maḳrīzī, iv, 17). Under the ʿAbbāsids, the custom became the usual form of expressing loyalty to the ruler (Ibn Taghrībirdī, ii/1, 151). After the caliph, the name of the local ruler or governor was mentioned (*ibid.*, 156, 161): even in Baghdād in 369/979-80 by order of the caliph al-Ṭāʾiʿ, the actual ruler ʿAḍud al-Dawla was mentioned in the *duʿāʾ* (Ibn Miskawayh, vi, 499; ed. Cairo 1915, 396) and the Būyids, according to al-Muḳaddasī, were generally mentioned in the *khuṭba* even in the remotest parts of the kingdom (this is evident from the above-mentioned expression *khuṭiba lahū*, for which we also find *ʿalayhi*: see Ibn Ḥawḳal[1], 20; al-Muḳaddasī, 337, 338, 400, 472, 485; cf. *Glossarium*, s.v.). There is also evidence that prayers used to be uttered for the heir-apparent (al-Maḳrīzī, iv, 37; *Kitāb al-Wuzarāʾ*, ed. Amedroz, 420). Under the Mamlūks also, the sultan's heir was mentioned (Quatremère, *Hist. Sult. Maml.*, ii/1, 101; ii/2, 3). Under the Fāṭimids, it was even the custom to call *salām* upon the ruler from the minaret after the *adhān al-fadjr* (al-Maḳrīzī, iv, 45); this also took place under the Mamlūks, e.g. in 696/1297, when Lādjīn was elected (Quatremère, *Hist. Sult. Maml.*, ii/2, 45). The prayer for the sovereign in the *khuṭba* did not find unanimous approval among the learned (see Snouck Hurgronje, *Verspreide Geschriften*, ii, 214-15).

In general, the mosque, and particularly the *minbar*,

was the place where official proclamations were made, of course as early as the time of the Prophet (al-Bukhārī, *Ṣalāt*, *bābs* 70, 71), ʿUthmān's bloodstained shirt was hung upon the *minbar* (al-Ṭabarī, i, 3255); messages from the caliph were read from it (*ibid.*, iii, 2084). Al-Walīd announced from the *minbar* the deaths of two distinguished governors (Ibn Taghrībirdī, i, 242); the results of battles were announced in *khuṭbas* (Yāḳūt, i, 647; *al-ʿIḳd al-farīd*, Cairo 1321, ii, 149-50). In the Fāṭimid and ʿAbbāsid periods also, proclamations, orders, edicts about taxation, etc., by the ruler were announced in the principal mosque (al-Ṭabarī, ii, 40; iii, 2165; Ibn Taghrībirdī, ii/2, 68; al-Maḳrīzī, *Ittiʿāẓ*, ed. Bunz, 87 above; Quatremère, *Hist. Sult. Maml.*, i/2, 89; ii/2, 44, 151); documents appointing the more important officers were also read upon the *minbar* (al-Kindī, *Wulāt*, 589, 599, 603, 604, etc., *passim*; al-Maḳrīzī, ii, 246; iv, 43, 88); frequently the people trooped into the mosque to hear an official announcement (al-Kindī, *Wulāt*, 14; cf. Dozy, *Gesch. d. Mauren in Spanien*, ii, 170).

After the position of the caliph had changed, tradition was so far retained that he still delivered the *khuṭba* in the principal mosque on special occasions, particularly at festivals. Thus the Fāṭimid al-ʿAzīz preached in the Mosque of al-Ḥākim on its completion (al-Maḳrīzī, iv, 55) and in the month of Ramaḍān he preached in the three chief mosques of Cairo, one after the other (*ibid.*, 53, cf. 61-2; Ibn Taghrībirdī, ii/1, 482 ff.; exceptionally also in al-Rāshida: al-Maḳrīzī, iv, 63). The ʿAbbāsid caliph also used to preach at festivals (e.g. al-Rāḍī: Yāḳūt, *Udabāʾ*, ii, 349-50); it was the exception when a zealot like al-Muhtadī in the year 255/869 followed the old custom and preached every Friday (al-Masʿūdī, *Murūdj*, viii, 2 = § 3110). Even the *fainéant* caliph in Egypt preached occasionally (al-Maḳrīzī, iv, 94; Quatremère, *Hist. Sult. Maml.*, ii/1, 138-9). Although the mosque lost its old political importance in its later history, it has never quite lost its character as the place of assembly on occasions of public importance. This is evident from al-Djabartī's history, and even quite recently large meetings have been held in the mosques of Egypt on questions of nationalist politics.

2. The mosque and public administration. The actual work of government was very early transferred from the mosque into a special *dīwān* or *madjlis* (see al-Ṭabarī, *Glossarium*, s.v.) and negotiations were carried on and business frequently done in the *ḳaṣr al-imāra* (cf. al-Ṭabarī, ii, 230-1). But when financial business had to be transacted at public meetings, the mosque was used; of this there is particular evidence from Egypt. Here the director of finance used to sit in the Mosque of ʿAmr and auction the farming out of the domains, with a crier and several financial officers to assist him. Later, the *Dīwān* was transferred to the *Djāmiʿ* of Aḥmad b. Ṭūlūn, but even after 300/912-13, we find Abū Bakr al-Mādharāʾī sitting on such occasions in the Mosque of ʿAmr. Under the Fāṭimids, the vizier Yaʿḳūb b. Killis used first the *dār al-imāra* of the Mosque of Ibn Ṭūlūn (see above); later his own palace and afterwards the caliph's *ḳaṣr* was used (al-Maḳrīzī, i, 131-2). In the same way, in the reign of Muʿāwiya, the Coptic churches were used and the taxation commission took up their offices in them (*Papyrus Erzherzog Rainer, Führer durch die Ausstelling*, no. 577); and Ibn Rusta (*ca.* 290/903) says that the officials in charge of the measurement of the Nile, when they noticed the rising of the river, went at once to the chief mosque and announced it at one *ḥalḳa* after another, at the same time scattering flowers on those seated there (116).

The connection with administration was also seen in the fact that the treasury-chest, the *bayt al-māl* (identical with the *tābūt*; al-Kindī, *Wulāt*, 70, 117) was kept in the mosque. In Fusṭāṭ, Usāma b. Zayd, the director of finance, in 97/715-16 and 99/717-18 built in the Mosque of ʿAmr a *ḳubba* on pillars in front of the *minbar* for the *bayt al-māl* of Egypt. A drawbridge was placed between it and the roof. In the time of Ibn Rusta, it was still possible to move about freely below the *ḳubba*, but in 378-9/988-9 al-ʿAzīz put up a running fountain below it (Ibn Rusta, 116; al-Maḳrīzī, iv, 9, 11, 13; al-Suyūṭī, ii, 136; Yāḳūt, iii, 899). Al-Kindī records an attempt to steal the chest in 145/762 (*Wulāt*, 112-13). In the disturbed period around the year 300/912, the *wālī* al-Nūsharī closed the mosque between the times of *ṣalāt* for the safety of the chest, which was also done in Ibn Rusta's time (al-Kindī, *Wulāt*, 266; Ibn Rusta, 116). New approaches to the *bayt al-māl* were made in 422/1031 from the *khizāna* of the mosque and from the *Dīwān* (al-Maḳrīzī, iv, 13).

In Kūfa, the *buyūt al-amwāl*, at least during the early period, were in the *Dār al-Imāra* (al-Ṭabarī, i, 2489, 2491-2); in the year 38/658-9, during the fighting, it was saved from Baṣra and taken with the *minbar* to the Mosque of al-Ḥuddān (*ibid.*, 3414-15). In Palestine, in the chief mosque of each town, there was a similar arrangement to that in the Mosque of ʿAmr (al-Muḳaddasī, 182). In Damascus the *bayt al-māl* was in the most western of the three *ḳubbas* in the court of the Mosque of the Umayyads; it was of lead and rested on 8 columns (*ibid.*, 157; Ibn Djubayr, 264, 267; Ibn Baṭṭūṭa, i, 200-1); it is still called *ḳubbat el-khazne* ("treasure-cupola", earlier *ḳubbat ʿĀʾisha* (cf. Baedeker, *Palästina und Syrien*). In the time of the two travellers mentioned, the *ḳubba* only contained property of the mosque. Ibn Djubayr saw a similar *ḳubba* in the chief mosque of Ḥarrān and says that it came from the Byzantines (246). In Ādharbāydjān, also by the time of al-Iṣṭakhrī, the Syrian custom had been everywhere introduced (184); in Īrānshahr, in the centre of the court, there was a building with marble colums and doors (al-Muḳaddasī, 316), which perhaps points to a similar state of affairs, and in Armenia, it is recorded that the *bayt al-māl* was kept in the *Djāmiʿ* in the time of the Umayyads as in Miṣr and elsewhere (Ibn Ḥawḳal[1], 241). The *ḳubba* was usually of lead and had an iron door. Ibn al-Ḥādjdj considers it highly illegal to shut off a *dīwān* in a mosque, since this is the same as forbidding entrance to it. This shows that the custom still survived in his time.

Ibn Djubayr's remark about Ḥarrān suggests that here again we have an inheritance from Byzantium. It was probably the building belonging to the *piscina* (cf. above) that the Muslims put to a practical use in this way. For the Byzantines had the treasury (*sakellē*) in the palace, and it is doubtful if the treasure-chambers of the church (*skenophylakion*) were built in this way (cf. F. Dölger, in *Byzantinisches Archiv*, Heft 9 [1927], 26, 34).

3. The mosque as a court of justice. That the Prophet used to settle legal questions in his mosque was natural (see al-Bukhārī, *Aḥkām*, *bābs* 19, 29, etc.; cf. *Ṣalāt*, *bāb* 71; *Khuṣūmāt*, *bāb* 4), but he could also deliver judgments in other places (*ibid.*, *passim*). In *Ḥadīth*, it is recorded that some *ḳāḍīs* of the earlier period (Shurayḥ, al-Shaʿbī, Yaḥyā b. Yaʿmar, Marwān) sat in judgment beside the *minbar*, others (al-Ḥasan, Zurāʿa b. Awfā) on the open square beside the mosque (al-Bukhārī, *Aḥkām*, *bāb* 18). The custom had all the better chance of survival, as churches were used in the same way (Joshua Stylites, ed. Wright, ch.

29; cf. Mez, *Renaissance*, 223, Eng. tr., 224). Sitting in judgment was primarily the business of the ruler, but he had to have assistants and Abū Bakr's *ḳāḍī* is mentioned as assisting ʿUmar (al-Ṭabarī, i, 2135), and a number of judges appointed by ʿUmar are mentioned (Ibn Rusta, 227). In the reign of ʿUt͟hmān, ʿAbd Allāh b. Masʿūd is said to have been judge and financial administrator of Kūfa (Ibn Ḳutayba, *Maʿārif*, ed. Wüstenfeld, 128). On the other hand, we are told that ʿAbd Allāh b. Nawfal, appointed by Marwān in 42/662, was the first *ḳāḍī* in Islam (al-Ṭabarī, iii, 2477); it is recalled that in the year 132/749-50 the *ḳāḍī* of Medina administered justice in the mosque (*ibid.*, 2505). In Baṣra, we are told that al-Aswad b. Sarīʿ al-Tamīmī immediately after the building of the mosque (i.e. in the year 14/635) worked in it as *ḳāḍī* (al-Balād͟hurī, 346). In the early period, ʿUmar wanted to choose a *ḳāḍī*, who had been already acting as a judge before Islam (al-Kindī, *Wulāt*, 301-2; al-Suyūṭī, ii, 86). Even the Christian poet al-Ak͟hṭal was allowed to act as arbiter in the mosque of Kūfa (see Lammens, *Moʿâwia*, 435-6).

In Fusṭāṭ, as early as 23/643 or 24/644 by command of ʿUmar, ʿAmr b. al-ʿĀṣ appointed a *ḳāḍī* named Ḳays (al-Suyūṭī, ii, 86; al-Kindī, 300-1). The *ḳāḍī* held his sessions in the Mosque of ʿAmr but not exclusively there. The *ḳāḍī* K͟hayr b. Nuʿaym (120-7/738-45) held his sessions sometimes before his house, sometimes in the mosque, and for Christians on the steps leading up to the mosque (al-Kindī, 351-2). A successor of his (177-84/793-800) invited Christians who had lawsuits into the mosque to be heard (*ibid.*, 391); of another judge (205-11/820-6), it is recorded that he was not allowed to sit in the mosque (*ibid.*, 428). It seems that the *ḳāḍī* could himself choose where he would sit. A judge, officiating in the year 217/832, sat in winter in the great pillared hall, turning his back towards the *ḳibla* wall, and in summer, in the *ṣaḥn* near the western wall (*ibid.*, 443-4). During the Fāṭimid period, the subsidiary building on the north-east of the Mosque of ʿAmr was reserved for the judge. This judge, called from the year 376/986 onwards *ḳāḍī 'l-ḳuḍāt* (cf. al-Suyūṭī, ii, 91; al-Kindī, 590), sat on Tuesday and Saturday in the mosque and laid down the law (al-Maḳrīzī, ii, 246; iv, 16, 22; cf. al-Kindī, 587, 589; cf. Nāṣir-i K͟husraw, tr. Schefer, 149).

In al-Yaʿḳūbī's time in Bag͟hdād, the judge of the east city used to sit in its chief mosque (*Buldān*, 245), in Damascus the vice-*ḳāḍī* in the 4th/10th century had a special *riwāḳ* in the Mosque of the Umayyads (al-Muḳaddasī, 158), and the notaries (*al-s͟hurūṭiyyūn*) also sat at the Mosque of the Umayyads at the Bāb al-Sāʿāt (*ibid.*, 17). In Naysābūr, every Monday and Thursday, the *mad͟jlis al-ḥukm* was held in a special mosque (*ibid.*, 328). In course of time, the judge was given a *mad͟jlis al-ḥukm* of his own (cf. al-Suyūṭī, ii, 96), and in 279/892 al-Muʿtaḍid wanted to forbid the *ḳāḍīs* to hold sessions in the mosques (Ibn Tag͟hrībirdī, ii/1, 87 above; perhaps, however, we should read *ḳāṣṣ*: see Goldziher, *Muh. Stud.*, ii, 164, n. 4). Justice was also administered in the *dār al-ʿadl* (Quatremère, *Hist. Sult. Maml.*, ii/2, 79). But the administration of justice did not at once lose all connection with the mosque. Under the Fāṭimids, the custom had been introduced that the *ḳāḍī* should hold sittings in his house, but Ibn al-ʿAwwām, appointed just after 400/1009-10, held them either in the *D͟jāmiʿ* at the *Bayt al-Māl* or in a side-room (al-Kindī, 612; cf. Ibn Tag͟hrībirdī, ed. Popper, ii/2, 69; al-Ḳalḳas͟handī, *Ṣubḥ al-aʿs͟hā*ʾ, iii, 487: for 439/1046, see Nāsir-i K͟husraw, ed. Schefer, text, 51, tr. 149). In Mecca, *the dār al-ḳāḍī* was in direct connection with the mosque (Ibn D͟jubayr, 104). In the 8th/14th century, Ibn Baṭṭūṭa attended a court presided over by an eminent jurist in a mosque (*madrasa*) in S͟hīrāz (ii, 55, 63; cf. also *Madk͟hal*, ii, 54 below), and in Damascus the S͟hāfiʿī chief *ḳāḍī* held his sessions in the ʿĀdiliyya Madrasa (so Ibn K͟hallikān, in Quatremère, *Hist. Sult. Maml.*, ii/1, 22; cf. also for Egypt: *ibid.*, 87, ii/2, 253), the vice-*ḳāḍīs* sat in the Ẓāhiriyya Madrasa (Ibn Baṭṭūṭa, i, 218). The judgment might even be put into execution in the *madrasa* (*ibid.*, 220). During the Mamlūk period in Egypt, we occasionally find a small mosque being used as a *mad͟jlis* for judges (al-Maḳrīzī, iv, 270; Ibn Duḳmāḳ, 98 above); Ibn K͟haldūn held legal sittings in the Madrasa al-Ṣāliḥiyya (*ʿIbar*, vii, 453).

A *muftī*, especially in the large mosques, was also frequently appointed; he sat at definite times in a *ḥalḳa li 'l-fatwā*, e.g. in Cairo (al-Ḳazwīnī, in al-Suyūṭī, i, 182; D͟jalāl al-Dīn, *ibid.*, 187), in Tunis (al-Zarkas͟hī, *Chronicle*, tr. Fagnan, in *Rec. Mém. Soc. Arch. Constantine*, xxi [1895], 197, 202, 218, 248). In Bag͟hdād, Abū Bakr al-Dīnawarī (d. 405/1014-15) was the last to give *fatwās* in the Mosque of al-Manṣūr according to the *mad͟hhab* of Sufyān al-T͟hawrī (Ibn Tag͟hrībirdī, ed. Popper, ii/2, 120).

F. The administration of the mosque

1. Finances. The earliest mosques were built by the rulers of the various communities, and the members of the community did all the work necessary in connection with the primitive mosques. The later mosques as a rule were erected by rulers, *amīrs*, high officials or other rich men in their private capacity and maintained by them. The erection of the mosque of Ibn Ṭūlūn cost its builder 120,000 *dīnārs*, the Mosque of Muʾayyad 110,000 (al-Maḳrīzī, iv, 32, 137, 138). The upkeep of the mosque was provided for by estates made over as endowments (*waḳf*, *ḥabs*) (cf. thereon besides the *fiḳh* books, I. Krcsmárik, *Das Waḳfrecht*, in *ZDMG*, xlv [1891], 511-76; E. Mercier, *Le code du hobous ou ouakf selon la législation musulmane*, 1899). In the 3rd/9th century we thus hear of houses which belonged to the mosque and were let by them (*Papyrus Erzherzog Rainer*, *Führer*, nos. 773, 837), and Ibn Ṭūlūn handed over a large number of houses as an endowment for his mosque and hospital (al-Maḳrīzī, iv, 83). This custom was taken over from the Christians by the Muslims (see Becker, in *Isl.*, ii [1911], 404). According to al-Maḳrīzī, estates were not given as *waḳf* endowments until Muḥammad Abū Bakr al-Mād͟harāʾī (read thus) bequeathed Birkat al-Ḥabas͟h and Suyūṭ as endowments (about 300/912-13; this was however cancelled by the Fāṭimids again (*ibid.*). Al-Ḥākim made large endowments not only for his own, but also for mosques previously in existence, such as the Azhar, al-Ḥākimī, Dār al-ʿIlm and D͟jāmiʿ al-Maḳs and D͟jāmiʿ Rās͟hida; the endowments consisted of dwelling-houses, shops, mills, a *ḳaysāriyya* and *ḥawānīt*, and the document (*ibid.*, 50-1) specifies how and for what purposes the revenues are to be distributed. Baths were also given as endowments for mosques (*ibid.*, 76, for 529/1135; cf. 81 for the year 543/1148-9). Ṣalāḥ al-Dīn granted lands to his *madāris*: in 566/1170-1, for example, a *ḳaysāriyya* to the Ḳamḥiyya and a *ḍayʿa* in al-Fayyūm, and the teachers received wheat from al-Fayyūm; in the same year he endowed the Nāṣiriyya with goldsmiths' shops and a village (*ibid.*, 193-4; cf. another document, 196-7). During the Mamlūk period also, estates were given as endowments (for documents of this period, see van Berchem, *CIA*, i, nos. 247, 252, 528; Moberg, in *MO*, xii [1918], 1 ff.; *JA*, ser. 9, iii, 264-6; ser. 11, x, 158 ff., 222 f.; xii, 195 ff., 256 ff., 363 ff.). They

were often a considerable distance apart: the mosques in Egypt often had estates in Syria (van Berchem, *CIA*, i, no. 247; al-Makrīzī, vi, 107, 137). Not only were mosques built and endowed, but already existing ones were given new rooms for teachers, *minbars*, stipends for Ḳurʾān reciters, teachers, etc. There were often special endowments for the salaries of the *imām* and the *muʿadhdhin*s, for the support of visitors, for blankets, food, etc. (see Ibn Djubayr, 277 with reference to the Mosque of the Umayyads). The endowments, and the purpose for which they might be used, were precisely laid down in the grant and the document attested in the court of justice by the *ḳāḍī* and the witnesses (cf. al-Makrīzī, iv, 50, 196 below). The text was also often inscribed on the wall of the mosque (cf. *ibid.*, 76; the above-mentioned inscriptions amongst others. For documents from Tashkent, see *RMM*, xiii [1911], 278 ff.). Certain conditions might be laid down, e.g. in a *madrasa* that no Persian should be appointed there (al-Makrīzī, iv, 202 below), or that the teacher could not be dismissed or some such condition (van Berchem, *CIA*, i, no. 201); that no women could enter (*JA*, ser. 9, iii, 389); that no Christian, Jew or Ḥanbalī could enter the building (*ibid.*, 405); etc. Endowments were often made with stipulations for the family of the founder or other purposes. That mosques could also be burdened with expenses is evident from an inscription in Edfū of the year 797/1395 (van Berchem, *CIA*, i, no. 539). If a mosque was founded without sufficient endowment, it decayed (e.g. al-Makrīzī, iv, 115, 201, 203) or else the stipends were reduced (*ibid.*, 251), but in the larger mosques as a rule the rulers provided new endowments. According to al-Māwardī, there were also special "Sultan mosques" which were directly under the patronage of the caliph and their officials paid from the *bayt al-māl* (*al-Aḥkām al-sulṭāniyya*, ed. Enger, 172 above, 176 above).

Just as the *bayt al-māl* of the state was kept in the mosque, so was the mosque's own property kept in it, e.g. the *kanz* or *khizānat al-Kaʿba*, which is mentioned in ʿUmar's time and may be presumed to have existed under his predecessors (al-Balādhurī, 43 above; *Chron. Mekka*, i, 307, ii, 14). The *Bayt Māl al-Djamiʿ* in Damascus was in a *ḳubba* in the *ṣaḥn* (al-Muḳaddasī, 157; Ibn Djubayr, 267; Ibn Baṭṭūṭa, i, 201. cf. for Medina, Wüstenfeld, *Medina*, 86). Rich men also had their private treasure-chambers in the mosque (see above, I. E. 2), as used to be the case with the Temple at Jerusalem (see E. Schürer, *Gesch. d. jüd. Volkes*[4], ii, 1907, 322-8; F. Cumont, *Fouilles de Doura-Europos*, 1926, 405-6).

2. Administration. As *Imām* of the Muslim community, the caliph had the mosques under his charge. This was also the case with the sultan, governor or other ruler who represented the caliph in every respect. The administration of the mosques could not however be directly controlled by the usual government offices. By its endowment, the mosque became an object *sui generis* and was withdrawn from the usual state or private purposes. Their particular association with religion gave the *ḳāḍī*s special influence, and, on the other hand, the will of the testator continued to prevail. These three factors decided the administration of the mosque, but the relation between them was not always clear.

a. Administration of the separate mosques. The mosque was usually in charge of a *nāẓir* or *walī* who looked after its affairs. The founder was often himself the *nāẓir* or he chose another and after his death, his descendants took charge or whoever was appointed by him in the foundation charter. In the older period, the former was the rule and it is said to have applied especially in the case of chief mosques, if we may believe Nāṣir-i Khusraw, according to whom al-Ḥākim paid the descendants of Ibn Ṭūlūn 30,000 *dīnār*s for the mosque and 5,000 for the minaret, and similarly to the descendants of ʿAmr b. al-ʿĀṣ 100,000 *dīnār*s for the Mosque of ʿAmr (*Safar-nāma*, ed. Schefer, text 39-40, tr. 146, 148). In 378/988 we read of an administrator (*mutawallī*) of the mosque in Jerusalem (al-Makrīzī, iv, 11). In the case of mosques and *madāris* founded during the Mamlūk period, it is often expressly mentioned that the administration is to remain in the hands of the descendants of the founder, e.g. in the case of a mosque founded by Baybars (al-Makrīzī, iv, 89), in the Djāmiʿ Maḳs when the vizier al-Maḳsī renovated it (*ibid.*, 66), the Ṣāḥibiyya (*ibid.*, 205), and the Ḳarāsunḳuriyya (*ibid.*, 232), etc.; so also in the Badriyya in Jerusalem ("to the best of the descendants", cf. van Berchem, *CIA*, ii/1, 129). Other cases are also found. Sometimes an *amīr* or official was administrator, e.g. in the Muʾayyad (al-Makrīzī, iv, 140), the Ṭaybarsiyya (*ibid.*, 224), the Azhar (*ibid.*, 54-5) or the Mosque of Ibn Ṭūlūn (al-Ḳalḳashandī, *Ṣubḥ*, xi, 159-62). In Djamāl al-Dīn's *madrasa*, it was always the *kātib al-sirr* (al-Makrīzī, iv, 256), in the *khānaḳāh* of Baybars the *khāzindār* and his successors (van Berchem, *CIA*, i, no. 252); but it was more frequently a *ḳāḍī*; for example, in the mosque of Baybars just mentioned, the Ḥanafī *ḳāḍī* was to take charge after the descendants (al-Makrīzī, iv, 89); in the Āḳbughawiyya, the Shāfiʿī *ḳāḍī* was appointed but his descendants were expressly excluded (*ibid.*, 225). In the Mosque of the Umayyads, during the Mamlūk period the Shāfiʿī chief *ḳāḍī* was as a rule the *nāẓir* (al-Ḳalḳashandī, iv, 191), and thus also in the Nāṣir mosque in Cairo (*ibid.*, xi, 262-4). In this city, we find during the Mamlūk period that *amīrs* and *ḳāḍīs* alternately acted as *nāẓirs* in the large mosques (e.g. the Mosque of Ibn Ṭūlūn, al-Makrīzī, iv, 42). Cases are also found, however, in which descendants of the founder unsuccessfully claimed the office of *nāẓir* (al-Makrīzī, iv, 218, 255). This was the result of the increasing power of the *ḳāḍīs* (see below). In the *madāris*, the *nāẓir* was often also the leading professor; the two offices were hereditary (*ibid.*, 204, the Ṣāḥibiyya al-Bahāʾiyya; and 238 above, the Djamāliyya). In Tustar, a descendant of Sahl as *nāẓir* and teacher conducted a *madrasa* with the help of four slaves (Ibn Baṭṭūṭa, ii, 25-6).

The *nāẓir* managed the finances and other business of the mosque. Sometimes he had a fixed salary (in Baybars' *khānaḳāh*, 500 *dirhams* a month, van Berchem, *CIA*, i, 252; in the Dulāmiyya in Damascus in 847/1443-4, only 60 *dirhams* a month, *JA*, ser. 9, iii, 261), but the revenues of the mosque were often applied to his personal use. His control of the funds of the mosque was however often limited by the central commission for endowments (see below). The *nāẓir* might also see to any necessary increase of the endowments. He appointed the staff and he fixed their pay (cf. e.g. al-Makrīzī, iv, 41). He could also interfere in questions not arising out of the business side of administration; for example, the *amīr* Sawdūb, the *nāẓir* of the Azhar in 818/1415-16, ejected about 750 poor people from the mosque. He was however thrown into prison for this by the sultan (*ibid.*, 54). Generally speaking, the *nāẓir*'s powers were considerable. In 784/1382 a *nāẓir* in the Azhar decided that the property of a *mudjāwir*, who had died without heirs, should be distributed among the other students (*ibid.*, 54). In Mecca, according to Ḳuṭb al-Dīn, the

Nāẓir al-Ḥarām was in charge of the great festival of the *mawlid* of the Prophet (12 Rabīᶜ I) and distributed robes of honour in the mosque on this occasion (*Chron. Mekka*, iii, 349). In the Azhar, no *nāẓir* was appointed after about 493/1100 but a learned man was appointed Shaykh al-Azhar, principal and administrator of the mosque (Sulaymān Raṣad al-Zayyātī, *Kanz al-djawhar fī taʾrīkh al-Azhar*, 123 ff.). Conditions were similar in Mecca in the late 19th century (Snouck Hurgronje, *Mekka*, ii, 235-6, 252-3).

As we have seen, *ḳāḍīs* were often *nāẓirs* of mosques. This was especially the case in the *madāris*, where the *ḳāḍīs* were often teachers (cf. al-Maḳrīzī, iv, 209, 219, 222, 238, etc.); the *ḳāḍīs* were particularly anxious to get the principal offices in the large schools (cf. al-Ḳalḳashandī, xi, 235). Their influence was however further increased by the fact that, if a *nāẓir* qualified by the terms of the founder's will no longer existed, the *ḳāḍī* of the *madhab* in question stepped into his place (cf. *ZDMG*, xlv [1897], 552). By this rule, which often gave rise to quarrels between the different *ḳāḍīs* (e.g. al-Maḳrīzī, iv, 218, the Ẓāhiriyya), a *ḳāḍī* could accumulate a larger number of offices and "milk the endowments" (*ibid.*, iii, 364). Sometimes their management was so ruthless that the schools soon declined (e.g. the Ṣāhibiyya and the Djamāliyya, al-Maḳrīzī, iv, 204-5, 238). They also exercised influence through the committee of management of the mosque.

b. Centralisation in the management of the mosques. The large mosques occupied a special position in the Muslim lands, because the caliph had to interest himself particularly in them, especially those of Mecca and Medina, where the rulers and their governors built extensions and executed renovations (cf. *Chron. Mekka*, i, 145; iii, 83 ff.). During the ᶜAbbāsid period, the *ḳāḍī* occasionally plays a certain part in this connection; for example al-Mahdī (158-69/775-85), presented the *ḳāḍī* with the necessary money to extend and repair the Meccan mosque (*ibid.*, i, 312; ii, 43). In 263/877, al-Muwaffaḳ ordered the governor of Mecca to undertake repairs at the Kaᶜba (*ibid.*, ii, 200-1). In 271/1884-5, the governor and the *ḳāḍī* of Mecca co-operated to get money from al-Muwaffaḳ for repairs, and they saw the work through (*ibid.*, iii, 136-7). In 281/894, the *ḳāḍī* of Mecca wrote to the vizier of al-Muᶜtaḍid about the *Dār al-Nadwa* and backed up his request by sending a deputation of the staff there (*sadana*). The caliph then ordered the vizier to arrange the matter through the *ḳāḍī* of Baghdād and a man was sent to Mecca to take charge of the work (*ibid.*, iii, 144 ff.).

The importance of the *ḳāḍī* was based primarily on his special knowledge in the field of religion. A zealous *ḳāḍī* like al-Ḥārith b. Miskīn in Cairo (237-45/851-9) forbade the *ḳurrāʾ* of a mosque to recite the Ḳurʾān melodiously; he also had the *maṣāḥif* in the mosque of ᶜAmr inspected and appointed an *amīn* to take charge of them (al-Kindī, *Wulāt*, 469). After the building of the Ṭūlūnid mosque, a commission was appointed under the *ḳāḍī 'l-ḳuḍāt* to settle the *ḳibla* of the mosque (al-Maḳrīzī, iv, 21-2). But at a quite early date they also obtained a say in the management of the funds. The first *ḳāḍī* to lay his hands on the *aḥbās* was Tawba b. Namir al-Ḥaḍramī; while hitherto every endowment had been administered by itself by the children of the testator or someone appointed by him, in 118/736 Tawba brought about the centralisation of all endowments and a large *dīwān* was created for the purpose (al-Kindī, 346). How this system of centralisation worked is not clear at first, but it was carried through under the Fāṭimids.

Al-Muᶜizz created a special *dīwān al-aḥbās* and made the chief *ḳāḍī* head of it as well as of the *djawāmiᶜ wa 'l-mashāhid* (al-Maḳrīzī, iv, 83 and 75; cf. al-Kindī, 585, 587, 589, according to whom al-ᶜAzīz specially appointed the chief *ḳāḍī* over the two *djāmiᶜs*), and a special *bayt al-māl* was instituted for it in 363/974; a yearly revenue of 150,00 *dirhams* was guaranteed; anything left over went to form a capital fund. All payments were made through his office after being certified by the administration of the mosque (al-Maḳrīzī, iv, 83-4). The mosques were thus administered by the *ḳāḍīs*, directly under the caliph. The *dīwān al-birr wa 'l-ṣadaḳa* in Baghdād (Mez, *Renaissance*, 72, Eng. tr., 80) perhaps served similar purposes.

Al-Ḥākim reformed the administration of the mosques. In 403/1012-13 he had an investigation made, and when it proved that 800 (or 830) had no income (*ghalla*), he made provision for them by a payment of 9,220 *dirhams* monthly from the *Bayt al-Māl*; he also made 405 new endowments (of estates) for the officials of the mosque (al-Maḳrīzī, iv, 84, 264). Under the Fāṭimids, the *ḳāḍīs* used to inspect all the mosques and *mashāhid* in and around Cairo at the end of Ramaḍān and compare them with their inventories (*ibid.*, 84). The viziers of the Fāṭimids, who also had the title *ḳāḍī*, did much for the mosques (Djawhar, Yaᶜḳūb b. Killis, Badr al-Djamālī, cf. van Berchem, *CIA*, i, nos. 11, 576, 631).

Under the Ayyūbids, conditions were the same as under the Fāṭimids. The *dīwān al-aḥbās* was under the *ḳāḍīs* (al-Maḳrīzī, iv, 84). Ṣalāḥ al-Dīn gave a great deal to the mosques, especially the *madāris*: 20,000 *dirhams* a day is a figure given (*ibid.*, 117). When Ibn Djubayr says that the sultan paid the salaries of the officials of the mosques and schools of Alexandria, Cairo and Damascus 43, 52, 275), he must really mean the *Dīwān* already mentioned.

The same conditions continued for a time under the Mamlūks. In the time of Baybars, for example, the chief *ḳāḍī* Tādj al-Dīn was *nāẓir al-aḥbās*. He caused the Mosque of ᶜAmr to be renovated, and when the funds from the endowments were exhausted, the sultan helped him from the *Bayt al-Māl* (al-Maḳrīzī, iv, 14); after conferring with experts, the chief *ḳāḍī* forbade a water-supply brought by Ṣalāḥ al-Dīn into the mosque (*ibid.*, 14; al-Suyūṭī, ii, 137). In 687 the chief *ḳāḍī* Taḳī al-Dīn complained to Ḳalāwūn that the ᶜAmr and Azhar mosques were falling into ruins, while the *aḥbās* were much reduced. The sultan would not however permit their restoration but entrusted the repairs of the mosques to certain *amīrs*, one to each (al-Maḳrīzī, iv, 14, 15). This principle was several times applied in later times, and the *amīrs* frequently gained influence at the expense of the *ḳāḍīs*. Thus after the earthquake of 707/1303 (cf. thereon Quatremère, *Hist. Sult. Maml.*, ii/2, 214 ff.), the mosques were allotted to *amīrs*, who had to see that they were rebuilt (al-Maḳrīzī, iv, 15, 53). From the middle of the 7th/13th century, we often find *amīrs* as administrators of the chief mosques. The *ḳāḍī* had however obtained so much authority that he was conceded "a general supervision of all matters affecting the endowments of his *madhhab*" (al-ᶜUmarī, *al-Taᶜrīf bi 'l-muṣṭalaḥ al-sharīf*, 117; cf. *ZDMG*, xlv [1891], 559); according to this theory the *ḳāḍī* could intervene to stop abuses. In Syria in 660/1262 Ibn Khallikān became *ḳāḍī* over the whole area between al-ᶜArīsh and the Euphrates and superintendent of *waḳfs*, mosques, *madrasas*, etc. (Quatremère, *Hist. Sult. Maml.*, i/1, 170).

Sultan Baybars reformed these endowments and

restored the office of *nāẓir al-awḳāf* or *nāẓir al-aḥbās al-mabrūra* or *n. d̲j̲ihāt al-birr* (al-Ḳalḳas̲h̲andī, iv, 34, 38; v, 465; ix, 256; xi, 252, 257; cf. K̲h̲alīl al-Ẓāhirī, *Zubdat kas̲h̲f al-mamālik*, ed. Ravaisse, 109). According to al-Maḳrīzī, the endowments were distributed among the Mamlūks in three departments (*d̲j̲ihāt*): 1. *d̲j̲ihāt al-aḥbās*, managed by an *amīr*, the *Dawādār*: this looked after the lands of the mosques, in 740/1339-40, in all 130,000 *faddāns*; 2. *d̲j̲ihāt al-awḳāf al-ḥukmiyya bi-Miṣr wa 'l-Ḳāhira*, which administered dwelling-houses; it was managed by the S̲h̲āfiʿī *ḳāḍī 'l-ḳuḍāt*, with the title *Nāẓir al-Awḳāf*. This department came to an end in the time of al-Malik al-Nāṣir Farad̲j̲ because an *amīr*, supported by the opinion of the Ḥanafī chief *ḳāḍī*, spent a great deal and misused the funds; 3. *d̲j̲ihāt al-awḳāf al-ahliyya*, comprised all the endowments which still had particular *nāẓirs*, either descendants of the testator or officials of the sultan and the *ḳāḍī*. The *amīrs* seized their lands and Barḳūḳ, before he became sultan, sought in vain to remedy the evil by appointing a commission. The endowments in general disappeared somewhat later because the ruling *amīrs* seized them (al-Maḳrīzī, iv, 83-6). In modern times, as a rule, endowments in Muslim lands have been combined under a special ministry, a *Wizārat al-Awḳāf*.

To be distinguished from the administrators of the mosque is the *nāẓir* who is only concerned with the supervision of the erection of mosques. Anyone could be entrusted with the building of a mosque (e.g. al-Maḳrīzī, iv, 92). Under the Mamlūks, there was also a clerk of works, *mutawallī s̲h̲add al-ʿamāʾir* or *nāẓir al-ʿimāra*: he was the overseer of the builders (*ibid.*, 102; see *Zubdat kas̲h̲f al-mamālik*, ed. Ravaisse, 115, cf. 109; van Berchem, *CIA*, i, 742, no. 751).

The caliph or the ruler of the country was in this, as in other matters, supreme. As we have seen, he intervened in the administration and directed it as he wished. He was also able to interfere in the internal affairs of the mosque, if necessary through his usual officers. In 253/867 after the rising in the Fayyūm, the chief of police issued strict orders by which it was forbidden to say the *basmala* aloud in the mosque; the number of prayers in the month of Ramaḍān was cut down, the *ad̲h̲ān* from the minaret forbidden, etc. (*Papyrus Erzherzog Rainer, Führer*, 788). In the year 294/908, the governor ʿĪsā al-Nūs̲h̲arī had the Mosque of ʿAmr closed except at the *ṣalāts*, because the *bayt al-māl* was kept in it, which however produced protests from the people (al-Maḳrīzī, iv, 11; al-Kindī, *Wulāt*, 266; Ibn Rusta, 116). Many similar examples could be mentioned, especially during periods of unrest. In 205/821 the *nāʾib*, in conjunction with the *ḳāḍīs*, revised the budget of the Mosque of the Umayyads and made financial reforms (*JA*, ser. 9, vii, 220). The *ad̲h̲ān* formulae were laid down in edicts by the ruler (al-Maḳrīzī, iv, 44, 45). In the year 323/935 the vizier in Bag̲h̲dād had a man whipped who had recited a variant text of the Ḳurʾān in the *miḥrāb*, after he had been heard in his defence in the presence of the *ḳāḍīs* and learned men (Yāḳūt, *Udabāʾ*, vi, 300). The importance of the sovereign in connection with the mosque depended on his personality. As a rule, he recognised the authority of the regular officials. When, for example, al-K̲h̲aṭīb al-Bag̲h̲dādī asked the caliph al-Ḳāʾim for authority to read *ḥadīt̲h̲* in the mosque of al-Manṣūr, the latter referred the question to the *naḳīb al-nuḳabāʾ* (Yaḳūt, *Udabāʾ*, i, 246-7; cf. Wüstenfeld, *Schâfiʿi*, iii, 280).

The consecration of the mosque was attended by certain ceremonies. When, for example, the midday worship was conducted for the first time in the D̲j̲āmiʿ al-Ṣāliḥ in Cairo, a representative from Bag̲h̲dād was present (al-Maḳrīzī, iv, 81). At the consecration of the Mosque of Ibn Ṭūlūn, the builder gave al-Rabīʿ b. Sulaymān, a pupil of al-S̲h̲āfiʿī, who lectured on *ḥadīt̲h̲* there, a purse of 1,000 *dīnārs* (al-Suyūṭī, ii, 139). Al-Maḳrīzī describes the consecration ceremony at several mosques. In the Mosque of al-Muʾayyad the sultan was present seated on a throne surrounded by his officers; the basin of the *ṣaḥn* was filled with sugar and *ḥalwa*, the people ate and drank, lectures were given, then the *ṣalāt* was read and *k̲h̲uṭba* delivered and the sultan distributed robes of honour among the officials of the mosques and Ṣūfīs (al-Maḳrīzī, iv, 139); similarly at the Ẓahiriyya in 662/1264 where poems were also recited: cf. Quatremère, *Hist. Sult. Maml.*, i/1, 228), Madrasat D̲j̲amāl al-Dīn, in 811/1408-9; al-Ṣarg̲h̲itmis̲h̲iyya, 757 (al-Makrīzī, iv, 217-18, 253, 256).

G. The personnel of the mosque.

1. The *Imām*. From the earliest days of Islam, the ruler was the leader of the *ṣalāt*; he was *imām* as leader in war, head of the government and leader of the common *ṣalāt*. The governors of provinces thus became leaders of the *ṣalāt* and heads of the *k̲h̲arād̲j̲*, and when a special financial official took over the fiscal side, the governor was appointed *ʿalā 'l-ṣalāt wa 'l-ḥarb*. He had to conduct ritual prayer, especially the Friday *ṣalāt*, on which occasion he also delivered the *k̲h̲uṭba*. If he was prevented, the chief of police, *ṣāḥib al-s̲h̲urṭa*, was his *k̲h̲alīfa* (cf. al-Maḳrīzī, iv, 83). ʿAmr b. al-ʿĀṣ permitted the people of the villages to celebrate the two festivals, while the Friday divine service could only take place under those qualified to conduct it (who could punish and impose duties; *ibid.*, 7). This was altered under the ʿAbbāsids. The caliph no longer regularly conducted the *ṣalāts* (after the conquest of the Persians; al-Maḳrīzī, iv, 45), and ʿAnbasa b. Isḥāḳ, the last Arab governor of Egypt (238-42/852-6), was also the last *amīr* to conduct the *ṣalāt* in the *d̲j̲āmiʿ*. An *imām*, paid out of the *bayt al-māl*, was now appointed (*ibid.*, 83), but the governor still continued to be formally appointed *ʿalā 'l-ṣalāt*. Henceforth, the ruler only exceptionally conducted the service, for example, the Fāṭimids on ceremonial occasions, especially in the month of Ramaḍān (Ibn Tag̲h̲rībirdī, ed. Juynboll, ii, 482 ff.; al-Ḳalḳas̲h̲andī, iii, 509 ff.); in many individual mosques, probably the most prominent man conducted the service; according to the *ḥadīt̲h̲*, the one with the best knowledge of the Ḳurʾān and, failing him, the eldest, should officiate (al-Buk̲h̲ārī, *Ad̲h̲ān*, *bābs* 46, 49).

The *imām* appointed was chosen from among those learned in religious matters; he was often a Hās̲h̲imite (Mez, *Renaissance*, 147, Eng. tr., 150); he might at the same time be a *ḳāḍī* or his *nāʾib* (see al-Kindī, 575, 589; Ibn Baṭṭūṭa, i, 276-7). During the *ṣalāt* he stood beside the *miḥrāb*; al-Muḳaddasī mentions the anomaly that in Syria one performed one's *ṣalāt* "in front of the *imām*" (202). He could also stand on an elevated position; on one occasion Abū Hurayra conducted the *ṣalāt* in the Meccan mosque from the roof (al-Buk̲h̲ārī, *Ṣalāt*, *bāb* 17). In Mecca, in Ibn D̲j̲ubayr's time, each of the four recognised *mad̲h̲āhib* (with the Zaydīs in addition) had an *imām*; they conducted the *ṣalāt*, one after the other each in his place, in the following order: S̲h̲āfiʿīs, Mālikīs, Ḥanafīs and Ḥanbalīs; they only performed the *ṣalāt al-mag̲h̲rib* together; in Ramaḍān, they held the *tarāwīḥ* in different places in the mosque, which was also often conducted by the *ḳurrāʾ* (*Riḥla*, 101, 102, 143-4). This is still the case; very frequently one performs the *ṣalāt*, not after the *imām* of one's own *mad̲h̲hab* (Snouck Hurgronje, *Mekka*, ii, 79-80). In Jerusalem, according

to Mudjīr al-Dīn, the order was: Mālikīs, Shāfiʿīs, Ḥanafīs and Ḥanbalīs, who prayed each in their own part of the Ḥaram; in Hebron the order was the same (Sauvaire, *Hist. Jér. et Hébron*, 136-7). In Ramaḍān, extraordinary *imāms* were appointed (*ibid.*, 138).

When the *imām* no longer represented a political office, each mosque regularly had one. He had to maintain order and was in general in charge of the divine services in the mosque. In al-Muḳaddasī's time the *imām* of the Mosque of ʿAmr read a *djuzʾ* of the Ḳurʾān every morning after the *ṣalāt* (205). It was his duty to conduct every *ṣalāt*, which is only valid *fī djamāʿa*. He must conform to the standards laid down in the law; but it is disputed whether the *ṣalāt* is invalid in the opposite case. According to some, the leader of the Friday *ṣalāt* should be a different man from the leader of the five daily *ṣalāts* (al-Māwardī, *al-Aḥkām al-sulṭāniyya*, ed. Enger, 171; Ibn al-Ḥādjdj, *Madkhal*, ii, 41, 43 ff., 50, 73 ff.; al-Subkī, *Muʿīd al-niʿam*, ed. Myhrman, 163-4; for *ḥadīths*, see Wensinck, *Handbook*, 109-10). Many misgivings against payment being made for religious services were held by certain authorities, who quoted in support of their view a saying of Abū Ḥanīfa (al-Muḳaddasī, 127).

2. The *Khaṭīb* or preacher [see KHAṬĪB].

3. The *Ḳāṣṣ* and *Ḳāriʾ*. On these, see above, I. C. 3. Sometimes, in later usage, *wāʿiẓ* is used of the official speaker, very like the *khaṭīb* (cf. Ibn Baṭṭūṭa, iii, 9), while *al-ḳāṣṣ* is only applied to the street story-teller (al-Subkī, *Muʿīd al-niʿam*, 161-2). The *ḳurrāʾ* were also frequently appointed to *madrasas* and particularly to mausoleums (al-Maḳrīzī, iv, 223; Yāḳūt, iv, 509; al-Subkī, 162; van Berchem, *CIA*, i, no. 252).

4. The *Muʾadhdhin*. According to most traditions, the office of *muʾadhdhin* was instituted in the year 1, according to others only after the *isrāʾ*, in the year 2, according to some weak traditions, while Muḥammad was still in Mecca. At first, the people came to the *ṣalāt* without being summoned. Trumpets (*būḳ*) were blown and rattles (*nāḳūs*) used, or fires lit after the custom of Jews, Christians and Madjūs. ʿAbd Allāh b. Zayd learned the *adhān* formula in a dream; it was approved by the Prophet and when Bilāl proclaimed it, it was found that ʿUmar had also learned the same procedure in a dream (Ibn Hishām, 357-8; al-Diyārbakrī, i, 404-5; al-Bukhārī, *Adhān*, *bāb* 1; al-Zurḳānī, i, 121 ff.). There are also variants of the story, e.g. that the Prophet and ʿUmar had the vision, or Abū Bakr or seven or fourteen of the Anṣār. According to some, the Prophet learned it at the *miʿrādj* from Gabriel, hence the introduction of the *adhān* is dated after the *isrāʾ*; among the suggestions made, the hoisting of a flag is mentioned (*Sīra Ḥalabiyya*, ii, 100 ff.). Noteworthy is a tradition which goes back to Ibn Saʿd, according to which at ʿUmar's suggestion, at first a *munādī*, Bilāl, was sent out who called in the streets: *al-ṣalāta djāmiʿatan*. Only later were other possibilities discussed, but the method already in use was confirmed by the dream, only with another formula, the one later used al-Diyārbakrī, i, 404; *Sīra Ḥalabiyya*, ii, 100-1). According to this account, the consideration of other methods would be a secondary episode, and probably the tradition in general represents a later attitude to the practices of other religions. But in Islam, other methods were certainly used. In Fās, a flag was hung out in the minarets and a lamp at night (*JA*, ser. 11, xii, 341). The flag is also found in the legend of the origin of the practice.

The public crier was a well-known institution among the Arabs. Among the tribes and in the towns, important proclamations and invitations to general assemblies were made by criers. This crier was called *munādī* or *muʾadhdhin* (*Sīra Ḥalabiyya*, ii, 170; Lammens, *La Mecque*, 62 ff., 146; idem, *Berceau*, i, 229 n.; idem, *Moʿâwia*, 150). *Adhān* therefore means proclamation, sūra IX, 3, and *adhdhana*, *muʾadhdhin*, sūra VII, 70, "to proclaim" and "crier". *Munādī* (al-Bukhārī, *Farḍ al-khums*, *bāb* 15) and *muʾadhdhin* (*ibid.*, *Ṣawm*, *bāb* 69; *Ṣalāt*, *bāb* 10 = *Djizya*, *bāb* 16; *Sīra Ḥalabiyya*, ii, 270) are names given to a crier used by the Prophet or Abū Bakr for such purposes. Official proclamations were regularly made by criers (cf. al-Ṭabarī, iii, 2131, 3). Sadjāḥ and Musaylima used a *muʾadhdhin* to summon the people to their prayers (al-Ṭabarī, i, 1919, 1932; cf. *Annali dell' Islām*, i, 410; 638-9). It was therefore a very natural thing for Muḥammad to assemble the believers to common prayer through a crier (*nādā li'l* or *ilā 'l-ṣalāt*, sūra V, 63; lxii, 9); the summons is called *nidāʾ* and *adhdhān*, the crier *munādī* (al-Bukhārī, *Wuḍūʾ*, *bāb* 5; *Adhān*, *bāb* 7) and *muʾadhdhin*; the two names are used quite indiscriminately (e.g. *ibid.*, *Wuḍūʾ*, *bāb* 5; al-Ṭabarī, ii, 297 sq.). *Munādī 'l-ṣalāt*, al-Muḳaddasī, 182, 12, also *ṣāʾiḥ* "crier" is used (al-Ṭabarī, iii, 861; *Chron. Mekka*, i, 340).

In these conditions, it was very natural for the crier in the earliest period to be regarded as the assistant and servant of the ruler; he is his *muʾadhdhin* (Ibn Saʿd, i, 7; Muslim, *Ṣalāt*, tr. 4; al-Maḳrīzī, iv, 43, etc.; cf. al-Ṭabarī, ii, 1120). ʿUmar sent to Kūfa ʿAmmār b. Yāsir as *amīr* and ʿAbd Allāh b. Masʿūd "as *muʾadhdhin* and *wazīr*" (Ibn al-Faḳīh, 165); he is thus the right hand of the ruler. Al-Ḥusayn had his *munādī* with him, and the latter summoned to the *ṣalāt* on al-Ḥusayn's instructions (al-Ṭabarī, ii, 297, 298; cf. Ibn Ziyād, *ibid.*, 260 and in the year 196/811-12, the *ʿāmil* in Mecca, *ibid.*, iii, 861, 13; also *Chron. Mekka*, i, 340). During the earliest period, the *muʾadhdhin* probably issued his summons in the streets and the call was very short: *al-ṣalāta djāmiʿatan* (Ibn Saʿd, 7, 7; *Chron. Mekka*, i, 340; al-Ṭabarī, iii, 861; cf. also in the year 196/811-12, *Sīra Ḥalabiyya*, ii, 101 al-Diyārbakrī, i, 404-5). This brief summons was, according to Ibn Saʿd, also used later on irregular occasions (i, 7 ff.; cf. the passage in al-Ṭabarī). Perhaps also the summons was issued from a particular place even at a quite early date (see I. D. 2a). After the public summons, the *muʾadhdhin* went to the Prophet, greeted him and called him to prayer; the same procedure was later used with his successor; when he had come, the *muʾadhdhin* announced the beginning of the *ṣalāt* (*aḳāma 'l-ṣalāt*: cf. al-Bukhārī, *Wuḍūʾ*, *bāb* 5; *Adhān*, *bāb* 48; *Sīra Ḥalabiyya*, ii, 104-5; al-Maḳrīzī, iv, 45; and IḲĀMA). The activity of the *muʾadhdhin* thus fell into three sections: the assembling of the community, the summoning of the *imām* and the announcement of the beginning of the *ṣalāt*. In the course of time, changes were made in all three stages.

The assembling of the community by crying aloud was not yet at all regular in the older period. During the civil strife in ʿIrāḳ, ʿUbayd Allāh b. Ziyād in the year 60/680 had his *munādī* summon people with threats to the evening *ṣalāt* in the mosque, and when after an hour the mosque was full, he had the *iḳāma* announced (al-Ṭabarī, ii, 260). When a large number of mosques had come into existence, the public call to prayer had to be organised lest confusion result, and the custom of calling from a raised position became general after the introduction of the minaret. While previously the call to prayer had only been preparatory and the *iḳāma* was the final summons, the public call (*adhān*) and the *iḳāma* now formed two distinct phases of the call to prayer. Tradition has

retained a memory of the summoning in the streets, now completely fallen into disuse, when it tells us that ʿUthmān introduced a third adhān, a call in al-Zawrāʾ, which was made before the call from the minaret: this call, however, was transferred by Hishām b. ʿAbd al-Malik to the minaret (al-Bukhārī, *Djumʿa*, *bābs* 22, 25; *Sīra Ḥalabiyya*, ii, 110; Ibn al-Ḥādjdj, *Madkhal*, ii, 45). This may be evidence of the gradual cessation of the custom of summoning the community by going through the streets. Ibn Baṭṭūṭa (but this is exceptional) tells us that the *muʾadhdhins* in Khwārazm still fetched the people from their houses and those who did not come were whipped (iii, 4-5), which recalls Wahhābī measures. When exactly the Sunnī and, in distinction to it, the Shīʿī formula, finally developed can hardly be ascertained [see ADHĀN]. The call *ḥayya ʿalā ʾl-falāḥ* is known from the time of ʿAbd al-Malik (65-85/685-705) (al-Akhṭal, ed. Ṣālḥānī, 254; see Horovitz, in *Isl.*, xvi [1927], 154; on *takbīr*, see *ibid.*; on *adhān* formulae, see further *Sīra Ḥalabiyya*, ii, 105-6). At first, the call was only made at the chief mosque, as was the case in Medina and Miṣr (al-Maḳrīzī, iv, 43 below), but very quickly other mosques were also given *muʾadhdhins*: their calls were sufficiently audible in the whole town. The chief mosque retained this privilege, that its *muʾadhdhin* called first and the others followed together (al-Maḳrīzī, iv, 43 below, 44).

The summoning by the *imām* in Medina was therefore quite a natural thing. The custom, at first associated with the ruler's mosque, was not observed in Medina only (see for ʿUthmān and ʿAlī, al-Ṭabarī, i, 3059-60), but was also usual under the Umayyads. The formula was *al-salām ʿalayka ayyuhā ʾl-amīr wa-raḥmatu ʾllāh wa-barakātuhu, ḥayya ʿalā ʾl-ṣalat, ḥayya ʿalā ʾl-falāḥ al-ṣalāt, yarḥamuka ʾllāh* (al-Maḳrīzī, iv, 45; *Sīra Ḥalabiyya*, ii, 105). After the alteration in the *adhān* and the greater distance of the ruler from the mosque, to summon him was no longer the natural conclusion to the assembling of the community. In the ʿAbbāsid period and under the Fāṭimids, there was a survival of the old custom, in as much as the *muʾadhdhins* ended the *adhān* call before the *ṣalāt al-fadjr* on the minarets with a *salām* upon the caliph. This part of the *muʾadhdhin*'s work was thus associated with the first *adhān* call. When Ṣalāḥ al-Dīn came to power, he did not wish to be mentioned in the call to prayer, but instead he ordered a blessing upon the Prophet to be uttered before the *adhān* to the *ṣalāt al-fadjr*, which after 761/1360 only took place before the Friday service. A *muḥtasib* ordered that after 791/1389 in Egypt and Syria at each *adhān* a *salām* was to be uttered over the Prophet (al-Maḳrīzī, iv, 46; *Sīra Ḥalabiyya*, ii, 110). Ibn Djubayr relates that in Mecca after each *ṣalāt al-maghrib*, the foremost *muʾadhdhin* pronounced a *duʿāʾ* upon the ʿAbbāsid *Imām* and on Ṣalāḥ al-Dīn from the Zamzam roof, in which those present joined with enthusiasm (103), and according to al-Maḳrīzī, after each *ṣalāt* prayers for the sultan were uttered by the *muʾadhdhins* (iv, 53-4). Another relic of the old custom was that the trumpet was sounded at the door of the ruler at times of prayer; this honour was also shown to ʿAḍud al-Dawla in 368/978-9 by order of the caliph (Miskawayh, vi, 499; ed. Cairo 1315, 396).

The *iḳāma* always remained the real prelude to the service and is therefore regarded as the original *adhān* (al-Bukhārī, *Djumʿa*, *bāb* 24). In the earliest period, it was fixed by the arrival of the ruler and it might happen that a considerable interval elapsed between the summoning of the people and the *iḳāma* (cf. al-Ṭabarī, ii, 260, 297-8). The times were later more accurately defined; one should be able to perform one to three *ṣalāts* between the two calls (al-Bukhārī, *Adhān*, *bāb* 14, 16). Some are said to have introduced the practice of the *muʾadhdhin* calling *ḥayya ʿalā ʾl-ṣalāt* at the door of the mosque between the two calls (*Sīra Ḥalabiyya*, ii, 105). From the nature of the case, the *iḳāma* was always called in the mosque; at the Friday service, it was done when the *imām* mounted the *minbar* (al-Bukhārī, *Djumʿa*, *bāb* 22, 25; *Sīra Ḥalabiyya*, ii, 110; al-Maḳrīzī, iv, 43) while the *muʾadhdhin* stood in front of him. This *muʾadhdhin*, according to some, ought to be the one who called the *adhān* upon the minaret (*Sīra Ḥalabiyya*, ii, 109), while Ibn al-Ḥādjdj ignoring the historical facts only permits the call from the minaret (*Madkhal*, ii, 45). In Tunis, the *iḳāma* was announced by ringing a bell as in the churches (al-Zarkashī, tr. Fagnan, in *Rec. Soc. Arch. Constantine* [1894], 111-12). A similarity to the responses in the Christian service is found in the fact that the call of the *muʾadhdhin*, which contains a confession of faith, is to be repeated or at least answered by every one who hears it (al-Bukhārī, *Djumʿa*, *bāb* 23); this is an action which confers religious merit (Ibn Ḳuṭlūbughā, *Ṭabaḳāt al-Ḥanafiyya*, ed. Flügel, 30). It is possible that we should recognise in this as well as in the development of the formulae the influence of Christians converted to Islam (cf. Becker, *Zur Gesch. d. islam. Kultus*, in *Isl.*, iii [1912], 374 ff., and *Islamstudien*, i, 472 ff., who sees an imitation of the Christian custom in the *iḳāma* in general; on the possibility of Jewish influence, see Mittwoch, in *Abh. Pr. A. W.* [1913], Phil.-Hist. Cl. 2).

The *muʾadhdhin* thus obtained a new importance. His work was not only to summon the people to divine service, but was in itself a kind of religious service. His sphere of activity was further developed. In Egypt we are told that Maslama b. Mukhallad (47-62/667-82) introduced the *tasbīḥ*. This consisted in praises of God which were uttered by the *muʾadhdhins* all through the night until *fadjr*. This is explained as a polemical imitation of the Christians, for the governor was troubled by the use of the *nawāḳīs* at night and forbade them during the *adhān* (al-Maḳrīzī, iv, 48). In the time of Aḥmad b. Ṭūlūn and Khumārawayh, the *muʾadhdhins* recited religious texts throughout the night in a special room. Ṣalāḥ al-Dīn ordered them to recite an *ʿaḳīda* in the night *adhān* and after 700/1300-1, *dhikr* was performed on Friday morning on the minarets (*ibid.*, 48-9, *Sīra Ḥalabiyya*, ii, 111). In Mecca also, the *muʾadhdhins* performed *dhikr* throughout the night of 1 Shawwāl on the roof of the *ḳubba* of the Zamzam well (Ibn Djubayr, 155, 156; cf. for Damascus, al-Maḳrīzī, iv, 49). Similar litanies are kept up in modern times, as well as a special call about an hour before dawn (*ebed*, *tarḥīm*: see Lane, *Manners and customs*, Everyman's Library, 75-6, cf. 86; Snouck Hurgronje, *Mekka* ii, 84 ff.).

The original call of the *muʾadhdhin* thus developed into a melodious chant like the recitation of the Ḳurʾān. Al-Muḳaddasī tells us that in the 4th/10th century in Egypt during the last third of the night, the *adhān* was recited like a dirge (205). The solemn effect was increased by the large number of voices. In large mosques, like that of Mecca, the chief *muʾadhdhin* called first from a minaret, then the others came in turn (*Chron. Mekka*, iii, 242-5); Ibn Djubayr, 145 ff.; (cf. Ibn Rusta, 111, 1 ff. and above). But in the mosque itself, the *iḳāma* was pronounced by the *muʾadhdhins* in chorus on the *dakka* (see above, I. D. 2e) erected for this purpose, which is also traced to Maslama. In the 3rd/9th and 4th/10th centuries we hear of these melodious recitations (*taṭrīb*) of the *muʾadhdhins* on a raised podium in widely separated

parts of the Muslim world (Ṣanʿāʾ, Egypt, Khurāsān, al-Muḳaddasī, 327; Ibn Rusta, 111; the expression *al-mutalaʿʿibīn*, "the musicians", if correct, probably refers to the *muʾadhdhins*, al-Muḳaddasī, 205; cf. also al-Kindī, *Wulāt*, 469; for Fārs we are expressly told that the *muʾadhdhins* call without *taṭrīb*, al-Muḳaddasī, 439, 17). Sometimes in large mosques, they were stationed in different parts of the mosque to make the *imām*'s words clear to the community (*tablīgh*). The singing, especially in chorus, like the *tablīgh*, was regarded by many as *bidʿa* (al-Kindī, *op. cit.*; *Madkhal*, ii, 45-6, 61-2; *Sīra Ḥalabiyya*, ii, 111). In other ways also, the *muʾadhdhins* could be compared to deacons at the service. The *khaṭīb* on his progress to the *minbar* in Mecca was accompanied by *muʾadhdhins*, and the chief *muʾadhdhin* girded him with a sword on the *minbar* (Ibn Djubayr, 96-7).

The new demands made on the *muʾadhdhins* necessitated an increase in their number, especially in the large mosques. The Prophet in Medina had two *muʾadhdhins*, Bilāl b. Ribāḥ, Abū Bakr's *mawlā*, and Ibn Umm Maktūm, who worked in rotation. ʿUthmān also is said occasionally to have called the *adhān* in front of the *minbar*, i.e. the *iḳāma* (al-Maḳrīzī, iv, 43). It is therefore regarded as commendable to have two *muʾadhdhins* at a mosque (Muslim, *Ṣalāt*, tr. 4; cf. al-Subkī, *Muʿīd*, 165). Abū Maḥdhūra was also the Prophet's *muʾadhdhin* in Mecca. Under ʿUmar, Bilāl's successor as *muʾadhdhin* was Saʿd al-Ḳaraẓ, who is said to have called to prayer for the Prophet in Ḳubāʾ (al-Maḳrīzī, *op. cit.*; cf. *Sīra Ḥalabiyya*, ii, 107 ff.). In Egypt under ʿAmr, the first *muʾadhdhin* in al-Fusṭāṭ was Abū Muslim; he was soon joined by nine others. The *muʾadhdhins* of the different mosques formed an organisation, the head (*ʿarīf*) of which, after Abū Muslim, was his brother Shuraḥbīl b. ʿĀmir (d. 65/684-5); during his time, Maslama b. Mukhallad built minarets (al-Maḳrīzī, iv, 44).

The office of *muʾadhdhin* was sometimes hereditary. The descendants of Bilāl were for example *muʾadhdhins* of the Medina Mosque in al-Rawḍa (Ibn Djubayr, 194). We also find in Medina the sons of Saʿd al-Ḳaraẓ officiating (Ibn Ḳutayba, *Maʿārif*, ed. Wüstenfeld, 132, 279), in Mecca, the sons of Abū Maḥdhūra (*ibid.*, 278; *Sīra Ḥalabiyya*, ii, 106), in Baṣra, the sons of al-Mundhir b. Ḥassān al-ʿAbdī, *muʾadhdhins* of ʿUbayd Allāh b. Ziyād (Ibn Ḳutayba, 279); it is, however, possible that this was really the result of a system of guilds of *muʾadhdhins*. In the *djawāmiʿ* of the Maghrib in the 8th/14th century, each had regularly four *muʾadhdhins* who were stationed in different parts of the mosque during the *ṣalāt* (*Madkhal*, ii, 47 above); but there were often quite a large number. In the Azhar mosque in the time of al-Ḥākim, there were fifteen, each of whom was paid two *dīnārs* a month (al-Maḳrīzī, iv, 51). Ibn Baṭṭūṭa found seventy *muʾadhdhins* in the Mosque of the Umayyads (i, 204). About 1900, in Medina there were in the Mosque of the Prophet fifty *muʾadhdhins* and twenty-six assistants (al-Batanūnī, *Riḥla*, 242). Blind men were often chosen for this office; Ibn Umm Maktūm, for example, was blind (al-Bukhārī, *Adhān*, *bāb* 11; *Sīra Ḥalabiyya*, ii, 104; cf. Lane, *op. cit.*, 75). The Prophet is said to have forbidden Thaḳīf to pay a *muʾadhdhin* (al-Wāḳidī-Wellhausen, 383). ʿUthmān is said to have been the first to give payment to the *muʾadhdhins* (al-Maḳrīzī, iv, 44) and Aḥmad b. Ṭūlūn gave them large sums (*ibid.*, 48). They regularly received their share in the endowments, often by special provisions in the documents establishing the foundations.

The *muʾadhdhins* were organised under chiefs (*ruʾasāʾ*: al-Maḳrīzī, iv, 14). In Mecca, the *raʾīs al-muʾadhdhinīn* was identical with the *muʾadhdhin al-Zamzamī* who had charge of the singing in the upper story of the Zamzam building (*Chron. Mekka*, iii, 424-5; Ibn Djubayr, 145; cf. Snouck Hurgronje, *Mekka*, ii, 322). The *raʾīs* was next to the *imām* but subordinate to him; in certain districts, it was the custom for him to mount the pulpit during the sermon with the *imām* (when the latter acted as *khaṭīb*) (*Madkhal*, ii, 74). The position which they originally occupied can still be seen from the part which they play in public processions of officials, e.g. of the *Ḳāḍī 'l-Ḳuḍāt*, when they walk in front and laud the ruler and his vizier (al-Maḳrīzī, ii, 246).

Closely associated with the *muʾadhdhin* is the *muwaḳḳit*, the astronomer, whose task it was to ascertain the *ḳibla* and the times of prayer (al-Subkī, *Muʿīd*, 165-6 and see MĪḲĀT); sometimes the chief *muʾadhdhin* did this (Snouck Hurgronje, *Mekka*, ii, 322).

5. Servants. According to Abū Hurayra, the Mosque of the Prophet was swept by a negro (al-Bukhārī, *Ṣalāt*, *bāb* 72, cf. 74). The larger mosques gradually acquired a large staff of servants (*khuddām*), notably *bawwāb*, *farrāsh*, and water-carriers (cf. e.g. van Berchem, *CIA*, i, 252). In Mecca there have always been special appointments, such as supervisor of Zamzam and guardian of the Kaʿba (*sādin*, pl. *sadana*, also used of the officials of the mosque: al-Maḳrīzī, iv, 76; cf. Ibn Djubayr, 278). In Ibn Baṭṭūṭa's time, the servants (*khuddām*) of the Mosque of the Prophet were eunuchs, particularly Abyssinian; their chief (*shaykh al-khuddām*) was like a great *amīr* and was paid by the Egyptian-Syrian government (i, 278, 348); cf. the title of an *amīr* of the year 798/1395-6, *shaykh mashāʾikh al-sāda al-khuddām bi 'l-ḥaram al-sharīf al-nabawī* (van Berchem, *CIA*, i, no. 201). In the Mosque of Jerusalem in about 300/912-13, there were no less than 140 servants (*khādim*; Ibn al-Faḳīh, 100); others give the figure 230 (Le Strange, *Palestine*, 163) and according to Mudjīr al-Dīn, ʿAbd al-Malik appointed a guard of 300 black slaves here, while the actual menial work was done by certain Jewish and Christian families (Sauvaire, *Hist. Jér. et Hébr.*, 56-7).

In other mosques, superintendents (*ḳayyim*, pl. *ḳawama*) are mentioned, a vague title which covered a multitude of duties: thus the Madrasa al-Madjdiyya had a *ḳayyim* who looked after the cleaning, the staff, the lighting and water-supply (al-Maḳrīzī, iv, 251), the Azhar Mosque had one for the *miʾḍaʾa*, who was paid twelve *dīnārs* (*ibid.*, 51) and also 4 *ḳawama*, who were paid like *muʾadhdhins* (two *dīnārs* a month) and are mentioned between them and the *imāms*, probably supervisors of the staff (*ibid.*, 51). In other cases, a *ḳayyim al-djāmiʿ*, sometimes a *ḳāḍī*, is mentioned, who is apparently the same as the *imām*, the *khaṭīb* or some similar individual of standing (*ibid.*, 75, 121, cf. 122; cf. Ibn Djubayr, 51). A *mushrif*, inspector, is also mentioned, e.g. in the Azhar (al-Maḳrīzī, iv, 51).

Bibliography: given in the article.

H. The architecture of the mosque.

1. Introduction. Attemps to generalise about regional variations in mosque architecture are fraught with difficulty and have often miscarried. One solution, admittedly a compromise, is to select a few of the most celebrated mosques, to imply in more or less arbitrary fashion that they are typical, and to base the requisite generalisations on them. This approach has at least the merit of clarity, and it could indeed be argued that it is in the finest mosques of a given period and region that local peculiarities are apt to find their fullest expression. Nevertheless, such a broad-brush

approach, for all its superficial attractions, is simply not specific enough. Another approach, which might be termed typological, cuts across regional and temporal boundaries in order to isolate the significant variants of mosque design and trace their development. Yet, precisely because it ignores such boundaries, this approach tends to minimise the significance of regional schools and fashions. The categories and sub-species which it proposes tend to have a somewhat academic flavour; while technically defensible, they somehow miss the point. A third approach might be to rely on statistics and, by chronicling all known mosques of pre-modern date, to discover the types and distribution of the most popular varieties. The picture to emerge from such a study might indeed be literally accurate, but it would not distinguish between the *dj̲āmiʿ* and the *masdj̲id*, that is, between the major religious building of a town or city and the neighbourhood mosque (on the *dj̲āmiʿ* and its functions, see above, I. C. 2.). Since virtually all the mosques under discussion here fall into the category of *dj̲āmiʿ*, such a study would be of limited value in this context, and would assuredly blur the sharp outlines of regional peculiarities of mosque design. After all, the simplest types of mosques not only vastly outnumber the more complex ones but are also to be found throughout the Muslim world. It is such mosques, therefore, which make up the standard distribution of this building type. They dominate by sheer weight of numbers, but—by the same token—they distort the overall picture, suggesting a uniformity that actually exists only at the level of the most primitive buildings. Only when a statistical survey of this kind is relieved of the effectively dead weight of such buildings can regional and temporal distinctions stand out in their full clarity.

Such are the difficulties attendant on venturing a *tour d'horizon* of formal developments in the pre-modern mosque. What, then, is the best way of tackling this problem? The most promising line of approach is probably to identify those mosque types which are most distinctive of a given area and period, describing their constituent features but avoiding a detailed analysis of individual buildings. It should be emphasised that the over-riding aim of highlighting significant regional developments entails the suppression of much corroborative detail and, more importantly, of those periods when a given region was simply continuing to build mosques in a style already well established. Admittedly the lulls in innovation have their own part to play in the history of mosque architecture; but that part is too modest to rate any extended discussion here.

For that same reason, areas in which the pace of change was sluggish are allotted less attention in the following account than those which were consistently in the forefront of experiment. The Mag̲h̲rib, for example, receives less space than Iran, while ʿIrāḳ and the Levant take second place to Egypt and Anatolia. These emphases, moreover, reflect the basic truth that the design of a mosque was often less liable to take on a distinctively local colouring than were its decoration, its structural techniques or even specific components of that design, such as the minaret [see MANĀRA]. The time-span covered by this article is also limited. The mosque architecture of the last two centuries, which have seen the gradual invasion of a long-established Islamic idiom by European ideas and motifs, and in which a general decline is unmistakable, is omitted from this account. One final caveat should be sounded: the ensuing generalisations deliberately exclude the peripheral areas of the Islamic world, notably Indonesia, Malaysia, China and sub-Saharan Africa, for which see sections III-VII below. Nearly all the mosques in these areas are of post-mediaeval date, and therefore lie in the shadow of developments in the Islamic heartlands. There is, moreover, a strong vernacular element in these regional traditions, for they draw very heavily on a reservoir of ideas, practices and forms which owe very little to Islam. Thus for reasons which are as much historical and cultural as geographical they do not belong in the mainstream of mosque architecture.

This survey, then, will cover the central Islamic lands from al-Andalus to Afg̲h̲ānistān. The very nature of the material, however, makes it undesirable to embark directly on a series of regional summaries: the sheer lack of surviving monuments would require each summary to start at a different date. In most areas of the Islamic world it is not until the 5th/11th century that mosques survive in sufficient quantities for the lineaments of a local style to emerge. To explain that style would in most cases entail reference to earlier mosques in other regions, with consequent repetition and overlap. The crucial decisions which dictated the subsequent formal development of the mosque were taken in the early centuries of Islam; and the buildings which embodied those decisions are themselves thinly scattered over the entire area bounded by al-Andalus and Afg̲h̲ānistān. Yet the interconnections between these buildings are such as to make light of their geographical remoteness from each other.

Accordingly, a pan-Islamic survey of the early architectural history of the mosque will preface the individual accounts of local developments. These accounts in turn will be of unequal length. Pride of place will go to the Arab mosque plan, which not only had the widest diffusion but also covers the longest chronological span. Next in length will be the survey of the Persian tradition, almost as ancient as that of the Arab plan but more restricted in geographical scope. Shortest of all will be the discussion of the Turkish mosque type, whose creative development is confined in time to the 8th-11th/14th-17th centuries and in space to Anatolia.

2. Early history of the mosque: 622-1000 A.D.

(a) The house of the Prophet. Beyond doubt, the genesis of the mosque is to be sought in a single seminal building: the house of the Prophet, erected to Muḥammad's own specifications in Medina in 1/622. It was a near-square enclosure of some 56 × 53 m. with a single entrance; a double range of palm-trunk columns thatched with palm leaves (a feature of many African mosques to this day) was added on the *ḳibla* side, with a lean-to for destitute Companions to the south-east and nine huts for Muḥammad and his wives along the western perimeter. By a curious paradox, it was not built even secondarily as a mosque. This fact cannot be over-emphasised, since to ignore it is to misinterpret the subsequent history of mosque architecture. The venerated model for all later mosques itself became a mosque only, as it were, by the way and in the course of time. How is this to be explained? The accumulated deposit of many centuries of reverence makes it difficult to disinter the full original context of the building. Yet this much is clear: it was first and foremost a house for Muḥammad and his family to live in. It was also conceived from the beginning as a gathering place for the growing band of Muslims: in fact a kind of community centre, complete with the attendant associations of welfare. At the same time it served political, military

and legal functions, while its high walls and single entrance allowed it at need to act as a place of refuge for the community. To be sure, by degrees people began to pray in it; but they prayed in many other places too and there is no evidence that it was used as the regular place of worship in the earliest years of the community. The mere fact that dogs and camels were allowed free access to it effectively disposes of such a notion. In short, Muḥammad had, it seems, no intention of creating a new type of building here. It is in no sense radical. In its extreme simplicity and austerity it well reflects his own life-style at that time. Its substantial scale may seem to contradict this, but is in fact somewhat deceptive, for some 80% of the interior consists of a vast empty courtyard. Yet it was this very emptiness that gave the mosque its innate flexibility, and in subsequent centuries a large open space became a standard feature of most large mosques. It is surely *à propos* to note that the earliest Christian places of worship, the so-called *tituli*, were also ordinary houses. (For a detailed discussion of the Prophet's *masdjid* and its various functions, see above, I. A. 1.).

(b) The so-called "Arab plan". Although there was thus a large measure of accident in the adoption of Muḥammad's house as the model *par excellence* of later mosques, that form could not have enjoyed the popularity it did unless it had answered to a nicety the needs of Muslim liturgy and prayer. Its components—an enclosed square or rectangular space with a courtyard and a covered area for prayer on the *ḳibla* side—could be varied at will so as to transform the aspect of the building. Thus there evolved the so-called "Arab" or "hypostyle" mosque plan. From the first it showed itself capable of quite radical modification according to circumstances. At Kūfa in 17/638 the location of the mosque within one of the garrison cities (*amṣār*) allowed the builders to dispense with the element of security, and the perimeter—its dimensions fixed, according to al-Balādhurī, by four bowshots—is marked by ditches; elsewhere, as at Baṣra in the year 14/635, a reed fence served the same purpose. At Fusṭāṭ in the rebuilt mosque of ʿAmr (53/673), corner turrets served simultaneously to articulate the exterior, to single out the mosque from afar and to provide a place from which the call to prayer could be made: the germ of the future minaret. Multiple entrances became a feature as early as the first mosque of ʿAmr at Fusṭāṭ (22/643), admitting light to the *muṣallā* [*q.v.*, and also above, I. B. 6] and allowing maximum ease of circulation.

The sunny climate of the southern Mediterranean and the Near East allowed the courtyard to accommodate the huge numbers of extra worshippers attending the Friday service. This was when its large expanse justified itself. For the rest of the week it was largely empty, and the heat and light emitted by this expanse could cause discomfort. This was especially likely if there were no provision for shade on three of the four sides, as in the early versions of the Great Mosques of Cordova (170/787), Ḳayrawān (221/836) and Tunis (250/864). Hence there arose the practice of adding arcades along the three subsidiary sides, so that people could walk around the mosque in cool shade. In time these arcades could be doubled, tripled or even quadrupled. A change in the alignment of their vaulting from one side of the mosque to another brought welcome visual relief and excluded the danger of monotony; so too did variations in the depth or number of the arcades (the second ʿAmr mosque in Cairo). As the surface area of the covered sanctuary was increased so did new spatial refinements suggest themselves, such as the progressive unfolding of seemingly endless vistas in all direction. Rows of supports (often spolia) with fixed intercolumniations created hundreds of repetitive modular units, perhaps deliberately mirroring the long files of worshippers at prayer.

Externally, the accent was on simplicity, with regular buttresses giving the structure a warlike air. At the Great Mosque of Sāmarrā (completed 238/852) there are a dozen of these on each long side, not counting the corners, with doorways after every second buttress. At Susa the exterior dispenses with buttresses in favour of rounded corner bastions, while in the mosque of al-Ḥākim in Cairo (381/991 onwards) the minarets at the corner of the façade rise from two gigantic square salients. The emplacement of the *miḥrāb* [*q.v.*] was marked by a corresponding rectangular projection on the exterior wall. Entrances were commonly allotted a measure of extra decoration—as in the series of shallow porches along the flank of the Cordova mosque—but massive portals on the scale of those in Western cathedrals found no favour in the early mosques of Arab plan. The absolute scale of some mosques (the mosque of Sāmarrā, for instance, could have accommodated 100,000 people) encouraged the adoption of fixed proportional ratios such as 3:2, which contributed in large measure to the impression of satisfying harmony which these mosques produced. The Ḳarakhānid mosque of Samarḳand (5th/11th century) illustrates the continuing use of such ratios. Sometimes the scale of the mosque was illusionistically increased by the addition of a broad open enclosure (*ziyāda*) on three of the four sides (Mosque of Ibn Ṭūlūn, Cairo, finished 264/878, presumably copying the mosques of Sāmarrā). In comparison with later mosques of similar scale, which catered for multiple subsidiary functions by adding appropriate purpose-built structures to the central core, these early mosques maintain simple and symmetrical lines, especially for their outer walls.

The architectural vocabulary of these early mosques brought further scope for diversity. In the first half-century of Islamic architecture, the system of roofing was still primitive, and even when columns and roof-beams had replaced palm-trunks and thatching, the basic scheme remained trabeate (Baṣra; Kūfa; and Wāsiṭ, 83/702) whether the roof was flat or pitched. Thus the post-and-lintel system long familiar from Graeco-Roman buildings was perpetuated, and the pervasive classical flavour was strengthened by the lavish use of spolia. Sometimes, however, as in the bull-headed capitals of the Iṣṭakhr mosque, these were of Achaemenid origin.

By degrees, wooden roofs resting on arcades gained popularity, and this was the prelude to full-scale vaulting in durable materials (especially in Iran: Tārīkhāna mosque, Dāmghān, and Fahradj *djāmiʿ*, both perhaps 3rd/9th century; Nāʾīn *djāmiʿ*, perhaps 4th/10th century). The earliest mosques all use columns, and were thereby restricted to relatively low roofs. By the 3rd/9th century the pier had ousted the column as the principal bearing member, though it occurs as early as the mosques of Damascus, Baʿlabakk and Ḥarrān, and though the column was still used for some mosques (Ḳayrawān; al-Azhar, Cairo, 362/973). This change made it possible to raise the height of the roof, an important development given the oppressive sensation produced by a low roof extending over a large surface area. At the Cordova mosque the column shafts bore piers braced by strainer arches; but this device, for all its ingenuity,

could not rival the popularity of superposed arcades in the fashion of Roman aqueducts (Damascus mosque, finished 98/716).

The apparently minor detail of whether the arcades ran parallel to the *ḳibla* or at right angles to it was sufficient to transform the visual impact of the roof. In the latter case, it focused attention on the *ḳibla*, and this was the solution that recommended itself to Mag̲h̲ribī architects (mosques of Cordova, Tunis and Ḳayrawān). Syrian architects, on the other hand, with only one major exception (Aḳṣā mosque, Jerusalem), preferred arcades parallel to the *ḳibla* (Damascus; Ḳaṣr al-Ḥayr East, *ca.* 109/728; Baʿlabakk, *ca.* 6th/12th century; Ḥarrān, *ca.* 133/750; and Raḳḳa, *ca.* 3rd/9th century), possibly reflecting in this the influence of the Christian basilica ubiquitous in that region, and several Egyptian mosques followed suit, including those of Ibn Ṭūlūn, al-Azhar and al-Ḥākim. It was a natural development to build mosques with arcades running in both directions (Great Mosques of Sfax and Susa, both finished 236/850), but with these exceptions the early experiments with this idea are all on a relatively modest scale which betrays some uncertainty of purpose. They comprise a small group of 9-bayed mosques with a dome over each bay and no courtyard: a type represented in Toledo, Ḳayrawān, Cairo and Balk̲h̲ and dating mainly from the 4th/10th century. These buildings inaugurate the much more ambitious use of vaults in later mosques. No such solutions are to be found in the larger mosques built before the 5th/11th century. This early Islamic vaulting drew its ideas impartially from the Romano-Byzantine tradition and from Sasanian Iran, and quickly developed its own distinctive styles, in which the pointed vault soon dominated.

(c) The secular element in early mosque architecture. In some mosques, the desire to emphasise the covered sanctuary (*muṣallā*) was achieved simply by adding extra bays and thus increasing its depth. In other mosques, especially those with royal associations, the requisite emphasis was achieved by some striking visual accentuation of the *muṣallā*: a more elaborate façade, a higher and wider central aisle, a gable or a dome. Once this idea of glorifying the *muṣallā* had taken root it was enthusiastically exploited, for example by furnishing this area with several carefully placed domes (Cordova, al-Azhar). On occasion, indeed, the *muṣallā*—complete with such distinguishing features as wider central aisle, dome in front of the *miḥrāb* and transversely vaulted bays adjoining the *ḳibla*—could itself become the mosque, with no attached courtyard (al-Aḳṣā).

The effect of singling out the *muṣallā* by these various means is to emphasise that this area is more important than any other in the mosque. Since this latter notion runs counter to the widely-expressed belief that all parts of the mosque are equally sacred, and that gradations of sanctity within it run counter to the spirit of Islam, its origins are worth investigating. It should be stressed at the outset that these various articulating devices cannot all be explained as attempts to draw attention to the *ḳibla*. Some measure of emphasis for this purpose was certainly required. Hence, no doubt, the greater depth of arcades on that side and the provision of an elaborate façade for the *muṣallā* alone. Similarly, the use of a different alignment or type of vaulting for the bays immediately in front of the *ḳibla* would make sense as a means of signposting this crucial area. Yet the addition of a dome or gable, or both, along the central aisle of the *muṣallā*, and the greater width and height of that aisle, cannot be explained—as is so often the case—simply as a means of highlighting the *miḥrāb*. After all, the entire *ḳibla* wall served to mark the correct orientation for prayer, so that the *miḥrāb* was technically redundant. The relatively late appearance of the *miḥrāb* (no 1st/7th century mosque appears to have possessed one and it is described as an innovation introduced by al-Walīd I in his re-building of the Mosque of the Prophet in Medina in 84/703) further suggests that it was not devised to meet some liturgical imperative.

The evidence points rather to the desire to assert in as public a way as the dictates of religious architecture would permit, the importance of the ruler in religious ceremonies. It was the duty of the caliph or of his representative to lead his people in prayer and to pronounce the *k̲h̲uṭba* [*q.v.*]. The political overtones of the latter ritual, which proclaimed allegiance to the ruler in much the same spirit as the diptychs in the contemporary Byzantine liturgy, in large part explain the physical form of the *minbar* [*q.v.*] from which the *k̲h̲uṭba* was pronounced. Similarly, the *miḥrāb*, another latecomer to mosque architecture, can be interpreted in secular terms, most conveniently as a throne apse transposed into a religious setting. These royal connotations could only be intensified by the addition of a dome over the bay directly in front of the *miḥrāb*.

Underneath that same dome was the preferred location for the *maḳṣūra* (see for this, above, I. D. 2.b.), usually a square enclosure of wood or stone reserved for the ruler, and ensuring both his privacy and his physical safety. Each of these elements in the mosque—*miḥrāb*, *minbar*, *maḳṣūra*, dome—drew added power from the proximity of the others, and together they stamped a secular and princely significance on this particular area of the mosque. The earliest surviving mosque which illustrates this emphasis, the Great Mosque of Damascus, adds a further refinement: a high transverse gable with a pitched roof cuts across the lateral emphasis of the *muṣallā* and thus highlights not just the *miḥrāb* area but also the way to it. The extra height of the gable and the way it cleaves across the grain of the mosque underscore its proclamatory role. Sometimes, as in the *d̲j̲āmiʿ*s of Tunis and Ḳayrawān, another dome over the central archway of the *muṣallā* façade sufficed to create an axis focused on the *miḥrāb*. As at Damascus, this axis asserted itself both inside the *muṣallā* and—by virtue of its greater width and the consequent break in the even tenor of the roofing—externally, at roof level. In later mosques, such as al-Azhar and al-Ḥākim (which possibly derive in this from al-Aḳṣā) the notion of the external gable is toned down to a broad flat strip projecting only modestly above roof level; but internally, the emphasis on the broader central nave terminating in the dome over the *miḥrāb* remains unchanged. It seems likely that these articulating devices were intended to mark out a processional way, presumably the formal route by which the ruler approached the *miḥrāb*.

So much, then, for the various elements in mosque design for which princely associations have been proposed. Yet their mere enumeration does not tell the full story. For it is above all the occurrence of these features in mosques located next to the residence of the ruler that places their political associations beyond doubt. This close juxtaposition of the secular and the religious may well have had its roots in the Prophet's house. Be that as it may, at Baṣra, Kūfa, Fusṭāṭ, Damascus, to name only a few very early examples, the principal mosque and the private residence of the ruler adjoined each other, and the viceroy Ziyād b. Abīhi [*q.v.*] said of this arrangement "it is not fitting

that the *Imām* should pass through the people"—a sentiment, incidentally, not shared by many later Islamic rulers. The analogy with the palatine chapel in Byzantium and mediaeval Europe—at Constantinople and Ravenna, Aachen and Palermo—is striking. Perhaps the most public expression of the idea in the mediaeval Islamic world was in the Round City of Bag̲h̲dād, where the huge and largely empty space at the heart of the city held only two buildings: the palace and the mosque, next door to each other. It would be hard to find the concept of Caesaropapism expressed more explicitly, or on a more gargantuan scale, than this.

The local expression of the articulating features under discussion varied from one part of the Islamic world to another, but they had come to stay. Henceforth, the *d̲j̲āmiʿ* of Arab plan only rarely returned to the simplicity of the 1st/7th century. Such, however, was the strength of the traditions formed at that time that the basic nature of the earliest mosques remained substantially unchanged. They were proof, for example, against immense increases in size and against a growing interest in embellishment by means of structural innovations and applied ornament. Even the conversion into mosques of pre-Islamic places of worship, as at Damascus and Ḥamā, was powerless to affect their essential nature. The component parts of the Arab mosque could be redistributed and rearranged almost at will without impairing their functional effectiveness.

In much the same way, their idiosyncrasies of structure and decoration were purely cosmetic. The range of options in these areas was gratifyingly wide. Windows and lunettes bore *ajouré* grilles in stone or plaster with geometric and vegetal designs (Damascus mosque); wooden ceilings were painted or carved and coffered (Ṣanʿāʾ mosque, 1st/7th century onwards); a wide range of capitals, at first loosely based on classical models but in time featuring designs of Central Asian origin (Sāmarrā) was developed; and piers with engaged corner colonnettes (Ibn Ṭūlūn mosque, Cairo) rang the changes on the traditional classical column. Finally, the aspect of these early mosques could be varied still further by the type of flooring employed—stamped earth, brick, stone or even marble flags—and by applied decoration in carved stone or stucco, fresco, painted glass, embossed metalwork or mosaic.

3. Later history of the "Arab plan" mosque.

The essentially simple components of the Arab plan set a limit to the degree of diversity that could be achieved within these specifications. Most of the room for manoeuvre had been exhausted within the first four centuries of Islamic architecture. Thus the subsequent history of the Arab plan cannot match the early period for variety and boldness; the later mosques, moreover, lie very much in the shadow of their predecessors, to such an extent, indeed, that it is hard to single out significant new departures in these later buildings. It can scarcely be doubted that the presence of the great Umayyad and ʿAbbāsid mosques, built at the period when the Islamic world was at the peak of its material prosperity, acted as a signal deterrent to later architects with substantially less money, men and materials at their disposal. In these early centuries the caliphal permission, not readily granted, had been required for the construction of a *d̲j̲āmiʿ* making it therefore a major undertaking, and correspondingly hard to emulate. By the 5th/11th century, moreover, most of the major Muslim cities had their own *d̲j̲āmiʿ*, so that the need for huge mosques had much declined.

Although mosques of Arab plan have continued to be built throughout the Islamic world until the present day, in the mediaeval period there were only two areas where they achieved dominance: in the Western Islamic lands before they fell under Ottoman rule, and in pre-Ottoman Anatolia. These areas will therefore provide the material for most of the discussion which follows. Nevertheless, sporadic references will be made to mosques elsewhere, for instance in Egypt and the Yemen.

(a) The Mag̲h̲rib. The Mag̲h̲rib rightfully takes pride of place in this account because for almost a millennium virtually no mosque that was not of Arab type was built there. Here, then, is to be found the most homogeneous and consistent development of that type. Its sources lie, like so much of Mag̲h̲ribī art, in Syria, and specifically in the Great Mosque of Damascus. Its transverse gable becomes a leitmotif in Mag̲h̲ribī mosques, and in some cases (such as the Ḳarawiyyīn Mosque [*q.v.*], Fez, founded 226/841 but largely of the 6th/12th century) is associated with the same proportions as the Syrian building, including the relatively shallow oblong courtyard imposed on the Damascus mosque by the classical *temenos* but copied thereafter in other mosques as a deliberate feature. In the Mosque of the Andalusians at Fez (600-4/1203-7) the Damascus schema is retained despite a jaggedly irregular perimeter and trapezoidal courtyard; and, as at the Ḳarawiyyīn mosque, the main entrance to the mosque is aligned to it, a refinement not found at Damascus. The length of the gable has also increased considerably, though its height is modest.

In later Mag̲h̲ribī mosques especially, the emphasis shifted from the exterior elevation of the gable to its impact from within the building. It attracts unusually intricate vaulting, often of *muḳarnas* [*q.v.*] type, or may be marked by domes ranging in number from two (Tlemcen, 531/1136) to six (second Kutubiyya, Marrakesh, mid-6th/mid-12th century). The latter mosque has a further five cupolas placed three bays apart along the transverse *ḳibla* aisle. Thus by means of vaulting alone is created a T-shape which combines the secular and religious emphases of the *d̲j̲āmiʿ*. Fewer vaults or domes, more strategically placed—for example at the *miḥrāb*, the *muṣallā* entrance and the corners of the *ḳibla* wall—could suffice to carry the T-shape into the elevation, but the form could be created at ground level alone by means of a wider central nave and by ensuring that the vaults stopped one bay short of the *ḳibla*, thus opening up dramatically the space immediately in front of it. The T-shape can indeed claim to be the principal Mag̲h̲ribī contribution to the development of mosque form, though horseshoe arches and square minarets were equally characteristic of the style.

Three other features distinguish Mag̲h̲ribī mosques from those found elsewhere in the Islamic world, though all have their origins in al-Andalus: the use of pierced ribbed or fluted domes, especially over the *miḥrāb*; the manipulation of arch forms to create hierarchical distinctions by means of gradual enrichment; and a readiness to alter the size, shape and location of the courtyard in response to the imperatives of a specific design. The ribbed domes (e.g. *d̲j̲āmiʿ*s of Taza, 537/1142 and 691/1292, and Algiers, *ca.* 490/1097) derive from those of the Cordova mosque, but elaborate on them by cramming them with vegetal designs in carved stucco or by increasing the number of ribs from the usual eight to twelve (Tlemcen *d̲j̲āmiʿ*) or even sixteen (Taza *d̲j̲āmiʿ*). This practice gives free rein to the characteristically Mag̲h̲ribī obsession with non-structural arched forms, here used as a lace-like

infill between the ribs; the overall effect is one of feathery lightness and grace. The light filtered through these domes suffuses the area of the *miḥrāb* with radiance, perhaps as a deliberate metaphor of spiritual illumination, an idea rendered still more potent when, as is often the case, that *miḥrāb* bears the popular text of sūra XXIV, 36-7, "God is the Light of the heavens and the earth; the likeness of His Light is as a niche wherein is a lamp..."

Long files of arcaded columns stretching in multiple directions and generating apparently endless vistas are a particular feature of Mag͟hribī mosques. The distinctive "forest space" thereby created finds its fullest expression in the fourth major rebuilding of the Cordova mosque, the supreme generative masterpiece of Western Islamic architecture, and the major Almoravid and Almohad mosques are best interpreted as reflections of this great original. Where the Cordova mosque, however, employed systems of intersecting arches and carefully differentiated types of capital to establish hierarchical distinctions, later Mag͟hribī *d̲j̲āmiʿ*s typically use a wide range of arch profiles to the same end. These include, besides the ubiquitious horseshoe type already noted, lobed, multifoil, interlaced cusped, trefoil, lambrequin and other varieties. They spring from piers, not columns, and this, coupled with the low roof, dim lighting and the general absence of ornament unconnected with vaulting, lends these interiors a ponderous austerity. Against this general background of parsimonious simplicity, the sudden switch from plain arch profiles for most of the sanctuary to elaborate ones for the axial nave alone constitutes a dramatic enrichment of the interior. Sometimes the transverse aisle in front of the *ḳibla* wall attests a third type of arch profile, and thus a further gradation of importance is emphasised.

In most western Islamic mosques the courtyard is something of an appendage. It is almost always very much smaller than the covered space. Custom decreed that it was isolated at the opposite end of the mosque from the *miḥrāb*, and that it should either be contiguous to the outer wall or be separated from it by no more than a single aisle. By contrast, the sanctuary tended to be of disproportionate depth and extent. This meant that the courtyard was never able to function as the heart of the mosque. Only when the sanctuary was reduced, as in the Ḳaṣba mosque in Marrakesh (581-6/1185-90), with its pronounced cruciform emphasis, was the courtyard able, both literally and figuratively, to play a more central role. In narrow rectangular plans, it can be a diminutive square box hemmed in by deep lateral aisles (Mosque of al-Manṣūra, 704-45/1304-44) or an extended shallow oblong (Mosque of Seville, *ca.* 571/1175). In oblong plans, it faithfully mirrored that emphasis on a diminutive scale (Tinmal, 548/1153; first Kutubiyya, Marrakesh, *ca.* 555/1160). Exceptional on all counts is the gigantic but unfinished mosque of Ḥasan, Rabat (*ca.* 591/1195), whose scale of 180 × 139 m. makes it the second largest mosque in the world, after the Great Mosque of Sāmarrā. Here the typical shallow oblong courtyard is supplemented by two lesser and narrow courtyards perpendicular to the *ḳibla* and along the lateral walls. These were, it seems, intended for men and women respectively, but they would also have served for ventilation and lighting, besides offering visual relief to the endless march of columns.

(b) Anatolia. For all that pre-Ottoman Anatolia was a fertile field for innovation in later mediaeval experiment with the hypostyle mosque, its contribution cannot seriously match that of the Mag͟hrib and al-Andalus, not least because of the much shorter time span, a mere three centuries; discussion of it will accordingly be brief. The earliest surviving mosques well illustrate the dependence of local builders on more developed traditions of Arab and Persian origin. The Great Mosque of Diyārbakir (484/1091) follows the transept schema of Damascus, while those of Mayyāfāriḳīn (550/1155), Dunaysir (601/1204) and Mārdīn (largely 6th/12th century) follow Iranian precedent in their emphasis on a monumental dome rearing up out of the low roofing of the sanctuary and set squarely in front of the *miḥrāb* bay. Their foreshortened courtyards, however, owe nothing to Iranian precedent and instead presage later developments. So too did the increasing tendency to use domical forms rather than modular trabeate units as the principal means of defining space.

The buildings of the 6th/12th and 7th/13th centuries sufficiently demonstrate the embryonic state of mosque design in Anatolia, for the variety of plans is bewildering and defies easy categorisation. The absence of direct copies of the classical Arab type of plan is striking, though modifications of it were legion. A common solution was to do without the courtyard altogether—perhaps a response to the severe Anatolian winter—and reduce the mosque to a wooden-roofed hall resting on a multitude of columns or pillars (ʿAlāʾ al-Dīn mosque, Konya, 530/1135 to 617/1220; Sivas, *ca.* 494/1101; Afyon, 672/1273; Beyşehir, 696/1296). Usually the minaret was outside the mosque and therefore not integrated into the layout. Sometimes a similar design was executed in multiple small vaults (Divriği, castle mosque, 576/1180; Niksar, 540/1145; Urfa, 6th/12th century), and indeed the preference for vaulted as distinct from trabeated construction is well marked even at this experimental stage. Whatever the roofing system adopted in these enclosed mosques, the scope for development in either direction was small, while poor lighting, a sense of cramped space and inadequate ventilation were virtually inevitable. Huge piers and low vaults gave many of these mosques a crypt-like appearance (ʿAlāʾ al-Dīn mosque, Niğde, 620/1223; Sivas, Ulu Cami).

The obvious way forward was to allot a more significant role to the dome, a decision made at an early stage (Great Mosque of Erzurum, 530/1135; Kayseri, 535/1140; and Divriği, 626/1229) but by no means universally accepted. In such mosques the domed bay is invariably the largest of all and is placed along the axis of the *miḥrāb*. This emphasis on the totally enclosed covered mosque was to remain the principal feature of Turkish mosque architecture, and as a natural corollary fostered a compact and integrated style. Sometimes a small courtyard is integrated into this design (Malatya, 635/1237; Kayseri, Mosque of K͟hʷānd K͟hātūn, 635/1237; Harput, 560/1165). By degrees, however, the courtyard was relegated to one of two functions: as a forecourt, akin to the atrium of Byzantine churches and thus heralding the mosque proper, instead of being co-equal to the sanctuary; and as a bay within the *muṣallā*, furnished with a skylight and a fountain as a symbolic reminder of the word outside. Sometimes these two uses coincided. The skylight bay (*s̲h̲ādirwān*) was normally placed along the axis of the *miḥrāb* and thus served as a secondary accent for it, in much the same manner as a central dome.

The 8th/14th century saw no major developments in hypostyle plans. Flat-roofed prayer halls, some with wooden-roofed porches (Merām mosque, Konya, 804-27/1402-24), others, especially in the Ḳaramān

region, without them, continued to be built. So too did hypostyle mosques with vaulted domical bays (Yivli Minare mosque, Antalya, 775/1373; the type recurs both in eastern Anatolia and Ottoman territory in Bursa and Edirne). Variations in the Damascus schema, with the transept replaced by one or more domes, a raised and wider central aisle, a skylight bay, or any combination of these were frequent (ʿĪsā Bey mosque, Selcuk, 776/1374; Ulu Cami, Birgi, 712/1312; mosque of Akhī Elvān, Ankara, *ca.* 780/1378). Finally, mosques with an enlarged domed bay in front of the *miḥrāb* spread from their earlier base in south-eastern Anatolia, an area bounded to the east by the Ulu Cami in Van (791-803/1389-1400) and to the west by that of Manisa (778/1376). In the latter mosque the *ḳibla* side is dominated by the dome and takes up almost half the mosque; a large arcaded courtyard with a portico accounts for the rest. With such buildings the stage is set for Ottoman architecture and Arab prototypes are left far behind.

These Anatolian mosques depart still further from the norm of the hypostyle type in their predilection for elaborate integrated façades. While earlier mosques of Arab type frequently singled out the principal entrance by a monumental archway, often with a dome behind it, the tendency was to keep the façade relatively plain. Only in the highly built-up areas of the major cities of the Near East, such as Cairo, Jerusalem, Damascus and Aleppo, did the extreme shortage of space, and often the small scale of the mosques themselves, oblige architects to decorate mosque façades if they wished to draw attention to them, e.g. the Aḳmar mosque, Cairo, 519/1125. In Anatolia the tenacious Armenian tradition, which favoured extensive external sculpture and articulation, may well have predisposed Muslim architects in Anatolia to develop integrated decorative schemes for the main façades of their mosques. A monumental stone portal or *pīshṭāḳ* [*q.v.*], often an *īwān* [*q.v.*] was the standard centrepiece for such designs. It could be strongly salient and tower well above the roofline (Divriği Cami). Further articulation was provided by ranges of recessed arches with decorative surrounds (Dunaysir), open or blind arcades along the upper section of the façade (Mayyāfāriḳīn and ʿAlāʾ al-Din mosque, Konya), and windows with densely carved frames (ʿĪsā Bey mosque, Selcuk).

(c) Egypt and Syria. It seems possible that some of the more elaborate Mamlūk mosque façades in Cairo, such as those of Baybars (660/1262) and Sulṭān Ḥasan (757/1356) may derive, if at several removes, from Anatolian prototypes of the kind discussed above. It is noteworthy, however, that in general the mosques of the Ayyūbid and Mamlūk period offer little scope for large-scale reworking of the hypostyle plan, since they were too small. The mosque of Baybars and that of al-Nāṣir Muḥammad b. Ḳalawūn in the Cairo citadel (718/1318), which is a free copy of it, provide exceptions to this rule; in both cases a monumental dome over the *miḥrāb* bay is the principal accent of an extensive covered space. The relative scarcity of major mosques in this period not only reflects the primacy of the great early *djāmiʿ*s which were still in use, and which made further such buildings redundant; it also marks a shift in patronage away from mosques towards mausolea, *madrasas*, *khānḳāh*s and the like. In time, not surprisingly, joint foundations became the norm, in which the mosque was a mere oratory, a component in some larger complex. Eventually, too, the forms of mosques came to reflect those of contemporary *madrasas* more than the hypostyle plans of earlier periods. Hence the dominance of small domed mosques such as the 7th/14th century Mamlūk *djāmiʿ*s of Tripoli. Such buildings have no bearing on the history of the Arab mosque plan.

(d) The Yemen. Apart from the Maghrib, it was principally in the Yemen that the large hypostyle mosque maintained its popularity throughout the mediaeval period. Inadequate publication has meant that these buildings are less well known than they deserve, and without excavation the dating of many of them will remain problematic. This is particularly regrettable because several of them were built on the site of pre-Islamic temples, churches or synagogues (e.g. al-Djilāʾ mosque, Ṣanʿāʾ), and spolia from these earlier buildings—such as columns, capitals, inscriptions and even sculptures of birds—are used very widely. Persistent local tradition attributes the *djāmiʿ*s of Ṣanʿāʾ and al-Djanad to the time of the Prophet; both were probably rebuilt by al-Walīd I. The former has preserved much more of its original appearance: perimeter walls of finely cut stone in stepped courses enclose a roughly square shape with a central courtyard with the *muṣallā* only slightly deeper than the other sides. Al-Djanad, on the other hand, has had its similar original layout transformed by a domed transept and numerous subsidiary buildings. This gradual transformation by the addition of prayer halls, mausolea, ablutions facilities and the like is a recurrent pattern in the Yemen (*djāmiʿ*s of Zabīd and Ibb).

Small hypostyle mosques of square form (al-ʿAbbās, 7th/13th century), or of rectangular shape, whether broad and shallow oblongs (Tithid, 7th/13th century) or narrow and deep (Tamur, 5th/11th century or earlier), are common, and a few larger mosques of this kind, still without a courtyard, are known (Dhibin, after 648/1250). The commonest form, however, comprises a structure that is rectangular or trapezoidal (Masdjid al-Ṣawmaʿa, Hūt, 7th/13th century) with a central courtyard and extensive covered *riwāḳ*s on all sides (Rawḍa *djāmiʿ*, 7th/13th century). Often this formula is enriched by a lavishly carved or painted wooden ceiling over the sanctuary area alone (Shibām *djāmiʿ*, 4th/10th century) or by the incorporation of mausolea (Ẓafār Dhibin, 7th/13th century; funerary mosque of the *Imām* al-Hādī Yaḥyā, Ṣaʿda, 4th/10th century and later) or of minarets (Djibla, 480/1087; Dhū Ashraḳ, 410/1019). Influences from the central Islamic lands explain the use of wider central aisles in the *muṣallā* (Ẓafār Dhibin, Ibb, Djibla, Dhū Ashraḳ) and a concentration of domes along the *ḳibla* wall (enlargement of Ibb *djāmiʿ*; Djāmiʿ al-Muẓaffar and Ashrafiyya mosque, both 7th/13th century, Taʿizz). The glory of these Yemeni mosques as a group lies in their decoration: exceptionally long bands of stucco inscriptions (mosques of Dhamār and Rada, 7th/13th century and later), frescoes with epigraphic, floral and geometric designs (Rasūlid mosques of Taʿizz) and a matchless series of carved and painted wooden ceilings (Ẓafār Dhibin, al-ʿAbbās, Sirha, Dhibin, Shibām, Ṣanʿāʾ and others).

4. The Iranian tradition.

(a) The early period. Such was the prescriptive power of the "Arab plan" that its influence permeated mosque architecture in the non-Arab lands too. It would therefore be an artificial exercise to consider the development of the Iranian mosque in isolation, the more so as many early mosques in Iran (Bīshāpūr, Sīrāf, Susa, Yazd) were of Arab plan. Some also had the square minarets which were an early feature of that plan (Dāmghān; Sīrāf). Rather

did the Iranian mosque acquire its distinctive character by enriching the hypostyle form by two elements deeply rooted in pre-Islamic Iranian architecture: the domed chamber and the *īwān*, a vaulted open hall with a rectangular arched façade. The domed chamber derived from the mostly diminutive Sasanian fire temple with four axial arched openings, the so-called *čahār ṭāḳ*. Set in the midst of a large open space, it served to house the sacred fire. This layout obviously lent itself to Muslim prayer, and literary sources recount how such fire temples were taken over and converted into mosques (e.g. at Bukhārā) by the simple expedient of blocking up the arch nearest the *ḳibla* and replacing it with a *miḥrāb*; but conclusive archaeological evidence of this practice is still lacking, though the mosques of Yazd-i Khāst and Ḳurwa may be examples of it. Such domed chambers, whether converted fire temples or purpose-built Muslim structures, may have served as self-contained mosques, with or without an attached courtyard; certainly the earliest part of many mediaeval Iranian mosques is precisely the domed chamber.

The associations of the *īwān*, by contrast, were markedly more secular than religious; its honorific and ceremonial purpose in Sasanian palaces is epitomised by the great vault at Ctesiphon, where it announced the audience chamber of the Emperor. The *īwān* form was therefore well fitted to serve as a monumental entrance to the mosque, to mark the central entrance to the *muṣallā* (Tārīkhāna, Dāmghān; Nāʾīn) or, indeed, itself to serve as the sanctuary (as at Nīrīz perhaps 363/973 onwards?). Thus both the domed chamber and the *īwān* quickly found their way into the vocabulary of Iranian mosque architecture, and by their articulating power gave it a wider range of expression than the Arab mosque plan could command. It was in the interrelationships between the domed chamber, the *īwān* and the hypostyle hall that the future of the Iranian mosque was to lie.

(b) The Saldjūḳ period. The tentative experiments of early Iranian mosque architecture crystallised in the Saldjūḳ period, especially between *ca.* 473/1080 and *ca.* 555/1160. The major mosques built or enlarged at this time have as their major focus a monumental domed chamber enclosing the *miḥrāb* and preceded by a lofty *īwān*. This double unit is commonly flanked by arcaded and vaulted prayer halls. This arrangement represents the final transformation of the *muṣallā* in Iranian mosques, using the vocabulary of Sasanian religious and palatial architecture for new ends. The sanctuary *īwān* opens onto a courtyard with an *īwān* at the centre of each axis punctuating the regular sequence of *riwāḳs*. These arcades attain a new importance as façade architecture by their arrangement in double tiers. Yet the focus of attention is undoubtedly the great domed chamber. The simplicity of the prototypical *čahār ṭāḳ* is scarcely to be recognised in these massive Saldjūḳ *maḳṣūra* domes with their multiple openings in the lower walls and their complex zones of transition. This concentration on the domed chamber was often achieved at the expense of the rest of the mosque (Gulpāyagān *djāmiʿ*, *ca.* 510/1116). The new combination of old forms created the classical, definitive version of the already ancient 4-*iwan* courtyard plan that was to dominate Iranian architecture for centuries to come, infiltrating not only other building types such as *madrasas* and caravansarais, but also spreading as far west as Egypt and Anatolia and eastwards to Central Asia and India. The 4-*īwān* mosque thus became in time the dominant mosque type of the eastern Islamic world.

Up to the end of the Saldjūḳ period, however, the way was still open for numerous other combinations of hypostyle hall, domed chamber and *īwān*. Bashan, for example (4th/10th century) has a square layout with courtyard, hypostyle hall, domed sanctuary and sanctuary *īwān*, but lacks any further articulation of the courtyard façade by *īwāns*. The mosques of Dandānḳān [*q.v.* in Suppl.] and Mashhad-i Miṣriyān [*q.v.*] (both 5th/11th century) are typologically related. At Urmiya/Riḍāʾiyya (7th/13th century) the mosque is an extensive shallow oblong with the domed chamber at one end of a hypostyle hall, and no *īwān*. Sometimes the mosque is entirely covered by five (Masdjid-i Diggaron, Hazāra, 5th/11th century) or nine domed bays (Čār Sutūn mosque, Tirmidh, 5th/11th century; Masdjid-i Kūča Mīr, Nātanz, 6th/12th century). In its Saldjūḳ form the mosque at Ardabīl comprised a domed chamber with an *īwān* in front of it, while at Sīn (528/1136) the sanctuary, comprising a deep *īwān* with *muḳarnas* vaulting, engulfs one side of the diminutive courtyard. The huge courtyard of the Firdaws *djāmiʿ* (597/1201) is dominated by its single *īwān* which heralds a low vaulted sanctuary. The *djāmiʿ*s of Faryumad (7th/13th century?) and Gūnābād (606/1210) have only two *īwāns* facing each other across a narrow courtyard, and no domed chamber. Other mosques in Khurāsān are simpler still, comprising only the domed chamber itself (Sangān-i Pāʾīn, 535/1140; Birrābād and ʿAbdallāhābād, both possibly Saldjūḳ) or with insignificant bays adjoining it (Takhlatan Baba, 6th/12th century). Often too, the various elements were added in an unpredictable sequence, for instance at Simnān where a probably 5th/11th century columned hall had a complete mosque "unit" comprising a domed chamber, *īwān* and courtyard tacked on to its side. Even within the classical 4-*īwān* model, considerable diversity could be attained by varying the scale of the components: from long narrow courtyards (Simnān) or small square ones of domestic scale (Zawāra, 527/1133) to huge open expanses broken up by trees (Shīrāz *djāmiʿ*, mainly 10th/16th century), pools or fountains.

The principal emphasis on the internal façade was, however, unchanging. The exterior, by contrast, was unadorned and unarticulated to the point of austerity. Variations in the height or breadth of *īwān*s reinforced axial or hierarchical distinctions. By common consent the sanctuary *īwān* was the largest and deepest; the opposite *īwān* was next in size, though often very shallow, while the two lateral *īwān*s were usually the smallest. Minarets at the corner of the sanctuary *īwān* underlined its importance, while the twin-minaret portal *īwān* first encountered in the Saldjūḳ period (Nakhčivān, *ca.* 582/1186; Ardistān, Masdjid-i Imām Ḥasan, 553/1158) became increasingly monumental and elaborate in later centuries (*djāmiʿ*s of Ashtardjān, 715/1315, and Yazd, 846/1442). *Īwān* minarets of this kind gradually replaced the freestanding cylindrical minarets so popular in the Saldjūk period.

(c) The Īlkhānid period. As in Mamlūk Egypt, so too in Iran the later mediaeval history of the mosque is sometimes hard to disentangle from that of the *madrasa*-, tomb- or shrine-complex. Prayer and communal worship were, after all, integral to the operation of such "little cities of God" as the shrines of Ardabīl, Nātanz, Turbat-i Djām, Basṭām and Lindjān—all of them the scene of much building activity in the 8th/14th century—to say nothing of the great shrines of Ḳumm and Mashhad. Such new foundations as these were simply perpetuated Saldjūḳ models (Hafshūya, early 8th/14th century), though these were subtly altered by having their proportions

attenuated or otherwise modified. At Ashtardjān everything is subordinated to the principal axis announced by the double minaret façade, an emphasis which is taken up and intensified by the single great *īwān* which takes up the full width of the courtyard and leads into the domed sanctuary. At Warāmīn, too (722/1322 onwards), which is of standard 4-*īwān* type, the sense of axial progression is strong, and is made rather more effective than at Ashtardjān by the absolute length of the mosque and the extended vestibule. The *djāmiʿ* of ʿAlī Shāh in Tabrīz, by contrast (*ca.* 710-20/1310-20) deliberately returned, it seems, to much earlier models, for it comprised essentially a huge cliff-like *īwān* preceded by a courtyard with a central pool and clumps of trees in the corners—perhaps a deliberate reference to the Ṭāḳ-i Kisrā itself. For smaller mosques, Saldjūḳ models were again at hand; hence, for example, the trio of domed chamber mosques with *īwāns* at Azirān, Kadj and Dashtī, all datable *ca.* 725/1325. Yet another compliment to earlier masters was the Īlkhānid tendency to add new structures to existing mosques: a *madrasa* to the Iṣfahān *djāmiʿ* (776-8/1374-7), an *īwān* to the mosque at Gaz (*ca.* 715/1315), and so on.

(d) The Tīmūrid period. The Tīmūrid period took up still further ideas which had been no more than latent in earlier centuries. While some mosques of traditional form were built such as the Mosque of Gawhar Shād, in Mashhad, of standard 4-*īwān* type (821/1418), attention focused particularly on the portal and *ḳibla īwāns*, which soared to new heights. Turrets at the corners magnified these proportions still further. This trend towards gigantism is exposed at its emptiest in the 4-*īwān djāmiʿ* of Ziyāratgāh, near Harāt (887/1482), where the absence of decoration accentuates the sheer mass of the sanctuary *īwān* looming over the courtyard. At its best, however, as in the mosque of Bībī Khānum, Samarḳand (801/1399) where these exceptional proportions are consistently carried through to virtually every part of the mosque, the effect is overwhelming. Here the 4-*īwān* plan is transformed by the use of a domed chamber behind each lateral *īwān*; by the profusion of minarets—at the exterior corners and flanking both portal and sanctuary *īwāns*—and by the four hundred-odd domes which cover the individual bays.

As in the Mongol period, however, the fashion for building *khānḳāhs*, *madrasas* and funerary monuments, all of them capable of serving as places of worship (shrine of Aḥmad Yasawī, Turkestan, begun 797/1394; the Rīgistān complex, Samarḳand, begun in its Tīmūrid form in 820/1417; Gawhar Shād complex, Harāt, 821/1418) excluded an equal emphasis on architecture. This may explain the continued popularity of so many standard mosque types—the domed hypostyle (Ziyāratgāh, Masdjid-i Čihil Sutūn *ca.* 890/1485) and the two-*īwān* type so long familiar in Khurāsān (Badjistān and Nīshāpūr *djāmiʿ*s, both later 9th/15th century)—to say nothing of the emphasis on refurbishing earlier mosques (*djāmiʿ*s of Iṣfahān, 880/1475 and Harāt, 903-5/1497-9), which, in accordance with the Tīmūrid predilection for innovative vaulting, often took the form of transversely vaulted halls (*djāmiʿ*s of Abarḳūh, 808/1415; Yazd, 819/1416; Shīrāz, *ca.* 820/1417; Maribud, 867/1462; and Kāshān, 867-8/1462-3; and the mosques of Sar-i Rīg, 828/1424 and Mīr Čaḳinaḳ, 840-1/1436-7, at Yazd). There was also still ample room for surprises. The winter prayer hall added to the Iṣfahān *djāmiʿ* in 851/1447 has multiple aisles of huge pointed arches springing directly from the ground and lit by ochre alabaster slabs let into the vaults and diffusing a golden radiance. The hoary 4-*īwān* formula was given a new twist by the addition of twin domed chambers flanking the sanctuary *īwān* (Harāt *djāmiʿ*, 9th/15th century), an idea which infiltrated other plan types too (Rushkhar *djāmiʿ*, 859/1454). At Djādjarm (late 9th/late 15th century?) the central axis marked by the domed chamber and the courtyard is flanked on each side by a trio of vaulted bays.

Yet perhaps the most original mosque designs of the period were those which focused on the single dome and thus echoed, if only distantly, the preoccupations of contemporary Ottoman architects. This concept manifested itself in several different ways. In the Masdjid-i Gunbād, Ziyāratgāh (*ca.* 887-912/1483-1506), a square exterior encloses small corner chambers and a cruciform domed central area, a layout more reminiscent of a palace pavilion than a mosque. The core of the Masdjid-i Shāh, Mashhad (855/1451), is again a large domed chamber, but this is enclosed by a vaulted ambulatory and preceded by a long façade with corner minarets and a portal *īwān*. Most ambitious of all, however, is the Blue Mosque in Tabrīz (870/1465) in which a similar idea is given much more integrated expression by virtue of the open-plan arrangement of the central space. The dome springs from eight massive piers, but this octagon has further piers in the corners, making it a square with twelve openings, and thus offering easy access to the multidomed ambulatory. A similar openness characterises the gallery area and ensures that this mosque, though entirely covered, was airy, spacious and flooded with light. The range and subtlety of its polychrome tilework makes this mosque an apt coda for a period which exploited to an unprecedented degree the role of colour in architecture.

(e) The Ṣafavid period. The restoration and enlargement of existing mosques, a trend already noted in Tīmūrid times, continued apace in the Ṣafavid period, and involved over a score of mosques in the 10th/16th century alone. Yet not one new mosque of the first importance survives from this century, though the Masdjid-i ʿAlī in Iṣfahān (929/1522), a classic 4-*īwān* structure, has a sanctuary whose open-plan dome on pendentives provides a bridge between the Blue Mosque in Tibrīz and the Luṭfallāh mosque in Iṣfahān (1011-28/1602-10). The latter, a private oratory for Shāh ʿAbbās I, makes a very public break with tradition, for it is simply a huge square chamber. Its lofty dome rests on eight arches via an intermediary zone of 32 niches. The whole interior is sheathed in glittering tilework whose smooth surfaces simplify all structural subtleties. Though the mosque is correctly oriented towards Mecca, it is set at an angle to the great square (*maydān*) from which it is entered, an angle dissimulated by the portal *īwān* which instead obeys the orientation of the *maydān* towards the cardinal points of the compass. A low vaulted passage linking *īwān* and dome chamber, but invisible from either, resolves these conflicting axes. It also draws attention to a discrepancy which could easily have been avoided and is therefore deliberate.

In the nearby Masdjid-i Shāh (1021-40/1612-30), which also fronts the *maydān*, the problem of discordant axes is solved with sovereign ease, for the portal leads into a diagonal vestibule which in turn opens into a 4-*īwān* courtyard now correctly orientated. Both portal and *ḳibla īwāns* have paired minarets to assert their importance. The scale is vast, but the entire mosque is conceived in due proportion to it. As at the comparably large mosque of Bībī Khānum, dome

chambers behind the lateral *īwān*s give extra space for prayer, while two *madrasas* with courtyards flank the main courtyard to the south. Thus even at the height of its popularity, the 4-*īwān* mosque could accommodate quite major innovations without impairing its essential character. Later Ṣafavid mosques, such as the *dj̲āmi*ʿs of Sarm and Čas̲h̲um, the Masdj̲id-i Wazīr in Kās̲h̲ān and that of ʿAlī Ḳulī Ag̲h̲a in Iṣfahān, serve by their very modesty, however, to highlight the altogether exceptional status of the two mosques on the Iṣfahān *maydān*. Even such a spacious and handsome version of the traditional 4-*īwān* schema as the Masdj̲id-i Ḥakim, Iṣfahān (1067/1656) could not fail to be an anticlimax in their wake.

5. The Turkish tradition.

(a) Early domed mosques. The earliest Anatolian mosques follow Arab prototypes, and by degrees some of them take on an Iranian colouring, especially in their free use of *īwān*s for portals and for sanctuary entrances. Already by the 7th/13th century, however, an emphasis on the isolated domed chamber as a mosque type began to make itself felt. This idea too might have had Iranian origins, but it soon developed in ways that owed nothing to Iran, since the contemporary preference for entirely covered mosques with no courtyard was itself enough to encourage experiments in the articulation of interior space. The dome quickly became the most favoured device to this end. In Iran, by and large, the domed chamber behind the *ḳibla īwān* remained spatially isolated from the rest of the mosque. In Anatolia, by contrast, architects were always seeking new ways of integrating the main domed space with the area around it. A consistent emphasis on domical forms created the necessary visual unity to achieve this. Already in the Saldj̲ūḳ period tentative experiments in this direction may be noted, for example the ʿAlāʾ al-Dīn mosque, Niğde (620/1223), whose *ḳibla* is marked by three domed and cross-vaulted bays with further parallel aisles behind. In the Ulu Cami of Bitlis (555/1160), a single great dome replaces these smaller bays, while in the Gök mosque and *madrasa*, Amasya (665/1266), the *masdj̲id* comprises a series of triple-domed aisles. Experiment with domical forms was therefore deeply rooted in Anatolian architecture from the beginning. It is above all, however, the hallmark of mosques erected by the Ottomans, and can be traced to the very earliest years of that dynasty.

(b) Ottoman architecture before 857/1453. The sequence begins very modestly with a series of mosques comprising a simple domed cube with a lateral vestibule (ʿAlāʾ al-Dīn mosque, Bursa, 736/1335, a structure typical of well over a score of such Ottoman mosques built in the course of the 8th/14th century) and minor variants of this schema, such as the mosque of Orhan Gazi, Bilecik, and the Yeşil Cami, Iznik, 780/1378. Such structures have a natural affinity with larger mausolea throughout the Islamic world, and with the simplest forms of Iranian mosques. It is only with hindsight that their significance for later developments, in which the theme of the single, and (above all) central, dominant dome of ever-increasing size becomes steadily more important, can be appreciated. This, then, is the main line of evolution in Ottoman mosque architecture, and the discussion will return to it shortly.

Meanwhile, two other types of mosque, in which the dome also loomed large, deserve brief investigation, especially as they bade fair in the formative early years to oust the domed, centrally planned mosque as the favoured Ottoman type, and also because they had their own part to play in the final synthesis of the 10th/16th century. The presence of three major types of domed mosque in the same century is a reminder that the pace of change was uneven. Several mosques conceived on an altogether larger scale rejuvenated the hypostyle form by investigating the impact of multiple adjoining domes. In some cases, like the Ulu Cami, Bursa, of 797/1394, a simple square subdivided into 20 domed bays of equal width though of varying height—the choice of the dome as the agent of vaulting is a diagnostic Ottoman feature—the effect was distinctly old-fashioned. At ground level this is an Arab mosque, even if its elevation is Anatolian. Contemporary with this, but marking a very different attitude to interior space, are two mosques in Bursa, that of Yîldîrîm Bāyazīd, 794/1390, and the Yeşil Cami of 816/1413, which use the dome motif on various scales and thus far more imaginatively. They represent a second preparatory stage on the way to the mature Ottoman mosque, and their large layout is by turn cruciform, stepped or of inverted T-type. Their distinguishing feature is the use of several domes of different sizes. In the two cases under discussion, the inverted T-plan highlights the *miḥrāb* aisle by two adjoining domes along the central axis flanked by a trio of domed or vaulted bays on each side, the whole knit together laterally by a 5-domed portico. Sandwiched between these two buildings in date is the Ulu Cami of Edirne, 806/1403, where the square is subdivided into nine equal bays, eight of them domed, with a domed and vaulted portico tacked on. At the mosque of Čelebi Sulṭān Meḥemmed, Dimetoka, this arrangement is refined by an increased concentration on the central dome, which is enveloped by vaults on the main axes and diagonals, the whole preceded by a 3-domed portico. Such a combination cannot fail to recall the standard quincunx plan, complete with narthex, of mid-Byzantine churches, and it was of course these buildings which dominated the Anatolian countryside in the early centuries of Turkish occupation. Steady Byzantine influence can be seen to have affected the evolution of Ottoman architecture even before the capture of Istanbul brought Turkish architects face to face with Hagia Sophia. Yet it would be grossly mistaken to regard mature Ottoman mosques as mere derivatives of Hagia Sophia. The Uç Şerefeli mosque, Edirne, of 851/1447, with its huge central dome on a hexagonal base flanked on either side by a pair of much smaller domes and preceded by a lateral courtyard enclosed by 22 domed bays, makes excellent sense within a purely Ottoman perspective as a key stage in the evolution which terminated in the great masterpieces of Sinān. The divergence between the great dome and the lesser ones flanking it has already become acute and was to end in their total suppression.

Yet one significant element, crucial to Hagia Sophia and a cliché of Ottoman architecture after 857/1453, had not yet entered the architectural vocabulary of the Turkish mosque before that date. This was the use of two full semi-domes along the *miḥrāb* axis to buttress the main dome. The long-rooted Islamic custom of marking the *miḥrāb* bay by a great dome rendered such a feature otiose. Once the decision had been taken to make the largest dome the central feature of a much larger square, the way was open for the adoption of this Byzantine feature, and with it the transformation and enrichment of interior space was a foregone conclusion. Otherwise, most of the architectural vocabulary used in mature Ottoman mosques was already to hand by 857/1453: flying buttresses, the undulating exterior profile created by multiple domes, tall pencil-shaped minarets and a cer-

tain parsimony of exterior ornament allied to exquisite stereotomy. It has to be admitted, however, that these features had yet to find their full potential, notably in the failure to develop a suitably imposing exterior to match the spatial splendours within. That potential could be realised only when these features were used in tandem with each other by masters seeking to express a newly-won confidence and bent on creating an integrated style for that purpose. The mosque was, moreover, their chosen instrument; indeed, Ottoman architecture is, first and foremost, an architecture of mosques.

(c) Ottoman architecture after 857/1453. The capture of Constantinople in 857/1453 provided both a terminus and an impetus to a radical rethinking of mosque design. Appropriately enough, the first building to express the new mood was a victory monument, as its name indicates: the Fātiḥ Mosque (867-75/1463-70). This has a single huge semi-dome buttressing the main one but also displacing it off the main axis; clearly, the spatial, aesthetic and structural implications of such a semidome had not yet been fully grasped. Within a generation, this anomaly at least had been rectified; the mosque of Bāyazīd II (completed 913/1506) has two such semi-domes on the *miḥrāb* axis, with four lesser domes flanking this central corridor on each side. On the other hand, the projecting portico sandwiched between dome chamber and courtyard is a clumsy and lopsided expedient with little functional justification. Yet the resultant emphasis on the portico is wholly typical of a period in which this feature re-appeared under numerous guises, especially in doubled form (Mihrimah mosque, completed *ca.* 973/1565). The Şehzade mosque (955/1548) presents a much more streamlined appearance, with dome chamber and courtyard of approximately equal proportions. Within the sanctuary, the great central dome opens into semi-domes on all four sides, with small diagonal semi-domes opening off the main ones and corner domes. It is instructive thus to see Ottoman architects developing the possibilities of the centralised plan like the builders of Christian churches and martyria a millennium before, and coming to very similar conclusions. Smaller mosques with domes on hexagonal (Ahmed Paşa, completed *ca.* 970/1562) or octagonal bases (Mihrimah mosque) were scarcely less popular than domed squares. A small number of wooden-roofed mosques perpetuating earlier modes, and with their roots in the Arab tradition, survive (e.g. Ramazan Efendi in Koçamustafapaşa, 994/1585, and Tekkeci Ibrahim Ağa, 999/1590) as reminders of a very widespread type of Ottoman mosque now almost entirely eclipsed by more durable structures.

In the ferment of experiment which marks 10th/16th century Ottoman architecture, the key figure was undoubtedly Sinān, an Islamic equivalent to Sir Christopher Wren, who transformed the face of the capital city as of the provinces with some 334 buildings (mostly mosques) erected in his own lifetime, and whose pivotal role as chief court architect (effectively Master of Works) allowed him to stamp his ideas on public architecture from Algeria to ʿIrāḳ and from Thrace to Arabia in the course of a phenomenally long career which spanned virtually the entire century. The Süleymaniye mosque in Istanbul (963/1556) is by common consent the masterpiece of his middle age. It takes up and refines the model of the Bāyazīd II mosque by adding ideas taken from the Şehzade mosque, like the succession of semi-domed spaces billowing out from the main dome, though only along the principal axis. Huge arches serve to compartmentalise the spatial volumes.

All these mosques are preceded by an open courtyard whose cloister is roofed by long files of adjoining domes. This standard feature typifies the new emphasis on subsidiary structures, mausolea, *ʿimārets*, *madrasas* and the like, and the consistent attempt to integrate them visually with the sanctuary itself, for example by subordinating them to the principal axes of the design. All this implies a marked increase in scale and a new sensitivity to the landscaping of the ensemble. Hence the recurrent choice of dramatic sites for these mosques, especially in Istanbul with its built-in vistas along the Bosphorus. This awareness of topography as a feature of mosque design is evident as early as the Fātiḥ mosque; its three parallel axes are grouped around and within an enclosed open piazza measuring some 210 m. per side. The climax of mature Ottoman architecture is reached with Sinān's final masterpiece, the Selimiye at Edirne (982/1574), in which the largest of Ottoman central domes (31.28 m. in diameter, hedged externally by the loftiest quartet of Ottoman minarets (70.89 m. high) rests on eight piers pushed as close to the walls as safety will allow so as to create the largest possible open space.

While the increase in the absolute height and breadth of these great domed chambers is striking, the amount of articulation and detail crammed into these spaces is scarcely less impressive. All is subordinated to a formidable concentration of purpose—for example, the carefully considered fenestration, surely a legacy from Hagia Sophia, with its superposed groupings of eights and sixes or sevens, fives and threes. In the interests of creating the maximum untrammelled space, thrusts are concentrated onto a few huge piers with spherical pendentives between them, and thus the layout is a model of clarity and logic. Flooded with light, their volumetric subdivisions apparent at a glance, these interiors are at the opposite pole from the dim mysteries of Hagia Sophia. Frescoes reminiscent of manuscript illumination and of carpet designs vie with Iznik tiles to decorate the interior surfaces, and often (as in the case of fluted piers) to deny their sheer mass.

Externally, these mosques attest a well-nigh fugal complexity by virtue of their obsessive concentration on a very few articulating devices like windows, arches and domes. The repetition of the same forms on varying scales intensifies the sense of unity. Even the minarets which mark the outer limits of the mosque's surface area are brought into play; for example, those of the Sultan Ahmed Mosque (completed 1025/1616) have the bases of their balconies so calibrated as to coincide with the top of the main dome, its collar and the collar of the main subsidiary half-domes, while their location at the corners of the building binds it together and defines the sacred space from afar. Detailing is sparse and crisp, with a strong linear emphasis, a flawless sense of interval and a pronounced attenuation of features like wall niches and engaged columns (Süleymaniye mosque). Nothing is allowed to impair the primary aesthetic impact of cliff-like expanses of smooth grey stone. Most notable of all is a dramatic but ordered stacking of units culminating in the great dome which crowns and developes the entire ensemble. These individual units are each locked into place within a gently sloping pyramidal structure whose inevitable climax is the central dome. From this peak the subsidiary domes, semi-domes and domed buttresses cascade downwards to form a rippling but tightly interlocked silhouette. These highly articulated exteriors are a triumphant reversal of the standard Islamic preference in mosque architecture for stressing the interior at the expense of the exterior. As the viewpoint changes, so too does the profile of

these mosques, from a continuous smoothly undulating line to a series of sharp angular projections formed by stepped buttresses and roof-turrets. The preference for saucer domes rather than pointed domes with a high stilt fosters the sense of immovable, rock-like stability, with the topmost dome clamped like a lid onto the mobile, agitated roof-lines beneath it.

This, then, can justly claim to be architects' architecture. It merits that term by virtue of its unbroken concentration on the single germinal idea of the domed centralised mosque. It is against that consistent unity of vision that the role of the Hagia Sophia must be assessed. Of course, Turkish architects were not blind to its many subtleties, and they freely quarried it for ideas. But it was as much a challenge that inspired them to emulation as it was a source for technical expertise. Finally, it was the Ottomans who succeeded where the Byzantines had failed: in devising for these great domed places of worship an exterior profile worthy of the splendours within. The triumphant issue of their labours to that end can be read along the Istanbul skyline to this day.

II. In Muslim India

A. Typology.

The nature of the regional building styles and their characteristic decoration have been treated s.v. hind.

vii. Architecture, in Vol. III above. This section deals with the essential typology of mosques in India, and excludes the simplest structures used only for occasional prayer such as the *ķibla*-indications at some tombs and graveyards [see MAĶBARA. 5. India], and the special structures (*ʿīdgāh*) provided for the *ʿīds*; for these see MUṢALLĀ. 2.

The continuous history of the mosque begins with the M. Ķuwwat al-Islām in Dihlī, founded immediately after the Muslim conquest in 587/1191. There are however records of mosques founded earlier, e.g. under the ʿAbbāsid caliphate in Sind [*q.v.*], by small communities of Muslim traders, especially in Gudjarāt and the Malabār coast, and by individual Ṣūfī *pīrs* who gathered a community around them. The remains of these are mostly too exiguous to be of value in a general statement. Recent explorations by M. Shokoohy, not yet published, have revealed a few structures, of a century or two before the conquest, at Bhadreshwar in Gudjarāt. These, in common with the first structures of any fresh conquest of expansion, are constructed from the remains of Hindū buildings; in the case of mosques built after a conquest there has been a deliberate pillaging of Hindū or Djayn temples, as an assertion of superiority as well as for the expediency of making use of material already quarried and of local impressed labour before the arrival of Muslim artisans. Examples of this are cited for different regions of India s.v. HIND, vii. Architecture, in Vol. III, p. 441 above. (It should be pointed out that the practice of pillaging the buildings of the conquered is known in India in the case of rival Hindū kings also.)

Where a mosque is actually constructed on the plinth of a destroyed Hindū building (e.g. M. Ķuwwat al-Islām at Dihli; Atalā M. at Djawnpur) the *ķibla* [*q.v.*] will probably not be accurately located and the original cardinal west made to serve the purpose; but in general an effort is made to observe the correct *ķibla*, which varies between 20° north of west in the south of India to 25° south of west in the extreme north, with a conventional west used only rarely in original buildings.

Mosques which might be described as "public"—i.e. not only the *Masdjid-i djāmiʿ* of a particular locality (and of course in a conurbation there may be a separate *djāmiʿ* for each original *maḥalla*) but also the individually-founded or endowed mosques within a town—are enclosed on all sides. This has not been required of mosques within a *sarāʾī* or a *dargāh*, or when the mosque is an adjunct of a tomb, and there are countless instances of small private mosques where there seems never to have been any enclosure. The enclosure for the public mosque is particularly necessary for Islam *in partibus infidelium*, and those courtyards which are *not* enclosed are protected from the infidel gaze in some other way, e.g. by the *ṣaḥn* standing on a high plinth (examples: the Djāmiʿ M. at Shāhdjahānābād, Dihlī, Atalā M. at Djawnpur, where in both the courtyard is limited only by an open arcade or colonnade). The principal entrance is usually on the east, although any gate may be on occasion specified as a royal entrance; it is rare, though not unknown, for any entrance to be made in the western wall, and where this has happened it is not designed for access by the general public. The internal position of the principal *miḥrāb* [*q.v.*], sometimes of subsidiary *miḥrābs* also, is indicated on the outside of the west wall by one or more buttresses; a feature of mosques in India is the way the exterior elevation of the west wall is brought to life by decorative expedients.

The interior of the mosque admits of little variation outside two well-defined types. In one the western end (known in India as *līwān*) is a simple arrangement of columns supporting a roof, usually of at least three bays in depth but possibly of many more; the roof may be supported by beam-and-bracket or by the arch; the former arrangement being by no means confined to compilations of pillaged Hindū/Djayn material. The *līwān* openings may be connected directly with the arcades or colonnades of other sides of the *ṣaḥn*. Where Hindū material has been used it is usually necessary to superimpose one column upon another in order to gain sufficient height, for not infrequently a mezzanine gallery may be incorporated in the structure, in the *līwān* or in the side *riwāķs*. These are frequently referred to as "women's galleries", but this is surely impossible unless they are placed to the rear of the structure so that women may not make their prayers in front of men; gallery structures in the *līwān* are more likely to be either reserved for royal (male) use or to be *čillas* for the use of a local *pīr*. In the other type, the *līwān* is physically separated from the *ṣaḥn* by a screen of arches (*maķṣūra*), which may conceal a columnar structure to the west, as in the M. Ķuwwat al-Islām where the *maķṣūra* is a later addition to the original structure, or in the mosques of Gudjarāt where the arch is not used with as much freedom as in other styles. More commonly, however, the arches of the *maķṣūra* are part of a vaulting system whereby the *līwān* is composed into one or more halls; there is always an odd number of *maķṣūra* arches, and it is common for the bay which stands in front of the principal *miḥrāb* to be singled out for special treatment, either by being made taller than the rest, or by being specially decorated (the latter treatment common in the mosques of Bīdjāpur [*q.v.*]). (This is not invariably the central bay, as mosques are not necessarily symmetrical about the principal *miḥrāb* axis; cf. the "Stonecutters' M." in Fatḥpur Sikrī, where a *čilla* occupies two additional bays at the north end of the *līwān*, or the Arhāʾī Kangūra M. at Kāshī Banāras, where the side *riwāķs* of the *līwān* are of unequal length.) In one mosque at Bīdjāpur (Makkā M.), the *līwān* stands within and unattached to the surrounding courtyard. A staircase is commonly provided to give access to the *līwān* roof, either separately or incorporated within the walls or the base of a minaret, as this is a favourite place from which to call the *ādhān*; a staircase may be provided within a gateway for the same purpose. The *līwān* roof may be surmounted by one or more domes. Inside the *līwān*, the principal *miḥrāb* stands within the west wall opposite the main opening; if there are other *miḥrābs*, the central one is always the most sumptuously decorated and may be set deeper within the west wall than the other. The *minbar* is usually a permanent stone structure, with an odd number of steps, only occasionally made an object of decoration (splendid examples in the older Bengal mosques and in the Mālwā sultanate). A simple *minbar* is often provided when not liturgically necessary, as in the mosque attached to a tomb. There is an exceptional case at Bīdjāpur, at the mosque building for the cenotaph of Afḍal Khān: the mosque is two-storeyed, the two halls being exactly similar except that a *minbar* is provided only in the lower one. (In another first-floor mosque at Bīdjāpur, the Andā M., there is no *minbar*; the ground floor is apparently a well-guarded *sarāʾī*, and the suggestion has been made that the whole structure was intended for *zanāna* use.) The floor of the *līwān* is often marked out into *muṣallās* of *miḥrābī* shape for each individual worshipper. Lamps may be suspended from the *līwān* ceiling.

The *līwān* façade is open to the *ṣaḥn*; i.e. there is never any portion closed off like the *zimistān* of Persian mosques.

The *ṣaḥn* is usually an open courtyard, containing a *ḥawḍ* [*q.v.*] for the *wuḍūʾ*; this is usually placed centrally, except that in some Shīʿī mosques the *ḥawḍ* may be placed to one side of the central axis. There are rare cases where the *ṣaḥn* is completely or partially covered (e.g. the Djāmiʿ M. at Gulbargā [*q.v.*] is completely covered; in two mosques of the Tughlukid period at Dihlī, Khiṛkī M. and Sandjar (Kālī) M., additional *riwāḳ*s leave only four small open courtyards in the middle of the *ṣaḥn*). In such cases provision must be made for the *wuḍūʾ* outside the *ṣaḥn*; some major mosques may also make provision, outside the *ṣaḥn*, for the *ghuṣl*. In some Gudjarāt mosques there is a water reservoir under the floor of the *ṣaḥn*, sometimes with chambers wherein to take refuge from the heat of the sun, with some sort of kiosk standing in the *ṣaḥn* from which water may be drawn; the idea is imitated on a small scale in the floor of the Djāmiʿ M. in Fatḥpur Sikrī. In one complex (Rādjōn kī bāʾīn) south of the M. Ḳuwwat al-Islām the mosque and an associated tomb seem subordinate to an enormous step-well (*bāʾōlī* [*q.v.*]).

One or more bays of the side or end *riwāḳ*s may be closed off for a special purpose, e.g. to make a room for relics, or to serve as a room for the *ḳāḍī* or *mutawallī*; in Shīʿī mosques, sometimes to house the *ʿalams*, etc., but these are usually accommodated in the *Imāmbāṛā* or *ʿĀshūrā-khāna* where there is one. The use of part of the mosque as a *madrasa* [*q.v.*] is commonplace, and many instances could be cited at the present day where there is no special provision for such a purpose; but there are instances of a special building forming an integral appendage of the mosque designated as a *madrasa*; e.g. M. Khayr al-Manāzil, near the Purānā Ḳilʿa in Dihlī, where the northern *riwāḳ*, of two storeys, forms the *madrasa* of the foundation.

The *ṣaḥn* may be used also for graves, from the simplest tombstone to elaborate mausoleums (see MAḲBARA. 5); e.g. the Djāmīʿ M. of Fatḥpur Sikrī, where most of the northern side of the *ṣaḥn* is occupied by the tomb of Salīm Čishtī, the Zanāna Rawḍa, and the tomb of Nawwāb Islām Khān (not so designed originally, and possibly a *djamāʿat-khāna* for the saint's disciples).

A *mīnār* is by no means an invariable appendage to the Indian mosque; apart from a few occasional early instances, only in the Gudjarāt sultanate, and in Burhānpur in Khāndēsh, was a functional *mīnār* provided for the *adhān* before the Mughal period; after the 10th/16th century, the *mīnār* becomes common, but not invariable. See further MANĀRA. 2. India.

The administration of the mosque may be under the *ḳāḍī* [*q.v.*] or, in the case of larger foundations, a committee headed by a *mutawallī* [*q.v.*]. Where a mosque stands on a high plinth there may be openings in it sufficiently large to be rented off as storerooms or to traders, in which case the revenues accrue to the mosque; see also WAḲF.

Bibliography: There are no studies dealing with mosque typology alone; for works on all architectural aspects, see the Bibliographies to HIND. vii. Architecture, and Section B. below.

(J. BURTON-PAGE)

B. The monuments.

The development of the mosque in the subcontinent can be recognised as an adaptation of the Arab prototype, largely as already modified by Iranian builders, to local materials, climate, and the proclivities of a long-established tradition of architecture and ornament. The Arab elements in this fusion were those basic to the expression of the *djamāʿat*, the collective act of prayer and the simple, egalitarian liturgy: the courtyard and its protective enclosure, the *ḳibla* wall, here on the western side, the *ẓulla* or prayer hall, here known as *līwān*, along the western wall, and colonnades, *riwāḳ* or *dālān*, along the other sides, with an essential severity of outline and a spare orthogonal framework. The Iranian elements were rhythmic arcading, the prominent use of *pīshṭāḳ* [*q.v.*] or frontispiece alcoves, the voussoired dome, ultimately double, and a particular sense of proportion; minarets did not become general until relatively late, and then often as decorative rather than functional features. A gamut of Iranian decorative devices including ceramic tiles [see KĀSHĪ], cut plaster-work, *gač-barī*, plaster relief work, *munabbat-kārī*, and pietra dura inlay, *parčīn-kārī*, besides the pseudostructural pendentive-work, *ḳalūb-kārī*, or squinch-netting. The Indian elements, within the context of an elaborated stone-cutting technique, were initially a certain heaviness due to the stone itself (especially in corbelled domes), complexity in individual forms, a vibration set up by the reiteration of forms at different scales, an interest in diagonal axes, and an overwhelming fertility of imagination in carved ornament. Indian traditions of massing only influenced mosque design in a limited way, and then largely through changes in dome form and grouping. The traditions of temple building were in strong contrast, creating massive, highly ornate enclosures within which progressively more intimate cells led to individual confrontation with a deity; the vertical extension was frequently emphasised as much as the horizontal. Despite this difference, a reconciliation of these traditions led to an enlivening of the mosque outline, especially on the skyline, with a frequent play of pinnacles and pavilions, much use of receding planes, and in some cases a culminating centrality comparable with the Ottoman achievement. The underlying Arab archetype retained its simplicity of arrangement in most regions, though periodically transformed in others. Evidence for the direct transfer of skills from temple-building to mosque building, which can be deduced from the earlier forms, is provided by a Māru-Gurdjara architectural manual of the 15th century A.D., the *Vṛkṣārṇava*, in a chapter on the *Rehmāṇa-prāsāda*, or temple of Rehmāna, i.e. of Allāh, giving instructions for layout, orientation, superstructure and exclusively floral decoration, all within prescribed norms. The principal modifications attributable to the climate are a tendency to raise the courtyard level to catch wind currents and escape dust and noise, a tendency to pierce the courtyard walls to allow the currents through, and a preference for riverside sites. Specific architectural features are incorporated, notably the finaly pierced *djālī* screen to reduce glare, and the *čhadjdjā* or eaves pent to throw off monsoon water and increase shade. A general trend in the chronological development is the movement from trabeated construction towards arcuate or vaulted forms, though this is achieved with some hesitation. This is in parallel with a progression from a somewhat provincial emulation of Iranian or Central Asian types through local technique to a much more accomplished creation of local types in which influence from the *Vilāyat* can still be traced. Although the relative neglect of the *madrasa* [*q.v.*] as a building form may have been due in part to a practice of teaching within the mosque, this seems not to have produced any overall adaptation of layout, unless in the development of the undercroft.

The Arab conquest of Sind. It is recorded that the first mosque in Sind was built by Muḥammad b. Ḳāsim at Daybul [*q.v.*] after his capture of the city in 92/711, followed by another at Multān [*q.v.*], next year; he was urged to build mosques in every town, the resources seized having proved unexpectedly large. A third great mosque was built at Manṣūra [*q.v.*] either by his son *ca.* 120/738, or in the early years of Abū Dja^cfar al-Manṣūr, i.e. after 136/754, with teak columns. Little remains of these. If Daybul is correctly identified with Bhambōr, and the uncertain date of 109/727 is right, then the mosque there may be among the oldest in Islam. Its plan is certainly close to that of Kūfa [*q.v.*], as rebuilt in 50/670, with the same double rows of columns for the *riwāḳ*, but only three aisles (of twelve bays) parallel to the *ḳibla* wall in lieu of five for the prayer hall; no trace has been found of a *miḥrāb* recess, but neither has one been found at Wāsiṭ [see MIḤRĀB], as built under the same governor, al-Ḥadjdjādj b. Yūsuf. Outer bays of the *riwāḳ* were walled off to form cells, *ḥudjra*, and stone bases contain traces of timber pillars. Another inscription gives 239/853-4; one in flowered Kufic for 294/906-7 probably refers to rebuilding after the earthquake of 280/893. The building thus conforms to the early ʿIrāḳī type, even to its strip foundations; though in yellow freestone, it lacks the stone columns. Pivots for gates in front of the *līwān* suggest some kind of *maḳsūra*. At Manṣūra, the Djāmiʿ Masdjid appears to have had a six-aisled prayer hall, built on an earlier Hindu site; three smaller mosques show careful alignment and external buttressing for a *miḥrāb*. In the absence of detail, the influence of these buildings is imponderable, but Daybul and Manṣūra survived until the 7th/13th century, and Manṣūra like Multān was taken by Maḥmūd of Ghazna; they can hardly have been ignored. A further early mosque in Kač̣h, at Bhadreśvar, has been identified by Shokoohy as a rebuilding with purposely-carved stone *ca.* 560/1165. This has a prayer hall of two aisles, a double *riwāḳ* colonnade at the sides, and a single one to the east. The prominent *miḥrāb* is echoed outside the east wall, which faces an open hypostyle hall, no doubt for an overflow congregation. The roof is trabeated throughout, mostly on the east-west axis.

In the period preceding the Dihlī Sultanate, the principal mosques must have been at Lāhawr [*q.v.*], the Ghaznawid centre (as Maḥmūdpūr) from 412/1021, including the Khishtī Masdjid., of which nothing remains, though brickwork is still typical of the area.

Sultanate. At Dihlī [*q.v.*] the victory of Ḳuṭb al-Dīn [*q.v.*] was proclaimed by the creation (587/1191) of the Masdjid Ḳuwwat al-Islām, "The Might of Islam", on a temple plinth, with stonework taken from 27 other temples by elephant-power. The plan, of the same ʿIrāḳī type, is here elongated on the east-west axis, and includes formally symmetrical entrances to the east, north and south. The colonnades in the prayer hall are four aisles deep, those to the east three, and those down the long sides two. The hall is now modified to include a row of five corbelled domes, above five *miḥrāb*s, by adjustment of the bay spacing to carry octagonal systems of lintels; this roof was set higher than the *riwāḳ* roofs, and mezzanines were built at the four angles of the court, possibly for women. Ingenious use of the strongly articulated temple pillars, with cruciform capitals and internally tiered domes, achieved a relatively light, harmonious building, whose Hindu character was scarcely disguised. In 595/1199, however, a great frontal screen of five pointed arches was added to the hall. Its clearly-framed format, with the central arch much taller, is Iranian, and related to the Ghūrid Shāh-i Mashhad in Ghardjistān (571/1175-6), or the Ribāṭ-i Sharaf [*q.v.*] (508/1114-15), but its construction is limited to Indian techniques, with corbelled arches. The marvellously vigorous combination of sinuous Hindu carving with *ṭughrā* inscriptions makes fresh use of Indian skills for a Muslim purpose. The exaggerated height of this screen, with no direct relation to the hall behind, set a pattern for later buildings. In the same year Ḳuṭb al-Dīn began the immense Ḳuṭb Mīnār [*q.v.*] outside the southeast corner of the mosque, much like that at Khʷādja Siyāh Pūsh in Sīstān, as a symbol of the centrality of faith; minarets, if used at all in Hindustān, are usually symbolic rather than functional until Mughal times. The exception is at Adjmer. There the equally symbolic re-use of temple components as "the annihilation of idolatry" achieved more orderly expression in the Afhāʾī-dinkā Djhōńpŕā (595/1199), under Abū Bakr al-Hirawī, with some evidence of specially-cut masonry in the lower column-shafts and tiered domes (see Meister, *op. cit.*), and a single, exquisite, cusped marble *miḥrāb*. The court is almost square, and probably had nine domes on all four sides, though there are five aisles in the prayer hall to three elsewhere; the effect is spacious, well-lit and calm. A reeded shaft graced each external angle, and the site on a mound allowed a grand approach stair to the east. Here too a great screen wall was added, with seven arches, under Iltutmish (607-33/1211-36), two lateral arches on each side reflecting the cusped form of the *miḥrāb*; the central arch is less dominant than at Dihlī, but is surmounted by two minaret shafts (now stumps), reeded and creased like the Ḳuṭb, so emulating a Saldjūḳ [*q.v.*] *pīshṭāḳ*. Iltutmish was to extend the work at Dihlī. Accepting Aybek's plan, he enlarged the prayer hall by a further three domes to north and south, with corresponding *miḥrāb*s and screen wall. Corbels on the latter suggest a double storey in each central bay, as in later work in Gudjarāt. The *riwāḳ*, built as before, now enclosed the first mosque, including the Mīnār, to which he added three storeys [see DIHLĪ for plan and details] (completed 1229). The Shāhī Djāmiʿ Masdjid at Bari Khatu is of the same period and type, set on a high plinth; it introduces an ornate domed gallery over the east entrance. At Badāʾūn [*q.v.*] the great Djāmiʿ Masdjid built by Iltutmish in 620/1223-4 adheres to the same basic layout, but has been heavily rebuilt.

ʿAlāʾ al-Dīn Khaldjī's scheme to double the Ḳuwwat al-Islām again fell victim to its own ambition, for it was abandoned at his death. Remnants show that it respected the existing alignments in prayer hall, screen wall, and north gateway, and even in the immense ʿAlāʾī Mīnār which was to rise from the centre of the new prayer court. The inherent symmetry cannot have mitigated the disruption of worship by three courts set within each other. The only complete element to survive is the southern gateway, or ʿAlāʾī Darwāza (710/1311), set as a *čārṭāḳ* on the palace approach: an elegant, accomplished building of a new order. Its vocabulary is recognisable in the Djamāʿat Khāna at the *dargāh* of Niẓām al-Dīn (dated for his death 725/1325), fully Muslim in style, and built with new stone. This has no courtyard, but only a prayer hall of three domed chambers, to each of which there is a broad archway in the eastern façade. The square central space, almost the same size as the Darwāza, has a similar system of concentric keel arches for its squinches, as in earlier Khurāsānian work (cf. Ḳirḳ Ḳiz near Termez), here carved,

framed, and supporting an octagonal cornice; above, round the base of the smooth dome, are 32 arched niches, four of them pierced to admit light. The grace of the interior is achieved by a balance between the four main arches, the squinches, and at a reduced scale the *miḥrāb* and pairs of small arches at each corner, sustaining interest at each level. Each arch, inside or out, is contained by bands of inscriptions on the extrados (derived from Čis̲h̲t?), set off by lotus buds lining the intrados, in recessed planes above the angle shafts first introduced in Iltutmis̲h̲'s screen. The now-voussoired arch construction is masked by the carving. The lateral bays have two domes each on triangular pendentives, and may have been added rather later. Externally, the lateral bays are sunk, and the central one advanced and raised as a modest frontispiece; all are joined by a string course at mid-height and a lotus-bud parapet. Each archway is latticed. A provincial variant of the same style can be seen in the Ukha Masd̲j̲id at Bayāna, erected by Ḳuṭb al-Dīn Mubārak (716-20/1316-20). The mosques of the same period at D̲j̲ālōr, Dawlatābād, Pātan and Bharoč are built from temple spoil, but that at Dawlatābād continues the use of tapering, fluted corner buttresses, and Bharoč, with its more conscious blending of Hindu with Muslim elements, provides a starting point for the Gud̲j̲arātī style, with latticed windows, coffered ceilings over carefully-grouped columns, and domes of two sizes over the *līwān*. The D̲j̲āmiʿ Masd̲j̲id at Khambāyat (*ca.* 1325) owes a more direct debt to Dihlī in its arches and massing, but local features are evident in the merlon parapet, pinnacles on the frontispiece, latticework set in a grid-like frame, and pillars carrying a cusped arch just inside the main archway. These examples attest to the diffusion of the style in western Hindūstān.

An altogether different treatment of the mosque was to characterise Tug̲h̲luḳ building. Most of the examples at Dihlī are undated, and have been ascribed to Fīrūz S̲h̲āh, but it has been suggested (Burton-Page, *op. cit.* in *Bibl.*, 1974, 15) that the large Begampur Masd̲j̲id is better explained as built by Muḥammad b. Tug̲h̲luḳ for his new city of D̲j̲ahānpanāh (*ca.* 725/1325). Raised on a high plinth, it is important in introducing the Iranian four-*īwān* plan to India. North and south, the *īwān*s are advanced well into the court between heavy walls, boxing entrances at the centre of each side; to the east, the projection is outwards to a flight of steps, and to the west the tall arch rises to twice the roof height between tapering octagonal stair turrets, framing a triple entrance to the prayer hall. Here the main chamber is square, under a large pointed dome completely masked by this *pīs̲h̲ṭāḳ*. The hall on either side is three-aisled, with lesser domes, and 44 more domes cover the single *riwāḳ* all round the court, above arcades, and matching arched windows (for plan see ASIAR, iv [1871-2], pl. x). Muḥammad's transfer of Dihlī's population to Dawlatābād in 729/1329 appears to have depleted the skilled labour force and led to its dispersion elsewhere, notably in the Bahmanī Sultanate; southward expansion emptied the treasury. Nevertheless, the change of attitude introduced by Fīrūz S̲h̲āh (752-90/1351-88) was primarily an ethical one, in which his religious integrity required a return to prescribed simplicity and lack of ostentation. His building programme encompassed many mosques and 120 *k̲h̲ānaḳāhs* in Dihlī and Fīrūzābād alone, under the architect Malik G̲h̲āzī S̲h̲aḥna; given his stringent financial control, a modest but durable type of construction was inevitable. The fortified appearance of these mosques probably owes more to K̲h̲urāsānian prototypes, whose tapering round towers and massive walls had met the needs of mud construction, than to the need for defence (G̲h̲iyāt̲h̲ al-Dīn, a Ḳaraʾuna Turk, may have mediated this influence). The D̲j̲āmiʿ Masd̲j̲id at Fīrūzs̲h̲āh Kōṭlā (755/1354), now ruined, was built to incorporate a *tahk̲h̲āna* or undercroft, with arcaded vaults accessible from three sides, the east fronting the river. It once had three-aisled *riwāḳ*s with multiple domes, and 216 stone pillars about 16 ft. (4.87 m.) high, around a central octagonal pool with its own dome. To the north, one of the As̲h̲oka's stone pillars was re-erected on a three-storey, arcaded pyramid as a marker. The materials for this and Fīrūz S̲h̲āh's other mosques are rough rubble stonework faced with *čūnā* plaster, once whitewashed or painted, with a minimum of mouldings. The common répertoire included tall plain walls with merlons, plain lintels on plain, squared quartzite piers set in twos or fours, with elementary scrolled cross-brackets and capitals, still Hindu in type, and two-centred arches of variable width sunk in panels, sometimes concentric. Domes were of a similar, helmet-like profile, set on framed, recessed squinch arches. Externally, the mass is emphasised by long flights of steps, projecting porches, and battered towers at the angles. The device of the *tahk̲h̲āna*, which allowed the lease of shop spaces to sustain the mosque, is repeated at the Kalān Masd̲j̲id (798/1387?) which exhibits these features, and an unusual corridor around the prayer hall, besides cannon-like *guldasta* pinnacles crowning the angle-towers of the porch. The Khiṛkī Masd̲j̲id, also on a *tahk̲h̲āna*, repeats the three-aisled *riwāḳ*, but in combination with three-aisled passages which traverse the court on both axes, dividing it into four smaller square courts. This four-court plan is to be seen in a perhaps earlier form at the Sand̲j̲ar Masd̲j̲id (772/1370-1) at Niẓām al-Dīn, though there the *riwāḳ* and the passages are only one aisle deep, and the courts are rectangular. This scheme, possibly derived from D̲j̲ayn temple plans, was presumably intended to provide shade; the courts themselves were probably covered by awnings, as in palaces at the time. It intruded on the essential unity of the *ṣaḥn* and its congregation, and the experiment was not repeated. The mosque of S̲h̲āh ʿĀlam includes an early example of a mezzanine gallery in the northwest corner; the inaccessibility of such retreats leaves their purpose uncertain.

The D̲j̲āmiʿ Masd̲j̲id at Irič (815/1412), some 40 miles north of Jhansi, demonstrates the transition from the Tug̲h̲luḳ to the Sayyid manner. The plan, with single-aisled *riwāḳ*s, is centred on a prayer chamber whose dome spans the full depth of the hall, with two aisles and six smaller domes on each side. The structure is wholly arcuate, on low piers carefully detailed to articulate both axes, with frequent use of recessed planes; the arches are now stilted, with marked corbelling at the impost giving a shouldered effect, and set in deep panels. The *riwāḳ* has groined vaulting. The dome is single, a little pointed inside, with ribs, and still set on concentric squinch arches. The generally ponderous effect is offset by the assured but simple proportions, and the skyline is relieved with merlons (see *Mem. ASI*, xix, Calcutta 1926, for drawings).

The Lōdī mosque (Tug̲h̲luḳid) at K̲h̲ayrpur (900/1494) incorporates similar features, while its massing shows the continuity of Tug̲h̲luḳid tradition despite Tīmūr's incursion. Attached by a walled court to the Baṛā Gumbad, it is balanced by an arched structure opposite: a significant precedent for later tombs. An arcaded basement makes up the change in

level at the rear, with tapering round buttresses at each rear corner, and at each angle of the projecting bay of the central *miḥrāb*, whose tops are alternately reeded below *guldasta* pinnacles; a Hindu window is corbelled out from the middle, and from either end wall. The hall has five bays; the three in the middle are domed, but the ends have low, flat vaults. The elevation reiterates the pattern, with three broad shouldered arches, and narrow ones at the extremities. As at Irič, the central *pīshṭāḳ* is raised a little, but here it is set between narrow, niched piers, and the outer two bays are united by the line of a *čhadjdjā*. Like its dome, the central arch, thrice recessed, is a little higher than the others, and a muscular tension results from the contrast of line. The surfaces, worked outside and in with deeply cut plaster, vibrate with countless arabesques; each extrados is inscribed, and inscribed rosettes fill the spandrels. Inside, they enhance pendentive systems of oversailing lintels carved with *muḳarnas* [*q.v.*] niches. The vocabulary is further enlarged by blind merlon parapets, counterset trefoils around the octagonal dome bases (precursors of later foliation), and spreading lotus finials, *mahāpadma*. The development of this type is apparent in the Mōth kī Masdjid (*ca.* 911/1505), where the lateral domes are shifted to the end bays, in a much freer spacing. There they are supported on similar corbelled pendentives, as long used in Iran, while the central dome rests on squinch arches. The five façade arches are narrower, and a lancet window is added at each end. The *pīshṭāḳ* now encloses a lofty blind arch reacing the parapet, which frames the entrance arch below, and a window above, as anticipated in the *miḥrāb* at Khayrpur. The two corner buttresses give way to polygonal towers, arcaded in two storeys. White marble is used to set off the red sandstone, with coloured tilework, notably on *čhatrīs* at the courtyard corners, and painted carved plaster.

Despite his dissatisfaction with this style, Bābur appears to have secured little improvement at his mosques (932/1526) at Kābulī Bāgh, Pānipat and Sambhal, beyond introducing Tīmūrid squinch netting. Humāyūn, however, developed it further in the Djamālī Masdjid (943/1536) at Dihlī, in the same five-bay format. This only has one dome. The *pīshṭāḳ* is contained between engaged reeded shafts that anticipate the Mughal use of minarets. The four-centred arches on either side are separated by large superimposed niches, which help to maintain the rhythm, and their haunches are slight. Khaldjī lotus buds are re-introduced on the central intrados. The Masdjid-i Kuhna at the Purānā Ḳilʿa (*ca.* 1535-60?) shows further refinement. Each of its five arches is contained within a taller blind one, and that in a panel. The end bays, broken forward, resemble the Djamālī *pīshṭāḳ*, but the three middle ones are set deeper, with delicate angle shafts, and are proportionately taller. The fine ashlar incorporates the first geometric marble mosaic, after Tīmūrid models, and elaborate moulding profiles. Inside, the rippling recessed arches carry squinch arches below the prominent central dome, niched pendentives on either side, and arched cross ribs with vaulting at either end, again of a Tīmūrid type.

Regional developments. Bengal.

Remains from the early Muslim annexation are very limited. At Tribeni, an inscription framing the *miḥrāb* is dated 698/1298, but the mosque has been rebuilt, as has the Sāliḳ mosque at Basīrhāt (705/1305). At Čhōṭa Pānḍuā [see PĀNḌUĀ, Čhōṭa] ruins of a large brick mosque include basalt Hindu columns supporting well-rounded, two-centred arches of a type that remained typical of Bengal, and *miḥrābs* with carved trefoil heads above ringed shafts, plainly derived from Hindu niches, though within diapered Muslim frames, and a kiosk-like *minbar* [*q.v.*]. It may have been the model for the huge Ādīna Masdjid at Ḥaḍrat Pānḍuā (776/1374-5)(154.70 x 87 m.), which has similar features. There the broad courtyard resembles that of the Great Mosque at Damascus in its proportions and the dominance of a *maḳṣūra*-like bay at the centre of the prayer hall, once vaulted over. This runs through the hall, with five arches leading to five aisles of 18 bays on either side, but the presence of a royal mezzanine in the north wing leaves its purpose in doubt. Triple-aisled *riwāḳs* surround the court behind plain, stone-faced arcades, each arch recessed once within a panel. The simple pillars support brick cross arches between which spherical pendentives of corbelled brick carry 378 identical low domes, punctuated only by the *maḳṣūra*. Outside, the ashlar wall is advanced and recessed in alternate vertical strips traversed by cornice and string course, each set off by an aedicule containing a cusped arch and lamp. Although never repeated at this scale (32 *miḥrābs*!) such treatment of detail was to inform most subsequent work. From the 9th/15th century onwards, mosques took a closed form in response to the wet climate, with the characteristically curved Bangālī eaves line, but still with the massive polygonal corner buttresses of the period. Thus the Čamkatta Masdjid at Gawŕ (*ca.* 880/1475?) has a single square chamber of brickwork surmounted by a single dome; it has single openings centred north and south, and three to the east giving on to a vaulted verandah running the full width, again with single doors to north and south, and three to the east. The piers between the arched openings carried aedicules set high, and glazed tilework. The Lattan Masdjid (880/1475-6) is similar, but with a more complete symmetry, having three openings to north and south, and three *miḥrābs* opposite the doors, three domes over the verandah, and intermediate "corner" buttresses; the central verandah dome has a roof with four curved eaves—a *čawčāla*. It was once tiled outside and in. The Gunmant Masdjid at Gawŕ (889/1484?) encloses four bays of three aisles, all domed, on either side of a central *maḳṣūra*, the stonework of whose vault is carved in relief. A further variant is illustrated by three mosques at Gawŕ. The Thāntipāra Masdjid (885/1480) is rectangular, enclosing five bays of two aisles, with a single line of four stone pillars to carry its ten domes. Fine terracotta reliefs fill the spandrels and the two registers of aedicules on the piers outside. At the Čhōṭa Sōnā Masdjid, built between 899/1493 and 925/1519, the plan is comparable, but of three aisles; its central bay is wider, and has three *čawčāla* roofs in lieu of domes. Its ashlar front is finely carved, and the dome was once gilded. The Baŕā Sōnā Masdjid (932/1526) combines eleven bays of three aisles with a verandah forming a further aisle down the front, facing an open quadrangle with arched gateways; the stone is remarkably plain. Such forms continued well into the Mughal period, as seen in the Ḳuṭb Shāhī mosque at Ḥaḍrat Pānḍuā (990/1582).

Djawnpur. A mosque begun in 778/1376 by Fīrūz Shāh Tughluḳ was completed under the independent Sharḳī sultans (811/1408); its name, Aṭāla Masdjid, apparently refers to the pylon-like *pīshṭāḳ* which was to become the dominant trait of subsequent buildings here (Sk. *aṭṭāla* = "watch tower", see Lehmann, *op. cit.*, 23), exaggerating the great screen-arch at Dihlī. The four-*īwān* plan is apparently derived from the Begampur Masdjid at

Dihlī, though the *īwān* walls are reduced to massive spurs outside the enclosure, and those to north and south have domes carried on clustered columns, leaving the three-aisled *riwāḳ* unimpeded. Only the western *īwān* still boxes in space in the prayer hall, accessible through triple doors as before, but with biaxial symmetry, three arches on either side maintaining the continuity of the three prayer hall aisles; the frontal turrets are now resolved as square towers tapering five stories to accommodate the *pīshṭāḳ* arch, whose recessed tympanum is pierced in three registers to reveal the open air beyond. This pylon, used for giving the *adhān*, is echoed at 1/3 scale on either side in the *līwān* wings, and in the remaining *īwāns* outside the remarkable two-storey colonnade; it may have been suggested by the pierced archway of the Shaykh Bārha mosque at Ẓafarābād (711/1311), though its scale perhaps owes something to Pānduā [for further description, see DJAWNPUR]. Tapering cylindrical turrets at the angles of the rear wall attest to Tughlukid influence. At the Lāl Darwāza Masdjid (*ca.* 852/1447), built on the same pattern, the structure behind the main *īwān* is still lighter, minimising obstruction of the prayer hall below the central dome, though mezzanines are set on either side; the absence of lateral domes, due to the smaller scale, leaves that at the centre uncluttered. The dome piers, with massive Hindu brackets, contrast oddly with the Iranic slenderness of the colonnades. In structural terms, the Djāmiᶜ Masdjid (842/1438, but finished under Ḥusayn Sharḳī) is a reversion to the Begampur type, with boxed-in, domed *īwāns* on all four sides, and the same high undercroft. In the prayer chamber the colonnades are eliminated except under the mezzanines either side of the central chamber, where the pillars are paired to match its piers, for the wings are again boxed in by heavy masonry supporting the roof of a single pointed barrel vault spanning east and west, on either side. The prayer hall is thus divided into three spaces free of supports, but separated by their cross walls and the two-storey mezzanines. The same triality is seen in the façade. The simply niched towers and arcaded tympana of the earlier *pīshṭāḳs* are transmuted into a rhythmic display of framed and fretted openings. The dichotomy between high frontal screen and the dome hidden behind is nowhere more pronounced than here. Related mosques are to be found at Itāwā (Djāmiᶜ Masdjid) and Banāras (Afhāʾī Kanguar).

Gudjarāt. In a sandstone architecture, drawing more than that of any other region on the Hindu and Jain traditions, two tendencies in mosque design had already emerged in the Khaldjī phase already referred to: the screening of the prayer-hall front between a series of archways, as at Khambāyat (after Niẓām al-Dīn at Dihlī), or the treatment of the hall as an open colonnade, given additional rhythm by the surge of domes above the *čhadjdja* line, as at Bharoč. In either case the domes were carried by the Hindu device of beams spanning between two columns grouped to convert each square bay to an octagon. Remaining square bays were panelled in intricately recessed layers of coffering, whose cellular carving matched that of the domes. Pillars with markedly stratified round shafts above squared, faceted pedestals, carry vigorously curved brackets never far from living movement. The proportions of the three-arched screen are carefully repeated at Dhōlkā in the mosque of Hilāl Khān Ḳāḍī (733/1333), but with bracketed, tiered pinnacles marking the *pīshṭāḳ* so prominently as to suggest the minarets which followed; the central dome, raised a storey above the roof, is surrounded by pierced screens. The same scheme, with its lower wings on either side, recurs at Aḥmadābād in Sayyid ᶜĀlam's mosque (815/1412), with half-rounded, tiered and bracketed buttresses framing the central arch as bases for fully functional *mīnārs* in a comparable style. The larger domes are now true, hemispherical ones. The development reaches fruition in the Djāmiᶜ Masdjid at Aḥmadābād (826/1423) where the roof at the front of the three central bays is raised for a clerestory, with mezzanine galleries between, and the central dome is raised a further storey, so that light can enter indirectly at two levels, filtered by a pierced screen set in the usual Gudjarātī gridframe of stone: the remaining domes, three deep and five in the length of the hall, surround these three at the lower level. The *mīnārs*, once four times this height, fell in 1819 (see J. Forbes' drawing of 1781 in *ASWI*, vii [1906], 30). The Masdjid of Malik ᶜĀlam (1422?) combines a single arch with such minarets and an open front. Continuing interest in the open type of hall is seen, as at the mosque at Sarkhēdj (855/1451), where 140 pillars, grouped as usual to support two rows of five equal domes, are set throughout in pairs to achieve an elegantly simple unity below a continuous roof line; there is little carving but for the *miḥrābs*. The Djāmiᶜ Masdjid at Čāmpānēr (Maḥmūdābād) (924/1518-9) works variations on that at Aḥmadābād. The eleven main domes are staggered, the central one being set over a single central bay rising through three roof levels, behind a *pīshṭāḳ* which now overlaps the *mīnār* on either side, and incorporates three corbelled bay windows. The hall wings (*bāzūhā*) thus maintain a single roof line, with a plain walled front pierced by two arches each side, but there are now corner turrets to match the octagonal *mīnārs*. The main dome is ribbed inside, the side ones still corbelled, and the carved panels have filigree tendril-work. As at Aḥmadābād, the *riwāḳ* is one aisle deep; three entrance pavilions outside the wall carry prominent *čhatris*, and the wall itself is strongly modelled. The mosque of Rānī Rūpawātī (*ca.* 916/1510) shows a hall of only three domes treated similarly, with bay windows playing a more conspicuous role in modulating the front and ends. The culmination of the open hall design at the mosque of Rānī Siprī (Sabarī), also at Aḥmadābād (920/1514), fronting her tomb, has two rows of three corbelled domes, with only one row of pillars down the centre, and another, paired, in front, enlivened by alternate spacing. The extreme delicacy of this small-scale scheme is most evident in the slender, but solid and purely decorative *mīnārs* now set at each end of the façade—a device already introduced at the mosque of Muḥāfiẓ Khān (897/1492) with full minarets. These two traditions were reconciled in the mosque of Shaykh Ḥasan Muḥammad Čishtī (973/1565-6), a pillared hall of three *miḥrābs* in which the front is arcaded between terminal *mīnārs*, and the central five bays are raised in an upper storey of verandahs around a single dome. Sīdī Saᶜīd al-Ḥabshī's mosque (980/1572-3), still at Aḥmadābād, has five bays of three aisles with intersecting arches, supporting shallow domes over squinches, lintels and corbels, but is remarkable for its ten large tracery lunettes, of which two are unrivalled in the sinuous naturalism they bring to the interior.

Mālwā. An initial phase of redeployed temple material is distinguished by a simple grace which remained typical of the kingdom. At the Djāmiᶜ Masdjid (or Lāt Masdjid) at Dhār (807/1404-5) the proportions of a single smooth hemispherical dome impart a spaciousness to the centre of the prayer hall colonnades, complemented by a pattern of flagstones,

and a peaked, cusped *miḥrāb* arch; outside, its coronet of merlons enhances the traces of a tiled merlon parapet over the open front. One domed porch is surrounded by coved vaults, and in another false arch profiles are inserted between the pillars as in Gudjarātī temples. The first mosque at Māndū, that of Dilāwar Khān (808/1405-6) is spartan, however, with its hall of elemental columns relieved only by seven *miḥrābs*. Its successor, that of Malik Mughīth (835/1432) presents a more Tughluḳid exterior, with an arcaded undercroft in front between domed turrets, and the prominent stair often used here. The open, pillared prayer hall has three low, helmet-like domes. These, though still supported by an octagon of lintels, are partly enclosed by similar false arches below, with web spandrels, well integrated with the *miḥrābs* behind. The Djāmiᶜ Masdjid (858/1454) has the same undercroft and steps, and the three main domes again span three rear aisles of the hall, but there are now two aisles in front of them, which with the triple aisles of the side *riwāḳs* are covered with ranks of small domes, one to each bay, 158 in all. The building is mature, wholly Muslim, and of a sturdy dignity. The heaviness of strongly stilted domes is balanced by the grace of matching arcades round the court; the lofty hall is intersected by arches over plain, squared pillars, and articulated with blind wall arches and a characteristic flaring squinch. Each end dome covers a mezzanine set on nine bays of cross-vaulting. The pink stone is almost plain. The Djāmiᶜ Masdjid at Čanderī is comparable, though remarkable for serpentine brackets developed from those of the *minbar* at Māndū.

Khāndēsh. A similar restraint in the Djāmiᶜ Masdjid at Burhānpur is conspicuous in its open hall front of 15 uniform arches, relieved only by a dancing alternation of large and small trefoil merlons, and the reiteration of *čhadjdjā* brackets, the arcaded court appearing larger thereby (997/1589). The interior of the hall is equally regular, with five aisles of cross vaulting sustained by plain squared pillars decorated only on their bases, and a crested *miḥrāb* to each bay, rising above the string course, with three recessed arches finely chiselled in the dark stone. A substantial octagonal *mīnār* rises from a faceted square base at each end of the hall front, topped by a square lantern and a dome. Similar tall but plain *mīnārs* appear elsewhere in the city, and most notably as a pair flanking the *pīshṭāḳ* arch of the Bībī kī Masdjid, with four *djharōkhā* windows below their domes. Their tiered form otherwise resembles that at Čāmpānēr, there is even a *djharōkhā* on either side fronting the three-domed hall, whose organisation is apparently based on Rānī Rūpawatī's mosque at Aḥmadābād (see *ASI, NIS*, ix, 1873-5).

Bahmanī Sultanate. The interpretation of the *līwān* as a simple repetition of arched bays is already present in the Shāh Bāzār Masdjid at Gulbargā (*ca.* 761/1360?), in an open-fronted hall of 15 bays of crossed arches in six aisles, all of them domed. The arches, set on tall piers, are recessed once, shouldered at the impost and stilted; the domes are low. At the Djāmiᶜ Masdjid (769/1367, thus contemporary with the Khiṙkī and Sandjar mosques at Dihlī) similar arches and squared piers are deployed quite differently to cover what would normally be the court with 63 domes on pendentives of corbelled work on angle. The *riwāḳs* are replaced by broader aisles roofed by rows of transverse pointed barrel vaults countering the thrust of these, with a large dome at each corner; these vaults rest on arches set on very low imposts, the contrasts in height adding interest to the interior, while light floods in from arcades in the outer wall. A still larger dome is set in front of the *miḥrāb*, heavily stilted, over trilobed squinches echoing the *miḥrāb* itself, and set in a square clerestory (cf. that in the mosque of Karīm al-Dīn at Bīdjāpur, 720/1320). The ensemble recalls *bāzār* architecture in Iran; it was without sequel, like the experiments at Dihlī. A variant of the arcaded open *līwān* at the Dargāh of Mudjarrad Kamāl (*ca.* 802/1400) has carved stucco archivolts and rosettes, with an extraordinary "entablature" of depressed cusped arches on sinuous brackets. The Djāmiᶜ Masdjid (Solah Khamba) in the Fort at Bīdar [*q.v.*] is another version (827/1423-4), whose long front of 19 arched bays has square piers, and the five-aisle interior round pillars, carrying small domes on squinches. Heavy piers form a *maḳṣūra* enclosing the central three bays, from which squinches on sinuous brackets carry a tall 16-sided drum lit by fine *djālīs*, and a single large dome whose outer form is close to the domes at Multān [*q.v.*] while its supports recall the Tughluḳid *īwān* at Begampur. The small three-bayed Langar kī Masdjid at Gulbargā (*ca.* 838/1435?) introduces a single pointed brick vault over two arched ribs.

Barīd Shāhī. At Bīdar, the use of tall arches on low imposts is resumed at the Djāmiᶜ Masdjid (*ca.* 926/1520?), recessed once, with angular matching squinches articulated with great clarity below plain domes (cf. those in southern Iran). A transition to the Bīdjāpur vocabulary can be seen in the Kālī Masdjid (1106/1694-5), where the three front arches are framed by a pair of slender, formalised *mīnārs*, and the decagonal *miḥrab* recess is housed in a square rear tower carrying a *čārṭāḳ* lantern, and a slightly bulbous dome as introduced at the Madrasa of Maḥmūd Gawan (877/1472); a domical vault roofs the central bay. A small mosque at the tomb of ᶜAlī Barīd (984/1576), handled similarly, has three domes on squinch-net pendentives, and a fretted cresting.

ᶜImād Shāhī. The Djāmiᶜ Masdjid at Gāwilgaṙh [*q.v.*], rebuilt in 893/1488, already combined a seven-arched hall façade on square piers with a square pylon at either end topped by a *čhatrī* with *djālī*-work in the sides, and *čhadjdjas* on serpentine brackets, but otherwise follows the Bahmanī pattern of a dome over every bay, and a larger one raised on a tall drum at the centre; an arcaded screen wall surrounds its court. This is repeated at a smaller scale in the Djāmiᶜ Masdjid at Rohankhed (990/1582), where four pylons with *čhatrīs* now form the hall ends, with a single central dome: the imposing south gateway has extensive carving.

Niẓām Shāhī. The Damrī Masdjid at Aḥmadnagar, small and precise, has a three-arched façade flanked by ornate pylons, which carry four graceful *mīnārs* capped by bud-like domelets. Octagonal pillars form two arched aisles supporting a flat roof. At the centre of a decorative parapet two slim minarets frame an arch profile, as in the Bādal Maḥall Darwāza at Čanderī. No superstructure remains on the corner piers of the Dilāwar Khān mosque at Khed, but the exterior is enhanced by cusped arches, with two panelled bands running all round, and lotus medallions in relief. The central dome set on a square base imitates a tomb, complete with *čhadjdjās* and corner *čhatrīs*. Inside, columns with volutes carry a coved ceiling.

ᶜĀdil Shāhī. At Rāyčūr [*q.v.*] in the disputed Dōāb, a series of *līwāns* were built with flat ceilings over black basalt Čālukyan pillars whose short, heavy profiles are compensated by a deep parapet; the Ek Mīnār kī Masdjid has a tapering, free-standing *mīnār*

20 m. high (919/1513). In Bīdjāpūr [*q.v.*] the Bīdar vocabulary was elaborated in dark stone. Thus in the Djāmi^c Masdjid of Yūsuf (918/1512-3) the slightly bulbous dome, set on a tall cylindrical drum, is familiar but for the foliation around its base, as is the dominance of the central arch, its form, and the articulation of line and squinch within; what is new, and characteristic, is the prominence given the dome, and the domed *čārṭāḳ* lanterns at each corner, well above the roof line. The same three-bay format is used in the Djāmi[c] Masdjid of Ibrāhīm (*ca.* 957/1550?), where a flat, domeless roof with sturdy domed *guldasta* pinnacles at each corner is relieved by a panelled *mīnār* set over each front pier. Cusped arches surround its *miḥrāb*. The mosque of Ikhlāṣ Khān (*ca.* 968/1560?) is similar, with the addition of a lantern in two storeys above the *miḥrāb*, and a cusped central arch. All three arches are cusped, and repeatedly recessed, in the mosque of [c]Alī Shahīd Pīr where a pointed vault (as at Gulbargā) runs parallel to the front, and a tall domed shaft rises over the *miḥrāb*. In all of these carved stucco decoration, notably rosettes, is prominent. A mosque in the fort at Naldrug (968/1560) may have one of the first double domes in India. At the Djāmi[c] Masdjid of Bīdjāpūr, the largest in the Deccan (985/1577-8?), these elements achieve mature expression. Its prayer hall, nine bays long and five aisles deep, is articulated with a calm strength, only an alternation of squinch detail varying a uniform structure with shallow domes; four piers at the centre are omitted, and intersecting pendentive arches are inserted in a miraculous change of scale to carry the dome (as already found in the tomb of Sulṭān Kalīm Allāh at Bīdar and based on Tīmūrid antecedents. Clerestory arches with fine *djālīs* light it through a square base rising above the roof, but the dome, still of the Mūltān shape above its foliation, remains dim, as usual here. Two features are innovations. At the east end of each seven-bayed *riwāḳ* is an octagonal base for an unbuilt *mīnār*; the entire external wall is modelled with two registers of arcading, the upper a corridor, and the lower blind. Both may be derived from the Muṣallā at Harāt (841/1437-8) [*q.v.*]. A central courtyard tank anticipates Mughal practice. Stucco is partly replaced by carved stone at Malika Djahān Bēgam's mosque (*ca.* 995/1586-7), in which the dome now suggests a sphere in its collar of leaves, repeated at each stage of four corner minarets; *guldasta* lanterns, fretted cresting, and pendant stone chains compound a new elegance. The same character informs the Andā Masdjid (1017/1608) in fine ashlar, set back above a *sarā'ī*, with a gadrooned dome, and the mosque at the Mihtar-i Maḥall, domeless, with rod-like *mīnārs*, and four prolonged *čhadjdjā* brackets engaged to the piers. Its acme is the mosque at the Ibrāhīm Rawḍa (1036/1626), facing the tomb across a plinth within a walled garden; brilliant use is made of elements repeated at a miniature scale to complement the whole. Afḍal Khān's mosque (1064/1653) is on two floors, the upper probably for women, as at the Andā mosque. The style was taken as far south as Sante Bennur. Much of the extravagant ornament is discarded in the Makka Masdjid, in the latter half of the century, free-standing within a *riwāḳ* continued to the west.

Ḳuṭb Shāhī. At Golkondā [*q.v.*], the first capital, the ruins include a Djāmi[c] Masdjid built by Sulṭān Ḳulī Ḳuṭb al-Mulk in 924/1518 near the Bālā Ḥiṣār Darwāza. The regional achievement is best represented by the mosques at Ḥaydarābād [*q.v.*], which were given a new emphasis on height, accentuated by the concentration of external detail in the fascia between the *čhadjdjā* and the skyline, and complemented by arcaded galleries around powerfully contoured *mīnārs*. The multiple *guldastas* on fretted parapets, and foliated bulbous domes are, like the stucco, inherited from Bīdjāpūr. The Djāmi[c] Masdjid (1006/1597-8) has a spacious arched hall behind a front of seven bays divided unusually into two registers, the upper one of cusped arches being carried on struts from the pier imposts; the central arch, broader and taller than the others, is surmounted by a plain profile in the upper section. The Makka Masdjid, begun *ca.* 1026/1617, and continued until finished by Awrangzīb in 1105/1693, is set behind a square courtyard reputed to hold 10,000 worshippers, with a hall two aisles deep and five tall bays wide. In the plain ashlar façade, the central arch is slightly larger, as the only variation below the strong horizontal of a *čhadjdjā* on linked brackets, spanning between the broad galleries of the turrets at either end, each of which is crowned by a bulbous dome on a marked necking. The columns carry arched pendentives and domes, with a coved central bay. Verticality is particularly pronounced in the Tolī Masdjid (1043/1633-4), where the five narrow arches of the front are stilted above impost blocks on the tall piers, and a tall parapet of arched screens joins the *mīnār* galleries for their full height; each shaft has two further galleries above roof level. Extensive use is made of cut plaster, syncretic in style. For other developments in the south, see MAHISUR. 2. Monuments.

Kashmīr [*q.v.*]. The combination of a mountain climate and plentiful timber have resulted in a tradition of mosque building in a blockhouse technique of laid *dewdār* logs and pitched roofs with birchbark sarking topped by turf. In parallel with Dakhani mosques, the basic constructional unit had much in common with the local tomb type, a near-cubical volume set on a stone base, the corners emphasised by timber jointing, and roofed by a pyramid, sometimes tiered, with a slim spire at the centre. Frequent renewal after fires renders dating unreliable, though the type seems to have been used since the 8th/14th century. At Shrinagar in the mosque of Shāh Hamadān, the volume is modulated by large roofed balconies on each outside face, and the roof by a square arcaded *mu'adhdhīn*'s gallery below the peaked spire. Four tapering octagonal columns support a painted ceiling, with small rooms ranged to north and south. Cusped round arches contrast with the rhythms of varying timber lattices and panelling. At the Djāmi[c] Masdjid (last built 1085/1674), a variant of the four-*īwān* plan places four of these units symmetrically around a square court, joined by four-aisled *riwāḳs* full of timber columns. Three form arched gateways, while the larger one to the west rises between walls of arched panelling over paired columns at the *riwaḳ* ends in an expansion of light and space, focussed on the simple arches of a large *miḥrāb* in a fenestrated wall. In this case the outer walls are of brick with a simple repeated window, contrasting with the four spired roofs. In Baltistān and Kuhistān simple open *līwāns* of one or two aisles are supported on wooden columns, often fluted above a waisted base, and with brackets carved in repeated waves supporting beams on the long axis; here the connection with Turkestan building is evident.

Mughal Empire. During Akbar's minority, the Tīmūrid innovations introduced under Humāyūn remained in currency, associated with the harem faction, as in the mosque and *madrasa* of Māham Anaga (Angā), the Khayr al-Manāzil (969/1561-2) whose three bays to the court are close in format to the cen-

tral three at Purānā Ḳilʿa with a slightly raised *pīshṭāḳ* advanced between clustered shafts, and four-centred arches whose tympana are pierced with archways at a lower level; only the single dome has an awkward, old-fashioned stilt. The arch spandrels are inlaid. The screened upper storey of rooms enclosing the court on three sides appears to be unique for the period, while the portal is the first to use a semidomed *īwān*. At Faṭhpur Sīkrī [*q.v.*] these forms are less in evidence. Although the front of the Stonecutters' Mosque (*ca.* 973/1565) is arched, originally in five bays, the arch profile is cut from thin slabs set between thicker posts, the *čhadjdjā* is supported by long, sinuous brackets, and the internal row of pillars is Hindū. The organisation of the great Djāmiʿ Masdjid (979/1571-2) stems from Djawnpur via Bayānā, where the technique of assembling cut stone components was already well-developed a century earlier (fieldwork by Shokoohy 1981). Three domed spaces at the centre and amid either wing of the *līwān* are each contained within massive walls pierced by symmetric arches to communicate with the columned spaces between, where flat, beamed roofs are supported on Hindū brackets, all in red sandstone; the central dome set on squinch arches is painted with swirling floral patterns, and the lateral ones are ribbed, lit through the drum, and carried on corbelled pendentives. The front of the hall with its alternation of broad and narrows bays, thin spandrels, long *čhadjdjās*, and the form of the pillars appears to be Gudjarātī in origin, as does the great tank under the courtyard. At the centre, however, is a great *pīshṭāḳ* of the Dihlī type, with a semi-dome, completely screening the stilted and lumpish dome behind. The wings are of half the height, and relieved by queues of little *čhatrīs* along the skyline, like the *riwāḳs* with their central *īwāns*: these once served as lanterns. Although the awkward column-spacing under the lateral domes of the Atāla Masdjid has been resolved, and much is made of the three main spaces, their walls still interrupt the unity of the hall.

The Mosque of Maryam Zamānī (1023/1614) at Lāhawr [*q.v.*], known as the Bēgam Shāhī Masdjid, and built of brick following local practice, achieves an unencumbered prayer hall of five square, domed compartments in line, interconnected by single arches springing from heavy piers at front and rear. The central compartment is wider, with a larger dome than the others, still stilted, but housing an inner shell which, though only of plaster, was probably the first used in a mosque in the north. The new arch shape extends to the squinches, with *muḳarnas* semi-domes, and the domes are articulated with netting, the whole being elaborately painted with floral, geometric, and inscriptional designs. Outside, the *līwān* front follows the model of the Djamālī Masdjid, with blind superimposed niches on the pier faces, but the arches are now simple in profile, the front is in one plane but for the vaulted *īwān*, and there are square, domed turrets at either end. The Masdjid-i Wazīr Khān (1044/1634-5) in the same city has a *līwān* of the same kind, both outside and in, as before punctuated by a *miḥrāb* below a semidome in each bay, with pendentives rising to carry the inner dome shells in the wings, and squinches at the centre. The dome profile is lower, with minimal stilting, but still unlike the profile of the five arches. The turrets are here full-sized octagonal minars with *čhatrīs* above the galleries, and are echoed by a second pair at the east of a long court. The brickwork forms shallow panels between orthogonal fillets, containing a sumptuous variety of tile mosaic; the interior is painted.

A series of court mosques faced entirely in white marble—seen as "pure like the heart of the austere" (*Bādshāh-nāma*, ii/1, 155)—was probably initiated at Āgra [*q.v.*] with the tiny, perfectly simple Mīnā Masdjid and the larger, three-bayed Nagīna Masdjid within the Fort. The latter, in which the lower dome profile has been transformed by necking above a torus moulding into a smooth bulbous shape with a large pointed *mahāpadma* (Bīdjāpūrī influence is suggested by the crescent above), represents an attempt to eliminate the conflict between emphasis on the central bay, and that on the dome behind, by replacement of the *pīshṭāḳ* with an upward curve of the *čhadjdjā* and parapet, in the new Bangālī fashion, at the middle. This accommodates the larger central arch; the arches are engrailed, probably to reduce glare when viewed from inside. In the mosque at the Tādj Maḥall [*q.v.*], the same conflict is resolved by raising the level of the façade over the two lateral arches almost to *pīshṭāḳ* level, and including a blind arched panel above each. This scheme is repeated at Lāhawr in the mosque of Dāʾī Angā (1045/1635-6), the corner turrets containing the taller front as before; the side arches are surmounted by great cusped arch heads, and the Lāhawrī panelling is of tile mosaic inside and outside the three interpenetrating square compartments. The treatment of the Madrasa Masdjid at Paṭnā (*ca.* 1040/1630) is comparable. The Fatḥpurī Masdjid at Āgra, flanked by the same flaring turrets, has a fully bulbous dome, but a tall marble *pīshṭāḳ* in front over a deep *īwān*, and low wings; its red stone is finely worked in relief, notably in the pendentives and inner dome. Like it, the Mōtī Masdjid at Lāhawr (*ca.* 1055/1645) is fronted by cusped arches flanking a plain central one, but it offers a further solution to the problem with a barely raised *pīshṭāḳ* linked to the wings by a continuous parapet in *parčīn-kārī*. The three marble domes still have the cavetto and profile of Dāʾī Angā's mosque, now clearly visible. These smaller mosques owe much to the consonant detail of arcuate screens which separate their courts from the outside world, and a finesse that extends to *sadjdjāda* inlaid in the floor. On a larger scale, the Shāh Djahānī Masdjid at Adjmēr (1048/1638-9), with a prayer hall two aisles deep with arched piers, presents a long, unbroken façade of eleven bays, accented only by a needle-like *guldasta* over each octagonal column, to a balustrated court adjoining the *dargāh* of Muʿīn al-Dīn Čishtī; the whole is in marble.

Some of these tendencies are resolved at the Djāmiʿ Masdjid at Āgra, completed in red stone in 1058/1648. Its plan is essentially that of the five-compartment prayer hall from Lāhawr, complete with its corner turrets and another pair at the east corners of the court. Its capacity is increased by the addition of a second row of compartments in front of the first, the central one forming a deep *īwān*, whose *pīshṭāḳ* is thus spaced well forward from the domes over the main row behind; the two lateral domes are placed over the ends, for better balance, and all three are double and distinctly bulbous, with a pointed profile accentuated by inlaid chevrons of white marble (structural inner domes were from henceforward the norm). The front is of the tall type, with panels above and between the well-spaced plain arches, and two prominent shafts frame the marble *pīshṭāḳ*. *Čhatrīs* enliven the whole skyline. The interior is a smooth progression of netted pendentives and plain arches with a broad extrados, at a noble scale. Its equivalent at Dihlī (1066/1656), also raised on a high podium, and approached by three great pyramids of steps on the axes, is the largest enclosed mosque in northern India. Gateway *īwāns* on these axes regain their prominence,

and the *riwāḳ*s are open to the external air on all three sides. A collision between these and the *līwān*, a weakness at Āgra, is avoided by returning them along the west, and then advancing the hall forward between full-size minarets at the corners. The *līwān* plan fuses those of Āgra and Fatḥpur Sīkrī, with alternating main compartments, and slimmer piers at the front; cusped arches are used throughout. The domes, now on tall drums are, like the *mīnār*s and the *īwān*, striped with marble inlay, and the entire front is panelled in marble, with plain merlons above. Such detail, and especially the marble calyces topping the angle shafts, introduce a mannered deviation from the former simplicity. The scale is such that the *īwān* itself forms a *miḥrāb* to the courtyard.

The Mōtī Masdjid at Āgra Fort (1063/1653), the largest of the marble series, complete with *riwāḳ* and axial gateways, combines a restraint of outline and of plan with an extravagance in the intersecting, cusped arch profiles. Eighteen identical piers in three aisles carry plain coved ceilings alternating with three domes on smooth pendentives, that rise bulbous among the *čhatrī*s outside. That in the Dihlī Fort (1074/1663-4) shows the full extent of the stylistic change at a small scale, with a Bangālī curve in the *čhadjdjā* over the central bay, set off by Bangālī vaults within, reticulated coving, clustered *guldasta*s with calyces, and floral relief playing on many surfaces; the domes, rebuilt after the Mutiny, were originally lower, and gilded.

The last of the great congregational mosques, the Bādshāhī Masdjid at Lāhawr (1084/1673-4) derives its plan almost entirely from the great mosque at Dihlī, the principal differences being that the three-storey octagonal *mīnār*s are now set at the four corners of the court, and the *līwān* itself reverts to the local scheme with a domed octagonal turret at each corner. The *riwāḳ*s, too, are subdivided into an alternating series of *hudjra*s for teaching, accessible only through doorways, and though raised as before, the court is thus closed in. The *līwān*, of brick faced with red stone, is rather taller than at Dihlī, and panelled in the local manner, but the surfaces swarm with relief carving; the marble domes formerly had dark drums to relate them to the wings. Internally the squinched dome chambers alternate with Bangālī vaults, and the walls, arch soffits and domes are panelled or worked in net-patterns, *islīm-i khaṭāʾī*, of plaster relief, or else painted. The mosque is claimed as the largest in the world. The gateways of such structures served to house the *imām* and other staff. The Sonahrī Masdjid at Dihlī (1164/1751) repeats the Motī Masdjid at the Fort in fawn sandstone. In subsequent work in Awadh the curvilinear and vegetal elements were to become dominant [see LAKHNAW], and were still vigorous in the Djāmiʿ Masdjid of *ca.* 1840 in the capital.

Provincial developments within the Mughal empire predictably show an adaptation of the court style to local practice. In Bengal, the mosque of the Lālbāgh Fort at Ḍhākā (1089/1678) has the closed appearance and panelled front typical of the area, but the height of the prayer hall, its three cusped and netted front *īwān*s, its three low domes and the four octagonal turrets at its corners all refer to the experience of Lāhawr. The interior of the lateral bays is remarkable for semidomes set below the apical dome, with two sets of pendentives. Other mosques at Ḍhākā follow the same format, as in that of Khān Muḥammad Mirdha (1118/1706), with tall minars at the *līwān* corners, or the Sātgunbadh mosque with octagonal corner towers.

The brick architecture of Sind is extensively clad in fine glazed tilework, owing much to Iranian influence, and apparently that of Harāt [*q.v.*] in particular. This is already apparent in the Dābgīr Masdjid at Ṭhaṭṭā (997/1588-9), of which the *līwān* remains in a ruined state, containing a square central compartment flanked by a rectangular one at each side, with arches connecting them between massive piers, and three deep *īwān*s, set in slightly raised *pīshṭāḳ*s. The central dome, like the *īwān* below it, is notably larger than those either side, but all three are set on double octagonal drums of an Iranian type. The walls of the central compartment each house one well-shaped arch within another; at the west the interval contains an arched window set on either side of the buff carved sandstone *miḥrāb*. The tilework, floral, geometric and calligraphic, in cobalt and azure on a white ground, filled arch spandrels and soffits. The Djāmiʿ Masdjid of Shāhdjahān (1057/1647) in the same city is unusual in plan, with repeated heavy piers forming the two aisles of the broad *riwāḳ*s, and the three of the prayer hall, around a very deep court, focussed on a great *pīshṭāḳ*, with small subsidiary courts on each side of an east entry passing under two domes in series (cf. the Masdjid-i Djāmiʿ at Kirmān). The multiple bays are roofed by 80 small domes, with larger single ones over the central *īwān*s, backed to the west by a single shell dome replacing four bays in front of the *miḥrāb*; this rises from intersecting pendentive work over a zone of 16 arches, pierced for a clerestory at the angles, and tiled throughout in mosaic (more than 100 pieces per sq. ft.) in ranks of wheeling stars. The smallest sound at the *miḥrāb* can be heard throughout the mosque, perhaps by virtue of its domes. In both these mosques the red brick is defined by white pointing which accents the arches. Further excellent tilework at the Djāmiʿ Masdjid of Khudābād has been badly damaged. The treatment of its façade shows stronger Lāhawrī influence in proportions and panelling; the external walls, however, are noteworthy for three superimposed registers of repeated blind arches, a few being pierced at the lower levels.

At Aḥmadābād, the mosque of Nawwāb Sardār Khān (*ca.* 1070/1660?) combines a relatively orthodox Gudjarātī treatment of a three-bayed *līwān*, having three plain arches between narrow piers, a *djharōkhā* bay on each end wall, and balconied *mīnār*s framing the front, with features that seem to bridge the styles of Bīdjāpūr and Āgra. The three closely-spaced domes are bulbous, above torus mouldings, with steep *mahāpadma*s as in the Nagīna and Mōtī Masdjids. The *mīnār*s, however, carry long foliations, lotus buds and the elongated, bulbed finial of the later ʿĀdil Shāhī style, close to those at the similar and contemporary Mosque of Afḍal Khān in the Dargāh of Gīsū Darāz at Gulbargā. The mosque, unlike its counterparts, is of brick and stucco. The mosque of Nawwāb Shadjāʿat Khān (1107/1695-6) has a five-arched front, with Gudjarātī merlons, and *mīnār*s placed to contain the central three bays, but the piers are panelled with rows of little niches, and a line of cartouches runs overhead, with three low domes of the Dāʾī Angā type; the *mīnār*s once more have foliations, but have lost their tops. In its ceiling, the domes alternate with coved bays, as in the Mōtī Masdjid at Āgra, and it is finished with marble and polished plaster.

In general, it may be seen that whereas the enclosure of the court only achieves full architectural expression in cathedral mosques, or the later court mosques, the prayer hall is the subject of consistent architectural development. The particular structural means adopted in each region for enclosing the space become the vocabulary for a series of variations which

in most cases go far beyond the immediate needs of the liturgy or of mere shelter, and can be recognised as successive resolutions of the need for balance, harmony, and unity at the chosen scale.

Ḳuṭb S̲h̲āhī: for Golkonḍa, *s.v.*; for Ḥaydarābād, see the *Annual reports of the Archaeological Department, Hyderabad* for 1916-17, 3 ff. and pls. ii-iii; for 1924-5, 2-4 and pls. iii-vi; for 1936-7, 2 ff. Kashmir: W. H. Nicholls, *Muhammadan architecture* in Kashmir, in *ARASI*, 1906-7, 164-70. Mug̲h̲al: for the K̲h̲ayr al-Manāzil, see *ASI*, NIS, xxii, 6 and pl. i, *ARASI*, 1903-4, 25-6 and pl. x-xi; for Fatḥpur Sīkrī, E. W. Smith's superb *Mughal architecture of Fatḥpūr-Sīkrī*, *ASI*, NIS, xviii, Allāhābād 1894-7, now augmented by the intelligent discussion in S. A. A. Rizvi and V. J. A. Flynn, *Fatḥpur-Sīkrī*, Bombay 1975 (but beware error in description of domes, p. 74a). For Lāhawr, see Ahmad Nabi Khan, *Maryam Zamani Mosque*, Lahore-Karachi 1972, and M. A. Chaghatai, *The Wazir Khan Mosque, Lahore*, Lahore 1975, with good plans, sections, and photographs; also J. Burton-Page, *Wazir Khan's mosque*, in *Splendours of the East*, ed. Mortimer Wheeler, London etc. 1965, 94-101. For Āgra, see Nūr Bak̲h̲s̲h̲, *The Agra Fort and its buildings*, in *ARASI*, 1903-4, 185, and M. A. Husain, *Agra Fort*, N. Delhi 1956, 22 and 27; also R. Nath, *Agra and its monumental glory*, Bombay 1977, 35-8, and idem, *The immortal Taj Mahal*, Bombay 1972; The Fatḥpurī Masd̲j̲id is illustrated in *ARASI*, 1902-3, pl. xii. For the Dāʾī Angā mosque, see W. H. Nicholls, in *ARASI*, 1904-5, 20-22 and pl. iv; and for the Mōtī Masd̲j̲id, idem in *ARASI*, 1903-4, 26-7 and pl. xii-xiii, and M. Z. Hasan, *Moti Masjid or the Pearl Mosque in the Lahore Fort*, in *Proceedings of the Pakistan History Conference, 2nd session, Lahore 1952*, 8-16. For the Mōtī Masd̲j̲id at Āgra, see Nūr Bak̲h̲s̲h̲, *op. cit.*, 181-4, and Nath, *op. cit.* (1977), 39-42; for that at Dihlī, see G. Sanderson, *A guide to the buildings, Delhi Fort*, Delhi 1937, 55-7, and idem in *ARASI*, 1911-12, 13. Chaghatai gives comprehensive treatment to *The Badshahi Masjid, history and architecture*, Lahore 1972, with useful comparative plans of the *d̲j̲āmiʿ masd̲j̲ids* at Āgra and Dihlī. The later mosques in Sind are reviewed in Cousens, *The antiquities of Sind, ed. cit.*, though not in full detail, and by M. A. Ghafur in *Muslim architecture in Sind area*, Karachi 1961; for those in Aḥmadābād, see

Burgess, *op. cit.* (ASWI, viii, 1905). Epigraphy is mainly available in *EIM*; a useful index is provided by V. S. Bendrey, *A study of Muslim inscriptions*, Bombay 1942, for 1907-38, supplementing J. Horowitz, *A list of the published Mohammedan inscriptions of India* in *EIM*, 1909-10, 30-144. Much material relating to mosques in Pakistan is set out by S. Mahmood in *Islamic inscriptions in Pakistani architecture to 1707*, unpubl. Ph.D. thesis, Edinburgh University 1981. Some of the principal mosque inscriptions are also quoted at length by R. Nath in *Calligraphic art in Mughal architecture*, Calcutta 1979. (P. A. ANDREWS)

III. IN JAVA.

In Java, the Arabic form *masdjid* is practically limited to religious circles. The Indonesian languages have developed the derivatives *mesigit* (Javanese, in Central- and East Java), *masigit* (Sundanese, in West Java) and *masèghit* (Madurese, on the island of Madura and in part of East Java). In general, these terms are used only for the mosques in which on the Friday *ṣalāt al-djumʿa* is held. Smaller mosques serving for the daily cult and religious instruction alone, are called *langgar* (Javanese), *tadjug* (Sundanese) and *balé* (in Bantĕn).

Indonesian Islam has produced its own type of mosque, clearly to be distinguished from that of other Islamic countries. Since this type was probably first developed in Java, it can be termed the Javanese type of mosque. Its standard characteristics are the following: (1) The ground plan is a square one. (2) The massive foundations are raised. The Friday mosque is not built on piles, as is the case with the classical Indonesian houses and the smaller mosques mentioned above. (3) The roof is tapering, and consists of two to five storeys narrowing towards the top (4) An extension on the western or north-western side serves as *miḥrāb* [*q.v.*]. (5) At the front—sometimes also at the two lateral sides—is an open or closed veranda. (6). The courtyard around the mosque is surrounded with a stone wall with one or more gates. Another characteristic is that in Java the mosque stands on the west side of the *alun-alun*, the grass-covered square which is found in virtually all chief towns of regencies and districts. In Tjeribon, Indramayn, Madjalèngka and Tjiamis—all regions in West Java—even each *dèsa* has an *alun-alun* with a mosque at its west side.

In Java, the direction of the *ḳibla* [*q.v.*], is, however, not west but north-west, and so, in order to indicate the exact *ḳibla*, the *miḥrāb* or niche is sometimes built obliquely against the back wall. There are, however, also regions, like the Priangan, where the exact *ḳibla* is taken into consideration at the time of construction of the mosque.

The gate at the front which gives access to the courtyard surrounding the mosque is sometimes covered. The mosques of Central and East Java are characterised by their monumental entrance gates.

The veranda (Javanese: *surambi*, *sĕrambi*, *srambi*; Sundanese: *tĕpas masdjid*, *tĕpas masigit*) is not considered as belonging to the mosque itself, as is evident from the various purposes which it serves. It is the place where, at night, after the mosque has been closed, the *ṣalāt* is performed; where travellers and other people who have no home pass the night; where marriages are concluded; where in former times (see Raffles, *The history of Java*) religious courts were functioning; where sometimes religious instruction is given and where *riyalat* (Javanese; in Arabic *riyāḍa* = ascetic abstinence from sleep, food and sexual intercourse) is practised. It is also the place for religious meals (*walīma*) on feast days like *Mawlid al-nabī* and *Miʿrādj* [*q.vv.*].

The walls of the mosque itself are rather low, but the roof tapers and ends in a sphere, on top of which is an ornament, called *mastaka* or *mustaka* in those regions where Javanese is spoken. It later times, this ornament was crowned by a crescent as the decisive symbol of Islam. This type of roof, in fact a piling-up of ever-smaller roofs, dates from pre-Islamic times and recalls the *mĕru* on Bali. In the present century, the cupola-shaped roof (Ar. *ḳubba* [*q.v.*]), an imitation of the mosques in other Islamic countries, and in particular India, is competing with the traditional piled-up roof of ancient Indonesia. Already before its restoration in 1935, the *Masdjid Kemayoran* in Surabaya diverged from the usual architectural pattern in that its base was not square but octagonal. In that year, two *ḳubbas* were constructed to the left and the right of the veranda. Another *ḳubba* was added to the monumental minaret, which is said to be an imitation of the Ḳuṭb Minār in Dihlī [*q.v.*]. At the same period, the *ḳubba* was also introduced into West Java. The use of the cupola-shaped roof became firmly established after Indonesia's independence in 1949. Impressive, huge mosques, all with *ḳubbas*, have been constructed since that time. The *Masdjid al-Shuhadāʾ* in Yogyakarta and the *Masdjid Istiḳlāl* in Jakarta can be considered as examples of a new type of architecture applied to the mosque.

The interior of a mosque built in the ancient Indonesian style can be described as a closed hall, sometimes provided with pillars, of a sober character, reflecting the simplicity which is the characteristic of the *masdjids* in Java. There are no pictures of man or animal on the walls, only sacred Arabic names and some religious texts like the *shahāda* [*q.v.*] and the *ḥadīth* in which the builder of a mosque is praised: "Allāh has built a house in Paradise for whoever has built a mosque for Allāh". Since the floor of the mosque has to be clean, it consists of cement, tiles or marble. The grey colour of cement is occasionally alternated with rows of red tiles, indicating the rows (Arabic *ṣaff*) of the faithful when performing the *ṣalāt*. Mats are usually spread on the floor. In mosques which have not been constructed in the exact direction of the *ḳibla*, these mats are laid out in the right direction. Regular mosque-goers have their own small mat or rug (Ar. *sadjdjāda*), preferably one brought back by pilgrims to Mecca.

The *miḥrāb* at the rear side of the mosque is usually rather narrow, consisting of a small gate with a round arch. Sometimes the niche, or rather the extension, is large enough to contain the *minbar* on the right side. There are, however, also mosques with two or even three niches next to each other, each provided with a small gate. Occasionally, the *miḥrāb* is built out into a large pentagon with the *minbar* in the centre and the place of the *imām* to the left, the front side being fenced off by a wooden fencing with green and yellow sheets of glass and decorated with religious texts. Sometimes the *miḥrāb* is built out into a large, square place with the *minbar* in the centre, the place of the *imām* for the daily *ṣalāt* to the left, and to the right a small movable construction with an open front, this being the place of the regent of the region. The *minbar* (Javanese and Sundanese: *mimbar*, Javanese and Sundanese of Bantĕn: *imbar*) is always found to the right of the *miḥrāb*. Unlike other Islamic countries where the *minbar* is reached by a high flight of stairs, the *minbar* in Java is rather low. The height may vary from one to five steps, three steps being the average. Some *minbars* are very simple, but many others are conspicuous for their woodcarving. As Islam permits, decorations consist of plants and flowers which sometimes look like pictures of men and animals. On closer inspec-

tion, however, they prove to be representations of flowers and leaves of the lotus, arranged as wings and birds. Sometimes the *naga* (serpent) motive can be recognised on the arms of the *minbar*, as is the case in the holy mosque of Demak in Central Java and in the ancient, holy mosque of Kuṭa Deḍé in the same region.

Each mosque in Java possesses a drum, called *bĕḍug*, stretched with buffalo-skin. Before the *adhān* [*q.v.*] (Javanese and Sundanese: *adan*) this drum is beaten vigorously at least five times a day. The *adhān* itself is made either from the minaret (Javanese: *mĕnara*, Sundanese: *munara*) or, more often, in the mosque itself since not every mosque has its minaret. The *muʾadhdhin*, called *modin* or *bilal*, stands at the entrance of the mosque or on its roof.

The highest official of the mosque is the *panghulu* (thus in Sundanese; Javanese: *pangulu*; Madurese: *pangòlò*, *pangòlòh*; Malay, *penghulu*), often a learned man (Ar. *ʿālim*) who has studied theology and is a pupil of the *pĕsantrèn*, the Indonesian religious school, or of the more modern *madrasa*; he may even have studied in Mecca. Traditionally, the *panghulus* are highly-considered in Indonesian society. Sometimes the function is hereditary. One of his tasks is to supervise and coordinate the functions of the lower officials of the mosque: the *imām*, the *khaṭīb*, the *muʾadhdhin* [*q.v.*] and the *marbūṭ*, the official who is responsible for maintenance. According to the linguistic area, these officials are called *imām*, *kĕtib* or *ketip*, *modin* or *bilal*, and *mĕrbot*, *mĕrĕbot* or occasionally *marbot*.

In Java the mosque is also used for *iʿtikāf* [*q.v.*], especially during the last ten days of Ramaḍān.

IV. In the rest of South-East Asia.

That the traditional South-East Asian mosque originated in Indonesia and that it is formally *sui generis* cannot be disputed. Whether, as has been claimed, it developed in Java is less certain. Indeed, the history of Islam in Indonesia would suggest another possibility. The building in question was of wooden construction. It consisted of a simple structure on a square groundplan, erected on a substantial base. This distinguished it from the classic Indonesian house on stilts. The existence of internal pillars probably depended on its size. It had openings in the walls, probably closed with shutters, and an entrance in the east side, opposite the later *miḥrāb*. It is not known how the *ḳibla* was originally indicated, but some mark on the west wall seems likely. Above this groundfloor hall, which had relatively low walls, there were a number of upper storeys of decreasing area, up to a total of four: each individual storey, including the main hall, had its own roof, usually in palm thatch, with widespreading eaves. The upper stories contained loft-like rooms which were functional. The whole building was topped by a finial which, in later times, seems to have been crowned by a crescent. The whole building was enclosed within a wall which had a more or less elaborate gateway in the east side. Occasionally there was more than one gate. There is some evidence to suggest that the main structure was surrounded by an irregular moat which may have formed part of a stream which traversed the enclosure. There was no *manāra*; the *adhān* was given either from the doorway of the mosque or from its top storey. This was probably preceded by the vigorous beating of a large skincovered drum, as is generally the practice today. A more simple structure, essentially a traditional Indonesian dwelling on stilts, serves as the model for a prayer hall which does not have the status of the mosque. It is still to be found in communities which cannot muster the requisite forty souls to constitute a congregation or, on occasions, as a supplementary building in a compound where it serves as a meeting place, a rest-house for visitors, an administrative centre as well as for *ṣalāt* when the mosque proper is closed.

This Indonesian prototype did not have the verandah, Javanese *serambi*, which is such a distinctive feature of the Central Javanese mosque. There is no evidence that this formed an original part of the mosque, from which it is, in fact, separated, both architecturally and dogmatically: shoes may be worn there. It seems to have derived from a royal building in pre-Islamic Central Java. Neither it, nor the externalised *miḥrāb*, belong to the original square mosque.

Various origins have been proposed for the basic Indonesian mosque. It has been derived from: (1) the *ćaṅḍi*, a temple of either Hindu or Buddhist intention, ultimately of Indian origin but modified by Indonesian religious concepts; (2) the traditional bamboo and thatch cockpit used in Bali for the quasi-ritual cockfighting; (3) the multi-tiered sacred mountain which is of widespread significance in Indonesian religions (the Balinese temple with multi-tiered thatched roofs known as a *meru*, after the Indian sacred mountain, is an architectural example of this). The objection to (1) is that, quite apart from its possible unacceptability to Muslim teachers, the *ćaṅḍi* does not occur in those parts of Indonesia where conversions to Islam first took place. The cockpit hypothesis appears to suffer from inherent implausibility. There is, however, good reason for holding the concept of the sacred mountain as one component in the undoubtedly complex origin of the Indonesian mosque. It differs so profoundly from mosques elsewhere in the Islamic world, not least in Cambay [see KHAMBĀYAT] and other parts of Gudjarāt [*q.v.*] from which the main impetus towards conversion seems to have come.

South-East Asia lies across the sea route from the Middle East and the Indian sub-continent to China and beyond. The Malay Peninsula and Sumatra mark the area where the monsoon system of the Indian Ocean meets that of the Pacific, and constitute a natural interchange point. For two millennia or more merchants have travelled and traded through this region. After the coming of Islam many of these travellers were Muslims, but, although there were without doubt Muslim communities in the ports and harbours of the region, some of whose members may have traded in the interior, there is no evidence at all for conversion to Islam among the local peoples. (Nor, incidentally, is there any evidence for mosques to serve the needs of such Muslim traders.) The first instances of such conversion comes at the end of the 7th/13th century. A hint in a Chinese source dated 683/1281 receives striking confirmation from Marco Polo who spent several months in Sumatra, on his way home from China ten years later. Of Ferlec (Perlak) he noted "the people were all idolaters, but, on account of the Saracen traders who frequent the kingdom with their ships, they have been converted to

the Law of Mahomet", adding that this was only the townspeople, those of the mountains being like wild beasts. The ruler of Samudra (Pasai), where Polo spent some months waiting for the wind to change, and who died in 699/1297, certainly died a Muslim for his tombstone, which was imported from Cambay, gives his name as Malik al-Ṣāliḥ. It was from this remote, in Javanese terms, area of Aceh that Islam spread to the Malay Peninsula, above all to Malacca, [*q.v.*], to the north coast of Java and thence to other parts of Sumatra, to the coasts of Borneo and to the sources for the much sought-after spices, by way of the ports of Sulawesi and Maluku. Over a period of some three centuries, Islam followed the trade routes and with it there went the Indonesian *masdjid*, with its tiered, overhanging roofs. More than a dozen have been identified, notably by De Graaf. What is noticeable is that it was precisely in areas which had not been strongly influenced by Indo-Javanese architecture of Hindu or Buddhist tradition that the mosque of this type developed. Its origins have to be sought in the socio-religious structures of northern Sumatra in the communal house which, as elsewhere in Indonesia, once constituted the men's house. Now without windows or its original interior divisions, in Aceh it has become the *meunasah* which serves as a prayer house, a meeting place, and an administrative centre as well as a Ḳurʾānic school. It had the advantage that it had never housed idols, but this does not explain how the teachers from Gudjarāt and elsewhere were persuaded to permit the adoption of such an aberrant form of mosque.

V. IN CHINA.

The Chinese term is *Ch'ing-chen ssu*, lit. "Pure and True temple". *Ch'ing-chen chiao* ("Pure and True Religion") being a Chinese synonym for Islam. The first Muslim settlements in China, dating from the early centuries of Islam, were established either by the sea route along the southern and eastern coasts (Canton and Hainan Island in Kwantung Province; Chuan-chou in Fukien Province, Hang-chou in Chekiang Province, Yang-chou on the lower Yangtze in Kiangsu Province); or by the overland "Silk Road" route at the ancient city of Ch'ang-an (some miles south of present-day Sian, Shensi Province), T'ang dynastic capital between 618-906 (corresponding approximately to the first three centuries *Hidjrī*).

Chinese Muslim tradition holds that numbers of mosques were established in these and several other cities by Saʿd b. Abī Waḳḳāṣ and various Companions of the Prophet or itinerant holy men during the first century, quite probably during the Rās̲h̲idūn caliphs' period. Pending further archaeological excavation, however, most of these oral traditions must be treated with caution, and according to Leslie (*op. cit.*, in *Bibl.*, 40), but few sites "merit serious consideration", the most important of which are:

1. Canton (the *Huai-sheng* mosque and *Kuang-t'a* minaret). This mosque, claimed by Muslim tradition as the first and oldest in China, may well date back to T'ang times, but the earliest extant reference dates from *ca.* 603/1206, whilst the earliest mosque inscription (in Chinese and Arabic) records the re-building of the *Huai-sheng ssu* in 751/1350 after its destruction by fire seven years before. The presence of a mosque in Canton in 755/1354 is attested by Ibn Baṭṭūṭa.

2. Chuan-chou (the *Sheng-yu* mosque), also sometimes claimed as the earliest mosque in China, though Leslie considers this to be "*a priori*, less convincing" than the claim of the *Huai-sheng ssu*. The mosque inscription of 710/1310-11 (in Arabic) dates the first building of the mosque to 400/1009-10, commemorating a restoration which took place over three centuries later. It claims that the *Sheng-yu ssu* was the first mosque "in this land", and calls it "The Mosque of the Companions" (*al-Aṣḥāb*).

3. Hang-chou (the *Chen-chiao* or Feng-huang mosque), ascribed by late Ming (11th/17th century) inscriptions to T'ang times, though Leslie rejects these unsubstantiated claims in favour of a Sung Dynasty establishment, Hang-chou being the capital of the Southern Sung (*ca.* 521-678/1127-1279), and by Yuan times "the greatest city in the world" (according to Marco Polo), with a substantial Muslim population living in its own ward (Ibn Baṭṭūṭa, Odoric).

4. Ch'ang-an (the *Ch'ing-chiao* or *Ch'ing-ching* mosque), which differs from those other mosques listed so far in that its foundation is ascribed to the arrival of Muslim soldiers travelling overland, rather than sailors coming by sea. Undated epigraphic evidence and long-established tradition date this mosque to the early T'ang (late Umayyad) period, but this remains inconclusive, and Leslie suggests that "until further evidence is forthcoming its is better to reject a T'ang date and query a Sung one, whilst taking for granted a Yuan [Mongol] presence".

Leslie continues by providing "Desultory Notes" for numerous other cities in Eastern. Central and Northern China (49-53), before concluding that many thousands (or even tens of thousands) of Muslims, mostly of Persian and Arab origin, were resident in China during T'ang Dynasty times, though little definitive evidence exists for the number of mosques which had been established during this early period of Chinese Islam. It is clear, however, that most of these *Hsi-yu jen* or "Westerners" were semi-permanent or permanent residents, many of whom would have intermarried freely with the indigenous Chinese population, thereby giving rise to a nascent Chinese-speaking, increasingly Sinicised Muslim population which would, by Ming times, develop into the Hui Chinese Muslim community. Certainly by T'ang times, the distinction was already being made between "foreigners" and "native-born foreigners". *S̲h̲arīʿa* law requires the establishment of congregational mosques wherever communities of more than forty adult male Muslims are gathered together; the presence of many small mosques along the Chinese coast and (to a lesser extent) in the interior may, therefore, be taken for granted by late T'ang/Sung times. Doubtless, except in the more important coastal towns such as Canton (Khanfu) and Chuan-chou (Zaitun) these mosques would have been fairly insubstantial buildings, long since altered beyond recognition or destroyed; thus, definitive proof of the extent of mosque-building in China during this early period will depend upon future archaeological excavations.

The Yüan period (*ca.* 678-770/1279-1368) was characterised by a substantial expansion of Islam in the central and western parts of China, most particularly in Yunnan, where Sayyid Adjall S̲h̲ams al-Dīn Buk̲h̲ārī (who conquered and subsequently admin-

istered the former Nan-ch'ao area for the Mongols) is credited with establishing two mosques in the region. Sayyid Adjall and his family may be seen as the archetypical example of Muslims in service under the Mongols—by whom they were employed as soldiers, administrators and financial middlemen—and from Yüan times the central focus of Islam in China moved definitively away from the southern coastal ports towards the north and west. Certainly, the oldest mosques in Yunnan and the north-west are likely to have been established during this period, a trend which was continued under the Ming Dynasty (*ca.* 771-1054/1368-1644) which is also known as a period of Sinicisation for the Chinese Muslim community—indeed, it may be that the Chinese-speaking Hui Muslim community emerged as a separate and distinct entity (paralleling, for example, the Swahili [*q.v.*] in East Africa and the Mappila [*q.v.*] of southern India) during this period.

It is probable that the mosques of the Hui (Chinese-speaking) Muslims, which are scattered throughout China but are particularly numerous in the provinces of Kansu, Ningsia, Tsinghai and Yunnan, evolved in their characteristic form during this period. Certainly under the Ming, the nascent Hui community expanded greatly as a result of intermarriage, overt (and, perhaps more frequently, covert) missionary work, and their success in the fields of military and commercial venture. Wherever Hui settled in any numbers, *ḥalāl* establishments (caravanserais, restaurants, inns), mosques and attendant *madrasas* soon followed. As Israeli notes (*op.cit.* in *Bibl.*, 29), many mosques constructed during the Ming period were built in a style reminiscent of indigenous Chinese temple architecture, either eliminating the minaret altogether, or eschewing the distinctive styles associated with the mosques of Central Asia, South Asia and the Middle East in favour of Chinese-style pagodas. As a result of this architectural development, the muezzin could no longer call the faithful to prayer in the usual way, but stood inside the mosque instead, calling the *adhān* behind the main mosque entrance. "And when one entered the mosque, one was struck by the traditional Muslim flavour; cleanliness and austerity. Except for the Emperor's tablets that were mandatory in any house of prayer, there was no sign of Chinese characters or Chinese characteristics. On the walls there were Arabic inscriptions of verses from the Qur'an and the west end (*qibla*) was adorned with arabesques. Once the believers were inside, they put on white caps, shoes were taken off, elaborate ablutions were ritually performed, and the prayers began in Arabic, with heart and mind centred on Mecca. When prostrating themselves before the Emperor's tablets, as required, the Muslims would avoid bringing their heads into contact with the floor... and thus did they satisfy their consciences in avoiding the true significance of the rite—this prohibited worship was invalid because it was imperfectly performed" (Israeli, *op.cit.*, 29).

Israeli defines this combination of external Sinicisation of mosque building and internal Islamic orthodoxy as a manifestation of the dichotomy of Chinese Islam. Certainly, the functions of the mosque remained immediately recognisable in their Islamic purpose. Thus, besides the area set aside for prayer, the interior of larger Chinese mosques is generally divided between lecture hall, dormitory, conference rooms, community leaders' offices, and the "dead man's room" for washing and otherwise preparing deceased Muslims for burial. Amongst the best-known and most beautifully decorated of these traditional Chinese mosques are the *Niu-chieh ssu* (Ox Street mosque) in Peking, and the *Hua-chueh ssu* in Sian.

By contrast with the Sinicised Hui Chinese mosques scattered throughout "China Proper", the mosques of the periphery are often very different. Thus the mosque architecture of Sinkiang conforms closely to that of neighbouring Western Turkestan, whilst in the far north-east (Heilungkiang Province), an area formerly much influenced by Russian culture, mosque may sometimes outwardly resemble Orthodox churches. In this context, an informative trilingual study illustrating many of the best-known mosques in China and clearly depicting the different architectural forms has recently been published by the China Islamic Association (*op.cit.* in *Bibl.*, 1981).

(A. D. W. Forbes)

VI. In East Africa.

In East Africa the mosque is commonly spoken of in Swahili as *msikiti*, pl. *misikiti*, but *msihiri*, *misihire* in the Comoro Islands; and cf. Swahili *sijida*, the act of adoration, and verb *sujudu* "to prostrate oneself", from Ar. *sadjada*. Nineteenth-century traditional histories claim the setting up of Muslim cities on the eastern African coast in the 7th and 8th centuries

A.D. Of this there is no earlier literary evidence, but a mosque is mentioned in the Arabic *History of Kilwa* named *Kibala* (possibly a Bantu form from *ḳibla*) as existing on that island *ca.* 950 A.D. In spite of recent excavations at Kilwa [*q.v.*] by H. N. Chittick, there has so far been no positive identification of a mosque of this period. The first reliable evidence is from inscriptions. Cerulli reports one in the Friday Mosque at Barāwa, Somalia, dated 498/1104-5, while on Zanzibar Island there is the well-known Friday Mosque at Kizimkazi [*q.v.*] which has an inscription dating its foundation to 500/1107. The inscription is certainly of Sīrāfī provenance, which does not argue that Zanzibar was much Islamicised at this period. The 4th/10th century *Kitāb ʿAdjāʾib al-Hind* of Buzurg b. Shahriyār of Rāmhurmuz contains, however, the tale of the conversion of an eastern African king of a place of which no identification is given; he was followed by his people. In the same century al-Masʿūdī, who visited eastern Africa, speaks of the people and their sovereigns as pagan. By the 6th/12th century al-Idrīsī says that "the people, although mixed, are actually mostly Muslims", which would accord with the epigraphical evidence.

Between 1962 and March 1964 the greater number of known mosques, from mediaeval times to the 18th century, both standing and ruined, were planned and photographed by P. S. Garlake. He omitted, however, an important series of foundation inscriptions of mosques at Lamu [*q.v.*], some twenty in all, and ranging from the 14th to the 19th century. He rightly says that "the most sensitive indicator of change and development in style and decoration is bound to be the mosque mihrab": he distinguishes a clear and unbroken development of style and technique from the early classic *miḥrāb* with a plain architrave of the 14th and 15th centuries; a developed classic *miḥrāb* in which the plain surfaces of the architrave are broken by decoration; a neo-classic *miḥrāb* of greater elaboration, both this and the foregoing in the 16th century; a simplified classic *miḥrāb* restricted to northern Kenya, and a derived classic *miḥrāb* on the Tanzanian coast in the 18th century, in which, however, there were new developments that led to multifoliate arches of an elaborate character. The dating of some of these *miḥrāb*s derives from inscriptions, but is based to a great extent upon the evidence of imported pottery and Chinese porcelain, the latter coming to be used as a decoration by insetting it into the architrave of the *miḥrāb*.

All the 19th century Swahili settlements in eastern Africa are on the edge of the shore: Gedi, two miles from the Mida creek, is the sole exception. Some earlier mosques, however, are found on cliffs or headlands, where they may have been placed to serve as mariners' marks. Some of them are still of special veneration for seafarers. The population in these places was on the whole small, and only at Kilwa [*q.v.*] and at Mogadishū [see MAḲDISHŪ] was the need felt for mosques of more than modest size. Throughout the coast from Somalia to Mozambique, the only available building material of a permanent character was coralline limestone, obtained either from old raised beaches or directly from coral reefs. Mouldings, arches, and all features wherever precision was required, were of finely dressed coral blocks. A fine concrete, whose aggregate was coral rubble, was used for circular and barrel vaults. The method of burning it has survived to this day. From it also was made the plaster which in the 18th century was used to decorate not only the *miḥrāb* but also elaborately decorated tombs. There was a limited répertoire of mouldings, used also on tombs, and—more sparingly—in domestic architecture. The planning of all buildings, religious and domestic, was restricted by the span of the timber rafters, always of mangrove wood, which never exceeds 2,80 metres or approximately 9 feet. Even the vaulted buildings conform to this as to a fixed and unalterable convention. Thus even in the Great Mosque of Kilwa, with its five aisles and six bays, there is a sense of constriction rather than of spaciousness. Walls may be built of dressed coral limestone but quite commonly of coral rubble plastered over. Piers occur in mosques in Kenya and Pemba during the 14th to 16th centuries, but not in the south. After the 13th century in Tanzania, columns alone are found, some square and some octagonal. Generally, these were of dressed coral, but occasionally, as at Kaole (southern mosque) and in the northern *muṣallā* of the Great Mosque of Kilwa, wooden columns fitted into coral sockets were used. Because of the difficulty imposed by the length of the rafters, the master-builders—for only rarely can architects have been employed, and perhaps only for the Fakhr al-Dīn Mosque at Mogadishu—in seeking to erect a building of a particular breadth, frequently encumbered the perspective of the *miḥrāb* by constructing a central arcade of pillars. This clumsy feature (which occurs quite unconnectedly in certain mediaeval European churches) appears not only in two-aisled mosques such as those of Tongoni and Gedi but also in the four-aisled Friday Mosque of Gedi and the original North Mosque which forms part of the Great Mosque of Kilwa.

Minarets [see MANĀRA. 3. In East Africa] are very rare, and *minbars* [*q.v.*] have certain idiosyncratic features. In all, the mosques of the eastern African coast have a distinct regional character of their own, deriving in earlier times from the common use of ogival or returned-horseshoe arches, and in later times from the elaborate plaster decoration of the *miḥrāb* and its architrave.

Bibliography: H. N. Chittick, *Kilwa*, 1975, describes the Kilwa mosques, bringing up to date P. S. Garlake, *The early Islamic architecture of the East African coast*, Nairobi 1966, with its numerous plates and plans and exhaustive bibliography up to that date; G. S. P. Freeman-Grenville, *Some preliminary observations of medieval mosques near Dar es Salaam*, in *Tanganyika Notes and Records*, no. 36 (1954), is wholly superseded by the finding of better evidence for date; see also J. S. Kirkman, *Men and monuments of the East African coast*, London 1964, and *Fort Jesus*, Oxford 1974; and, for inscriptions, G. S. P. Freeman-Grenville and B. G. Martin, *A preliminary handlist of the Arabic inscriptions of the eastern African coast*, in *JRAS* (1973).

(G. S. P. FREEMAN-GRENVILLE)

VII. IN WEST AFRICA.

In Muslim West Africa, the smallest hamlet has its mosque, and the quarters of an individual town compete with one another in the construction of cultic sites. In most villages, the mosque is situated in the middle of the public square, near the tree which is the traditional place for bargaining and discussion ("palaver"); it is generally constructed in the style of a large shed, roofed with zinc plates and bamboo partitions or with banco or with moulded clay, and has the appearance, in the majority of cases, of the most attractive building in the locality, often surrounded by bushy trees. The mosque is regarded with pious respect, and is kept clean. Volunteers, often women of a certain age, accept responsibility for maintenance, cleaning and the supply of drinkable water for the faithful.

In towns, the mosque is a more substantial building

and it dominates the neighbourhood with its minaret or minarets. Sometimes, as in the case of the Great Mosque of Dakar, it has only one, while that of Touba, the most important centre of the religious brotherhood of the Murids, has three, of which the tallest, known as the "Lamp" (*Fall*) measures 83 m. In fact, it is the modern mosques which possess minarets; the most ancient have none, but still dominate their surroundings with cubic pillars. In small villages, the floor of the mosque is covered with matting or with fine sand which is sifted every day. In the urban setting, oriental carpets cover the floor. A palisade of bamboo or zinc plates or even a cement wall forms an enclosure within which a spacious courtyard is set out, to enable those worshippers who cannot pray at the times when the mosque is crowded to perform their religious duties. On the left side of the larger mosques, the place reserved for women is separated from that where the men pray by a metal grill.

The *imām* leads the prayer standing in a niche (*minbar*) in the *ḳibla wall*. The Great Mosque is furnished with a throne, a kind of raised dais where the *imām* takes his place to preach his sermon and to harangue the faithful, first in Arabic and then in the local language.

All the other facilities, including lavatories and taps for ablutions, are located on the exterior. In a corner of the courtyard there is a hut for the washing of corpses.

Each *imām* is served by a *nāʾib* or deputy who officiates in his absence. Two or more muezzins make the call to prayer from the tops of the minarets. In the larger mosques loud-speakers have been installed, to relay either the call to prayer or the sermon of the *imām*. The majority of *imām*s receive no monthly salary. The *imām* of the Great Mosque of the Senegalese capital is one of the few who receives regular payment and occupies an official residence; more often, the *imām* and his family are accommodated in the mosque.

The architectural style reproduces especially that of the Maghrib. It is thus that the Great Mosque of Dakar, inaugurated by King Ḥasan II, was built under the supervision of a Moroccan architect, as was the Islamic Institute which adjoins it. However the ancient mosques of northern Senegal, including those of Halwâr, Ndioum, Guédé and Dialmath, are in the Sudanese style of the mosque-institutes of the towns of Mali (Djenné, Mopti, Timbuktu, etc.) and of the land of the Sahel (cf. J. Boulègue, *Les Mosquées de style soudanais au Fuuta-Tooro (Sénégal)*, in *Notes africaines*, 136 (Oct. 1972), 117-19). This is a style characterised by its massive buttresses exceeding the height of the roof, in a rounded, conical form, with a small cubic minaret; the whole is constructed in brick made from dried earth and covered with a facing of the same material and ochre or beige in colour. The walls are very thick. An elaborate system of ventilation maintains a freshness similar to that provided by air-conditioning.

Religious function. In West Africa, the principal function of the mosque is still religious; each quarter possesses several, and in this context a genuine rivalry prevails between quarters or between members of different brotherhoods. It is thus that the mosque of the Tidjānīs is found alongside those of the Murīds [see MURĪD], of the Ḳādirīs [see ḲĀDIRIYYA] or of the Hamallites [see ḤAMĀLIYYA]. The faithful fill the mosques without regard for their particular affiliation. The Tidjānīs organise gatherings in the mosque after morning and evening prayers to recite, in chorus, the litanies (*dhikr*) peculiar to their religious order. This ritual is performed around a carpet and in darkness. But on Fridays or at times of canonical festivals, great crowds of Muslims are seen streaming towards the mosques clad in their splendid boubous or flowing robes.

Special prayers for the dead are also offered in the mosque. In this case, the bier is placed before the faithful, who pray upright without bowing or sitting. After these funeral rites, the parents of the deceased arrange a ceremony of recitation of the Ḳurʾān "for the repose of his soul".

The veneration of which the mosque is the object inspired Cheikh El-Hadji Malik Sy (1853-1922), founder of the *zāwiyya tidjāniyya* of Tivaouane, to compose a poem in Arabic consisting of forty verses in *radjaz* style and revealing the details of a whole system of etiquette. Cheikh Aliou Faye, the chief marabout of the Gambia, revised and embellished his master's poem, entitling his version *Tabshīrat al-murīd* or "The way of success for the disciple". The following are a few of the verses:

Whosoever wishes to enter Paradise without punishment and without the need to give an exact account of his actions at the Resurrection, should build a mosque for God the Merciful, and he will be granted one hundred and thirty palaces in Paradise.

Every believer who enters this mosque to pray will obtain a pleasant dwelling in Paradise.

A mosque may be built in any place, even in the square of a church or a or a synagogue.

There it is forbidden to grow crops, to dig wells, to sew and to compose [profane] poetry.

There it is forbidden to eat garlic, leek, onion, to shave, to cause an injury to a human being, to cut the nails, to cast lice or fleas and to kill them.

To tie animals, confine the mentally ill, to allow a criminal to enter and be seated.

All mosques are of equal worth, with three exceptions: those of Mecca, Medina and Jerusalem, which are the best mosques.

Social function. Besides this predominant religious role, the mosque also performs a very important social function. It is there, in fact, that, under the patronage of the *imām*, marriages are contracted between the parents of the betrothed parties. The father or guardian of the prospective bride gives her hand to the father or guardian of the suitor and receives the dowry. This function is so important that when information is sought regarding the marital status of a female person, the question is asked: "Have the men gone to the mosque for her?" (in Wolof: *Ndax demnañu jaka ja?*). As a form of pleasantry and to tell a girl that she is nubile, the remark is made: "I shall go to see the *imām* about it." Parents or guardians may be accompanied to the mosque by other parents and friends who act as witnesses. The relatives of the suitor bring the dowry which they entrust to the *imām*; the latter gives it to the father or guardian of the prospective bride and recites the sacramental formula. In the presence of all, the *imām* blesses the couple. Cola, non-alcoholic drinks or delicacies are distributed.

Even though, since the promulgation of a "Family Code" in Senegal, for example, some ten years ago, marriages must be contracted before the mayor or the representative of the public authorities, it is considered that, without the mosque playing a part, the matrimonial union is not valid. Thus the *imām* in fact represents the municipal magistrate.

Often the elders of the village hold meetings not under the traditional tree, but inside or in the courtyard of the mosque at any hour of day or night to

discuss public matters; finance for the sinking of wells, construction of a market, division of the produce of common land, preparations for the reception of distinguished guests, etc. In this case, the mosque represents a kind of national assembly where all the affairs of the village community are the object of wide and democratic debate.

Sometimes the mosque performs the role of a tribunal where disputes between members of the village are laid public and closely examined. Solutions are always formed on the basis of the *Sharīʿa*, or of local custom, or of both. These may be disputes between spouses, between two dignitaries, between two families, between herdsmen and stock-breeders, between a representative of the state and local landowners, between traditional chiefs and religious leaders. Sometimes the division of bequests is performed in the mosque under the supervision of the *imām*.

Some mosques provide places of lodging for strangers. It is in this way that travelling Muslims are accommodated. Furthermore, any person who is regarded as having lived a pious life and who has contributed to the building of the mosque, is buried there after his death. Such is the case of Cheikh Ahmadou Bamba Mbacke, Cheikh El-Hadji Malik Sy, Cheikh Ibrahima Niasse, Cheikh Ahmadou Anta Samb, and Bouh Kounta respectively at Touba, Tivaouane, Kaolack, Kébémer and Ndiassance (Senegal).

Many other men renowned for their piety or for their work in the service of Islam are entombed within or in close proximity to the mosque.

Economic function. The economic function of the mosque is explained by the fact that the temporal is always closely linked with the spiritual. Thus, for example, the sums raised from legal alms (*zakāt*) are in most cases entrusted to the *imām* of the mosque who, as an expert in the matter, ensures that they are distributed to those entitled to them. Sometimes cattle are led to the mosque to be slaughtered by the *imām*, who distributes the meat to the needy. Every Friday, a whole army of beggars is seen flocking to the mosques, attracted by the prospect of receiving charity from the wealthier believers. The same spectacle is witnessed during the major Islamic feasts of *Tabaski* and *Korite*.

The *imām* received a gratuity for his services when marriage is celebrated. Even though the sum is by no means considerable, it is important for the *imām* who is not salaried. In the course of one Sunday afternoon he may preside over several marriage ceremonies. Furthermore, numerous mosques receive requests for readings of the Ḳurʾān in exchange for a certain sum, the amount being left to the discretion of the customer.

Mosques which incorporate tombs receive a profitable income as a result of daily, weekly, monthly and annual pilgrimages or on the occasion of major Islamic feasts. This applies in the case of the mosque of Touba during the well-known feast of *Magal*, which commemorates the departure into exile (in 1895) of Cheikh Ahmadou Bamba Mbacke, founder of the brotherhood of the Murīds, and that of Tivaouane at the time of the *Mawlūd* [see MAWLID].

Cultural function. Although the mosque in West Africa fulfils a considerable economic role, its function in the cultural sphere is more striking. In the majority of cases, the courtyard of the mosque is the setting for a Ḳurʾānic ṣchool. Sometimes dozens of young children, boys and girls, are seen squatting in a half-circle before their master, who sits either on the ground, on a sheepskin rug or reclining on a couch, holding a cane. Each pupil places on his knees a tablet on which the lesson to be learned is inscribed in ink made from soot from cooking-pots. In the evening, after twilight and before the meal, a large fire is lit and the verses to be learned are read by the light of the flames. By this educational method, in the shadow of the mosque, many scholars arrive at the point where they can recite the entire Holy Book by heart.

The mosque also serves as a high school and university when, having memorised the Ḳurʾān, the pupils become students and learn the other Islamic sciences: exegesis, *ḥadīth*, theology, mysticism, Muslim law and even literature, history, logic, astronomy, rhetoric, etc.

It is also in the mosque that lectures are held on various subjects relating to religion, as well as educational lectures given by scholars or distinguished guests from other Muslim countries. In the mosque, throughout the month of Ramaḍān, marabout exegetes expound and comment on the Ḳurʾān before an audience, either to recall the teaching of the Holy Book or to instruct the faithful. On the "Night of Destiny" nobody sleeps, and reverent vigil is held in the mosque. Also in the mosque, particularly at Tivaouane, the sanctuary of Tidjānism in Senegal, the head *khalīfa* of the disciples of the brotherhood founded by Aḥmad al-Tidjānī (1737-1815 [*q.v.*]) expounds and comments on the *Burda* of al-Būṣīrī (608-*ca.*695/1212-*ca.*1295 [*q.v.* in Suppl.]).

Political function. Finally, the mosque performs in West Africa a political function which is far from insignificant, because the region contains a very substantial percentage of Muslims. This figure is increasing as a result of large-scale conversion to Islam of followers of other religions (Christianity and animism). Islam has enjoyed a revival of activity under pressure exerted both from the interior of this zone and, to a lesser extent, from the exterior. In Senegal, for example, the quite recent appointment of M. Abdou Diouf to the post of chief magistrate has had a considerable influence in this domain, to such an extent that, unlike his predecessor, the head of state, accompanied by the presidents of the National Assembly and the Economic and Social Council, participates behind the senior *imām* in the prayers conducted on the occasion of major festivals. In his *khuṭba*, the latter invariably affirms his loyalty to the authorities and invites the believers present to pray, with him, for the President of the Republic and the members of his government, whom he mentions by name, appealing to God to "perpetuate their rule and assist them, giving peace, health and long life to them, to their families and to Senegal".

This account of the activity of the present President of the Republic of Senegal applies to the other Muslim Heads of State of West Africa.

The *imām* often uses the occasion of the Friday Prayer to draw attention in his *khuṭba* to themes of concern to the government such as the misappropriation of public funds, corruption, juvenile delinquency, drugs, prostitution, the degradation of morals, the urgent need to combat bush-fires and desertification.

After this survey of the functions of the mosque in West Africa, it may be affirmed that it performs a multifarious role in this region by virtue of its status as the supreme place of prayer.

Bibliography: J. M. Cuoq, *Les Musulmans en Afrique*, Paris 1975, 103-271, gives information and bibliographies concerning religious life in West Africa; see also, in particular, J. Schacht, *Sur la diffusion des formes d'architecture religieuse musulmane à*

travers le Sahara, in *Travaux de l'Inst. de Rech. Sahariennes*, xi (1954), 11-27. (A. SAMB)

AL-**MASDJID** AL-**AKṢĀ**, literally, "the remotest sanctuary." There are three meanings to these words.

1. The words occur in Ḳurʾān, XVII,1: "Praise Him who made His servant journey in the night (*asrā*) from the sacred sanctuary (*al-masdjid al-ḥarām*) to the remotest sanctuary (*al-masdjid al-aḳṣā*), which we have surrounded with blessings to show him of our signs." This verse, usually considered to have been revealed during the Prophet's last year in Mecca before the Hidjra, is very difficult to explain within the context of the time. There is no doubt that *al-masdjid al-ḥarām* is the then pagan sanctuary of Mecca. But whether the event itself was a physical one and then connected with a small locality near Mecca which had two mosques, a nearer one and a farther one (A. Guillaume, *Where was al-Masjid al-Aqṣā?*, in *Al-Andalus*, xviii [1953]), or a spiritual and mystical night-journey (*isrāʾ*) and ascension (*miʿradj* [*q.v.*]) to a celestial sanctuary; a consensus was established very early (perhaps as early as the year 15 A.H., cf. J. Horovitz, *Koranische Untersuchungen*, Berlin 1926, 140) that *al-masdjid al-aḳṣā* meant Jerusalem. By the time of Ibn Hishām's *Sīra*, nearly all the elements of what was to grow into one of the richest mystical themes in Islam were in place. Their study and the diverse and at times contradictory interpretations found in early commentaries of the Ḳurʾān derive from a complex body of religious sources (references in R. Blachère, *Le Coran*, Paris 1949, ii, 374) which have not yet been completely unravelled.

2. The words were occasionally used in early Islamic times for Jerusalem, and, during many centuries, more specifically for the Ḥaram al-Sharīf [*q.v.*], the former Herodian Temple area transformed by early Islam into a restricted Muslim space.

3. The most common use of the words is for the large building located on the south side of the Ḥaram platform and, next to the Dome of the Rock (Ḳubbat al-Ṣakhra [*q.v.*]), the most celebrated Islamic building in Jerusalem. Its archaeological history has been superbly established by R. W. Hamilton, *The structural history of the Aqṣā Mosque*, and his conclusions were entirely accepted by K. A. C. Creswell and incorporated in his *Early Islamic architecture*, Oxford 1969, 373-80. Such points of debate as do exist (H. Stern, *Recherches sur la Mosquée al-Aqṣā et ses mosaïques*, in *Ars Orientalis*, v [1963]) deal only with the precise dating of the archaeologically-determined sequences of building, not with their character. From the 4th/10th century onward, precious descriptions by al-Muḳaddasī, Nāṣir-i Khusraw and, much later, Mudjīr al-Dīn's chronicle of Jerusalem, provide a unique written documentation which has been made accessible in several books, of which the more important ones are G. Le Strange, *Palestine under the Moslems*, London 1890, and M. S. Marmardji, *Textes géographiques arabes sur la Palestine*, Paris 1951, 210-60. An easily accessible survey of drawings and plans is found in Eli Silad, *Mesgid el-Aksa*, Jerusalem 1978. For inscriptions, one should consult M. van Berchem, *CIA, Jérusalem*, Cairo 1927, ii/2, and S.A.S. Husseini, *Inscription of the Khalif El-Mustansir*, in *QDAP*, ix (1942); A. G. Walls and A. Abul-Hajj, *Arabic inscriptions in Jerusalem*, London 1980, 24-5, for a checklist. Finally, it is possible that a unique picture of Zion in the celebrated 9th century A.D. Byzantine manuscript known as the Chludoff Psalter is a representation of the Aḳṣā Mosque *ca.* 850 A.D.; cf. O. Grabar, *A note on the Chludoff Psalter*, in *Harvard Ukrainian Studies*, vii (1983) (= a volume in honour of Professor Ihor Ševčenko). The recent excavations carried out south of the Ḥaram have brought a lot of contextual information pertinent to the uses of the Aḳṣā mosque, but, at least to the writer's knowledge, nothing immediately pertinent to its forms or history.

The latter can be summarised in the following manner: (a) There was an Umayyad hypostyle mosque consisting of several aisles (their exact number cannot be ascertained) perpendicular to the *ḳibla*, with a central, wider, aisle on the same axis as the Dome of the Rock. This mosque, like many Umayyad ones, reused a lot of materials of construction from earlier buildings and was either built from scratch or completed under the caliph al-Walīd I. The only item of contention is whether it already contained a large dome in front of the *miḥrāb* which would have been decorated with mosaics (Hamilton and Creswell argue that it did not, Stern that it did; the argument of the latter has historical logic on his side, as al-Walīd was lavish in his imperial buildings, but the archaeological arguments against it are weighty indeed). Many decorative remains of painted and carved woodwork (kept in various Jerusalem museums) which have been preserved probably date from the Umayyad period, but they, as well as numerous fragments of mosaics, marble, etc., whose records remain in the archives of the Palestine Archaeological Museum (the so-called Rockefeller Museum), still await a full investigation. This first Aḳṣā mosque was the congregational mosque of the city of Jerusalem, but it was also seen as the covered part (*mughaṭṭā*) of the whole Ḥaram conceived as the mosque of the city.

(b) A series of major reconstructions took place in early ʿAbbāsid times, possibly because of a destructive earthquake in 746. But the extent of the reconstructions carried out under al-Manṣūr, al-Mahdī and ʿAbd Allāh b. Ṭāhir between 771 and 844 suggests more than a simple restoration. It was certainly a major attempt to assert ʿAbbāsid sponsorship of holy places. It is essentially this ʿAbbāsid building which is described by al-Muḳaddasī (*ca.* 985). It consisted of fifteen naves perpendicular to the *ḳibla*, of a fancy porch with gates inscribed with the names of caliphs, and of a high and brilliantly decorated dome. Its greatest pecularity is that it was open to the north, towards the Dome of the Rock and the rest of the Ḥaram *and* to the east. The latter is unusual and is probably to be explained by the ways in which the Muslim population, mostly settled to the south of the Ḥaram, ascended the holy place. We know that the main accesses to the Ḥaram were through underground passages, and the eastern entrances of the Aḳṣā may indicate that the Triple Gate and the so-called Stables of Solomon in the southeastern corner of the Ḥaram played a much greater rôle in the life of the city than has been believed.

(c) The earthquake of 1033 was a devastating one, leading, among other causes, to a major reorganisation of the whole city [see AL-ḲUDS]. The Aḳṣā was rebuilt under al-Ẓāhir between 1034 and 1036 and the work completed under al-Mustanṣir in 1065. Except for the latter, it is the mosque described by Nāṣir-i Khusraw in 1047, and most of the central part of the present mosque dates from that time. Shrunk to seven aisles only, probably without side doors, it was a very classical mosque adapted to the peculiar circumstances of Jerusalem, whose major characteristic was the brilliance of its mosaic decoration. The triumphal arch with its huge vegetal designs surmounted by a royal inscription in gold mosaics, the gold pendentives with their huge shield of "peacock's eyes," and the

drum with its brilliant panels of an idealised garden with Umayyad and possibly Antique reminiscences, transformed the mosque into a true masterpiece of imperial art and exemplified the political ambitions of the Fāṭimids in Jerusalem.

(d) The Crusaders used the mosque as a palace and as living areas for the Knights Templar, and much of the present eastern and western façades date from this occupation. In 1187, when the mosque was reconsecrated to Islam, Ṣalāḥ al-Dīn re-did the decoration of the whole *ḳibla* wall, including the beautiful *miḥrāb* and the long inscription along the *ḳibla* wall. He also brought in the *minbar* made in 1169 by order of Nūr al-Dīn for the reconquered Holy City, but this great masterpiece of Syrian woodwork was destroyed by an arsonist in 1969 before it had been possible to study it fully. The northern porch was restored in 1217 and the eastern and western vaults re-done in 1345 and 1350. Under the later Ottomans, numerous repairs, often of dubious quality, and plasterings or repaintings altered considerably the expressiveness of what was essentially a Fāṭimid building with major Crusader, Ayyūbid and Mamlūk details. It was only in the nineteen-twenties and especially between 1937 and 1942 that a major and carefully supervised programme of restoration took place.

In spite of scholarly debates which will continue to grow about this or that detail, and this or that date for some aspect of the building, the history of the monument is reasonably set. What is far more difficult to define and to explain is its function, and on that issue the debate has barely begun. As a work of art, should it be considered as a finite monument to be explained entirely in its own architectural terms? Or should it always be understood as physically and visually part of a broader vision, whether even completed or not, of the Ḥaram as a unit? Socially and culturally, was it always, as it has become today, the city's mosque, different from its other sanctuaries, or was it, at times, simply the covered part of a single sanctuary? In all likelihood, the answers to these questions will differ according to the periods of the city's history. But beyond the fascinating vagaries of meaning of an extraordinary building in a unique setting, the problem is still unresolved of when it became known as the Masdjid al-Aḳṣā. The Ḳur'ānic quotation XCII,1, appears for the first time in the 5th/11th century official Fāṭimid inscription on the mosque's triumphal arch, and it is possibly at that time that it acquired its name. But in the early 10th/16th century, Mudjīr al-Dīn still calls it a *djāmi*ᶜ, while acknowledging that it is popularly known as the Aḳṣā.

These confusions are all part of the complexities of Jerusalem's meaning in the Muslim world. Yet it should be noted that the spiritual and onomastic impact of the mosque extended much beyond its location, since in the Javanese city of Ḳudus the main mosque is also called the Masdjid al-Aḳṣā.

Bibliography: Given in the article.

(O. GRABAR)

AL-**MASDJID** AL-**ḤARĀM**, the name of the Mosque of Mecca. The name is already found in the pre-Islamic period (Horovitz, *Koranische Studien*, 140-1) in Ḳays b. al-Khaṭīm, ed. Kowalski, v. 14: "By Allāh, the Lord of the Holy Masdjid and of that which is covered with Yemen stuffs, which are embroidered with hempen thread" (?). It would be very improbable if a Medinan poet meant by these references anything other than the Meccan sanctuary. The expression is also fairly frequent in the Ḳur'ān after the second Meccan period (Horovitz, *op. cit.*) and in various connections; it is a grave sin on the part of the polytheists that they prohibit access to the Masdjid Ḥarām to the "people" (sūra II, 217, cf. V,2; VIII, 34; XXII, 25; XLVIII, 25); the Masdjid Ḥarām is the pole of the new *ḳibla* (sūra, II, 134, 149); contracts are sealed at it (sūra IX, 7).

In these passages, *masdjid ḥarām* does not as in later times mean a building, but simply Mecca as a holy place, just as in sūra XVII, 1, al-Masdjid al-Aḳṣā [*q.v.*] "the remotest sanctuary" does not mean a particular building.

According to tradition, a *ṣalāt* performed in the Masdjid al-Ḥarām is particularly meritorious (al-Bukhārī, *al-Ṣalāt fī masdjid Makka*, *bāb* 1). This *masdjid* is the oldest, being forty years older than that of Jerusalem (al-Bukhārī, *Anbiyā*', *bāb* 10, 40).

This Meccan sanctuary included the Kaᶜba [*q.v.*], the well of Zamzam [*q.v.*] and the Maḳām Ibrāhīm [*q.v.*], all three on a small open space. In the year 8, Muḥammad made this place a mosque for worship. Soon however it became too small, and under ᶜUmar and ᶜUthmān, adjoining houses were taken down and a wall built. Under ᶜAbd Allāh b. al-Zubayr, the Umayyad and Ābbāsid caliphs, successive enlargements and embellishments were made. Ibn al-Zubayr put a simple roof above the wall. Al-Mahdī had colonnades built around, which were covered by a roof of teak. The number of minarets in time rose to seven. Little columns were put up around the Kaᶜba for lighting purposes. The mosque was also given a feature which we only find paralleled in a few isolated instances: this was the putting up of small wooden buildings, or rather shelters for use during the *ṣalāt* by the *imām*, one for each of the four orthodox rites. The fact that one of these *maḳāms* might be more or less elaborate than another occasionally gave rise to jealousies between the Ḥanafīs and the Shāfiᶜīs. Ultimately, the ground under the colonnades, originally covered with gravel, was paved with marble slabs, also in the *maṭāf* around the Kaᶜba as well as on the different paths approaching the *maṭāf*.

The mosque was given its final form in the years 1572-7, in the reign of the Sultan Selīm II, who, in addition to making a number of minor improvements in the building, had the flat roof replaced by a number of small, whitewashed, cone-shaped domes.

A person entering the mosque from the *masᶜā* or the eastern quarters of the town has to descend a few steps. The site of the mosque, as far as possible, was always left unaltered, while the level of the ground around—as usual in oriental towns and especially in Mecca on account of the dangers of sudden floods (*suyūl*)—gradually rose automatically in course of centuries (cf. Snouck Hurgronje, *Mekka*, i, 18-20).

The dimensions of the Ḥarām (interior) are given as follows (al-Batanūnī, *Riḥla*, 96): N.W. side 545, S.E. side 553 feet, N.E. side 360, S.W. side 364 feet; the corners are not right angles, so that the whole roughly represents a parallelogram.

Entering the *maṭāf* from the eastern side, one enters first the Bāb Banī Shayba, which marks an old boundary of the *masdjid*. Entering through the door, the Maḳām Ibrāhīm is on the right, which is also the Maḳām al-Shāfiᶜī, and to the right of it is the *minbar*. On the left is the Zamzam building. As late as the beginning of the 19th century, there stood in front of the latter, in the direction of the north-east of the mosque, two domed buildings (*al-ḳubbatayn*) which were used as store-houses (*Chron. der Stadt Mekka*, ii, 337-8). These *ḳubbas* were cleared away (cf. already, Burckhardt, i, 265); they are not given in recent plans.

Around the Kaᶜba are the *maḳāms* for the *imāms* of

the *madhhabs*, between the Kaʿba and the south-east of the mosque, the *maḳām* (or *muṣallā*) *al-Ḥanbalī*, to the south-west the *maḳām al-Mālikī* and to the north-west the *maḳām al-Ḥanafī*. The latter has two stories; the upper one was used by the *muʾadhdhin* and the *muballigh*, the lower by the *imām* and his assistants. Since Wahhābī rule has been established, the Ḥanbalī *imām* has been given the place of honour; it is also reported that the *ṣalāt* is conducted by turns by the *imāms* of the four rites (*OM*, vii, 25). The *maḳām al-Ḥanafī* stands on the site of the old Meccan council-chamber (*dār al-nadwa*) which in the course of centuries was several times rebuilt and used for different purposes. The *maṭāf* is marked by a row of thin brass columns connected by a wire. The lamps for lighting are fixed to this wire and in the colonnades. In the 1930s, the mosque was provided with an installation for electric light (*OM*, xvi, 34; xviii, 39).

The mosque has for centuries been the centre of the intellectual life of the metropolis of Islām. This fact has resulted in the building of *madrasas* and *riwāks* for students in or near the mosque, for example, the *madrasa* of Ḳāʾit Bey on the left as one enters through the Bāb al-Salām. Many of these *waḳfs* have however in course of time become devoted to other purposes (Burckhardt, i, 282; Snouck Hurgronje, *Mekka*, i, 17). For the staff of the mosque, cf. SHAYBA, BANŪ; Burckhardt, i, 287-91.

(A. J. WENSINCK)

MASDJIDĪ (A.), pl. *masdjidiyyūn*, an adjective formed from *masdjid*, but specifically concerning the Friday mosque of Baṣra and used to designate groups (see al-Djāḥiẓ, *Ḥayawān*, iii, 360) of adults or young people who were accustomed to meet together in that building, near the gate of the Banū Sulaym, as well as of poets, popular story-tellers (*ḳuṣṣāṣ* [see ḲĀṢṢ]), and transmitters of religious, historical and literary traditions, in particular, those regarding poetic verses. The information which we possess on the *masdjidiyyūn* in general comes from al-Djāḥiẓ, who seems clearly to have acquired from them, in his youth, part of his cultural formation and perhaps also some of the traits of his character. He was especially interested in a group which was probably composed of Baṣran bourgeois or, at all events, of idlers who exchanged ideas and held conversations on subjects which were probably more varied (see e.g. *Bayān*, i, 243) than those for which he puts forward some examples in his *K. al-Bukhalāʾ* (ed. Ḥādjirī, 24-8; tr. Pellat, 41-8); the conversations thus reproduced are concerned essentially with how to spend as little money as possible, and allow us to classify the persons taking part in these conversations as part of the class of misers.

Nevertheless, al-Djāḥiẓ frequented other *masdjidiyyūn*: not only poets—al-Āmidī (*Muwāzana*, 116) could not appreciate their verses, and al-Marzubānī (*Muʿdjam*, 379) states that Abū ʿImrān Mūsā b. Muḥammad, e.g., was a *masdjidī*—but also traditionists who themselves wrote books, since, in regard to two *ḥadīths*, he states that he did not gather them directly from the mouth of some scholar but that he had read them in some book of *masdjidiyyūn* (*Bayān*, iii, 57-8). He mentions however (*ibid.*, iii, 220) that one *shaykh* of the mosque only wanted to frequent persons amongst whom were included traditionists handing on *ḥadīths* on the authority of al-Ḥasan (sc. al-Baṣrī [*q.v.*]) and *ruwāt* [see RĀWĪ] who were reciting the verses of al-Farazdaḳ [*q.v.*]. It should be noted that it is concerning the transmiters of classical poetry installed at the Mirbad [*q.v.*], the *mirbadiyyūn*, or in the Friday mosque, that al-Djāḥiẓ observes the changes of taste among lovers of poetry which were discernable precisely in these *ruwāt*'s audience (*Bayān*, iv, 23).

Bibliography: Given in the article. See also Pellat, *Le milieu baṣrien et la formation de Ǧāḥiẓ*, 244-5.

(CH. PELLAT)

AL-**MASḤ ʿALĀ ʾL-KHUFFAYN** (A.), literally: "act of passing the hand over the boots", designates the right whereby Sunnī Muslims may, in certain circumstances, pass the hand over their shoes instead of washing their feet as a means of preparing themselves for the saying of the ritual prayer. Al-Djurdjānī (*Taʿrīfāt*, ed. Tunis 1971, 112) proposes a definition of the *masḥ*: "passing the moistened hand without making (water) flow" (*imrār al-yad al-mubtalla bi-lā tasyīl*), which justifies the translation by "wetting of the shoes" which is adopted by L. Bercher and G. H. Bousquet (see below), but the term in question nevertheless remains ambiguous. In fact, if in the verses IV, 46/43, and V, 8-9/6, of the Ḳurʾān, the verb *masaḥa* refers to ablutions which necessarily entail the use of a certain quantity of water and consequently has the sense of "to wash", as is suggested by the *Lisān*, it is also employed in the same verses in reference to ritual purification with sand or soil (*tayammum* [*q.v.*]) and therefore no longer has the same meaning. In his translation of the Ḳurʾān (iii, 1115), R. Blachère points out moreover that it is quite inaccurate to render this verb by "to wipe" or "to rub", since it properly signifies, in these contexts, "to pass the hand over".

Unlike the *tayammum*, the *masḥ ʿalā ʾl-khuffayn* is not envisaged by the Holy Book, and it is probable that the practice in question, although ancient, was only tolerated at a relatively late date, to take into account difficulties which could face armies in the field, and after provoking debate in the very bosom of the Medinan school. Ultimately it constituted, along with, especially, *mutʿa* [*q.v.*], one of the most manifest signs of the rift between Sunnīs and Shīʿīs, for the latter, like the Khāridjīs, do not recognise it. The different Sunnī schools now base their doctrine, in this context, on a half-dozen *ḥadīths* whose authenticity is accepted by al-Bukhārī and Muslim, and on a number of other more liberal, but nevertheless for that reason more suspect traditions.

From "authentic" *ḥadīths* it emerges that the Prophet was observed to practise the *masḥ ʿalā ʾl-*

khuffayn. However, Djarīr b. ʿAbd Allāh al-Badjalī, who was converted after the revelation of the Medinan sūra *al-Māʾida* (V), which contains instructions relating to ablutions and to the *tayammum* (see above), claimed that he himself had seen Muḥammad passing the hand over his shoes; but his colleagues contested the validity of his statements and declared that the revelation of the verses in question had *ipso facto* put an end to the legality of this practice. This testimony, which has not been retained by al-Bukhārī, does not seem to have shaken the conviction of later *fuḳahāʾ*, any more than another more or less controversial tradition which official doctrine has retained, no doubt because it provides an additional benefit: according to Khuzayma b. Thābit and Abū Bakra, the Prophet was reported to have permitted the Muslim to observe the *masḥ ʿalā 'l-khuffayn* for a day and a night when he is in fixed residence (*muḳīm*), and for three days and three nights when he is travelling.

According to another "authentic" *ḥadīth*, al-Mughīra b. Shuʿba, who travelled in the company of Muḥammad, bent down to take off his shoes in order to perform his ablutions, but the Prophet said to him: "Leave them, for I put them (= the feet) into [my boots], when they were in a state of ritual purity (*ṭāhiratānⁱ*)", and he passed his hand over his shoes. From this *ḥadīth*, the *fuḳahāʾ* have retained the obligation, for the believer who wishes to cleanse himself of a minor defilement (*ḥadath* [*q.v.*]) by means of this indulgence, to wash his feet and polish his shoes before putting them on, and not to take them off in the meantime.

Regarding the legal manner of performing the *masḥ*, Ibn Abī Zayd al-Ḳayrawānī, of the Mālikī school, describes it clearly in his *Risāla* (ed. and tr. L. Bercher, Algiers, 1949, 50/51): "The believer will place the right hand on the upper part of the shoe [foı the right foot], beginning with the extremity of the toes. He will place his left hand underneath and thus make the hands glide as far as and including the pegs. He will do the same for the shoe of the left foot, putting his left hand above and his right hand underneath. But he will not let his hand touch the ground which may be under his shoe, or touch the dung of a beast of burden. He must previously raise his foot when rubbing or washing." The author adds that, according to another opinion, "the believer must wet the underside of the shoes, beginning with the pegs and ending with the extremities of the toes."

The classical manual of Western Mālikism, the *Mukhtaṣar* of Khalīl b. Isḥāḳ (tr. G. H. Bousquet, Algiers 1956, i, 34-5) presents an even more detailed account of the *masḥ ʿalā 'l-khuffayn*. It envisages in fact the use of a kind of slipper (*djawrab*) inside the boot proper, and prescribes that the *masḥ* should be performed on both pieces of leather; it forbids the use of a slipper which is too large or torn, because it must be firmly fixed to the foot, cover it completely and not let water penetrate through any crevice. This author also considers cases where the *masḥ* is invalidated, for example if the *ghusl* [*q.v.*] is obligatory, if the individual has forgotten to pass his hand over the upper part of the shoe, etc.

Bibliography: All the *ḥadīths* concerning the *masḥ* have been conveniently assembled by Ibn al-Djārūd al-Naysābūrī (d. 307/919-20) in his *Kitāb al-Muntaḳā min al-sunan al-musnada ʿan Rasūl Allāh*, ed. Cairo 1382/1963 by ʿAbd Allāh Hāshim al-Yamanī al-Madanī, who has taken care to indicate in his notes (37-9) the more or less important collections in which they figure; the same editor has proceeded in the same fashion with the *Djamʿ al-fawāʾid min djāmiʿ al-uṣūl* (Medina 1381/1971, i, 104-7) of the Moroccan Muḥammad b. Muḥammad b. Sulaymān (1039-94/1630-83). See also R. Strothmann, *Kultus der Zaiditen*, Strasburg 1912, 21 ff.; A. J. Wensinck, *The Muslim creed*, Cambridge 1932, index, s.v. *shoes*; J. Schlacht, *The origins of Muhammadan jurisprudence*, Oxford 1950, 263-4.

(CH. PELLAT)

MĀSHĀʾ ALLĀH (A.), a phrase occurring in the Ḳurʾān (VI, 128; VII, 188; X, 50; XVIII, 37; LXXXVII, 7; cf. XI, 109-10, LXXII, 8) and widely used in the Islamic lands of the Middle East with the general meaning of "what God does, is well done". The formula denotes that things happen according to God's will and should therefore be accepted with humility and resignation. In a cognate signification, the phrase is often used to indicate a vague, generally a great or considerable, but some times a small, number or quantity of time (Lane, *Lexicon*, *s.v.*, who refers to S. de Sacy, *Relation de l'Egypte*, 246, 394). One might compare *ilā mā shāʾa Allāhu* "forever and ever" (Wehr, *Dictionary of modern written Arabic*, s.v.). The phrase is also the equivalent of the English "God knows what", and, as signifying "what God has willed", expresses admiration or surprise.

According to *TA*, in Lane, *Lexicon*, s.v., a Jew addressed the Prophet, objecting to his people's saying *mā shāʾa Allāhu wa-shiʾtu* "what God has willed and I have willed", as implying the association of another being with God. The Prophet then ordered them to say *mā shāʾa Allāhu thumma shiʾtu* "what God has willed and then I have willed".

In Konya, blue hemispheres are found, representing half an eyeball, covered with silver-thread textile with which the phrase is embroidered. Because of the decorative character of the Arabic script, the hemispheres are also worn as ornaments (R. Kriss and H. Kriss-Heinrich, *Volksglaube im Bereich des Islam*, ii, 12, 65 and pl. 7). As a charm to protect from the effect of the evil eye, the phrase is found on *zār* [*q.v.*] amulets and on amulets worn by children and domestic animals (*ibid.*, ii, 43, 66, 67, 153, and pl. 76; F. Th. Dijkema, *The Ottoman historical monumental inscriptions in Edirne*, Leiden 1977, 137; the amulet collection of the Ethnographical Museum, Cairo; Lane, *Manners and customs*, ch. xi). According to L. Einnsler, *Das böse Auge*, in *ZDPV*, xii (1889), 200 ff., there were silver amulets in Jerusalem with the formula on the obverse, the reverse bearing the invocations *yā kāfī, yā shāfī, yā ḥāfiẓ, yā amīn*. In Turkey, the phrase is often found on the fronts of trucks and cars.

Bibliography: In the article, and see also M. Piamenta, *Islam in everyday Arabic speech*, Leiden 1979; idem, *The Muslim conception of God and human welfare as reflected in everyday Arabic speech*, Leiden 1983.

(ED.)

MĀSHĀʾ ALLĀH B. ATHARĪ or B. SĀRIYA, Jewish astrologer of Basra (although the frequent confusion between Baṣrī and Miṣrī has sometimes led to him being considered an Egyptian). His Hebrew name was perhaps Manasseh (the *Fihrist*, 273-4, and Ibn al-Ḳifṭī, 327, call him Mīshā) and in Persian he was known as Yazdānkhʷāst which, like Māshaʾallāh, signifies "that which God wills".

According to the *Fihrist*, the period of his activity extended from the reign of al-Manṣūr (135-58/754-75) to that of al-Maʾmūn (198-218/813-33), but the last date to be placed definitely within his lifetime is 193/809 (in *Fī ḳiyām al-khulafāʾ*, he shows in fact that he knew that of the death of al-Rashīd). With Nawbakht, ʿUmar b. Farrukhān al-Ṭabarī and al-Fazārī, he drew the horoscope favourable to the foun-

dation of Baghdād (3 Djumādā I 145/30 July 762); this horoscope, which has been preserved (see al-Bīrūnī, *al-Āthār al-bāḳiya*, ed. Sachau, Leipzig 1923, 270-1), had probably been calculated on the basis of the Pahlavi original text of the *Zīdj al-Shāh*. On the evidence of his *Kitāb al-Ḳirānāt*, he seems to have been of pro-Iranian and anti-ʿAbbāsid sentiment; he hoped in fact that the caliphate would be overthrown in 200/815 and that power would pass to the Persians.

In the *Fihrist*, Ibn al-Nadīm mentions 19 works of Māshāʾ allāh, and al-Ḳifṭī reproduces this list in his *Taʾrīkh al-Ḥukamāʾ*. The generally most complete and most recent studies which mention the titles of these works and the mss. in which they are preserved are those of D. Pingree, *Māshāʾallāh*, in *Dict. of scientific biography*, New York 1974, 159-62, and F. Sezgin, *GAS*, vi, 127-9, viii, 102-8.

Of the corpus of known works, discussion here will be limited to the following:

— *Fi ʾl-ḳirānāt wa ʾl-adyān wa ʾl-milal* ("On conjunctions, religions and communities"), an astrological history of mankind, and of Islam in particular, which is known to us by means of a summary by Ibn Hibintā. E. S. Kennedy and D. Pingree (*The astrological history of Māshāʾallāh*, Cambridge, Mass. 1971, 1-25) have published a facsimile of the ms., with a translation and a study of the summary of this work, which is based on an amalgam of the Sāsānid theory which explains the major changes which have taken place in human history by reference to conjunctions of Jupiter and Saturn, and of the Zoroastrian theory of millennia which attributes a thousand years to each planet from the time of the creation of the world (-8291), the cycle being repeated up until the figure of 12 millennia which will be reached in the year 3709 A.D. Ibn Hibintā's summary also contains 16 horoscopes, probably those of Māshāʾallāh himself and calculated on the basis of the *Zīdj al-Shāh*: Kennedy and Pingree have made use of the numerical figuring in these horoscopies, combined with the sparse information supplied by other sources (essentially al-Bīrūnī) to reconstruct the principal parameters employed in the Persian tables mentioned above (see also J. J. Burckhardt and B. L. van der Waerden, *Das astronomischen System der persischen Tafeln I*, in *Centaurus*, xiii [1968], 1-28).

— *Fī ḳiyām al-khulafāʾ wa-maʿrifat ḳiyām kull malik* ("On the accession of caliphs and knowledge of the accession of each king"), of which the original Arabic, preserved, has been translated and studied by Kennedy and Pingree, in *The astr. history*, 129-43. After a general theoretical survey, the work contains horoscopes of the spring equinoxes at which the Prophet and 18 caliphs (from Abū Bakr to Hārūn al-Rashīd) acceded to power. To calculate these, Māshāʾallāh also made use of the *Zīdj al-Shāh*.

— *Kitāb al-Mawālīd* ("Book of genethliac themes"), known only through some quotations made by a disciple of the author, Abū ʿAlī al-Khayyāṭ, and through a Latin translation edited and studied by Pingree (*The astr. history*, 145-74). It contains 12 natal horoscopes dating from between 36 and 542 A.D.; three of them derive from the *Pentateuch* of Dorotheus of Sidon (50-75 A.D.), and the other nine from an unknown Greek astrological work dating from the 6th century. He interprets the horoscopes according to the doctrine of Dorotheus, whose work he probably knew through the Pahlavi translation. The influence of this writer is also perceptible in the *Super significationibus planetarum in nativitate* of Māshāʾallāh, which survives only in Latin translation.

— *De receptione*, preserved in Latin translation (ed. J. Heller, Norirbergae 1549), comprises 6 horoscopes dating between 791 and 794. One of them figures in the Peterhouse ms. 75.1, which contains the treatise of Chaucer (*ca.* 1340-*ca.* 1400) on the equator (E. S. Kennedy, *A horoscope of Messehalla in the Chaucer Equatorium manuscript*, in *Speculum*, xxxiv [1959], 629-30; repr. in E. S. Kennedy (ed.), *Studies in the Islamic exact sciences*, Beirut 1983, 336-7; cf. Kennedy-Pingree, *The astr. history*, 175-8).

— *De scientis motus orbis* or *De elementis et orbitus coelestibus* or *De sphaera mota*, preserved in Latin translation, contains a study of the *Physics* of Aristotle (chs. 1-7), as well as an introduction to astronomy (chs. 8-24), both of these based on Syriac sources. The astronomical source mentions Ptolemy and Theo of Alexandria, but the planetary models described are pre-Ptolemaic Greek (they do not, in fact, employ the equant and introduce no specific apparatus for the moon and Mercury) and similar to those found in Sanskrit texts since the end of the 5th century (cf. D. Pingree, *Mashaʾallah: some Sasanian and Syrian sources*, in G. F. Hourani (ed.), *Essays on Islamic philosophy and science*, Albany 1975, 5-14).

— *Kitāb al-Amṭār wa ʾl-riyāḥ* ("Book of the rains and the winds"), ed. and tr. by G. Levi Della Vida (*Un opusculo astrologico di Māšʾāllāh*, in *RSO*, xiv [1933-4], 270-81), concerns the astrological procedure for predicting rain. A Latin version also exists.

— *Epistola de rebus eclipsium*, *De ratione circuli et stellarum*, *Liber Messehalla in radicis revolutionum* or *Epistola Messallach de planetarum efficacis* (cf. J. M. Millás Vallicrosa, *Las tables astronómicas del rey don Pedro el Ceremonioso*, Madrid-Barcelona 1962, 87), preserved in Latin translation (by John of Seville, ed. Basle 1551) and Hebrew translation (by Abraham b. ʿEzra). The latter, which is entitled *Sefer li-Mashaʾallāh bi-ḳadrūt ha-levanah we ha-shemesh*, has been translated by B. R. Goldstein (*The Book on eclipses by Mashaʾallah*, in *Physis*, vi [1964], 205-13). It is divided into 12 chapters, of which the first contains a curious reference to magnetism in a cosmological context: the ascending node, the stars and the planets exert an influence on the earth in the same manner that magnetic stone attracts iron. It is appropriate also to mention the use, in this text, of a classification of planetary conjunctions distinct from that which figures in *Fi ʾl-ḳirānāt*.

— Ibn al-Nadīm attributes to Māshāʾallāh a *Kitāb Ṣanʿat al-asṭurlābāt wa ʾl-ʿamal bi-hā* ("Construction and use of astrolabes"), often identified with the treatise on the astrolabe in Latin, which has been edited, notably by R. T. Gunther (*Early science in Oxford*, v, Oxford 1929, 195-231). A second treatise on the astrolabe in a Latin version, likewise attributed to Māshāʾallah, has been edited by Millás Vallicrosa (in *Las traducctiones orientales en los manuscritos de la Biblioteca Catedral de Toledo*, Madrid 1942, 322-7). P. Kunitzch has rejected the attribution of the two texts to Māshāʾallāh (see *Typen von Sternverzeichnissen in astronomischen Handschriften des zehnten bis vierzehnten Jahrhunderts*, Wiesbaden 1966, 313-21; idem, *On the authenticity of the treatise on the composition and use of the astrolabe ascribed to Messahallah*, in *AIHS*, xxxi [1981], 42-62). A part at least of the text edited by Gunther appears to be linked to the school of Maslama al-Madjrīṭī (d. *ca.* 398/1007-8; cf. R. Martí and M. Viladrich, in J. Vernet (ed.), *Textos y estudios sobre astronomía española en el siglo XIII*, Barcelona 1981, 79-99, and in idem (ed.), *Neuvos estudios sobre astronomía española en el siglo de Alfonso X*, Barcelona 1983, 9-74; M. Viladrich, *On the sources of the Alphonsine treatise dealing with the construction of the plane astrolabe*, in *JHAS*, vi [1982], 167-71).

The work of Māshāʾallah is that of a writer who has

little interest in astronomy, but has cultivated all the branches of astrology which he has widely promulgated and popularised; nevertheless, it has considerable interest from the astronomical point of view on account of the sources used (Persian, Syriac and, directly or indirectly, Greek), which throw light on a very early period in the history of Arab-Islamic astronomy.

Bibliography : Given in the article. See also L. Thorndike, *The Latin translations of the astrological works by Messahala*, in *Osiris*, xii (1956), 49-72; F. J. Carmody, *Arabic astronomical and astrological sciences in Latin translation*, Berkeley-Los Angeles 1956, 23-38; E. S. Kennedy, *The Sasanian astronomical handbook Zīj-i Shāh and the astrological doctrine of "transit"* (mamarr), in *JAOS*, lxxviii (1958), 246-62 (re-ed. in Kennedy and others, *Studies*, 319-35); Kennedy, D. Pingree and F. I. Haddad, *The Book of the reasons behind astronomical tables by ʿAlī ibn Sulaymān al-Hāshimī*, New York 1981, 183, 186-7, 191, 264, 284, 321-3. (J. Samsó)

MAṢḤAF [see muṣḥaf]

MASHĀḲA, Mīkhā'īl, a person of secondary importance of the *Nahḍa* [*q.v.*] (b. Rashmaya 20 March 1800, d. Damascus 6 July 1888). Born in the Greek Melkite rite, he began his studies in Egypt in astronomy, mathematics and the natural sciences. As a silk weaver, he studied music (*Risāla fī fann al-mūsīkī*, ed. Ronzevalle, in *al-Machriq* [1899], pp. 146). As an official, a representative of Shihāb and vice-consul for the United States, and then merchant, he took up medicine (doctor of medicine at Cairo, 1845). In 1848 at Damascus he joined the Protestant faith. The ensuing polemics can be found in *al-Dalīl ilā ṭāʿat al-Indjīl*², Beirut 1860, pp. 332, and in *K. al-Barāhīn al-indjīliyya ḍidd al-abāṭīl al-bābawiyya*, Beirut 1864, pp. 187. As the Arabic translator of Voltaire, a close connection of the al-Shidyāḳ family and of Buṭrus al-Bustānī, he reacted, through his attitude and his writings, against confessionalism, and opened the way, through his advocacy of reason, to scientific attitudes. His chronicle of Syria (1783-1841) remains in manuscript; the autograph is in the AUB Library, ms. 956, 9 M 39a.

Hourani, *Arabic thought in the liberal age*, 58; *Travaux et jours*, xl (July-Sept. 1971), 57-67; Dāghir, iii/2, 1212-14. (J. Fontaine)

MASHĀRIḲA (a.), the Arabs and Arabised peoples of the East (*Mashriḳ*) in contrast to those of the West (*Maghrib*) called *Maghāriba* [*q.v.*]. The history of the Mashāriḳa in the East, a history which is inseparable from the region itself, will not be treated here. The concern here is rather with the Mashāriḳa who were perceived as such in the West by the Maghāriba. The distinction between the two great groups, with a certain specificness proper to Muslim Spain, becomes perceptible less than half-a-century after the expansion of the Arabs in the West, i.e. around 122/740 [see maghāriba].

It is impossible to determine, even with an approximative exactness, the number of Mashāriḳa who, in successive waves and during periods stretching from the middle of the 1st century to the middle of the 5th one/last quarter of the 7th to the middle of the 11th, established themselves in the West and especially in Ifrīḳiya, where their settlement was the densest and most enduring. As the newcomers became "Maghribised", i.e. at the latest from the second generation onwards, they thereby ceased to be perceived as Mashāriḳa. The first waves of them, up to the last quarter of the 2nd century/beginning of the 9th one, were made up of sedentaries who founded new towns or who settled in already existing towns. Their number cannot have exceeded a quarter of a million: fighters for the faith, often coming with wives and children; officials; men of religion; merchants; and all kinds of persons attracted by the prospect of profits offered by a new land (see M. Talbi, *L'émirat aghlabide*, Paris 1966, 21-2, and art. al-ʿarab, v, at 542-3). The towns where they settled formed at one and the same time centres for religious Islamisation and cultural Arabisation, i.e., for the orientalisation of the Maghrib. A certain number of the Ṣaḥāba, the Companions of the Prophet, are said to have died in the Maghrib (see Abu 'l-ʿArab, *Ṭabaḳāt*, ed. Ben Cheneb, Paris 1915, 16-18; and al-Mālikī, *Riyāḍ*, ed. B. al-Bakkūsh and M. A. al-Miṭwī, Beirut 1981, i, 60-98, where, in the notes, the editors refer in a virtually exhaustive fashion to the other sources), and certain towns have retained the memory of them till this day, embodied in sanctuaries and tombs, as features of great glory. Thus at al-Ḳayrawān, the presumed tomb of Abū Zamʿa al-Balawī, transformed into the centre of a sanctuary—the Zāwiya Sīdī al-Ṣāḥib—enjoys a particular prestige (see B. Roy and P. Poinssot, *Inscriptions arabes de Kairouan*, Paris 1950, ii/1, 65-76). Nevertheless, the sources attach a particular importance to ten Successors or Tābiʿūn who were sent by the caliph ʿUmar b. ʿAbd al-ʿAzīz (99-101/717-20) into Ifrīḳiya in order to spread Islam in the Maghrib (al-Mālikī, *Riyāḍ*, i, 99-118, with reference to other sources). One should however note that there was no figure of the first rank among these Mashāriḳa.

Politically, the most outstanding of the eastern dynasties who reigned in the Islamic West were the Aghlabids of al-Ḳayrawān, the Idrīsids of Fez, the Umayyads of Cordova and the Fāṭimids [*q.vv.*], the founders of al-Mahdiyya [*q.v.*] on the Tunisian coast. The last Mashāriḳa who infiltrated into the Maghrib and then Spain in large numbers—several hundred thousands?—were the nomadic Banū Hilāl [*q.v.*], who were victorious in 443/1052 at Ḥaydarān [*q.v.*] and were backed up by the Banū Sulaym. Views on the extent of his "catastrophe" of the Hilālian invasions vary considerably (see Talbi, *Droit et économie en Ifrīḳiya...*, in *Etudes d'histoire ifrīḳiyenne*, Tunis 1982, 205 and n. 4, Eng. tr. in *The Islamic Middle East*, ed. A. L. Udovitch, Princeton 1981, 222-3 and n. 77). But the Hilāl and Sulaym were not perceived in the Muslim West as Mashāriḳa *stricto sensu*.

This term too, together with those of *ʿIrāḳī* and *Kūfī*, denoted fairly frequently in the Muslim West, though not inevitably and constrainedly, the geographical connection with a socio-cultural area, but equally, the belonging to a religious school. In particular, the Shīʿīs are often described in Ifrīḳiya, after the coming of the Fāṭimids, as being *mashriḳīs*, even when the persons in question were authentic Maghribīs. Thus Ibn Ghāzī was a pious Sunnī of al-Ḳayrawān and a zealous frequenter of *ribāṭs*. "When ʿUbayd Allāh made his entry [into al-Ḳayrawān], he embraced Shīʿism (*tasharraḳa*)" (Talbi, *Biographies aghlabides*, Tunis 1968, 284). Another similar person was "a *mashriḳī* who had abandoned Islam" (al-

Mālikī, *Riyāḍ*, ii, 502) in order to convert to the Shīʿī heresy. An assembly at al-Ḳayrawān brought together "Sunnīs and *mashāriḳa*" (*ibid.*, ii, 338), i.e. Shīʿīs. See other examples in *ibid.*, ii, 425, 427, and in Talbi, *op. cit.*, 369, 383, 394.

The terms *ʿIrāḳī* (or *ahl al-ʿIrāḳ*) and *Kūfī* were, on the other hand, more often reserved for Ifrīḳiyan Ḥanafīs (al-Mālikī, *Riyāḍ*, i, 181, 256, 263, 264, 266, 277, 374, 375, 451, 452, 463, 500, ii, 29, 73, 207, 339; and Talbi, *op. cit.*, index s.v. *ʿIrāḳiyyūn*). These last, in contradistinction from the Mālikīs who made up the spear-head of opposition to the Fāṭimids, showed themselves as much more receptive to Shīʿī propaganda, which may be a contributory cause to their disappearance from the North African scene, after having formed the majority there (Talbi, *L'émirat aghlabide*, 233), once Shīʿism was finally extirpated.

Above all, it was in a dual role, religious and cultural, that the Mashāriḳa played an outstanding part in the Muslim West. Certainly, none of their outstanding stars went beyond the Nile valley. The Maghrib was to some extent a land of exile where only persons relatively in the second rank sought their fortune, which does not however mean that their role was any the less decisive. Let us mention, for example, that ʿIyāḍ [*q.v.*] had among his masters two Mashāriḳa who had visited Ceuta, Abu 'l-Ḥasan al-Rabʿī al-Maḳdisī (d. at al-Nāṣiriyya in 531/1137, ʿIyāḍ, *Ghunya*, no. 81) and the Shāfiʿī Sahl b. ʿUthmān al-Nīsābūrī (no. 89; al-Maḳḳarī, *Nafḥ*, ed. Iḥsān ʿAbbās, Beirut 1968, iii, 67). Naturally, one cannot give here an exhaustive survey. Such a survey, which has not yet been done, would however show itself as very suggestive and open up many directions for research. The sources at our disposal at present have not, in any case, kept note of everything. Al-Maḳḳarī, who devotes 86 biographical notices to the Mashāriḳa who resided in al-Andalus (*Nafḥ*, iii, 5-149), remarks that "one cannot give an exhaustive list of them, even when limiting oneself to the most outstanding ones (*ibid.*, iii, 5). For his part, Ibn Bashkuwāl provides us with over 50 names of Mashāriḳa established in Muslim Spain (*al-Ṣila*, classified in an approximately alphabetical order at the end of each section, under the rubric *wa-min al-ghurabāʾ* ...).

Among the top figures, three are especially representative of the role played by the Mashāriḳa in the Muslim West, comprising two philologist *adībs* and a musician. Abū ʿAlī al-Ḳālī (288-356/901-67 [*q.v.*]) arrived in Cordova in 330/942 and was received with great pomp (al-Maḳḳarī, iii, 71-2). Drawing on his rich library, and also on his memory, he spread eastern culture over a wide range, and he thus occupies the position of "the key figure in the ʿIrāḳī tradition in the West" (R. Sellheim, *EI²* art. s.v.). The figure of Ṣāʿid al-Baghdādī (d. ?417/1026 [*q.v.*]) is in a sense even more representative and of heightened relief (see R. Blachère, *Un pionnier de la culture arabe orientale en Espagne au Xᵉ siècle: Ṣâʿid de Bagdad*, in *Analecta*, Damascus 1975, 443-65). This was that of "a fairly picturesque Bohemian" (*op. cit.*, 445), certainly, enough of a flamboyant figure to shine at court. Having been compelled to "give up the idea of making a name for himself in Iraq", he took the road for Cordova, where he became "something like the type of the pioneer of oriental literary culture in Spain during the second half of the 10th century" (465). Ziryāb (173-243/789-857 [*q.v.*]) was a black musician who had first of all gravitated into the orbit of the ʿAbbāsid court in Baghdād. Having aroused jealousies there, he also had to renounce making an impression in ʿIrāḳ, and, after a brief stay in al-Ḳayrawān, went to seek his fortune at Cordova, arriving there in 207/822. His enormous influence was not just in the muscial sphere. "Under the unchallenged arbitration of Ziryāb, the court and the town altered their dress, their furnishings [and] their cuisine" (E. Lévi-Provençal, *Hist. Esp. mus.*, Paris 1950, i, 272).

Bibliography: There is no specific bibliography for this topic. In addition to references given in the text, information can be gleaned from all the historical works, from the *adab* literature and, above all, from the *ṭabaḳāt*. (M. TALBI)

MASHHAD (A.), noun of place from the verb *shahida* "to witness, be present at" > "be a martyr, *shahīd*" (a post-Ḳurʾānic semantic development which Goldziher thought was influenced by Eastern Christian Syriac parallel usage; see *Muh. Studien*, ii, 387-9, Eng. tr. ii, 350-2). In post-Ḳurʾānic times also, the noun *mashhad* developed from its designating any sacred place, not necessarily having a construction associated with it, but often in fact a tomb in general, the burial place of an earlier prophet, saint or forerunner of Muḥammad or of any Muslim who had had pronounced over him the *shahāda* or profession of faith. Later, it might mean a martyrium specifically or be used for any small building with obvious religious features like a *miḥrāb* [*q.v.*] (see O. Grabar, *The earliest Islamic commemorative structures, notes and documents*, in *Ars Orientalis*, vi [1966], 9-12). Literary sources, e.g. the early geographers, mention *mashhads* of what are clearly highly varying natures (see e.g. al-Muḳaddasī, tr. A. Miquel, *La meilleure répartition*, Damascus 1963, 6 n. 15), but an early epigraphic instance of the term's usage is on the frieze of the Mīl--i Rādkān, the tomb tower in Gurgān erected by the Bāwandid local ruler, the Ispahbadh Muḥammad b. Wandarīn, in 407-11/1016-21, where this edifice is described as a *mashhad* (see M. Van Berchem, *Die Inschriften der Grabtürme*, 1, in E. Diez, *Churasanische Baudenkmäler*, i, Berlin 1918, 87-90; *RCEA*, vi, nos. 2312-13; KITĀBĀT. 9. Iran and Transoxiana and Pl. XIX no. 22).

For the tomb of the caliph and First Imām of the Shīʿīs, ʿAlī, the Mashhad ʿAlī, see AL-NADJAF; for that of the Third Imām, al-Ḥusayn, the Mashhad (al-) Ḥusayn, see KARBALĀ; and for that of the Eighth Imām, ʿAlī al-Riḍā, the Mashhad in Khurāsān, see the next article.

Genequand, Geneva 1978, index s.v.; and the arts. BUḲʿA in Suppl., ḲUBBA, MASDJID. I. B. 4 Tomb-mosques, and TURBA. (C. E. BOSWORTH)

MASHHAD, a city of northeastern Persia, the capital of the present province of Khurāsān [*q.v.*] and the location since medieval times of one of the most important shrines of the Shīʿī world built round the tomb of the Eighth Imam ʿAlī al-Riḍā [*q.v.*].

1. Geography, history and topography to 1914. Mashhad lies 3,000 feet above sea level in 59° 35′ E. long. and 16° 17′ N. lat. in the valley from 10 to 25 miles broad of the Kashaf-Rūd, also called Āb-i Mashhad, which joins the Harī Rūd [*q.v.*] about 100 miles S.E. of Mashhad on the Russo-Persian frontier. Mashhad lies about 4 miles south of the bank of the Kashaf-Rūd. The hills which run along the valley rise to 8,000 or 9,000 feet near Mashhad. In consequence of its high situation and proximity to the mountains,

the climate of Mas͟hhad is in the winter rather severe, in the summer, however, often tropically hot; it is regarded as healthy.

Mas͟hhad may in a way be regarded as the successor of the older pre-Islamic Ṭūs [*q.v.*], and it has not infrequently been erroneously confounded with it.

The fact that Ṭūs is the name of both a town and a district, together with the fact that two places are always mentioned as the principal towns of this district, has given rise among the later Arab geographers to the erroneous opinion that the capital Ṭūs is a double town consisting of Ṭābarān and Nūḳān; e.g. Yāḳūt, iii, 560, 5 (correct at iv, 824, 23) and in the *Lubāb* of Ibn al-At͟hīr quoted by Abu 'l-Fidā' (*Taḳwīm*, 453). Al-Ḳazwīnī (*At͟hār al-bilād*, 275, 21) next made the two towns thought to be joined together into two quarters (*maḥalla*). This quite erroneous idea of a double town Ṭūs found its way into European literature generally. Sykes (*JRAS* [1910], 1115-16) and following him, E. Diez (*Churasanische Baudenkmäler*, Berlin 1918, i, 53-4) have rightly challenged this untenable idea. The older Arab geographers quite correctly distinguish between Ṭābarān and Nūḳān as two quite separate towns. Nūḳān, according to the express testimony of the Arabic sources, was only ¼ parasang (*farsak͟h*) or one Arabic mile from the tomb of Hārūn al-Ras͟hīd and ʿAlī al-Riḍā (see below) and must therefore have been very close to the modern Mas͟hhad. The ruins of Ṭābarān-Ṭūs and Mas͟hhad are about 15 miles apart.

In Nūḳān, or in the village of Sanābād͟h belonging to it, two distinguished figures in Islamic history were buried within one decade: the caliph Hārūn al-Ras͟hīd and the ʿAlid ʿAlī al-Riḍā b. Mūsā [*q.vv.*].

When Hārūn al-Ras͟hīd was preparing to take the field in K͟hurāsān, he was stricken mortally ill in a country house at Sanābād͟h where he had stopped, and died in a few days (193/809). The caliph, we are told (al-Ṭabarī, iii, 737, 13-17), realising he was about to die, had his grave dug in the garden of this country mansion and consecrated by Ḳur'ān readers.

About 10 years after the death of Ḥārūn, the caliph al-Ma'mūn on his way from Marw spent a few days in this palace. Along with him was his son-in-law ʿAlī al-Riḍā b. Mūsā, the caliph designate, the eighth *imām* of the Twelvers. The latter died suddenly here in 203/818; the actual day in uncertain (cf. Strothmann, *Die Zwölfer-S͟hīʿa*, Leipzig 1926, 171).

It was not the tomb of the caliph but that of a highly venerated *imām* which made Sanābād͟h (Nūḳān) celebrated throughout the S͟hīʿa world, and the great town which grew up in course of time out of the little village actually became called *al-Mas͟hhad* (Mas͟hhad) which means "sepulchral shrine" (primarily of a martyr belonging to the family of the Prophet). Cf. on the conception of *mas͟hhad*, MASD͟JID. I. B. 4; the previous article; and M. van Berchem in Diez, *op. cit.*, i (Berlin 1918), 89-90. Ibn Ḥawḳal (313) calls our sanctuary simply Mas͟hhad, Yāḳūt (iii, 153) more accurately al-Mas͟hhad al-Riḍāwī = the tomb-shrine of al-Riḍā; we also find the Persian name *Mas͟hhad-i muḳaddas* = "the sanctified shrine" (e.g. in Ḥamd Allāh al-Mustawfī, 157). As a place-name, Mas͟hhad first appears in al-Muḳaddasī (352), i.e. in the last third of the 4th/10th century. About the middle of the 8th/14th century the traveller Ibn Baṭṭūṭa (iii, 77) uses the expression "town of Mas͟hhad al-Riḍā". Towards the end of the Middle Ages, the name Nūḳān, which is still found on coins in the first half of the 8th/14th century under the Īlk͟hāns (cf. Codrington, *A manual of Musalman numismatics*, London 1904, 189), seems to have been gradually ousted by al-Mas͟hhad or Mas͟hhad. At the present day, Mas͟hhad is often more precisely known as Mas͟hhad-i Riḍā, Mas͟hhad-i muḳaddas, Mas͟hhad-i Ṭūs (so already in Ibn Baṭṭūṭa, iii, 66). Not infrequently in literature, especially in poetry, we find only Ṭūs mentioned, i.e. New Ṭūs in contrast to Old Ṭūs or the proper town of this name; cf. e.g. Muḥammad Mahdī al-ʿAlawī, *Ta'rīk͟h Ṭūs aw al-Mas͟hhad al-Riḍawī*, Bag͟hdād 1927, 3.

The history of Mas͟hhad is very fully dealt with in the work of Muḥammad Ḥasan K͟hān Ṣanīʿ al-Dawla entitled *Maṭlaʿ al-s͟hams* (3 vols., Tehran 1301-3 A.H.). The second volume is exclusively devoted to the history and topography of Mas͟hhad; for the period from 428/1036-7 to 1302/1885 he gives valuable historical material. On this work, cf. C. E. Yate, *Khurasan and Sistan*, 313-14, and E. G. Browne, *LHP*, iv, 455-6. The *Maṭlaʿ al-s͟hams* forms the chief source for the sketch of the history of the town in Yate, 314-26. Cf. also the chronological notes in Muḥammad Mahdī al-ʿAlawī, *op. cit.*, 13-16.

The importance of Sanābād͟h-Mas͟hhad continually increased with the growing fame of its sanctuary and the decline of Ṭūs. Ṭūs received its death blow in 791/1389 from Mīrāns͟hāh, a son of Tīmūr. When the Mongol noble who governed the place rebelled and attempted to make himself independent, Mīrāns͟hāh was sent against him by his father. Ṭūs was stormed after a siege of several months, sacked and left a heap of ruins; 10,000 inhabitants were massacred (see Yate, 316; Sir Percy Sykes, in *JRAS* [1910], 1118 and Browne, *op.cit.*, iii, 190). Those who escaped the holocaust settled in the shelter of the ʿAlid sanctuary. Ṭūs was henceforth abandoned and Mas͟hhad took its place as the capital of the district.

As to the political history of Mas͟hhad, it coincides in its main lines with that of the province of K͟hurāsān [*q.v.*]. Here we shall only briefly mention a few of the more important events in the past of the town. Like all the larger towns of Persia, Mas͟hhad frequently saw risings and the horrors of war within its walls. To protect the mausoleum of ʿAlī al-Riḍā in the reign of the G͟haznawid Masʿūd [*q.v.*], the then G͟haznawid governor of K͟hurāsān erected defences in 428/1037. In 515/1121 a wall was built round the whole town which afforded protection from attack for some time. In 556/1161 however, the G͟huzz [*q.v.*] succeeded in taking the place, but they spared the sacred area in their pillaging. We hear of a further visitation by Mongol hordes in 695/1296 in the time of Sultan G͟hāzān [*q.v.*]. Probably the greatest benefactors of the town and especially of its sanctuary were the first Tīmūrid S͟hāh Ruk͟h (809-50/1406-46 [*q.v.*]) and his pious wife D͟jawhar-S͟hād͟h.

With the rise of the Ṣafawid dynasty [*q.v.*], a new era of prosperity began for Mas͟hhad. The very first S͟hāh of this family, Ismāʿīl I (907-30/1501-24 [*q.v.*]), established S͟hīʿism as the state religion and, in keeping with this, care for the sacred cities within the Persian frontier, especially Mas͟hhad and Ḳumm, became an important feature in his programme as in those of his successors. Pilgrimage to the holy tombs at these places experienced a considerable revival. In Mas͟hhad, the royal court displayed a great deal of building activity. In this respect Ṭahmāsp I, Ismāʿīl I's successor (930-84/1524-76 [*q.v.*]), and the great S͟hāh ʿAbbās I (995-1037/1587-1627 [*q.v.*]) were especially distinguished.

In the 10th/16th century the town suffered considerably from the repeated raids of the Özbegs (Uzbeks). In 913/1507 it was taken by the troops of the S͟haybānī K͟hān [see S͟HAYBĀNIDS]; it was not till

934/1528 that Shāh Ṭahmāsp I succeeded in repelling the enemy from the town again. Stronger walls and bastions were then built and another attack by the same Özbeg chief was foiled by them in 941/1535. But in 951/1544 the Özbegs again succeeded in entering the town and plundering and murdering there. The year 997/1589 was a disastrous one for Mashhad. The Shaybānid ʿAbd al-Muʾmin after a four months' siege forced the town to surrender. The streets of the town ran with blood, and the thoroughness of the pillaging did not stop at the gates of the sacred area. Shāh ʿAbbās I, who lived in Mashhad from 993/1585 till his official ascent of the throne in Ḳazwīn in 995/1587, was not able to retake Mashhad from the Özbegs till 1006/1598.

At the beginning of the reign of Ṭahmāsp II in 1135/1722, the Afghān tribe of Abdālī [*q.v.*] invaded Khurāsān. Mashhad fell before them, but in 1138/1726 the Persians succeeded in retaking it after a two months' siege. Nādir Shāh (1148-60/1736-47 [*q.v.*]) had a mausoleum built for himself in Mashhad.

After the death of Nādir Shāh, civil war broke out among the claimants to the throne, in the course of which the unity of the Persian empire was broken. The whole eastern part of the kingdom of Nādir Shāh, particularly Khurāsān (except the district of Nīshāpūr), passed in this period of Persian impotence under the rule of the vigorous Afghān Shāh Aḥmad Durrānī [*q.v.*]. An attempt by Karīm Khān Zand [*q.v.*] to reunite Khurāsān to the rest of Persia failed. Aḥmad defeated the Persians and took Mashhad after an eight months' siege in 1167/1753. Aḥmad Shāh and his successor Tīmūr Shāh left Shāh Rukh in possession of Khurāsān as their vassal, making Khurāsān a kind of buffer state between them and Persia. As the real rulers, however, both these Afghān rulers struck coins in Mashhad.

Otherwise, the reign of the blind Shāh Rukh, which with repeated short interruptions lasted for nearly half a century, passed without any events of special note. It was only after the death of Tīmūr-Shāh (1207/1792) that Agha Muḥammad Khān, the founder of the Ḳādjār [*q.v.*] dynasty, succeeded in taking Shāh Rukh's domains and putting him to death in 1210/1795, thus ending the separation of Khurāsān from the rest of Persia. The death soon afterwards of Agha Muḥammad (1211/1796) enabled Nādir Mīrzā b. Shāh Rukh, who had escaped to Harāt, to return to Mashhad and take up the reins of government again. A siege of his capital by a Ḳādjār army remained without success; but in 1803 Fatḥ ʿAlī Shāh was able to take it after a siege of several months when Nādir's funds were exhausted.

From 1825 Khurāsān suffered greatly from the raids of Turkoman hordes and the continual feuds of the tribal leaders (cf. Conolly, *Journey*, i, 288 and Yate, 53). To restore order, the crown prince ʿAbbās Mīrzā entered Khurāsān with an army and made Mashhad his headquarters. He died there in 1833.

The most important political event of the 19th century for Mashhad was the rebellion of Ḥasan Khān Sālār, the prince-governor of Khurāsān, a cousin of the reigning Shāh Muḥammad-i ʿAbbās. For two years (1847-9) he held out against the government troops sent against him. At the time of the accession of Nāṣir al-Dīn (1848), Khurāsān was actually independent. It was only when the people of Mashhad, under pressure of famine, rebelled against Sālār that Ḥusām al-Salṭana's army succeeded in taking the town.

In 1911 a certain Yūsuf Khān of Harāt declared himself independent in Mashhad under the name of Muḥammad ʿAlī Shāh, and for a period disturbed Khurāsān considerably with the help of a body of reactionaries who gathered round him. This gave the Russians a pretext for armed intervention, and on 29 March 1912, they bombarded Mashhad in gross violaton of Persia's suzerain rights and many innocent people, citizens and pilgrims, were slain. This bombardment of the national sanctuary of Persia made a most painful impression in the whole Muslim world. Yūsuf Khān was later captured by the Persians and put to death (cf. Browne, *The press and poets of modern Persia*, Cambridge, 1914, 124, 127, 136; Sykes, *History of Persia*, London 1927, ii, 426-7).

Mashhad is now the centre of eastern Persia, the capital of the province of Khurāsān which, since its eastern part was taken by the Afghāns in the 18th century, is barely half its former size (cf. Le Strange, *Lands*, 383-4; *Isl.*, xi, 108-9). In the middle ages it was not Ṭūs, Mashhad's predecessor, but Naysābūr (modern Persian Nīshāpūr) that was the capital of this extensive and important province. A royal prince has usually been governor since the fall of the Nādirids. Since 1845, the lucrative and influential post of Mutawallī-Bāshī, the controller or treasurer of the sanctuary of the Imām, has usually been combined with the governorship (cf. Yate, 322).

Like most pre-modern Persian towns, Mashhad was enclosed by a great girdle of walls. The lines built to stiffen the defences, namely a small moat with escarpment before the main wall and a broad ditch around outside, were by the early 20th century in ruins and in places had completely disappeared.

The citadel (*ark*) in the southwest part of the town was directly connected with the system of defences. It was in the form of a rectangle with four great towers at the corners and smaller bastions. The palace begun by ʿAbbās Mīrzā but finished only in 1876, with its extensive gardens, was connected with the fortress proper, by the end of the 19th century fallen into disrepair (cf. Yate, 327). It was used as the governor's residence. The whole quarter of government buildings which, according to MacGregor, occupied an area of 1,200 yards, was separated from the town by an open space, the Maydān-i Tōp (Cannon Place) which was used for military parades.

There were six gates in the city walls.

The town was divided into six great and ten smaller quarters (*maḥalla*) (see Yate, 328). The six larger bore the names of their gates; see al-Mahdī al-ʿAlawī, *op. cit.*

The principal street which divides the whole town into two roughly equal halves, the Khiyābān, is a creation of Shāh ʿAbbās I, who did a great deal for Mashhad (see Yate, 319; cf. the pictures in Sykes, *The glory of the Shia world*, 231). This street, a fine promenade, is, being the main thoroughfare, filled all day with a throng of all classes and nationalities, including numerous pilgrims, and caravans of camels and asses; the bustle is tremendous, especially in the middle of the day.

The canal, which flowed through the Khiyābān in a bed about 9 feet broad and 5 feet deep, was fed, not from the Kashaf Rūd (see above) which runs quite close to Mashhad, for it has too little water, but from the Česhme-yi Gīlās, where the river rises, and which used to provide Ṭūs with water. When this town had been almost completely abandoned, Shīr ʿAlī, the vizier of Sultan Ḥusayn b. Manṣūr b. Bāyḳarā (1468-1506 [see ḤUSAYN MĪRZĀ]), at the beginning of the 10th/16th century had the water brought from this source to Mashhad by a canal 45 miles long, thus sealing the ruin of Ṭūs; cf. Yate, 315; al-Mahdī al-ʿAlawī, 13.

The making of this canal (see Yate, 315; Mahdī al-

ʿAlawī, 13) contributed essentially to the rise of Mas͟hhad; for the greater part of its inhabitants relied on it for water, although after entering the town, the canal became muddy and marshy (which was often a subject of satire; cf. ʿAbd al-Karīm, *Voyage*, 74), and used it for drinking, washing and religious ablutions without hesitation. There were also large and deep reservoirs before the main gates. The water was saline and sulphurous and therefore had an unpleasant taste (cf. Conolly, i, 333-4; Khanikoff, 105; Curzon, i, 153).

The *Ḥaram-i S͟harīf* or sacred area, often called the *Bast* [*q.v.*], literally "place of refuge, asylum", straddles the lower part of the main street; for a detailed consideration of the shrine, see 3. below.

As to descriptions of Mas͟hhad by Europeans, we owe the first full description to Fraser (1822); Conolly (i, 260) and Burnes (ii, 78) both say it is thoroughly reliable. Valuable notes on the town are given by Conolly, Ferrier, Khanikoff, Eastwick, MacGregor, Bassett, O'Donovan, Curzon, Massy, E. Diez, and especially by C. E. Yate and P. M. Sykes, each of whom spent several years (1893-7 and 1905-12 resp.) in Mas͟hhad as British Consul-General for K͟hurāsān.—Ruy Gonzales de Clavijo (1404), *Embassy to the court of Timur*, ed. C. R. Markham London 1859, 109-10; Truilhier (1807), in *Bulletin de la Société de Géogr.*, ix, Paris 1838, 272-82; J. B. Fraser (1822), *Narrative of a journey into Khorasan in the years 1821-1822*, London 1825, 436-548; A. Conolly (1830), *Journey to the North of India*, London 1834, i, 255-89, 296-368; A. 2. History and topography from 1914 to the present day [see Suppl.]

3. The shrine, and Mas͟hhad as a centre of S͟hīʿī learning and piety [see Suppl.]

MAS͟HHAD ʿALĪ [see al-nad͟jaf].

MAS͟HHAD ḤUSAYN [see karbalāʾ].

MAS͟HHAD-I MIṢRIYĀN, a ruined site in Transcaspia (the modern Türkmenistan SSR) north-west of the confluence of the Atrak and its right bank tributary the Sumbar, or more exactly, on the road which runs from Čat at right angles to the road connecting Čikis͟hler with the railway station of Aydîn.

The ruins are surrounded by a wall of brick and a ditch and have an area of 320 acres. The old town, situated in the steppes which are now peopled by Turkomans, received its water from a canal led from the Atrak about 40 miles above Čat. Near the latter place, the canal diverged northwards from the river, crossed the Sumbar by a bridge and finally followed

an embankment 6 feet high on which the bed of the canal was 12 feet broad.

The ruins of a fine mosque can still be seen, the gateway of which, decorated with faience, has an inscription according to which this *ṭāḳ* was built by ʿAlāʾ al-Dunyā wa ʾl-Dīn Ghiyāth al-Islām wa ʾl-Muslimīn Ẓill Allāh fi ʾl-ʿĀlamīn Sulṭān Muḥammad b. Sulṭān Takish Burhān Amīr al-Muʾminīn. The Khwārazmshāh Muḥammad in question reigned 596-617/1200-20 [see KHWĀRAZM-SHĀHS]. On one of the two towers (minarets?) is written: *bismillāh ... barakat*^{un} *min Allāh*^{i}, *mimmā amara bihi Abū Djaʿfar Aḥmad b. Abi ʾl-Aʿazz* (?) *ṣāḥib al-ribāṭ, aʿazzahu ʾllāh*^{u}. *ʿAmal ʿAlī R* .... (?). The identity of this Aḥmad is unknown but the title "lord of the *ribāṭ*" which he gives himself, confirms the fact that Mashhad-i Miṣriyān was a frontier fortress (*ribāṭ*). Near the east gate stood another white mosque.

Tradition (Conolly) ascribes the destruction of Miṣriyān to the "Ḳalmuḳ Tatars". The appearance of the Ḳalmuḳs in these regions may be dated about 1600.

The name Mashhad-i Miṣriyān (variants: Mestorian, Mest-Debran, Mest-Dovran, Mastān) is obscure, unless Mestorian is to be explained as * Nestoriyān i.e. "Nestorian Christians"; it may be recalled that during his campaign in the Čōl (*چول), to the east of the Caspian, Yazdagird II persecuted the Christians (Hoffmann, 50; J. Labourt, *Le christianisme dans l'Empire Perse*, Paris 1904, 26).

The site of the ruins (to the north of Djurdjān) is given the name Dihistān in Muslim sources; for the town of this name, and the promontory of Dihistānān-Sur, as the *Ḥudūd al-ʿālam* calls it, see DIHISTĀN. 2.

The ruins of Mashhad-i Miṣriyān (as the inscription on the mosque suggests !) must correspond to the *ribāṭ* of Dihistān which al-Muḳaddasī, 358 (cf. also 312, 367, 372), mentions as distinct from Akhūr. This *ribāṭ*, situated on the borders of the steppes, had fine mosques and rich markets. Relying on Yāḳūt, i, 39, Barthold thought that in the 6th/12th century the *ribāṭ* (and not Akhūr to the east of the Djurdjān-*ribāṭ* road) was the capital of the district of Dihistān.

MASHHŪR (A.), technical term used in the science of *ḥadīth* [*q.v.*] for a well-known tradition transmitted via a minimum of three different *isnāds* [*q.v.*].

Bibliography : Nūr al-Dīn ʿItr, *Muʿdjam al-muṣṭalaḥāt al-ḥadīthiyya*, Damascus 1976, 98, and the literature quoted there. (G. H. A. JUYNBOLL)

MASHRABIYYA (A.) designates a technique of turned wood used to produce lattice-like panels, like those which were used in the past to adorn the windows in traditional domestic architecture.

1. In Egypt. The term derives from Arabic *shariba* "to drink". The connection between the turned wood technique and drinking was established last century by E. W. Lane, who describes the *mashraba* as a niche attached to such lattice wooden
1. (Top third) *al-ṣalīb al-malyān*, "filled cross"; (lower two-thirds) *kanāʾisī ḳibṭī* "Coptic church style".
2. *Nudjūmī* "star-shaped".

windows and used to keep the water jars cool and fresh for drinking. This interpretation is confirmed by *wakf* [*q.v.*] documents, which since the 10th/16th century refer to such niches as *mashraba* and also to the turned wood technique as *mashrabiyya*. Muḥammad ʿAlī [*q.v.*] is said to have prohibited the use of *mashrabiyya* windows, in order to replace traditional by European architecture. The *mashrabiyya* technique is a speciality of Cairo, where it was used with a multitude of patterns and combinations, as the collection of the Islamic Museum in Cairo shows, as well as the remains of some old houses of the Ottoman period. Each type of *mashrabiyya* has its own name, such as *nudjūmī* "star-like", *sākiya* "like a water-wheel", *muthallath* "triangular", *ṣalībī fāḍī* "cross-shaped and empty", *ṣalībī malyān* "cross-shaped and filled in", *kanāʾisī ḳibṭī* "Coptic church type", *kanāʾisī fāḍī* "church type and empty", *ʿayn al-katkūt* "chick's eye, *maymūnī mudawwar* "circular *maymūnī*", *maymūnī nudjūmī* "star-like *maymūnī*" and *maʿkūs* "reversed".

Mashrabiyya panels are composed of small pieces of wood which are turned in various forms and are fixed together without glue or nails, but simply by being inserted into each other, thus giving the panel more resistance towards the flexibility of the wood with the change of temperature. Geometric patterns of great complexity and diversity can be obtained with the combination of the wooden pieces. The result is a transparent screen which is very decorative due to the variation of patterns and density, according to which the pieces, of various shapes, can be fixed together. The panel filters the light and the sun rays in a pleasant manner; at the same time, it allows a view to the exterior without exposing the interior to outside view. This device had an important impact on the fenestration system, since it allowed large surfaces, like a whole wall in a room, to be made in turned wood and thus offered a panorama to the inhabitants at the same time as the introduction of fresh air. This could be combined with the use of glass panels or curtains for additional protection. *Mashrabiyya* windows could be made of painted wood in various colours, or could simply show the natural colour of the wood. Hence Cairo's façades in the 19th century as seen by orientalist painters and in early photographs, were characterised by the multitude of projecting *mashrabiyya* windows that almost touched each other on both sides of the narrow streets.

Historically, the technique of turned wood in Cairo seems to have been used first on other architectural objects before it was applied to windows. Mamlūk *wakf* deeds, which include detailed descriptions of buildings, refer to turned wood, though not usually in connection with windows. Only in the very late Mamlūk *wakf* deeds in the early 10th/16th century do we find, and then only sparsely, references to turned wood used on windows. It is referred to as *khashab kharṭ* or sometimes as *shughl al-kharrāṭ*, i.e. "made by the turner", to distinguish it from *shughl al-nadjdjār*, which means "made by the carpenter".

Whereas Lane reports that in his time, the houses of the rich differed from those of the poor by their larger display of *mashrabiyya* panels, in the Mamlūk period the windows of the rich had iron or bronze grills that were gilded like those of the royal palaces at the Citadel, whereas the more common ones were made of wood. Al-Maḳrīzī, deploring the ruins of the palace of Tashtimur, writes that its marble was replaced by stone, and its iron windows by wooden ones. Mamlūk *wakf* deeds describe the windows of residences of the period as having the same system of fenestration used in the mosque architecture: the lower windows were rectangular, large and adorned with iron or bronze grills, whilst above them were
3. *Nudjūmī maymūnī "star-shaped maymūnī* style".

arched windows with stucco grills filled with coloured glass. The more common house type, or the less visible windows in a residence, were made of wood, in general without turned wood panels, according to the *waḳf* descriptions. Whenever this technique is mentioned in Mamlūk *waḳf* descriptions, it usually refers to balustrades, like that which adorns the *maḳʿad*, i.e. loggia, or the wooden lantern which surmounts the central part of a *ḳāʿa* or reception hall, also found in late Mamlūk mosques. *Khashab kharṭ* is also mentioned in connection with *maghānī*, also called *aghānī*, which are a pair of loggias that flank a *ḳāʿa* on both sides and which, as the name indicates, were intended for the singers and musicians, who traditionally performed behind curtains or screens.

There are three mediaeval mosques in Cairo that display magnificent examples of *mashrabiyya* technique. The mosque of al-Ṣāliḥ Ṭalāʾiʿ, built in the Fāṭimid period (555/1160) and restored more than once under the Mamlūks, has a screen of turned wood, today at the portico but originally inside the mosque. The present one is a modern copy made after a 19th century illustration. The mausoleum of Sultan Ḳalāwūn (built 683-4/1284-5) also has a turned wood screen around the cenotaph, restored at the beginning of this century. Further, the mosque of al-Māridānī (739-40/1340) has its sanctuary screened by a *mashrabiyya* wall from the courtyard.

Regular reference to turned wood *mashrabiyya* in connection with windows in domestic architecture, starts after the Ottoman conquest of Egypt (923/1517) and is found in *waḳf* descriptions. Although windows of turned wood are a characteristic feature of the domestic type of architecture, there is one Ottoman mosque in Cairo that has a large *mashrabiyya* window, the mosque of Yūsuf Agha al-Ḥīn (1035/1625), which was erected along the shore of the Canal of Cairo. The *mashrabiyya* window must have been intended to allow the worshippers to enjoy the view of the water and the greenery.

Nowadays, after modern European architecture was definitely adopted in Cairo from the first half of the 19th century under the initiative of Muḥammad ʿAlī Pasha, *mashrabiyya* windows have disappeared from Cairo's façades. In the second half of that century, European architects introduced a kind of orientalist style in architecture and decoration which revived some traditional crafts, and turned wood became again fashionable, this time, however, with purely decorative functions. It was no more used in its original architectural context, but as decoration for European-style furniture and on small objects. With time, the *mashrabiyya* technique became a touristic craft only practiced in the bazaar, and the term *mashrabiyya* itself became equivalent to local traditional handicraft.

Bibliography: Maḳrīzī *Khiṭaṭ*, Būlāḳ 1270, ii, 68, 71; Lane, *Manners and customs of the modern Egyptians*, introd.: *waḳf* documents of the Mamlūk and Ottoman periods in Cairo, at the Ministry of Waḳf (Daftarkhāna) and at the Dār al-Wathāʾiḳ al-Ḳawmiyya, Citadel (Ḥudjadj al-Mulūk wa 'l-Umarāʾ).

(Doris Behrens-Abouseif)

2. In Iran. As in many other Islamic countries, so too in Iran the use of *mashrabiyya* serves both practical and aesthetic functions. The former includes the protection of the private environment from indiscreet glances, the ability to see without being seen, and the requirements of ventilation. The latter operates in the context of an architecture which lacks deep voids and which strives for an effect of large surfaces over which decoration can extend.

The type most frequently encountered consists of rectangular grilles, grilles with ogee arches and grilles of larger dimensions containing three or more panels with a vertical and stepped movement (*urūsī*). The material most frequently used is wood, and in particular, plane (*čінār* or *platanus orientalis*) which, since it could secure optimum durability, and, since it had a high and straight trunk, also came to be used for columnar porticoes (*tālār*). Sometimes grilles of plaster or of coloured glass were employed (e.g. the specimen removed from the Darb-i Imām at Iṣfahān), as were grilles of stone or plaster and tile mosaic (e.g. the Masjid-i Shaykh Luṭf Allāh and the Masdjid-i Djumʿa, both *in situ* in Iṣfahān).

The main decorative themes comprise vegetal, figural and animal motifs (cf. the above-mentioned grille of the Darb-i Imām); inscriptions (e.g. the large *urūsī* of the Haftdah Tan at Shahr-i Kurd); and, above all, geometric motifs.

In all the types recorded to date—rectangular, ogival, and stepped—the wooden grille is always subdivided for decorative purposes into two main parts, sc. an outer border and an inner field. The first of these, namely the border, always comprising a series of square "modules", is obtained by the repetition of a single decorative motif all along the edge of the grille. This establishes an exact correspondence between the width and height of a single grille. By contrast, the second—namely the inner field—constitutes the principal motif of the whole composition and is therefore subject to certain regulatory "laws".

Such laws are illustrated above all by the use of rotations around precisely located axes; or of rotations of a single basic motif; or of various renderings of a given decorative theme—unless, indeed, a single part of the design is isolated. This makes it possible to obtain, with minimum artifice, a most varied range of compositions.

The geometric schemes highlighted in these various compositions consist in the main of equilateral or isosceles triangles or of squares often rotated at an angle of 45°, and, more rarely, of rectangles. The geometrical figures are above all regular polygons such as hexagons, octagons, decagons and dodecagons, which, with their numerous symmetrical axes, allow the creation of complex ensembles. The decorative motifs employed have very ancient origins and go back to the first centuries of Islamic art and even to the period of Near Eastern late antiquity.

This répertoire was used and elaborated for centuries, with the result that today it is possible to find identical decorative motifs in periods far removed from each other in time. With the Ṣafawids, the decorative motif, initially simple and with a wide mesh, tends to thicken and to become more complicated with the creation of complex stellar figures or those with polygonal matrices. There is an increasing use of coloured glass, mirrors and perforated elements with a progressively increasing use of curvilinear motifs.

With the advent of the Ḳādjārs, this love of curvilinear motifs increases apace and the decorative design changes totally. The mesh widens yet again, the geometric motifs disappear almost entirely while curvilinear motifs prevail. These include floral themes, in which large areas of coloured glass occur; their colour scheme is dominated by blue, red and green.

MAS͟HRIḲ (A.), the East, linked with and opposed to the West (Mag͟hrib [*q.v.*]), either in general or from the strictly geographical point of view; for the Arab world, the Mag͟hrib embraces all the lands to the west of Egypt, and the Mas͟hriḳ all those to the east. Nevertheless, the parallelism is not absolute; whilst the term Mag͟hrib is particularly applied either to the grouping North-Africa-Tripolitania or to North Africa properly so-called or to its most western part, Morocco (Mag͟hrib, al-Mag͟hrib al-Aḳṣā [*q.v.*]), the word Mas͟hriḳ seems to cover the Orient in general, without reference to any one country or another (the name of one of the *mik͟hlāfs* of Yemen, cited in Yāḳūt, *Buldān*, s.v., but not in al-Hamdānī, can only be understood, from all the evidence, in a local context).

An interesting attempt was, however, made in the 4th/10th century to take to its logical conclusion a rigorous parallelism between the two geographical groupings. It emanated from the Arabic geographer al-Muḳaddasī, whose originality of thought and conceptions is well-known. For him, the land of Islam (*mamlakat al-Islām*), going beyond its fourteen provinces, embraces several binary oppositions. Just as there exist two seas (those of Rūm and Ṣīn) and two deserts (the *bādiyat al-ʿArab* and the *mafāza* of Iran), there likewise exist two particular provinces (*iḳlīm*), hence binary also (a third province, Arabia, further has, like the two preceding ones, two capitals, Mecca and Zabīd, for the two lands of the North and the South, and this last, Yemen, is also described to us as having two lands, one of seacoast and one of the mountains (*Aḥsan al-taḳāsīm*, 56, 69-70, 260-1); but the parallelism with the other two great provinces is not pushed any further). To the Mag͟hrib, made up of two *d̲j̲ānibs* (al-Andalus and the Mag͟hrib properly speaking) and with two metropolises (*miṣr*) of Cordova and al-Ḳayrawān, there corresponds the Mas͟hriḳ, defined as the assemblage of lands more or less strictly under the aegis of the Sāmānids, including Sid̲j̲istān, K͟hurāsān and Transoxania (*mā warāʾ al-nahr*), this assemblage being divided into two *d̲j̲ānibs* separated by the D̲j̲ayḥūn river (sc. the Oxus); to the south, K͟hurāsān and its *miṣr*, Naysābūr and to the north, Hayṭal and its *miṣr*, Samarḳand. It should be noted that al-Muḳaddasī, in the introduction to his work, adds to the distinction Mag͟hrib/Mas͟hriḳ a further parallelism between G͟harb and S͟harḳ, one which does not however seem to be operative in the rest of the book; for the author, G͟harb embraces the ensemble Mag͟hrib-Egypt-S͟hām (sc. Syria-Palestine) and S͟harḳ the ensemble Mas͟hriḳ-Fārs-Kirmān-Sind.

Bibliography: In addition to the references given in the text, see Muḳaddasī, 7, 47, 57, 260 ff. and *passim*. (A. Miquel)

MAS͟HRIḲ AL-AD͟HKĀR, a term used in the Bahāʾī movement for four related concepts: 1. In Iran (loosely) to describe early morning gatherings for reading of prayers and sacred writings. 2. Generally of any house erected for the purpose of prayer. 3. Most widely, to refer to Bahāʾī temples (*maʿbad*) or "houses of worship", of which six have been built on a continental basis. The earliest was constructed in As͟hkābād, Russian Central Asia by the expatriate Iranian Bahāʾī community there (begun 1902; completed 1920; damaged by earthquake 1948; demolished 1963). The others are: Wilmette, Illinois (begun 1912; dedicated 1953); Kampala, Uganda (1961); Sydney, Australia (1961); Frankfurt, W. Germany (1964); Panama City, Panama (1972). Temples are under construction in India and Western Samoa, while land has been acquired for over 100 national buildings. Architecturally, temples differ widely, but conform to minimum requirements of a nine-sided circular construction. Internal ornamentation is sparse, with prohibition on images and use of a *minbar*; seating is provided for congregations on the Western church pattern, facing the Bahāʾī *ḳibla* (Bahd̲j̲ī, near Acre, Israel). In the absence of formalised clergy, worship takes the simple pattern of reading from Bahāʾī or other scriptures; sermons, instrumental music, and communal prayer are forbidden, although chanting (*tilāwa*), unaccompanied singing, and a capella choral singing are permitted. "Elaborate and ostentatious ceremony" is proscribed, and set forms of service are not laid down; private *ṣalāt* may be performed (communal *ṣalāt* is forbidden in Bahāʾī law). Temples are open to non-adherents for private worship. 4. In its widest application, to refer to a central temple in conjunction with various dependencies regarded as intrinsic to the overall institution. These include a school for orphans, hospital and dispensary for the poor, home for the aged, home for the infirm, college of higher education, and traveller's hospice. With the exception of a home for the aged in Wilmette, no dependencies have as yet been established. Temples may be erected on a national or local basis; administrative buildings (*ḥaẓīrat al-ḳuds*) are kept separate from the *mas͟hriḳ al-adhkār*.

Bibliography: ʿAbd al-Ḥamīd *Is͟hrāḳ K͟hāvarī* (ed.), *Gand̲j̲īna-yi ḥudūd wa aḥkām*, Tehran 1961, 188-9, 230-40; *The Bahāʾī World*, xiii (Haifa 1970), 699-748; xiv (1974), 475-95; xv (1976), 629-49; Mīrzā Asad Allāh Fāḍil Māzandarānī, *Amr wa k͟halḳ*, iv (Tehran 1970), 147-53. (D. MacEoin)

MAS͟HRŪBĀT (Ar.), drinks.

I. *Problems of identification and of permissibility.*

The problem of the distinction between "permitted" and "forbidden" in relation to drinks is a subject of great interest to Islamic religious literature, on account of the prohibition, in the Ḳurʾān, of the consumption of wine [see K͟hamr]. By extension, everything alcoholic is forbidden, and doctors of law devote entire chapters, and even independent works, to the subject of drinks (*as͟hriba*; for example: *Kitāb al-As͟hriba* by Aḥmad b. Ḥanbal, numerous editions). The use of certain receptacles is forbidden to Muslims, because of the ease with which they may be employed for the fermentation of liquids (see for example, *dubbāʾ*, *ḥantam*, *naḳīr*, in the *Concordance de la tradition musulmane*; the epistle of al-D̲j̲āḥiẓ, *al-S͟hārib wa 'l-mas͟hrūb*; the art. k͟hamr; and especially the legal and literary sources quoted in Sadan, *Vin—fait de civilisation*, in *Studies in memory of Gaston Wiet*, 129-60; one of the best later sources (somewhat polemical) is *Ikrām man yaʿīs͟h bi-aḥkām al-k͟hamr wa 'l-has͟hīs͟h* by al-Aḳfahsī, B.L. ms. 9646, fols. 1b-7a, which makes a distinction, from a judicial point of view, between all kinds of musts, beers, etc.; drinks composed of fruits (dates, etc.) mixed in water are called *fadīk͟h*, *naḳīʿ* (cf. *ʿIlm al-tilmīd̲h̲ bi-aḥkām al-nabīd̲h̲*, Princeton, Yahuda 2090, ms. 5084, fols. 15a-20a). Liquids which tend to ferment are produced on the basis of fruits, various berries, cereals or honey (mead is called *bitʿ*, *nabīd̲h̲ al-ʿasal*); from syrup or from preserves of fruit there derives the *dūs͟hāb* which is sometimes non-alcoholic,

but which al-Djāḥiẓ and other authors mention in the context of drinks (*dūshāb*, *dādhī*, etc.) which can ferment and become alcoholic (see the references cited above, as well as Abū Hilāl al-ʿAskarī, *Dīwān al-maʿānī*, i, 331: *nabīdh al-dibs*—identical to *dūshāb*; M. Ahsan, *Social life under the ʿAbbasids*, 111). Certain jurists of the Ḥanafī and Muʿtazilī schools had a tendency to permit the consumption of some of these drinks, under certain conditions, excluding only wine made from grapes. A more limited group of the Muʿtazilīs (to which al-Djāḥiẓ did not belong) even tried to legalise wine made from grapes, and it is for this reason that Ibn Ḳutayba, *al-Ashriba*, ed. M. Kurd ʿAlī, calls them "theologians of debauchery" (*mudjdjān ahl al-kalām*) (for other details, see Sadan, *op. cit.*, and for *dādhī*, see also al-Balawī, *al-Alif bāʾ*, ii, 80, and S. D. Goitein, *A Mediterranean society*, iv, 1983, 260).

Now these tendencies count for nothing in Islamic jurisprudence at present (even among the Ḥanafīs), and these numerous and rich testimonies from mediaeval texts are cited only to show the difficulty, in a given historical context, of distinguishing between the "permitted" and the "forbidden", the "soft" and the alcoholic, and above all, to underline the rich variety of fermented drinks, soft or relatively so, musts and beers. The term *nabīdh* [*q.v.*], for example, most often denotes a true wine made from dates (very potent according to pre-Islamic poetry; see Sadan, *op. cit.*), or from various berries, but—with reference to the *nabīdh* consumed by the Prophet—the religious texts stress the non-alcoholic nature of this drink, which was lightly fermented (or, rather, exposed to the sun for only a few hours, according to the definitions of the texts themselves), in order to prevent any other interpretation of this term in the context of the biography of the Prophet (see Ibn Ḥayyān, *Akhlāḳ al-nabī*, Cairo 1959, 225-8; Ibn al-Djawzī, *al-Wafāʾ*, Cairo 1966, 617; cf. al-Bādjūrī, [Commentary on] *al-Shamāʾil* by al-Tirmidhī, Cairo 1301).

II. *Beers.*

In fact, beers were well-known in the civilisation of that time. For example: 1. *Mizr*, see *Concordance*, s.v.; Dozy, *Suppl.*, under *mizr*, *mazr*, *mizār*; S. D. Goitein, *op. cit.*, iv, 261 (under "beer") and cf. al-Ḥalabī, *Nuzhat al-udabāʾ*, Camb. ms. or. 1256(8), fol. 218b, where the Egyptian author describes *mizr* as the favourite drink of the Negroes living in Egypt. See also al-Aḳfahsī, *op. cit.*, fol. 5a, who calls *mizr* by the name of *nabīdh al-dhura*, "beer" of maize or of sorghum, while "beer" of wheat is called in Egypt, *apud* al-Aḳfahsī, *ḥatīʿā*; as for barley beer, *māʾ shaʿīr*, see below under the heading *fuḳḳāʿ*. On *mazzār* = "brewer", see Ibn Mawlāhum, *Maḳāma fī khamsīn marʾa*, B.L. ms. Add. 19, 411, fol. 94a: *mazzāra* (= "brewer" in the fem.) and her implements, her receptacles and the preparation of the drink. 2. *Djāʿa*, see, for example, Ibn Ḥadjar, *Fatḥ al-Bārī*, x, 258-9; on the revived use of this term in this century, in place of the more widespread borrowing *bīra* (= modern beer), see *Machriq*, xii, 401-7. 3. *Māʾ shaʿīr* and *aḳsimā*, see below. 4. *Boza*, see towards the end of the article. 5. *Fuḳḳāʿ*, see Ibn Ḳutayba, *ʿUyūn*, iii, 280; Kushādjim, *Dīwān*, 1313, 84; al-Sarī al-Raffāʾ, *Dīwān*, Baghdād 1981, ii, 180: *fuḳḳāʿ* = sparkling drink; al-Ḥuṣrī, *Zahr*, ed. al-Bidjāwī, i, 116: *faḳḳāʿ* = producer and vendor of this drink; al-Rāghib al-Iṣfahānī, *Muḥāḍarāt al-udabāʾ*, Beirut 1961, ii (4), 379; P. Kahle, in *ZDMG* (1935), 344; Darrāg, *L'acte de waqf de Barsbay*, Cairo 1963, 52; Sadan, in *REI* (1977), 50, 56, n. 18; Goitein, *loc. cit.* The long and narrow vessels which, among their others functions, were used for the preparation or storage of this "beer", were the *kīzān* (sing. *kūz*, see above). The *kūz*, often fitted with a handle (see al-Ghuzūlī, *Maṭāliʿ al-budūr*, Cairo 1299-1300, ii, 72) is frequently mentioned and described in Arabic literature. However, Goitein, *op. cit.*, iv, 146, translates *kīzān* as "bowls", a sense which the word possesses in certain dialects. With reference to the producer/vendor of this drink (*faḳḳāʿ*), see also the popular *Story of the Caliph Hārūn al-Rashīd and the fuḳḳāʿī* (= *faḳḳāʿ*), B.N. Ar. ms. 3658 fols. 26b-34a. On the *faḳḳāʿ/fuḳḳāʿī* = brewer, see also al-Nawādjī, *Marātiʿ al-ghizlān*, B.N. ar. ms. 3402, fol. 36a; al-Ṣarīḥī, *Nuzhat al-afrāḥ*, Oxford ms. Marsh 2, fol. 46a; al-Khafādjī, *Ṭirāz al-madjālis*, Cairo 1284, 71-3; S. de Sacy, *Exposé de la religion des Druzes*, i, pp. cccxxxii-iii.

There existed numerous kinds of *fuḳḳāʿ*: they are mentioned in culinary literature, among sauces and drinks (see the mss. mentioned below and M. Rodinson, in *REI* [1949], 131, whose material is based on *al-Wuṣla* (see below); art. GHIDHĀʾ and Ḥ. Zayyāt, in *Machriq*, xli, 25). The sense of "beer" is clearly evident when the text describes the fermentation (*yakhmar*, *yaṭhūr*) of this drink. In addition to the references given above concerning the *fuḳḳāʿ*, see anon., *Kanz al-fawāʾid*, Camb. ms. Qq. 196, fols. 108a-b, 109a: *fuḳḳāʿ* sweetened and flavoured with fruit (the mediaeval equivalent of "shandy" or almost so; it may thus be with justification that Ahsan, *loc. cit.*, attempts to conclude from a very partial reference of *adab* that this drink was invariably soft or even non-alcoholic; however, *apud* al-Ghuzūlī, *op. cit.*, who accurately reflects life in mediaeval Egypt, various kinds of *fuḳḳāʿ* were sweetened to a considerable extent), 108b, 109a-b: *māʾ shaʿīr*, literally "barley water", when fermented becomes "barley beer", of which a special variety exists for the nights of the month of Ramaḍān (according to this text and according to anon., *K. al-Ṭabīkh*, Chester Beatty ms. 4018, fol. 48a), 107a, 110a, 111a: *aḳsimā* = liquid, syrup, but, since one of these recipes mentions the presence of yeast among the ingredients of this drink, it must presumably be a variety of sweetened beer and not a simple syrup as it is usually translated (for the Egyptians, according to al-Ghuzūlī, *loc. cit.*, both the term and the recipe of *aḳsimā* often replace those of *fuḳḳāʿ*, 180a-b, 111b, 112a: *shīsh*, a drink or sauce which Rodinson, *loc. cit.*, reads as *šašš*, defining it as an unidentified liquid (without examining the recipes for it in the *Kanz*), but a humorous treatise in B.L. ms. Add. 19.411, fol. 15a, supplied the plural *ashyāsh* (which would seem to justify the reading accepted here, *shīsh*; the suggestion that it derives from the Turkish *shīshe* "bottle", cf. Lane, *Manners and customs*, 331, does not seem plausible). See also al-Warrāḳ, *K. al-Ṭabkh*, ms. Oxford, Hunt. 187, which contains recipes of *fuḳḳāʿ*, fols. 148b, 151b, and cf. Zayyāt, *loc. cit.*; anon. *al-Wuṣla*, B.L. ms. 6388, fol. 27a-b: *aḳsimā* and *fuḳḳāʿ*, 28b-29a: *aḳsimā* prepared with yeast, and various kinds of *fuḳḳāʿ*; cf. Rodinson, *loc. cit.* Certain physicians are inclined to define *fuḳḳāʿ*, made of barley or rice, as a relatively soft drink, when compared to real intoxicants (al-Rāzī, *Manāfiʿ al-aghdhiya*, Beirut 1982, 91; who notes, on the other hand, that the *fuḳḳāʿ* "goes to the head"), but for the jurists, the mediaeval experts in Islamic law, this drink brings up some difficult legal questions (see al-Ṭūsī, *Masʾala fī taḥrīm al-fuḳḳāʿ*, Bodl. MS.Arab.f.64, fols. 94v-97v).

III. *Milk.*

The same works of culinary art also provide a wide range of recipes of which the primary ingredient is milk, but it may be assumed, judging by the method

of preparation, that in the majority of cases the references are to sauces accompanying food rather than to drinks as such (cf. also Ahsan, *op. cit.*, 97-8, and the references given below). In fact, without refrigeration, it was not easy to preserve milk, except with the addition of preservative elements, e.g. salt, or allowing it to curdle. In fact, ever since the pre-Islamic period the Arabs were well aware of the importance of milk as a nutritive element, with numerous terms denoting its varieties and properties and verbs and adjectives used to identify the stages of curdling (*rā'ib* = clotting, for example), and it is thus that numerous pages are devoted to milk in the lexical literature (specialised works, including *Kitāb al-Laban wa 'l-liba'* by Abū Zayd al-Anṣārī, ed. Haffner-Cheikho, in *Dix traités*, as well as entire chapters in longer works; see also the references in Sadan, *op. cit.*). The pre-Islamic Arabs were great breeders of camels and dromedaries, and it is often to their milk that these terms apply. Muslim civilisation was familiar with the milk of all kinds of beasts (see for example the work attributed to al-Suyūṭī [Sidi-Siouti], *Livre de la miséricorde*, Paris 1856, 19-21) and geographical literature refers to it at times (see e.g. Ibn Ḥawḳal, tr. Kramers and Wiet, ii, 364). Ibn Ḳutayba (*al-Ashriba*) knew that it was possible to ferment these milks, e.g. that of the camel, although it was the milk of the mare which was more popularly used for fermentation a few centuries later (koumiss [see KUMĪS] was often produced from fermented mare's milk, as was *kefir*, generally less potent; some varieties still exist today which are even given to children to drink). This came about through the influence of the peoples of Central Asia and those from the native lands of the Mamlūks; the latter also drank koumiss, in spite of the hot climate of Egypt [see KHAMR].

As has already been mentioned, curdling, or even salting, were effective means of preserving lactic drinks, in a period when refrigeration was still unknown, and in relatively hot regions. It is thus that a land may be renowned beyond its geographical borders for the quality of its lactic products (the Syro-Palestinian region, for example, is praised for its yoghourts, etc., in a humorous work on the gastronomic art which does not however include recipes: untitled B.L. ms., Add. 19.411, fols. 4b-5a). Moreover, it is thus that certain of these drinks are still known today, for example *laban* (originally *laban* means nothing more than "milk", but in certain dialects the distinction has arisen of *ḥalīb* = milk, *laban* = fully or partially curdled milk), *ayran*, among the Turks, and there is an Iranian equivalent, *dūgh*, sometimes a little more salted. Some ancient texts describe yoghourts (*yoghurt*) and give the recipes: *Kanz*, the above-mentioned Cambridge ms., fol. 132a, with instructions on how to dilute it with water, producing a drink which would resemble the above-mentioned *ayran*; al-Warrāḳ, *op. cit.*, fols. 54b-56a (see also fols. 28b-30a): types of milk and their treatment; the untitled ms. mentioned above, B.L. Add. 19.411, fol. 4b; curdled milk and various yoghourts, including that made from the milk of the buffalo. Ibn Rāzin al-Tīdjānī, ed. Ibn Shaḳrūn, *Faḍālat al-khiwān (La cuisine andalou marocaine au XIII^{ème} siècle)*, Rabat 1981, 147: *rā'ib* (explained above).

In the course of the last two centuries, Egyptian scholars and physicians have developed a genre of polemical debate in favour of and against milk and its products: Alī al-Dabbāgh al-Ḥalabī, *Radᶜ al-djāhil ᶜan dhamm al-kishk wa 'l-ma'ākil*, ms. Taymūriyya, Adab 370 (replying to a treatise against certain lactic products); and Aḥmad al-Tābiᶜī, *Fayḍ al-minan*, Cairo 1315 (replying to a treatise, *al-Wadjh al-ḥasan*, in favour of fish and against milk).

IV. *Literary and semiotic questions.*

In works of a moral and religious nature, milk is also a literary symbol (even a semiotic value) of the purity of Islam: it was chosen by the Prophet at the time of his nocturnal travels through the heavens (*isrā'* and *miᶜrādj*), when he was offered water, wine, milk, etc. (on this and other symbolic senses attributed to milk, see Sadan, *op. cit.*; and, regarding the importance of milk in the eyes of the Prophet, see also Ibn Ḳayyim al-Djawziyya, *al-Ṭibb al-nabawī*, Beirut 1957, 299 ff.). For certain *mādjin* poets, wine characterises the sedentary life of Muslim society, especially that of ᶜAbbāsid society (the relatively more affluent circles), while milk, of less worth in their eyes, characterises the pre-Islamic Arabs. This is not a case of true contradiction, but of two semiotic and literary levels. After all, this is not an objective notion (in fact, the ancient Arabs were not unaware of the existence of wine, but they did not drink it very very often) but one that arises from a variety of literary elements, showing, among other topics, the different roles that the pair "milk" and "wine" play as symbols in the various genres (see Sadan, *op. cit.*).

V. *Water as a drink.*

In spite of the afore-mentioned preference for milk over other drinks on the part of the Prophet, he is also credited with such remarks as "Water is the mother of all drinks", or "the master of all drinks" (on the importance of water in Muslim legal tradition, see also al-Kulīnī, *al-Kāfī*, vi, 380-1; Ibn Ḳayyim al-Djawziyya, *op. cit.*, 302 ff.; al-Urmawī, *Siyāsa*, ms. Köprülü 1200, fol. 164a; al-Madjlisī, *Biḥār*, xiv, 752-5).

Water was an element of prime importance in the life of the ancient Arabs, especially those who lived in desert regions (see E. Bräunlich, in *Islamica*, i, 41-76, 288-343, 454-528). The literature of medical traditions speaks of the importance of this element as a drink, and gives detailed accounts of its properties and different varieties (see e.g. Sidi-Siouti, *op. cit.*, 38). In fact, geographical and topographical conditions made it necessary for each region to be content with a given, and often unalterable, quality of water: water from wells (*ābār*), from canals, rivers, etc. [see MĀ'], a subject of frequent interest to Arab geographers (in particular the so-called "classical" ones of the 4th/10th century; al-Muḳaddasī, in his *Aḥsan al-taḳāsim*, often adds at the end of each description of a region a sub-chapter entitled *djumal shu'ūn hādhā 'l-iḳlīm* which contains, among other things, information concerning the different waters of the region, their qualities, etc.). Similarly, culinary literature (fols. 13a ff. of the *Kanz*, Cambridge ms., and cf. al-Ghuzūlī, *op. cit.*, ii, 74-7) also devotes special chapters to water, in its capacity as a drink. Well-organised systems of provision of water were rare, but not unknown in the mediaeval period (see e.g. R. B. Parker and R. Sabin, *A practical guide to Islamic monuments in Cairo*, 91). The water of certain rivers was often neither pure nor clean (al-Djāḥiẓ, *al-Bukhalā'*, ed. al-Ḥādjirī, 113, describes how sewage was dumped in one of the channels of the Tigris; see also E. Lévi-Provençal, *Trois traités hispaniques de ḥisba*, 33; idem, *Séville musulmane*, 70). The quality of drinking water often depended on the social condition of the consumer, in particular the money available to him to pay the water-bearer (*saḳḳā'*; see Lane, *op. cit.*, 327-31), but there were also receptacles, or even special constructions (*sabīl*, pl. *subul*, testifying to the generosity of the benefactors who built them)

designed for the use of the general public. By such means, water was distributed to travellers or to the visitors of markets.

VI. *Water mixed with snow.*

The wealthy were not satisfied with ordinary water; they were not only prepared to pay more highly for water of good quality but they sought also to refrigerate it. In addition to porous jugs (which had the effect of lowering the temperature of water by a few degrees), it was possible, even at the height of summer (al-Sarī al-Raffāʾ, *op. cit.*, ii, 23) to buy snow, which was one of the most expensive products. The caliph al-Mahdī even ordered a supply of snow to be brought to him at the time of his pilgrimage (al-Ṭabarī, iii/1, 484). The vendors of snow (*thallādjūn*), in Baghdād for example, had their own storehouses which were filled with snow (often brought from afar: al-Shābushī, *al-Diyārāt*, Baghdād 1966, 88, in winter; al-Ḳalḳashandī, *Ṣubḥ*, *maḳāla* 10, ch. 3; al-Ḥānī, *al-Thaldj wa 'l-thallādjūn*, in *Ṣuwar ʿabbāsiyya*, Sidon-Beirut, n.d., 89-130; in his edition of al-Ṣābī, *Rusūm dār al-khilāfa*, M. ʿAwwād mentions (24, n. 7) that he has published two articles on this subject in *Ahl al-naft* (Beirut), xxxviii and xxxix [1954]; it may be—added that the afore-mentioned Oxford ms. of the *K. al-Ṭabkh* contains a chapter devoted to "water with snow", fol. 147b; cf. fol. 148b: water cooled simply by air; cf. Ḥ. Zayyāt, in *Machriq*, xli, 25). Water mixed with a small quantity of snow (*māʾ muthalladj*) was such a "rarity" that it was preferred to lemonade (A. Mez, *Renaissance*, 408). One of the doctors of law even went so far as to write a short treatise on the question of whether it was permitted occasionally to distribute water mixed with snow to less affluent people and to the poor (al-ʿAynī, *Aḥkām al-ʿināya*, Chester Beatty ms. 4400 (8), fols. 92a-95b). It is thus that social stratification and its problems are reflected in the domain of *mashrūbāt*. See the series *Le voyage en Égypte*, I.F.A.O., Cairo, *passim* (e.g. volume for 1587-8, tr. and annot. by U. Castel and N. and S. Sauneron, n.d., 257).

VII. *Fruit-flavoured water, juices and other fresh drinks.*

Typical examples of the great variety of drinks based on fruits (or pure juice, or mixtures of juice with spices and other ingredients) emerge clearly from books of culinary recipes, including, for example, the afore-mentioned Cambridge ms., fol. 107a (lemonades and a drink made from ginger). The afore-mentioned London ms., fol. 30a (lemonade, orangeade, drinks flavoured with sumac); see A. Huici Miranda, *Kitāb al-Ṭabīkh*, in *RIEIM*, vi (1961-2), 235-48 (and now B.N. ms. 7009, fols. 76a-81a; a variety of soft drinks, sugared and flavoured with fruits, flowers, vegetables, spices etc., e.g. jujubes, apples, lemons, tamarinds, pomegranates and violets); the afore-mentioned ms., fols. 152a-154a (one ch. on vegetal-based drinks, and another on fruit-based drinks). A luxury drink was often a combination of one of these kinds of mineral waters with, in addition, *fuḳḳaʿ* (see above) and a little snow (see above and al-Ghuzūlī, *op. cit.*, ii, 88-9). This may be compared with Mez, *loc. cit.*, and especially idem, *Abulkâsim*, Heidelberg 1902, 38, 39, mentioning the same drinks as early as the 4th/10th century (for example *māʾ laymūn* = lemonade, probably made from green lemons/limes; *māʾ ḥiṣrim* = verjuice drink which is described in a more detailed manner, with two recipes in the mss. mentioned above).

Since certain of these drinks were considered to be medicines or tonics, some of them may be encountered in medical literature, often in a chapter entitled *ashriba* "drinks" and there even exist independent medical treatises on this subject (see e.g. Sezgin, *GAS*, iii, index, s.v. *K. al-Ashriba*), but this topic is beyond the scope of the present article. However, some literary works show a fairly profound knowledge of the secrets of medicine (or of popular medicine), including for example al-Djāḥiẓ in his epistle concerning drinks; in another mediaeval literary work, written in colloquial or quasi-colloquial Arabic, a drink made from jujubes is found in the shop of a popular perfumer-pharmacist (Sadan, in *St. Isl.* [1982], 46); this may be compared with al-Saḳaṭī, ed. G. S. Colin and E. Lévi-Provençal, *Un manuel hispanique de ḥisba*, 46: *Sharāb al-ʿunnāb* (= drink made from jujubes sold in the streets in marketplaces). There is a certain continuity with a whole range of mediaeval drinks, extending into the contemporary period, where fresh or cold drinks are still sold in the streets, often by itinerant traders (see Lane, *op. cit.*, 154-5, 331), such as, e.g., tamarind drink (*tamr hindī*, see above, and al-Saḳaṭī, *loc. cit.*) and liquorice drink (*sūs*), which are very popular; the drink made from dried grapes (*zebeeb* according to Lane, *loc. cit.*, *zabīb* or *zbīb* in colloquial speech), *djallāb* (which was known to the mediaeval world, see the above-mentioned Cambridge ms., fol. 133; al-Ghuzūlī, *loc. cit.*; Huici Miranda, *loc. cit.*). These recipes are not always based on dried grapes and the drink is most often non-alcoholic, but, even today, some devout Muslims abstain from consuming this drink made from dried grapes when it is prepared by non-Muslims, since it is feared that over-long soaking of the fruit produces alcohol. Also worthy of mention here is the *boza* of the Ottomans (whence *būza* in the Egyptian dialect, see Spiro, *Dictionary*, defining it as *bière*; but it is necessary to distinguish this term from *boza*, *būza* "ice cream" in some dialects of colloquial Arabic, which must rather be derived from Turkish *buz* "ice"). This may contain alcohol (see, the series *Le voyage en Égypte*, I.F.A.O., Cairo, *passim* (e.g. vol. for 1634-6, tr. and annot. by V. Volkoff, n.d., 255 and n. 157; *bouso*). But soft varieties of *boza*/*būza* are known (see E. G. Gobert, *Usages et rites alimentaires des Tunisiens*, in *Archives de l'Institut Pasteur de Tunis* [1904], 64; see also 43, 72, on other drinks such as *bsīsa*, for which see Beaussier, s.v. *bsīsa* and the other terms). The last-mentioned drinks recall the problem of the "permitted" and the "forbidden" explored in detail at the beginning of the present article (e.g. the *naḳīʿ*, mentioned above).

In this context of continuity, we may also compare the *sūbiyya* of the ancient texts (afore-mentioned Cambridge ms., fols. 112a-113a, and afore-mentioned London ms. *al-Wuṣla*, fol. 26b, although the references here are to a fairly thick liquid) with the *soobiya* described by Lane, *op. cit.*, in the 19th century (a similar drink, prepared from the pips of melons, is also described by R. Khawam, *La cuisine arabe*, 172: *boûzoûrate*).

VIII. *Hot drinks.*

As regards hot drinks, see the arts. KAHWA "coffee" (see also on this, R. J. Hattox, *Coffee and Coffeehouses*, Washington D.C. 1985) and SHĀY "tea", but besides these two drinks, the lands of the Near East are familiar with a wide variety of infusions of flowers, leaves, etc.

(J. SADAN)

MASHRŪṬIYYA [see DUSTŪR].

MASHWARA (A.) or MASHŪRA, a common term for consultation, in particular by the ruler of his advisers, the latter being various defined. The term sometimes also appears to mean some kind of deliberative gathering or assembly.

The practice of consultative decision was known in pre-Islamic Arabia [see MADJLIS, and MALAʾ in Suppl). Two passages in the Ḳurʾān (III, 153/159, *wa-shāwirhum fi 'l-amr* and XLII, 36/38, *wa-amruhum shūrā baynahum*) are commonly cited as imposing a duty of consultation on rulers. The merits of consultation (*mushāwara* and *mashwara*) and the corresponding defects of arbitrary personal rule (*istibdād*) are supported by a considerable body of material both in *ḥadīth* and *adab* (on *ḥadīth*, see Wensinck, *Concordance*, iii, 212; for examples of *adab*, see Ibn Ḳutayba, *ʿUyūn*, i, 27-36; Ibn ʿAbd Rabbihi, *ʿIḳd*, Cairo 1953, i, 46-8). Similar recommendations are made by the Ḳurʾān commentators (e.g. al-Zamakhsharī, *Kashshāf*, Cairo 1373/1953, i. 322-3, iv, 179; i, 226; al-Rāzī, *Mafātīḥ al-ghayb*, iii, 120). The desirability of consultation by rulers becomes a commonplace in Islamic political literature. It is urged by representatives of the scribal and bureaucratic tradition (see for examples ʿAbd al-Ḥamīd, *Risāla ... fī naṣīḥat walī al-ʿahd*, in Muḥammad Kurd ʿAlī, ed., *Rasāʾil al-bulaghāʾ*, Cairo 1374/1953, 185; Ibn al-Muḳaffaʿ, *Ḥikam*, in *ibid.*, 155; Niẓām al-Mulk, *Siyāsat-nāma*, ch. 18, "On having consultation with learned and experienced men", ed. Ch. Schefer, Paris 1891, 84-5; French tr. idem, Paris 1893, 124-6; Eng. tr. H. Darke, London 1960, 195-6; etc.).

In general, bureaucrats urge the need to consult bureaucrats, while *ʿulāmāʾ* lay greater stress on the importance of consulting the *ʿulāmāʾ*. Ibn Taymiyya (*Minhādj al-sunna*, Būlāḳ 1321, ii, 86; idem, *al-Siyāsa al-sharʿiyya*, Cairo 1961, 161-4, French tr. H. Laoust, *Le traité de droit public d'Ibn Taimīya*, Beirut 1948, 168-9) goes further than most of his colleagues. Citing Ḳurʾān and *ḥadīth*, he insists that the ruler must consult not only with the *ʿulāmāʾ* and with his political and military officials, but also with spokesmen of the general population.

In the early Islamic centuries there seems to have been no formal procedure of consultation. As Gibb remarks: "There is, in fact, nothing in the texts to justify the suggestion that ʿUmar's consultation was more than informal, or that there was at Medina any recognized consultative committee, still less a cabinet" (H. A. R. Gibb, in *Law in the Middle East*, ed. Majid Khadduri and H. J. Liebesny, Washington D.C. 1955, 16). The nearest approach to a consultative body was the famous committee appointed by the caliph ʿUmar on his deathbed, with the function of choosing one of their own number as his successor [see SHŪRĀ]. The Umayyad caliphs, at least the earlier ones, do however seem to have continued the old Arabian practice of consultation with the elders of the tribes [see WUFŪD]. The increasingly authoritarian character of government after the accession of the ʿAbbāsids is vividly expressed in a passage quoted by many authors. Sudayf, a *mawlā* of the Hāshimīs, is quoted as complaining of the changes resulting from the ʿAbbāsid accession: "By God, our booty, which was shared, has become a perquisite of the rich; our leadership, which was consultative (*mashwara*), has become arbitrary; our succession, which was by the choice of the community, is now by inheritance ..." (Ibn Ḳutayba, *ʿUyūn*, ii, 115; Eng. tr. in Lewis, *Islam*, ii, 54-55; cf. *ʿIḳd*, iii, 32; *Aghānī*, xiv, 162; Ibn ʿAsākir, vi, 68; Ibn Ḳutayba, *Shiʿr*, 419; etc.).

The mediaeval literary tradition, though generally in favour of consultation, is not uniformly so. Some texts indeed, without formally condemning consultation, indicate that in excess it may lead to anarchy and destruction. Thus the traveller Ibn Faḍlān, describing the system of government of the Volga Bulgars whom he visited in 309/921, remarks that their form of government was consultative (quoting the Ḳurʾānic verse *wa-amruhum shūrā baynahum*) and goes on to remark that whenever they agree among themselves to do anything, their decision is nullified by the meanest and lowest among them (Ibn Faḍlān, *Riḥla*, ed. Sāmī Dahhān, Damascus 1379/1959, 91-2, French tr. M. Canard, *AIEO*, xvi [1958], 68). An equally harsh judgment on democracy in action is given by al-Ḳalḳashandī, *Ṣubḥ*, viii, 30, who, in speaking of the city of Sīs in Asia Minor, notes that "authority became consultative, the populace became anarchic, the fortifications fell into disrepair" and the city thus fell prey to Christian conquest. Consultation as usually interpreted meant that the ruler before reaching a decision should discuss matters with competent and experienced persons and not act in an arbitrary fashion on his own. It did not mean that he should set up any consultative body, still less share authority with it.

The existence of such bodies is first attested in the period following the Mongol conquest, and may be a reflection of Mongol practice in east Asia. The Ilkhāns in Iran seem to have adopted the practice of covening a great council of high dignitaries (*Dīwān-i Buzurg*), presided over by the Vizier. Regular meetings of a council are attested under the Ṣafawid Shahs, by both Persian and western sources [see DĪWĀN. iv]. The name Djānḳī, applied to this council, indicates a Mongol origin (see V. Minorsky, *Tadhkira*, 44, 53, 113 n. 5, 120; G. Doerfer, *Türkische und Mongolische Elemente im Neupersischen*, i, Wiesbaden 1963, 280-2; H. H. Zarinezade, *Fars dillinde Azerbaydjan sözleri*, Baku 1962, 248-50).

The Ottoman historian, Kemālpashazāde, in discussing the eastern campaigns of the Ottoman sultan Meḥemmed II, describes the holding of such a council in Persia. When the Persian monarch received a spy's report that the Ottoman sultan was moving eastward, he convened a meeting of "the dignitaries of his state and the notables of his realm and consulted with them (*erkān-i dewletini we aʿyān-i memleketini bir yere dirüb onlarïnla meshweret etdi*)", Ibn Kemāl, *Tewārīkh-i āl-i ʿOthmān*, vii, *Defter*, ed. Ş. Turan, Ankara 1957, 544).

In Egypt, under the Baḥrī Mamlūks there appears to have existed a supreme council of high ranking *amīrs*. The members of this council were variously known as *Amīr Mashwara* and *Mushīr al-Dawla*. Its head was called *Raʾīs al-Mashwara*. References to appointments to this council and to its meetings are of frequent occurrence in the Mamlūk chronicles for the Baḥrī period (see D. Ayalon, *Studies on the structure of the Mamluk army. III*, in *BSOAS*, xv [1954], 69; E. Tyan, *Institutions de droit public musulman*, ii, Paris-Beirut 1956, 171-81; Björkman, *Beiträge*, 153; al-Ḳalḳashandī, *Ṣubḥ*, vi, 28, xi, 153-6; al-Maḳrīzī, *Sulūk*, ii, 64, 85-6, 182, 485, 551, 626, 634, 645, 746, 890, with an editorial note; idem, *Khiṭaṭ*, ed. Bulāḳ, ii, 64; Abu 'l-Maḥāsin, *Nudjūm*, ed. Cairo, x, 190; see further MUSHĪR). Under the Circassian Mamlūks, references to this council become extremely rare.

According to an Ottoman historical tradition, the very foundation of the Ottoman dynasty and state was due to a deliberative act. According to this version, the Beys and Ketkhudās of that region met together and held a *mashwara*. After much discussion they came to ʿOthmān Bey and asked him to become their chief

(Luṭfī, *Taʾrīkh*, 21; Yazīdjīoghlu ʿAlī, *Seldjūḳ-nāme*, cited in Agah Sırrı Levend, *Turk dilinde gelişme ve sadeleşme safhaları*, Ankara 1949, 34). Ottoman authors, like other Islamic authors, urged the importance of consultation by the ruler, and in the Ottoman empire such was indeed the practice. The high council (*dīwān-i hümāyūn* [*q.v.*]) was an important part of the Ottoman governmental system. Presided over in earlier times by the Sultan, in later times by the Grand Vizier, it had a prescribed membership and prescribed times of meeting. The term *mashwara* (Ottoman *meshweret*) is used commonly by the Ottoman historians to denote ad hoc meetings and councils of military and other dignitaries to consider problems as they arose. Such *meshwerets* were already held in the course of the wars in Europe in the 15th century (see for example Kemālpashazāde, 127). References to such meetings are common in the Ottoman chronicles in the 16th, 17th and 18th centuries. Naʿīmā offers many accounts of military *meshwerets* held in the field by the commanders as well as of civilian gatherings held in Istanbul by official dignitaries. The Sultan was not normally present at such gatherings (see for example Naʿīmā, i, 131, 146, 155, 180, 273, 413, ii, 354, 360, iii, 54, iv, 298, 413, v, 60, 203, 281-3). Towards the end of the 18th century such gatherings become more frequent, particularly in the periods of crisis associated with the Russian and other wars, and were sometimes held in the presence of the Sultan (examples in Wāṣīf, i, 316-18, 221, 222, 274; Djewdet, ii, 276 ff., iv, 289). A new phase began with the accession of Sultan Selīm III who, at the start of his reign, on 20 Shaʿbān 1203/16 May 1789, convened a consultative asembly (*meshweret*) of leading officials to discuss the problems of the Empire and the way to remedy them. Such gatherings were often held under Selīm III and his successors. The early 19th century historian Shānīzāde [*q.v.*] makes frequent reference to such gatherings and ascribes to them a representative character and significance not mentioned by previous authors (Shānīzāde, i, 66, 73-5, 199-201, 365, iv, 2-5, 201, 37 ff., 155-8, etc.). For a full treatment of these informal consultative assemblies, see MADJLIS AL-SHŪRĀ.

Shānīzāde's account marks the transition from a purely traditional Islamic interpretation of *mashwara* to a new approach influenced by the practice of European states, to which indeed he alludes under the polite euphemism *düwel-i munta̤zame* "well-organised states". He may have been thinking of the British parliament, a description of which, by the young Ottoman diplomatist Maḥmūd Raʾīf was available to him in Istanbul. Shānīzāde notes that the holding of such *meshwerets* was common in these states, where they served a useful purpose. At the same time, he was naturally concerned to justify the holding of such meetings with both Islamic and Ottoman precedents [see further ḤURRIYYA. ii].

Perhaps the earliest use of the term in a clearly western context occurs in the Turkish translation of the first volume of Carlo Botta's *History of Italy from 1789 to 1814*, first printed in Cairo as *Bonapart taʾrīkhi* in 1249/1833. This speaks of the *parlamento meshwereti* established by the liberals in that country.

In the course of the 19th century, the term *mashwara* or *meshweret* was much used by Turkish and Arabic authors, first to describe European representative institutions, and then to justify their introduction into the Islamic lands. Thus the Egyptian *shaykh* Rifāʿa Rāfiʿ al-Ṭahṭāwī, discussing the functioning of French parliamentary institutions, makes common use of the term *mashwara* to describe the various consultative bodies (*Takhlīṣ al-ibrīz fī talkhīṣ Bārīz*, ed. Mahdī ʿAllām *et alii*, Cairo n.d., ch. 3, 138-43). This important book was published in a Turkish translation as well as in the original Arabic and provided the first detailed and documented description, in these languages, of constitutional and representative government. The term was adopted by the young Ottoman liberal patriots of the mid-century [see YEÑI ʿOTHMĀNLĪLAR] and was much used in their writings. By 1876 it was sufficiently well-accepted in Ottoman usage to figure in the Sultan's speech from the throne at the opening of the first Ottoman parliament (*Ḳāʿide-yi Meshweret*, in *Ḍabīṭlar Djerīdesi*, 10), and in 1909 the speech from the throne even speaks of constitutional and consultative government (*Meshrūṭiyyet we-meshweret*), "as prescribed by the holy law as well as by both reason and tradition" (*Taṣwīr-i efkār* of 15 November 1909).

Taimīya*, Cairo 1939, 301-2; Muḥammad Ḍiyāʾ al-Dīn al-Rayyis, *al-Naẓariyyāt al-siyāsiyya al-islāmiyya*, Cairo 1952, 224-8. See also MADJLIS. 4. A. In the Middle East and North Africa, sections i-ii, and MADJLIS AL-SHŪRĀ, the latter with full bibliography. (B. LEWIS)

MASHYAKHA or *mashīkha*, one of several plural forms of A. *shaykh*, literally "an elder, i.e. a distinguished person usually of an advanced age [*q.v.*]. In its classical usage, *mashyakha* also served as an abstract noun denoting a *shaykh*'s position or authority (e.g. in *mashyakhat al-Islām*, the authority of the *shaykh al-Islām* [*q.v.*]).

In the Muslim West *mashyakha* was used to designate the collectivity of urban elders and notables often wielding considerable political influence in the cities. Such groups of dignitaries sometimes acted as virtual advisory councils of local rulers, hence *mashyakha* also carried the sense of "a municipal council". This was so in Muslim Spain (D. Wasserstein, *The rise and fall of the Party-Kings*, Princeton 1985, 142-45) and, according to clues offered by Ibn Khaldūn, in North Africa as well (ref. in Dozy, *Suppl.*, s.v. *shaykh*; *Muḳaddima*, ed. Quatremère, ii, 269; tr. Rosenthal, ii, 305).

During Bonaparte's Egyptian expedition, the word acquired a new meaning. Seeking an Arabic expression for "republic", Bonaparte's orientalist experts came to use *mashyakha*. This was apparently an intended allusion to the Directoire of five who were governing France at the time; endeavouring to simplify an idea novel to their audience, the translators chose to refer to the persons making up the governing body ("the elders") rather than to the abstract principle underlying it. The French administration employed the term extensively in its proclamations to the Egyptians—issued "on behalf of al-*mashyakha al-faransawiyya*"—using it interchangeably with *djumhūr*, the common Ottoman word for the notion [see DJUMHŪRIYYA]. *Mashyakha* then became a popular name for "republic" in Arabic writings as well, in which it was considerably more common during the first half of the 19th century than either *djumhūr* or *djumhūriyya*; the latter term was introduced by al-Ṭahṭāwī [*q.v.*] in the 1830s.

The choice of a word with established connotations to express a new idea was bound to produce some confusion. Certain writers of Arabic thus understood "republic" to mean "government by elders", erroneously identifying the foreign notion with a more familiar concept (e.g. Niḳūlā Turk, *Mudhakkirāt*.

Cairo 1950, 3, 97, 98; Rifāʿa Rāfiʿ al-Ṭahṭāwī. *Ḳalāʾid al-mafākhir*, Būlāḳ 1833, i, 52, ii, 104). In addition, the simultaneous application of the word, by similar logic, to other notions—such as *al-mashyakha al-baladiyya* ("city council"), *mashyakhat al-bilād* ("the country's government"), *mashyadhat Bārīz* ("the Paris Commune") etc.—further attested to the vagueness of the term and, perhaps, of some of the concepts it was chosen to express.

In the second half of the 19th century, *mashyakha* in the sense of republic gradually gave ground to *djumhūriyya*, although some writers continued to vindicate the older usage until the 1870s. Thereafter, *mashyakha* lost this meaning, retaining only the loose import of an institution of elders at large or a sheikhdom.

Bibliography: For the classical usage, see Lane, *Lexicon*, s.v.; Ḳalḳashandī, *Ṣubḥ al-aʿshā*, s.v. in index (ed. Muḥammad Ḳandīl al-Baḳlī), 425. For its use in French proclamations, see examples in Aḥmad Ḥusayn al-Ṣāwī, *Fadjr al-ṣiḥāfa fī Miṣr*, Cairo 1975, pls. 43, 48, 49, 70, 79, 87A, 90-7. See further A. Ayalon, *Language and change in the Arab Middle East*, Oxford 1987, ch. vii.

(A. AYALON)

AL-**MASĪḤ**, the Messiah; in Arabic (where the root *m-s-ḥ* has the meanings of "to measure" and "to wipe, stroke") it is a loanword from the Aramaic, where *mᵉshīḥā* was used as a name of the Redeemer.

Horovitz (*Koranische Untersuchungen*, 129) considers the possibility that it was taken over from the Ethiopic (*masīḥ*). Muḥammad of course got the word from the Christian Arabs, amongst whom the personal name ʿAbd al-Masīḥ was known in pre-Islamic times, but it is doubtful whether he knew the true meaning of the term (see K. Ahrens, *Christliches im Qoran, eine Nachlese*, in *ZDMG*, lxxxiv [1930], 24-5; A. Jeffery, *The foreign vocabulary of the Qurʾān*, Baroda 1938, 265-6). In Arab writers we find the view mentioned that the word is a loanword from Hebrew or Syriac. Al-Ṭabarī (*Tafsīr* on sūra III, 40 = iii, 169) gives only purely Arabic etymologies, either with the meaning "purified" (from sins) or "filled with blessing". Horovitz, *op. cit.*, calls attention to the occurrence of the word in inscriptions, proper names and in the old poetry.

In the Ḳurʾān, the word is first found in the Mecca sūras: (a) alone: sūra, IV, 170, IX, 30; (b) with Ibn Maryam; sūra, V, 19, 76, 79; IX, 31; (c) with ʿĪsā b. Maryam: sūra III, 40; IV, 156. None of these passages make it clear what Muḥammad understood by the word. From sūra III, 40: "O Maryam, see, Allah promises thee a word from Him, whose name is al-Masīḥ ʿĪsā b. Maryam", one might suppose that al-Masīḥ was here to be taken as a proper name. Against this view, however, is the fact the the article is not found with non-Arabic proper names in the Ḳurʾān. One can assume with reasonable certainty that al-Masīḥ is a title of Jesus in the Ḳurʾān, but not a messianic one; clearly, no eschatological interpretation of Christ's mission could have been known in Arabia (see J. S. Trimingham, *Christianity among the Arabs in pre-Islamic times*, London 1979, 267).

In canonical Ḥadīth al-Masīḥ is found in three main connections: (a) in Muḥammad's dream, in which he relates how he saw at the Kaʿba a very handsome brown-complexioned man with beautiful locks, dripping with water, who walked supported by two men; to his question who this was, the reply was given, "al-Masīḥ b. Maryam" (al-Bukhārī, *Libās*, *bāb* 68; *Taʿbīr*, *bāb* 11; Muslim, *Īmān*, trad. 302); (b) in the descriptions of the return of ʿĪsā [*q.v.*]; (c) at the Last Judgment, the Christians will be told; "What have you worshipped?". They will reply, "We have worshipped al-Masīḥ, the Son of God". For this they shall wallow in Hell (al-Bukhārī, *Tafsīr*, sūra IV, *bāb* 8; *Tawḥīd*, *bāb* 24; Muslim, *Īmām*, trad. 302).

In Ḥadīth also, we frequently find references to al-Masīḥ al-Kadhdjāl; see AL-DADJDJĀL.

(A. J. WENSINCK - [C. E. BOSWORTH])

AL-**MASĪḤĪ** AL-DJURDJĀNĪ, ʿĪsā b. Yaḥyā Abū Sahl, Christian physician born in Djurdjān, and one of the teachers of Ibn Sīnā, who dedicated some of his works to him.

He studied in Baghdād, and then taught in Khurāsān and later in Khʷārazm. He had no social intercourse with his coreligionists, but performed religious worship alone in his house (al-Bayhaḳī, *Taʾrīkh*, 95). In 401/1010, together with a number of other scholars who had settled in Khʷārazm—among them al-Bīrūnī—, he was summoned by al-Maḥmūd of Ghazna [*q.v.*] to this city under the suspicion of heresy. In the company of Ibn Sīnā he succeeded in fleeing to Māzandarān, but met his death in a sandstorm. So far, none of his works, in large part preserved, has been edited. The most important, existing in numerous manuscripts, is the *K. al-Miʾa* ("hundred [treatises]"), a comprehensive medical encyclopaedia, arranged in a hundred sections, probably the oldest work of its kind and perhaps the model for Ibn Sīnā's *Ḳānūn*. An edition of this work is most desirable. A very much smaller work, the *K. al-Ṭibb al-kullī*, gives in 39 chapters an introduction to the general fundamentals of medicine. The third work to be mentioned here is the *K. Iẓhār ḥikmat Allāh taʿālā fī khalḳ al-insān*, dealing with the physiology of the human organs and their meaning and purpose as intended by God. Ibn Abī Uṣaybiʿa (i, 328,2) says explicitly that this work is based on Galen's [see DJĀLĪNŪS] *K. fī manāfiʿ al-aʿḍāʾ* περὶ χρείας μορίων, see G. Bergsträsser, *Hunain ibn Isḥāq über die syrischen und arabischen Galen-Übersetzungen* (AKM, xvii/2), no. 49. Already the title of al-Masīḥī work reflects Galen's teleological way of thinking: in the latter's work just mentioned, the single chapters deal with "God's wisdom with regard to the perfect creation of the hands" and of the other organs (see Bergsträsser, *loc. cit.*). Al-Masīḥī indeed was "a philosopher for whom medicine was dominant" (*ḥakīm istawlā ʿalayhi 'l-ṭibb*, al-Bayhaḳī, 95); with some exaggeration, Niẓāmī ʿArūḍī even calls him, together with Ibn Sīnā, "successor of Aristotle in philosophy, which includes all sciences" (*Čahār maḳāla*, 118, 8-9). His special investigations, which are smaller in extent, deal with smallpox, the pulse, and also with matters of geometry, psychology and the interpretation of dreams, and contain also an extract from the *K. al-Midjisṭī*. A work on the plague he dedicated to his patron, the Khʷārazmshāh Abu 'l-ʿAbbās Maʾmūn b. Maʾmūn.

Al-Masīḥī's knowledge of theoretical and practical

medicine, his lucid terminology and the clear composition of his writings are generally praised. The *K. al-Mi'a*, in particular, has been commented upon and recommended to posterity by prominent experts like Amīn al-Dawla Ibn al-Tilmīḏh. Only one single voice—but then a powerful one—is of an opposite opinion: al-Madjūsī gave a harsh verdict on the *K. al-Mi'a*, and in particular denounced the arrangement of the book, unsystematical in his eyes (al-Madjūsī, *Kāmil al-ṣināʿa al-ṭibbiyya*, Būlāḳ 1294/1877, i, 4, 29-33).

MASĪLA (current orthography M'sila), a town in Algeria founded by the Fāṭimids in 315/927 on the northern edge of the depression of Ḥodna as an outpost of their rule in the Zāb. This remote province of their domain was in fact to play, from the foundation of their caliphate, the role of a military frontier to the west of Ifrīḳiya. As with his predecessors, the Aghlabid *amīrs*, the primary task of the first Fāṭimid sovereign, al-Mahdī ʿUbayd Allāh [*q.v.*], in ensuring the defence of the western side of the realm consisted in raising a powerful barrier on the desert route leading towards al-Ḳayrawān: this entailed the blocking of the natural course of penetration which followed, at the southern limit of Numidia, the defile of al-Ḳanṭara known as "mouth of the Sahara" (*fam al-Ṣaḥrā'*) and proceeded to the north-east by way of Wadi Miskyana and Wadi Mellegue, thus offering to the desert tribes access to the wealthy provinces of Ifrīḳiya.

As early as the ancient period, in Roman and subsequently Byzantine Africa, a line of fortresses (*limes*), including the powerful stronghold of Lambesus (Lambaesis), sealed this gateway to the Sahara at the western limit of the Zāb, where the renowned Third Augustan Legion was stationed on desert guard for a considerable period of time.

Intended as a military base, Masīla was founded not far from the ancient Zabi, to the west of Lambaesis, inheriting from the latter the rôle of giving protection against the Berber tribes always eager to pillage the prosperous Ifrīḳiyan regions, sc. the Birzāl, Muzāta, Kamlān and other Huwwāra clans. The threat that they posed became still more serious since the Ifrīḳiyan realm had come just under the control of the Shīʿī ʿAlids, who were just as accursed, from the point of view of the Khāridjī doctrines which the tribes professed, as were the Sunnī Aghlabids. Furthermore, the "auxiliaries" of these new masters of the coveted land of Ifrīḳiya were none other than the Kutāma, long-standing enemies of the Zanāta clan of which they had taken advantage.

It was thus with the object of holding these hostile tribes in check that the presumptive heir of al-Mahdī, Abu 'l-Ḳāsim Muḥammad, the future al-Ḳā'im bi-Amr Allāh [*q.v.*], took the decision to found Masīla at the time of the expedition which he conducted in the Zāb and then in the region of Tāhart in 315/927-8, on territory occupied by the most troublesome tribe, that of the Kamlān. He entrusted the task to his officer ʿAlī b. Ḥamdūn, ordering him to station himself there with his troops, ʿAdjīsa elements and slaves, and instructing the Kamlān to join with his army before going to establish themselves in the region of al-Mahdiyya on the route leading to al-Ḳayrawān. Called Muḥammadiyya after its founder, the new town was soon to bear the name of Masīla on account of its position on the edge of a water-course, the Wādī Ṣaḥr, currently the Wādī Ksob.

It soon supplanted Ṭobna as regional capital of the Zāb and became, under the rule of Ibn Ḥamdūn, in addition to its importance as a military base, a prosperous city and the seat of a powerful principality within the Fāṭimid realm. The father of ʿAlī, Ḥamdūn, also known as Abū ʿAbd Allāh al-Andalusī, scion of a Djudhāmī family of Yemen, had counted among the most valued Arab "auxiliaries" (*awliyā'*) of the Fāṭimid cause, those who had been loyal from the outset. Sent to the canton of Elvira in Muslim Spain and then to the region of Bougie, he had been one of the disciples of al-Ḥulwānī, the first Shīʿī missionary in Ifrīḳiya, before becoming a loyal companion of Abū ʿAbd Allāh al-Shīʿī [*q.v.*] at Ikdjān where he died, apparently before the fall of the Aghlabids. As for ʿAlī, he joined al-Mahdī at Sidjilmāssa before entering his service at Raḳḳāda in 297/910, barely a year after the conquest of Ifrīḳiya by Abū ʿAbd Allāh. He rapidly distinguished himself in the entourage of the sovereign, along with other Yemenis, notably the Kalbīs, acting as a counterweight to rebellious Kutāmī elements and to certain elements of the Muḍarī Arab aristocracy who had remained loyal to the Aghlabids.

But it was with the foundation of Masīla that he reinforced his rôle in supporting the cause of his Fāṭimid masters. Surrounded by a fortified wall, the new town was soon to be endowed with a second perimeter wall and its defences were strengthened by a canal dug between the two walls and fed by the river, in such a way as to provide water for the needs of the population and for irrigation. This permitted the development of extensive plantations of fruit, as well as fertile ground for the growth of cereals and a prosperous stock-breeding sector. These agricultural resources were supplemented by the produce of flourishing trade favoured by the town's position at the crossroads of the mercantile routes linking Ifrīḳiya to western Barbary. Varied victuals and provisions supplied vast reserves for the purpose of feeding troops in the course of punitive expeditions against the rebel tribes.

Thus during the revolt of Abū Yazīd [*q.v.*], Masīla played its rôle of a base for operations effectively. When the Khāridjī rebel arrived at the gates of al-Mahdiyya, ʿAlī b. Ḥamdūn attempted to take the enemy from the rear and to unite his forces with those of Ibn al-Kalbī who had left Tunis to come to the aid of besieged Mahdiyya. But he was defeated by the son of Abū Yazid, Ayyūb, on the banks of the Medjerda and perished in Rabīʿ I-II 334/November 945. His son Djaʿfar, brought up at the court of Mahdiyya with his brother Yaḥyā, and foster-brother of the *amīr* Maʿadd, the future al-Muʿizz li-Dīn Allāh, succeeded him in command at Masīla. Subsequently, when, defeated before al-Ḳayrawān, Abū Yazīd was obliged

to fall back towards Ḥodna and to entrench himself in the mountains of Koyāna, it was from Masīla that the Fāṭimid Ismāʿīl al-Manṣūr [*q.v.*] conducted the campaign against the rebels and ultimately crushed them in Muḥarram 336/August 947.

Henceforward, Masīla became, in addition to its strategic rôle, one of the most important provincial capitals of the realm and underwent rapid development, while, in the mountain range of Titteri, the *amīr* of the powerful neighbouring Ṣanhādja, Zīrī b. Manād, founded Ashīr, an impregnable fortress intended to reinforce Fāṭimid control over the troublesome Zanāta. Masīla inspired its foundation and assisted its development.

Bordered, on the one hand, by Zanāta hostile to the Fāṭimids, on the other, by Ṣanhādja, who had recently become supporters of the ʿAlid cause on the side of the Kutāma, Djaʿfar began to rule, within the limits of his prerogative, as a veritable suzerain, thus acting in rivalry to Zīrī, and to raise Masīla to the status of a principality. Endowing it with castles and palaces and lavishing there large sums of money, he succeeded in making himself a conspicuous personality and even maintained a literary court frequented by numerous poets and scholars. The eminent Ibn Hānī [*q.v.*], who spent some time there and sang the praises of Djaʿfar and his family, did not hesitate, in lauding the Zāb, to compare it to ʿIrāḳ. Moreover, the administrative status accorded to Masīla by the Fāṭimid monarch, which endowed Djaʿfar with almost unlimited authority over his territory, was that of *istikfāʾ*, which conferred upon the governor of a province the right to exercise, like a viceroy, full powers and thus to maintain a high degree of military, judicial, financial and religious control. Djaʿfar was enabled to administer his territory "with trustworthiness" (*bi 'l-amāna*) without first being obliged to pay a fixed sum to the State Treasury (*ḍamān*). The process of autonomous administration then being developed in the provincial organisation of the realm thus authorised him to deduct from the annual revenues of the Zāb, which were considerable, all his public expenses before paying only the surplus as tax. Such a favourable status did not fail to arouse jealousy in the Fāṭimid court against the all-powerful suzerain of Masīla. In addition, his disagreements with the chieftain of the Ṣanhādja, Buluggīn b. Zīrī, and his good-neighbourly relations with the Zanāta who were the implacable enemies of the Kutāma and of his sovereign, caused severe irritation to al-Muʿizz. The presence at the court of Masīla of Umayyad agents, and the sentiments of allegiance to the Andalusian monarchy flaunted by the Zanāta with the blessing of Djaʿfar, gravely worsened his relations with his sovereign. Not hesitating to defy his anger, Djaʿfar espoused the cause of the Zanāta in their contentions with his rival, the *amīr* of the Ṣanhādja, then embarked upon open rebellion against al-Muʿizz. Subsequently, he proclaimed his allegiance to the Umayyad al-Ḥakam II and made haste to abandon Masīla with his family, arriving at Cordova in 360/971.

With the defection of the Banū Ḥamdūn, Masīla began to lose its importance to the advantage of Ashīr, already its rival. The predominance of Ashīr was confirmed with the designation of Buluggīn as viceroy of al-Muʿizz in Barbary, when the latter finally left the region for Egypt, to which the seat of the caliphate was transferred.

Under the first Ṣanhādja dynasties, supremacy over the Zāb and its regional capital Masīla became the object of the struggle in which they were continually embroiled with one of the components of the Zanāta clan, the powerful tribe of the Maghrāwa commanded by Zīrī b. ʿAṭiyya. In the course of this struggle during the reign of Bādīs, distinction was achieved by his uncle Ḥammād who conceived the idea of founding, a score of kilometres to the northeast of Masīla, a new town, al-Ḳalʿa [see ḲALʿAT BANĪ ḤAMMĀD], destined to supplant the former in its role of provincial capital and military base capable of controlling the Zanāta tribes.

There then began for Masīla a long period of decline. Abandoned, to the advantage of its neighbour during the first half of the 5th/11th century, it conceded to it its status as the major city of the Zāb, where the Ḳalʿa became in its turn the seat of a principality founded by the powerful branch of the Ṣanhādja, the Banū Ḥammād. Then with the Hilālian invasion, the regions of the Zāb and of Ḥodna were, like Ifrīḳiya, devastated by nomadic Arab tribes, the Athbadj, Riyāḥ, Zughba and other elements of Sulaym. Masīla was ravaged, as was the Ḳalʿa. However, it outlived both the latter and Ashīr, which was laid to ruin under the empire of the Almohads, to the advantage of a new provincial capital, Bougie [see BIDJĀYA]. Then, despite the destruction caused by the Banū Ghāniya in revolt against the Almohads, it regained during the 6th/12th century a little of its lost glory in the wake of Bougie, with the renown of scholars such as Abū ʿAlī al-Masīlī or Aḥmad b. Ḥarb. But Masīla was to suffer again under the Ḥafṣids as a result of their struggles with the ʿAbd al-Wādids [*q.vv.*]. The Dāwūdiyya attempted in the meantime to assert their domination over the region. It regained for the last time some political importance and reputation with scholars such as Aḥmad al-Masīlī, a disciple of Ibn ʿArafa, and especially as a result of the rôle played there in the mid-8th/14th century by the renowned Ibn Khaldūn and his brother Yaḥyā in the service of the ʿAbd al-Wādid sultan Abū Ḥammū. Finally, with the ascendancy of nomadic Arab tribes over the Zāb and Ḥodna, during the 9th/15th century Masīla definitely lost its status as a major city, becoming nothing more than an undistinguished locality eking out a meagre existence through manufacturing and agriculture.

Bibliography: Besides the information supplied by the chroniclers and the writings of Arab geographers, especially those of Ibn Ḥawḳal and Bakrī used by G. Marçais in, notably, *Les Arabes en Berbérie du XI^e au XIV^e siècle*, Constantine-Paris 1913, see the accurate Fāṭimid documentation used by M. Canard, in *Une famille de partisans, puis d'adversaires des Fāṭimides en Afrique du Nord*, in *Mélanges G. Marçais*, ii, 33-49, and *Vie de l'ustadh Jawdhar*, Algiers 1958 (tr. of the *Sīra* of Djawdhar, ed. M. K. Ḥusayn and M. ʿAbd H. Shaʿira). See also F. Dachraoui, *Le califat fatimide au Maghreb*, Tunis 1981, and IBN HĀNĪ in *EI²*; M. Yalaoui, *Un poète chiʿite d'Occident au IV^e/X^e siècle, Ibn Hâni al-Andalusî*, Tunis 1976. Also to be consulted is a general work, exhaustive but uneven, by P. Massiera, *M'Sila du X^e au XV^e siècle*, reprinted in *CT*, xxii/85-6 (1974). (F. DACHRAOUI)

MAʾṢIR, a technical term of fiscal practice in the hydraulic civilisation of early Islamic ʿIrāḳ, doubtless going back to earlier periods there. It is defined by al-Khwārazmī in his *Mafātīḥ al-ʿulūm*, 70, as "a chain or cable which is fastened right across a river and which prevents boats from getting past", and more specifically by Ibn Rusta, 185, tr. Wiet, 213, as a barrier across the Tigris at Ḥawānīt near Dayr al-ʿĀḳūl [*q.v.*] consisting of a cable stretched

between two ships at each side of the river, preventing ships passing by night (and thus evading the tolls levied by the official traffic and toll house regulators, *aṣḥāb al-sayyāra wa ʾl-maʾāṣir*). The term has no obvious Arabic etymology from the root ʾ-ṣ-r, but may be connected with Akkadian *maṣāru* "to delimit, set a boundary", *muṣṣuru* "to fix a borderline", *maṣṣartu* "watchman, guard, watch house" (Von Soden, *Akkadisches Handwörterbuch*, ii, 619-21, 659; *Chicago Assyrian dictionary. Letter M*, x/1, 333 ff., x/2, 245).

From being a barrier across the river to halt shipping, it soon acquired the meaning of "customs house where tolls are collected" (for such tolls, see MAKS and MAʿŪNA), and then the actual tolls themselves. In the caliphate of al-Muʿtaḍid (279-89/892-902) one hears of a body of officials attached to the *shurṭa* [*q.v.*] or police guard of Baghdād, called *maʾāṣiriyyūn*, who collected tolls from river traffic on the Tigris.

MAṢĪRA, an island to the north of a gulf of the same name, lying parallel to the eastern coast of Arabia, some 150 miles south-west of Raʾs al-Ḥadd. It is part of the Sultanate of Oman (ʿUmān). The irregular oblong island, which is composed almost entirely of igneous rocks, is some 40 miles in length and has a maximum breadth of nearly ten miles. Its total area is approximately 200 square miles, and Maṣīra is therefore the largest island in the Arabian Sea after Socotra (Suḳuṭrā). A low mountain ridge traverses the island reaching a maximum height of 740 feet at Djabal Madhrūb (lat. 20° 34' N, long. 58° 53' E) in the north. The shallow channel which separates Maṣīra from the mainland of Arabia is from 8 to 12 miles wide, but the existence of a large number of shoals and coral outcrops makes it hazardous for all except local craft. From mid-December until March, the northeast monsoon adds to the dangers of navigation in this Strait.

The landscape of the island is largely barren and vegetation is scant, consisting of a few stunted trees, some shrubs and scattered tufts of grass. In the past this lack of grazing has greatly restricted the number of domesticated animals kept by the local people. In 1845 an Indian Navy survey party put thc total number of inhabitants at about 1,000—the overwhelming majority of whom belonged to the Djanaba tribe [*q.v.*], while a smaller number were said to be Ḥikmān. Water supplies were then reported to be adequate. In 1957 de Gaury estimated the population to be just under 2,000. The climate is generally good; in May—the hottest month—the average maximum is 96° F., while in January—the coolest—the average minimum is 66° F.

The islanders have long derived their livelihood from the sea. Large numbers of turtles provided both food and tortoise shell for export; dried fish and shark fins were also traded for rice and dates from the mainland. The presence of sperm whales off the east coast of the island meant that lumps of valuable ambergris were sometimes washed ashore, and these too were exported. Lead and copper ores are known to exist on the island. Some apparently ancient smelting sites have been located, and it has been suggested that these may constitute evidence of an early Persian presence on Maṣīra.

The history of the island is, however, obscure, for clear and reliable documentary sources are few, and archaeological evidence is slight. Sprenger suggests that the classical geographers may have had some knowledge of the island under several different names. The author of the *Periplus of the Erythraean Sea* refers to it as the Island of Sarapis (Σαράπιδος νῆσοι); he also notes that the inhabitants ate fish and exported tortoise shell. The former fact was also observed by Ibn Baṭṭūṭa, who anchored off Maṣīra but did not land there. According to de Gaury, there are some vestigial ruins from the Portuguese period at Sūr Maṣīra in the west of the island.

Several foreign vessels are known to have foundered in the dangerous coastal waters, and some of the local tribes, who were extremely reluctant to acknowledge any external authority, indulged in wrecking and plundering as recently as the early years of the 20th century. (When the tribesmen did recognise such suzerainty, it was apparently that of the Shaykh of Ṣūr in ʿUmān). On 2 August 1904 a British vessel, the *Baron Inverdale*, went aground on the island of Djubayla in the Khūryān-Mūryān [*q.v.*] (Kuria-Muria) group. Some of the passengers and crew took to two boats, one of which was lost at sea. The other, carrying 17 people, landed on the northern shore of Maṣīra in mid-August. Those survivors were robbed and murdered by local inhabitants. After an abortive investigative visit in mid-September, the Sultan of Maskaṭ, Fayṣal b. Turkī Āl Bū Saʿīd, returned to the island at the end of that month and arrested several tribesmen who were taken to the capital for trial. Those found guilty were then returned to the island, and shot at the scene of their crime. A monument recording the execution of the murderers was erected nearby, and so too was a memorial slab in honour of the victims of the outrage. These events were very important in helping to establish the control of the Sultan of Maskaṭ over Maṣīra.

The inauguration of air routes across the Middle East in the 1930s began to give the island a new significance. During the Second World War, the British Royal Air Force and the United States' Air Force made use of the staging-post airfield, which was constructed at the northern tip of the island, in moving men and supplies to and from India and the Far East. A new agreement was reached in July 1958 between the Sultan of Maskaṭ and the British government which permitted the Royal Air Force to continue its use of that base. In 1962 a 9,000 feet hard-surface runway was added to the two shorter natural-surface landing strips which were already in operation. New fuel storage tanks and better communications equipment were also installed at this time. The Royal Air Force withdrew from Maṣīra in 1977, and control of the facilities then passed to the government of Oman. The Britsh Broadcasting Corporation maintains a radio-relay station on the island. A severe and prolonged hurricane struck Maṣīra in June 1977, causing considerable loss of life and destroying most of the buildings there.

(R. M. Burrell)

MASJUMI (*Madjelis Sjuro Indonesia*, "Consultative Council of Indonesian Muslims"), the name of two different Indonesian Islamic organisations: (a) during the Japanese occupation of Indonesia 1942-5, and (b) in independent Indonesia.

(a) During the Japanese occupation. The Japanese Military Government, during the first stage of its occupation of Indonesia after 1 March 1942, tried to mobilise the Islamic groups for its anti-Western political and military aims. Most of the Islamic leaders had, in different degrees, opposed actively Dutch rule and a number of Islamic nationalist organisations had been established in pre-war Indonesia, with the *Madjelis Islam A'la Indonesia* (*MIAI*, "Supreme Indonesian Islamic Council") in 1937 as their co-ordinating organ.

In November 1943, Masjumi was founded more or less as the successor of *MIAI*. Membership was open only to those organisations which had been granted legal status by the Japanese authorities. These were, at that time, the traditionalist-oriented *Nahdatul Ulama* (*NU*, "Renaissance of the Scholars"), and the modernist social organisation *Muhammadiyah*, joined later by two smaller organisations. In addition, personal membership could be granted to those *ʿulamāʾ* and *kiyai* (religious leaders) who had obtained the consent of the Office for Religious Affairs (*Shūmubu*), established by the Japanese in March 1942 and since 1 October 1943 under Indonesian leadership. The aim and purpose of Masjumi was defined as sponsoring and coordinating the relations between the different Islamic associations in Java and Madura, guiding and guarding the activities of these associations in order to improve cultural life and thus enable the Muslim community to help and contribute their efforts for establishing the Commonwealth of Greater Asia under the leadership of *Dai Nippon*, "in accordance with God's commandments" (cf. van Nieuwenhuijze, 155; Soebagijo, 67). Masjumi's pro-Japanese stand resulted in a certain estrangement with the more radical Islamic organisations which were still waiting for their legalisation, with the associations of Arab Muslims, and with the religiously "neutral" nationalists whose activities were severely restricted.

Masjumi was not a merger, but "constituted a working agreement between Muhammadiyah and Nahdatul Ulama" (Benda, 152). It may be presumed that the interest of the Japanese authorities originated in the personal influence and respect which most leaders of *Muhammadiyah* and *NU* exercised on the populace, mainly in the villages, as religious teachers. Winning their support would mean for the Japanese a guarantee for a certain degree of quiescence and stability among the people. As a consequence of this policy, the traditional power balance in the Muslim society shifted from the jurisdictional and administrative representatives, the *penghulu*, who had obtained some support from the Dutch administration, to the Muslim teachers and scholars. On 1 August 1944, the *Shūmubu* was reorganised, its new leading personnel taken mostly from Masjumi. Thus Masjumi functioned practically as part of the government and was linked to its goals more than before. As go-betweens, the religious leaders had to explain the Japanese policy to the people, endeavouring to gain their support in spite of all kinds of increasing shortages and suffering; at the same time, they were responsible to the military administration, especially in cases of turmoil or revolt.

On 7 September 1944, the Japanese government had announced its plan to prepare Indonesia for independence. Now, Masjumi's political agitation received new momentum. During a rally sponsored by Masjumi and held in Jakarta on 12-14 October, a statement was adopted which stressed the task to prepare the Indonesian Muslim community so as "to be ready and able to receive freedom for Indonesia, and freedom for the religion of Islam" (cf. also W. Hasjim, 341). Independence was understood as an opportunity to establish the nation on Islamic principles, without restrictions imposed by a foreign or non-Islamic power.

The growing militancy in the country finally led to the formation of a military branch of Masjumi, the *Barisan Hizbullah* ("The Front of God's Party"), in December 1944. Already in September 1943, Masjumi had urged the Japanese, although in vain, to establish a Muslim volunteer corps, after the "secular" nationalists had made a similar plea and were allowed to form Peta (*Pembela Tanah Air*, "Defenders of the Home Country"). Hizbullah's aim was defined as to realise the solidarity of the Indonesian Muslim community, to stand and fight together with Japan, in the path of God (*fī sabīl Allāh*), and to realise Indonesian independence, all in accordance with the commandments of Islam (van Nieuwenhuijze, 159; van Dijk, 73). Japanese officers were in charge of the military training, whereas religious instruction was given by Indonesian Islamic teachers, preferably members of Masjumi.

After January 1945, Masjumi broadened its field of activity and started to infiltrate into the "Neighbourhood Associations", a "grass roots control apparatus to the *Djawa Hōkōkai*" ("People's Service Association in Java"), which was under direct Japanese control and staffed with *priyai*. This move, although apparently profitable for Masjumi, indicated that it had passed its climax as the favourite of the Japanese. These felt that Masjumi's agitation against the "infidel" (Western) imperialists became more and more ambiguous and could include the Japanese occupiers as well. The Japanese, therefore, began to deal with the different nationalist groups on more equal terms. This encouraged non-Masjumi Muslims to appeal for a larger basis of the Islamic movement. Finally, Masjumi lost its political monopoly among the Muslims, although its leaders remained the most eminent spokesmen of the Muslim community.

With the re-emergence of the "secular" nationalists, a fierce contest for ideological leadership in the national movement was inaugurated. This contest dominated the discussions in the "Study Committee for the Efforts to Prepare Independence" (*Badan*

Penyelidikan Usaha Persiapan Kemerdekaan), established by the Japanese on 1 March 1945, of whose 62 members only six were from Masjumi. After Soekarno, as a representative of the "secular" nationalists, had presented his concept of *Panca Sila* ("Five Pillars") on 1 June, in which not Islam but more generally the belief in One Divinity (*ketuhanan*) should be the religious element in the state ideology, the Masjumi members led by Wahid Hasjim agreed to this principle on 22 June, after it was amended with the "seven words": *dengan kewajiban menjalankan Syari'at Islam bagi pemelukpemeluknya* ("with the obligation for its adherents to practice the Islamic Law"), and some other Islamic provisions. This "compromise", later known as the "Jakarta Charter", stimulated the aceeptance of other religions considered to be monotheistic in the state, but it made it also obligatory for the state to force Muslims into obedience to the *sharīʿa*.

In the last weeks before Indonesia's independence, Masjumi as a politieal force speedily declined. Its aim to maintain the identification of nationalist and Islamic goals proved to be unrealistic. Opposition against the "Jakarta Charter" and its "seven words" were not only voiced by non-Muslims but also by Muslims, especially those coming from the Outer Islands. Some considered the *sharīʿa* as a foreign juridical concept with only particular applicability, and they therefore favoured traditional or *adat* law as an inclusive Indonesian basis for legislation and ideology. Thus, when after the Proclamation of Independence issued by the "secularists", and not Masjumi, on 17 August 1945, the draft of the Constitution was discussed, their repeated efforts to maintain, or include, Islamic preceptions, were finally refuted, and even the "seven words" of the "Jakarta Charter" were dropped. Masjumi as an organisation vanished together with its former protectors.

(b) In independent Indonesia. After the proclamation of Independence, Soekarno aimed at establishing only one party, a *Partai Nasional Indonesia*, in which all frictions in society would be overcome through consultation followed by unanimous decisions. The government was headed by the President, and power lay in his hands. There was, however, growing opposition against Soekarno's understanding of "unity" and leadership, and a desire to form political parties increased. On 7 November 1945, the Muslim leaders from various groups and orientations who had gathered at Yogyakarta in a national congress, transformed the old Masjumi into "the only political Islamic party in Indonesia". In contrast to the old Masjumi, the new party seems to have laid more stress on individual membership than on membership of organisations. There were granted extraordinary membership only, and were considered as mere "social organisations" not questioning Masjumi's political monopoly. The leadership mainly originated from *NU*, *Partai Serikat Islam Indonesia* (*PSII*, the oldest nationalist Islamic party founded in 1911), and Muhammadiyah.

Masjumi's pretensions to represent all Muslims in Indonesia presented an alternative, and challenging, conception of "unity" against the all-inclusive one of Soekarno. In the field of doctrine, this meant that differences about the role of the *madhhabs* and other questions of *khilāfiyyāt* were considered to belong to the *furūʿ*, not the *uṣūl al-fikh*. In actual policy-making, this call for Islamic unity actually urged co-operation between a number of Islamic leaders who had been bitterly opposed against each other before the war, and new controversies about *Pancasila* and its meaning for the Muslims added to the difficulties of this task.

Under the leadership of Masjumi, a women's organisation was founded to promote knowledge and political as well as religious awareness, and to strengthen their feeling of responsibility at home and in society. Besides this women's organisation, Masjumi established also an Islamic Youth Movement, an Islamic Labour Union, an Islamic Farmers' Union, and it was closely related to the Islamic Students Organisation *HMI* (*Himpunan Mahasiswa Indonesia*), established in 1947.

Although the original Islamic goals were not achieved in the Republic proclaimed in August 1945, the leaders of Masjumi called for a general mobilisation of the Muslims to defend it against the returning Allies. Internally, it intensified its strife for controlling the state. There has been much discussion whether the aim of Masjumi at this time was to erect the Islamic State (*Negara Islam*), or whether its intention was to develop an Islamic society in the state which implemented the Islamic law, without changing formally the constitution or abrogating Pancasila. Both tendencies had their protagonists. Social responsibility, sometimes even expressed in socialist terms, was a constant factor in Masjumi's working programs. In some areas with a strong feudal system, Masjumi presented itself as a forerunner of social renewal, or even social or Islamic revolution (H. Feith and L. Castles, *Indonesian political thinking 1945-1965*, Ithaca and London 1970, 55 ff.).

After 1946, Masjumi became more and more dominated by intellectuals who had received a modernist or western education. Some of them had been expelled by *PSII* before the war and were, more or less, affiliated with organisations like Muhammadiyah, Persatuan Islam, and others. This led to internal conflict which finally caused the exodus of former adherents of *PSII* and the re-foundation of this party in 1947. A similar exodus, although less spectacular, had already taken place in 1946 when the traditionalist "Movement for Islamic Education" (*Pergerakan Tarbiyah Islamiyah Perti*) of Central Sumatra, declared itself as a political party.

After the secession of *PSII*, there were three main groups within Masjumi (Ward, 10). The first one may be styled as "religious socialist", and indeed, they were occasionally political partners of Sutan Sjahrir's Socialist Party. Its members were mainly the above-mentioned intellectuals like Dr. Soekiman, Moh. Natsir, Mohammed Roem, Sjafruddin Prawiranegara, Jusuf Wibisono and others. After 1948 especially, they sometimes took over leading positions in government activities, including the negotiations with the Dutch which finally led to the recognition of Indonesia's sovereignty in 1949.

Another group left in Masjumi after 1947 were the traditionalist *ʿulamāʾ* related to *NU* under the leadership of K. H. Wahid Hasjim. Their participation in the government was usually focussed on the Ministry of Religious Affairs, founded in January 1946.

The third group of Masjumi members, and the smallest one, was that of the "radical fundamentalists". They represented the militant wing of the modernist movement, being more illiberal and anti-Western than the moderates of the first group. Isa Anshary, chairman of Masjumi's branch in West Java, became their spokesman. They became the most outspoken advocates of an "Islamic state".

A serious blow to the integrity of Masjumi was launched in 1948. S. H. Kartosoewirjo, a Masjumi leader in West Java, renounced the Renville Agreement of January 1948 between the Indonesians and

the Dutch, which called for a withdrawal of Republican troops from West Java. He let himself be declared as the *Imām* (Head of State) of the provisional "Islamic State of Indonesia" proclaimed in West Java as an alternative to the Indonesian Republic. His rebellion, known as the *Darul Islam* movement, lasted until 1962, when he was captured and executed. The leaders of Masjumi, although disagreeing with the measures which he had taken, were eager to avoid a definite break, but in 1951 they had to accept the demand of the army leaders and approve military actions against the rebels.

In the meantime, a new crisis developed in Masjumi. The *NU*-oriented *ʿulamāʾ* felt a growing decrease of their influence. In both the Natsir and Soekiman cabinets of 1950 and 1951, only the portfolio of Religious Affairs was entrusted to a representative of *NU*. When in the Wilopo cabinet of 1952, Faqih Usman from Muhammadiyah was appointed as Minister of Religious Affairs, the time had come for *NU* to separate from Masjumi and establish itself as a political party on its own (H. Feith, *Decline of constitutional democracy*, 233-7).

With two great rival Islamic parties, the political atmosphere in Indonesia changed considerably. The cabinet presided over by Ali Sastroamidjojo (*PNI*) from July 1953 to July 1955 was supported by *NU*, whereas Masjumi opposed it as being too much compromised with the Communists.

The uncompromising attitude against the Communists had been a characteristic of Masjumi since its very beginning. This led to conflicts with Soekarno, for whom Communism was one of the most powerful and therefore indispensable anti-imperialist ideological forces. In combining it with his understanding of nationalism, he outlined the ideology of his *Partai Nasional Indonesia* (*PNI*). A compromising attitude among some of Masjumi's leaders with the *PNI* had, however, already been apparent before the secession of NU, when Soekiman succeeded Natsir as Prime Minister, leading a Masjumi-*PNI* cabinet. Soekiman, being a Javanese, tried to counteract a *PNI-PKI* co-operation by strengthening ties with *NU*. On the other side, Natsir was more linked to the "radical fundamentalists" in his own party, and to the Socialist Party which was also strictly anti-Communist and opposing *PNI*.

After Soekarno's speech in Amuntai in January 1953 in which he attacked the concept of a Negara Islam and praised *Pancasila* as a guarantee for freedom of religious practice and civil rights of every single Indonesian, the different basic convictions of Masjumi leaders and their cultural and ideological roots became more apparent. Isa Anshary and his team stressed that their conception was based on divine revelation and therefore not open to compromise like the human-made concepts of Christians, secularists and others. He questioned the religious sincerity of Soekarno and those Muslims who were in favour of *Pancasila* as understood by the "religious neutral" nationalists, and he accused them of being hypocrites or unbelievers.

Natsir, like Soekiman, took a much more moderate position in this matter. He felt that the voters would reveal their aspirations in the coming elections and stressed that the people should be well prepared to cast their votes for the "right" party. Therefore he urged the start of new efforts in the fields of Islamic education and self-awareness.

During the election campaign in 1954-5, the voices heard from Masjumi and launched through its party organ *Suara Masjumi*, the daily newspaper *Abadi* and other media, became more and more adapted to the language of the radical fundamentalists. This was partly due to other Islamic revolts, besides the *Darul Islam* in West Java, which were shaking Aceh and South Sulawesi since 1953. Both provinces had a strong Islamic, and generally pro-Masjumi, population. They justified their revolt by pointing to, among other grievances, the neglect by the central government of the development of their provinces, and the growing influence of atheistic Communism in the state. If Masjumi wanted to obtain the votes of these groups, it had to show clearly its opposition to the incriminating trends and its struggle for Islamic goals.

The other Islamic parties taking part in the campaign had formed an Islamic anti-Masjumi bloc. Thus Masjumi became isolated; it was denounced as being extremist and even in sympathy with the Darul Islam, and therefore disturbing the national brotherhood based on the *Pancasila* which had even been accepted by the *PKI* in 1954.

In the Parliamentary elections on 29 September 1955, Masjumi gained 20.9% of the votes. It was thus the second largest party, after *PNI* with 22.3%. Next were *NU* with 18.4% and *PKI* with 16.4%. There were no major differences in the elections to the Konstituante (cf. H. Feith, *Elections*, 57 ff.). All Islamic parties together gained 43.7% of the valid votes. During the years after the elections, Masjumi remained in opposition to the governments, after a short initial period of co-operation. But in the debates in the Konstituante which started working on 10 November 1956 in Bandung and which had to draft the final Indonesian Constitution replacing those from 1945, 1949 and 1950, Masjumi was joined by *NU* and the other Islamic parties in its struggle for a constitution which would base state and society on the principles of Islam. Against this Islamic bloc, a *Pancasila* bloc formed itself from the other parties. Regarding the basic question, *Pancasila* or Islam, none was strong enough to reach the two-thirds majority needed for any decision. This deadlock encouraged Soekarno finally to dissolve the Konstituante on 5 July 1959 and to decree a return to the 1945 Constitution, together with the proclamation of Guided Democracy.

In these years after the elections, Masjumi experienced its political decline. This was partly due to its futile position, in that it still claimed to defend the interests of the Muslims or 90% of the Indonesian population and thus refrained from defining its role as constructive partner in the midst of Indonesia's pluralism of ideologies and religions. But more decisive for its decline than these failures was the involvement of some of its leaders like Moh. Natsir and Sjafruddin Prawiranegara in new regional uprisings which had broken out in North Sulawesi and in West Sumatra in 1957.

This again led to serious clashes in Masjumi between the "regionalists" and the "Javanese" wing led by Soekiman, who was in favour of Soekarno's centralisation policy. Others like Moh. Roem feared that another split in Masjumi could only serve the Communists and their growing influence on Soekarno, and thus endanger Masjumi's political role. He therefore urged the maintenance of the unity of the *umma*. But finally, some leaders like Soekiman left Masjumi in early 1960 and joined *PSII*. Muhammadiya, too, terminated its affiliation as a "special member". Thus the remaining faithful had to bear the consequences of Masjumi's image as "a party of separation and rebellion" (A. Samson, quoted by Ward, 14). They were viewed, moreover, with suspicion by the military leaders who, although outspoken

anti-Communist themselves, had to fight the rebels. On 17 August 1960, Soekarno announced his decree that Masjumi, together with Sjahrir's Socialist Party (*PSI*), were to be dissolved because both parties refused to condemn their party members who were active in the regional rebellions.

MASKANA, Greek Μασχάνη, from the Syriac Maškenē (cf. Pauly-Wissowa, xiv/1, col. 2963), a small town, now a village, in the northern part of Syria. The name is mentioned by Stephanus of Byzantium in regard to the war of Septimius Severus against the Parthians in 224 A.D. The Arabic geographers and chroniclers of the Middle Ages only mention Bālis [*q.v.*] in this region, situated 4 km./2½ miles to the south-east of Maskana.

The place is situated in long. 38° 05' N. and 36° lat. E. at about 100 km./63 miles to the east of Ḥalab [*q.v.*] or Aleppo on a Pleistocene terrace which forces the Euphrates (al-Furāt [*q.v.*]) to turn eastwards after having flowed from northwards to southwards on leaving the Taurus, like its two left-bank affluents the Balīkh and Khābūr [*q.v.*]. Being on the 25 mm. isohyet, at the southern limit of the cultivable steppe land and the desert zone, Maskana is on the line of contact between the sedentary, peasant world and that of the nomadic pastoralist. The region has been populated since the Bronze Age, as is attested by numerous ancient sites, the most notable being Tell Muraybat, above the left bank.

Having developed down-stream from Ḳalʿat Nadjm [*q.v.*] and at a distance of 5 km./3 miles to the north-north-west of Bālis at a spot where the route coming from Ḥalab rejoins the route which follows the right bank of the Euphrates towards Baghdād, Maskana has since Antiquity experienced the vicissitudes of warfare, for it lies on a bend of the river in a region where there are fords. It should be noted that the Euphrates has in the course of the centuries several times changed its bed in the region of Maskana, a fact which may perhaps explain the variations in distance given in the written sources between the river bank and the actual course of the river. It is at this point that the Euphrates becomes navigable, and flat-bottomed barges (*shakhtūra*, pl. *shakhātīr*) constructed from wood are used for river navigation.

In pre-Islamic times, the tribe of the Ḥadīdīn pastured their sheep in the region of the middle Euphrates, and one of the tombs attributed to their mythical ancestor Shaykh Ḥadīd lay in the neighbourhood of Maskana. In the second half of the 6th century, members of the ʿAnaza [*q.v.*] and Bakr moved into the region and installed themselves there definitively. Over a thousand years later, there took place a new migration of the ʿAnaza towards this middle Euphrates region, and then a further one *ca.* 1800. In the 20th century, the Shammar and the ʿAnaza are the main sheep-rearing tribes of the region.

During mediaeval times, the history of Maskana is intertwined with that of Bālis, and it passed under the rule of the master of Ḥalab like all the region to the west of the Euphrates between Ḳalʿat Nadjm and al-Raḳḳa [*q.v.*]. At the beginning of the 6th/12th century, the Atabegs of Mawṣil disputed with the rulers of Ḥalab for this region which, at Nūr al-Dīn's death (569/1174) suffered successive blows from the rivalries of his successors and then those of the heirs of Ṣalāḥ al-Dīn. From the second half of the 7th/13th century onwards until the end of the 8th/14th century, the invasions of the Mongols were to provoke damage in this region, which always remained the inevitable route for anyone heading from Baghdād towards Ḥalab via the Euphrates valley.

At the time of Mamlūk control in Syria (8th-9th/14th-15th centuries), Maskana does not seem to have been a place worthy of mention. In Ottoman times, the population of the region was made up of turbulent nomads. When ʿAbd al-Ḥamīd II [*q.v.*] became sultan in 1876, he confiscated the fertile lands of the *wilāyet* of Ḥalab in order to bring them into his own personal domains administered by a special organisation (*čiftlik* [*q.v.*]). In 1908, ʿAbd al-Ḥamīd accepted the integration of his personal domains into those of the state, so that the *čiftlik* lands became *mīrī* ones, i.e. lands of the empire. The measures taken in 1326/1908 and in the following year were still regulating land ownership in the district of Maskana in 1923. Until the mid-20th century, this region remained almost exclusively one of traditional large ownership.

In May 1915, Alois Musil mentioned at Maskana a barracks for gendarmes, a large *khān* and the residence of the head of the telegraph service (*Palmyrena*, 89). At this time, camels browsed below the settled part. There was in the valley an ancient canal whose branches received, when the waters were high, water from the Euphrates for irrigating the cultivated lands.

Under the French mandate, the *ḳaḍāʾ* of Maskana, the second in the region of the province of Aleppo in 1923, was made up of 80% lands administered by the office of domain lands (*al-amlāk al-mudawwara*), following the system of tenant farming; 15% lands with the system of métayage; and 5% small landowners. In this *ḳaḍāʾ*, situated on the periphery of the province,

and only linked with Aleppo in 1922 by a single track impracticable for cars which went along the telegraph line, hence lacking any means for transport or commincations, the price of land was markedly less than that in other ḳaḍāʾs. There were two classes of lands in this region. Those alongside the Euphrates, called *hawī*, with a covering of alluvium left by the river at periods of high water, were irrigated for both summer and winter crops. Yields were 15 to 30 for one measure for corn and barley, whilst maize and sorghum gave 100 for one measure (Parvie, 104). The lands in the second category were to be found on the old slopes of the river some 10-15 m./33-50 feet above the distant river level, at the beginning of the 20th century, a distance of one to 5 km. These were less good, and corn, barley, cats and lentils were grown there.

Until a recent date, the construction material of this region was mud brick made from earth and chopped straw dried in moulds by the sun. In times farther back, there was also used clay from the Euphrates baked in kilns. In the opening years of the 20th century, Maskana became in spring time one of the centres for producing milk from cows for Aleppo, and this milk was used to make butter for exporting. In May could also be found dromedaries put out to pasture. Like Ḳalʿat Nadjm and al-Raḳḳa, it was one of the points where flocks of sheep coming from Mawṣil and heading for Aleppo crossed the Euphrates. Transhumance was practised on the pastures of Maskana.

In 1945 the village had 430 inhabitants. At the present time, the modern road network allows in this region, thanks to road bridges at al-Raḳḳa, Dayr al-Zōr [*q.v.*] and Mayyadīn, the transporting of sheep in two-level lorries to Aleppo without any need to halt at Maskana.

(N. ELISSÉEFF)

MASḲAṬ (lat. 23° 28' N., long. 58° 36' E.), Eng. Muscat, Fr. Mascate, a port on the Gulf of Oman and since the end of the 18th century notionally the capital of what came to be called the Sultanate of Muscat and Oman, since 1970 the Sultanate of Oman. ʿUmānī sources often write the name as Maskad, and even as Maska/Muska with *tāʾ marbūṭa*, the former in accordance with local dialectal pronunciation.

1. Geographical situation and demography.

The site of the town is a constricted one, in a cove where the mountains come almost down to the sea, with the Portuguese Fort Mīrānī at the western end of the cove and a second Portuguese fortress, that of Djalālī, on one of the two off-shore islets. The town itself is on a gravel plain, but until modern times, access to Masḳaṭ by land has always been difficult, and communication with it has more often been by sea. In effect, it is the cul-de-sac of the Bāṭina coastal plain, and the nearby port of Maṭraḥ [*q.v.*] is in many ways the more favoured centre. But the natural mountain defences plus a line of fortifications have given Masḳaṭ a strategic significance, despite the limited space for settlement and the unattractive climate, with its high temperature and humidity.

The 19th century travellers and visitors commented unfavourably on the town's squalor and its narrow streets. Lorimer, in his *Gazetteer*, estimated the town's permanent population at 8,000, of which 3,000 lived within the town and the rest in the suburbs, whereas he estimated that of Maṭraḥ at 14,000, reflecting the latter's superior commerical role. After a period of steep decline, the population of Masḳaṭ has been reliably estimated in 1970 at 6,000, mainly detribalised ʿUmānī Arabs or foreigners, including Baḥraynīs, Balūč, Persians and Ḥaḍārim (southern Arabian tribesmen) and a lowest stratum of the *bayāsira*, slaves and ex-slaves from Africa. In the 19th century there was also a small Jewish population. But the most significant element was that of the Banians, Hindu merchants and middlemen, who had certainly been there since Portuguese times; see C. H. Allen, *op. cit.* in *Bibl.* Their quarter was in the east of the town, where they have had their temples, traditionally since the 17th century.

2. History.

Masḳaṭ's real rise to prominence goes back to the Hurmuzī period of the late 15th century, just before the arrival of the Portuguese; up to the 12th century, the main emporium of the ʿUmānī coast has been Ṣuḥār [*q.v.*], and the town of Masḳaṭ's main importance was as the last watering place on the Arabian coast for ships trading with India (see the mediaeval Arabic sources, notably al-Muḳaddasī, 93; Ibn al-Faḳīh, 11; Yāḳūt, iv, 529; Ibn al-Mudjāwir, ed. Löfgren, ii, 284; ?the merchant Sulaymān, *Akhbār al-Ṣīn wa 'l-Hind*, ed. and tr. J. Sauvaget, Paris 1948, §§ 13-14). Now, in the later 15th century, Masḳaṭ grew at the expense of Ḳalhāt [*q.v.*], apparently under the patronage of the Hurmuzī ruling family, and Ibn Mādjid [*q.v.*] stresses that his home port had become the main centre of the ʿUmānī coast for trade with India (see G. R. Tibbetts, in *Arabian studies*, i, 87-101), the export trade in horses, bred in eastern Arabia as far away as al-Ḥasā, being especially important (see S. Digby, *War horse and elephant in the Delhi Sultanate*, Oxford 1971; Serjeant, *op. cit.* in *Bibl.*, 27; J. Aubin, in *Mare Luso-Indicum*, ii, 112).

On 2 September 1507 Afonso d'Alboquerque arrived at Masḳaṭ after subduing Ḳalhāt and destroying Ḳurayyāt, seizing and sacking the town and massacring its population, perhaps amounting to 7,000 at that time, three days later. The Portuguese soon realised Masḳaṭ's strategic value, and it came to play an important part in their control of the Gulf,

above all after their loss of Hurmuz in 1622; previous to that, the Portuguese operated as nominal vassals of the ruler of Hurmuz, whilst nevertheless requiring an annual tribute from him, by 1523, of 60,000 *ashrafīs*. In the middle years of the 16th century, the Portuguese faced threats from the Ottoman occupation of al-Baṣra 61546) and of al-Ḳaṭīf (1550), but above all from the Ottoman fleet operating in the Indian Ocean from its base at Suez; in 1552 the Ottoman admiral Pīrī Reʾīs [*q.v.*] temporarily captured Maskaṭ, but was subsequently defeated by D. Fernando de Menezes in a naval battle off the ʿUmānī coast. Maskaṭ now became integrated into the Portuguese trading empire, and although the Portuguese creamed off the main profit, seems to have benefited also, whereas Ḳalhāt declined *pari passu* with Maskaṭ's rise. In the later 16th century new threats appeared from the Dutch and English, but the two main fortresses, still surviving today, San João or Djalālī and Fort Capital (now known as Mīrānī, ? < *almirante*), were built in 1587-8 as a reply to Turkish corsair raids. When the Portuguese were dislodged from Hurmuz, Maskaṭ received most of Hurmuz's Portuguese garrison and was built up against the Ṣafawids and the native ʿUmānīs, now uniting under the Yaʿrabid *Imām* Naṣr b. Murshid. Further defences were constructed, and the town had two churches according to Pietro della Valle, who visited it in 1625 (*Travels*, London 1665, 223-36), and soon afterwards, a Carmelite staging-house, at some later period erected into a "cathedral"; used under the Āl Bū Saʿīd as a stable, remains of it were visible till the 1890s.

The Yaʿāriba [see YAʿRABIDS] first attacked Maskaṭ in the 1630s, forcing the Portuguese to seek peace and possibly to pay tribute or protection money; by 1643 the Yaʿrabids had taken Ṣuḥār and now had independent access to the sea which enable the *Imāms* to bypass the Portuguese export licensing system. In 1649 Sulṭān b. Sayf al-Yaʿrabī finally stormed Maskaṭ and took it from the Portuguese, and though the war continued at sea, with the Portuguese blockading and harassing the port, by 1697 they had to give up all hope of retaking it. The *Imāms* now built up Maskaṭ's trade with India, South Arabia and East Africa for themselves, skilfully using the Dutch and English to further their own interests, though no foreign power, then or later, was allowed to establish a factory in ʿUmān. ʿUmānī aggression and buccaneering in the Gulf of Oman, in effect taking over the role of the old European powers, led to tension with Persia. With the decline of the Yaʿāriba and increased disorder within ʿUmān, involving the Hināwī-Ghāfirī civil war, there arose possibilities for Persian intervention. Persian military help was summoned by Sayf b. Sulṭān in 1737, and for a while in 1738 Maskaṭ was occupied by a force under Muḥammad Taḳī Khān, *Beglerbeg* of Fārs.

Eventually during these years of anarchy in ʿUmān, Aḥmad b. Saʿīd was recognised as *Imām ca.* 1167/1743-4 [see BŪ SAʿĪD], and Maskaṭ now began to develop again in importance during this period when Ottoman and Persia power in the Gulf was weak and when there were no foreign rivals for the trade there, until the Ḳawāsim and the ʿUtub [*q.vv.*], who captured Baḥrayn island in 1783, emerged as maritime rivals. Maskaṭ's main trade was at this time directed at South India, and close relations developed between Maskaṭ and Tīpū Sulṭān (1782-99 [*q.v.*]) of Mysore, who established a trade mission there (the Nawwāb's house was still in existence in the mid-19th century); fear that Maskaṭ might follow Tīpū Sulṭān into the camp of the French was one of the reasons for the first agreement (*ḳawl-nāma*) with the British in 1798.

A further factor operative at this time in ʿUmānī affairs was internal division within the country, although it was not until after 1913 that the split between Sultan and *Imām*, coastal ʿUmān and the interior, became a significant factor; before that, ʿUmānīs from the interior had been as strongly involved as any others in maritime expansion and trade until German and Belgian expansion in Central Africa excluded them from Africa and British intervention along the ʿUmānī coast excluded them from Maskaṭ. Now, after the arbitration of the Canning Award in 1861, the two separate Bū Saʿīdī rulers of ʿUmān and Zanzibar became in effect British puppet rulers [see BŪ SAʿĪD and ZANZIBAR].

Under the Bū Saʿīdīs, Maskaṭ flourished as the naval and commercial centre of ʿUmān until in the 19th century, Zanzibar became the main centre for the dynasty's political control of overseas commerce. The rule of Sulṭān b. Aḥmad (1792-1804) saw the apogee of Maskaṭ's florescence as the basis for ʿUmānī control of Gulf trade, with 15 ships of 400-500 tons each based there; fine houses were constructed there, including a residence for the ruler, the Bayt Grayza, by the site of the old Portuguese *igrezia* ("church") complex. After his death, however, pressure on ʿUmān from the Ḳawāsim, the Wahhābī-Suʿūdī state and the ʿUtub increased. Protection increasingly came from the British, and when the Ḳawāsim were quelled in 1819, the ruler Saʿīd b. Sulṭān, after attempts to assert the old ʿUmānī control in the Gulf ended in disaster at Baḥrayn in 1829, eventually turned ʿUmānī interest away from the Gulf-Indian trade axis in order to concentrate on the South Arabian-East African one. Also, during this first half of the 19th century, Banian (Hindu) and other Indian merchants were encouraged to settle in Maskaṭ and then Zanzibar, and they built up a dominating position in the increasingly monetarised ʿUmānī-East African-Indian commercial system, especially as customs-tax farmers, in which role they were protected by the British. One effect of this was that the Indians came to own most of the property in Maskaṭ and Maṭraḥ. In the decades 1880-1910 Maskaṭ was for a while incorporated into a wider pattern of world trade, as a port of call and coaling station; port facilities were therefore extended, a new palace built and foreign consulates set up. But already before World War I, decline was setting in. Attacks on Maskaṭ from the interior were resumed, till in 1920, (Sir) Ronald Wingate arranged terms which effectively divided ʿUmān into two, with the sultanate of Taymūr b. Fayṣal based on Maskaṭ and the coastlands only. Maskaṭ became a commercial backwater, whilst Maṭraḥ grew in trade and in population at its expense. Taymūr's son Saʿīd (1932-70) effectively moved his capital to Salāla in Ẓafār [*q.v.*] and after 1954 ceased to visit Maskaṭ. With this increased isolation, Maskaṭ had no foreign representives beyond those of Great Britain and India, one bank and one mission hospital. When Saʿīd's son Ḳābūs succeeded after the coup of 1970, the latter had never seen Maskaṭ, let alone the rest of ʿUmān.

At the present time, Maskaṭ continues to be a backwater, within the capital area extending outwards beyond al-Sīb (ancient Damā). The problem of road access has been solved by the construction of a corniche round the rocky Raʾs Kalbuh, but the whole question of communication along a narrowly-constricted area of settlement has led to major developments now occurring at the southern end of the Bāṭina plain. Various facilities have grown up at nearby points, such as the oil port of Mīnā al-Faḥl and at the commercial centre of Maṭraḥ, with its moder-

nised port of Mīnā Ḳābūs. Since the Sultan's real capital is Salāla, Masḳaṭ proper remains only a notional capital, devoid of almost all functions and in effect a museum piece.

Bibliography : The *Bibl.* of A. Grohman in his *EI*[1] art. contains detailed references to the classical and mediaeval Arabic geographical and historical sources on Masḳaṭ; see also that to ʿUMĀN.

For basic geographical information, J. G. Lorimer, *Gazetteer of the Persian Gulf, ʾOmān and Central Arabia*, Calcutta 1908-15, repr. 1970, is probably the most useful source and may be supplemented by various British Admiralty handbooks and charts, notably the *Persian Gulf Pilot* 1942. For details of the Arab population of the area, al-Siyābī (Sālim b. Ḥumūd) *Isʿāf al-aʿyān fī ansāb ahl ʿUmān*, Beirut 1965 (esp. 163-4) is useful, whilst C. H. Allen, *The Indian merchant community of Masqat*, in *BSOAS*, xliv (1981), 39-53, provides further details about the Banians.

Travellers' accounts are useful adjuncts, and D. G. Hogarth, *The penetration of Arabia*, New York 1904, still contains useful material. A valuable summary of their descriptions can be found in R. Bidwell, *Bibliographical notes on European accounts of Muscat 1500-1900*, in *Arabian Studies*, iv, 123-59. To his list of references may be added the account and drawings of E. Kaempfer discussed in G. Weisgerber, *Muscat in 1688: Engelbert Kaempfer's report and engravings*, in *J. Oman Studies*, v (1979), 95-101; and C. G. Miles, *The countries and tribes of the Persian Gulf*, London 1919, where descriptions of Masḳaṭ (1966 repr., 462-9) really describe the period when he was living there (1872-86). Collections of photographs also provide interesting details, notably the Fuad Dabbas Collection in Harvard University Semitic Museum, and W. D. Peyton, *Old Oman*, London 1983. This last contains a map which seems to derive from the unpublished *Muscat City planning survey* of 1972, a useful source for the state of the town before the impact of modern development; a description of that period may also be found in I. Skeet, *Muscat and Oman: the end of an era*, London 1974.

For the history of Masḳaṭ, the following sources contain material which is particularly useful. J. Aubin, *Cojeatar et Albuquerque*, in *Mare Luso-Indicum*, i (1971), 99-134, and *Le Royaume d'Ormuz au début du XVIe siècle*, in *ibid.*, ii (1972, publ. 1973), 77-179, provides a detailed study of the Gulf in the late Hurmuzī and early Portuguese period with extensive critiques on the sources, notably de Barros, Correia and Albuquerque. In *Ottoman Turks and the Portuguese in the Persian Gulf, 1534-1581*, in *Jnal. of Asian History*, vi (1972), 45-87, Salih Özbaran uses both Portuguese and Ottoman sources; whilst R. D. Bathurst's unpubl. D. Phil. thesis, Oxford 1967, entitled *The Yaʿrubī dynasty of Oman*, completes the Portuguese period. See further R. B. Serjeant, *The Portuguese off the South Arabian coast*, Oxford 1963, and N. Steensgaard, *Carracks, caravans and companies. The structural crisis in the European-Asian trade in the early seventeenth century*, Copenhagen 1972. A vast number of Portuguese engravings and charts have been collected in the *Portugaliae monumenta cartografica*, but the *Livro das cidades e fortelezas da India* in its various original forms repays further study. Additionally, some useful notes on Mīrānī have been compiled in the mimeographed notes (nos. 2 and 3) of the Oman Historical Association.

For the post-Portuguese period down to the rise of the Āl Bū Saʿīd, Bathurst, *op. cit.*, remains the main study until the end of the Yaʿāriba period, while Anne Kroell, *Louis XIV, la Perse et Mascate*, Paris 1977, adds material from French sources. Then comes a lacuna, for which A. A. Amin, *British interests in the Persian Gulf*, London 1967, provides some background to the end of the 18th century and for which Mrs P. Risso's forthcoming thesis (Toronto University) should help fill the gap (*non vidi*).

From the 19th century to the early 20th century, there is no shortage of studies. The most useful summary of material in the India Office archives is in Lorimer's *Gazetteer*, whilst J. B. Kelly, *Britain and the Persian Gulf 1795-1880*, Oxford 1968, is a massive study based on British records. See also C. H. Allen, *The State of Masqat in the Gulf and East Africa*, in *IJMES*, xiv (1982), 117-27 and his full thesis, *Sayyids, Shaykhs and Sultans: politics and trade in Masqat under the Al Bu Sa'id 1785-1914*, University of Washington 1978, unpubl.; R. G. Landen, *Oman since 1856*, Princeton 1967; and J. E. Peterson, *Oman in the twentieth century*, London 1978.

The two great ʿUmānī sources for Masḳaṭī history are (down to 1856) Ibn Ruzayḳ (Ḥumayd b. Muḥammad), tr. G. P. Badger as *History of the Imâms and Seyyids of Oman*, Hakluyt Society, London 1971, and al-Sālimī (ʿAbd Allāh b. Ḥumayd, d. 1914) *Tuḥfat al-aʿyān bi sīrat ahl ʿUmān* (ed. Aṭfayyish, many printings). Further details of ʿUmānī sources can be found in Bathurst, *op. cit.*, and J. C. Wilkinson, in *AS*, iii, iv. The latter's *Water and tribal settlement in South-East Arabia*, Oxford 1977, and his forthcoming *The Imamate of Oman* provide further information on the Masḳaṭ setting.

(J. C. WILKINSON)

MASKH (A.) "metamorphosis", that is, according to *LA*, s.v., "transformation of an exterior form (*ṣūra*) into a more ugly form"; the product of the metamorphosis is itself called *maskh*/*miskh* or *masīkh*/*mamsūkh*.

Belief in the fact that, as a result of supernatural intervention—divine punishment in the majority of cases—humans have been transformed into animals, statutes or even into stars was as widespread, before Islam, among the Arabs as among the peoples of Antiquity whose mythologies are known to us. The growth of the concept of punishment inflicted by God has led to the survival of this belief under Islam, not only among a populace conscious of ancestral tradition, but also in religious doctrine, since numerous Ḳurʾānic verses justify it: "You know of those among you who have broken the Sabbath; We have said to them: 'Be abject monkeys'" (II, 61/65; cf. VII, 166); "Those whom Allah has cursed, those on whom His wrath has fallen, those whom He has turned to the monkeys and the pigs" (V, 65/60); "If We wished, We would have transformed them where they stood" (XXXVI, 67). The verb *masakha* occurs only in the last-mentioned verse, which concerns deviants in general, whereas the others are applied to the Banū Isrāʾīl. Al-Djāḥiẓ (*Ḥayawān*, iv, 39) explains that God has chosen monkeys and pigs because they are uglier and more antipathetic than other animals, and adds (iv, 39) that if monkeys only are mentioned in II, 61/65 and VII, 166, it is because the punishment in question is more severe.

Jews are also the subject of the principal *ḥadīth* relating to *maskh* (*apud* al-Damīrī, *Ḥayāt al-ḥayawān*, i, 573, s.v. *ḍabb*; cf. ii, 182, s.v. *ḳird*; see also al-Ḳurṭubī, *al-Djāmiʿ li-aḥkām al-Ḳurʾān*, i, 439-40). Seeing somebody eating the flesh of the lizard, the Prophet

said, "A nation of the Banū Isrāʾīl has been transformed, and I fear lest this creature is a part of it; I do not eat this meat, but I do not forbid it". This text is absolutely characteristic because, while testifying to the growth of traditions concerning punishments inflicted on the impious (cf. al-Damīrī, i, 386, s.v. *khinzīr*, where God changes to swine some Jews who have molested Jesus), it relates to an animal which is never mentioned in the Ḳurʾān and is corroborated by various anecdotes. In particular, al-Djāḥiẓ (*Ḥayawān*, vi, 77) describes how a *faḳīh*, also seeing a person eating the flesh of the lizard, says to him: "Know that you have eaten a *shaykh* of the Banū Isrāʾīl". The popular belief is in fact that two Israelite tribes have been transformed, one into lizards which have remained on dry land, the other into eels (*djirrī*) which have gone to live in the sea; the reason for this transformation is not indicated, and it is simply stated that it is likely because the foot of the lizard resembles a man's hand. Ibn Ḳutayba (*Mukhtalif*, 10, 362-3, tr. G. Lecomte, §§ 15, 300 c) refutes the interpretation of the proverb *aʿaḳḳ min ḍabb* "more irreverent than a lizard", according to which a Jew showing disrespect towards his parents had been transformed (al-Maydānī, *Madjmaʿ al-amthāl*, i, 509-10, proposes a different explanation). According to another ancient legend, all dishonest tax collectors were transformed (al-Djāḥiẓ, *Ḥayawān*, vi, 80), and there is reference to one of them who changed into a lizard (*Ḥayawān*, vi, 81, 155); of two others, one became a hyena and the other a wolf (*Ḥayawān*, vi, 80, 148), while Canopus (Suhayl, *Ḥayawān*, iv, 69, vi, 81, 155; *Tarbīʿ*, § 41; Ibn Ḳutayba, *Mukhtalif*, 10, tr. Lecomte, § 15) is none other than the fourth metamorphosed tax-collector. As for Venus (al-Zuhara), she was a prostitute who ascended into the sky by virtue of her knowledge of the greatest name of God (*bi-smi llāh al-aʿẓam*) which Hārūt [*q.v.*] and Mārūt had communicated to her (al-Samarḳandī, *Bustān al-ʿārifīn*, Ḳāzān 1298/1880, 131) and was transformed into a comet (*Ḥayawān*, iv, 69; *Tarbīʿ*, § 41 and index; Ibn Ḳutayba, *Mukhtalif*, 10 = § 15).

The story of Isāf [*q.v.*] and Nāʾila, turned to stone in the Kaʿba, is well known, but it will be noted that the Ḳurʾān (XI, 83/81) does not say that the wife of Lot "became a pillar of salt" (Genesis, xix, 26); al-Djāḥiẓ (*Ḥayawān*, vi, 70) makes the comment in this context that the Ahl al-Kitāb refer to no case of the metamorphosis of an human being into a pig or a monkey and simply state that this guilty woman was changed into a pillar of stone (*sic*). There are also encountered in the pre-Islamic period some individual instances of transformation into animals, but, after Islam, divine punishment does not seem frequently to take this form. There are however Shīʿī legends according to which ʿUmar b. al-Khaṭṭāb wanders in the guise of an owl, and the murderer of Ḥusayn b. ʿAlī, Shimr, "runs about incessantly in search of water, transformed into a dog with four eyes; he observes at least one spring which he never reaches, because at Karbalāʾ he forbade the family of Ḥusayn to approach the water" (H. Massé *Croyances et coutumes persanes*, Paris 1938, 185). On the other hand, the Iranians attribute to post-Islamic metamorphoses the origin of several species of animal: the bear, the elephant, the tortoise, the vulture, the crow, the owl, the hoopoe, the hornet, in addition to the monkey, the pig, the dog and the lizard (*op. laud.*, 185-6).

To these latter attributions relating to Iran, should be added some cases of collective metamorphosis mentioned in the ancient Arab world. For example, it is stated, without undue emphasis, that the mouse (*faʾr* [*q.v.* in Suppl.]) has for its ancestor a miller's wife (*Ḥayawān*, i, 297) and that the shrimp (or the lobster, *irbiyāna*) was a dressmaker who stole thread: this is why the creature has threads, to remind her of the crime that she committed (*Ḥayawān*, i, 297; Ibn Ḳutayba, *Mukhtalif*, 364 = § 300 c); the snake (*ḥayya*) had the form of a camel but, as a punishment (*Ḥayawān*, i, 297), God compelled it to crawl on the ground. According to popular belief, the dog is also the result of a metamorphosis (*Ḥayawān*, i, 222, 292, 297, 308, vi, 79), but in i, 297-8, al-Djāḥiẓ conjectures that the wolf would be the more likely case! Ibn ʿAbbās (*apud* Ibn Ḳutayba, *Mukhtalif*, 167 = § 172 a) comes close to believing in this metamorphosis; he has elsewhere handed down a tradition according to which the elephant, the hare, the spider, the eel and, naturally, the mouse, the monkey and the pig, are humans transformed (*Ḥayawān*, i, 309).

Obliged by the Ḳurʾān to accept the reality of *maskh*, jurists and theologians ponder the real meaning of such transformation and pose the question as to whether it is effected gradually or at a single stroke, whether it has led to the creation of new animal species and, consequently, whether the animals that are the result of it have survived and become numerous, in other words, whether the monkeys, pigs and lizards that we see today are their descendants and theirs alone. Al-Djāḥiẓ (*Tarbīʿ*, § 44) adds this secondary question, which he refrains from answering: "Do they recognise one another and do they know what has brought about their origin?".

To the first question, the author of *K. al-Ḥayawān* (iv, 70), one of whose most original ideas is the influence exerted by the soil and the climate on the somatic and psychological characters of living beings, replies by conveying, without however associating himself with it explicitly, the opinion of certain of the Dahriyya [*q.v.*] who accept the concept of gradual modifications capable of leading ultimately to a total transformation; conversely, there are others who do not deny the existence of collective divine punishments such as *khasf* or engulfment (of Sodom and Gomorrah in particular), poisonous wind and flood, but do not recognise *maskh*. On the part of the Muʿtazilīs, al-Naẓẓām accepts the phenomenon and considers that it falls within the category of divine miracles, while Abū Bakr al-Aṣamm and Hishām b. al-Ḥakam reject it and accept only *ḳalb*, modification (*apud Ḥayawān*, iv, 73). According to al-Bayḍawī (on II, 61/65; cf. al-Damīrī, ii, 183, s.v. *ḳird*), Mudjāhid [*q.v.*] interpreted in a limited fashion the verse relating to the *maskh* of the Banū Isrāʾīl, stating that they were not metamorphosed, but that their heart was transformed and their spirit rendered similar to that of monkeys; he was, however, the only one to hold this opinion.

As to the question of whether the monkeys and pigs of which the Ḳurʾān speaks and the above-mentioned animals in general derive exclusively from metamorphosis and were thus, originally, humans, or whether such species existed before the event in question, the answers are by no means unanimous, since points of view vary perceptibly, even though in II, 61/65, the words *ḳirada* and *khanāzīr* are defined by the article, which would seem to allow no freedom of interpretation. For some (*Ḥayawān*, iv, 68), the Ḳurʾān refers only to individual cases designed simply to impress minds and teach a lesson. For others, on the contrary, the lizards, pigs and monkeys, as well as the eels, dogs, etc., which are alive today are the descendants of those who have been transformed. It is thus that, for example, Ibn Ḳutayba, in referring to verse V,

65/60, accepts (*Mukhtalif*, 326 = § 284 a) that monkeys are indeed the product of a transformation and that this product has increased and multiplied (cf. 167, 37 = §§ 172 a, 280 h). According to al-Ḳurṭubī (*loc. cit.*) the *ḳāḍī* Abū Bakr Ibn al-ʿArabī (468-543/1076-1148 [see IBN AL-ʿARABĪ] professed the same opinion, on the basis of a *ḥadīth* handed down by Abū Hurayra, according to which the Prophet said: "A nation of the Banū Isrāʾīl has disappeared and nobody knows what has become of it. I consider this the origin of the mouse. Do you not agree that when mice are offered the milk of the camel, they do not drink it, but if it is the milk of the ewe, they drink it". Al-Djāḥiẓ himself, at the end of the *Tarbīʿ* (§ 206), complains that God has radically transformed for the worse (*masakha*) this temporal world, as He has changed certain polytheists into monkeys and certain nations into pigs, with the difference however that in the world at large nothing survives of the previous situation, whereas the animals in question have retained some characteristics of their former humanity (cf. what has been said above concerning the foot of the lizard); this author thus implies that they were not previously created, although he does not believe in the reality of the phenomenon and in this passage has simply allowed himself to be carried away by his pen.

However, according to the prevailing opinion, the metamorphosed animals have died without leaving descendants, since, as objects of the anger and chastisement of God, they would be incapable of surviving. Al-Ḳurṭubī (*loc. cit.*, cf. al-Damīrī, ii, 182, s.v. *ḳird*) states that, for Ibn ʿAbbās, they survived no longer than three days, during which they neither ate, drank nor copulated; these details are attributed to the Prophet, who affirmed elsewhere (see al-Damīrī, ii, 183) that monkeys and pigs existed previously; having related the *ḥadīth* concerning the lizard which is quoted at the beginning of the present article, al-Damiri adds the curious comment: "It is probable that the Prophet said this before he knew that metamorphoses do not reproduce themselves (*anna 'l-mansūkh la yuʿḳib*)".

The same of course does not apply to the animals that have undergone a simple modification. Such is the case of the gecko (*wazagha*) struck deaf and leprous for having stirred up the fire that was to burn Abraham (*Ḥayawān*, iv, 68, cf. iv, 289-91; Ibn Ḳutayba, *Mukhtalif*, 10 = § 15; al-Damīrī, ii, 379, s.v. *wazagha*); the geckos that are seen today are indeed the descendants of the one that was modified and, although they are innocent, it is permitted, even recommended, to kill them. H. Massé (*op. laud.*, 187), also cites the case of the mule, rendered sterile for having, unlike the other beasts of burden, caused weariness to ʿAlī at the time of the assault on Khaybar, and the camel, whose organ of generation was made to point backwards so that the rider, Abraham, would not be soiled by the animal's urination; this last-mentioned case is clearly different from all the others.

All the excamples mentioned, including the Ḳurʾānic verses, belong ultimately to folklore, and there is no cause for surprise in that al-Djāḥiẓ treats them with irony in various passages of the *K. al-Ḥayawān* (in particular, i, 297). Also to be noted in this context is the belief according to which, "when an angel disobeys God in Heaven, he is sent to the earth in the form and with the nature of a man" (*Ḥayawān*, i, 187); this applies in the case of the father of Djurhum (see *Tarbīʿ*, § 40 and index) and also of Hārūt and Mārūt.

The notion of metamorphosis as a magical process was a natural source of inspiration for the writers of fabulous tales. In the *Thousand and one nights* (see N. Elisséeff, *Thèmes et motifs des Mille et Une Nuits*, Beirut 1949, 127, 141-4), it is generally by means of sprinkling with water that humans are changed into animals (cow, calf, gazelle, dog, mule, monkey, bird, ass, bear) or that metamorphosed beings are returned to their initial form. Culprits are sometimes petrified (*ibid.*, 151), like Isāf and Nāʾila, and rocks which present a vaguely human appearance are invariably considered to represent men who have suffered divine punishment (as, for example, the rocks of Ḥammām Maskhūṭīn in eastern Algeria).

It may be noted finally that the metamorphoses of insects, well-known to the authors of zoological works, are not designated by the term *maskh* (a detailed example is to be found in al-Damīrī, s.v. *dūd*).

Bibliography: Given in the article.

(CH. PELLAT)

MAṢLAḤA, the concept in Islam of **the public interest or welfare**.

Maṣlaḥa (pl. *maṣāliḥ*) is the abstract noun of the verb *ṣalaḥa* (or *ṣaluḥa*), "to repair or improve". Strictly speaking, *maṣlaḥa*, like *manfaʿa*, means "utility" and its antonyms are *maḍarra* and *mafsada* ("injury"); but generally speaking, *maṣlaḥa* denotes "welfare" and is used by jurists to mean "general good" or "public interest". Anything which helps to avert *mafsada* or *ḍarar* and furthers human welfare is equated with *maṣlaḥa*. As a legal concept, *maṣlaḥa* must be distinguished from *istiṣlāḥ*, a method of legal reasoning through which *maṣlaḥa* is considered a basis for legal decisions [see ISTIḤSĀN and ISTIṢLĀḤ]. In this article, *maṣlaḥa* will be dealt with as a concept and a legal principle.

The first important case in which the notion of public welfare (*al-khayr* and *nafʿ*) was invoked as a basis for legal decision was the land of southern ʿIrāḳ (al-Sawād), which the caliph ʿUmar decreed should become state-land and a land tax (*al-kharādj*) was imposed on it. Earlier, the practice of the Prophet in such a situation varied from dividing the land among the participants in *djihād*, as in the case of the land taken from the Banū Ḳurayẓa, to turning it into state-land as in the case of Khaybar (Abū Yūsuf, *Kitāb al-Kharādj*, 51). Some of the Companions, like al-Zubayr and Bilāl, urged ʿUmar to divide the Sawād among the warriors, but others, like ʿUthmān, ʿAlī and Ṭalḥa, suggested that it should become state-land. After consultation with several other Companions, the caliph came to the conclusion that the interests of the community as a whole would be better served if the Sawād were brought under state control rather than divided. "If it were divided among the warriors", the caliph ʿUmar asked, "what would be the position of the believers as a whole and their descendants?" Retention of the land under state control would, he argued, bring about greater welfare and utility for the believers (*al-khayr li-djamīʿ al-Muslimīn* ... [and] *ʿumūm al-nafʿ li-djamāʿatihim* (Abū Yūsuf, 27). Though ʿUmar did not use the word *maṣlaḥa* per se, its notion was clearly implied in the words *khayr* ("welfare") and *ʿumūm al-nafʿ* ("public utility"). Supported by the opinion of leading Companions, he issued instructions to immobilise the land of al-Sawād and required its people to pay the *kharādj* (Abū Yūsuf, 23-7; Yaḥyā b. Adam, *Kitab al-Kharādj*, 17-21; M. Khadduri, *War and peace in the law of Islam*, 181-3). ʿUmar's decision on the basis of public interest may be said to have influenced other caliphs to make similar decisions, e.g. concerning the compilation of the Ḳurʾān. But these cases, though often cited as precedents, did not

establish *maṣlaḥa* as a principle or source of law. It was indirectly used through the derivative sources of *ḳiyās* and *istiḥsān* (al-S̲h̲āṭibī, *al-Iʿtiṣām*, ii, 287-8).

Mālik b. Anas (d. 179/795) is reputed to have been the first jurist to make decisions directly on the basis of *maṣlaḥa* through the use of *istiṣlāḥ* or *al-maṣlaḥa al-mursala*. Although no reference to *maṣlaḥa* or *istiṣlāḥ* is to be found in Mālik's writings, his disciples cited cases in which *maṣlaḥa* as a concept of law had been used by him. Both al-S̲h̲āfiʿī in the *Risāla* and Saḥnūn in *al-Mudawwana* cite the *ʿariyya* sale (the sale of fresh for dried dates, contrary to the rule that fresh fruit cannot be sold for dried) as a case in point in which *maṣlaḥa* was the basis of Mālik's rulings (al-S̲h̲āfiʿī, *Risāla*, 331-5, tr. M. Khadduri, *Islamic jurisprudence*, 235-6; and Saḥnūn, *al-Mudawwana*, x, 93-4). As a method of legal reasoning, however, *istiṣlāḥ* was developed later and used by jurists who claimed that Mālik was the first to initiate the use of it (al-S̲h̲āṭibī, *al-Iʿtiṣām*, ii, 281-316). No clear evidence, however, has yet come to light indicating that Mālik had used *maṣlaḥa* as a concept of law. D̲j̲uwaynī (d. 478/1085) is mentioned as the first to call attention to it (al-S̲h̲āṭibī, *op. cit.*, 282), and other jurists must have made their contribution before it suddenly appeared as a mature concept in the writings of Abū Ḥāmid al-G̲h̲azālī (d. 505/1111).

Al-G̲h̲azālī states that in the narrow sense, *maṣlaḥa* may be defined as the furthering of the *manfaʿa* and the averting of *maḍarra*, but in a broad sense it is the ultimate purpose of the *S̲h̲arīʿa*, consisting of the maintenance of religion, life, offspring, reason and property. "Anything which furthers these aims," he adds, "is *maṣlaḥa*, and anything which runs contrary to them is *mafsada*" (*al-Mustaṣfā*, i, 139-40). Considering *istiḥsān* and *istiṣlāḥ* as imaginary (i.e. subjective) legal methods, he confirms the use of *ḳiyās* as a positive method of legal reasoning on the grounds that the achievement of *maṣlaḥa* is a necessity (*fī rutbat al-ḍarūrāt*) and develops the doctrine of necessity (*ḍarūra*) as a means by which to realise the ultimate purpose of the *S̲h̲arīʿa*. *Al-maṣlaḥa*, he maintains, consists of three categories: *al-ḍarūrāt* ("necessities"), *al-ḥād̲j̲iyyāt* ("needs") and *al-taḥsīnāt* ("improvements"). In order to make a decision on the basis of the second and third categories, the jurists must find a textual reference by means of *ḳiyās*; but the first category — the *ḍarūrāt*— constitutes by itself a basis for legal decision without resort to *ḳiyās* or any other method, on the grounds that the *maṣlaḥa* of that description is the ultimate purpose of the *S̲h̲arīʿa*. Thus by al-G̲h̲azālī's time, *maṣlaḥa* had become a definite concept of law on the basis of which jurists could make legal decisions. Other jurists called legal reasoning *istiṣlāḥ*, but al-G̲h̲azālī rejected *istiṣlāḥ*. If such a method is needed, *ḳiyās* can adequately provide it. In the case of *ḍarūrāt*, he argued, no dependence on a textual reference is needed. Thus *maṣlaḥa* of the highest rank itself becomes a source of the *S̲h̲arīʿa*. Al-G̲h̲azālī cites as an example the case of unbelievers who shield themselves with a group of Muslim captives. He maintains that the killing of innocent Muslims, though not allowed by the S̲h̲arīʿa, would allow the unbelievers to gain mastery over the *dār al-Islām* and kill both the Muslims and the prisoners. Since minimising killing and the preservation of the community as a whole is closer to the purpose of the *S̲h̲arīʿa*, a decision to strike at the enemy shielded with Muslims can be justified on the strength of *maṣlaḥa*, since its protection is a *ḍarūra* (i.e. a necessity) and an implied purpose of the *S̲h̲arīʿa* (*op. cit.*, i, 141). But al-G̲h̲azālī warns against the use of cases other than *ḍarūrāt*, such as if a few men in a ship, afraid of sinking or starvation, should kill one of them to save the rest.

It was, however, not a Mālikī or S̲h̲āfiʿī jurist who went further in the use of *maṣlaḥa*, but the Ḥanbalī jurist Nad̲j̲m al-Dīn al-Ṭawfī (d. 716/1316). In principle, he agreed with al-G̲h̲azālī on the use of *maṣlaḥa* as a basis for legal decisions irrespective of others sources. He also argued that the other sources of the *S̲h̲arīʿa* recognised *maṣlaḥa* as the ultimate purpose of the Divine Legislator. Al-G̲h̲azālī restricted its use to only the vital necessities (*ḍarūrāt*). So far, al-Ṭawfī seems to have said nothing innovative save that he universalised the principle to all cases of public interest. But then he went further by holding that, even if the principle of *maṣlaḥa* contradicts a primary source, it should override on the grounds that the *S̲h̲arīʿa* itself was laid down to protect *maṣlaḥa* as the ultimate purpose of the Divine Legislator (for the text of al-Ṭawfī's treatise on *maṣlaḥa*, see the appendix in Muṣṭafā Zayd, *al-Maṣlaḥa fī 'l-tas̲h̲rīʿ al-Islāmī*, 7-48). Although he cites textual references from the Ḳurʾān and Tradition in support of his argument, the principal textual evidence is the tradition *lā ḍarar wa-lā ḍirār* ("no injury should be imposed nor an injury to be inflicted as a penalty for another injury"). From this and other citations, he asserted that the principle of *riʿāyat al-maṣlaḥa* must be overriding in all legal aspects of human relationships (*muʿāmalāt*), though not in matters relating to *ʿibādāt* (devotional duties), because these are relating to worship of God and are fundamentally different from *maṣlaḥa*.

The principle of *riʿāyat al-maṣlaḥa*, though ably defended by some of its adherents, like the Mālikī jurist Abū Isḥāḳ al-S̲h̲āṭibī (d. 790/1388) and others, found no great supporters in an age in which *id̲j̲tihād* was discouraged and *taḳlīd* prevailed, mainly because it stressed dependence on evidence that cannot be clearly identified by *ḳiyās* or other derivative sources. In the modern age, however, under the impact of Western legal thought, the concept of *maṣlaḥa* has become the subject of an increasing interest among jurists who have sought legal reforms in order to meet the needs of the modern conditions of Islamic society. Muḥammad ʿAbduh (d. 1905) equated the *S̲h̲arīʿa* with natural law (M. H. Kerr, *Islamic reform*, 103 ff.) and opened the door for modern jurists to use reason as a basis for legal interpretation. Pursuing this line of thought, Ras̲h̲īd Riḍā (d. 1935) might be regarded as the most effective protagonist of the use of *maṣlaḥa* as a source for legal and political reform. In his treatise *al-K̲h̲ilāfa wa 'l-imāma al-ʿuẓmā* (1923) ("The caliphate, or the supreme authority"; tr. H. Laoust, *Le Califat dans la doctrine de Rašīd Riḍā*), Riḍā tried to re-interpret the *S̲h̲arīʿa* on the basis of *maṣlaḥa* and *ḍarūra* as the expression of public interest. Like al-Ṭawfī, he made a distinction between *muʿāmalāt* and *ʿibādāt*, and sought to reform the *S̲h̲arīʿa* by an elected assembly in which the *ʿulamāʾ* would be represented on the basis of the principles of *maṣlaḥa* and *ḍarūra*, presumably by the method of *id̲j̲tihād*, guided by reason, which Muḥammad ʿAbduh had eloquently explained. This approach to legal reform, partly on the basis of *maṣlaḥa* (often expressed by the modern usage of "national interest") and other legal devices, encouraged modern jurists such as ʿAbd al-Razzāḳ al-Sanhūrī (d. 1968) and others to provide modern civil codes based partly on the *S̲h̲arīʿa*, but mainly on Western law.

MASLAMA B. ʿABD AL-MALIK B. MARWĀN, son of the caliph ʿAbd al-Malik and one of the most imposing Umayyad generals, whose siege of Constaninople 98-9/716-18 earned him lasting fame. Like his uncle Muḥammad b. Marwān [*q.v.*], whom he succeeded in Asia Minor in many respects, he was, as the son of a slave-girl, excluded from the succession to the caliphate. His date of birth is unknown. He died on Muḥarram 121/24 December 738.

Starting in 86/705, the last year of his father's reign, Maslama led the regular summer campaigns (*ṣawāʾif*), sometimes prolonged over the winter, into the Byzantine territories of Asia Minor, often accompanied by al-ʿAbbās b. al-Walīd [*q.v.*] and/or other sons of his half-brother, the caliph al-Walīd. The range of these campaigns stretched from the region of Malatya in the east to Amasya in the north and to Pergamon in the west. Among his early conquests, those of Ṭuwāna (Tyana) and ʿAmmūriyya (Amorium) in 88/707 and 89/708 are best known. In 91/710 he succeded Muḥammad b. Marwān in the governorship of al-Djazīra, Armenia and Ādharbāydjān after having already served as governor of Ḳinnasrīn. In this capacity, he advanced as far as Bāb al-Abwāb (Darband) [*q.v.*] on the Caspian Sea, an operation which he repeated in 95/714 and in the course of which he conquered and destroyed the town. After Sulaymān had succeeded al-Walīd in the caliphate during the following year, Maslama was given chief command of the expedition against Constantinople which was carried out by land and sea [see ḲUSṬANṬĪNIYYA]. The siege proper started in the beginning of 99/mid-August 717 and ended exactly one year later without success. The fiasco was caused mainly by supply difficulties, the plague and the use of the Greek fire by the Byzantines against the Arab fleet. The loss did not injure Maslama's military reputation, but marked an interruption of his activities in Asia Minor for some years. Legend actually transformed the failure into a victory. Already in 100-1/719 he was ordered by ʿUmar II again to lead the *ṣāʾifa*, but he had to use this army in ʿIrāḳ, first against the Khāridjites and then, under the caliphate of Yazīd II, against the rebellious Yazīd b. al-Muhallab [*q.v.*], whom he defeated completely in Ṣafar 102/August 720 at ʿAḳr in the vicinity of Wāsiṭ. Together with this expedition, he was entrusted with the governorship of both ʿIrāḳs at the beginning of 102/July 720, but lost his office a year later because he apparently had not delivered the surplus taxes to Syria. This and his interference in the question of succession in favour of his half-brother Hishām and against Yazīd's son al-Walīd adversely affected his relations with the caliph, so that he did not exercise any military or administrative functions in the remaining years of Yazīd's caliphate. Hishām, however, reverted to the experienced general soon after his assumption of power, and conferred upon him the governorship of Armenia and Ādharbāydjān from 107/725 until 111/729 and again from 112/730 until 114/732. Maslama began this last phase of his military activities with a *ṣāʾifa* in the summer of 108/726 which resulted in the conquest of Caesarea in Cappadocia. His main attention, however, was turned further to the east against the Khazars [*q.v.*], who in these years threatened Adharbāydjān and Armenia. The culminating point of these activities was his new expedition to Bāb al-Abwāb in 112-13/730-1, during which he reconstructed and fortified the town and stationed a permanent Syrian garrison in it, whereby he became the founder of Islamic Darband. In 114/732 he retired from the political stage, and seems to have passed the remaining years of his life in northern Syria, where he possessed large estates, especially in the region between Ḥarrān and Raḳḳa.

ROTTER)

MASLAMA B. MUKHALLAD B. AL-ṢĀMIT AL-ANṢĀRĪ, ABŪ MAʿN or SAʿĪD or ʿUMAR), Companion of the Prophet who took part in the conquest of Egypt and remained in the country with the Muslim occupying forces. Subsequently, loyal to the memory of ʿUthmān b. ʿAffān and hostile to ʿAlī b. Abī Ṭālib, whose accession to the caliphate he had not recognised (see al-Ṭabarī, i, 3070), he opposed, with Muʿāwiya b. Ḥudaydj [*q.v.*], the arrival of Muḥammad b. Abī Bakr [*q.v.*] who, having had a hand in the murder of the third caliph, had been appointed governor of Egypt, and it is probable that he was involved in the campaigns which took place in 38/658 and ended with the death of the son of Abu Bakr. He faithfully served ʿAmr b. al-ʿĀṣ [*q.v.*], who governed the country until his death (43/663), and lived unobtrusively under his two successors, ʿUtba b. ʿAbī Sufyān and ʿUḳba b. ʿĀmir. Al-Ṭabarī (ii/1, 84, 93) says that in 47/667-8 Muʿāwiya b. Ḥudaydj was appointed governor of Egypt and performed this function until 50/670, but other sources claim that Maslama governed Egypt from 47 onward; he was retained in his official responsibilities by Yazīd b. Muʿāwiya, from 60/680 until his death on 25 Radjab 62/9 April 682 aged 62 or 66 years, since he was 10 or 14 years old on the death of the Prophet. During his period of office, he conducted regular operations against the Byzantines and rebuilt the mosque of ʿAmr which he endowed with minarets [see MANĀRA]. Some authors state that, from the time of his nomination, he had responsibility for the Maghrib and Ifrīḳiya, and Ibn ʿAbd al-Ḥakam for example (partial ed. and tr. A. Gateau, 66-7) specifies that it was he who, in 51/671, replaced ʿUḳba b. Nāfiʿ [*q.v.*] with Abu 'l-Muhādjir Dīnār al-Anṣarī; but the chronology is not easily established and Ibn ʿIdhārī (i, 17) dates in the year 55/675 the decision on the part of Muʿāwiya to join Ifrīḳiya to Egypt and the subsequent appointment of Abu 'l-Muhādjir.

(ED.)

MASLAMA AL-MADJRĪṬĪ [see AL-MADJRĪṬĪ].

MAṢMŪDA (the broken plural *Maṣāmida* is also found), one of the principal Berber ethnic groups forming a branch of the Barānis.

If we set aside the Maṣmūda elements mentioned by al-Bakrī in the neighbourhood of Bône, the post-Islamic Maṣmūda seem to have lived exclusively in the western extremity of the Maghrib; and as far back as one goes in the history of the interior of Morocco, we find them forming with the Ṣanhādja [*q.v.*], another group of Barānis Berbers, the main stock of the Berber population of this country. Indeed, from the first Arab conquest in the 1st/7th century to the importation of the Hilālīs by the Almohad sultan Yaʿḳūb al-Manṣūr in 586/1190, it was the Maṣmūda who inhabited the great region of plains, plateaux and mountains, which stretches from the Mediterranean to the Anti-Atlas to the west of a line from north-east to south-west passing through Miknāsa (Meknès) and Damnāt; the only parts of this territory which were not occupied by them were three small Ṣanhādja enclaves: the Ṣanhādja of Tangier, of the valley of the Wargha and of Azammūr. To the north and to the west, the land of the Maṣmūda was bounded by the Mediterranean and the Atlantic. To the east and south it was bounded by the land of the Ṣanhādja. To the north were the Ṣanhādja of the region of Tāzā and those of Wargha; in the centre, the Zanāga or Ṣanhādja of the Central Atlas, to which should be added the Zanāta of Fāzāz; to the south, the Haskūra, the Lamṭa [*q.v.*] and the Gazūla [see DJAZŪLA].

It was from the presence of this Maṣmūda block, extending continuously from Sūs to the Mediterranean, that eastern Morocco generally must have received the name of Sūs, a name found for example in Yāḳūt (s.v. Sūs) who distinguishes a Hither Sūs (capital Tangier) and a Farther Sūs (capital Ṭarḳala?) separated from the other by two months' journey. It is also to this racial unity that are due the legends according to which all the northwestern corner of Morocco was once inhabited by the people of Sūs (*ahl Sūs*).

Before the coming of the Hilālī Arabs, the Maṣmūda peoples were divided into three groups:

1. In the north, from the Mediterranean to the Sabū and Wargha, the Ghumāra [*q.v.*].
2. In the centre from the Sabū to the Wādī Umm Rabīʿ, the Baraghwāṭa [see BARGHAWĀṬA].
3. In the south, from the Wādī Umm Rabīʿ to the Anti-Atlas, the Maṣmūda in the strict sense of the word.

Like the majority of the Barānis, who in this respect are a contrast to the Butr, who are inclined to be nomads, the Maṣmūda were all settled; for if, in one passage, Ibn Khaldūn mentions two nomad tribes, the Lakha and the Zaggan, as forming part of the Maṣmūda confederation of the Ḥāḥa, he also points out that they were tribes of the Lamṭa, i.e. of the nomadic Ṣanhādja, who finally became incorporated in the Dhawū Ḥassān, Maʿḳilī Arab nomads [see MAʿḲIL] of Sūs. Ibn Khaldūn further makes special mention of the fortresses and fortified villages (*maʿāḳil wa-ḥuṣūn*) of the Maṣmūda who lived in the mountains of Daran or the Great Atlas. Other Arab historians and geographers mention the many little towns (*ḳarya*) in the plains occupied by the Dukkāla or the Baraghwāṭa, a pastoral and agricultural people; but these were gradually ruined and destroyed in the course of the fighting which went on without interruption in their country from the establishment of the Zanāta principalities of Shālla, Tādlā and Aghmāt: the Almoravid and Almohad conquests, repeated campaigns against the heretical Baraghwāṭa, the Hilālī occupation, the struggle between the Almohads and the Marīnids, the rivalry between the Marīnid kingdom of Fās and that of Marrākush and lastly the wars with the Portuguese. Exterminated as heretics, dispossessed of their lands and driven from them by the Arab or Zanāta nomads brought into their territory, transported to a distance (region of Fās) by the Waṭṭāsid sultans, for whose taste they showed too little hostility to the Portuguese, the central Maṣmūda, the original inhabitants of the Azghār, of Tāmasnā and of the land of the Dukkāla, finally disappeared; their place was taken by nomads, Hilālī Arabs (in the north, in Habṭ and Azghār, the Riyāḥ; in the south, the Djusham, Sufyān, Khulṭ and Banū Djābir) and the Berbers (Zanāta Hawwāra); in the 10th/16th century the coming to power of the Saʿdid dynasty brought about the immigration of Maʿḳil Arab tribes to the same region: ʿAbda, Aḥmar, Raḥāmina, Barābīsh, Udāya, Awlād Dulaym, Zuʿayr, etc.

From the 10th/16th century onwards, as a result of the occupation of their central plains by the Arabs, Hilālī then Maʿḳilī, the Maṣmūda only survived in the mountainous regions which formed the northern and southern extremes of their old domains.

The Maṣmūda of the north (or *Maṣmūdat al-Sāḥil*: "M. of the shore" of *al-Bayān*) were chiefly represented by the Ghumāra group. But, alongside of them, we find two small groups having the same racial origin:

a. The Maṣmūda of the Straits, settled between the district of Ceuta, which belonged to the Ghumāra and that of Tangier, a Ṣanhādja country. It was they who gave their name to the fortified port of Ḳaṣr Maṣmūda, also called Ḳaṣr al-Madjāz, the modern al-Ḳaṣr al-Ṣaghīr. Their presence here is attested in the 4th/10th century, for it was while fighting here against them that Ḥā-Mīm, the prophet of the Ghumāra, was slain; al-Bakrī (5th/11th century) knew them in the same area corresponding to that of the modern Andjra.

b. Al-Bakrī mentions another group of Maṣmūda (tribe of the Aṣṣāda) settled in the land lying between al-Ḳaṣr al-Kabīr and Wazzān; there is still a small Maṣmūda tribe between these two towns.

The Maṣmūda of the south, who inhabited the lands between the Wādī Umm Rabīʿ and the Anti-Atlas, were divided into two groups: those of the plain and those of the mountain.

2. The Southern Maṣmūda of the plain lived to the north of the Great Atlas. The chief tribes were the Dukkāla; the Banū Māgir (around Safi); the Hazmīra; the Ragrāga and the Hāḥa (to the south of the lower course of the Tansift). The chief town in this region was Safi [see ASFĪ], for the town of Azammūr [*q.v.*] and the *ribāṭ* of Tīṭ [*q.v.*] were in the enclave of Ṣanhādja; beside the port of Safi, we must also mention that of Ḳūz (the *Agoz* of the Portuguese) at the mouth of the Tansift, which gave Aghmāt access to the sea and had a *ribāṭ*, and that of Amagdūl (the *Mogador* of the Portuguese) which served the district of Sūs. Besides these three centres, there were, as in Tāmasnā, a large number of fortified little towns (*ḳarya*) many of which survived down to the 10th/16th century; the Portuguese chroniclers, Leo Africanus and Marmol have preserved for us many names of these places which have now disappeared, their very memory being lost; the local hagiographic collections, and notably the *Kitāb al-Tashawwuf* of al-Tādilī (7th/13th century), have preserved a good deal of valuable information on this subject. At the present day, all the country to the north of the Atlas is arabicised and if the old Berber element has not com-

pletely disappeared, it is at least overwhelmed by Arabs, of whom the majority seem to be of Maʿḳilī origin. The Ḥāḥa alone, between Mogador and Agadir, have remained almost intact and have retained the use of the Berber language.

b. The Southern Maṣmūda of the mountains occupied the Great Atlas (*D̲j̲abal Daran*), the massif of Sīrwā (anc. Sīrwān) and the Anti-Atlas or mountains of the Nagīsa (Berber, I n Gist).

In the Great Atlas, the Maṣmūda extended to the east as far as the upper course of the Tansift (a pass called Tizi-Telwet). From east to west, the following were the chief groups: the Glāwa; the Haylāna (or Aylāna), the Warīka and the Hazrad̲j̲a, near Ag̲h̲māt; the Aṣṣādan, including the Maṣfīwa, the Māg̲h̲ūs and the Dug̲h̲āg̲h̲a or Banū Dag̲h̲ūg̲h̲; the Hintāta, including the G̲h̲ayg̲h̲āya; the people of Tin-Mallal, on the upper course of the river of Naffīs; the Ṣawda or Zawda, in the lower valley of the Asif al-Māl; the Gadmīwa and lastly in the west, the Ganfīsa, the chief tribe of which was the Saksāwa or Saksīwa.

The massif of Sirwā and the high valley of the Wādī Sūs were inhabited by the Banū Wāwazgīt and the Saktāna. The northeastern part of the Anti-Atlas was occupied by the Harg̲h̲a.

Farther to the south, the Sūs, properly so-called, was inhabited by heterogeneous elements of Maṣmūda origin (al-Idrīsī, *ak̲h̲lāṭ min al-Barbar al-Maṣāmida*). Describing the road leading from Tarūdant to Ag̲h̲māt, al-Idrīsī mentions between Tarūdant and the land of the Harg̲h̲a, four tribes the names of which, corrupted by the copyists, are unfortunately hardly identifiable.

Besides these highlanders, who were strictly Maṣmūda, we must mention the Haskūra (or Hasākira). These were highlanders of Ṣanhād̲j̲a origin, brethren of the Lamṭa and Gazūla, who led a nomadic existence to the south of the Great Atlas and the Anti-Atlas. The Haskūra were settled in the high valley of Tansift and the Wādī al-ʿAbīd, on the two slopes of the mountain range which links the Great Atlas, the home of the Maṣmūda, with the Central Atlas, the home of the Zanāga (= Ṣanhād̲j̲a) of Tādla; their chief tribes were the Zamrāwa, the Mug̲h̲rāna, the Garnāna, the G̲h̲ud̲j̲dāma, the Faṭwāka, the Maṣṭāwa, the Hultāna, and the Hantīfa, who, according as they lived on one slope or the other, belonged to the Haskurāt al-Ḳibla (H. of the south) or to the Haskurāt al-Ḍill (Ḥ. of the north [< *ẓill*]). Ibn K̲h̲aldūn, who calls attention to the Ṣanhād̲j̲a origin of the Haskūra, adds that, as a result of their taking up the Almohad cause, it became customary to associate them with the Maṣmūda tribes, but that they never enjoyed the same privileges as these latter.

History. In 62/682, ʿUḳba b. Nāfiʿ [*q.v.*] marched against the Maṣmūda of the Atlas with whom he fought several battles. On one occasion, he was surrounded in the mountains and owed his safety solely to the help given him by a body of Zanāta. In the same year, he attacked and took the town of Naffīs which was occupied by "Rūm" and Berbers professing Christianity. Thence he went to Igli, a town of Sūs which he also took. Legend adds that he even thrust his way to the Atlantic where he rode his horse into the water, calling God to witness that there were no more lands for him to conquer.

This first submission of the Maṣmūda does not however seem to have lasted after the departure of ʿUḳba. In 88/707, Mūsā b. Nuṣayr had to reconquer Morocco; he in person took Darʿa and Tāfīlālt and sent his son to the conquest of Sūs and the land of the Maṣmūda.

In 114/732 ʿUbayd Allāh b. al-Ḥabḥāb was appointed governor of the Mag̲h̲rib; he appointed his son Ismāʿīl as assistant to the governor of Morocco and gave him particular charge of the district of Sūs.

In 117/735, the same ʿUbayd Allāh sent Ḥabīb, grandson of ʿUḳba, to make an expedition into Sūs against the Maṣmūda and the Ṣanhād̲j̲a (Massūfa). Later the latter's son ʿAbd al-Raḥmān al-Fihrī (d. 127/745) becoming semi-independent governor of the Mag̲h̲rib occupied Igli and built a camp there, the remains of which could still be seen in al-Bakrī's time. It is to the same governor that is attributed the making of the wells which supply the road from Tāmdalt to Awdag̲h̲ost [*q.v.*] via Waddān, through the modern Mauritania.

The land of the Maṣmūda then disappears from history till the 3rd/9th century. The conquests of Idrīs I did not extend in the south beyond Tāmasnā and Tādlā. But in 213/812 Idrīs II made an expedition against the town of Naffīs; on his death in 213/828, his son ʿAbd (or ʿUbayd) Allāh obtained as his share of the kingdom, Ag̲h̲māt, Naffīs, the lands of the Maṣmūda and of the Lamṭa as well as Sūs. Al-Bakrī records that some of his descendants ruled as lords of Naffīs and among the Banū Lamās, not far from Igli. Other Idrīsids, descendants of Yaḥyā b. Idrīs, were at this time lords of Darʿa.

With the decline of Idrīsid power in the 4th/10th century, the Maṣmūda again became independent and were ruled by elected chiefs or *img̲h̲aren* (sing. *amg̲h̲ar* [*q.v.*], Arabic *s̲h̲uyūk̲h̲*); al-Bakrī tells us that those of Ag̲h̲māt were appointed by the people for a term of one year. When at the end of the 4th/10th century, Zanāta principalities became established in Morocco (at Fās, S̲h̲ālla and Tādlā), Mag̲h̲rāwa established themselves at Ag̲h̲māt; but all we know of them is that they were attacked by the Almoravids. In 449/1057, after receiving the submission of Sūs and of the Maṣmūda (Zawda, S̲h̲afs̲h̲āwa, Gadmīwa, Ragrāga and Ḥāha), the Almoravid chief ʿAbd Allāh b. Yā-Sīn took Ag̲h̲māt, the last Mag̲h̲rāwa ruler of which, Lagūṭ b. ʿAlī, fled to Tādlā. His wife, the famous Zaynab, who was one of the Nafzāwa, finally became the wife of Yūsuf b. Tās̲h̲fīn, whom she initiated into the fine art of diplomacy.

From 449/1057, Ag̲h̲māt was the capital of the Almoravids till 454/1062, when Yūsuf b. Tās̲h̲fīn founded Marrākus̲h̲ [*q.v.*]. In 466/1074 the same ruler, having divided his empire among several governors, gave his son Tamīm the governorship of Marrākus̲h̲, Ag̲h̲māt, of the Maṣmūda and of Sūs, then of Tādlā and Tāmasnā.

The Maṣmūda seem to have remained subject to the Almoravids till the rebellion in 515/1121 provoked by the *mahdī* Ibn Tūmart [*q.v.*] of the tribe of Harg̲h̲a, who, supported by ʿUmar Īntī, *s̲h̲ayk̲h̲* of the Hintāta, and by ʿAbd al-Muʾmin [*q.v.*], brought about the foundation of the Almohad dynasty. The history of the Maṣmūda is henceforth involved with that of the dynasty which they brought to power and which was to last till 1269. The Maṣmūda, together with the Almohad dynasty, thus contributed to the rise of the Ḥafsids [*q.v.*], who ruled over Ifrīḳiya from 625/1228 to 982/1574, through the descendants of Abū Ḥafṣ ʿUmar Īntī, *s̲h̲ayk̲h̲* of the Hintāta.

During the first half of the 7th/13th century, the power of the Almohads, routed by the Christians of Spain at the battle of Ḥiṣn al-ʿUḳāb (Las Navas de Tolosa) in 609/1212 and vigorously attacked in Morocco by the Banū Marīn, soon began to decline. The Maṣmūda of the Atlas, indifferent to the fate of the dynasty, took advantage of its plight to regain

their independence. It was the tribes of the Hintāta and the Haskūra, which in 621/1224 at the proclamation of al-ʿĀdil assumed the leadership in the movement; frequently allied with the Hilālī Arabs of the plains, Sufyān and Khulṭ, we find them fighting in all the civil wars and supporting various pretenders to the throne.

When in 667/1269, the Marīnids had definitely crushed the Almohads, the Maṣmūda retained a certain amount of independence and lived more or less in submission to the central power, ruled by chiefs chosen from the great local families: Awlād Yūnus among the Hintāta; Awlād Saʿd Allāh among the Gadmiwa; among the Saksāwa, ʿUmar b. Ḥaddū was an independent chief who went so far as to claim the Berber title *agellid* (= king). In Sūs, the Banū Yaddar (Idder) founded an independent principality which lasted from 652/1254 till about 740/1340. As to the Haskūra, the power among them was exercised by the Banū Khaṭṭāb.

Down to the 9th/15th century, except during the first half of the reign of the Almohad dynasty of which they had been the principal supporters, the Maṣmūda of the Atlas were hardly ever under the direct rule of the Moroccan government; only the tribes of the plains, Dukkāla and Ḥāḥa, in a position of inferiority as a result of their geographical situation, were able to offer less resistance and had to submit. The later dynasties, Saʿdid and ʿAlawī, were no better able to subdue the Maṣmūda of the highlands; but instead of gathering round local chiefs with temporal power, the latter now placed themselves under the leadership of holy men with religious prestige.

In the beginning of the 10th/16th century, the land of the Maṣmūda was in a state of anarchy. Some *ashyākh* of the tribe of the Hintāta held the lands of Marrākush; the most famous was Abū Shantūf; to the south of Tansift, the 8th/14th century saw the rise of the warlike group of the Ragrāga; in the 9th/15th century, the power of the mystic al-Djazūlī [*q.v.*] spread among the Ḥāḥa. In the adjoining country of Darʿa, the Saʿdid dynasty was rising, which, after occupying Sūs, imposed its domination on the whole of Morocco. But it did not, however, succeed in subjecting completely the highlanders of the Atlas. The powerful Aḥmad al-Manṣūr himself had to fight against a pretender who had proclaimed himself king of the Saksāwa. After the death of al-Manṣūr, the Atlas and Sūs were all under the authority of local religious leaders of whom the most important were to be found among the Ḥāḥa and in Tāzarwālt (family of Aḥmad u-Mūsā).

It was the ʿAlawid Sultan Mawlāy Rashīd who restored Sūs and the Atlas to the Moroccan empire. The only episode to note is the constitution in Tāzarwālt, by a marabout Sayyidī (Sīdī) Hishām of a kind of independent kingdom, the capital of which was Ilīgh and which lasted from the end of the 18th century till 1886.

Henceforth, the Maṣmūda disappear from history. The Atlas remained more or less independent, according to the degree of power of the ruling sovereigns, but all the important events in the region took place among the Ḥāḥa or in Sūs [*q.v.*]. The French occupation found the old Maṣmūda grouped, since the death of the ʿAlawid Sultan Mawlāy al-Ḥasan, into three bodies each under the authority of a local family: the Glāwa in the east, the Gunḍāfa in the centre, ad the Mtugga in the west.

The name Maṣmūda, still preserved in the north of Morocco in the name of a little tribe of al-Ḳaṣr al-Kabīr, seems to have completely disappeared in the south, where the former Maṣmūda peoples, continuing to talk Berber, bear the name of *Shulūḥ* (French *Chleuhs* [*q.v.*]. It may even be asked if the name Maṣmūda, which is found so often in the Arab historians and geographers, was ever in regular use among the peoples to whom they apply it; it is, indeed, suggestive that it is not found in the long lists of ethnics given in the *Kitāb al-Ansāb*, published in the *Documents inédits d'histoire almohade*.

Social structure. The Maṣmūda of the Atlas lead a settled life, living by a little agriculture and breeding a poor type of cattle; they live in villages or hamlets of stone houses with clay roofs. Ibn Khaldūn notes the existence among them of numerous little strongholds and fortified villages (*maʿāḳil wa-ḥuṣūn*), the ancestors of the modern *tighremts* and *agadirs* [*q.v.*]. There were no towns among the mountains; Tīn Mallal, famous for the mosque where Ibn Tūmart was buried, was never a town. Before the Almoravid ruler Yūsuf b. Tāshfīn founded Marrākush in 454/1062, built moreover in the plains out of reach of the highlanders, whom it was to control, the only urban centres in the district were situated at the foot of the Atlas on its lowest slopes. The principal towns were in the north, the double town of Aghmāt [*q.v.*] and that of Naffīs on the river of the same name; in the south, in Sūs, Igli and Tarūdant; as places of less importance we may mention in the north, Shafshāwa (mod. Shīshāwa), Afīfan and Tamarurt; in the east, among the Ḥāḥa and in the borders of Sūs, Tadnast. The great trade-routes which traversed the region started from Aghmāt for the port of Ḳūz (at the north of the Tansift), Fās (via Tādlā), Sidjilmāssa (through the land of the Hazradja and the Haskūra), and Sūs (via Naffīs, the land of the Banū Māghūs and Igli; no doubt using the pass now called Tizi n-Test). Al-Bakrī particularly mentions the industry and application and the thirst for gain, characteristic of the Maṣmūda of the Atlas of Sūs. The principal products of the country were fruits (nuts and almonds), honey and oil of *argan* [*q.v.*], a tree peculiar to the country, of which there were regular forests among the Ḥāḥa. The Maṣmūda could cast and work iron and also copper, which they exported in the form of ingots or "loaves" (*tangult*); they also worked and chased silver jewellery. In Sūs also the cultivation of the sugar-cane enabled sugar to be made.

From the intellectual point of view, the Maṣmūda seem to occupy a place of first rank among the Berbers. Each of their three principal groups has produced a "reforming prophet", the author of sacred works in the Berber language: Ḥā-Mīm of the Ghumāra; Ṣāliḥ b. Ṭarīf of the Baraghwāṭa; Ibn Tūmart of the Maṣmūda of the Atlas. It may also be noted that Sūs is one of those few districts in which books were written in Berber down to a quite recent date (cf. H. Basset, *Essai sur la littérature des Berbères*, 73-81).

Religious life. The Maṣmūda were converted to Islam in the 1st/7th century by ʿUḳba b. Nāfiʿ, who left his comrade Shākir among them to teach the new religion. The latter died among them and was buried on the banks of the Tansift where his tomb is still venerated. The place is now called Ribāṭ Sayyidī Shikar near the confluence with the river of the Shīshāwa. The Mosque of the town of Aghmāt of the Haylāna was founded at the beginning of the 2nd/8th century in 85/704.

Ibn Khaldūn describes the Maṣmūda of the Atlas as being attached to Islam from the first conquest, in which they differed from their brethren of the north, the Baraghwāṭa and the Ghumāra, who remained

faithful to their heretical beliefs. At the beginning of the 2nd/8th century, several of them accompanied Ṭāriḳ on his conquest of Spain; the best known of these was Kuthayyir b. Waslās b. Shamlāl, of the tribe of the Aṣṣāda, who settled in Spain and was the grandfather of Yaḥyā b. Yaḥyā, one of the *ruwāt* of the *Muwaṭṭaʾ*; many others also settled in Spain and their descendants played important parts under the Umayyads.

In the 5th/11th century, however, al-Bakrī notes Rāfiḍī heretics among the Maṣmūda; these were the Banū Lamās settled to the north of the Hargha and the town of Igli. In this district he also mentions the existence of idolators who worshipped a ram; perhaps we have here a relic of the cult of the god Ammon among the ancient Berbers. The towns, however, formed important centres of Muslim culture, the influence of which was felt not only by the Maṣmūda of the district but also by the Ṣanhādja of the adjoining deserts, Lamṭa and Gazūla. We know that it was in the town of Naffīs, with Uggʷag b. Zallū, a learned jurist of Lamṭa origin and a pupil of Abū ʿImrān al-Fāsī [*q.v.* in Suppl.] of al-Ḳayrawān, that in 430/1039 Yaḥyā b. Ibrāhīm al-Gudālī recruited ʿAbd Allāh b. Yā-Sīn al-Gazūlī who was the promoter of the Almoravid movement. For the Almohad period, al-Tādilī's hagiographic collection, entitled *Kitāb al-Tashawwuf*, shows us the land of the Maṣmūda of the south full of wonder-working saints. Later, the tribe of the Ragrāga, settled on the lands now occupied by the Shayāḍima, was the cradle of a movement at once religious and warlike, the details of which are little-known but the memory still alive. In the first half of the 11th/17th century, religious activity seems to be concentrated in the south of Sūs, in Tāzarwālt where the descendants of the saint Sīdī Aḥmad u-Mūsā carved themselves out an independent marabout principality.

(G. S. Colin)

MAṢMUGHAN, ("great one of the Magians") a Zoroastrian dynasty which the Arabs found in the region of Dunbāwand (Damāwand [*q.v.*]) to the north of Ray.

The origins of the Maṣmughāns. The dynasty seems to have been an old, though not particularly celebrated, one, as is shown by the legends recorded by Ibn al-Faḳīh, 275-7, and in al-Bīrūnī, *Āthār*, 227. The title of *maṣmughān* is said to have been conferred by Farīdūn upon Armāʾīl, Bēwarāsp's former cook (Zohāk), who had been able to save half the young men destined to perish as food for the tyrant's serpents. Armāʾīl (according to Yāḳūt, ii, 606, a Nabataean, a native of the Zāb) showed to Farīdūn in the mountains of Daylam and Shirriz, a whole nation of these refugees, which caused Farīdūn to exclaim *was mānā kala āzād kardī*, which is explained to mean: "What a large number of people of the house (*ahl bayt*ⁱⁿ) thou hast saved'".

The first historical reference to a *maṣmughān* is found in al-Ṭabarī's (i, 2656) account of the taking of Ray by Nuʿaym b. Muḳarrin in the time of the caliph ʿUmar (according to Ibn al-Athīr in the years 18, 21 or 22; Marquart, however, puts these events as late as 98/716-17). The King of Ray, Siyāwakhsh b. Mihrān b. Bahrām-Čubīn, had received reinforcements from the people of Dunbāwand, but when he was defeated, the *maṣmughān* of Dunbāwand made peace at once with the Arabs and received honorable terms (*ʿalā ghayrⁱ naṣrⁱⁿ wa lā maʿūnatⁱⁿ*) promising an annual payment of 200,000 *dīnārs*. The charter given by Nuʿaym was addressed "to the *maṣmughān* of Dunbāwand, Mardān-shāh, to the people of Dunbāwand, of Khʷār, of Lāriz (Lāridjān) and of Shirriz". This gives us an idea of the extent of the sway of the *maṣmughān*. His possessions included the country round Mount Damāwand and stretched down the plains as far as the east of Ray. The district of Dunbāwand (* Dubā-wand, [the land occupied by] the * Dubān clan?) did not form part of Ṭabaristān. The Arabs mention it along with Ray (al-Ṭabarī, i, 2653-6; al-Muḳaddasī, 209; Ibn al-Faḳīh, 275-7); but as we have seen, at the time of the conquest, Ray and Dunbāwand were under different dynasties. The old capital of Dunbāwand may have been at Mandān, where, according to Ibn al-Faḳīh, Armāʾīl had built a wonderful house of teak and ebony, which in the reign of Hārūn al-Rashīd was taken to pieces and transported to Baghdād. In the Arab period there were two towns in Dunbāwand, sc. Wīmā and Shalanba (the latter is marked on Stahl's map to the south of the modern town of Damāwand, which lies on the slopes of Mount Damāwand). According to Yāḳūt, the *maṣmughān*'s principal stronghold was called Ustūnāwand or Djarhud. This should be sought above the village of Rayna, which must correspond to the old Ḳaryat al-Ḥaddādīn. (Ibn al-Faḳīh's story of the shops (*ḥawānīt*) in which worked the smiths, the noise of whose hammers exorcised the enchained Bēwarāsp, must refer to the chambers carved out of the rock near Rayna; cf. E. Crawshay-Williams, *Rock-dwellings at Reinah*, in *JRAS* [1904], 551; [1906], 217.)

An attempt made by Abū Muslim in 131/748-9 to conquer the *maṣmughān* was a disastrous failure: his general Mūsā b. Kaʿb was attacked by the *maṣmughān*'s men and on account of the difficult nature of the country (*li-ḍīḳⁱ bilādihi*) was forced to return to Ray (Ibn al-Athīr, v, 304; cf. Ḥāfiẓ-i Abrū, in Dorn, *Auszüge*, 441).

The principality was not conquered until 141/758-9. In this period, there were dissensions in the family of the *maṣmughān*. Abarwīz b. al-Maṣmughān quarrelled with his brother and went over to the caliph al-Manṣūr, who gave him a pension (al-Ṭabarī, iii, 130). The *Kitāb al-ʿUyūn wa 'l-ḥadāʾiḳ*, 228, testifies to his bravery in the rising of the Rāwandiyya and calls him "al-Maṣmughān Mālik b. Dīnār, *malik* of Dunbāwand". This Abarwīz (or Mālik) had enjoyed considerable influence, for, according to Ibn al-Faḳīh, the appointment of ʿUmar b. ʿAlāʾ as commander of the army sent against Ṭabaristān was made on the advice of Abarwīz, who had known him since the trouble with Sunbādh (on the partisans of this "Khurramī" in Ṭabaristān, cf. al-Masʿūdī, *Murūdj*, vi, 188 = § 2400) and with the Rāwandiyya.

In the year 141/748-9, the brother of Abarwīz who occupied the throne of Dunbāwand was at war with his father-in-law, the *ispahbad* Khurshīd of Ṭabaristān; but when he heard that the forces sent by al-Manṣūr were on their way to Ṭabaristān, he hastened to effect a reconciliation with his adversary (al-Ṭabarī, iii, 136; Ibn al-Athīr, v, 386).

The stories of the campaign against Ṭabaristān directed by al-Mahdī by order of his father al-Manṣūr

are very contradictory, as is shown by their very detailed analysis in Vasmer, *op. cit.*, in *Bibl.* After the defeat of the *ispahbad*, the Arabs conquered the *maṣmughān* and captured him and his daughters Bakh-tariyya (?) and Ṣmyr (? or Shakla). Of these princesses, one became the wife of al-Mahdī b. al-Manṣūr and the other the *umm walad* of ʿAlī b. Rayṭa. According to a story in Ibn al-Faḳīh, 314, Khālid b. Barmak (Vasmer, *op. cit.*, 100, thinks that his expedition was sent especially against the lord of Dunbāwand) sent the *maṣmughān* and his wife and his two daughters to Baghdād, but in another passage, 275, the same writer says that the *maṣmughān* obtained *amān* from al-Mahdī and came down from the mountain of al-ʿAyrayn (?). He was taken to Ray, and there al-Mahdī ordered him to be beheaded.

After the death of the *maṣmughān*, the people of these mountain regions lapsed into barbarism (*ḥawziyya*) and became like wild beasts (al-Ṭabarī, iii, 136). According to Ibn al-Faḳīh (276), however, the descendants of the *maṣmughān* (= Armāʾīl?) were still well-known.

Spiegel's and Marquart's hypotheses. Yāḳūt, i, 244, interprets *maṣmughān* as *kabīr al-madjūs* "the great one of the magi" (*mas* "great", N.W. Iranian form). Spiegel thought of connecting this dynasty with the prince-priests of Ray, whose existence is known from a well-known passage in the Avesta (*Yasna*, ix, 18, tr. Darmesteter, i, 170; cf. Jackson, *Zoroaster*, 202-5). In spite of Marquart's criticisms, who says it is impossible to quote the authority of Avestan traditions which relate to much earlier state of affairs, Spiegel's suggestion is still of interest. We have certainly to deal with vague memories and not with actual facts. In the time of the Arab conquest, the descendants of Bahrām Čubīn were ruling in Ray, but the Arabs (al-Ṭabarī, i, 2653-6) installed there a certain al-Zaynabī, son of Ḳūla and father of al-Farrukhān. It remains to be seen if this family of Zaynbadī "whom the Arabs call al-Zaynabī" (al-Balādhurī, 317) is connected with Dunbāwand. Their stronghold in Ray was called ʿĀrīn (?), which resembles the name of the mountain al-ʿAyrayn from which the last *maṣmughān* came down (cf. the note by de Goeje in Ibn al-Faḳīh, 275). Marquart wanted to connect the *maṣmughāns* of the Bāwandid dynasty, the eponymous ancestor of which Bāw, a descendant of Kāwūs, brother of Khusraw I, is said to have lived in the time of the later Sāsānids [see BĀWAND]. This Bāw was a man of piety, and after the fall of Yazdagird III had retired to his father's fire-temple. Marquart regards him as a "magus" and identifies him with the father of the Christian martyr Anastasius, who bore this name (βαῦ) and was a "master of Magian lore". Lastly, he quotes the fact that the Bāwandids appeared in 167/783-4 only after the disappearance of the *maṣmughāns* (after 141), as if to continue their line. Unfortunately, several details of the ingenious argument are not accurate: our sources (Ibn Isfandiyār; Ẓahīr al-Dīn, 204-5) give not the slightest suggestion that Bāw belonged to the priestly caste. According to Ibn Isfandiyār (tr. Browne, 98), his grandfather's temple was at Kūsān, which Rabino, *Mázandarán and Astarábad*, 160, locates a little distance west of Ashraf i.e. quite remote from Dunbāwand. The passage in al-Ṭabarī, iii, 1294, which Marquart quotes to prove the occurrence of the name Maṣmughān among the Bāwandids refers to the cousin of Māzyār of the Ḳārinid dynasty [*q.v.*], which is quite different from the Bāwandids (cf. below).

The Ḳārinid *maṣmughāns*. It is curious that neither Ibn Isfandiyār nor Ẓahīr al-Dīn speaks of the dynasty of the *maṣmughān* of Dunbāwand, perhaps because they do not include this region in Ṭabaristān proper. On the other hand, they mention a *maṣmughān* (*madmughān* > * *mazmughān*) Walāsh, who was the *marzubān* [*q.v.*] of Miyān-du-rūd (Ẓahīr al-Dīn, 42, says that this canton was near the Sārī between the rivers Kalārud and Mihribān and that on the east it adjoined Ḳaratughān; Miyān-du-rūd is thus quite close to where Rabino puts Kūsān !). This *maṣmughān* Walāsh (Ibn Isfandiyār, 101; Ẓahīr al-Dīn, 42) lived in the time of Djamāspid Farrukhān the Great (709-22?) and belonged to the elder branch of the Ḳārinids descended from Zarmihr b. Sūkhā. (it is unclear why Justi, *Iranische Namenbuch*, 430, takes this Walāsh to be the son of the last *maṣmughān* of Dunbāwand). The Ḳārinid Wandād Hurmuzd (of the younger line, descended from Ḳārin, brother of Zarmihr) in his rising against the caliph (al-Mahdī, 158-69/775-85) had combined with the *ispahbad* Sharwīn (772-97) and the *maṣmughān* Walāsh of Miyān-du-rūd. This latter (Ibn Isfandiyār, 126; Ẓahīr al-Dīn, 155) seems to have been one of the successors of the *maṣmughān* Walāsh mentioned above.

Under 224/838 al-Ṭabarī (iii, 1294) mentions a cousin of the Ḳārinid Māzyār, who was called Shāhriyār b. al-Maṣmughān. According to this, al-Maṣmughān would be identical with Wandād Ummīd, uncle of Māzyār (cf. Justi, 430). On the other hand, under the year 250/864, al-Ṭabarī, iii, 1529, mentions a Māṣmughān (*sic*) among the allies of the ʿAlid Ḥasan b. Zayd. Ibn Isfandiyār, 165, calls him Maṣmughān b. Wandā-Ummīd. One must either suppose there is an error in al-Ṭabarī's genealogy or admit that the title of *maṣmughān* was borne both by Wandā-Ummīd and his son, but the form of the designation of the latter (ماصمغان without the article) would rather show that the title had become a simple proper name (Browne was thus wrong in translating "*the* Maṣmughān").

To sum up then. Alongside of the *maṣmughāns* of Dunbāwand, we have the *maṣmughāns* of Miyān-du-rūd. These *marzubāns*, if we may rely on Ẓahīr al-Dīn, belonged to the Zarmihrid branch of the dynasty of Sūkhrā (Sāsānid governor of Ṭabaristān descended from Ḳārin, son of the famous smith Kāwa [see KĀWAN]). Later we find the title (or proper name!) of *maṣmughān* recurring in the younger branch of the line of Sūkhrā (the Ḳārinid branch), which occupied a position in Ṭabaristān subordinate to the Bāwandid *ispahbads* (Ẓahīr al-Dīn, 154, 14).

MAṢRAF DEFTERI, the household account book of high-level Ottoman administrators such as viziers or governors, or of palace personnel such as waterbearers. The account book covered, for time periods of a month up to several years, detailed monthly inventories of household economic transactions. These inventories are often organised under subject headings such as kitchen, clothing, or food expenses,

purchases of household goods from merchants and artisans, salaries of household members, or gifts given and received during religious holidays. Each entry of the inventory usually contains a description of the transaction, the price, quantity and the names of the people involved in the transaction. No systematic study of these books, hundreds of which are to be found in the Topkapı and Ottoman State archives, has yet been undertaken. (F. MÜGE GÖÇEK)

MASRAḤ (A.), "scene", increasingly employed as "theatre" (in the same sense as "Bühne" in German); frequently synonymous with *tiyātrō* (from the Italian).

1. In the Arab East.

Primarily an artistic and literary phenomenon of the last two centuries, the Arab theatre has its roots in local performances of passion plays [see TAʿZIYA], marionette and shadow plays [see ḲARAGÖZ], mimicry and other popular farces, and was affected by the then contemporary (rather than the classical) foreign theatre as well. Although some popular open-air plays in Arabic have occasionally been presented publicly since the 12th/18th century, if not earlier, an Arabic theatre in the modern sense of this term has been in existence only since the mid-19th century. It was in 1847-53 that Mārūn al-Naḳḳās̲h̲ [*q.v.*], under the impact of the Italian theatre, wrote and produced several plays, chiefly adapted from Molière, before select audiences in Beirut. His plays arabicised the locale, the names of the *dramatis personae* and certain elements of the plot, in order to increase the appeal; with the same intent, the language combined the literary with the vernacular, and both vocal and instrumental music was added. To moderate possible opposition from religious circles, men and boys acted the female parts (later on, non-Muslim—and afterwards, Muslim—women joined theatre troupes). These features, which remained characteristic for some time, were introduced into Egypt by Syrian-Lebanese immigrant actors, who soon rendered Egypt (and, most particularly, Cairo) the centre of Arab theatrical activity. Performances continued in Syria as well, and gradually spread to other Arab lands in the Middle East and North Africa. Most troupes were made up of amateurs, e.g. students, or at most, of semi-professionals; gradually, however, the number of the professional actors increased, although they had to await the establishment of semi-independent states, following World War I, in order to benefit from the public funds which were vital for their unhampered activity.

These developments were parallelled by playwriting. At first, most plays were written by people of other professions. Mārūn al-Naḳḳās̲h̲ was a clerk and merchant; his successors were journalists or, even more often, troupe directors, stage managers or actors. Only much later did the writing of plays become a full-time profession. Adaptations, mostly from the French, came first, as al-Naḳḳās̲h̲'s literary output indicates. An even more prolific writer was Muḥammad ʿUt̲h̲mān D̲j̲alāl (1829-98) of Egypt, who adapted into Arabic French tragedies and comedies, introducing appropriate changes, chiefly in the latter; in general, the former were performed in literary Arabic, the latter in the vernacular. Increased education and changes in taste led to more literal translations (although adaptations did not disappear for some time). One typical translator was the Beirut-born Nad̲j̲īb al-Ḥaddād (1867-99), who wrote in Egypt. Although he changed the names of the plays and some of the characters and added music, al-Ḥaddād usually remained faithful to the originals (mostly translated from the French); his works served as a model for the strictly literal translators which soon followed. These generally translated from French or English and, to a lesser extent, from Italian and other languages. There followed an impressive number of original playwrights, whose output continued simultaneously with active translation work (and, initially at least, adaptations). These cover the entire gamut of dramatic writing, contributing to the répertoire of farces, historical plays, melodramas, dramas, tragedies, comedies, political and symbolic plays, as well as works pertaining to the theatre of the absurd. One of the most deservedly-famous of these playwrights, who successfully tried his hand at several of these genres, is Tawfīḳ al-Ḥakīm (born in ?1902), one of Egypt's prominent 20th century men-of-letters.

There was evident interaction between dramatic output and the further development of the troupes. While the musical theatre continued to attract crowds, the acting, the stage-directing and theatrical criticism achieved gradual professionalisation: the number of theatre halls increased, and troupes performed an increasing variety of plays to a steadily growing public of diverse interests and tastes. Of all the troupe directors and actors in Egypt after World War I, perhaps the ones with the most impact were D̲j̲ūrd̲j̲ Abyaḍ [*q.v.* in Suppl.] who, having studied acting in the Paris Conservatoire, promoted an Arabic classical theatre in the grand style; Yūsuf Wahbī (1899-1981), promoter of the often tear-jerking melodrama with social background; and Nad̲j̲īb al-Rīḥānī (1891-1949), nicknamed "The Oriental Molière", whose comedies amused the crowds while criticising the social mores of his time. Numerous other troupes have joined these during the Inter-War period and since World War II, particularly in Egypt, Lebanon, Syria and ʿIrāḳ, less so in Jordan, and hardly at all in the Arabian Peninsula. Most are ephemeral unless supported by public funds, while usually means government allocations. Obviously, schools for the dramatic arts and theatre halls are dependent on such funds. All this has, again, led to a certain politicisation of the Arab theatre, differing from one country to the other. This process has been evident from the early days of the Arab theatre, e.g. in the plays of Yaʿḳūb Ṣanūʿ Abū Naḍḍāra [*q.v.*] in the Egypt of the 1870s; since World War II, however, it has acquired an obvious social content, often fully committed and starkly realistic. Theatrical criticism, too, has become increasingly outspoken, with critics generally vying among each other in their caustic remarks on play-writing, acting and stage-directing. They readily find an outlet not only in journals specially devoted to theatrical criticism (see *Bibl.*, below, for examples), but in many Arabic dailies and periodicals as well. All this is yet another indication of the great interest in the theatre throughout much of the Arab East.

Bibliography : Few bibliographies are devoted exclusively to the Arab theatre, e.g. Ṣalāḥ D̲j̲awād al-Ṭuʿma, *Bibliyūg̲h̲rafiyyat al-adab al-ʿArabī al-masraḥī al-ḥadīt̲h̲, 1945-1965*, Bag̲h̲dād 1969; or *al-Nuṣūṣ al-masraḥiyya al-maḥfūẓa fī masāriḥ al-Ḳāhira mund̲h̲u nas̲h̲ʾatihā ḥattā al-ān*, in *al-Kātib al-ʿArabī*, xlv (April 1969), 60-83. For a list of plays in Arabic (both original and translated), see Dār al-Kutub, *Ḳāʾima ʿan al-tamt̲h̲īliyyāt al-ʿArabiyya wa 'l-muʿarraba*, Cairo 1960. Bibliographies concerning the Arab countries or modern Arabic literature are relevant, in part, as are some bibliographies of the theatre, like N.B. East (ed.), *African theatre: a checklist of critical materials*, New York 1970, 15-19 (for Egypt and the Mag̲h̲rib). Several of the books

mentioned below also comprise useful bibliographical lists. Source materials, as well as memoirs (but excluding plays) include Salīm al-Naḳḳās͟h, *Fawāʾid al-riwāyāt aw al-tiyātrāt*, in *al-Djinān* (Beirut), vi (1875), 521; *al-Tamt͟hīl al-ʿArabī*, in *al-Hilāl* (Cairo), xiv (1 Dec. 1905), 141-9; xv (1 Nov. 1906), 117-18; *al-Tamt͟hīl al-ʿArabī: māḍīhi wa-mustaḳbaluhu*, *ibid.*, xxxii (1924), 481-4, 638-41, 751-3 (a referendum); *al-Masraḥ aw al-marzaḥ*, in *al-Muḳtaṭaf* (Cairo), lxix (1 Aug. 1926), 223-4; Fāṭima al-Yūsuf, *D͟hikrayāt*, Cairo 1953; Nadjīb al-Rīḥānī, *Mud͟hakkirāt*, Cairo 1959; Fāṭima Rus͟hdī, *Fāṭima Rus͟hdī bayn al-ḥubb wa 'l-fann*, Cairo 1971; eadem, *Kifāḥī fi 'l-masraḥ wa 'l-sīnimā*, Cairo 1971; Futūḥ Nas͟hāṭī, *K͟hamsūn ʿāmᵃⁿ fī k͟hidmat al-masraḥ*, i-ii, Cairo 1973-4; Nāzik Bāsīlā (ed.), *Mud͟hakkirāt Badīʿa Maṣābnī*, Beirut n.d.; Muḥammad Rifʿat (ed.), *Mud͟hakkirāt ʿAbd al-Ḥalīm Ḥāfiẓ*, Beirut, n.d.; idem (ed.), *Mud͟hakkirāt ʿAbd al-Wahhāb*, Beirut n.d.; idem, *Mud͟hakkirāt ʿamīd al-masraḥ al-ʿArabī Yūsuf Wahbī*, Beirut n.d.; idem (ed.), *Mud͟hakkirāt Badīʿ K͟hayrī: 45 sana taḥt aḍwāʾ al-masraḥ*, Beirut n.d.; idem (ed.), *Mud͟hakkirāt Fāṭima Rus͟hdī, Sarah Bernhardt al-s͟harḳ wa-mumaththilat al-masraḥ al-ʿArabī*, Beirut n.d.; idem (ed.), *Mud͟hakkirāt Fātin Ḥamāma wa-ʿUmar al-S͟harīf*, Beirut n.d.; idem (ed.), *Mud͟hakkirāt Umm Kult͟hūm*, Beirut n.d. In addition, several Arabic periodicals dealing with the threatre might be profitably consulted, of which one of the most important is *al-Masraḥ*, edited in Cairo until his death (in 1981) by Ṣalāḥ ʿAbd al-Ṣabbūr. 2. In North Africa.

Tunisia. — The first attempt at introducing theatre into Tunisa dates back to the early years of the 20th century. It owed much to the initiative of a fine actor of Syrian origin, Sulaymān al-Ḳardāḥī, who, in the course of his long career, travelled along the Nile Valley between Cairo and Asyūṭ, mounting performances of an extremely varied nature (tragedy, drama, melodrama and comedy), featuring music and dance and with themes borrowed almost entirely from the *Thousand and one nights* and from the European répertoire (Shakespeare, Racine, Molière and Voltaire). Al-Ḳardāḥī's influence was consolidated by the fact that his troupe included talented performers such as the comedienne Ḥanīna, the singer Layla and, in particular, the singer Salāma al-Ḥidjāzī.

When he arrived in Tunis in 1907, al-Ḳardāḥī found support on the part of the Bey Muḥammad al-Nāṣir, and he obtained a municipal subsidy towards the realisation of his objectives. He was to devote the last two years of his life to training young comic actors, founding the first Tunisian drama company and performing various items from his vast répertoire in partnership with his best pupils, of whom the most gifted seem to have been Brāhīm Lakudī and Muḥammad Bourguiba. It was the latter who, on the death of the master, continued in his footsteps. In 1909, he formed his own troupe, with which that of ʿAlī al-Khaznī was soon to be a serious competitor.

In the period following the First World War, groups of amateur performers proliferated in all the major towns. They toured the country, playing Egyptian tragedies and dramas in literary Arabic, as well as comedy and farce in colloquial language. But it was the popular entertainments which appealed most to the public. Nevertheless, the Egyptian influence remained apparent, especially in the more serious genre as a result of the tours which the major troupes of Cairo made periodically in the Maghrib, visiting Tunis in particular: Djūrdj Abyaḍ in 1921, Yūsuf Wahbī in 1927, Fāṭima Rushdī in 1932 and Nadjīb al-Rīḥānī in 1935.

In a theatre quite openly dependent on foreign material, a play such as *al-Sudd* ("The Dam") by Maḥmūd al-Masʿadī takes on the nature of an original experiment. This transparently symbolic drama evokes the failure of a person engaged in an enterprise which is beyond him and which ultimately testifies in favour of the man and of his destiny. The action is stark, the scene set at the foot of a mountain. Two persons arrive, Ghaylān and Maymūna, leading a heavily-laden mule. The man decides to construct a dam, but he encounters enormous difficulties. Barely begun, the work is stopped, the scaffolding soon abandoned. To add to his misfortune, the man is swept away by a storm with his work unfinished, while his consort rushes headlong towards the plain exclaiming: "The Land, it is the Land that I discover!". Written *ca.* 1940 in a very pure prose style, intended to be read rather than performed, *al-Sudd*, on its publication in 1955, came to be regarded as a kind of masterpiece by Tunisian and Egyptian scholars and French Arabists.

However, dramatic production after 1940 seldom strayed from the beaten tracks. Authors were not concerned with presenting scenes that were new, true and pertinent to the human condition. Whether engaged in serious or in comic vein, they made strenuous efforts to achieve pathos or, on the other hand, contented themselves with facile gaiety. Innovations were rare, and performances of mediocre quality. For their part, the majority of actors were young amateurs whose enthusiasm did not compensate for their lack of training. Moreover, the absence of producers and technicians meant poor preparation and clumsy performance. Ultimately, the achievements gained by each troupe were all the more precarious in that the public was heterogeneous and fickle. The theatre thus underwent a crisis which found an echo in the local Arabic and French language press, where considerable space was devoted to exposing the problems with which it was faced: too few writers, insufficient training of actors, poor standards of performance-venues, diversity and unreliability of the public, etc. At this stage, Tunisian theatre seemed doomed to failure. It was certainly in a state of stagnation.

It was not until the years following Independence that significant efforts were made at various levels with a view to reviving the theatre. Writers, mostly of dual Arab and French culture, generally occupying posts in public administration which guaranteed their material security, set about laying the ground-work for a new dramatic movement. The example set by the foreign plays which were frequently produced in Tunis encouraged them to give freer rein to the imagination. In this process of renovation, producers, hitherto an unknown breed, played a rôle of the highest importance. The greatest of them was undoubtedly the Egyptian Zakī Ṭulaymāt, a man of expertise and experience, who for a long time enjoyed a well-deserved reputation in artistic circles of the Near East and the Maghrib.

When he arrived in Tunis in 1956, eight competing

companies of amateur comic actors shared between them the patronage of a sparse and eclectic public. Actors variously performed Egyptian plays in literary Arabic, adaptations of European works, comedies and farces in the colloquial style of the locality, normally concluding the show with singing, dance and music. There were among them some talented individuals, whom Ṭulaymāt chose in order to form a company of quality. He strove to make the scenery more authentic, the performance of actors more natural; he required his casts to rehearse thoroughly, to work in a spirit of team collaboration, to present well-constructed, living productions in which the element of convention is mingled with fantasy. The training which he gave bore fruit. In fact, when Zakī Ṭulaymāt left Tunisia in 1961, the theatre experienced a new era of prosperity through the efforts of some of his young successors, including ʿAlī Ben ʿAyād.

The latter was then director of the Municipal Theatre of Tunis. Both a man of grand aspiration and a man of the people, he was active in all spheres of artistic pursuit, with imagination and zeal as well as with realism. He adopted a dramatic technique which consisted in transposing the themes of works borrowed from the foreign répertoire to ancient or contemporary Arab-Islamic society, with the appropriate beliefs, costumes and conventions. Thus for example, his *Caligula* (1961) is set in the Middle Ages, at the court of a Maghribī sultan surrounded by his viziers, *amīrs* and Arab retainers. There is nothing in common with the historical character nor with the protagonist of Camus' play, whom the Tunisian dramatist takes as the symbol of a sovereign ruling in bloody tyranny over his people. Ben ʿAyād applied similar treatment to a series of foreign works which he presented in Tunis and at the international cultural centre of Hammamet before performing them before the heterogeneous audiences of provincial towns and rural villages: *Measure for Measure* and *Othello* by Shakespeare, *L'Ecole des femmes* und *L'Avare* by Moliere, *En attendant Godot* (1965), *La Derniere bande* and *Oh les beaux jours!* (1966) by Samuel Beckett, etc. In a few years, he became acquainted with a vast comic and tragic répertoire. The success of his productions earned him renown both in Tunisia and abroad, especially in Paris, at the Théâtre des Nations.

At the same time, other young dramatists who favoured strong characters, violent emotions and local colour, attempted to find new sources of inspiration in drawing their themes from Arab-Islamic history. They preferred the ages of glamour, retaining the facts but moulding them according to their imagination, developing the classical ideals of love, faith, honour and valour. The heroes, princes, military chieftains or simple waariors are obliged to risk their lives for the glory of Islam and the love of the homeland. Thus for example, Ahmad Khayr al-Dīn dramatised the epic of the Berber queen al-Kāhina who, at the end of the 1st/7th century offered fierce resistance to the Arab army of Ḥasan b. al-Nuʿmān before finally collapsing under his onslaught (*al-Kāhina*). For his part, Fattāḥ Wālī devoted his *Pearl of Sicily* (*Djawhar al-Ṣiḳillī*) to the exploits of the Muslims who, embarking from Sousse in 210/827 under the command of Asad b. al-Furāt, flung themselves into the conquest of Christian Sicily. Nor is romance absent from these pseudo-historical tableaux. ʿAbd al-Razzāḳ Karabaka brings alive on the stage the famous couple Ibn Zaydūn and Wallāda, with a nostalgic evocation of the Cordova of the 5th/11th century (*Wallāda wa-Ibn Zaydūn*). In this category of plays of heroic or historical pretensions, *Murād III* (1966) by Ḥabīb Boulares (Bu 'l-ʿArīs) is reminiscent of *Caligula* by ʿAlī Ben ʿAyād rather than of Shakespeare's *Richard III* which the Tunisian playwright seems to claim as his inspiration. The net result is that these dramas borrow the methods of melodrama, compounded by inferior dialogue and action filled with sensation and interludes of pathos. Written by young authors, they show the exuberance of youth. On the other hand, the wealth of invention, the intensity of colour and the epic grandeur of the subjects create an atmosphere of heroic legend capable of capturing the imagination of the spectators. Ultimately, the characters are of quite elementary simplicity, entirely good or totally evil, clad in their symbolic guises.

Alongside this serious theatre, the comic genre has made a worthy contribution. In the relaxed atmosphere of the period 1960-70, numerous humorists provided comedies, farces or simple entertainments of circumstance, introducing hilarious, pathetic or cynical characters. It was during this time that Aḥmad Khayr al-Dīn enjoyed his greatest popular success with the creation of the character of Ḥādj Klūf, distant cousin of the Egyptian Kish Kish Bey. All such plays, a little simplistic but well-constructed, have delighted popular audiences.

It may be added that the efforts made over the past twenty-five years to interest all classes of society in theatre in its most diverse forms have succeeded well. In the context of decentralisation, provincial drama companies have evolved, so that today every town boasts its own troupe of comic actors, whose active members contribute both to improvement in standards of production and to the opening up of the theatre to new audiences. On the other hand, theatre has made its presence felt in the school, the academy and the university, and every years competitions are organised to reward the best young dramatists. Thus a new spirit is alive in theatrical life. Attendance at dramatic performances, formerly the preserve of a narrow circle of intellectuals, has become within a few years a social event shared by the scholar, the artisan and the peasant. It is beyond doubt this fact which, more than the number and quality of works, best characterises the rebirth of theatre in Tunisia.

Algeria. — It was only in the years following the First World War that Arab theatre appeared for the first time in Algeria. In 1921, the Egyptian troupe led by Djūrdj Abyaḍ, after performing in Tunis, presented in Algiers two historical dramas by Nadjīb al-Ḥaddād written in classical Arabic: *Ṣalāḥ al-Dīn al-Ayyūbī* ("Saladin the Ayyūbid") and *Thārāt al-ʿArab* ("Vengeance of the Arabs"). Although encountering only limited success before a public generally ignorant of the literary language, these performances made the Algerian élite aware of the existence of a militant and didactic Arabic theatre. Drawing on this experience a few months later, a handful of young intellectuals, for the most part former *madrasa* students, formed a cultural association, *al-Muʾaddiba* ("The Educating [Society]") one of whose leaders, Ṭāhir ʿAlī Sharīf, organised the performance in the capital of three plays in literary Arabic which had the purpose of awakening the national sentiment of his compatriots and educating them concerning the horrendous consequences of social scourges such as alcoholism: *al-Shifāʾ baʿd al-ʿanāʾ* ("Recovery after the trial", 1921), *Khadīʿat al-gharām* ("Perfidy of Love," 1923) and *Badīʿ* (1924). Another company, that of *al-Tamthīl al-ʿarabī* ("The Arab Theatre"), founded in 1921, had as its leading personality a former student of Arabic

literature, Muḥammad al-Mānṣālī. This company performed in Algiers two plays in literary Arabic borrowed from the Egyptian répertoire: *Fī sabīl al-waṭan* ("For the homeland", 1922) and *Futūḥ al-Andalus* ("The conquest of Andalusia," 1923). This attempt at the introduction of dramatic art was hindered by two apparently unsurmountable obstacles: on the one hand, it encountered the incomprehension of a public barely familiar with Arabic literature; on the other hand, it incurred the disapproval of the bourgeois élite, which had little taste for performances whose themes seemed incompatible with the principles of Arab-Islamic ethics.

Taught by this experience, some young enthusiasts performed during the same period plays which would be universally accessible, drawing their themes from contemporary life and from popular tradition. They shared their predecessors' concern with moral and social, even political issues, and their simplistic philosophy, but they were at pains to express them in the daily patois of their fellow-citizens. During the inter-war period, three names are pre-eminent: ʿAllālū, Ksentini and Bachtarzi. With quite dissimilar gifts, all three gained reputations in comedy and in song, perpetuating in the theatre the tradition of popular poetry whose rhythms lend themselves particularly to music and dance. They embody, in varying degrees, the tastes and the spirit of their time.

In many respects, ʿAllālū is a pioneering figure. Born in Algiers in 1902, he first participated as a singer in public concerts which a musical society, *al-Muṭribiyya*, organised during the evenings of Ramaḍān. Later he began performing in local cinemas, at Bab el Oued in particular, short sketches in the style of farces dramatising domestic situations. Enriched by this experience and confident of his methods, he formed in 1925 his own drama company, the Zahia troupe, and composed satirical, romantic comedies and comic ballets, written entirely in dialect, which he presented successfully in Algiers and the surrounding region, between 1926 and 1931: "Djeha" (*Djḥā*, 1926)," The marriage of Bou-Akline" (*Abū ʿAḳlīn*, 1926), "Abou-Hassan or the sleeper awakened" (*Abu 'l-Ḥasan*, 1927), "The Fisherman and the Genie" (1928), "Antar el-Hachaîchi" (*ʿAntar al-Ḥashāyishī*, 1930), *El-Khalifa oues-Sayyad* (*al-Khalīfa wa 'l-ṣayyād*, "The Caliph and the Fisherman," 1931) and *Hallaq Guernata* (*Ḥallāḳ Gharnāṭa*," The Barber of Granada," 1931). However, his company, the beneficiary of neither public nor private aid, was not a commercial success and ʿAllālū soon found himself beset by serious financial difficulties. As writer, actor and director of the troupe, he led an exhausting life and consequently his health suffered. Disillusioned, in 1932 he decided to renounce all his theatrical activities.

ʿAllālū had no pretentions to originality, and little interest in novelty. Three of his productions were adaptations of very well known stories from the *Thousand and one mights*: *Abou-Hassan or the sleeper awakened*, *The Fisherman and the genie* and *El-Khalifa oues-Sayyad*. His *Djeha* does indeed contain numerous humorous episodes traditionally attributed to the popular character of the same name, but the general theme is borrowed, via *Le Médecin malgré lui*, from a mediaeval fable, *Le vilain mire*, which depicts the triumph of a cunning woman. In *The Marriage of Bou-Akline* there are numerous echoes both of Arab folklore and of the French theatre. However, ʿAllālū does not venture to follow Molière in the direction of comedy of character. His figures confine themselves to stereotyped theatrical roles; they never become authentic human beings. Nevertheless, he excels in devising plots and situations which automatically arouse laughter: in *Djeha*, the hero is soundly beaten by the emissaries of the sultan before admitting that he is indeed the famous physician capable of curing the son of the sovereign. Similarly, the wife of Bou-Akline, finding the door closed on returning from an assignation with her lover, simulates suicide by throwing a great stone into the garden well; later, when everyone believes her dead, she appears before her husband who, terrified, imagines himself confronted by the ghost of his wife. Thus, the plays of ʿAllālū appear to be a compromise between farce and comedy of intrigue. Invariably, the audience is held in suspense by theatrical sensations or amused by the disguises: Abu 'l-Ḥasan, a nonentity dressed as a caliph and flaunting the trappings of his temporary authority; Hārūn al-Rashīd and his vizier Djaʿfar disguised as merchants; etc.

Furthermore, ʿAllālū is a skillful writer, deploying many witticisms, puns, amusing expressions: he gives to the hero of his first play, *Djeha*, the name of a popular character in the Arab world and to his wife that of *Ḥīla* ("Stratagem, trick"); the aged retainer of Bou-Akline, Mekidech (*Mḳīdash*) is the homonym of another fictitious character whose adventures have for a long time been a feature of Algerian popular tradition. Furthermore, the choice of names often reveals the parodic intention of the author: Hārūn al-Rashīd becomes *Ḳarūn al-rāshī* ("Ḳārūn the Corrupt"), his vizier *Djʿfar al-markhī* ("Djaʿfar the soft-witted") and his sword-bearer Masrūr is named *Maṣrūʿ* ("The Sot"). Following the same procedure, a wretched cobbler is made to appear ridiculous by bearing the prestigious name of ʿAntar, the chivalrous hero so much admired by Arabs past and present. All such pitiful dupes he places in the gallery of legendary characters who inhabit the popular imagination and still influence minds.

In addition, he endows them with a popular, vivid, colourful style of language. As well as their demeanour and their gestures, their speeches provoke laughter. Their verbal comedy is constituted partly by aphorisms, maxims and proverbs in current Algerian usage, partly by the repetition of exclamations habitually employed by the people to express joy, surprise or sadness (*wīlī wīlī*, "Alas for me"; *yā saʿdī*, "Just my luck!"). The borrowings from the spoken language and the verbal novelties are evidently designed to make the audience share the gaiety of the actors. In sum, there is no profundity, but the revelation, through laughter, of a good humour free from vulgarity, a joyous, irrepressible, infectious enthusiasm. This cheerful mood makes everything acceptable: Djeha and his wife Ḥīla are arrant rogues, Bou-Akline is not entirely honest, and no more so is Abu 'l-Haṣan. It would be folly to object and to attach any importance to their actions or their concerns. ʿAllālū has succeeded in the gamble of turning quasi-serious issues into the material of farce, without any pretension of displaying to the audience the illusion of reality. His principal achievement has been the definitive establishment in Algeria of a theatre of essentially popular inspiration and expression, adapted to the taste of his contemporaries.

The second actor-writer who has contributed significantly to the growth of the theatre in Algeria during the 1930s is incontestably Rashīd Ksentini, but in this instance the reader is referred to the lengthy article devoted to him, s.v. al-ḲUSANṬĪNĪ.

The third motive force of Algerian theatre between the two World Wars is Bachtarzi (Muḥyī 'l-Dīn Bāsh

Ṭarzī), who was born and died in Algiers (1896-1985). When he came to prominence in the 1930s, he was already a veteran of the stage where he had acquired a fine reputation as a singer and an actor. Initially, he confined himself to repeating the principal successes of his predecessors in a slightly amended version. His players merged with those of ʿAllālū and Ksentini, and the company thus formed comprised Algerian actors (al-Mānṣālī, Bās͟h D̲j̲arrāḥ, Daḥmūn and Hāmel) and French ones (Louis Chaprot, Georges Baudry and Georges Hertz), who were joined by comic actresses such as Kalt͟hūm and Marie Soussan, the last named being Jewish. On the other hand, Bachtarzi created a répertoire: to the comedies, farces and sketches of his predecessors he added his own works, the first composed in collaboration with Ksentini, Chaprot and Hāmel, and some seventy plays in all, all written in colloquial speech and several containing scenes where the actors express themselves in French. Among those which delighted the Algerian audience are the following: *Faqo* (*Fāḳū*, "That's no good!", 1934); *El Bouzerii fel Askaria* (*al-Būzrīʿī fi 'l-ʿaskariyya*, "The Bouzarian at the barracks," 1934); *Alennif* (*ʿAlā 'l-nīf*, "From self-respect", 1934); *Beni oui-oui* (1935); *Syndicat des chomeurs* (1935); *Le Mariage par téléphone* (1936); *El-Kheddaine* (*al-K͟haddāʿīn*, "The Traitors", 1937); *El Keddabine* (*al-Kaddābīn*," The Liars" 1938); *El Mechehah* (*al-Mas͟hḥāḥ*, "The Miser," 1940); and *Sliman Ellouk* (*Slīmān al-lukk*, "Sliman wax," (1942), the two last-named being adaptations of, respectively, *L'Avare* and *Le Malade imaginaire* by Molière.

Bachtarzi was indeed a performer, but he was above all an impresario of performances. He was also a writer conscious of the rôle which the theatre had to play in the evolution of Algerian society. Eager to encourage the broadest public to discover new horizons, he organised tours throughout Algeria and in Morocco, France and Belgium, playing to the significant Algerian communities present in these countries. However, his situation was precarious, as may be judged from the account in his *Mémoires*: in 1934, his troupe gave 61 performances in 44 localities; the following year it appeared in 55 urban centres; in 1936 and in 1937, the number of towns visited was respectively 59 and 89. Audiences varied between 150 in small towns and 2,000 in Algiers, Constantine, Oran and Tlemcen. Successes were inconsistent and receipts poor.

Such signs are a clue to understanding the difficulties faced by the new guiding spirit of Algerian theatre encountering a society which remained backward and an admininistration uneasy about the intentions of a potentially subversive movement. In fact, Bachtarzi did not content himself, like his predecessors, with exploiting the public taste for entertaining spectacles. He saw it as his mission to inform and educate his Muslim fellow-citizens regarding the various issues then exciting public opinion. In his plays and dramatic tirades, he denounces the danger posed to the Algerian community by the relaxation of morals, the adoption of a poorly understood modernism and the revival of social evils: unemployment, alcoholism, prostitution and usury. With the same zeal, he condemns the disunity of his compatriots, the compromises of elected administrators, religious busybodies and hypocrites. In this mood, he readily employs terms of ideological connotation (*ḥuḳūḳ*, "political rights;" *ittiḥād*, "union; "*ittifāḳ*, "accord; "*waṭan*, "homeland;" *umma*, "nation"), henceforward to become part of the normal vocabulary of every Algerian of any degree of education, and evidence of a willingness to take political and cultural initiatives in accordance with the social ferment dominating the country from the year 1930 onward. Inevitably, the irreverent style of Bachtarzi aroused serious hostility. His plays were banned or subjected to censorship. His career declined and he was only able to ensure the survival of his company by compromising with the authorities. However, he was appointed during the Second World War to entertain the Muslim soldiers receiving treatment in military hospitals.

The year 1947 marked the revival of Algerian theatre with the formation at the Algiers Opera of an Arab troupe and the appointment of Bachtarzi as its director. This initiative created conditions of a degree of professionalism and of greater stability. In fact, the players henceforward had facilities for rehearsing at leisure before every performance; they were guaranteed at least one performance per week; and finally they received a regular income as a result of a municipal subsidy. This company initially comprised about a score of actors, actresses, singers and musicians, most of them quite young: Mustapha Kateb, Muḥammad Tourī, Muḥammad Ḥaṭṭāb, D̲j̲alāl Sissānī, Riḍā Falakī, ʿAyād Rouiched, Kalt͟hūm, Dalīlā and Laylā Ḥākim. Most often, they played comedy in the colloquial language, but they also on occasion performed serious plays such as *Hannibal*, a historical drama by Tawfīḳ al-Madanī (1952). They remained active until the dissolution of the troupe in 1956.

Meanwhile, numerous troupes of players made their appearance in Algeria. Four of them were based in Algiers: *Les fervents du théâtre arabe algérien*, which was managed by Muḥammad Ṭāhir Fuḍalā; *Firḳat al-fann al-tamt͟hīlī* ("The Company of Dramatic Art") whose main guiding spirit was Mustapha Grībī; *al-Masraḥ al-d̲j̲azāʾirī* ("The Algerian Theatre") of Mustapha Kateb and *Masraḥ al-g͟haḍ* ("Theatre of Tomorrow") of Riḍā Falakī, the two last-named being former members of Bachtarzi's team. Other dramatic activists made their appearance in the provinces: Aḥmad Riḍā Ḥūḥū at Constantine, Ḥasan Derdour at Bone, Mūsā K͟haddāwī at Blida, etc. While Falakī specialised in producing children's programmes for Radio Algeria, the others composed comedies, farces, entertainments, romances, plays full of enthusiasm and fantasy, mostly written in dialect, but with a rapidly increasing number in classical Arabic. It seems that the impression made by Egyptian productions performed by the major companies of Cairo in the course of their tours of Algeria encouraged the activists of the Algerian theatre to give more scope to the literary language.

In the same period, companies of actors were formed in the major cities with the encouragement of organisers of the association of reformist *ʿulamāʾ* and of the M.T.L.D. (*Mouvement pour le triomphe des libertés démocratiques*). The former presented, on the occasion of the celebration of religious feasts or of the annual distribution of prizes in private Arab schools, small dramas of cultural instruction intended to glorify Islam and the Arabic language. The latter were clearly oriented towards political and social action. For example, the play *Aimak and Rouibah*, performed in Algiers in the 1950s, dramatises the career of a young Algerian who "joins the party of the struggle for liberty" and evokes "the most noble cause". Such a committed theatre naturally had recourse to history with the object of exalting national sentiment: Hannibal, al-Kāhina, Barbarossa and Ṣalāḥ Bey, each of these characters being seen as a champion of

patriotism. On the other hand, in numerous plays a conspiracy is forged against the sovereign to put an end to "the servitude of the people" and to "deliver" the country from tyranny. These transparent allusions enable the audience to make straightforward comparisons and offer as a desirable prospect "the punishment of the despot" and "the revenge of the oppressed". The performance normally ends with the singing of patriotic anthems (*anās̲h̲īd waṭaniyya*). It need hardly be stressed that all these performances took place in private places, before a limited audience of militants and sympathisers. After the rebellion of 1954, the Arab theatre virtually ceased to exist in Algeria. Some of its guiding spirits, members of the F.L.N., took refuge in Tunisia where they occasionally performed propaganda pieces.

The years following 1962 saw considerable changes taking effect in the theatre. At the Algiers Opera, renamed the Algerian National Theatre, there were efforts, under the guidance of Mustapha Kateb, to renew theatrical presentation and communication with the public by introducing aesthetic and ideological preoccupations. In this spirit numerous national companies were invited to perform, from Black Africa, Eastern Bloc countries, Asia and Central America. The actors performed in their own languages and boasted of the benefits accruing to the people as a result of revolution in their countries. On the other hand, there were dialectal adaptations of foreign works such as those of Bertold Brecht and Sean O'Casey, but it must be admitted that neither the satire on rural and clerical society of the latter, nor the parables employed by the former to illustrate his communist principles, genuinely interested the public, which was thoroughly bored by these spectacles and found in them none of the entertainment for which it had come to the theatre. Other producers including Kākī, Raīs, Rouiched, Safīrī, dramatised episodes from the war (*Les Enfants de la Casbah* and *Hassan Terro*) or popular tales borrowed from oral tradition (*El-Ghoula* and *Dīwān al-Garagouz*).

After 1965, Algiers no longer held a monopoly over theatrical life. While, in the context of cultural decentralisation, five regional theatres were progressively established in Constantine, Oran, Sidi Bel Abbas, ʿAnnaba and Bejaia, groups of amateurs proliferated in the provinces. In 1970, seventy such groups were counted as regularly attending the annual festival of Mostaganem. Their members gave dramatic treatment to topics of contemporary interest: agrarian reform, socialist development of commerce, emigration, education of the young and the position of women in Algerian society. This last problem formed the subject of lengthy public debates at the conclusion of plays devoted to it which the troupe *Théâtre et culture* performed in Algiers in 1970. Similarly, *Le groupe théâtral de l'action culturelle des travailleurs* scored a major success both in Algeria and among expatriate communities in France with the performance in 1972 and 1973 of a dual Arabic and dialect version of *Mohammed, pick up your case*! by Kateb Yacine, in which the protagonist, a modern follower of D̲j̲ḥā, condemns the activity of all those who shamelessly exploit workers. Agrarian reform gave numerous dramatists the opportunity to reveal their attitude to the subject, notably in *El-Meida* (*al-Mayda*, "The Table"), and *Beni Kelboun* by Kākī, *El Khobza* (*al-K̲h̲ubza*, "Bread") by Abdelkader ʿAllūla and *El Agra* (*al-ʿĀgra*, "The Sterile") by Zāhir Bouzrar (1972-4).

The intentions of other authors are not displayed so overtly, but they are discernible. Such for example is the case of Slīmān Benaissa who, in *Boualem zid el-goudem* (*Būʿlām zīd al-guddām*, "Boualem, come forward!") and *Youm el djemaa* (*Yūm al-d̲j̲amʿa*, "Friday," 1979) deals in a Marxist perspective with the relationships of politics, culture and religion and the social conflicts provoked by their confrontation. Furthermore his work, like that of his colleagues who have read Ionesco and Beckett, breaks with traditional technique and approaches anti-theatre. Scenery is almost non-existent: a deserted island in *Babour eghraq* (*Bābūr g̲h̲raḳ*, "A ship has foundered," 1982); the action is reduced to a few gestures, barely-scripted dialogues between two or three characters without substance who behave like puppets. Similar experiments have been undertaken to reform the presentation and the language of the theatre. But already, since the first seminar of young writers held at Saida in 1973, discussions have given rise to the following concepts: the man of the theatre needs the cooperation of all those who, in various ways, contribute to the staging of the play. Dramatic work is thus a collective creation. It is, furthermore, based on a close collaboration between actors and audience. In order to achieve this objective, it must be performed in the language common to both. It is to this trend of popular expression that the majority of Algerian dramatists adhere today.

Born out of private initiative, Algerian theatre has long suffered from poor material and financial resources. It has neither hierarchy nor organisation. Combination of style is the norm: drama, melodrama, comedy in each of its different elements. Plays rarely display a unity of tone. Written in dialectal prose—the use of literary Arabic is exceptional—they reflect familiar modes of conversation. This is nevertheless a good style of theatre, and it would be a mistake to attribute to it a literary quality which it does not have and which it does not claim. The concepts of authors evidently vary according to their temperament, but all are in agreement on one point: the primary objective is to please and to move the audience. ʿAllālū, Ksentini and Bachtarzi understood this well. Of the three, it is without doubt the second who, both as a man of the theatre and as a man of the people, best interprets the taste and the nature of his contemporaries with the composition of comedies and lively, jovial farces, often leavened with rational contemplation. His successor, Bachtarzi, aware of the educactive role of the theatre, is mainly concerned with familiarising his audience with the issues of concern to Muslim opinion during the inter-war period. In his view, the man of the theatre is a creator and the spectacle that he presents consists only in dramatising serious or comic situations: it is a kind of celebration of novelty and hope.

Like other cultural activities, since 1962 the theatre has been brought under state control. Many national companies are invited to perform, most of them from self-styled socialist and Third World countries, and their performances are aimed essentially at exhibiting communist and anti-imperialist doctrines. At the same time, youth has leapt to the forefront of the stage. Scores of regular and amateur companies, established in the towns, tour the provinces, performing plays in dialect with themes generally borrowed from contemporary life. Their promoters are obsessed with conceptual debates, seeking only to promote the principles dear to them. The public follows such ideological debates with passionate interest, but by excessively stereotyping characters they make for poor theatre. The best dramatists among the contemporaries are those who, avoiding extreme didacticism, are capable of going beyond narrative or pictorial

analysis and taking the measure of the human condition.

Morocco.—As in Algeria, it was not until after the First World War that theatre made its appearance in Morocco. In 1923, an Egyptian troupe led by ʿIzz al-Dīn al-Maṣrī made a tour of the country during which its most notable production was *Ṣalāḥ al-Dīn al-Ayyūbī*, a historical drama in literary Arabic by Nadjīb al-Ḥaddād, which Djūrdj Abyaḍ had performed two years earlier before Muslim audiences in Algiers. This event inspired several young intellectuals of Fez to present similar spectacles to their compatriots. They formed a company whose principal organisers were Muḥammad al-Durrī, Mahdī al-Mniaï and Ibn Shaykh. The first wrote about a dozen plays on themes dealing with the political and social scene: he denounced the protectorate régime, extolled national sentiment and stressed the poverty and ignorance which were the lot of the popular masses. Soon arrested, he died prematurely. His successors, who shared the same ideas, embraced political theatre with increased vigour. In 1929, there were enough of them to justify the holding at Fez of a contest to find the best dramatic actor. The winner was a student of the university of al-Ḳarawiyyīn who celebrated in literary Arabic the virtues of education in the cause of progress and of the struggle for the liberation of the country.

From 1934 onward, the theatre reflected the demands of the *Comité d'action marocaine* of ʿAllāl al-Fāsī which, in particular, sought the reform of Arab education, freedom of the press and the repeal of the dahir of 16 May 1930 codifying traditional Berber law. In the wake of violent public demonstrations at Fez and Meknès in 1934 and 1937, public meetings were forbidden. This measure had a severe impact on the theatre which took refuge in semi-secrecy. Henceforward, groups of players performed only in private sessions on the occasion of family celebrations. Short, humorous and sometimes satirical plays were shown, featuring known characters or current events, and these were much enjoyed by the audience. The state of limbo to which this theatre of controversy was reduced, banned or legalised according to changing circumstances, persisted until Independence.

The years following 1956 were marked by an intense intellectual ferment, to which the theatre contributed a major part. In the chief cities of the country, numerous amateur companies mounted spectacles combining all elements: evocations of the recent past and of ancient history, borrowings from Arab folklore or from foreign literature. To this scintillating period belong several remarkable works, including *Les Fourberies de Joha* by Atawakīl, adapted from Molière's *Les Fourberies de Scapin*, which achieved a huge success both in Morocco and in France, where it was awarded a prize at the Paris Festival of the Nations in 1956.

The public authorities encouraged initiatives aimed at popularising the theatre and took various measures with the purpose of putting its activities on a sound footing. It was thus that there was established in 1959 a centre for drama studies designed to train actors and theatre technicians. At the same time, a national company was founded, bringing together the best actors of the time: al-Ṭayyib al-Ṣiddīḳī, Aḥmad al-Ṭayyib al-ʿAldj, ʿAbd al-Ṣamad Dinyā and Bashīr Skīradj. Finally, financial support was henceforward offered to groups of amateurs who were invited to participate in the annual festival of dramatic art. This official attempt at imposing structure on the theatre was a failure. It encountered difficulties which twenty years later were still not fully surmounted and which had as much to do with the conflicting ambitions of men of the theatre, their personal concepts of dramatic art and the use of the means laid at their disposal, as with the refusal of some of them to join in a process which would integrate them in a bureaucratic system. The combination of these various factors soon put an end to an experiment which had barely begun. In 1962, the centre for drama studies closed its doors. Soon afterwards, the national company broke up and fragmented into several competing groups, while amateur actors were as destitute of support as they had been in the past.

The theatre born immediately after Morocco's accession to independence produced diverse works of very inconsistent quality. The different comic genres continued to enjoy popular approval: sketches, farces, comedies based on mime and gesture, humorous and satirical playlets featuring traditional types such as the naïve and miserly Berber, the cunning and selfish Marrākshī, the greedy Jew, etc. On the other hand, adaptations of foreign works abounded: a characteristic example is supplied by *The Inquisitive ones* by Aḥmad al-Ṭayyib al-ʿAldj, after Molière's *Les Femmes savantes*. Finally, serious theatre was enriched by historical dramas which, written by young authors, sometimes display the exuberance of youth. In this spirit ʿAzīz Saghrūshnī describes, in *The Battle*, the heroic attitude of the inhabitants of al-Djadīda (formerly Mazagan) in their opposition to the occupation of their town by the Portugese at the beginning of the 16th century. Similarly, ʿAbd Allāh Shakrūn devotes numerous plays to the past of his country and develops the theme of resistance to foreign occupation, especially in *al-Wāḳiʿa* ("The Battle").

Around the year 1965, changes took place in the world of the theatre. The majority of those who, for ten years, had contributed to the development of dramatic art, abandoned the stage to enter public administration. Among the pioneers, only one remained at the forefront: al-Ṭayyib al-Ṣiddīḳī.

Born at Mogador in 1938, his father a teacher of Arabic and his mother of rural origin, al-Ṣiddīḳī spent his childhood in his native town. After studying at the High School of Casablanca and a brief period of working in postal administration, he began his stage career at eighteen years old, in an Arabic adaptation of *Les Fourberies de Scapin* which, as indicated above, enjoyed major success in Morocco and in France. Al-Ṣiddīḳī then spent two years in Paris, where he learned techniques of production from Hubert Ginioux at the Comédie de l'Ouest before acting for a season at the Théâtre National Populaire, under the direction of Jean Vilar. Returning to Morocco in 1958, he devoted himself entirely to the theatre. Under the auspices of the *Union marocaine du travail*, he established the *Théâtre travailliste*, setting up his stages on the Casablanca waterfront and mounting productions adapted from plays by Aristophanes and Gogol. This experiment lasted no longer than two years, after which he formed his own company, consisting of a dozen players who followed him to the Municipal Theatre of Casablanca when in 1964, at twenty-six years old, he took over its direction. Simultaneously actor, producer, director and administrator, al-Ṣiddīḳī exerted himself unstintingly in efforts to draw the masses of his fellow-citizens to the theatre.

In ten years, he wrote, translated, adapted, presented—almost invariably in dialect—about fifty plays with widely varied themes. First, productions, or more precisely, large-scale exhibitions dramatising events of the past or of the present: *Maroc I*, *La Bataille d'Oued Meghezem*, *Maroc 1973*, or huge pseudo-

historical tableaux performed in the open air on the occasion of the annual festival of the *tolba*. Next came pieces inspired either by classical Arabic literature, such as the *maḳāmāt* of al-Hamadhānī, or by the oral tradition as expressed, for example, in the rhymes of al-Madjdhūb [*q.v.*] which are still today recited on many occasions in the Maghrib. Finally, al-Ṣiddīḳī adapted some forty foreign plays, from *Jeu de l'amour et du hasard* by Marivaux to *Amédée* by Eugene Ionesco and *En attendant Godot* by Samuel Beckett. In sum, we have burgeoning répertoire continually enriched.

In fact, al-Ṣiddīḳī sought to provide himself with a lasting supply of material by vigorously seizing everything suited to his purposes, as much in the living popular culture as in foreign works. This versatility corresponded, in his personality, to a threefold concern: to try to interest the largest possible public by offering it numerous and varied productions; to make it aware of the problems faced by contemporary man in the political as well as the social and cultural domain; and to engage it in debate by establishing a dialogue between actors and audience. These parties could not communicate except by using the language of daily conversation. Al-Ṣiddīḳī knew that he was risking the disapproval of the partisans of literary Arabic, but he believed that this was a price worth paying for the development of the theatre in his country.

The prestige of al-Ṣiddīḳī should not obscure the efforts of writers and actors of lesser importance who for the most part have shared his motivations. There are several scores of them contributing to theatrical life in the main cities of the kingdom, Rabat, Fez, and especially Tangiers. Radio and television regularly devote broadcasts to the theatre, both in literary Arabic and in dialect. Studies of the traditional methods of performance (*bisāṭ*, *ḥalḳa* and *sirr*) are followed at centres of popular arts. As in Algiers and Tunisia, annual competitions are formed to reward the best dramatists. In short, significant efforts are being made in Morocco to promote and to popularise the theatre.

In the three countires of North Africa, there is periodic talk of crisis in the theatre, expressed in various terms of which the most often heard related to the paucity of writers, poor standards of performance-venues, public apathy, meagre patronage and the excessive cost of seats. In fact, it is perhaps in the very prosperity of the theatre that the true reasons for the crisis should be sought. Dramatic art in the Maghrib is suffering from inflation. There, as elsewhere, many are called and few chosen. The quite considerable number of mediocre works, hastily mounted productions, insufficiently trained actors, the excessive publicity applied to performances or performers of average quality, the constant confusion between original works and those which only pretend to be such, the urge to educate at any price—all these factors are liable to hinder the progress of the theatre without, however, truly threatening its existence. On the contrary, one is constantly surprised by its vitality, the constant innovation on the part of the young people who devote their daily energies to it—writers, producers, designers and actors—even if the co-ordination necessary between these elements is not always evident and the style of the particular period is not accurately invoked. What is clear, in any case, is that theatrical people are not doomed, as were their predecessors, to work in isolation. The problem of the relationship that they must establish with the public—one involving all classes of society—has been better addressed than ever before. In conclusion, the basis of hope for the future is founded as much on the development of communication between actors and audience as on the success of an art form.

3. In Turkey.

The art of theatre in Turkey developed from the same religious, moral and educational urge to imitate human actions that accompanied its growth in ancient Greece. There are four main traditions of theatre in Turkey: folk theatre, popular theatre, court theatre and Western theatre. Improvised theatre developed in two complete different social environments: as part of the popular theatre tradition in big cities, such as Istanbul, and as part of folk-literature. Although the two traditions seem poles apart, they are essentially not so different in spirit as external characteristics might suggest. Both are extempore and non-literary. In both theatres, the action gains naturalism and vividness by spontaneity, and in both the language is simple, direct and strong. Performances were held at ground level in an arena, thereby lending flexibility to the acting and helping to create intimacy with the audience. Although highly different in presentation, techniques and conventions, both theatres have approximately the same genres: puppetry, story-telling (acted out), dramatic dancing and rudimentary play by actors.

Unlike most Asiatic countries, Turkey had no greatly individualised and distinctive court theatre tradition. Until the period of Westernisation, court theatre simply imitated popular theatre. The courts of mediaeval rulers all over Anatolia attracted dancers, actors, story-tellers, clowns, puppet masters and conjurors. They performed only for the aristocracy of the palace, and hence they were more refined and literary. But the court also supported theatrical entertainment outside the palace. The birth of a prince or his circumcision, a court marriage, the accession of a new ruler, triumph in war, departure for a new conquest or the arrival of a welcome foreign ambassador or guest, were occasions for public festivities, sometimes lasting as long as forty days and nights. These served the double purpose of amusing the courtiers and the people and impressing the world at large with a display of magnificence. The festivities included not only processions, illuminations, fireworks, equestrian games and hunting, but also dancing, music, poetry recitations, and performances by jugglers, mountebanks, and buffoons. Beginning in the 19th century, in reaction to Western influence, sultans started building theatres in their palaces. ʿAbd al-Medjīd constructed a theatre near the Dolma Baghče Palace in 1858, and the theatre that ʿAbd al-Ḥamīd II built in his Yîldîz Palace in 1889 has survived. In these theatres, dramatic and operatic performances were given by both professional and amateur players.

The development of the Turkish Western theatre tradition is fairly recent, and can be conveniently divided into three periods, which are determined not only by theatrical developments but also by political and constitutional changes. The first period, from 1839 to 1908, is subdivided into the *Tanẓīmāt* and *Istibdād* periods—that is, the periods of "reorganisation" and "despotism"; the second major period, from 1908 to 1923, is that of the Revolution of 1908; and the third from 1923 to the present can be called the Republican period.

Four public playhouses were built in the first year of the *Tanẓīmāt* period: a Western theatre, a playhouse for performances of traditional Turkish theatre, and two large amphitheatres for circus-like spectacles. (Before this date, however, there were probably several temporary theatres. For instance, documents have established that in 1830 a theatre was under construction in Izmir.) This theatre construction was important to the development of Western theatre in Turkey. As the *Tanẓīmāt* intelligentsia pointed out, what distinguished Turkish traditional theatre from Western theatre was the latter's reliance on playhouses and written texts. With the opening of four theatre buildings in 1839, the first major distinction had been breached. The second, the development of written text, was to follow.

To go ahead in time, 1908 saw the restoration of the constitution of 1876, and what is commonly called the "Declaration of Freedom" (*Ḥürriyyetiñ iʿlānī*). The political change brought a reawakening of the nation's creative theatre life, and the years that followed have been identified by drama historians as the theatre of the constitutional period. A new theatrical period can be said to have begun with the declaration of the Republic on 23 October 1923, first of all because the Republican period finally saw the removal of an obstacle which had been blocking the development of Turkish theatre: the ban against the appearance of Turkish Muslim women on the stage. Though some courageous Turkish women had previously attempted to break this ban, legal proceedings and police persecution had discouraged them. In July 1923, however, Atatürk attended a performance in Izmir, given by a group of actors from the Istanbul Municipal Theatre. He assured them that from then onwards, Turkish women would be free to appear on the stage and that the theatre arts would be supported by the government. In that same year, Turkish women appeared in a musical comedy called *The fugitives from the ballroom (Bala ḳačaḳlarî)*, and the picture of the leading actress Sedād Naẓīre K͟hānîm, was featured on the cover of a women's magazine. The following year two women appeared in a performance of Shakespeare's *Othello*, Badʿiyya Muwaḥḥid as Desdemona and Neyyire Neyyir as Emilia. With this general view in mind, the development of Western-style theatre in Turkey can be analysed in detail.

In 1839 the Royal Decree of Gülhane inaugurated the *Tanẓīmāt* period, important as a period when an audience for theatre was created, professional personnel developed and playwrights emerged to write hundreds of plays. Among the factors which helped facilitate the establishment of European theatre in Turkey, the following are important:

The sultan and his environment. Three reformist sultans were especially important to this development: Selīm III and Maḥmūd II, both prior to 1839, and ʿAbd al-Madjīd. In 1836 Maḥmūd II's library contained 500 plays, of which 40 were tragedies, 40 were dramas, 30 were comedies, and the rest farces and vaudevilles. The sultans sometimes attended public performance, and were a kind of insurance against opposition from fanatical orthodox quarters. When the latter attacked the notion of theatre, intellectuals could use the sultan's support as a defence: "Would you know better than His Majesty, not only our Sovereign but the Caliph of all Muslims, who is building a theatre in his own palace,

and rewarding foreign and native actors? He himself honours performances on many occasions." ʿAbd al-ʿAzīz was not so keen on the theatre as his predecessors, but it was during his rule that Turkish theatre had its golden age. During the thirty-three year reign of his successor, ʿAbd al-Ḥamīd II, despotism and rigid censorship halted positive developments in the theatre, and public theatre almost ceased. Nevertheless, he himself had two theatres built in his palace, where he maintained two permanent, salaried theatrical companies, one foreign and the other native.

Turkish statesmen and ambassadors also contributed to the development of Western-style theatre. Early in 1870, the Grand Vizier ʿAlī Pas̲h̲a unsuccessfully tried to establish a national theatre, but later that year he achieved his objectives by granting Güllü Agôp, director of the Ottoman Theatre Company, a ten-year monopoly.

The press was another important factor in promoting Western-style theatre. Newspapers appeared in Turkey at just about the same time as the theatre, and many journalists began to write plays. Naturally, newspaper reports and reviews of theatre activities helped stimulate and guide public opinion. Foreign embassies, especially the French and Italian ones, played an important role, since many of these embassies had their own theatres, to which Turks were often invited to private performances. The embassies were also instrumental in bringing theatre and opera troupes to Turkey from their own countries. Non-Muslim minorities contributed greatly to the development of Western theatre in Turkey, most importantly, the Armenian community. An important role was also played by the cultural centres of other minorities of residents: the German one with their Teutonia, the French with their Alliance Française and the British and Italians through various theatre organisations.

Western theatre was perhaps most strongly promoted by visiting foreign troupes, many of which stayed as long as a whole season and gave regular performances. Some of these companies included the leading actors and artists of their times, and Turkish actors often learned their profession by watching these performances. Some seasons were so rich that the several foreign companies gave parallel performances, as for example on 11 September 1896, when there were three different performances of Verdi's *Aida* in Istanbul. Some of the operas of Verdi, Donizetti and Bellini were performed in Turkey before they were seen in Paris or other European capitals. Because of the influx of foreign companies, many more theatres were built. Often when these companies returned home, some of their members remained in Turkey, and it was from these actors, directors, set designers and conductors that Turkish theatre people learned their skills.

As has been pointed out, for the intelligentsia of the *Tanẓīmāt* period, the establishment of a Western theatrical tradition in Turkey was dependent on the building of theatres and the availability of written texts. The first modern Turkish play dates from 1859. Called *The poet's marriage* (*Bir s̲h̲āʿir evlenmesi*), this satire on prearranged marriages by the poet Ibrāhīm S̲h̲ināsī had been commissioned for the newly-completed court theatre of the Dolma Bag̲h̲če Palace. Though it was the first Turkish play written by a Turk in Turkey, it was not the first Turkish play. The first theatre texts in Turkish are those of the Azerbaijani playwright Mīrzā Fatḥ ʿAlī Ak̲h̲undov (1812-78), who wrote six comedies between the years 1850 and 1855. His popular plays were translated into Russian and later into the various languages of the present-day Soviet Union, as well as into Persian, French, English and German. Though Ak̲h̲undov preceded Ibrāhīm S̲h̲ināsī and enjoyed wide popularity outside his own country, S̲h̲ināsī's short play demonstrates greater skill.

Mention should also be made of a Turkish manuscript found in Viennese archives by Professor Fahir Iz, *The strange and curious tale of Ahmet the Cobbler* (*Waḳāyiʿ-i ʿad̲j̲ībe we ḥawādit̲h̲-i g̲h̲arībe-yi kefs̲h̲er Aḥmed*). Dated 1809, the manuscript, contains translations of the play in Italian, German and French; the name Iskerleč on it is probably that of the copyist. Two more plays were subsequently found: one, *Godefroi de Bouillon*, dealing with the First Crusade; the other, in both Turkish and French, was by a foreigner, Thomas Chabert, and its long title can be shortened to *Ḥād̲j̲d̲j̲ī Bektās̲h̲ or the founding of the Janissaries*. The source of these texts was the Paris Ecole des Langues Orientales, which trained translators for the European embassies in the Middle East countries. Some of these plays were actually produced in the school. Years later, the catalogue of Turkish and Persian manuscripts in Poznan listed another version of *Aḥmed the cobbler* and another work entitled *Nasreddin Hoca's appointment to an official post (Naṣreddīn K̲h̲od̲j̲a'niñ manṣibi)*. The manuscript, translated into German, Italian and French was like the earlier-found version of *Aḥmed the cobbler* dated 1809, but the Poznan copy of *Aḥmed the cobbler* bore the signature Dombay, instead of Iskerleč, and the *Naṣreddīn K̲h̲od̲j̲a* play was signed Johann Lippa. The evidence suggests that in the School of Oriental Languages, Turkish was taught by members of the Turkish embassy staff. Though they no doubt wrote these plays, they chose as professional diplomats to remain anonymous. They probably dictated them as exercises to students, who in turn translated them into the three major languages of the Austrian Empire. Written from dictation, the manuscripts contain spelling errors, but since the authors were Turks, there are not many mistakes in syntax.

Other plays in Turkish that pre-date S̲h̲ināsī's were only translations, some of which were performed but never published. For instance, ʿAbd al-Med̲j̲īd's chamberlain, Ṣaffet Bey, translated Molière's plays for performance by the young Turkish musicians of the imperial band, and in 1845 the sultan invited three of his doctors to be present at the Turkish performance of two of Molière's plays, one of which ridiculed the medical profession.

Many foreign plays were translated into Turkish and performed by the Armenian theatre companies prior to the foundation of the Ottoman Theatre. Some copies of the translations that predate S̲h̲ināsī's play are in Armenian characters. The earliest, published in 1813, is a translation of Molière's *Le médecin malgré lui*. Four plays by Metastasio were translated into Turkish and published in Armenian in 1831. Since the source of these latter plays was the Bible, it seems likely that they were used to propagate the Christian faith. Unlike contemporary Turkish texts, they do not contain Persian or Arabic words. Lithographed translated texts of opera libretti for Tukish audiences are very rare, but there are some in the Topkapı Museum and in private collections. An Italian opera on Turkish subject, *The siege of Silistria*, written in Turkey and performed there, has libretti in both Italian and Turkish.

Some students of Turkish theatre consider the first Turkish play to be K̲h̲ayr Allāh Efendi's *Ḥikāye-yi Ibrāhīm Pas̲h̲a*, a 19th century version of a 16th century

story about Ibrāhīm Pas̲h̲a of Sulaymān the Magnificent's time. The manuscript of this play by the father of the well-known Turkish poet and playwright ʿAbd al-Ḥaḳḳ was discovered by Ismail Hami Danişment in 1939. Written in 1844, fifteen years before S̲h̲ināsī's play, when K̲h̲ayr Allāh was a student in medical school, it is little more than a rough draft by an amateur, probably never meant to be seen by others.

The Armenians and Levantines of Istanbul gave Turkey its first Western theatre in the Turkish language, generally adapted to local theatre tastes and conditions. Before the Armenians became active in theatre, the private residences of foreign embassy personnel were the only places in which Turks could see Western theatre and opera companies in their own languages. By the third quarter of the 19th century, however, the Istanbul Armenians had established two companies that sought a wider Turkish audience. First, a company called S̲h̲arḳ ("The Orient") and, later, one called Vaspuragan, came into existence, both of which translated, adapted, and performed European plays in both Armenian and Turkish.

The most important effort in this Armeno-Turkish development was that of the Ottoman Theatre Company at the Gedikpas̲h̲a Theatre in Istanbul. Headed by an Armenian Agop Vartovian (Güllü Agop), the company prepared the way for a genuinely national Turkish theatre by introducing Turkish actors in original Turkish plays. Sometimes given minor roles, the Turkish actors helped correct the pronunciation of Armenian performers, and Turkish writers were employed to make sure that the translations were idiomatically correct. The proceedings inevitably aroused the enthusiasm and support of university students.

But the guiding spirit remained Güllü Agop, who completed this Armeno-Turkish integration by eventually becoming a Muslim. In 1868 he committed his company to performances of plays in Turkish, and in April of that year he offered Istanbul its Turkish-language modern theatre production, a translation of a French play entitled *César Borgia.* This production was received somewhat unenthusiastically, and Güllü Agop immediately followed it with a tragedy based on the Turkish romance *Leylā and Med̲j̲nūn* by Muṣṭafā Efendi. The following year saw a marked increase in original Turkish plays.

As noted earlier, in 1870 the Grand Vizier ʿAlī Pas̲h̲a granted Güllü Agop a ten-year monopoly of the production of dramas in the Turkish language. This patent, however, required him to open new theatres in various parts of Istanbul within a given time. Other would-be-producers barred from producing plays in Istanbul by Güllü Agop's monopoly, were encouraged, occasionally by prominent statesmen, to open theatres in the provinces. One such man, Ḍiyāʾ Pas̲h̲a (1825-80), brought a company from Istanbul, and another theatre was opened in Trabzon by the governor ʿAlī Bey, who was a playwright. In Bursa, the governor Aḥmed Wefīḳ Pas̲h̲a adapted nearly all of Molière's plays into Turkish and personally ran his own theatre, training and directing his actors and inspiring talented Turkish authors to write plays.

In Istanbul, Güllü Agop's monopoly was soon challenged, first by an open company which claimed that his patent did not apply to musical performances on stage, and then by *ortaoyunu* [*q.v.*] actors, who used every subterfuge to put on plays indoors as well as outdoors. They charged Güllü Agop with having failed to build the new theatres called for in his patent, and that in any case their performances were improvised, without text or employment of a prompter, and therefore not covered by the monopoly. Thus the seed was sown for a new theatre that could perhaps better nourish itself in the native tradition than the borrowed theatre translated from European literatures or directly imitative of them. With their *ṭulūʿat* (improvisatory) theatre, which filled the outline of a vague plot with local events, incidents picked up from the newspapers, or from street gossip, the *ortaoyunu* players gave their generation a kind of *commedia dell'arte* which stands midway between the traditional Turkish theatre and the imported Western theatre. However, after the Ottoman Theatre Company, was abruptly abolished by an order of the sultan in 1884, theatre activity in Turkey generally suffered an eclipse.

The second phase of the Western theatre tradition in Turkey is considered to have begun in 1908, the year of the constitutional revolution and to have ended in 1923, the year of the proclamation of the Republic. It was an important transitional period, a time of political turmoil. It also marked the restoration of theatre and some attempts to develop in new directions. The early months of 1908 were full of tension and excitement, as the new régime was being greeted with understandable delight. The theatres shared this enthusiasm, and put on productions suited to special occasions. Many new theatres sprang up under the stimulus of the events of this year, and during the next fifteen years they changed names and administration in rapid succession, some managing to survive only briefly. Too often, dramatic offerings were supplanted by political speeches and demonstrations meant to fire audiences with liberal enthusiasm. Plays previously banned by ʿAbd al-Ḥamīd's censorship were revived to stir up the populace against the former régime. The dominant genre of theatre was the *pièce de circonstance.* These works were set in contemporary Turkey, and their protagonists were the Young Turks, the leaders of the Union and Progress Party, who were shown as patriots, while the supporters and followers of ʿAbd al-Ḥamīd were portrayed as opportunistic villains. Playwrights of the time saw theatre as a vehicle for the abasement of the former régime on the one hand and for enthusiastic praise of the constitutional reforms on the other. Thus the deluge of bad plays continued.

The theatre was also an ideal instrument for the strengthening of civilian and military morale. Wars followed in dizzy succession during that period, among them the Turco-Italian War of 1911, the Balkan War of 1912, World War I, and finally the Turkish War of Independence. A long series of Turkish plays were loosely constructed from topical scenes derived from some recent ware, glorifying the struggle of the Turkish people against their enemies. Other plays dealt with Ottoman history, lauding Turkish heroes of the past. The emphasis was always on solidarity and preparedness for war. Needless to say, most of these plays were extremely ephemeral.

Nevertheless, this period saw a number of significant developments in the theatre. Religious and official attitudes militating against the appearance of Turkish Muslim women on stage began to give way in 1919, when for the first time an actress—her name was ʿAfīfe—appeared in a play on the Turkish stage. Though her career was not without difficulties, her example was soon followerd by others.

The same period also saw the establishment of a school of drama and music in Istanbul. It was organised in 1914 by André Antoine (1859-1943), founder of Paris's Théâtre Libre, who had come to Turkey at the invitation of the mayor of Istanbul. In

1916, it started giving public performances, gradually becoming more of a theatre than a school and leading to the establishment of the present Istanbul Municipal Theatre.

It was also during this period that many native playwrights and theatre men of distinction started their careers. Until the Constitution of 1908 and the dethroning of ᶜAbd al-Ḥamīd, government censorship discouraged the development of playwrights. After the reforms, however, there appeared dramatists who treated a variety of previously forbidden subjects.

Several professional, semi-professional, and amateur companies were active in this period. Among these were the Ṣaḥne-yi Hewes (formed by amateurs, among whom there were playwrights), and the short-lived Ṣanāyiᶜ-i Nefīse. Amateurs later formed other troupes, such as Mürebbī Ḥiṣṣiyyāt, which was housed in the ᶜOthmān Agha Theatre. Burhān al-Dīn Tepsi, a pupil of Silvain, studied drama in Paris and subsequently formed a company which gave regular performances. It was followed by another company called Dār al-Tamthīl-i ᶜOthmānī, formed by the actor Hüseyn Kāmī Bey. Certain playwrights, intellectuals and actors unsuccessfully planned to found a national theatre. Other attempts in this direction were the ᶜOthmānlî Tiyatro Kulübü (Ottoman Theatre Club), the Istanbul Ḳumpanyasî, and the Ertughrul Tiyatrosu. To raise money for the purchase of warships, the ᶜOthmānlî Donanma Djemᶜiyyeti was formed. Other important companies included Minakian's Ottoman Theatre and the Binemedjiyan Company.

The present period of Turkish drama dates from the proclamation of the Republic. This and the reforms of 1925-8 opened a new era and quickly brought about official approbation and government support of culture and drama in Turkey. The Turkish language was revivified, and there was increased interest in bringing to audiences works based on national history and folklore. Because the state considered drama to be an essential element in the modernisation of Turkey, it assumed full responsibility for the actor's professional career. The state conservatory established in 1936 in Anakara for training actors, acresses, opera singers and ballet dancers has since then greatly advanced the development of Turkish dramatic arts. When the course at that school has been completed, the student is taken on as a member of the leading State Theatre Company, which is founded by the government and functions under the Ministry of Culture. Additional funds are obtained from the sale of low-priced tickets. Providing security and opportunities for work in the theatrical profession, the State Theatre now operates with ten or eleven stages. In recent years it has produced excellent productions of foreign playwrights, from Sophocles to Edward Albee, and has introduced new Turkish dramatists. Along with several private theatres, it has been sending companies on one or two-month tours throughout the country.

The Halk evleri (People's houses) [see KHALḲ EVI] were established in 1931 and furthered cultural emancipation through a concerted programme of literary, artistic and mainly drama projects. Despite its success, this movement was disbanded on political grounds. The present trend is toward the establishment of regional theatre companies.

Theatre activity in Turkey is still mostly confined to the two largest cities, Ankara and Istanbul. The latter has about 25 private theatres, as well as 5 owned by the municipality. Privately-owned and managed theatres do not receive government subsidies or tax relief. In addition to the 4 theatres of the State Theatre Company, Ankara has several private companies, although the number varies from season to season. Owing to the competition of television, most theatres are almost invariably half-empty; therefore, while there appears to be a highly active theatre life in Turkey, this is now only superficially so.

From the point of view of the development of Turkish drama, the Republican period can be subdivided into two main sub-periods: from 1923 to 1960, and from 1960 to the present day. Though rooted in a relatively short tradition, recent Turkish drama has shown considerable promise.

Until 1960, the works seen on the Turkish stage reflected few of the changes which had overtaken the country. Some were poor copies of Western plays, in which an effort was made to assimilate the latter's surface qualities. The pre-1960 dramatists tended toward pseudo-symbolism or psychological realism, in which characters worked out their fate in an almost societyless vacuum. Highly popular were the traditional lightweight comedies that amused the audiences without ruffling their composure: plays focusing on unusual or off-beat characters: plays hammering on the theme that money is the root of all evil; plays on the inevitability of fate; plays involving dreams and psychoanalytic themes; plays on the eternal triangle; plays on the vicissitudes of married life; plays contrasting big city and provincial life; plays in verse which failed to be poetic; and sentimental plays on themes of love, altruism and self-sacrifice. Dramatists most often provided only a sketchy treatment of these themes.

After the Army junta overthrew the Menderes government in 1960 and promulgated a new constitution in the following year, the theatre turned to a more outspoken treatment of contemporary problems. Though theatre was excluded from preliminary censorship, a long list of moral and political taboos remained in effect. Nevertheless, the new values imposed by the 1961 constitution lie behind every problem play of the period. Turkish dramatists were working toward some moment of release from constrictions, both self- and externally-imposed. Not only did new dramatists emerge, but many playwrights writing before 1960 suddenly seemed to find new energy and new forms of expression. This lasted until the 1970s. During those memorable ten years, Turkish theatre enjoyed a vitality that enabled it to deal with problems of current social and political importance. In 1969 serious social, economic, and political unrest descended upon Turkey. Rural inhabitants were flocking to the big cities in search of work and student violence was erupting in the streets. Severe new codes were enacted which subjected the big cities to martial law. People naturally prefered to spend their evenings at home watching television, then quite a recent innovation in Turkey.

Between 1960 and the 1970s, private theatre had mushroomed in Istanbul and Ankara, but many now closed their doors, leaving others that are still struggling to survive. Two theatres deserve special mention: Dostlar Tiyatrosu (Friends' Theatre) in Istanbul, and Ankara Sanat Tiyatrosu (Ankara Arts Theatre). Both are private theatres, and are socially and politically committed to the left. Thanks to their loyal audiences and staffs, they have been able to resist the tide.

A new generation of aspiring playwrights began to appear in the 1960s, and a changing society provided them with ever-new material. For convenience, the considerable dramatic output of the Republican period can best be broken down by its main focus and

theme. Contemporary man's sense of isolation, alienation, and loss of identity are dealt with in various plays. Plays about individuals caught in the cultural conflict between traditional values and modern Westernised ideas and manners are the subject of a number of plays. Peasants flooding into the big cities and being forced to live in slums are another topic. Many plays involve lower-middle class or working-class families in the grip of financial difficulties, and show the family as a microcosm of world problems as they fight against disintegration. Since 1960s there have been plays highlighting and revealing the role, the problems, and the social position of modern Turkish women. Some plays can best be described as village or peasant plays offering authentic pictures of village life in out-of-the way places. They deal with such problems as corrupt landlords and local administrators, marriage customs, jealousy intolerance, superstitions and family feuds. Some playwrights take their inspiration from mythology, old legends, local history and the history of previous civilisations. Plotless plays presenting glimpses of assorted characters and their everyday lives are often introduced by a narrator and depend largely on their atmospheric quality. Often they contrast an "inner" and an "outer" world. Many plays highlight political and social revolutionary ideals, the conflict between capital and labour, business ethics, and the fight against Fascism. Idealists whose zeal alienates them from contemporary Turkish reality are dealt with in a number of plays. Of a more general nature are those symbolic dramas concerned with such themes as man's place in the universe, analyses of social organisation and criticism of contemporary mores. In recent years, Turkish dramatists and theatre groups have been experimenting with new forms and unconventional structures. Western culture is now seen not as an ideal model but as a contrasting tradition. Playwrights have also become aware that "modern" theatrical trends in Europe have their counterparts in Turkish traditional theatre, and this has facilitated their absorption into contemporary Turkish theatre. For example, the tradition of Karagöz [*q.v.*] or shadow theatre has been supplied with new scripts designed for performance by live actors. The contribution of traditional Turkish theatre far transcends mere borrowing or superficial treatment. It stems from the very essence of traditional theatre: a sense of anti-illusionistic rapport between the actors and the audience, an open or flexible form, the attempt to give the impression of improvisation and total theatre in performance, and the use of music, dance and songs as adjuncts to drama.

(METİN AND)

4. In Iran.

The history of the theatrical arts in Iran is obscured by the fact that they have only recently acquired a place among the manifestations of Iranian culture considered to be serious. Written drama as a branch of polite literature emerged under the influence of the West in the second half of the past century, and the development of a theatrical tradition with formal institutions started at an even younger data. This does not mean, however, that before that time no indigenous types of drama were in existence. References to performances of various kinds are known from pre-Islamic times onwards, although they do not become numerous enough to allow us to describe their origin and development in detail until the last few centuries. Iran even made a unique contribution to Islamic civilisation by creating a form of religious drama [see TAʿZIYA]. A common feature of these types of drama is that they are based almost entirely on improvisation so that they only rarely have left traces of their past existence in the form of written plays. They belong essentially to popular culture, even if they were adopted by the courts and by members of the educated class as forms of entertainment.

Religious objections to the impersonation of living beings, and to frivolous entertainment in general, being as they were prevalent during the Islamic period, have undoubtedly been an impediment to the development of serious drama. Already before Islam, however, dramatics did not play a prominent part in Iranian culture, at least not in that section of it about which we possess any knowledge. The Greek theatres which existed in some places after the invasion of Alexander remained a foreign element and soon disappeared without having exerted a noticeable influence.

The Sāsānid kings amused themselves with the performances of minstrels, singers and musicians, as well as with many other kinds of entertainment. Descriptions of these court traditions can be found in the Pahlawi book *Khusraw and his page* and in many Islamic sources (cf. M. Boyce, in *JRAS* [1957], 10-45). They provided a model for the amusements of polite society in later times. This tradition continued without fundamental changes till it came under the attack of modern types of entertainment. It remained close to the popular tradition of performances, called *maʿrika*, *hangāma* or *tamāshā*, which mostly took place in public squares. The performer (*maʿrika-gīr*) could be a storyteller (*ḳiṣṣagū*), a rope-dancer, an acrobat, a magician or a leader of dancing animals. Literary sources seldom pay attention to these types of folk art, but a remarkable exception is the *Futuwwat-nāma-yi sulṭānī* by Kāshifī (*q.v.*; see also Galunov, *Iran*, iii, 94). The earliest observations of such performances made by European travellers date from the 17th century (cf. e.g. J. B. Tavernier, *Les six voyages... en Turquie, en Perse et aux Indes*, Amsterdam 1678, i, 442-3 (performances at the *maydān* of Tabrīz); J. Chardin, *Voyages en Perse*, ed. L. Langlès, Paris 1811, iii, 326 f. (variety at Tabrīz), 180 ff. (wrestlers, sword fighters and fighting animals at Iṣfahān), 436-64 ("Exercices et jeux des Persans")). At the social occasions held at the courts or in private mansions, singing, playing and dancing were among the principal amusements. Central figures were the minstrel (*khunyāgar*; cf. the description of his craft in ch. 36 of the *Ḳābūs-nāma* by Kay Kāwūs [*q.v.*], ed. Tehran 1345/1967, 193-7), and the singer-musician (*muṭrib*), who appears frequently in Persian poetry. A picture of the entertainment at a local court about the end of the 5th/11th century is presented in a short *mathnawī* poem by Masʿūd Saʿd-i

Salmān [*q.v.*] (*Dīwān*, ed. Tehran 1339/1960, 562-79), which makes mention of musicians playing various instruments, singers and dancers.

The art of the narrator (*naḳḳāl*), who accompanied his recitation with musical and gesticular means of expression, may rightly be regarded as a branch of indigenous dramatics. The relationship with polite literature, which often exists, puts this performer in a special category. Until the beginning of this century, the narrator was a man of some education whose performances were appreciated at all levels of society. His rôle as a transmitter of epics in prose or in poetry must have been considerable throughout the history of Persian literature, although he usually remained in the shadow of the writers and the poets. He also provided the latter with much of raw material, consisting of stories of all kinds, for their prose works and *mat̲h̲nāwī* poems. Several terms were in use to differentiate between specialisations within the profession of narrator. In more recent times, the best-known religious narrator is the *rawḍa-k̲h̲ʷān* [*q.v.*]. The national epic provided the subject matter to the *s̲h̲āh-nāma-k̲h̲ʷān*, who narrated fragments from Firdawsī's poem. His popularity at the court of the Ṣafawids has been recorded by the historians of the period, together with the names of the most celebrated narrators of this type (for further details, see Bayḍāʾī, *Namāyis̲h̲*, 60-81).

To the common people, the *naḳḳāl*, performed in particular at the coffee- or teahouses which are known to have existed in Iran since the 17th century [see ČAY-K̲H̲ĀNA in Suppl.]. Sitting on a platform (*tak̲h̲t*), he chanted his text using only a small stick (*miṭrāḳ*, *čūbdastī*) to accentuate his gesticulations. Sometimes his recitation was accompanied by one or two musicians. Pictures on the walls representing scenes from the *S̲h̲āh-nāma* or from the tales about the *Imām*s called *s̲h̲amāyil*, often helped him to make his audience visualise his narrative. Story-telling with the help of pictures was also practiced outdoors by people named *pardazān* or *s̲h̲amāyil-gardān* who mainly dealt with religious subjects. Subsequent scenes were usually combined on one canvas covered by a curtain which was gradually uncovered as the narration proceeded. A remarkable tool, described by Galunov as it could be seen at Iṣfahān in the twenties of of this century, was the *s̲h̲ahr-i firang* (a name referring probably to its European origin), a metal case inside which a roll (*ṭūmār*) could rotate to show pictures one by one through an opening at the front of the case (*Narodniy teatr Irana*, 67 ff.).

Puppet-shows were known in Iran already during the Middle Ages, as is witnessed by many references in the works of classical poets to puppets (*k̲h̲iyāl*, *luʿbat*) as well as to certain props of the puppet-player, e.g. the curtain (*parda*), the cloth (*naṭʿ*) on which the plays were enacted, and the box (*ṣandūḳ*) into which the puppets were put away after the show had ended. Mention is also made sometimes of a magic lanterm (*fānūs-i k̲h̲iyāl*), but it is uncertain whether any of the known references may be interpreted as evidence of the existence of shadow play in mediaeval Iran (see P. N. Boratav, art. ḲARAGÖZ). Whenever mention is made of puppet-shows in these sources, the intention is to use them as symbols pointing to the thought that the existence of this world and its inhabitants is dependent entirely on God's will. In the *Us̲h̲tur-nāma*, a mystical *mat̲h̲nawī* poem attributed by tradition to ʿAṭṭār [*q.v.*], a Turkish puppet-player is presented as an emblem of the divine rule over human destiny. This is also the proper meaning of the puppet-play according to the description in the *Futuwwat-nāma* of Kās̲h̲ifī (see Galunov, *Iran*, ii, 72-4).

The most important types of puppet-play which until quite recently were current in Iran belong to the kind in which the puppets are shown directly to the public. The shadow-play never gained in Iran the prominence which it had in the folklore of other peoples of the Middle East [see K̲H̲AYĀL AL-ẒILL] and disappeared already quite early without leaving many traces. A variety making use of glove puppets was called *pahlawān kačal* ("the bald hero") after its leading character who also appears however in other forms of popular theatre. It was sometimes called *pand̲j̲* because five figures were required to play the stock parts of the show. Much more elaborate was the *k̲h̲ayma-s̲h̲ab-bāzī*, a marionette theatre operating, as the name implies, at night and enacted, at least originally, in a tent. The performers were itinerant artists who were reckoned among the *lūṭī*s [*q.v.*] or the gypsies. In the present century, the *k̲h̲ayma-s̲h̲ab-bāzī* was also played at a fixed locality such as the *kafa-yi s̲h̲ahrdārī* at Tehran between 1941 and about 1950 (Bayḍāʾī, *Namāyis̲h̲*, 110 f.). The puppet-player (*ustād*) and his assistant (*s̲h̲āgird*) manipulated the figures from behind a screen and let them speak. They used a small whistle (*sutsutak*) to imitate high-pitched voices. In front of the scene, the leader (*murs̲h̲id*) introduced the performance and argued occasionally with the characters of the play. Musical accompaniment was played on the *ḍarb*, the *tār* or the *kamanča*.

The variety shows performed by live actors originated from the acts of individual performers of different types. There is perhaps a historical connection with folk traditions, such as the installation of a mock king at the time of the New Year festival, which was practised in parts of Iran until quite recently (cf. M. Ḳazwīnī, *Mīr-i Nawrūzī*, in *Yādgār*, i/3, 13-6, who described an instance of the custom witnessed at Bud̲j̲nūrd in 1923). Wandering groups of actors used to perform humorous sketches during this holiday. One of the stock figures was known as Ḥād̲j̲d̲j̲ī Fīrūz, a clown with a blackened face. Jesters, called *dalḳak* (originally *ṭalḳak*) or *mask̲h̲ara*, have been common in Iran since ancient times. They were present in the private *mad̲j̲lis* [*q.v.*], as well as in the public square. Miniatures of the 10th/16th century depict groups of itinerant performers wearing high, pointed hats or animal masks and goatskins. Their comic dances were accompanied by tambourines. Comparable representations can be recognised already in the decoration of objects dating from the Muslim Middle Ages (cf. R. Ettinghausen, *The dance with zoomorphic masks*, in G. Makdisi, ed., *Arabic and Islamic studies in honour of H. A. R. Gibb*, Leiden 1965, 211-24). A bald clown by the name of Kal ʿInāyat was, according to Chardin (*op. cit.*, viii, 124-30), an entertainer at the court of S̲h̲ah ʿAbbās I. Mimic dancing combined with singing, which constituted a kind of bawdy "opera", is mentioned in the same travel account (iv, 61) as the amusement of an aristocratic audience.

According to Bayḍāʾī (168), the popular theatre gradually expanded from the middle of the Ṣafavid period onwards. This began with the appearance of itinerant groups of musicians and dancers, who performed at private houses, usually during the night. Their répertoire consisted of ballets featuring local dances as well as some element of mime, e.g. in a piece called *ḳahr u ās̲h̲tī* ("quarrel and reconciliation"). The curtain raisers (*pīs̲h̲-parda*) introducing such performances gave rise to more elaborate farces, called *muḍḥika*. In addition to *tamās̲h̲ā*, the term *taḳlīd* became a general designation for secular theatre, although it refers more in particular to mime, which was a prominent element in most plays (see for an

example of a farce performed about 1838, A. Chodzko, *Théâtre persan*, Paris 1878, pp. x-xiv).

A special type of popular theatre was known as *baḳḳāl-bāzī* because the play's main character was a rich grocer who claimed to be a *ḥādjdjī* and was made fun of by his insolent servant. The latter was often represented as a negro, and plays in which he appeared in a major role were also called *siyāh-bāzī*. A variety show including various kinds of entertainment is the *rū-ḥawḍī* or *takht-i ḥawḍī*, which derives its name from the stage where it was commonly performed: a platform on a pond in the courtyard of a house. Occasions when the artists could be summoned, such as weddings and circumcisions, were especially important days in the life of a family. Popular theatre also attracted the attention of the court, where performances are on record from the time of the Zand dynasty onwards. Under Nāṣir al-Dīn Shāh, the favourite court-jester Karīm Shīraʾī led a group who performed *baḳḳāl-bāzīs*. Plays were also enacted in tea-houses and, in the present century, in small theatres, notably at Tehran.

In spite of its great popularity, popular drama was always under attack from the side of the religiously minded. In the thirties of this century, the government, suspicious of the satire of the popular performers, tried to censure it by demanding that scripts should be made and submitted to the authorites beforehand. Perhaps its most formidable opponent, however, presented itself in the form of modern entertainment as offered by cinema and television. Yet the oral tradition of drama somehow managed to survive long enough to make its impact on the development of modern drama.

The theatrical arts were an element of such prominence in Western civilisation during the 19th century that they could not fail to impress Iranians who travelled to the West, including Nāṣir al-Dīn Shāh himself. In comparison with other countries in the Middle East, however, the introduction of Western-style drama to Iran proceeded at a very slow pace. The only instance of a theatre fitted up to stage modern plays before the end of the century was an auditorium in the building of the Dār al-Funūn at Tehran. It was used merely for private performances attended by the Shah and his retinue, and even these were discontinued after some time. Plays by Molière were the first to be translated, or rather adapted to a Persian audience: *Guzārish-i mardumgurīz* (*Le Misanthrope*) was published at Istanbul 1286/1869-70 (cf. Browne, *LHP, iv, 459-62); other early translations were Ṭabīb-i idjbārī* (*Le Médecin malgré lui*) and *Gīdj* (*L'Étourdi*).

A separate development was the use of drama as a medium for criticism about social conditions and the spread of modern ideas. The anonymous *Baḳḳāl-bāzī dar ḥuḍūr*, which contains comments on the administrative reforms introduced by Mīrzā Ḥusayn Khān Sipahsālār (1871-3) and has been preserved in a written form, shows how drama of the traditional type could be used in this manner. Much more important was the example set by Mīrzā Fatḥ-ʿAlī Ākhundzāda [*q.v.*] who between 1850 and 1855 wrote six comedies in the Turkish of Ādharbāydjān. In Tiflis he was in close contact with the Russian tradition of drama, which contained an influential strain of critical comedy, its most famous product being Gogol's *The Inspector* (1834). The plays of Ākhundzāda were translated into Persian by Mīrzā Djaʿfar Ḳarādjadāghī, who in his preface stressed their educational intent. The translations appeared first at Tehran (1291/1874) and were subsequently edited as well as translated in Europe by several scholars (cf. Browne, iv, 462; see also H. W. Brands, *Azerbaidschanisches Volksleben und modernistische Tendenz in den Schauspielen Mīrzā Feth-ʿAlī Aḫundzāde's (1812-1878)*, 's-Gravenhage-Wiesbaden 1958). The foreign interest in Ḳarādjadāghī's translations was roused in particular by his use of colloquial Persian. Most Western editions are for that reason accompanied by vocabularies.

For a long time, Malkum Khān [*q.v.*] was regarded as the author of three original Persian plays, the publication of which began in the newspaper *Ittiḥād* (Tabrīz 1326/1908) but was left unfinished (cf. E. G. Browne, *The press and poetry of modern Persia*, Cambridge 1914, 34); a complete edition based on a ms. then owned by Fr. von Rosen appeared at Berlin, Kāviyānī Press, 1340/1921-2. The discovery of a letter by Ākhundzāda preserved in the Akhundov Archive at Baku has made it more than likely that the recipient of this letter was the real author. He was Mīrzā Āḳā Tabrīzī, a Persian secretary at the French embassy in Tehran. The plays must have been written already about 1870 (cf. A. E. Ibrahimov and H. Mémédzadé, *Trudî Instituta Yazîka i Literaturî imeni Nizami*, ix, Baku 1956; Guseyni Abul'Fas, in *Narodov Azii i Afriki* [1965-6], 142-5; see also H. Evans, in *Central Asian Review*, xv [1967], 21-5; G. Scarcia, in *OM*, xlvii/2-3 [1967], 248-66). The plays satirise the political conditions in Ḳādjār Iran, especially the oppression exerted by local governors and their corruption. Tabrīzī gave them lengthy titles, which in an abbreviated form run as follows: (1) *Sargudhasht-i Ashraf-Khān ḥākim-i ʿArabistān dar ayyām-i tawaḳḳuf-i ū dar Ṭihrān*...; (2) *Ṭarīḳa-yi ḥukūmat-i Zamān Khān-i Burūdjirdī*... (3) *Ḥikayat-i Karbalā raftan-i Shāh-ḳulī Mīrzā*...*wa tawaḳḳuf-i čand rūza dar Kirmanshāhān*... (the plays were recently published by Ḥ. Ṣadīḳ, together with two others by the same author, Tehran 2536/1977; they were translated into French by A. Bricteux, *Les comédies de Malkom Khān*, Liège 1933, and into Italian by G. Scarcia, *Tre commedie*, Rome 1967). They are closet dramas written without much concern for the requirements of theatrical performance.

The beginning of theatricals performed in public cannot be dated earlier than the first decade of this century. Tabrīz seems to have preceded other cities. The Russian consul B. Nikitine saw performances at Rasht in 1912. They included at least one original Persian play, on the problem of alcoholism. The female parts were played by men (*Īrānī ki man shinākhta am*, Tehran 1329/1951, 127-8). In the capital, theatrical activities started about the same time. Among the first companies which gave regular performances were *Kūmīdī-yi Īrān* (1915), led by Sayyid ʿAlī Naṣr, and the drama section of *Īrān-i djawān* (1921), an organisation of progressive intellectuals. The *Kūmīdī-yi mūzīkāl* (1919) brought musical shows on the stage which were modelled on shows performed in Caucasian Russia. Non-Muslims were at this stage very prominent in the Iranian theatre. From their midst came especially the female actors, as the religious objections to the appearance of Muslim women on the stage were still very strong.

Although translated plays continued to hold their important place in the répertoire of the Iranian companies, original plays were also produced. The bi-weekly magazine *Tiʾātr* published already in 1908 dialogues which criticised the government. A playwright of the earliest period was Aḥmad Maḥmūdī, also known as Kamāl al-Wizāra (1875-1930). In his *Ḥādjdjī Riyāʾī Khān* he presented a Per-

sian Tartuffe, and in *Ustād Nawrūz-i pambadūz* a type similar to the *baḳḳāl* of the popular farce. Ḥasan Muḳaddam (1898-1925) published, under the name ʿAlī Nawrūz, his *Dja'far-Khān az Firang āmada*. This successful comedy ridicules the type of the westernising Iranian (cf. I. Djamshīdī, *Ḥasan Muḳaddam wa Djaʿfar Khān az Firang āmada*, Tehran 1357/1978 repr. Oakland 1984, with a French translation by the author himself). Its first performance at the Grand Hotel, Tehran, on 23 March 1922, was an important event in the history of the modern theatre in Iran. The drama was used as a literary genre by the poet Muḥammad Riḍā Mīrzāda ʿIshḳī (1894-1924) for works like *Īdiʾāl*, *Kafan-i siyāh* and the "opera" *Rastākhīz*. Ṣādiḳ Hidāyat [*q.v.*] and many others wrote plays on episodes from the History of Iran. Notable as a playwright was also Dhabīḥ Bihrūz (1891-1971).

Under the Pahlawī régime, the theatre was subjected to censorship, but it also received for the first time official recognition as an important section of modern Iranian culture. In 1939 a college for the training of actors, the *Hunaristān-i hunarmandān*, was founded. The leading personality of the theatre in Iran during the Riḍā Shāh period was the actor and playwright Sayyid ʿAlī Naṣr (d. 1961). A similar rôle was later played by ʿAbd al-Ḥusayn Nūshīn (1905-70) who was active as a director and a translator of foreign drama, and wrote the handbook *Hunar-i tiʾātr* (1952).

The rise of the cinema and afterwards of television in Iran broadened the scope of the dramatic arts. Together with the theatre, they benefited from the remarkable flourishing of these arts, which took off in the 1960s and continued until the revolutionary turmoil began about a decade later. The promotion of indigenous theatre became a matter of official concern. A special department (*Idāra-yi tiʾatr*), which became a part of the Ministry of Culture and Arts, was created for this purpose. Dramatic education at an academic level was introduced in Tehran and the production of original Persian plays was encouraged. Shāhīn Sarkīsiyyān, ʿAlī Nāṣiriyyān, ʿAbbās Djawānmard and Bīzhan Mufīd were prominent stage directors and theatrical leaders. They also write a number of new plays based either on modern Persian literature (e.g. the short stories of Ṣādiḳ Hidāyat) or popular theatre, from which the type of the black clown (*siyāh*) was borrowed. Mufīd's *Shahr-i ḳiṣṣa* (1968) is a social satire based on children's stories, and put on stage with the use of animal masks. Active in all fields of drama were Bahrām Bayḍāʾī and Ghulām-Ḥusayn Ṣādighī (1935-85), a distinguished writer of short stories who under the name *Gawhar Murād* wrote many plays and film scripts.

The facilities for dramatic productions were enlarged through the opening of new auditoriums at Tehran and Iṣfahān. Of particular importance was the Festival of Arts (*Djashn-i Hunar*) of Shīrāz (1967-76), organised at the initiative of the National Iranian Television. It brought leading foreign directors to Iran, where they received the opportunity to stage experimental theatre of the most advanced kind. At the same time, special symposia on national drama were held featuring the epic tradition, the passion play and popular traditions. Another offshoot of the Festival was a theatre workshop (*Kārgāh-i namāyish*). The Iranian film attracted a great amount of attention at international festivals during the 1970s.

The Islamic revolution of 1979 changed the course of these developments considerably, but did not bring the dramatic activities in Iran to a standstill. They have also been continued outside the country by emigrants, especially in the United States.

Bibliography: The best survey of indigenous drama is Bahrām Bayḍāʾī, *Namāyish dar Īrān*, Tehran 1344/1965 (a new and revised edition has been announced). See further: Y. N. 5. In Central Asia and Afghānistān.

Islamic Central Asia—Western Turkistan including Kazakstan, Eastern Turkistan (Shinjiang) encompassing the area of the present Uyghur Autonomous Province, Afghānistān and contiguous territory where Islam was or is professed and Central Asian Iranian or Turkic languages are spoken—has known three main types of theatre. Oral folk art probably pervaded the region long before the advent of Islam, although documentation is as yet unavailable to prove it. Muslim religious drama, known especially to Shīʿīs [see taʿziya], received performance as late as the end of the 19th century in certain areas. Modern indigenous drama and theatre using written scripts, fixed stages and enclosed auditoria began activity within the region no earlier than the second decade of the 20th century.

Historical precedents for organised, formal theatrical presentations long existed in the region. A great, 35-tier, semi-circular outdoor Greek theatre was built and ruins survive at Ay Khanum, a fortified capital city located on the left bank of the Oxus River (Āmū Daryā) at the confluence of the Kokča River under the Greco-Bactrian Kingdom in the 3rd-2nd centuries B.C. Additional archaeological finds from the vicinity of Termez (Tirmidh) and Bukhārā—in the form of Hellenic carvings, dishes, frescoes and sculptures dating from the 1st to 8th centuries A.D.—have depicted the head of Dionysus, the youthful god, patron of drama and wine, as well as musicians playing harps, drums and local stringed instruments. A ceramic ossuary dated to the early centuries A.D. unearthed at Afrāsiyāb, near Samarḳand, shows the clear depiction of several actors holding tragic masks. A comic figure originated from

the same sites. More direct evidence for theatrical life in that period is difficult to come upon. No clear evidence has been reported conclusively linking that ancient legacy with the development of indigenous Central Asian theatre art in the Islamic epoch, beginning there no earlier than the 1st/7th century in western Central Asia. It has been surmised that the obligatory attributes of recent folk performers from Kh^w^ārazm known to follow the oldest traditions of *mäskhäräbäz* (clown) art in Central Asia—such as the goatskin mask and two-horned, cone-shaped or simply dishevelled cap of goat's wool—refer to the ancient Dionysian cult, and particularly to the 5th-6th centuries A.D. in Kh^w^ārazm. (L. A. Avdeeva, in *Uzbekskii sovetskiii teatr*, Tashkent, Izdatel'stvo "Nauka" Uzbekskoy SSR, 1966, 22, 18; Annaya F. Korsakova, *Uzbekskii opernyi teatr*, Tashkent, Gosudarstvennoe. Izdatel'stvo Khudozhestvennoy Literaturî, 1961, figure facing p. 24, 33).

Oral folk art. Undoubtedly the oldest continuous forms of Central Asia theatre still existing late in the 20th century belonged to the folk tradition. At their most uncomplicated level came performances by bear trainers, jugglers, stilt walkers, wrestlers and acrobats, horsemen, slight-of-hand artists, balancing artists, animal imitators and dancers. The last two categories often differed from the other entertainers by representing imagined actions to an audience rather than merely executing certain practiced skills. From at least the 9th/15th century onwards in Harāt and Samarkand, the existence of the *mäddaḥ* [see MEDDĀḤ] is recorded. He was a professional story teller who, with gesture and facial expression, added action to words with an extensive repertory of saint's lives, legends and tales told in public. Several storytellers continued actively to render their dramatic oral narratives as late as the reign of the Amīr ʿAbd al-Aḥad of Bukhara (1885-1910) in towns such as Mazār-i Sharīf, Afghānistān (Muhsin H. Qadiraw, *Ozbek khälk tamashä ṣänʿäti*, Tashkent, "Okituwči", 1981, 8).

Puppeteers went even further in the direction of dramatisation. One of the two best-known varieties of puppet theatre seen in Central Asia was *čadirkhäyal*, a marionette show with full-bodied miniature *koghirčaklär* (marionettes) suspended and activated from above on strings. The second sort of puppet, usually a half-torso figure, was manipulated from below by the hand of the *kol koghirčakbaz* (puppeteer). Both kinds of shows presented in confined space the interactions of lively figures whose sounds or words came from behind the scene, uttered by the puppet master, who sometimes talked through a tube or thin disk in order to alter his voice for different puppets. Musicians habitually accompanied both puppet shows. Rather elaborate playlets could be offered by accomplished puppeteers. Well-known to Western Turkistanis were the hand-puppet characters, long-nosed (and therefore un-Central Asian and "ridiculous") Palwan Kačal, also to be found in Iran, and his wife, Pučukkhan-ayim or Biče Khanim-ayim, with their marital squabbles. One marionette play, called *Särkärdälär* ("The mighty ones"), has a certain Karparman acting as master of ceremonies at a royal gathering. He requires the chieftains, who enter the scene one after another in order of increasingly high rank, to announce themselves. The chief figure is the Yasawul, a Cossack officer embodying the Tsarist Russian administration, and there is a drunk who also shows Christians in a repulsive condition (T. Menzel, *Meddāh, Schattentheater und Orta Ojunu*, Prague 1941, 37-41; Avdeeva, 66-8). Then begins a spectacle within the shows, as the powerful men observe monkey trainers, various sensuous dancers in costume, and a military parade. At the end, a devil sometimes abruptly rushes these high-ranking sinners off to Hades in punishment for watching idle, profane theatricals. Puppet theatre came rather late to the Afghānistān of ʿAbd al-Raḥmān Khān (1880-1901) [*q.v.*] from Bukhārā and Samarkand, whence a court storyteller brought it and called it *butley bawz* ("puppet play"), from the Urdu. For this show, the storyteller invented the long-popular females, Onion Lady and Lady Sweet (S. Heuisler, *Two years and two months of involvement with theatre in Afghanistan*, Mimeographed Essay, Kabul, 18 Jan. 1975, 4). This emphasis upon movement and brusque gesture to entertain viewers was carried over to a notable degree into skits and farces by human actors in folk theatricals. Among Central Asians a form of *tämasha* ("show") could be seen that edged much closer than other folk art to modern comedy.

Typical was the short play, *Raʾis* ("The Keeper of morals"), in which a governor's beadle, the main figure, enforces the injunctions of religion and keeps order as well as verifying the correctness of weights and measures in the marketplace. The keeper of morals suddenly appears in a bazaar, creating consternation among shopkeepers and tradesmen, who must submit their scales and measuring rods to his men for inspection. Violators bribe the officials flagrantly. In both Tajik and Uzbek versions of *The keeper of morals*, the traits of a semi-amateur folk performance are well exemplified. Flexible, unstable dialogue typifies the improvisation in the absence of any written script. Audience volunteers and other, less-experienced performers are openly coached during a show by the master of the troupe. The comic vein is almost invariably ribald, and the subject of the skit confined to everyday activity in town or countryside. No specific site or stage was used or needed for the presentation. This brief comedy placed emphasis, like the puppet shows, upon slapstick, pantomime, and stock characters. The skit depended for its effect largely upon minimal, repeated variants of one action. In *The Keeper of morals*, peddler after peddler encounters the same treatment at the hands of inspectors. The action moves forward through reiteration and rough jokes made at the expense of offenders publicly humiliated and by the surprisingly varied sorts of bribes offered to ward off extortion. The second part of the same farce portrays the keeper of morals similarly cross-examining hapless Muslims concerning their religious duties and the obligatory rituals, and meting out harsh discipline for infractions (Nizam Nurdzhanov, *Tadzhikskii narodnyi teatr*, Moscow: Izdatel'stvo Akademii Nauk SSSR, 1956, 145-50, 309-14; Muhsin Qadiraw, *Ozbek khälk aghzäki drämäsi*, Tashkent, Uzbekistan SSR Fänlär Äkädemiyäsi, Näshriyati, 1963, 57-63).

The many playlets extant differed greatly in size of cast. *The Keeper of morals* used as many as 50 performers, but some required only one or two. Many received command performances at the Central Asian courts, and most diverted townspeople or villagers as late as the early 20th century. A sizeable troupe of *kizikčis* (buffoons) at the Kokan (Khokand) court of ʿUmar Khān (1809-22) was led by a star, Bedashim. Succeeding generations of buffoons consider him to be their patron and founding father. (*Uzbekii sovetskii teatr*, i, 1966, 47). Troupes of buffoons were maintained also at the Khīvan and Bukhāran courts, except during the reign of an *amīr* or *khān* whose piety prompted a ban on public theatricals. In Kāshghar,

under Yaʿḳūb Beg (1865-77) [*q.v.*], the *raʾis* and his *muḥtasibs* strictly enforced the *Sharīʿat*. They actively prevented mimes, storytellers and actors from diverting bazaar-goers. Before Yaʿḳūb Beg's day. Chinese administrators had allowed all sorts of amusements there (D. Boulger, *Central Asian questions*, London 1878, 6). Popular folk plays included *Uylänish* ("The wedding"), humorously revealing a bridegeroom's reluctance to start life with an unknown woman, especially when it is discovered at the unveiling that she is not the promised bride. Another favourite skit, *Zärkakil* ("Golden tresses"), portrays forbidden dances and rituals engaged in by a group of men and women. They make their bacchanal so alluring that even the keeper of morals sent to censure them joins in the festivities. In *Mudärris* ("The seminary teacher"), the vices of a Marghīlān schoolman become the subject of the farce. *Mazar* ("The tomb") turns on the interaction between a venal custodian of a sacred shrine and women and men who bring offerings to the saint buried there.

Plays in this genre depended for their appeal not only upon the familiar themes but upon theatrical style and verve of the performers, as well as on special effects utilising such devices as flashes of gunpowder, fire, the antics of animals imitated by human performers, and stylised, rudimentary costuming. Most of these playlets would not have required more than 20 minutes to perform unless the characteristic repetitions were greatly multiplied. Their bawdy nature and irreverence offended the strict religious leaders of the capitals and repelled the urban literati with their crudity. Thus although folk theatre prepared the way for new developments in Central Asian stage activity by whetting an appetite among the public for more plays, it also created obstacles and provoked prohibitions which affected what was to follow.

Muslim religious drama. Strictly speaking, Muslim miracle plays also constituted a part of folk theatre, but their content and tone made a significant difference between the two genres and set religious drama far apart from the folk comedy found in Central Asia. Performances of mystery plays associated with the Shīʿī holy festival during the first ten days of al-Muḥarram have been reported in Central Asia relatively seldom. This is because the region has remained almost entirely Sunnī beginning from around the 4th/11th century. The earliest presentations of Muslim mystery plays anywhere are conventionally dated to the mid-18th century in Iran (P. J. Chelkowski, *Taʿziyeh: indigenous avant-garde theatre of Iran*, in *Taʿziyeh. Ritual and drama in Iran*, ed. idem, New York University Press and Soroush Press, n.p. 1979, 4). None seems to be attested in Central Asia before the late 1200s/1800s. But in at least three zones—in Turkmenistan along the Iranian frontier; in the Farghāna valley; and in the city of Bukhārā and its environs—Shīʿī ritual ceremonies connected with *ʿĀshūrā* received much attention in the 13th-14th/19th-20th centuries. Descendants of over 30,000 Persians had been transferred to the Uzbek-Tajik state of Bukhārā after Shāh Murād (1785-1800) captured and devastated Merv (Marw) in 1790. They augmented an existing core of mainly enslaved Shīʿī population already there. As late as January 1910, bloody riots erupted in the city of Bukhārā when Shīʿī processions, usually confined to the Persian quarter, moved by permission of a Shīʿī *Ḳushbegi* (Prime minister) through Sunnī sections of the city during *ʿĀshūrā*. They very likely performed mystery plays on that occasion as well. Not far from Bukhārā city was a well-known Persian garden called *ʿĀshūrākhāni*, whose name meant that it was a place connected with rites linked to the martyrdom of Ḥusayn, grandson of the Prophet Muhammad (Sadriddin Aini, *Vospominaniya*, Moscow-Leningrad: Izdatel'stvo Akademii Nauk SSSR, 1960, 1021; G. Tsvilling, *Bukharskaya smuta*, in *Srednyaya Aziya*, no. 2 [Feb. 1910], 79-95; O. A. Sukhareva, *Islam v Uzbekistane*, Tashkent: Izdatel'stvo Akademii Nauk Uzbekskoy SSR, 1960, 27-8). In the Farghāna valley among Sunnī Muslims, performances consisted mostly of readings, recitations, and ritual feasting, but *atins* (women mourners), especially, were famed for their eloquence during *ʿĀshūrā* in dramatically rendering poetry devoted to Ḥasan and Ḥusayn. Certainly, the people of southwestern Tekke Turkmen villages such as Muḥammadābād or Derguez in the holy days followed extended daily presentations of the mystery plays. Known as *shabih* ("imitation"), among them, and as *taʿziya* in Iran and India, the episodes attracted fascinated attention of all villagers. These performances, with lines chanted in Turkmen—one source who observed the plays between 1878-81 says that they were in Čaghatay—were offered by professional players who travelled from town to town during al-Muḥarram (E. O'Donovan, *The Merv Oasis*, London 1882, ii, 40-50).

The main segments of this cycle portray the suffering of Ḥasan, Ḥusayn, adolescent Ḳāsim the bridegroom, and other members of the Muslim Holy Family and their offspring and retinue. The martyrdom of Ḥusayn, in particular, the bereavement of their women, and the death of some children in the unequal battle on the field at Karbalāʾ in 60/680, comprise the central theme of the drama. Besides the sacred religious power of these episodes, tremendously effective theatrical use is made in them of physical suffering, acute thirst and hunger, personal sacrifice and loss, heroism, and inevitable human destruction. European witnesses have declared that these village presentations offered the most realistic acting the outsiders had ever seen (O'Donovan, ii, 42). Nevertheless, the producers and performers firmly rejected the notion that the *shabih* qualified as drama and theatre at all. If universal participation of those off-stage in such ritualistic performances deprives these presentations of a separated audience to watch without acting, and if that lack thus removes the requirement obligatory for theatre, the Central Asians may be justified in distinguishing such celebrations from what they otherwise call "theatre". No serious person denies that the Islamic mystery or miracle play, as it is designated in Western literature, exerts dramatic force and theatrical effect upon both Muslim and non-Muslim. Notwithstanding this fact, no vestige of this precedent, except possibly in historical tragedy, seems to have carried over into the new drama and stage that overlapped chronologically with it in Central Asia.

Modern drama and theatre. Nearly all forms of theatre known actively to the region began to coexist in the civilisation of Central Asia once the modern genre appeared. That innovation occurred separately in the three main sectors of the region only after the first decade of the 20th century. Two factors delayed adoption of the new theatre by Central Asians long after visiting troupes began touring in Tashkent and other cities of the Tsarist Russian sector. Racy folk skits had given "theatre" in Central Asia a bad name in polite society. In addition, the Armenian or Russian troupes that acted there after the Russian conquest in 1865 were not merely Christian but included women who showed their faces openly. Only after

Azerbaijani and Tatar troupes brought their all-male, Muslim casts and plays to Western Turkistan's cities were educated Central Asians able to accept European-style drama and theatre as their own institution. Central Asian women initially performed on stage in Tashkent and Samarḳand, when several actresses were recruited as trainees for the Model Uzbek Troupe established in December 1920. Women could not act publicly in Kābul theatres until 1959, much later than they went on stage in Kāshghar and Urumči in Eastern Turkistan, where, following Societ Central Asian models, they freely played roles beginning around the mid-1930s.

Modern indigenous drama and theatre of the region drew its initial audience in Samarḳand, Russian Turkistan, in January 1914. *Padarkush yakhud oḳumagan balaning hali* ("The patricide, or the plight of an uneducated boy"), written by the Samarḳand author Maḥmūd Khōdja Behbudiy (1874-1919) in 1911, provided the premier performance of a play by a local dramatist. Thereafter, the short tragedy quickly went on tour throughout the Tsarist Russian sector among Uzbeks, Tajiks, Uyghurs and others. Behbudiy's theme—the crying need for education—became a standard subject for Central Asian playwrights. Like some folk plays, these Djadīd (Reformist) dramas invariably focused upon some social problem or abuse, though the Djadīdīs would not have acknowledged any link with folk theatre. *The patricide* influenced the entire theatrical development for years to come by inspiring many young poets to begin writing for the theatre. They as a rule created didactic works meant to edify or reform the public and its behaviour, and usually avoided politics or outright comedy. Kölbay Toghïs ulï (b. and d. unknown) wrote the first Kazak-language drama, *Nadandïḳ kürbandarï* ("Victims of ignorance"), which was printed at Ufa in 1914 and performed at Orenburg in 1916, both towns being located in the Tatar-Bashkir sphere at or beyond the northern fringe of Kazak territory. The play explored serious difficulties arising among the nomads from the practice of polygamy, again blaming abuses upon a lack of enlightenment in the society. Another theme, the curse of pederasty, also persisted in early Reformist drama and literature, reflecting public concern over the prevalence of that practice in the sexually segregated urban life of Central Asia. Abdurrauf Shahidi (Shashudilin) (b. and d. unknown), a Tatar schoolteacher living in Ḳoḳan, wrote the play first published (1912) in the Turki (later, "Uzbek") language of southern Central Asia. The plot of *Măḥrămlăr* ("Forbidden to marry") dramatised the destructive effect upon young Turkistan boys of the organised homosexual circles in which many were kept by older men of means.

An acknowledged follower of what was termed *Behbudiy aḳimi* (the Behbudiy tendency), Abdullah Ḳadiriy (1894-1939), chose the second most common serious plot, after backwardness, for his drama, *Bäkhtsiz kuyaw* ("The unfortunate bridegroom"), published in 1915 and staged the same year. In it, Ḳadiriy explored the practice and often unhappy consequences of arranged or forced marriage in Central Asian life. That theme emerged, as well, in one of the earliest original plays presented in Kābul, Afghānistān, in the 1920s, in *Izdewādje idjbārī* ("A girl's forced marriage"). Similar social themes animated the modern Uyghur theatre in Kāshghar during its first period, starting after 1933. Drug addiction, polygamy, bribery, stupid pretension and forced or arranged marriage led the list of subjects in the Chinese sector of the region. Exposure to modern theatre in capitals of the Near and Middle East strengthened the conviction of reform-minded Central Asians that the theatre offered a compelling medium with which to educate and indoctrinate the woefully illiterate population (96.8% of the total, on average, in 1920) of Central Asians (E. Allworth, *Central Asian publishing and the rise of nationalism*, New York 1965, 22). In 1913, for example, the disgruntled, socially alienated Ḳoḳan poet, Hämzä Häkimzadä Niyaziy (1889-1929), visited Egypt, Syria, Turkey and Russian Azerbayjan, each of which had enjoyed lively indigenous modern stage activity beginning in the 1850s to the 1870s (Mamadzh Rakhmanov, *Khamza i uzbekskiĭ teatr*, Tashkent: Gosudarstvennoye Izdatel'stvo Khudozhestkvennoy Literaturï UzSSr, 1960, 58, 70, 81). He returned to write several plays, similarly focused upon social abuses, during 1915-16. His works, unlike the better-known Djadīd drama, aimed not so much toward constructive persuasion and change as at exacerbating social tension and increasing civil strife. For this reason, Niyaziy remained little staged and outside the mainstream of new Central Asian dramaturgy in the initial period. But the same antagonistic quality was to earn this pro-Russian writer an ideological approval from Communist leaders in the 1920s that persisted long after his death. Niyaziy's first play, the four-act *Zähärli ḥäyat yakhud ʿishḳ ḳurbanläri* ("A poisoned life, or, victims of love"), written 1915, published by the author in 1916 at Tashkent, dramatises the anguishing forced marriage already portrayed in Central Asian poetry, fiction and drama. His version blames religion for permitting the practice. The playwright staged, directed, publicised and organised a company to act in this tragedy in Ḳoḳan's military assembly building at the end of 1915. Religious controversy closed the show and he disbanded his troupe after two performances (Mämäjan Rähmanaw, *Ozbek teätri tärikhi*, Tashkent, Uzbekistan SSR "Fän" Näshriyati, 1968, 313-16).

Plays that avoided treating contemporary life, usually historical dramas, in the beginning mainly served patriotic purposes, and often ended tragically. They started appearing about 1918, initially in the Russian-controlled sector of the region, notably in works written by another protégé of Behbudiy, the prolific Bukhārā author Abdurauf Abdurahim-oghli Fiṭrat (1886-1937) [*q.v.*]. He employed actual historic figures from early to late mediaeval times for many stage portraits. Fiṭrat composed *Begijan* in 1917, *Abu Muslim* in 1918, *Timurning saghanasi* ("Timur's mausoleum") in 1919, *Oghuzkhan* in 1919, *Abul Fayz Khan* in 1924, *ʿIṣyan-i Vose* ("Vose's uprising") in 1927, and others, either in Turki or Farsi. Like many educated authors or poets of that period, Fiṭrat was bilingual in Turkic and Iranian languages. Among his historical dramas, only the final two, the first in Turki, the second in Farsi, came out in print, though troupes staged all of them in various towns of Central Asia (V. Ya., art. *Fitrat, Abdul Rauf*, in *BSE*[1], lvii, 656; M. Rakh., art. *Fitrat*, in *Teatral'naya Entsiklopediya*, 1967, col. 475). Historical drama rapidly spread to other parts of Central Asia. Among the first modern plays staged, starting in the 1920s in Afghānistān, was *Fatḥ-i Andluz* ("The conquest of Andalus"), translated from Arabic and dealing with the Moorish invasion of southern Spain in 92/711, the very year in which Arab forces firmly planted Islam in Bukhārā. Another treatment, seen in the Russian sector of Central Asia, was *Andalis songgiläri* ("The last days of Andalus"). *The conquest of Andalus*, along with *Shahawn-i Afghān* ("The Afghān kings") were among the very first modern

dramas staged, like most Afghān plays, in the Darī language. King Amān Allāh (1919-29) [*q.v.* in Suppl.] took another step towards westernising Afghānistān in 1926 when he caused a theatre building to be constructed in the Paghman suburb of Kābul (Heuisler, *loc. cit.*). Historical themes likewise attracted Afghān dramatists in later decades, despite the risk entailed in writing about kings unflatteringly in a monarchy. Abdur Ghafur Breshna (1907-74) wrote his *Haji Mirwais Khan* about an 8th-century clan leader and khān who leads intrigues and battles for possession of the fortress of Ḳandahār (Breshna, *Haji Mirwais Khan. A historical play in 3 scenes and 17 acts*, in *Afghanistan: Historical and Cultural Quarterly*, xiii/2 [Summer 1349/1970], 59-81).

In the Russian sector, the earliest historical plays served supra-ethnic patriotic, but not nationalistic, purposes. They represented Islam at the height of expansion against Christianity or made allegories for the Central Asian situation under foreign rule. After the *coup d'état* in November 1917, and the increasing Russian Communist domination of cultural development in the sector, historical drama became explicitly civil- (i.e. class-) war-minded and anti-patriotic. Such plays were meant to depict rulers and most other past leaders as "class enemies", a procedure that persisted into following decades. An exception was made in works devoted to a few approved potentates who were usually also poets or scholars. Thus Uzbek drama furnishes an example; the Tīmūrids Ulugh-Beg (1394-1449), Mīr ʿAlī Shīr Nawāʾī (1441-1501), and Ẓahīr al-Dīn Muḥammad Bābur Pādishāh (1493-1530), or ʿUmar Khān's talented wife Nādira Khānim (1792-1842) has each furnished the subject for at least one full-length stage work in Uzbekistan alone. Selected historical figures served similar ends elsewhere in Central Asia.

Most active among the first prominent local Uyghur playwrights of Eastern Turkistan became the poet Abdurähim Tiläsh Ötkür (1922-), from Komul district. He wrote his initial play, "A million flowers from one drop of blood" (*Tamča ḳandin miliyon čičeklär*) (1943) in a patriotic vein. With the poet Lutpulla Mutällip (1922-45)—author of several other, ideological plays—Ötkür wrote "The Steadfast peony" (*Čing modangül*) (1943), soon staged in Urumči. And, when Ötkür served as Editor-in-Chief of *Shinjiang gazeti*, the principal East Turkistan newspaper, he published his drama, *Niyazḳiz* (1948) (Yusup Khojayef, *Čaḳmaḳ käbi hayat*, in *Bizning wätän*, no. 2 (Jan. 1983), 3; personal interview, Istanbul 1956, with Mr Polat Ḳadir, former Managing Editor, *Shinjiang gazeti*).

At Urumči and Turpan in Chinese Turkistan in 1982, Uyghur troupes staged a new historical drama, *Ḳanliḳ yillar* ("Bloody years") that had been published in the revived, modified Arabic script in 1981. The Uyghur author Tursun Yunus (b. and d. unknown), issued it in the unusual Uyghur language journal, *Shinjian sänʾiti* ("Art of Shinjiang") from Urumči. Sidiḳ Zälili, an 18th-century Uyghur poet and hero of this six-act play, affirms the identity of his country within the world of Islam when he prays for an end to religious conflict, rhetorically asking in his final speech: "When will the sectarian slaughter of the world of Islam (*Islamiyät dunyasi*) come to an end?" Commenting to Chinese critics upon his reason for creating this long historical drama, Yunus once remarked that he meant it to oppose the old Muslim sect of Īshāns which had "raised its head again in recent years in some parts of southern Shinjiang". (Tursun Yunus, *Ḳanliḳ yillar*, in *Shinjiang, sänʾiti*, no. 1 [July 1981], 24-93; Zhorhilimizning mukhbiri, *Tarikhiy dirama "ḳanliḳ yillar" sohbät yighinining khatirisi*, in *Shinjiang säʾniti*, no. 4 [1982], 123).

Alongside historical plays there came staged versions of legendary tales, heroic epics and popular romances. Mukhtar Auez ulï (1897-1961) not only gave Kazak audiences such a rendition of legendary motifs based upon oral epic and entitled his four-act work *Englik Kebek* (1922), but directed the first performance in Semey (Semipalatinsk) himself that same year (*Ḳazaḳ teatrïnïng tarikhï*, Alma Ata: Ḳazaḳ SSR-nïng "Ghīlīm" Baspasï; 1975, 353). Numerous selections of instrumental and vocal music often entered into these productions. The musician Sharahim Shaumar adapted well-loved motifs from the classical Central Asian cycle Shāshmäḳam to the text of the Turki-language scenarios written by Shämsiddin Shäräfiddinaw Khurshid (1892-1960) for *Färhäd wä Shirin* and *Läyla wä Mäjnun* (1922) (*Khurshid. Tänlängän. äsärlär*, Taskent: Uzbekistan SSR "Fän" Näshriyati, 1967, 10-11). Music added great feeling and appeal to the stage presentation of these tragic, mystical romances and made them increasingly popular throughout the region. Complete opera started relatively late. Conventionally, it is said to have begun in the Russian sector of Central Asia with *Boran* (1937, staged 1939), by Kamil Nuʿmanaw Yäshin (1909-). The work speaks about the tragic love and death of young Djorä and his beloved Nargul during the Central Asian uprising against Russian colonists in 1916. Music, based upon genuine Uzbek melodies, was arranged by the Uzbek composer M. Ashrafi and the Slavic musicologist, S. N. Vasilenko. In the Chinese sector, indigenous opera began at Kāshghar with *Rabiʿä Saʿdin* (1948), in five acts, by the Uyghur author, Ahmad Ziyaʾi (b. unknown). It, too used a traditional eastern Romeo and Juliet theme to the accompaniment of indigenous music. According to an eye-witness, audiences jammed the theatre's opera performances (A. Korsakova, *Uzbekskii opernyi teatr...*, 142-7; Ziya'i Ahmad, *Rabiʿä Saʿdin*, in *Tozomas čičeklar*, Kāshghar: Shinjiang Gazitä Idarasidä Basildi, 13 February 1948, 73-169; Ghulamettin Pahta, personal memoir, 30 January 1983).

More pleasant to audience taste in the region than opera were musical comedy and a form of serious theatre termed "musical drama" which combines spoken and sung parts for the personages. This type of theatre became institutionalised first in the Soviet Russian sector, then appeared in Afghānistān as well as Shinjiang. Ghulam Zafariy (1889-1944) wrote one of the earliest regional musical dramas, the four-act *Hälima*, 1918-19. A Tashkent cast with a woman in the lead role staged it in 1919-20. Uyghur theatre in Ḳazakstan saw its first formal Uyghur musical drama, *Änärkhan*, by Dj. Asim and A. Sadïr, and based again upon popular folk songs, staged in 1934 at Djarkent, now Panfilov, located just eleven miles from the Shinjiang frontier near Ḳuldja [*q.v.*]. Like the reformist plays of two decades earlier in Samarkand and Ḳoḳan, *Änärkhan* elaborates the unhappy consequences of a forced marriage between a young bride and an unloved older and wealthy man. In Kazakstan, among the small Uyghur population of 109,000 recorded for the USSR in 1926, a succession of Uzbek theatrical directors, producers and actors from Uzbekistan helped with the first staging of *Änärkhan*. Männan Uyghur (1897-1955) and ʿAli Ardobus Ibrahim (1900-59) infused those initial Soviet Uyghur endeavours with the brief Uzbek experience in drama. Ibrahim had also worked earlier in Stalinabad

(Dushanbe) with the fledgling modern Tajik theatre. This government-sponsored cooperation between nationalities imitated the frequent collaboration and borrowing in stage work initiated earlier by Central Asians themselves. For directing his first staging of *The patricide*, Behbudiy had brought in an Azerbayjanian, ʿAli Askar Askar-oghli (b. and d. unknown). The first decade and a half of modern Uyghur drama and theatre, including its répertoire, starting *ca.* 1933 in Shinjiang, also came to life under direct influence of the Soviet Central Asian theatre. In the folk tradition, when 19th-century puppetry came to Afghānistān from the Russian sector, it became more than simple borrowing. A puppeteers' troupe immediately formed around it and acquired the name *Madkharawi-yi Sayin* ("Clowns of Sayin", i.e. sugar) from the leading puppeteer, Sayin Ḳanad (Heuisler, *op. cit.*, 4).

Organised troupes, amateur or professional, coalesced wherever traditional or modern theatre was performed. The Ḳoḳan Khanate's next-to-the-last indigenous ruler, Khudāyār Khān (1854-8, 1862-3, 1866-75) [see KHOḲAND], maintained a well-known folk troupe at court. Itinerant troupes of performers often presented Muslim religious drama in the villages. Neither folk nor religious drama troupes could effectively adapt themselves to the modern stage when it appeared. The first Reformist dramas necessitated creation of entirely new theatre groups to perform them. At Samarḳand in 1913, Behbudiy acknowledged his difficulty in forming the initial indigenous troupe of amateurs because of lack of interest and experience. His group soon turned semi-professional through rehearsals and exposure during active road tours outside Samarḳand, playing also in Bukhārā, Ḳoḳan, Andidjan and other towns until it disbanded in 1916 (Mämäjan Rähmanaw, 281-2). The future playwright, Abdullah Awlaniy (1878-1934) established one of the earliest of these troupes, the semi-professional "Turkistan" group, basing itself on Tashkent, in 1914. Like the first Samarḳand group, "Turkistan" began assembling a répertoire around Behbudiy's *The patricide*, presenting various additional Central Asian plays and some translations from Turkish, Azerbayjani, and the like. Numbers of other private theatre groups came into being, mirroring the custom in folk theatricals. Traditionally, ensembles of clowns, buffoons, puppeteers, conjurors, stilt walkers, equilibrists, horn players, bellringers and related performers had been combined in one *käsäbä-yi sazändä* or *mihtärliḳ* (guild of musicians) rather than separated into guilds for each special art. As late as the early 20th century, this guild still possessed its own *risalä* (statute or treatise), giving a legendary history of the art's origins, naming saintly protectors, and setting forth religious duties and prayers linked to each phase of the vocational activity. In 1926, political authorities in the Soviet sector incorporated these folk performers into a "Union of Art Workers" and continued their performances under government auspices (A. Samoilovič, *Turkestanskii ustav-risolya tsekha artistov*, in *Materialy po etnografii*, Leningrad: Izdanie Gosudarstvennogo Russkogo Muzeya 1927, 54-6),. Thus sponsorship by provincial governors, added to some patronage of the *khāns* and *āmirs*, along with guild structure and tradition, gave performers in folk theatre systematic recognition and status comparable to the position enjoyed by many artisans of the region in different vocations.

In the initial modern period, amateur troupes attempting new productions regularly drew to them in various centres as actors persons who were already accomplished teachers, poets or playwrights. A Tatar author, Abdullah Badriy (b. and d. unknown), later a playwright, originally acted to acclaim the women's roles offered by Behbudiy's Samarḳand troupe. As "Bay", Abdullah Awlaniy had the lead in the first Tashkent presentation of *The patricide* on 27 February 1914. Hämzä Häkim Zadä Niyaziy acted in his drama *A poisoned life* in Ḳoḳan on 22 October 1915. Männan Uyghur and Awlaniy performed in the "Turkistan" troupe when it put on Abdullah Ḳadiriy's *The unfortunate bridegroom* in Tashkent, November 4, 1915. Ubaydullah Khodja's troupe toured all over the Farghāna valley. Following the March and November 1917 changes in Russian governments, some private theatricals had continued in Central Asia. Except for folk art shows, most of their activity was soon curtailed by political authorities. All theatre houses and properties became government-owned after 2 October 1918. By 1922, in the Russian sector among the Central Asians, only state theatre groups received approval or support, and political censorship was again firmly established. Uzbekistan's comprehensive law code in this field became a model for all Soviet Central Asia. It controlled répertoires as well as productions. The decree, enacted by the Turkistan Autonomous SSR on 16 April 1923 and codified by the successor Uzbekistan SSR on 8 February 1927, provided for Union republic censors in publishing houses and press and at all levels of local political hierarchy down to the county (*okrug*) (*Uzbekistan Idjtimaʿi Shoralar Djoralar Djomhoriyäti Ishči wä Dihkan Ḥokomätining Ḳanon wä Boyroḳlarining Yighindisi*, no. 9 [7nči Mart 1927inči yil], 199-202).

Nevertheless, the legacy of theatres, troupes and faithful audiences had already created the environment needed for enlarging modern drama performances on a regular basis. A network of new troupes and theatres quickly grew up in the Russian sector, though there were setbacks. The "Karl Marx Drama Troupe" organised there in October 1918 was led in 1921 to Bukhārā, which was at the time still semi-independent from Soviet Russia, by Männan Uyghur, to propagandise for the new régime's ideology. During a performance of Fiṭrat's *Abu Muslim* in 1922, opponents burned down the theatre and dispersed the troupe, leaving Bukhārā again without a professional theatre group for years. At Alma Ata in Kazakstan, in order to lay a stable foundation for guided theatrical growth in its area, the Kazakstan Autonomous S.S.R. Ministry of Education ordered the establishment of a Kazak Theatre Studio to accommodate 40 students from January 1933 onwards. This followed by almost a decade the founding of a studio for Uzbek theatre trainees in Moskow. The 24 young people sent to Moscow from Uzbekistan had included several who contributed greatly, as authors, directors, actors or translators, to the development of Central Asian theatre. They included the mature ʿAbdulhämid Suläyman Čolpan (1896-1938), a promising 14-year old actress Sarä Ishanturayewa (1911-), Männan Uyghur, and Äbrar Hidayätaw (1900-57). The latter subsequently achieved fame in the role of Hamlet during 21 consecutive Uzbek performances after the première in 1935. Cultural leaders dispatched another group of 17 from Uzbekistan to Baku in Azerbayjan for a theatrical apprenticeship (*Ḳazaḳ teatrïning tarikhï*, Alma Ata: Ḳazaḳ SSRnïng "Ghïlïm Baspasï, 1975, 201-2; *Uzbekskii sovetskii teatr*, i, Tashkent: Izdatel'stvo "Nauka" Uzbekskoy SSR, 1966, 246-8). In 1937, there were 24 theatres, including both Russian and Uyghur ones, functioning in Kazakstan.

By 1934, the quantity of regularly performing local-language theatres in all Uzbekistan had reached its peak of 32, after which the numbers gradually subsided to a fairly constant 22 to 28. This did not include provincial Uzbek houses operated in the Kirgiz SSR at Osh and Tajik SSR at Now (Nau). The quantity of Tajikistan's theatres working in various languages rose from four in 1934 to 24 by 1941. (Mämäjan Rähmanaw, 413-5; N. L'vov, *Kirgizkii teatr. Očerk istorii*, Moscow: Gosudarstvennoe Izdatel'stvo "Iskusstvo", 1953, 127; Yakov Mosheev, *My recollections of Now Raion: the status of a peripheral theater in Soviet Tajikistan*, in *Central Asian Survey*, nos. 2-3 [1982-3], 108-22; Nizam Khabiblullayewič Nurdjänaw, *Istoriya tadzhikskogo sovetskogo teatra (1917-1941 gg.)*, Dushanbe: Izdatel'stvo "Donish", 1967, 401). Thus the quantity of theatres in all Central Asia multiplied strikingly from 1913 onwards, reaching an estimated 150 official houses, government sponsored and supported, in the three sectors, during the 1950s and thereafter. The capital cities saw a division of labour among serious drama theatres, musical drama houses, opera, and comedy or children's playhouses, as well as between the major languages and traditions. In 1983, Tashkent possessed nine of Uzbekistan's 28 active theatres. Leading administrators in the three principal theatrical organisations of Uzbekistan in 1983 were the drama critics and historians, Professor Häfiz Sh. Äbdusämätaw (1925-), former Editor of *Shärḳ yulduzi*, the principal Uzbek journal publishing drama, and Director of the Hämza Institute for the Arts of the Ministry of Culture, Uzbekistan SSR; Professor Mämädjan R. Rähmanaw (1914-), Rector of the Ostrovsky Tashkent Theatre Arts Institute, the main training centre for theatre arts; Sara Ishanturayeva, Bähriddin Näsriddinaw and other officers of the sole membership organisation for stage, the Uzbekistan Theatre Society (*Djämiyäat*). The vigour of the theatrical institution implied a constant need for an attractive repertory, and, especially, for many original indigenous plays. The numbers of original Central Asian stage works written had risen from about 20 altogether by the end of 1916 to many hundreds by the 1980s. New Uzbek scripts of varying quality were being received at the rate of some 25 annually in the early 1980s. Yet critics and historians spoke soberly at the same time about a decline in drama, attributed generally to the emergence of radio, television and new popular music. Most keenly missed were good serious plays about contemporary subjects. Even before the strong growth of mass media in broadcasting, Central Asian theatre had endured slumps in attendance to a marked degree. Many auditoria remained nearly empty night after night in the 1920s and 1930s owing to public indifference to the offerings being brought to the stage, especially to those heavily ideological in content.

From the beginning, modern Central Asian drama bore three distinct traits: it was socially or politically didactic; purely entertaining and comic; or the plays were historical and patriotic, sometimes legendary. Newer drama combined some of these characteristics, remaining resolutely instructive in the Russian and Chinese sectors, but more balanced in spirit and aims in Afghānistān until the late 1970s. The theatre of all three sectors began to explore contemporary life seriously, in particular, after an opening period that was notably tendentious. Since the coming of Communist régimes to the three sectors, the nature of drama has shifted remarkably in the direction of propagandising political-social directives from the central authorities. In each case, the acknowledged ideological base is a kind of official Marxism. As a result, plays written and staged in the period following that political change in each sector have become at first outspokenly rhetorical and sloganeering. Themes announced by political authorities for each period can be found reflected in the dramaturgy and repertories. In addition, plays have persistently enunciated such principles as atheism, espoused by Communist régimes. Many Central Asian stage works originating in the Russian sector, far more than in the others, have openly and specifically opposed the religion of Islam. This paralleled the intensification of political and social tensions in the USSR in the 1930s, when Central Asian plays, too, mirrored the times. Zinnat Fathullin (1903-) wrote a drama typical of the period in 1932 entitled *Niḳab yirtildi* ("The mask torn away"), one which is engrossed with a search for "enemies" ostensibly hidden inside Central Asian society. A related obsession with "external enemies" and "traitors" coloured political plays such as *Ḳanli särab* ("Bloody mirage") (1961-4) in two acts and ten scenes, by Sarwar Äzimaw (1923-), a political activist and diplomat.

In the 1960s, dramas with a more human content began to appear increasingly. It was indicative of this evolution that Bähram Rähmanaw (1915-61) turned to themes such as *Yuräk sirläri* ("Secrets of the heart") (1953), a play that ignored political topics and simply concentrated upon the private lives of its people. Rähmanaw, a Communist Party member, headed the Administration for Art Affairs in Uzbekistan from 1953-5; thereafter, he became Director of the Scientific Research Institute for Studies of the Arts, and finally, in 1958, took the post of First Secretary of the powerful government-controlled Union of Writers of Uzbekistan. Another influential intellectual, Izzat Sultan (1910-), in his play *Iman* addressed the ethical dilemma put before a family that finds a dishonest scholar in its midst. The senior Uzbek poet and playwright, Rähmätullä Atäḳoziyew Uyghun (1905-), soon made audiences face the crucial test of social and political ethics in Soviet Central Asia. He looked, in his play *Dostlär* ("Friends") (1961), at the havoc raised among farmers by the Stalinist terror and false denunciations that had resulted in unlawful treatment to the extremes of execution and exile. For Central Asian theatre this was a pointed theme, for many of the important earlier playwrights and other theatre people, including the Kazaks Mir Djaḳib Duwlat-ulï (1885-1937) and Säken Ṣadvaḳas Seyfullah-ulï (1894-1937) and the Uzbeks Čolpan, Fiṭrat, Ḳadiriy, Ziya Said (1901-38) and Zafariy, had lost their lives in the political repression.

The Kirgiz dramatist and novelist, Čingiz Äytmätaw (1928-) and the Kazak author, Kaltay Muḥammadjanaw (1928-), joined in examining that very controversial ethical subject. They translated their Kazak language drama, *Köktöbedegï kezdesu* ("Mountain top encounter") (1972) based upon a story by Äytmätaw, into Russian as *Voskhozhdenie na Fudziyamu* ("The ascent of Mount Fuji") and gave it its première in Moscow in 1973. They recreated the tension in society over collective indifference and guilt toward innocent victims of political repression and social discrimination. But the writers in the end concern themselves more forcefully with basic problems of individual honesty and responsibility for personal actions and outlook.

After those ethical dramas during the 1970s-1980s in the Soviet sector, historical tragedy and domestic comedy seemed to predominate, leaving assertively political and ideological plays less in the forefront that

they had been previously. Yās̲h̲in returned to the story of climactic events in early 20th-century Central Asian history with a three-act musical drama he called *Inḳilab tangi (Buk̲h̲ara)* ("Dawn of the Revolution: Buk̲h̲ārā"), published in 1973. Its *dramatis personae* included the Bolshevik dictator Vladimir I. Lenin, the Young Buk̲h̲aran politician Fazil K̲h̲od̲j̲äyew, the last Amīr of Buk̲h̲ārā Saᶜīd ᶜĀlimk̲h̲ān and other historical figures, portrayed on stage with a cinematic flashback technique. Yās̲h̲in represents the prominent old-time and doctrinaire Central Asian dramatists educated almost entirely in the Soviet period. Like Rähmanaw, he held key positions in the administration of the theatrical arts and served as Secretary of the Government's Union of Writers in Uzbekistan. The contribution of these playwrights hardly lay in the comic genre.

Comedy originally defined Central Asian theatre, for it was the essence of folk skits and acts long before and well after religious or modern drama appeared on the scene. In the early decades of the 20th century, both the D̲j̲adīds and the very first Communist Soviet playwrights, as well as Afg̲h̲ān writers, initially for the most part rejected light comedy. They believed their message to be paramount and serious. In the first decade, the official bulletin, *Is̲h̲tirakiyun*, published by the Central Committee of the Turkistan Autonomous S.S.R. at Tas̲h̲kent, demanded that theatre cease to be "a place of amusement and love intrigues", and it specifically criticised attempts to present "diverting comedy" (*Is̲h̲tirakiyun*, 11 December 1919, 12 October 1920). Consequently, from the 1920s to the 1950s in Soviet Central Asian theatre, most stage comedy spoke with a heavy satirical voice. Hämid G̲h̲ulam (1919-) wrote *Tas̲h̲baltä ᶜas̲h̲iḳ* ("Tas̲h̲baltä in love") (1962), a musical sharply attacking religion and the practice of Islam in Central Asia. Folk humour incorporated in modern plays from the 1920s onward repeatedly conformed to the vision of comedy preferred by cultural managers. The Uyg̲h̲ur dramatist Yusufbek Muhlisi (1920-), who emigrated from the Chinese sector to Soviet Central Asia at about the same time as other writers, sc. around 1964, provided Uyg̲h̲ur performers in Kazakstan and Uzbekistan with a later specimen of this genre. Muhlisi's *Näsriddin Äpändim* (1966), a musical staged in 1967 at Alma Ata, adapted several anecdotes from the widely popular Nasriddin tradition to fashion, in the Uyg̲h̲ur idiom, what critics called an anti-Islamic satirical comedy. (Ak̲h̲med̲z̲h̲an Kadyrov, *Godī stanovleniya (Iz istorii uygurskogo teatra muzīkal'noy komedii)* Alma Ata: Izdatel'stvo "Zhalyn", 1978, 62-3).

Subtler, often lighter, humour characterised more of the works written later in the 1960s by younger dramatists. The new generation of playwrights interests itself directly in personal feelings, contemporary values and ways of life. Most notable in Uzbekistan in the 1970s-80s became Olmäs Umärbekaw (1934-) and Äbduḳähhar Ibrähimaw (1939-), both natives of Tas̲h̲kent. Ibrähimaw's initial play, *Birinči bosä* ("First kiss") (1969), which the author calls "a lyric drama", ran for 500 performances between 1971-5 on the "Young Guard Theatre" stage in Tas̲h̲kent. The comedy focuses exclusively upon the personal motives, lives and loves of several teenagers, shown as growing into young adulthood by the end of the second and final act. Ibrähimaw's unideological but bitter comedy, the two-act *Ärrä* ("The saw"), 1970, staged in the Farg̲h̲ana Oblast Theatre, is about the Mänsuraw family. It dramatises the character and ideals of Murad, the head of the family. He is an influential medical administrator and professor who is the cutting "saw" of the play Mänsuraw is convinced that everyone acts only out of selfishness or, out of what is closely related, a sense of obligation rooted in the principle of *quid pro quo*. He disallows the elements of affection, generosity, spontaneity and similar affirmative forces in human relationships. Ibrähimaw's two-act play *Meni äytdi demäng* ("Not a word about me") satirises a hearty but impervious country town borough politician and educator, Häshim-äkä. His callousness, like that of Professor Mänsuraw in *The saw*, permits any positive human urge to wither and die. This is symbolised in *Not a word...* by the corruption and demoralisation of the borough's best, most generous part-time gardener, a roofer, Ali, whose small courtyard plot has decorated, pleased and fed the whole neighbourhood well up until he acquires false values from a chain of irresponsible bureaucrats, including Häshimäkä, and allows the lush garden to dry up. Ibrähimaw's later play, *Tusmal* ("Supposition"), ran at the Samarḳand Alimd̲j̲an Uzbek Drama Theatre in 1983, and another one, *Čakana säwda* ("Retail trade"), was published in 1984. Six of Ibrähimaw's plays, including *First kiss*, *The saw* and *Not a word about me*, came out in Russian translation in 1982. (Äbdukähhar Ibrähimaw, *Birinči bosä. Ärrä. P'esälär*, Tas̲h̲kent: G̲h̲äfur G̲h̲ulam namidägi Ädäbiyat wä Sänᶜät Näs̲h̲riyati, 1978; Abdukak̲h̲k̲h̲ar Ibragimov, *Obo mne ni slova. P'esy*, translated from the Uzbek, Moscow: Sovetskii Pisatel', 1982; *Čakana säwda*, in *S̲h̲ärḳ yulduzi*, no. 8 [Aug. 1984], 73-99; Äbduḳahhar Ibrähinaw, *Tusmal. P'esälär*, Tas̲h̲kent: G̲h̲äfur G̲h̲ulam namidägi Äbdäbiyat wä Sänʾat Näs̲h̲riyati, 1985). Crimean Tatars, Tajiks and Turkmens also contributed new plays.

After the earliest days of modern Central Asian theatre, translations and borrowings from plays written outside the region were frequently published in Central Asian languages and included in the repertory. Although Tsarist Central Asians originated their own earliest dramas, the relatively few local productions soon required supplementing by adaptations from playwrights of Azerbayjan, Tatarstan and Turkey in order to make an adequate répertoire available. Into Afg̲h̲ānistān, modern stage plays first came from the Arabic, English or Turkish. To S̲h̲injiang in the 1930s, the active theatre of Soviet Central Asia supplied numbers of its plays, easily adapted to the linguistic needs of Uyg̲h̲ur and Kazak actors and audiences. Throughout the region, the range of dramaturgy widened further with renditions of European and Russian dramas. Molière's comedies, especially *L'Avare, Le Médecin malgré lui, Georges Dandin* and *Les fourberies de Scapin* became perhaps the most popular in Soviet Central Asia and Afg̲h̲ānistān, as they had been in Egypt and Turkey. Shakespeare, most often represented by *Hamlet*, *The merchant of Venice* and *Othello*, appeared nearly everywhere. Čolpan made the first published Uzbek translation of *Hamlet* in 1934. It was staged, along with *Othello*, in Tas̲h̲kent in the mid-30s. By the 1960s and 1970s, Afg̲h̲ānistān's city theatres were staging recent American plays by Eugene O'Neill (*Desire under the elms*), Tennessee Williams (*The glass menagerie*), Edward Albee (*The zoo story*) and others. Translations of standard Russian plays seen in Soviet Central Asia included Gogol's comedy, *The Inspector-General*, Ostrovsky's melodrama, *Thunderstorm*, Gorky's ideological *Yegor Buličev and others*, and many dozens of works from Soviet Russian dramatists concerning selected political and historical themes. The importance of foreign sources for the Central Asian reper-

tory is emphasised in the fact that translations supplied around one-half of the 130 to 140 plays staged each year in Uzbekistan as late as the early 1980s (*Ozbekistan ädäbiyati wä sänʿäti*, no. 8 [19 February 1982] 4, 7).

Bibliography: A critical bibliography of Central Asian theatre and drama has not been published. Selected bibliographies are found in E. Allworth, *Drama and theater of the Russian East: Transcaucasus, Tatarstan, Central Asia*, in *Middle East Studies Association Bulletin*, xvii/2 (December 1983), 151-60; a short version of the same survey appears in R. Fleshman (ed.), *Theatrical movement: a bibliographical anthology*, New Orleans 1986; in Soviet Central Asia some lists for subdivisions of the region are in print: *Uzbekskoy iskusstvo (Teatr, muzyka, kino na stranitsakh pečati). 6. In Muslim India and Pakistan.

The classical Sanskrit drama in India had reached its apogee two centuries before the first Muslim penetration. Its gradual decline—often blamed partly on the religious objections of the new Muslim rulers—was probably due as much to linguistic developments, through the mediaeval local Prākrits to the modern regional languages. But whilst Sanskrit drama, which was essentially court theatre, died out, popular vernacular drama prospered. Strolling players went from village to village performing various types of plays, pageants, monologues or other entertainment (Haywood, 294-6), often on familiar Hindu themes such as Krishna and Rādhā, with singing, dancing and, at times, coarse humour. Among the actors were Muslims: female parts were performed by men or boys.

Some efforts were made in the 17th and 18th centuries to write plays in various languages such as Hindi, Bengali, Assamese and Gujarati of literary, and not merely of entertainment value. But there is no doubt that it was the influence of European—especially British—drama which provided the main impetus for the growth of a new interest in the theatre, though the heritage, both classical and popular, played part. Towards the end of the 19th century, English plays were performed in Calcutta, and two were performed in Bengali translation (Guha Thakurta, 40 ff.). Lord Macaulay's Minute of 1833 led to the spread of English higher education in India. This in its turn led to the study, then the translation or adaptation of English plays, and especially of Shakespeare. R. K. Yajnik, 270-8, lists 200 versions of 29 Shakespeare plays in nine languages between 1864 and 1919. These languages are Urdu-Hindustani, Hindi, Panjabi, Gujarati, Marathi, Bengali, Tamil, Telegu and Kanarese. In this period, the Indian government regarded Hindustani as a lingua franca and official language which could be written in either Persian or Devanagari script, depending largely on whether one was a Muslim or Hindu. People spoke of High Urdu and High Hindi, but the distinction was one of vocabulary, style and script rather than grammar. The entry of Muslims into playwriting led to the development of Urdu or Hindustani drama. Very occasionally, they used other scripts such as Devanagari or Gujarati. However, it is fair to say that practically all their plays—certainly all plays of note—were written and published in the Persian script, and may fairly be described as Urdu drama.

The form of popular drama which appealed to Muslims was called Rahas (cf. Sanskrit *rāsa* "sentiment", a technical term of the Classical dramaturgy), which was on Hindu themes and included singing and dancing and formed a sort of operetta. This became popular in Lucknow, thanks to the patronage of the last Nawwāb of Awadh (Oudh.), Wādjid ʿAlī Shāh, who himself wrote a number of them. It was there that what is considered as the first real Urdu drama, Amānat's *Indar Sabhā*, was performed in 1853. So successful was it that it was translated into several languages and performed all over the subcontinent. The scene is Indar (Indra)'s court, and the play recounts how a peri falls in love with a mortal, and finally wins Indar's approval. Songs predominate in this play, which is almost entirely in verse. The curtain is lowered and then raised again whenever a new character comes on stage, and characters announce their identity, as in English Miracle plays.

In some strange way, this play heralded the development of modern drama in several Indian languages. The commercial instincts of the Parsis led to the establishing of a number of theatrical companies in Bombay, but they soon opted for Urdu, rather than Gujarati, Marathi or Hindi, as the language medium. This new drama thrived until the first quarter of the 20th century, and not only did companies tour outside Bombay, but new companies were formed in distant cities such as Dihlī and Benares. Drama prospered rather as it did in

Elizabethan England. Each company had a resident playwright, most of them Muslims. Plots were often taken from Islamic Persian or Indian folk-lore or history, but contemporary social themes gradually emerged. The leading dramatist was Āg͟hā Ḥas͟har Kās͟hmīrī [*q.v.* in Suppl.]. Plays were largely in verse, but rhymed prose, and increasingly prose, were also used. Plays by Shakespeare were adapted. There were sub-plots and many short scenes, and the general tone tended to be melodramatic.

This Urdu drama was certainly lively, but it was decried by purists on both moral and literary grounds. Its influence on drama in other languages, such as Hindi and Gujarati, has often been deplored (Tindal, 180-1, and Munshi, 304-5).

The theatre declined after the First World War, due to the emergence of the cinema, and especially of the talkies. Āg͟hā Ḥas͟har became a film-star in Calcutta, and then founded his own film company in Lahore. On the other hand, radio, and even more, television, have given a new impetus to drama. Thus in Urdu, Mīrzā Adīb (b. 1914), who has specialised in one-act plays on social themes, has worked for Radio Pakistan. Imtiyāz ʿAlī Tād͟j, (1900-70), who wrote for radio and films, excelled in comedy. His *chef d'oeuvre* is *Anārkalī*. On the other hand, ʿIs͟hrat Raḥmānī, who is best-known as a critic and editor of dramas, has continued the tradition of translation of Western plays, with *Hansī hansī meṅ* (Brandon Thomas's farce, *Charlie's Aunt*) and *Ēk ḥamām māṅ* (Booth Tarkington's *Clarence*).

The limited scope of this article precludes reference to some leading dramatists with no Islamic connections, particularly in Bengali, Marathi and Hindi. Information on them will be found in the works listed in the *Bibl.* There has not yet been sufficient theatrical activity to warrant reference to regional languages of Pakistan such as Sindhi and Pashto.

Panjabi, however, spoken in adjacent provinces of India and Pakistan, is a special case. The Gurmukhi script, a variety of Devanagari, is used by Sikhs, most of whom live in India; whilst the Arabic-Persian script has long been used by Muslims, and has been encouraged by the Pakistan Government. Plays have been written and published in both scripts. They are not numerous, but Mohan Singh, 87-8, lists 6 prose plays, 6 translations or adaptations from Shakespeare, and 3 from Sanskrit.

Bibliography: The following should be supplemented by reference to the art. ĀG͟HĀ ḤAS͟HAR KĀS͟HMĪRĪ, and the footnotes in J. A. Ḥaywood, *Urdu drama—origins and early development*, in *Iran and Islam. In memory of Vladimir Minorsky*, ed. C. E. Bosworth, Edinburgh 1971, 293-302.

General works include R. K. Yajnik, *The Indian theatre*, London 1933, which has much to say about Western influence, especially of Shakespeare. Hemendra Nath Das Gupta, The *Indian Stage*, 4 vols., Calcutta 1934-44, despite its title, deals mostly with Bengali drama, though there are useful chapters on other languages and on the English theatre in Calcutta. For classical Sanskrit drama, see Biswanath Bhattacharya, *Sanskrit drama and dramaturgy*, Varanasi [Benares] 1974; and, for a more popular account, E. P. Horrowitz, *The Indian theatre, a brief survey of the Sanskrit drama*, Glasgow 1912, repr. New York 1967, which aims to convey the spirit and atmosphere rather than factual details. For drama in various languages, the following may be consulted: K. B. Jindal, *A history of Hindi literature*, 1955, 271-88; Kanayalal M. Munshi, *Gujarat and its literature*, London, Calcutta, etc., 1935, 248-9, 304-5, 373; P. Guha Thakurta, *The Bengali drama, its origin and development*, London 1930. For Urdu drama. Ram Babu Saksena, *A history of Urdu literature*. Allahabad 1927, 346-67, lists many plays by Āg͟hā Ḥas͟har Kās͟hmīrī and his contemporaries. Collections of the works of many of them have been published by Mad͟jlis-i-Taraḳḳī-yi-Urdū in Lahore. Of more recent dramatists, Mīrzā Adīb's *Lahū awr ḳālīn—čand khēl*[2], Lahore 1959, contains 13 one-act plays. Of ʿIs͟hrat Raḥmānī's translations, *Hansī hansī māṅ* was published in Lahore 1964, and *Ēk ḥamām meṅ*, in Lahore n.d. For Panjabi drama, see Mohan Singh, *A history of Panjabi literature*[2], Amritsar 1956.

(J. A. HAYWOOD)

MĀSSA (Berber Masst), the name of a small Berber tribe of the Sūs of Morocco, from which comes the name of the place where it is settled, some 30 miles south of Agadir at the mouth of the Wādī Māssa; the latter is probably the *flumen Masatat* mentioned by Pliny the Elder (v. 9) to the north of the *flumen Darat*, the modern Wādī Darʿa, and the *Masata* of the geographer would correspond to the modern *ahl Māssa*.

The name Māssa is associated with the first Arab conquest of Morocco: according to legend, it was on the shore there that, after conquering the Sūs, ʿUḳba b. Nāfiʿ drove his steed into the waves of the Atlantic, calling God to witness that there were no more lands to conquer on the west. In any case, Māssa appears very early as an important religious and commercial centre. Al-Yaʿḳūbī (*Buldān*, 360, tr. Wiet, 226) notes that the harbour was a busy one, where ships built at al-Ubulla and "sewn" (i.e. not nailed) anchored, and mentions a *ribāṭ* already renowned, that of Bahlūl. Al-Bakrī (*Descr. de l'Afrique septentrionale*, 306) and al-Idrīsī (*Opus geographicum*, 240) mention the harbour of Māsst; al-Bakrī emphasizes the fame of the *ribāṭ* and the importance of the fairs held there. Ibn K͟haldūn devotes several passages (*Hist. des Berbères*, ii, 181, 279) to the *ribāṭ* of Māssa, where according to popular belief the expected Mahdī [*q.v.*] will appear; this belief induced many devout people to go and settle in this *ribāṭ* and also sent many adventures there to raise rebellions.

Towards the middle of the 15th century A.D., the Portuguese began to become interested in Māssa, where they very soon acquired a privileged position (see R. Ricard, *Études sur l'histoire des Portugais au Maroc*, Coimbra 1953, 133, 136) and, at the opening of the 16th century, the Genoese came there to purchase gold, wax, cow and goat hides, lac and indigo.

Towards the end of the 15th century, the religious movement begun by al-D͟jazūlī [*q.v.*] made Māssa one of the great *zāwiyas* of Sūs, a remarkable centre for culture and piety (see M. Hajji, *L'activité intellectuelle au Maroc à l'époque Saʿdide*, Rabat 1976-7, ii, 626-8 and index). In the middle of the 9th/16th century, Leo Africanus (tr. Épaulard, 87-9) describes Māssa as a group of three little towns surrounded by a drystone wall in the middle of a forest of palmtrees; the inhabitants were agriculturists and turned the rising of the waters of the Wādī to their advantage. Outside the town on the seashore was a highly venerated "temple", from which the Mahdī was to come; a peculiar feature of it was that the little bays in it were formed of ribs of whalebone. The sea actually throws up many cetaceans on this coast and ambergris was collected here; local legend moreover says that it was on the shore of Māssa that Jonah was cast up by the whale.

After the fall of the Saʿdīds, the development of the

Marabout principality of Tazerwalt again made Māssa a commercial centre. The port was frequented by Europeans, but it was soon supplanted by that of Agadir. The rapid decline of the principality of Tazerwalt and the steadily increasing influence of the central Moroccan power finally destroyed almost completely any religious and economic importance of Māssa.

(G. S. COLIN*)

MASSALAJEM, the name given to two Islamic settlements in North-West Madagascar: Old Massalajem, otherwise Langani, is also known as Nossi Manja, and the daughter settlement of New Massalajem, also known as Boeny (Swa. correctly Bweni). The original town is reputed to have been founded from Kilwa [*q.v.*], and to have had regular trade relations with it and with Malindi and Pate, until its destruction by the Sakalava at the end of the 18th century. Sherds found there do not antedate the 14th century. New Massalajem served the Sakalava first as their northern capital, until they moved to Majunga, also a town of Islamic origin.

(G. S. P. FREEMAN-GRENVILLE)

AL-**MAṢṢĪṢA**, the Arabic form of the classical Mopsuestis, Byzantine Greek form Μαμίστρα, Syriac Maṣīṣtā, Armenian Msis, Ottoman Tkish. Miṣṣīṣ. or Missīs, modern Tkish. Misis, a town of Cilicia on the western or right bank of the Djayḥān [*q.v.*], 18 miles/27 km. to the east of Adana [*q.v.*] and now in the modern *vilayet* of Adana.

In antiquity it was called Μόψου ἑστία, a name, which (like that of Μόψου κρήνη in the Cilician passes) is derived from the cult of the legendary seer Mopsos (cf. Meyer, *Gesch. d. Altert.*, i/2², § 483). In ancient times, the town was chiefly famous for its bishop Theodorus (d. 428), the teacher of Nestorius and friend of the suffragan bishop and inventor of the Armenian alphabet, Mashtᶜocᶜ.

The emperor Heraclius is said to have removed the inhabitants and laid waste the district between Antioch and Mopsuestia on the advance of the Arabs, in order to create a desert zone between them (al-Ṭabarī, i, 2396; al-Balādhurī, *Futūḥ* 163: between al-Iskandarūn and Ṭarsūs), and under the Umayyads all the towns taken by the Arabs from al-Maṣṣīṣa to the fourth Armenia (Malatya) are said to have been left unfortified and uninhabited as a result of the inroads of the Mardaites (Theophanus, ed. de Boor, i, 363, 17). According to Abu 'l-Khaṭṭāb al-Azdī (in al-Balādhurī, 164), the Arabs conquered al-Maṣṣīṣa and Ṭarsūs under Abū ᶜUbayda, according to others under Maysara b. Masrūḳ, who was sent by him and who thereafter advanced as far as Zanda (in 16/637: Caetani, *Annali dell' Islām*, iii, 805, § 311). Muᶜāwiya, on his campaign against ᶜAmmūriyya in 25/645-6, found all the fortresses abandoned between Anṭakiya and Ṭarsūs (see above). According to the *Maghāzī Muᶜāwiya*, he himself destroyed all the Byzantine fortresses up to Anṭākiya in 31/651-2 on his return from Darawliyya (Δορύλαιον in Phrygia) (al-Balādhūrī, 164-5). After the Syrian rebellion against ᶜAbd al-Malik, the emperor Constantine IV Pogonatos in 65/684-5 advanced against the town and regained it (al-Yaᶜḳūbī, ii, 321). Yaḥyā b. al-Ḥakam in 77/696 marched against Mardj al-Shaḥm between Malaṭya and al-Maṣṣīṣa (al-Yaᶜḳūbī, ii, 337). It was only in 84/703 that ᶜAbd al-Malik's son ᶜAbd Allāh retook the town and had the citadel rebuilt on its old foundations (al-Balādhurī, 165; al-Yaᶜḳubī, ii, 466; al-Wāḳidī, in al-Ṭabarī, ii, 127; Ibn al-Athīr, iv, 398; Theophanus, *Chron.*, ed. de Boor, 372, 4; Michael Syrus, tr. Chabot, ii, 477; Elias Nisiben, *Opus chronolog.*, ed. Brooks, 156, tr. 75; *Script. Syri, chronica minora*, ed. Guidi, 232. tr., 176, under 1015 Sel. year; Weil, *Gesch. d. Chalifen*, i, 472). In the following year, he installed a garrison in the fortress, including 300 specially picked soldiers, and built a mosque on the citadel hill (Tall al-Ḥiṣn); a Christian church was turned into a granary (*huryun*, *huryā* = *horreum*, *horrea*; al-Balādhurī, 165; Ibn al-Shiḥna, ed. Beirut, 179). To the same event no doubt refers the wrongly-dated reference in the *Chronicle* of the Armenian Samuel of Ani of the year 692 A.D. to the fortification with strong walls of the town of "Mamestia, i.e. Msis" by the Muslims under ᶜAbd al-Malik (*Ratio temporum usque and suam aetatem presbyteri Samuelis Aniensis*, in Euseb. Pamphil., *Chron.*, ed. A. Mai and I. Zohrab, Mediolani 1818, App. 57; Alishan, *Sissouan*, 286). Every year, from 1,500 to 2,000 men of the advance troops (*ṭawāliᶜ*) of Anṭākiya used to winter in the town. According to Michael Syrus (tr. Chabot, iii, 478), ᶜAbd al-Malik died in 1017 Sel. (705 A.D.) in al-Maṣṣīṣa.

ᶜUmar II is said to have intended to destroy the town and all the fortifications between it and Antioch and to have been either prevented by his own death (al-Balādhurī, 167) or dissuaded by his advisers; according to this version, he then had a large mosque built in the suburb of Kafarbayya in which there was a cistern with his inscription. It was called the "Citadel Mosque" and kept up till the time of al-Muᶜtaṣim (al-Balādhurī, 165; but Kafarbayya was probably not really built till the time of al-Mahdī or Hārūn al-Rashīd, see below). Yazīd b. Djubayr ('Αζιδος ὁ τον χοννεί (in 85/704 attacked Sīs (τὸ Σίσιον κάρτρον, in al-Ṭabarī and Ibn al-Athīr: Sūsana in the *nāḥiya* of al-Maṣṣīṣa) but was driven off by Heraclius, the emperor's brother (Theophanus, ed. de Boor, 372, 23: A. M. 6196; according to al-Ṭabarī, ii, 1185, and Ibn al-Athīr, iv, 419, wrongly not till 87 A.H.). Hishām built the suburb (*al-rabaḍ*), Marwān II the quarter of al-Khuṣūṣ east of the Djayḥān, which he surrounded with a wall with a wooden door and a ditch. The bridge of Djisr al-Walīd between al-Maṣṣīṣa and Adhana, 9 *mīls* from the former, was built in 125/742-3 and restored in 225/840 by al-Muᶜtaṣim (al-Balādhurī, 168; Yāḳūt, *Muᶜdjam*, ii, 82; Ṣafī al-Dīn, *Marāṣid*, ed. Juynboll, i, 255). In the first half of the 2nd/8th century the caliphs al-Walīd II and Yazīd III brought the gipsy tribe of the Zuṭṭ [*q.v.*], who had been deported to Baṣra by Muᶜāwiya in 50/670, and settled them with great herds of buffalo in the region of al-Maṣṣīṣa in order to fight the plague of lions in the district of the Djabal al-Lukkām (al-Balādhurī, 168; De Goeje, *Bijdrage tot de Geschiedenis der Zigeuners*, Leiden 1875, 17-22).

The first ᶜAbbāsid, Abu 'l-ᶜAbbās al-Saffāḥ, on his accession strengthened the garrison by 400 men, to whom he gave lands; the same estates were later allotted to them by al-Manṣūr. The latter in 139/756-7 restored the wall, which had been damaged by an earthquake in the preceding year, and increased with 8,000 settlers the much diminished population of the town, which he called al-Maᶜmūra (al-Balādhurī, 166; Ibn al-Athīr, v, 382; Yāḳūt, iv, 579, s.v. al-Maᶜmūriyya; Ibn Shiḥna, 179). On the site of a heathen temple, he built a large mosque which far surpassed the mosque of ᶜUmar in size. When ᶜAbd Allāh b. Ṭāhir was governor of the West (i.e. in 211/826), it was enlarged by al-Maʾmūn. Al-Manṣūr increased the garrison to 1,000 men and settled in the town the inhabitants of al-Khuṣūṣ, Persians, Slavs and Christian Arabs (Nabataeans), whom Marwān had transplanted thither (see above), and gave them allotments of land. It is probably to the same event that the story refers that Ṣāliḥ b. ᶜAlī, when in the ᶜAbbāsid period the inhabitants of al-Maṣṣīṣa, harassed by the Byzantines, resolved to migrate, sent Djibrīl b. Yaḥyā al-Badjalī al-Khurāsānī in 140/757-8 to rebuild the town and settle it with Muslim inhabitants (al-Balādhurī, 166; according to al-Ṭabarī, ii, 135 in the year 141). Under al-Mahdī, the garrison was increased to 2,000; in addition, there was the Anṭākiya corps of almost the same size which wintered here regularly until Sālim of Burullus became their *wālī* and increased the garrison by 500 men instead. There is a brief reference in the Syriac inscription of ᶜEnesh to a raid by al-Mahdī to the Djayḥan (Syr. Giḥōn) in 780 A.D. (1091 Sel; Chabot, in *JA*, ser. 9, xvi [1900], 287; Pognon, *Inscr. semit. de la Syrie et de la Mésop.*, 148-50, no. 84). Hārūn al-Rashīd built Kafarbayya or, according to another story, altered the plans for this suburb prepared by al-Mahdī and fortified it with a ditch; he also built walls which were only completed after his death by al-Muᶜtaṣim. In 187/803 an earthquake laid waste the town (al-Ṭabarī, iii, 688). In the following year, the Byzantines invaded and pillaged the region of al-Maṣṣīṣa and ᶜAyn Zarba and carried off the inhabitants of Ṭarsūs into captivity, whereupon Hārūn al-Rashīd attacked and defeated them (Michael Syrus, iii, 16). According to al-Ṭabarī (iii, 709) and Ibn al-Athīr (vi, 135), the Byzantines in 190/806 invaded ᶜAyn Zarba and Kanīsat al-Sawdāʾ and took prisoners there; but the people of al-Maṣṣīṣa regained all their loot from them. If, as it seems, the curious story in the Byzantine chroniclers (Theophanes, *Chron.*, ed. de Boor, 446, 18; Georg. Kedren, Bonn, Corpus, ii, 17) that in 771-2 (A. M. 6264) Ἀλφαδὰλ Βαδινάρ, i.e. al-Faḍl b. Dīnār, who had 500 Byzantine prisoners with him, lost 1,000 men and all his booty through a sortie of the Μομφουερτεῖς, refers to the same events, the latter would appear to be wrongly reported and wrongly dated.

On 13 Ḥazīran 1122 Sel. (811 A.D.), the walls and many houses in the town and three adjoining villages fell in a great earthquake; near al-Maṣṣīṣa the course of the Djayḥān was dammed for a week so that the boats lay on the dry bed (Michael Syrus, iii, 17). In 198/813-14 Thābit b. Naṣr al-Khuzāᶜī was fighting in the Syrian marches of al-Maṣṣīṣa and Adhana (al-Yaᶜḳūbī, ii, 541). On his campaign into Bilād al-Rūm, al-Maʾmūn passed through al-Maṣṣīṣa and Ṭarsūs in Muḥarram 215/March 830 (al-Ṭabarī, iii, 1103; Ibn al-Athīr, vi, 294; Abu 'l-Fidāʾ, *Annales Moslem.*, ed. Reiske, ii, 152; Weil, *Gesch. d. Chal.*, ii, 239). In revenge, the emperor Theophilus in 216/831 raided the lands around these two towns and slew or took prisoner 2,000 men (al-Ṭabarī, iii, 1104; Ibn al-Athīr, vi, 295).

After the emperor's campaign against Zibaṭra (837 A.D.) in which he also defeated the Μομφουεστῖται (Const. Porophyrog., *De caeremoniis*, ed. Bonn, 503; Vasilev, *Vizantiya i Arabi*, in *Zapiski ist.-filol. fak. imp. S.-Ptbg. Univ.*, *čast* lvi [1900], 88-9, n. 4), al-Muᶜtaṣim in the following year attacked ᶜAmmūriyya; his general Bashīr commanded a part of the army which included the Maṣṣīṣa contingents (Michael Syrus, iii, 96). In 245/859, the town was again visited by an earthquake which destroyed many places in Syria, Mesopotamia and Cilicia (al-Yaᶜḳūbī, iii, 1440). The caliph al-Muᶜtaḍid after restoring order in the Thughūr al-Shāmiyya (287/900) returned from al-Maṣṣīṣa via Funduḳ al-Ḥusayn, al-Iskandariyya and Baghrās to Anṭākiya, Ḥalab and al-Raḳḳa (al-Ṭabarī, iii, 2198-2200; al-Funduḳ, a place in the *thughūr* near al-Maṣṣīṣa: Yāḳut, iii, 918; Ṣafī al-Dīn, *Marāṣid*, ii, 365).

When in 292/904-5 the Byzantine Andronicus invaded the district of Marᶜash, the people of al-Maṣṣīṣa and Ṭarsūs met him, but were defeated and lost their leader Abu 'l-Ridjāl b. Abī Bakkār (al-Ṭabarī, iii, 2251; Ibn al-Athir. vii, 371; Vasilev, *Zap. ist.-fil. fak. imp. S.-Ptbg. Univ.*, *čast* lvxi [1902], 154, 2).

In 344/955-6, the Ḥamdānid Sayf al-Dawla was visited by horsemen from the frontier towns of Ṭarsūs, Adana and al-Maṣṣīṣa and with them an envoy from the Greek king, who concluded a truce with him (al-Nuwayrī and Kamāl al-Dīn, in Freytag, *ZDMG*, xi, 192); Ibn Ẓāfir al-Azdī. *Kitāb al-Duwal al-munḳaṭiᶜa*, tr. Vasilev, *op. cit.*, Priložen., 86). Defeated by Leo Phocas in 349/960 in the pass of al-Küčük, Sayf al-Dawla spent the night in al-Ḥawānīt and returned to Ḥalab via al-Maṣṣīṣa (Kamāl al-Dīn, in Freytag, *op. cit.*, 196; Yaḥyā b. Saᶜīd, *Taʾrīkh*, ed. Kračkovskiy-Vasilev, in *Patrol. Orient.*, xiii, 1924, 782).

In 352/963, the emperor Nicephorus took Adana, the inhabitants of which fled to al-Maṣṣīṣa, and sent the Domesticus John Tzimisces (Yānīs b. al-Shimishīḳ al-Dumistiḳ) against this town. The latter besieged it for several days but had to withdraw as his supplies were running short, and after laying waste the country round burned the adjoining al-Mallūn (Μαλλός) at the mouth of the Djayḥān (Yaḥyā b. Saᶜīd, 793-4). The emperor himself came again in Dhu 'l-Ḳaᶜda 353/Nov. 964 to the marches (*al-thaghr*) and besieged al-Maṣṣīṣa for over 50 days, but had again to abandon the siege owing to shortage of supplies and retired to winter in Ḳaysariyya. Finally, the town was stormed by John Tzimisces (Arm. Kuiř Žan) on Thursday 11 Radjab 354/13 July 965. The inhabitants set it on fire and fled to Kafarbayya. After a desperate struggle on the bridge between the two towns, the Greeks took this suburb also and carried off all the inhabitants into captivity (Yaḥyā b. Saᶜīd, 795; Ibn al-Athīr, viii, 408-11; Abu 'l-Fidāʾ, *Ann. Mosl.*, ed. Reiske, ii, 482-3; Michael Syrus, iii, 128; Elias Nisiben., ed. Brooks, 218, tr. 106; Georg., Cedren., ed. Bonn, ii, 362; Leon Diakon., ed. Bonn, 52-3; Mattᶜeos Uřhayecᶜi, ed. Dulaurier in *Rec. hist. crois.*, *Doc. arm.*, i, 5; Stepᶜan Asołik of Taron, *Armen. Gesch.*, tr. H. Gelzer and A. Burckhardt, Leipzig 1907, 134, 24). They were, to the number of 200,000, it is said, led past the gates of Ṭarsūs, which at that time was being besieged by the emperor's brother Leo, to terrify the people of the town (Ibn Shiḥna, *Rawḍat al-manāẓir*, in Freytag, *ZDMG*, xi; Elias Nisiben., *op. cit.*). The gates of Ṭarsūs and of al-Maṣṣīṣa were

gilded and taken as trophies to Constantinople, where one set was put in the citadel and the others on the wall of the Golden Gate (Georg. Cedren., ii, 363).

The town remained for over a century in the hands of the Byzantines; the Emperor Basil II Bolgaroctonus stayed for six months in the region of al-Maṣṣīṣa and Ṭarsūs before going to Armenia, after the death (31 March 1000 A.D.) of the Kuropalates Davitᶜ of Taykᶜ, to take possession of his lands by inheritance (Yaḥyā b. Saᶜīd, *Taʾrīkh*, ed. Rosen, 39, in *Zap. Imp. Akad. Nauk*, xliv, St. Petersburg 1883). In 1042 the Armenian prince Aplgharib, son of Ḥasan and grandson of Khačᶜik of the house of the Artsrunians, was sent by the emperor Constantine Monomachos as governor to Cilicia (St. Martin, *Mém. sur l'Arm.*, i, 199). In 1085 Philaretos Brachomios, who was appointed in Constantinople perhaps as Sebastos (Michael Syrus, iii, 173) or at least Kuropalates (Mich. Attal., Bonn ed., 301) and whose ephemeral kingdom comprised the land from Ṭarsūs to Malaṭya, Urfa and Anṭākiya, held al-Maṣṣīṣa (Michael Syrus, *loc. cit.*; Laurent, *Byzance et Antioche sous le curopalate Philarète*, in *Rev. des Et. Arm.*, ix [1929], 61-72). Shortly before the arrival of the Crusaders, the Saldjūḳ Turks took Ṭarsūs, al-Maṣṣīṣa, ᶜAyn Zarba and the other towns of Cilicia (Michael Syrus, iii, 179). About the end of September 1097, the Franks under Tancred, who had been invited thither from Lambron by Ōshin III, took the town, which was stormed after a day's siege: the inhabitants were slain and rich booty fell into the hands of the victor (Albert. Aquens., iii, 15-16, in Migne, *Patrol. Lat.*, clxvi, col. 446-7; Radulf. Cadom., *Gesta Tancredi*, ch. 39-49). William of Tyre describes al-Maṣṣīṣa on this occasion (iii, 21, in Migne, *Patrol. Lat.*, cci, col. 295): *Erat autem Mamistra una de nobilioribus eiusdem provinciae civitatibus, muro et multorum incolatu insignis, sedet optimo agro et gleba ubere et amoenitate praecipua commendabilis.* Count Baldwin, who had quarrelled with Tancred, followed him along with the admiral Winimer of Boulogne and encamped in a meadow near the Djayḥān bridge; Winimer left him there and went with his fleet to al-Lādhiḳiyya, while the two rivals had a desperate fight, after which Baldwin withdrew to the east (Albert. Aquens., iii, chs. 15, 59, in Migne, *op. cit.*, cols. 446, 472). Tancred followed him, after he had imposed on the city *plus paternas quam principis leges* (Radulf. Cadom., ch. 44). The Byzantine general Tatikios, who had joined the Crusaders to take over their conquests in name of the Emperor, left them in the lurch in the beginning of February 1098 at the siege of Anṭākiya and ceded to Bohemund the town of Tursol (Ṭarsūs), Mamistra and Addena (Adana) (Raymond of Agiles, in Bongars, *Gesta Dei per Francos*, Hanover 1611, 146, 5). Bohemund only took possession of the towns of Ṭarsūs, ᶜAyn Zarba and al-Maṣṣīṣa in August (William of Tyre, vii, 2). After the town had again fallen to the Greeks for a period, Tancred again took it in 1101 (Rad. Cad., ch. 143), but had to hand it over with Ṭarsūs, Adana and ᶜAyn Zarba to Bohemund on his return from captivity in 1103 (William of Tyre, vii, 2, in Migne, *op. cit.*, col. 379). In the following year, however, Longinias, Ṭarsūs, Adana and Μάμιρτα were regained for Byzantium by the campaign of the general Monastras (Anna Comnena, *Alexaid*, ed. Reifferscheid, ii, 140, 5, who apparently did not recognise the identity of Μάμιρτα with Μόψου ἑρτίαι, which she mentions several times). In the treaty between Bohemund and the emperor Alexius of September 1108, the town was promised to the former (Anna Comnena, *op. cit.*, ii, 218), Tancred having taken it in the preceding year with 10,000 men from the Byzantine general, the Armenian Aspietes (*ibid.*, ii, 147). At this time, of the quarters of the town one (probably Kafarbayya) was in ruins (*ibid.*). Baldwin of Burg and Joscelin of Courtenay, who allied themselves against Tancred with Kogh Vasil of Kaysūm, were supported by the latter with a detachment of 800 men and a body of Pečenegs, who were stationed in al-Maṣṣīṣa as Greek mercenaries (Mattᶜeōs Uřhayecᶜi, tr. Dulaurier, 266-7 = *RHC, Doc. arm.*, i, 86). The great earthquake of 1114 destroyed the town, like many others in Cilicia and Syria (Smbat, in *Doc. arm.*, i, 614).

Under the Frankish patriarchate of Antioch, Mopsuestia-Mamistra was separated from the ecclesiastical province of Anazarbos and made an autocephalous metropolis (Michael Syrus, iii, 191; recensions of the *Notitia Antiochena* of the Crusading period). The ἐνορία Μοφουεστίας stretched (according to *Notitia Antiohena* on the boundaries of the Antiochene dioceses, ed. Papadopoulo-Keramevs, 67) from Seleuceia in Syria and Adana ἀπο τοῦ μεγάλου Ξηροποταμοῦ (now Ozerlü or Rabaṭča?) ἕως τοῦ μεγάλου ποταμοῦ φυρῶν. The latter is undoubtedly identical with αὐτὸς ὁ μέγας ποταμὸς Ἄδανας, the Sayḥān.

In 1132-13 the Rupēnid Łevon I (Λεβούνης), son of Constantine, took the town (Arm. Msis, Mises, Mamestia or Mamuestia) from the Greeks (Cinnamos, i, 7; iii, 14; Smbat Sparapet, *Chronicle*, in *Doc. arm.*, i, 615). The brother of the emperor John II Comnenus went to him, and Łevon gave his sons his daughters as wives with the towns of al-Maṣṣīṣa and Adana as dowries. But when they quarrelled he took back from the Greeks all that he had given them, and Isaac had to flee with his sons to sultan Masᶜūd (Michael Syrus), ii, 230). Łevon, falling through treachery into the hands of Raymond of Poitiers, had to cede (1136-7) al-Maṣṣīṣa, Adana and Sarvantikᶜar (now Sawuran Ḳalᶜe?), but regained his liberty in a couple of months; he very soon retook these towns (*Doc. arm.*, i, 152-3 = *Chron. de Matthieu d'Édesse*, tr. Dulaurier, 457; Smbat, *op. cit.*, 616). The emperor John in 1137 (1448 Sel.) had his revenge on Łevon. He invaded Cilicia, took Ṭarsūs, Adana and al-Maṣṣīṣa, seized Łevon himself with his wife and children and took them to Constantinople, where Łevon subsequently died (Ibn al-Athīr, xi, 35; Michael Syrus, ii, 245; Gregor. presbyt., *Forts. d. Chronik des Mattᶜēos*, tr. Dulaurier, 323; cf. *Docum. arm.*, i, p. xxxii, 1 and 153, 4; William of Tyre, xiv, 24; Röhricht, *Gesch. d. Kgr. Jerusalem*, 211). John installed Coloman (*Calamanus*), son of Boris and grandson of Cilicia (William of Tyre, xiv, 24, xix, 9, in Migne, *Patr. Lat.*, cci, cols. 603, 756; a *Dux Ciliciae* mentioned in *Regum et principum epistolae*, no. 24, in Bongars, *Gesta Dei per Franc.*, 1182, 1. 46 and *passim*). When the emperor John died at Mardj al-Dībādj on 8 April 1143 (William of Tyre, xv, 22; Röhricht, *Gesch. d. Kgr. Jerus.*, 228, 4), his successor Manuel I Comnenos had his body brought by boat from Mopsuestia down the Pyramos to the sea and taken by sea to the capital (Niketas Choniat., *Man. Komn.*, i, Bonn ed., 67).

Thoros II, the son of Łevon, who had escaped home from his confinement in Constantinople, was again able to cast off the Byzantine yoke. When in 1151 he took Msis and Tᶜil (Tall Ḥamdun) from the Byzantines (Smbat, in *Doc. arm.*, i, 619) and made their general Thomas prisoner, the emperor Manuel in the following year sent against him with 12,000 cavalry Andronicus Comnenus, whom he had appointed governor of Ṭarsūs and al-Maṣṣīṣa (Gregor. presbyt.,

in *Doc. arm.*, i, 167 = Matthew of Edessa, tr. Dulaurier, 334; Smbat, *Chron.*, in *Doc. arm.*, i, 619). Andronicus, who did not recognise Thoros as ruler of Asia Minor, advanced against al-Maṣṣīṣa, but was surprised by the Armenians and put to an ignominious flight with his 12,000 men. Thus not only the town, which was very well supplied with provisions and military material of all kinds, fell into his hands, but also a great part of Cilicia (Gregor. presbyt., tr. Dulaurier, 334-6 = *Doc. arm.*, i, 167 ff.; Smbat, *op. cit.*). The emperor, himself too weak to avenge the insult, twice induced by gifts the sultan Ḳilidj Arslān II (Gregor. wrongly: Masʿūd) of Ḳonya to attack Thoros. The sultan, who on the first occasion (548/1153) was content with the defeat of the Armenian and the return of the lands taken from the Greeks, again attacked al-Maṣṣīṣa, ʿAyn Zarba and Tall Ḥamdūn (Arm. Tʿiln Hamtunoy) in 1156, but could do nothing against them and had finally to retire after heavy losses (Gregor., *op. cit.*, 338 = *Doc. arm.*, i, 171).

The emperor Manuel himself passed through Cilicia in 1159 with a large army to the assistance of the Crusaders. Thoros had already retired to Vahka in the desolate mountains (*Armen. Rhymea Chron.*, in *Doc. Arm.*, i, 505) when the emperor entered al-Maṣṣīṣa at the beginning of November, but he did no injury to any one there (Gregor., tr. Dulaurier, 353-4 = *Doc. arm.*, i, 187). The Frankish kings led by Baldwin came to pay homage to him in the town or on the adjoining *pratum palliorum* (as William of Tyre, xiii, 27, translates Mardj al-Dībādj) where his court was held in camp for seven months (Gregor., tr. Dulaurier, 358; Röhricht, *Gesch. d. Kgr. Jerusal.*, 298). Thoros was also able with great tact to become reconciled with him, and on acknowledging Byzantine suzerainty and ceding several towns in Cilicia, was recognised as *Sebastos* of Msis, Anazarbos and Vahga (*Doc. arm.*, i, 186; Smbat, *ibid.*, 622). His brother Mleh, who attempted his life while out hunting between al-Maṣṣīṣa and Adana, was banished by Thoros and given by Nur al-Dīn the town of Ḳūrus (Kyrrhos; Smbat, *loc. cit.*). After the death of Thoros of Msis (1168-9; Smbat, 623), Mleh (Arab. Malīḥ b. Liwun al-Armanī) succeeded him and at first ruled only over the district of the passes (*Bilād al-Durūb*). In 1171 he surprised Count Stephen of Blois at Mamistra and plundered him (William of Tyre, xx, 25-8). In 568/1172-3, supported by troops of his ally Nūr al-Dīn, he took from the Greek Adana, al-Maṣṣīṣa and Ṭarsūs (Ibn al-Athīr, xi, 255; Kamāl al-Dīn, tr. in Röhricht, in *Beiträge z. Gesch. d. Kreuzzüge*, i, Berlin 1874, 336).

When Mleh's successor Rupēn III fell through treachery into the hands of Bohemund of Antioch, his brother Łevon (II) obtained his release in 1184 by ceding al-Maṣṣīṣa, Adana and Tall Ḥamdūn (Tʿiln) and paying 3,000 *dīnārs*; immediately afterwards, Rupēn retook these strongholds from the Franks (Michael Syrus, iii, 397; *Doc. arm.*, i, 394).

Hetʿum, the nephew of the Catholicos Grigor IV and son of Čʿortvanēl of Ṭarōn, who came to Cilicia in 1189 with his brother Shahinshah, received from Łevon II (1185-1219) his niece Alice, daughter of Rupēn III, in marriage and the town of Msis, but died in the same year (Smbat, in *Doc. arm.*, i, 629; Marquart, *Südarmenien und die Tigrisquellen*, Vienna 1930, 481-2). The Emperor Frederick Barbarossa in 586/1190 was about to go to Syria via Ṭarsūs and al-Maṣṣīṣa when he met his tragic end in the Kalykadnos (alleged[?] letter of the Armenian Catholicos in Ibn Shaddād, in *Rec. Hist. Orient. des Crois.*, iii, 162); a portion of his army thereupon went to Antioch via Ṭarsūs, *Mamistria* and *Thegio* (Ḥiṣn al-Muthaḳḳab; not *Portella*, the Syrian passes, with which Röhricht, *Gesch. d. Kgr. Jerus.*, 530, 4, identifies it).

Wilbrand of Oldenburg, who visited the East in the train of Duke Leopold VII of Austria and Styria and the Teutonic Grand Master Hermann von Salza, came in the beginning of 1212 to *Mamistere* which he describes as follows: (Wilbr., ch. 18, ed. Laurent, *Peregrinatores*, Leipzig 1864, 175): *Haec est civitas bona, super flumen sita, satis amoena, murum habens circa se turritum, sed antiquitate corrosum, paucos in quodam respectu habens inhabitatores, quibus omnibus rex illius terrae imperat et dominatur.* In the vicinity lay *quoddam castrum quod erat de patrimonio beati Pauli .... sed nunc temporis possidetur a Graecis. In hac civitate* [Mamistere] *habetur sepulchrum beati Pantaleonis. Ipsa vero distat a Canamella* (cf. Tomaschek, *SB Ak. Wien* [1891], app. viii, p. 71) *magnam dictam.* Łevon II granted the republics of Genoa and Venice the privilege of having their own trading centres in al-Maṣṣīṣa, which could be reached by ship from the sea before the mouth of the Djayḥān became silted up (Alishan, *Sissouan ou l'Arméno-Cilicie*, 287). The attempt of Raymund Rupēn of Antioch to seize the throne of Armenia after Łevon's death in 1219 failed; he was, it is true, able to take Ṭarsūs and attack al-Maṣṣīṣa but he was taken prisoner by Constantine of Baržberd and died in prison in 1222 (*Doc. arm.*, i, 514; Röhricht, *Gesch. d. Kgr. Jerus.*, 741-2).

For a century the Rupēnids ruled almost undisturbed in the town. Their glory reached its height under the splendour-loving Hetʿum I (1219-70). Here were held the annual festivals of the Church at which numerous princes and nobles used to gather down to the last and difficult years of the king. Here was held the brilliant ceremony at which his 20-year old son Łevon was dubbed knight. Hither the king brought the seat of government after the destruction of Sīs (Alishan, *Sissouan*, 287-8).

Baybars sent a punitive expedition against Hetʿum in 664/1266 under al-Malik al-Manṣūr of Ḥamā, who advanced as far as Ḳalʿat al-ʿAmūdayn and into the district of Sīs, while Sayf al-Dīn Ḳalāwūn took al-Maṣṣīṣa, Adana, Ayās and Ṭarsūs (al-Maḳrīzī, *Hist. d. Sult. Maml.*, tr. Quatremère, i/2, 34-5; Abu 'l-Fidāʾ. *Annal. Mosl.*, ed. Reiske, v, 18; al-Nuwayrī, in Weil, *Gesch. d. Chal.*, iv, 56). Three years later (1269), the district of al-Maṣṣīṣa was visited by an earthquake (al-Suyūṭī, in *Doc. arm.*, ii, 1906, 772, n. f.). Baybars (Arm. *Pntukhtar* = Arab. *Bundukdār*) himself in 673/spring of 1275 took the field against Łevon III, son of Hetʿum, laid waste the whole of Cilicia as far as Koricos and stormed al-Maṣṣīṣa and Sīs, the former on 26 March. The inhabitants were massacred, almost all the houses burned and the great bridge destroyed (Arm. Kandarayn Msisay, i.e. Ḳanṭarat al-Maṣṣīṣa; cf. al-Maḳrīzī, i/2, 123-4, with n. 154; Mufaḍḍal b. Abi 'l-Faḍāʾil, *Gesch. d. Mamlūkensultane*, ed. Blochet, in *Patrol. Orient.*, xiv, 389; Barhebraeus, *Chron. syr.*, ed. Bedjan, 531, 6; Smbat, *Chronik*, in *Doc. arm.*, i, 653; Röhricht, *Gesch. d. Kgr. Jerusalem*, 967; van Berchem, *CIA*, i, 688, n. 2). When in 697/1297-8 an army under the *amīrs* Sayf al-Dīn Kipčaḳ, the *Nāʾib* of Dimashk, Fāris al-Dīn Ilbekī al-Sāḳī al-Ẓāhiri, the *Nāʾib* of Ṣafad, Sayf al-Dīn Bizlār al-Manṣūrī and Sayf al-Dīn ʿAzāz al-Ṣāliḥī invaded the land of Sīs, al-Maṣṣīṣa is not specially emphasised among the unimportant places taken like Tall Ḥamdūn, Ḥammūṣ (Ḥumaymis), Kaʿlāt Nadjīma, al-Maṣṣīṣa, Sirfandikār, Ḥadjar, Shughlān, al-Nuḳayr and Zandjfara (al-Maḳrīzī, ii/2, 60-5; Mufaḍḍal, *op. cit.*, 602; al-Nuwayrī, in Blochet, *ibid.*). In 722/1322,

the Egyptians crossed the Djayḥān by a bridge of boats, got behind the Armenians who had retired to Msis and inflicted a severe defeat upon them; among those who fell are mentioned the barons Hetᶜum of Djlnocᶜ, his brother Constantine, Wahram Lotik, Ōshin, the son of the marshal, along with 21 knights and many men (Smbat's Continuator, in *Doc. arm.*, i, 688). This authority also mentions a raid by an Egyptian force against al-Maṣṣīṣa (Mamuestia), Adana, al-Mallūn (Mlun) and Ṭarsūs in 735/1334-5 (*Doc. arm.*, i, 6/1; Tomaschek, in *SB Ak. Wien* [1891], part viii, 68). The last Egyptian invasion took place in 775/1373-4. Among the towns destroyed were Sīs, Adana, al-Maṣṣīṣa and ᶜAyn Zarba, and Łevon IV had to surrender in 1375 after a siege of nine months in Ghaban (*Doc. arm.*, i, 686, n. 3). The town thus passed nominally into the *Futūḥāt al-Djahāniyya* of the Mamlūk empire; it had, it is true, by now sunk into insignificance and it is not mentioned, for example, among the towns taken by Shahsuwār in 871/1467 (Alishan, *Sissouan*, 290).

Armenian sources mention eight archbishops of the town from 1175 to 1370 (1175-1206 David, 1215 Johannes, 1266 Sion, 1306 Constantine, 1316 John, 1332 Stephen, 1342 Basil, 1362-1370 unnamed; cf. Alishan, *op. cit.*, p. 290). Michael Syrus knows only Job of about 800 A.D. (*Chron.*, tr. Chabot, iii, 23-4, 451, no. 27), and the Frankish writers from 1100 onwards Bartholomaeus, before 1234 Radulphus and in the years from 1162-1238 three or four more unnamed bishops (Albert. Aquens., ix, 16; William of Tyre, xiv, 10; Le Quien, in *Oriens Christianus*, iii, 1198-1200; Röhricht, *Gesch. d. Kgr. Jerusal.*, 42, 202). On account of the many Egyptian invasions, the Latin archbishopric was removed to Ayās by Pope John XXII in 1320 (Alishan, *Sissouan*, 290).

After the fall of the kingdom of Little Armenia, the power of the Ramaḍān-Oghlu [*q.v.*] and Dhu 'l-Ḳadr-Oghlu [see DHU 'L-ḲADR] gradually spread in Cilicia. Selīm I on his campaign against Egypt in 922/1516 and on his return also preferred to keep to the east of their land (Taeschner, *Anatol. Wegenetz*, ii, 32). Al-Maṣṣīṣa has been Turkish-controlled since that year, in which the decisive battle was fought on Mardj al-Dābiḳ [*q.v.*].

In Kafarbayya, a *khān* was built for caravans passing through in 949/1542 and restored in 1830 by Ḥasan Pasha. The Djayḥān bridge became useless in 1736 when the central arch collapsed; in 1766 this was repaired but was blown up in 1832 on the retreat of the Turkish troops from the fighting at Baylān in order to hold up the advance of Ibrāhīm Pasha's pursuing army. As late as the middle of the 19th century, it could only be crossed by an improvised wooden footbridge.

In modern times, al-Maṣṣīṣa is mentioned mainly by western pilgrims and travellers, who as a rule only spent a short time there. Thus it was visited in 1432 by the Burgundian Bertrandon de la Brocquière ("*Misse-sur-Jehan*"), in the 16th century by P. Belon, 1682 the Mecca-bound pilgrim Meḥmed Edīb, 1695 the Armenian Patriarch of Antiochia Makarios, 1704 Paul Lucas, 1736 Chevalier Otter, 1766 the Dane Carsten Niebuhr, 1813 Macd. Kinneir, 1834 Aucher Eloy, 1836 Colonel Chesney, 1840 Ainsworth and 1853 Victor Langlois, whose reports were exhaustively used by Carl Ritter (*Erdkunde*, xix, 66-115). The "Merges Galles" visited by Ludwig von Rauter on 8 July 1568, is not (as in Röhricht-Meisner, *Deutsche Pilgerreisen nach dem hl. Lande*, 1880, 434, n. 43) al-Maṣṣīṣa, but Merkez Ḳalᶜesi on the Bāb Iskandarūn (Cilic.-Syr. passes). Somewhat fuller descriptions of the recent Miṣṣīṣ and its ancient and mediaeval ruins were given in the 19th century by Langlois, Alishan and at the beginning of the 20th one by Cousin (see *Bibl.*).

The stretch of the Baghdād railway from Dorak south of the Taurus via Adana and Miṣṣīs to Maᶜmūra at the foot of the Amanos was opened on 27 April 1912. As a station on the railway (the station is actually 1½ miles north-west of the place) the town gained a certain strategic importance in the Cilician campaign of the French in 1919-20 (1919: settlement of about 1,200-1,500 Armenians; 27-8 May 1920: futile Turkish blockade of the garrison there, about a company strong; end of July: withdrawal of the troops to Adana; cf. E. Brémond, *La Cicilie en 1919-1920*, in *Rev. Étud., Arm.* [1920], i, 311, 360, 363, 365). After the Turkish occupation, the newly-settled Armenians were probably exterminated in the usual way. The importance of the town has now passed to the neighbouring Ceyhan.

According to the Arab geographers, al-Maṣṣīṣa lay on the Djayḥān (Πύραμος, sometimes confused by the Byzantine authors with the Σάρος, Arabic. Sayḥān, with which it seems to have had at one time a common mouth: George Cedren, ii, 362; Anna Comn., ii, 147), 1-2 days' journey from Bayyas and one from ᶜAyn Zarba and Adhana, 12 *mīls* from the Mediterranean coast. The sea could be seen from the Friday mosque in the town; in front of the town lay a beautiful fertile plain (the ancient 'Αλήιον πεδίον). Al-Maṣṣīṣa lying on the right bank was connected with Kafarbayya by an ancient stone bridge built by Constantius and restored by Justinian. The country round was rich in gardens and cornfields, watered by the Djayḥān. According to Yāḳūt, the town originally had a wall with 5 gates, and Kafarbayya, one with 4 gates. A speciality of the town was the valuable fur-cloaks exported all over the world. Ten miles from al-Maṣṣīṣa, which is somewhat inaccurately placed by Ibn Khurradādhbih, Yāḳūt and others on the Djabal al-Lukkām (Amanus), was the plain of Mardj al-Dībādj, which is often mentioned in the records of the fighting between the Mamlūks and Little Armenia (probably the *ager Mopsuestiae* on which Cicero encamped: *Ad fam.*, iii, 8). In it, to the north-east of the town on the road to Sīs, was the fort of al-ᶜAmūdayn (al-Maḳrīzī, ed. Quatremère, ii/2, 61; cf. Ḳalᶜat al-ᶜAmudayn in Abu 'l-Fidāʾ, *Ann. Mosl.*, ed. Reiske, v, 18; located by Alishān, *Sissouan*, 225-6 too far east in "Hémétié-Kaléssi"). A field of Mardj al-Aṭrākhūn is also mentioned near al-Maṣṣīṣa (Yāḳūt, iv, 487; Ṣafī al-Dīn, *Marāṣid*, iii, 74). Tall Ḥāmid, a strong fortress of the Thughūr al-Maṣṣīṣa, corresponds to the recent Ottoman Ḥāmidiyye, now called Ceyhan (*ZDMG*, xi, 191, 200; Yāḳūt, i, 866; Ṣafī al-Dīn, *Marāṣid*, i, 211; Ibn al-Shiḥna, 339). There also was Tall Ḥūm (Yāḳūt, i, 867; *Marāṣid*, i, 211; Ibn al-Shiḥna, *ibid.*; exact site unknown). Al-ᶜAyn at the foot of the Djabal al-Lukkām, over which the Darb al-ᶜAyn pass went, was also one of the forts of al-Maṣṣīṣa (Yāḳūt, iii, 756; *Marāṣid*, ii, 293); on the frontier against Ḥalab lay Būḳa [*q.v.*; cf. van Berchem, *Voyage en Syrie*, i, 257, 8]. Ḥiṣn Sinān (al-Balādhurī, 165; Yāḳūt, iii, 155) is probably also to be sought near al-Maṣṣīṣa. A pass called Thaniyyat al-ᶜUḳāb, to be distinguished from that of the same name near Damascus, was in the region of al-Maṣṣīṣa (Yāḳūt, i, 936; *Marāṣid*, i, 230). Even the remote fortress of Samālū (on its site cf. Tomaschek, in *Festschrift f. H. Kiepert*, 144) was sometimes reckoned in the Syrian *thughūr* and located near al-Maṣṣīṣa and al-Ṭarsūs (al-Balādhurī, 170: Dhamālū; Yāḳūt, iii, 416;

Marāṣid, ii, 167; Byzantine τὸ κάστρον Σημαλοῦος), al-Ṣafṣāf on the present Sügüdlī-ṣū (*ZDMG*, xi, 180; Reiske on Abu 'l-Fidā', *Annal.*, ii, 649, n. 76, according to Ḥadjdjī Khalīfa: "Ḥiṣn Ṣafṣāf, that is Sögüd") is also reckoned by Yāḳūt (iii, 401) to the marches of al-Maṣṣīṣa. Not far from the town was a Syrian monastery, Gawīkāth (mentioned in *ca.* 1200 A.D.: Barhebr., *Chron. eccles.*, ed. Abbeloos-Lamy, i, 624; in Alishan, *Sissouan*, 295: Djokhath, probably identical with *Joacheth*). The neighbouring fortress of Adamodana (now Tumlu-Ḳalʿe) and Cumbetefort (*in territorio Meloni*, i.e. of Mlun, Ar.: al-Mallūn) were, according to Wilbrand of Oldenburg (*op. cit.*), in *ca.* 1212 in the possession of the Teutonic Order (*Allemani*). The Venetians had a church in al-Maṣṣīṣa (*Gestes des Chiprois*, in *Doc. arm.*, ii, 831). Armenian authors mention there the churches of St. Sarkis, Thoros and Stephan (Alishan, 288-9).

The present Misis is a large village or small town whose population was, according to the 1950 census, 1,177. A stone bridge with nine arches (in Baedeker, *Konstantinopel und Kleinasien*, 1914, 303, wrongly: "five-arched"), the foundations of which are in part ancient (picture in Alishan, *Sissouan*, 289; Lohmann, *Im Kloster zu Sis*, 15), leads to the left bank of the Djayḥān where pieces of walls and inscriptions still mark the site of the ancient Mopsuestia. Here lay the mediaeval Kafarbayya; while this form is the one in general use in Arabic texts and in modern authors, Ḥādjdjī Khalīfa (*Djihān-numā*, Constantinople 1145/1732, 602) has Kafarbinā (Taeschner, *op. cit.*, 145, 1), as Langlois (*Voyage*, 462) and others apparently heard it on the spot. The name is unknown there now (Heberdey-Wilhelm, *Denkschr. Ak. Wien*, xliv, part vi, 11-12; the Turkish General Staff map in the German version of July 1918, Adana Sheet, calls the two halves of the town "Misis Nahijesi" and "Huranije"). According to Ibn al-Shiḥna, 179, Kafarbayya was also called "Little Baghdād".

Misis lies where the river emerges from a gorge with walls of yellow loess at which the last foothills of the highlands between the Sayḥān and Djayḥān in the north-west and the Djabal Nūr (Nur Dagh, 2,200 feet; picture in Alishān, 284), a part of the Djabal Miṣṣīṣ (*Stadiasm. mar. magn.*: Πάριον ὄρος), in the south-east meet. This ridge, which takes its name from the town, lying in the centre of the Cilician plain on the left bank of the lower Djayḥān and linked up with the Amanus in the east, is celebrated, particularly in the Djabal Nūr, for its rich flora, which was studied by the Austrian Theodor Kotschy on 24-6 April 1859. On account of its medicinal herbs, Ibn al-Rūmiyya in his commentary on the book of Dioscurides says that many writers took al-Maṣṣīṣa to be the city of the wise Hippocrates (Ibuḳrāt) who, however, according to others, belonged to Ḥimṣ (Mufaḍḍal b. Abi 'l-Faḍā'il, in *Patrol. Orient.*, xiv, 393; Ibn al-Shiḥna, 180).

Near the mouth of the Djayḥān, which at one time was navigable for small ships up to al-Maṣṣīṣa, lay al-Mallūn, the site of which is not known (Μαλλός; now rather Bebeli than Ḳaraṭash; cf. R. Kiepert, *Form. orb. antiqu.*, viii, text, 19a). The Frankish writers also speak of a *portus de Mamistra* (Raimundus de Aigulers, *Historia Francor. qui ceperunt Iherusalem*, c, xi; cf. *Doc. arm.*, i, p. xlvi, n. 1), probably on the *fauces fluminis Malmistrae*, where al-Idrīsī mentions the place al-Buṣā (*ZDPV*, viii, 141; Tomaschek, *SB Ak. Wien*, cxxiv [1891], fig. viii, 69, writes al-Būṣā).

MASTŪDJ, village, fort, and district in the upper Yārkhūn valley formerly included in the Dīr, Swāt and Čitrāl Political Agency of the North-West Frontier Province of British India and now in Pakistan. It apparently formed part of the ancient territory of Syāmāka (Sylvain Lévi, in *JA*, ser. 11, vol. v, 76; and H. Lüders, *Weitere Beiträge zur Geschichte und Geographie von Ostturkestan*, 1930, 29 ff.). Stein identifies Mastūdj with the territory of Čü-wei or Shang-mi which was visited by the Chinese pilgrim Wu-k'ung in the 8th century A.D. (*Ancient Khotan*, Oxford 1907, i, 15-16, *Serindia*, i, 18). An inscription discovered at Barenis points to the fact that Mastūdj

was included in the dominions of the Hindūs̲h̲āhiyya dynasty of Wayhind [see HINDŪ-S̲H̲ĀHĪṢ]. The village of Mastūd̲j̲ lies at an altitude of 7,800 feet, and is 71 miles north-east of Čitrāl town and to the west of Gilgit [q.v. in Suppl.].

The history of Mastūd̲j̲ is closely connected with that of Čitrāl [q.v.]. British relations with these two states arose as a result of their relations with Kas̲h̲mīr, which state recognised British suzerainty in the year 1846. During the viceroyalty of Lord Lytton, it was deemed expedient, in view of Russian military activities in Central Asia, to obtain a more effective control over the passes of the Hindū Kūs̲h̲. With this objects in view, the Māharād̲j̲a of Kas̲h̲mīr was encouraged to extend his authority by means of peaceful penetration over Čitrāl, Mastūd̲j̲ and Yāsīn. (The fullest account of early British relations with these states is to be found in Foreign Office mss. no. 65, 1062.) After the introduction of Lord Curzon's tribal militia scheme, Mastūd̲j̲ became the headquarters of the Čitrālī irregulars.

MASʿŪD B. MAḤMŪD, ABŪ SAʿĪD, S̲H̲IHĀB AL-DAWLA, D̲J̲AMĀL AL-MILLA, etc., sultan of the G̲h̲aznawid [q.v.] dynasty, reigned 421-32/1030-40.

The eldest son of the great Maḥmūd b. Sebüktigin [q.v.], he was born in 388/998. In 406/1015-16, as *walī ʿahd* or heir apparent, he was made governor of Harāt and in 411/1020 led an expedition into the still-pagan enclave of G̲h̲ūr [q.v.] in central Afg̲h̲ānistān. When in 420/1029 Maḥmūd annexed the northern Būyid amirate of Ray and D̲j̲ibāl and attacked the Kākūyids [q.v.] of Iṣfahān and Hamad̲h̲ān, Masʿūd was placed in charge of these operations in western Persia.

Shortly before his death, Maḥmūd had changed his mind and made another son, Abū Aḥmad Muḥammad, his heir, despite the latter's lack of experience as compared with Masʿūd. When Maḥmūd died in Rabīʿ II 421/April 1030, Muḥammad accordingly succeeded in G̲h̲azna, but was unable to retain support there when Masʿūd marched eastwards with his army, and later that summer, Muḥammad was deposed, sent into captivity and succeeded by Masʿūd as sultan in G̲h̲azna (S̲h̲awwāl 421/October 1030), receiving caliphal confirmation and a grant of fresh *alḳāb* or honorific titles from Bag̲h̲dād.

Masʿūd's aim was doubtless to carry on his father's tradition of military conquest, but he was in fact less able than Maḥmūd and faced problems which demanded qualities of skill and foresight which he did not possess. Masʿūd in 422/1031 successfully intervened in a succession dispute in the client state of Makrān [q.v.], and in 426/1035 asserted his authority in Gurgān and Ṭabaristān, where the local ruler Abū Kālīd̲j̲ār was two years in arrears with tribute. In India, raids were made into Kas̲h̲mīr (424/1032-3), but policy regarding India in the middle years of his reign was taken up with lengthy operations against the rebellious commander of the army of India at Lahore, the Turkish officer Aḥmad Inaltigin, against whom Masʿūd appointed as his commander the Hindu Tilak (424-6/1033-5). When order was restored in the Pand̲j̲āb, the sultan in 427/1036 led a successful expedition against Hānsī, leaving his son Mad̲j̲dūd as governor in the Pand̲j̲āb.

This concentration on India meant that Masʿūd could not give adequate attention to the western parts of the empire, where the situation grew increasingly menacing. On the death in 423/1032 of the G̲h̲aznawid governor in K̲h̲ʷārazm, the K̲h̲ʷārazm-S̲h̲āh Altuntas̲h̲ [q.v.], that distant province, which had been annexed by Maḥmūd less than twenty years before, fell away from G̲h̲aznawid control under less amenable governors there. The loss of this outpost, guarding approaches from the steppes to northeastern Persia, hampered Masʿūd in dealing with the incursions of the Turkmens led by the Sald̲j̲ūḳ family, who had been repulsed from Harāt and Farāwa early in the reign but who were by 425/1033-4 making systematic raids into K̲h̲urāsān. Although the G̲h̲aznawid armies were better armed, they lacked the mobility of the Turkmen cavalrymen, who were able to defeat a G̲h̲aznawid army under the Ḥād̲j̲ib Begtog̲h̲dī in 426/1035, and then temporarily to occupy Balk̲h̲ and Nis̲h̲āpūr whilst Masʿūd was involved in India (429-31/1038-9). The sultan mounted a final effort against the Sald̲j̲ūḳs, but in the desert, en route for Marw, was decisively defeated at Dandānḳān [q.v. in Suppl.] (Ramaḍān 431/May 1040).

Masʿūd's prestige and military reputation were now shattered. Fearing that even eastern Afg̲h̲ānistān and G̲h̲azna might fall to the Sald̲j̲ūḳs, he resolved to leave for India, but after crossing the Indus his army rebelled at the *ribāṭ* of Mārīkala, deposed him and soon afterwards killed him, having set up his brother Muḥammad again for a brief second reign (Rabīʿ II 432/December 1040), before Masūd's son Mawdūd [q.v.] was able to avenge his father.

The verdict of contemporaries such as the official Abu 'l-Faḍl Bayhaḳī [q.v.] was that Masʿūd was inferior in capability and determination to his father; his advisers complained of this capriciousness and lack of sound judgement. But in retrospect, one may well conclude that the G̲h̲aznawid empire had reached a high point by the end of Maḥmūd's reign which no successor of his, however competent, could have sustained.

Bibliography: The primary sources are copious; they include Gardīzī, Bayhaḳī, Ibn Bābā al-Ḳās̲h̲ānī, Ibn al-At̲h̲īr, D̲j̲ūzd̲j̲ānī and Sayf al-Dīn Faḍlī ʿUḳaylī's *Āt̲h̲ār al-wuzarāʾ*. Of secondary sources, see W. Barthold, *Turkestan down to the Mongol invasion*, London 1928, 293-303; M. Nāẓim, *The life and times of Sulṭān Maḥmūd of G̲h̲azna*, Cambridge 1931, index s.v.; R. (C. E. BOSWORTH)

MASʿŪD B. MAWDŪD B. ZANGĪ, ʿIZZ AL-DĪN, fifth Zangid Atābak of al-Mawṣil (Mosul) (576-89/1180-93).

Masʿūd's public career was entangled from beginning to end with that of his great adversary Ṣalāḥ al-Dīn, and it is easy to regard him as no more than a troublesome shadow in the latter's path. But Masʿūd had a positive policy of his own—to maintain, under his leadership, the legacy of Zangī and Nūr al-Dīn in

North Syria and the Djazīra. Though he had neither the material resources nor the political imagination to block Ṣalāḥ al-Dīn's ambitions altogether, he nevertheless proved a tenacious opponent, and in the end was able to retain in the hands of his family al-Mawṣil and the core districts of Diyār Rabīᶜa. We should also note that he seems to have enjoyed the active support of his subjects, whose energy and stubbornness were decisive factors in the defence of al-Mawṣil in 581/1185.

Like every other Syro-Djazīran prince of the 6th/12th century, Masᶜūd operated within the framework of a family confederation. Once he came to the throne of al-Mawṣil, he was the senior member of a group of Zangid princes, but he had little capacity to intervene in the affairs of their appanages or to compel them to accept his leadership. At the time of his accession in 576/1180, Ḥalab (Aleppo) was held by his cousin al-Ṣāliḥ Ismāᶜīl b. Nūr al-Dīn Maḥmūd; Djazīrat Ibn ᶜUmar by his nephew Muᶜizz al-Dīn Sandjar Shāh b. Sayf al-Dīn Ghāzī II; and Sindjār by his younger brother ᶜImād al-Dīn Zangī II. But with Ṣalāḥ al-Dīn's occupation of Aleppo (Ṣafar 579/June 1183), Zangid rule was restricted to the principalities of al-Mawṣil (always the principal one), Sindjār and Djazīrat Ibn ᶜUmar. These three towns remained in fact the main elements of the Zangid conferation down to its end in the early 7th/13th century. As always in such political formations, the princes were seldom united among themselves, and Ṣalāḥ al-Dīn played with great skill on the petty ambitions of Sandjar Shāh and ᶜImād al-Dīn Zangī II. On the other side, Masᶜūd hoped to establish a close supervision over his relatives, but Ṣalāḥ al-Dīn's presence prevented that.

Masᶜūd began his career in the service of his older brother, Sayf al-Dīn Ghāzī II (565-76/1170-80). He was commander of al-Mawṣil's contingent at the disastrous battle of Ḳurūn Ḥamāt (Ramaḍān 570/April 1175), which marked Ṣalāḥ al-Dīn's first great military triumph in Syria, and was likewise present at the equally unfortunate Tall al-Sulṭān the following year, though on this occasion his brother Ghāzī was in command.

After this we hear nothing of Masᶜūd until the death of Ghāzī (Ṣafar 576/June 1180). Ghāzī had intended to name his twelve-year-old son Sandjar Shāh to succeed him, but was persuaded by the *amīr* Mudjāhid al-Dīn Ḳāymāz—the éminence grise of Zangid politics throughout this period—to assign al-Mawṣil to his brother Masūd and to compensate Sandjar Shāh with Djazīrat Ibn ᶜUmar. In spite of these beginnings, Masᶜūd's succession went without incident and was never seriously challenged throughout his reign.

Masᶜūd now had the primary responsibility for checking Ṣalāḥ al-Dīn's evident ambitions, and the first six years of his reign were almost entirely taken up with this problem. The first crisis came with the death of al-Ṣāliḥ Ismāᶜīl of Aleppo (Radjab 577/December 1181). Ismāᶜīl bequeathed Aleppo to his cousin Masᶜūd as the only Zangid prince with sufficient resources to hold the city. Masūd in fact did occupy Aleppo during the winter of 577/1182. But he soon negotiated an exchange of Aleppo for Sindjār with his younger brother ᶜImād al-Dīn Zangī II. Ibn al-Athīr states that the reason was Zangī's threat to turn Sindjār over to Ṣalāḥ al-Dīn; equally a factor, no doubt, was Masᶜūd's desire to consolidate his territories around al-Mawṣil. The exchange was consummated in Muḥarram 578/May 1182, and at once provoked Ṣalāḥ al-Dīn's great Syro-Djazīran campaign of the same year. Al-Mawṣil was subjected to a short siege in the autumn of 578/1182, but far more important was Ṣalāḥ al-Dīn's capture of a string of major Djazīran towns, including Sindjār itself. Masᶜūd's effort to assemble a defensive alliance (including Ḳuṭb al-Dīn Il-Ghāzī of Mārdīn and the Shāh-Arman of Khilāṭ) failed, and in the spring of 579/1183 Ṣalāḥ al-Dīn captured Āmid and Aleppo. The latter city was taken through negotiations with Zangī, and this prince was compensated with the restoration of his old seat of Sindjār together with several other towns. Masᶜūd's strategy had thus utterly failed; he was now isolated, while Ṣalāḥ al-Dīn had gained a powerful new client in ᶜImād al-Dīn Zangī II. Worse, a moment of turbulence in the palace politics of al-Mawṣil caused Masᶜūd to lose control of a traditional client-state in Irbil, whose ruler also went over to Ṣalāḥ al-Dīn.

At this juncture, Masᶜūd sought the support of the powerful Atābak of al-Djibāl and Ādharbāydjān, Pahlawān Muḥammad b. Eldigüz [see ILDEÑIZIDS]. Pahlawān never really intervened effectively in the region, but the possibility that he might seems to have induced a certain caution in Ṣalāḥ al-Dīn's policy until his death early in 582/1186.

In the spring of 581/1185, Ṣalāḥ al-Dīn launched his last offensive in the Djazīra; among his allies this time was Sandjar Shāh of Djazīrat Ibn ᶜUmar. He was hoping for an easy victory over a presumably demoralised Masᶜūd, but it did not happen. The garrison and townspeople of al-Mawṣil put up a spirited defence, and the caliph's envoys made it quite clear that Ṣalāḥ al-Dīn's venture did not enjoy the support of Baghdād. Finally, a grave illness forced Ṣalāḥ al-Dīn to withdraw to Ḥarrān in late autumn, and negotiations throughout the winter at length led to a treaty in Dhu 'l-Ḥidjdja 581/March 1186. Masᶜūd would retain al-Mawṣil and would have full autonomy in internal affairs, but he would recognise Ṣalāḥ al-Dīn's supremacy in the *khuṭba* and *sikka* and would supply him with military aid as demanded. These terms did in fact govern relations between the two princes for the rest of their lives. Masᶜūd's support to Ṣalāḥ al-Dīn during the reconquest and the Third Crusdade even earned for him permission to attack his troublesome nephew Sandjar Shāh in Djazīrat Ibn ᶜUmar in 587/1191. He did not succeed in taking the city, but did compel Sandjar Shāh to concede him half his lands.

With Ṣalāḥ al-Dīn's death (Ṣafar 589/March 1193), Masᶜūd hoped to recoup the fortunes of his house. Joining forces with Zangī of Sindjār, he moved to occupy as much of the Djazīra as possible. But before any major results could be achieved, Masᶜūd fell ill and returned to al-Mawṣil. Meantime, Ayyūbid forces under al-ᶜĀdil were able to compel the hapless Zangids to make a quick peace before they suffered irreparable territorial losses. After an illness of some two months, Masᶜūd died on 29 Shaᶜbān 589/30 August 1193. He left al-Mawṣil to his son Nūr al-Dīn Arslān Shāh (d. 607/1211), who would be the last effective ruler among the Zangid Atābaks of al-Mawṣil.

Bibliography: The Arabic sources for ᶜIzz al-Dīn Masᶜūd are essentially those for Ṣalāḥ al-Dīn. Of particular importance are Ibn al-Athīr, *Atabegs*, ed. Ṭulaymāt, Cairo 1963, and with a French translation by Barbier de Meynard in *RHC, historiens orientaux*, ii, 1876; *idem*, *al-Kāmil*, xi-xii, *passim*; Ibn Khallikān, *Wayfayāt al-aᶜyān*, ed. I. ᶜAbbās, Beirut 1972, nos. 236, 521, 721 (Ibn Khallikān follows Ibn al-Athīr closely but adds

some fresh details). Modern works: the Zangid background is given in N. Elisséeff, *Nūr al-dīn*, 3 vols., Damascus 1967; of the many works on Ṣalāḥ al-Dīn, the most useful are A. Ehrenkreutz, *Saladin*, Albany, N.Y. 1972, and M. C. Lyons and D. E. P. Jackson, *Saladin*, Cambridge 1982. On the later Zangids, see R. S. Humphreys, *From Saladin to the Mongols*, Albany 1977, *passim*. There are no specialised monographs or articles on Masʿūd.

(R. Stephen Humphreys)

MASʿŪD b. MUḤAMMAD b. MALIK-SHAH, Abu 'l-Fatḥ Ghiyāth al-Dunyā wa 'l-Dīn, Saldjūḳ sultan in ʿIrāḳ and western Persia 529-47/1134-52.

Like the other sons of Muḥammad b. Malik-Shah [*q.v.*], Masʿūd was entrusted as a child to the tutelage of Turkish Atabegs [see atabak], latterly with Ay-Aba Djuyūsh Beg acting thus, and given the appanage of Ādharbāydjān and al-Djazīra; at Djuyūsh Beg's prompting, Masʿūd unsuccessfully rebelled in 514/1120 at the age of 12 against his elder brother Sultan Maḥmūd b. Malik-Shāh [*q.v.*], but was pardoned.

When Maḥmūd died in 525/1131, a period of confusion ensued, during which various Saldjūḳ princes contended for power: Maḥmūd's son Dāwūd, and his brothers Masʿūd (with a power base in ʿIrāḳ), Saldjūḳ-Shāh (in Fārs and Khūzistān) and Ṭoghrīl (the preferred candidate of the ruler in the east, Sandjar [*q.v.*]). After complex military operations and several changes of fortune, Ṭoghrīl secured the throne, but died in 529/1134 after a reign of only two years, and Masʿūd was then proclaimed sultan by the *amīrs* of ʿIrāḳ.

Masʿūd now began a reign of 20 years, the longest of any sultan since Malik-Shāh's day, relying for his vizier first of all on Anūshirwān b. Khālid [*q.v.*], then on ʿImād al-Dīn Darguzīnī and then on the former treasurer Kamāl al-Dīn Muḥammad. Masʿūd's effective power was confined to central ʿIrāḳ and Djibāl, and for many years, his nephew Dāwūd, installed in Ādharbāydjān, remained a potential rival. Then after Dāwūd's death in 538/1143-4, northwestern Persia was in the hands of powerful and ambitious Turkish *amīrs*, by the end of Masʿūd's reign, in those of Eldigüz or Ildeñiz [*q.v.*] of Arrān and most of Ādharbāydjān, Atabeg of Arslan b. Ṭoghrīl (the later sultan), and Aḳ Sunḳur Aḥmadīlī of Marāgha, both of whom were to found Atabeg lines in the region [see aḥmadīlīs and ildeñizids]. Fārs was under the control of Masʿūd's enemy, the *amīr* Boz-aba, until the sultan defeated and killed him in 542/1147-8, having before his death espoused the cause of Maḥmūd b. Muḥammad's two sons Muḥammad [*q.v.*] and Malik-Shāh [see malik-shāh. 3].

Within ʿIrāḳ, Masʿūd asserted his authority at the outset by deposing the ʿAbbāsid caliph al-Rāshid [*q.v.*] in 530/1130 after disputes over the caliph's non-payment of tribute due to the Saldjūḳ. This marked the apogee of the sultan's influence in ʿIrāḳ, for the new caliph al-Muḳtafī [*q.v.*] gradually proved to be a much more powerful and effective force in Baghdād. Masʿūd, meanwhile, had over the next years to deal with various hostile coalitions involving at times the caliph, the sons of the Mazyadid of Ḥilla Dubays, the Turkish *amīr* of Mawṣil Zangī b. Aḳ Sunḳur, and his own brothers and their Atabeg backers. Despite some successes, the combined strength of the Turkish *amīrs* restricted his freedom of action. They compelled him in 533/1139 to dismiss his vizier Kamāl al-Dīn Muḥammad. In the latter part of his reign, he fell more and more under their control, with much of the land in his dominions appropriated by the *amīrs* as *iḳṭāʿ*s, thus reducing the sphere of his direct control and consequently his financial resources. He was now increasingly forced to accept nominees of the *amīrs* for the vizierate and other high offices of state. Masʿūd defeated a coalition of discontented *amīrs* in 542/1147 and killed a major thorn in his flesh, Boz-aba; but jealousy of the sultan's favourite, the *amīr* Khāṣṣ Beg Arslan, provoked further warfare in the next year, with the rebel group endeavouring, unsuccessfully, to place Malik-Shāh b. Maḥmūd on the throne in Baghdād. Masʿūd later gave him one of his daughters in marriage and made him his heir, and when Masʿūd died at Hamadhān on 11 Djumādā 547/13 September 1152, Malik-Shāh succeeded briefly to power as the protégé of Khāṣṣ Beg. Ibn al-Athīr regards the fortunes of the Saldjūḳ dynasty as going into steep decline on Masʿūd's death.

MASʿŪD BEG, minister in Central Asia of the Mongol *Khān*s in the 13th century A.D.

Soon after 1238, in the reign of the Great Khān Ögedey (1227-41), parts of Transoxania and Mogholistān [*q.v.*] (the region of the steppes to the north of Transoxania) were ceded to Čaghatay as an *indjü* or appanage [see čaghatay khān and mā warāʾ al-nahr. 2. History]. Masʿūd Beg's father Maḥmūd Yalawač [*q.v.*] was transferred from his governorship of the sedentary population of Transoxania and Mogholistān to China, and the son then appointed to succeed him there. Indeed, according to Rashīd al-Dīn, tr. J. A. Boyle, *The successors of Genghis Khan*, New York and London 1972, 94, cf. 183, 218, Masʿūd Beg administered the affairs of the entire sedentary population, sc. all but the nomadic Turks and Mongols, throughout Inner Asia from Khʷārazm to Kāshgharia and Uyghuria, Muslims and non-Muslims alike. Djuwaynī praises him for his just rule over the Muslims of Transoxania. His benefactions included such buildings as the Khāniyya *madrasa* (built by him with money given by the Christian Queen Sorḳotani, widow of Toluy and mother of Möngke Khān and Hülegu) and the Masʿūdiyya *madrasa*, both situated near the Rīgistān of Bukhārā, and also, it seems, the Masʿūdiyya *madrasa* in Kāshghar (Djuwaynī-Boyle, i, 108).

Masʿūd Beg remained governor of Inner Asia under Möngke and Batu, during the civil strife of Alghu and Berke and after the victory of Ḳaydu over his rivals in 1269, showing remarkable powers of survival. He died in 1289 and was buried in the rebuilt Bukhārā Masʿūdiyya. He was succeeded in turn as minister to the Khāns by his three sons, the first two under Ḳaydu till the latter's death in 1301, and the

third in Kā<u>sh</u><u>gh</u>ar under Ḳaydu's son and successor Čapar.

MASᶜŪD-I SAᶜD-I SALMĀN, eminent Persian poet of the 5th/11th century (*ca.* 440/1046 to *ca.* 515/1121-2) who early and late in his life enjoyed position and fame at the <u>Gh</u>aznawid court, but spent some eighteen years of his maturity in onerous imprisonment. As a poet, he is most famous for the powerful and eloquent laments he wrote from his various places of incarceration [see ḤABSIYYA in Suppl.].

Masᶜūd-i Saᶜd was born in Lahore to a family of means and education. The family's original home was Hamadān, but had been settled in the region long enough for his father to have become a responsible official at court. About Masᶜūd-i Saᶜd's early life no reliable information survives. He makes his first dateable appearance in 460/1076-7 as a panegyrist in the retinue of prince Sayf al-Dawla Maḥmūd, son of the ruling sultan (Ẓahīr al-Dawla Ibrāhīm [see <u>GH</u>AZNAWIDS]), who was appointed governor-general of India in that year. The *ḳaṣīda-yi madīḥa* which Masᶜūd-i Saᶜd composed on that occasion is the work of a mature and accomplished poet. By his own assertion in other poems from about this period, he was also a brave warrior, and a responsible and highly-regarded member of the prince's court. In about his fortieth year, Masᶜūd-i Saᶜd went to <u>Gh</u>azna to reclaim land that had been seized from him by persons unspecified in the sources. While there, he fell under suspicion, and possibly more because of the suspected disloyalty of his patron than of his own, he was imprisoned. This period of imprisonment, which he spent in the fortresses of Sū, Dahak and Nāy, lasted some ten years despite the repeated entreaties of a number of officials friendly to the poet, and the supplications of Masᶜūd-i Saᶜd himself.

He was released early in his reign by sultan Ibrāhīm's successor, ᶜAlāʾ al-Dawla Masᶜūd (III) who also made the poet curator of the royal library. Masᶜūd-i Saᶜd also enjoyed the patronage of Abū Naṣr-i Fārsī, deputy to the current governor of India, ᶜAḍud al-Dawla Shīrzād, and was appointed by him to the governorship of <u>D</u>jālandhar/Čālandhar, a dependency of Lahore. When shortly thereafter Abū Naṣr-i Fārsī was disgraced and fell from favour, his protégé suffered a like fate and was again imprisoned, this time in the Indian fortress of Maran<u>dj</u>, and for a period of eight or more years.

Masᶜūd-i Saᶜd was released from his second and final period of incarceration in *ca.* 500/1106-7, shortly after the opening of the reign of Sultan Masᶜūd's successor, Kamāl al-Dawla <u>Sh</u>īrzād, but he remained in obscurity throughout both his reign and that of his successor, Sulṭān al-Dawla Arslān <u>Sh</u>āh. Only toward the close of his life, with the beginning of the reign of Yamīn al-Dawla Bahrām <u>Sh</u>āh, a notable patron of literature, did the now aged poet once again enjoy the recognition that his poetic talents merited.

Masᶜūd-i Saᶜd was a skilful court panegyrist who continued the style of his eminent predecessors, ᶜUnṣurī, Farru<u>kh</u>ī and Manūčihrī [*q.vv.*]. His work does not reflect either the shift toward mystical subjects nor the more complex metaphorical structure that can be seen in the poetry of his contemporaries Sanāʾī and Azraḳī. His panegyrics have a special interest for the historian because they contain a measure of historical data about a period for which other sources are rare. However, his most enduring contribution as a poet has been his prison poems (*ḥabsiyyāt*), in which, through the skilful deployment of conventional language, he conveys with originality and power the wretchedness of his days. One hears in these poems that intensely personal voice whose lack is so frequently decried in studies of Persian poetry.

Bibliography : The notices of Masᶜūd-i Saᶜd-i salmān in mediaeval *Ta<u>dh</u>kiras* are not to be trusted, and the only reliable source for his biography is his *Dīwān*, which has been capably edited by Ra<u>sh</u>īd Yāsimī, Tehran 1338/1939, and frequently reprinted. Although he boasted of his knowledge of Arabic, no Arabic poetry by him has survived. The best study of his life and work remains that of Mīrzā Muḥammad b. ᶜAbd al-Wahhāb Ḳazwīnī, *Masᶜūd-i Saᶜd-i Salmān. Translated by E. G. Browne*, in *JRAS* (1905), 693-740, and (1906), 11-15. C. E. Bosworth makes a number of comments on the life of Masᶜūd-i Saᶜd and the general literary situation at the <u>Gh</u>aznawid court in his *The Later Ghaznavids, splendour and decay: the dynasty in Afghanistan and northern India 1040-1186*, Edinburgh 1977. There is a lengthy chapter on his imagery in M. <u>Sh</u>afīᶜī-Kadkanī, *Ṣuwar-i <u>kh</u>iyāl dar <u>sh</u>iᶜr-i Fārsī*, Tehran 1350/1971.

(J. W. Clinton)

MASᶜŪD, Sayyid Sālār, called <u>Gh</u>āzī Miyān, a legendary hero and martyr of the original Muslim expansion into the Gangetic plain of India.

He is alleged to have been the son of a sister of Sultan Maḥmūd of <u>Gh</u>azna [*q.v.*], to have been born at A<u>dj</u>mēr [*q.v.*] in 405/1014, and to have been killed in battle against Hindu idolaters, aged 19, in 424/1033. His tomb is on a pre-Muslim sacred site in Bahraič, in the sub-Himalayan plain of northern Uttar Pradesh, and is the centre of a widespread cult. The hero-cult was well-established by the beginning of the 8th/14th century, and is succinctly described by Ibn Baṭṭūṭa. The Sultans Muḥammad b. Tu<u>gh</u>luḳ and Fīrūz <u>Sh</u>āh Tu<u>gh</u>luḳ visited the tomb. The procession of the hero's *nēza* ("lance", a tall tufted pole) was prohibited by Sultan Sikandar Lodī (d. 923/1517) but remains a highlight of the annual festival (cf. similar poles of Lāl Beg of the Čuhŕās, and of <u>Sh</u>āhbāz Ḳalandar at Sehwan). The myth of Sālār Masᶜūd was elaborated in Persian in the early 11th/17th century in the *Mirʾāt-i Masᶜūdī*, a heroic romance which owes something to the *Dāstān-i Amīr Ḥamza* though it strives for a greater air of historical authenticity. <u>Gh</u>āzī Miyān's cult extends to Bengal and the Pan<u>dj</u>ab, probably sometimes conflated with the cult of other local Muslim *<u>sh</u>ahīd*s. The main *ᶜurs* or death anniversary is celebrated on the first Sunday of the solar month of <u>D</u>jye<u>sh</u>t'ha/<u>D</u>jet'h, between 14 and 21 May, but an *ᶜurs* is also mentioned on the significant date of 11 Muḥarram. The martyr-cult is combined with a fertility-cult (cf. the secondary sexual symbolism of the pole, and the "mystic-marriage" implication of *ᶜurs*). Legends and songs of the marriage of <u>Gh</u>āzī Miyān before his last battle are widely distributed and were sung at Muslim weddings. At an extreme popular level a conflation may occur (e.g. in west Nepal), with the celebration of the martyrdom of Ḥusayn at Karbalā, with the bridegroom figure of Ḳāsim b. Ḥasan, lamented in Indian *mar<u>th</u>iyas*. The *ᶜurs* of <u>Gh</u>āzī Miyān is celebrated by lower-class Hindus as well as Muslims. Mendicant followers of <u>Gh</u>āzī Miyān carry a *daff* (tambourine) and are known as *dafālī faḳīrs*.

AL-**MASʿŪDĪ**, ABU 'L-ḤASAN ʿALĪ B. AL-ḤUSAYN, Arab writer whose activity, in the words of Brockelmann (in *EI*[1], s.v.) "has been undertaken outside the well-trodden paths of professional scholarship", with the result that he has been rather neglected by biographers and copyists and that a normally well-informed writer like Ibn al-Nadīm, who has obviously not read his works, takes him (*Fihrist*, 154) for a Maghribī and devotes to him only a short, moreover probably truncated, article. In fact, the only reliable account which is available concerning the biography of this eminent individual must be drawn from his two surviving works, the *Murūdj al-dhahab* (abbreviated here as *M*, refering to Pellat's edition-translation) and the *Tanbīh* (ed. De Goeje = *T*).

Al-Masʿūdī was born in Baghdād (*M*, 987; *T*, 19, 42) into a Kūfan family which traced back its generalogy and connected its *nisba* to the Companion Ibn Masʿūd [*q.v.*]. He himself does not record his ancestry in entirety, but it could well be as follows (see Ibn Ḥazm, *Djamharat ansāb al-ʿArab*, ed. Cairo 1962, 197; Ibn Khaldūn, *ʿIbar*, ii, 319): ʿAlī b. al-Ḥusayn b. ʿAlī b. ʿAbd Allāh (*M*, § 522) b. Zayd b. ʿUtba b. ʿAbd al-Raḥmān b. ʿAbd Allāh b. Masʿūd (for the rest of the genealogy, see Ibn al-Kalbī-Caskel, *Djamhara*, Tab. 58: Hudhayl, who does not however allot to ʿAbd al-Raḥmān a son named ʿUtba). The date of his birth is unknown; however, if we are to take literally the expression (*ḥaddatha-nā*) preceding the reference (*T*, 254) to Ibrāhīm b. ʿAbd Allāh al-Kashshī (d. 292/904) or that (*shāhadnā*) which is used (*T*, 396) to introduce a series of authorities which includes al-Nāshiʾ (d. 293/906 [*q.v.*]), he must have been born no later than some years before 280/893, and not *ca.* 283/896, as is suggested by A. Shboul (*Al-Masʿūdī and his world*, London 1979, p. xv).

His youth was spent in Baghdād, but he gives no information regarding the development of his studies. From a reading of the *M.* and *T.*, it may however be deduced that he had the opportunity, during the period of his religious, judicial and literary education, to attend classes given by a number of eminent teachers who died in the early years of the 4th century, notably (*T.*, 296) Wakīʿ (d. 306/918 [*q.v.*]), (*M*, § 2242) al-Faḍl b. al-Ḥubāb (d. 305/917 [*q.v.* in Suppl.]), (*M*, §§ 159, 2282) al-Nawbakhtī (d. at the beginning of the 4th century [*q.v.*]), (*T*, 396) Abū ʿAlī al-Djubbāʾī (d. 303/915, see AL-DJUBBĀʾĪ), (*M*, § 3382) al-Anbārī (d. 304/916 [*q.v.*]); he may also have been acquainted at this time with: (*T*, 267) al-Ṭabarī (d. 310/923 [*q.v.*]), (*M*, *passim*) al-Zadjdjādj (d. 311/924 [*q.v.*]), (*T*, 396) Abu 'l-Ḳāsim al-Balkhī (d. 319/931, see AL-BALKHĪ), (*M*, § 764) Ibn Durayd (d. 321/934 [*q.v.*]), (*T*, 396) al-Ashʿarī (d. 324/935 [*q.v.*]), (*M*, *passim*) Nifṭawayh (d. 323/934 [*q.v.*]), and others besides; it is also known that in 306/918 (al-Subkī, *Ṭabaḳāt al-Shāfiʿiyya*, ii, 307) he was present at the death bed of Ibn Suraydj [*q.v.*]. It would be tedious to list the personalities with whom he associated in the course of his career, but a further exception is to be made in the case of (*M*, § 3382) Djaʿfar b. Muḥammad b. Ḥamdān al-Mawṣilī (d. 323/934; see Sezgin, *GAS*, ii, 625) and of (*M*, *passim*) Abū Bakr al-Ṣūlī (d. 336/946, see AL-ṢŪLĪ), who seem to have played a particularly important role in his life. The scholars and men of letters cited above represent, at the highest level, the principal disciplines cultivated in this period (see, in this context, A. Shboul, *op. laud.*, 29-44; T. Khalidi, *Islamic historiography*, Albany 1975, 148-50; in the encyclopaedic index which follows the new edition of the *Murūdj*, brief biographies of the contemporary personalities mentioned in this work are to be found).

Whatever may have been the interest and the value of the knowledge thus acquired through direct transmission, an echo of which is also to be found in his work, al-Masʿūdī would never have attained his eminence had he not been endowed with an extraordinary intellectual curiosity which impelled him, on the one hand, to educate himself with books, and, on the other, to enrich his human experience by undertaking long journeys both within and outside the Muslim world. For the composition of his principal surviving work, the *Murūdj*, he had recourse to no fewer than one hundred and sixty-five written sources, including, in addition to Arabic texts, translations of Plato, Aristotle and Ptolemy, as well as Arabic versions of monuments of Pahlavi literature. In one paragraph of the *Tanbīh* (154), he mentions Christian authors with whom he was in the majority of cases personally acquainted, and passes judgment on their works; he seems to have had them make translations of or to explain passages which provided documentation for chapters of his own works (e.g. *M*, §§ 523 ff.), and the transcription into Greek characters of the name Helen (*M*, § 735) is proof of his breath of interest and his curiosity.

The latter are also exhibited in the accounts, unfortunately dispersed, of his travels, a topic which raises the question of his profession, which he does not reveal, and thereby of the resources which enabled him not only to live but furthermore to undertake expensive foreign expeditions. By all appearances, he had no connection with regular commerce and he was neither an official representative nor a religious authority who could depend on hospitality from Muslim communities visited. The hypothesis of A. Miquel (*Géographie humaine*, i, 205-6) according to which he could have been an emissary of the Ismāʿīlis seems hard to sustain, and ultimately it has to be assumed that this traveller possessed a personal fortune out of which he met the costs of his travels and that he perhaps drew some profits from the occasional commercial venture.

In 300/912, al-Masʿūdī was still in Baghdād (*M*, § 2161); three years later (303/915), he is found visiting Persia (*T*, 106, 224), then India (*M*, §§ 269, 417-8; *T*, 224); it is hardly probable that he travelled as far as Ceylon and China (*M*, §§ 175, 342) since, when he speaks of these lands, he copies from Abū Zayd or the *Akhbār al-Ṣīn wa 'l-Hind* [*q.v.* in Suppl.]. In 304/916, he returned to his own country by way of ʿUmān and the island of Ḳanbalū (*M*, § 246). From 306 to 316/918-26 he was travelling around ʿIrāḳ and Syria (*M*, § 3326) and it was perhaps during this time that he made his way to Arabia (cf. Shboul, *op. laud.*, 8, 12-13). In 320/932 or a little later he visited the provinces of the Caspian and Armenia (*M*, § 494), then, from 330/941 or 331 onward, he resided in Egypt, where, in 332/943, he composed the *Murūdj* (*M*, § 874

and *passim*), also returning to Syria in the same year (*M*, § 220) and visiting Damascus (*T*, 194) and Antioch (*M*, §§ 704-5) in 334/946. Naturally he visited Alexandria (*M*, §§ 679, 841) and Upper Egypt (*M*, §§ 811-18, 822, 893 ff.). It is in Fusṭāṭ that he seems to have spent his last years, reviewing his works and writing some new ones, in particular the *Tanbīh*, completed in 345/956 (*T*, 401), shortly before his death, which came about in Dj̲umādā II 345/September 956. On his travels, see especially Maqbul Ahmad, *Travels of... al-Masʿūdī*, in *IC*, xxviii (1954), 509-21; A. Shboul, *op. laud.*, 1-28.

It is not known exactly at what period al-Masʿūdī began the composition of his work and committed himself fully to his vocation as a writer, but the titles that he quotes in the *Murūdj̲* suggest that he began with relatively short treatises before embarking on his major works and before turning to account the notes which he must have accumulated in the course of his travels. The first point that commands attention is the care which he devoted to the correction and enrichment of the original versions of his writings, in particular the *Murūdj̲*, of which the first "edition" dates from 332/943 and the last, from 345/956 (*T*, 154). The second point is the fact that this abundant and diverse corpus of work has, in total, been curiously neglected by posterity, with the exceptions, specifically, of the *Murūdj̲*, the success of which has never ceased but of which only the "edition" of 332, revised in 336, has been preserved, and of the *Tanbīh*, which, owing to its conciseness, responds to the Muslim taste for abstracts; a third text that has been attributed to him, the *Ith̲bāt al-waṣiyya*, has survived for obvious reasons (see below) but it is of doubtful authenticity.

The content of the surviving works, which are presented in a historico-geographical framework, shows that this prolific writer has a close interest in various disciplines which are not to be arbitrarily classified as history or geography; since he displays in addition an active sympathy for the *Ahl al-Bayt* and Twelver Imāmī S̲h̲īʿism, it is, to say the least, surprising that the Imāmīs, who mention al-Masʿūdī as one of their partisans, but are principally familiar with the *Murūdj̲* (and subordinately with the *Ith̲bāt al-waṣiyya*), have not devoted their efforts to the preservation of his works, beginning with the most "committed"; in fact, even if it can be understood that his major work, the *Ak̲h̲bār al-zamān*, might not have tempted the copyists on account of its volume, it is hard to see the reason for a general indifference with regard to the majority of his other writings which ought to have been interesting and more easily manageable. While IBn al-Nadīm and later biographers have conscientiously enumerated the works, now lost, of so many less prestigious writers, not one of them has apparently entertained the idea of going through the *Murūdj̲* and the *Tanbīh*, in which thirty-four titles are mentioned, enabling us to establish thirty-six as the total number of al-Masʿūdī's writings. It must be supposed that the article in the *Fihrist* has been truncated by a few lines, because it contains only five titles, whereas Yāḳūt, who revised it and therefore must have known it well, refers to eleven (*Udabāʾ*, xiii, 90-4) and the same number recurs in the work of al-Kutubī (*Fawāt*, ii, 94-5); the S̲h̲īʿī al-Nadj̲ās̲h̲ī (*Ridj̲āl*, 178) increases the number to fourteen, and Ḥādjdj̲ī K̲h̲alīfa (*passim*) to sixteen. Ibn Ḥadjar al-ʿAsḳalānī (*Lisān al-Mīzān*, iv, 224-5) confirms the general impression when he asserts that with the exception of the *Murūdj̲*, copies of the work of al-Masʿūdī are rare. In the West, a number of authors have attempted to compile inventories of his work: De Goeje in the Introduction to his edition of the *Tanbīh* (vi-vii), Carra de Vaux in his translation of the latter (569-70), Sarton in his *Introduction to the history of science* (Baltimore 1927, i, 637-9), Brockelmann (I, 150-2, S I, 220-1), Sezgin (*GAS*, i, 333-4), but more recently, Khalidi (*op. laud.*, 154-64) and Shboul (*op. laud.*, 55-77) have made strenuous efforts, working on the basis of the titles mentioned in *M* and *T* and especially of such references to their content as are available, to identify the subjects of the lost works. When the researcher is confronted by such a discursive writer as al-Masʿūdī, this method is often dangerous, but there is no reason why it should not be used in order to gain an impression of at least some of the questions examined and to establish an approximative classification.

I. A first category comprises works of general culture set in a framework of geography and history or of the latter alone:

1.—*K. Ak̲h̲bār al-zamān wa-man abādahu 'l-ḥidth̲ān min al-umam al-māḍiya wa 'l-adj̲yāl al-k̲h̲āliya wa 'l-mamālik al-dāth̲ira* (before 332/943); the author draws attention in *M* (§§ 1-2) to its general content and refers to it frequently in *M* and *T*, thus giving the impression that it contained a great deal more detail than the two surviving works; history was presented here in the form of annals (*M*, §§ 1498, 3240). The *K. Ak̲h̲bār al-zamān* published in Cairo, in 1938, by Ṣāwī, has nothing in common with that of al-Masʿūdī; it had been translated as early as 1898, under the title *Abrégé des merveilles*, by Carra de Vaux, who considered it a popular work (*JA*, 9th series, vii [1896], 133-44; cf. D. M. Dunlop, *Arab civilization to AD 1500*, London-Beirut 1971, 110 ff.).

2.—*K. Rāḥat al-arwāḥ* (before 332/943); despite the title, it is a supplement to the above-mentioned work and it concerns expeditions and wars (especially those of the mythical kings of Egypt) which did not figure in the preceding (*M*, § 819).

3.—*al-Kitāb al-awsaṭ* (before 332/943); this "Middle book" must have followed the same format as the *Ak̲h̲bār al-zamān*, since it was both an abridgement and a supplement on points of detail. The Oxford and Istanbul mss. mentioned by Brockelmann (in *EI*[1], s.v. AL-MASʿŪDĪ) and Sezgin (*GAS*, i, 334) do not correspond with *al-Kitāb al-awsaṭ* (see Shboul, *op. laud.*, 89, n. 127, who has examined them).

4.—*K. Murūdj̲ al-d̲h̲ahab wa-maʿādin al-dj̲awhar* (*fī tuḥaf al-as̲h̲rāf min al-mulūk wa-ahl al-dirāyāt*, *T*, 1): it is to this work, written in 332/943, revised in 336/947, again in 345/956 (*T*, 97, 110-1, 155-6, 175-6) that al-Masʿūdī owes his reputation. The text of 332-6, the only version that has survived, was published at Būlāḳ in 1283 and in Cairo in 1313, in the margins of the *Nafḥ al-ṭīb* of al-Maḳḳarī in Cairo in 1302 and of the *Kāmil* of Ibn al-Ath̲īr at Būlāḳ in 1303; Muḥyī 'l-Dīn ʿAbd al-Ḥāmīd has made from it an annotated edition which has enjoyed a degree of success (2nd ed. Cairo 1368/1948, 3rd ed. 1377/1958, further ed. by Yūsuf Dāg̲h̲ir, Beirut 1973). As early as 1841, the first volume of an English translation, the work of A. Sprenger, appeared in London, and later Barbier de Meynard and Pavet de Courteille edited and translated the entire text into French (Paris 1861-77, 2nd ed. 1913-30); this work has been extensively exploited by orientalists, notably by Marquart (*Streifzüge*, Leipzig 1903) and A. Seippel (*Rerum normannicarum fontes arabici*, Oslo 1896-1928), who amended it on points of detail; finally. Ch. Pellat has revised the edition-translation by Barbier de Meynard and Pavet de Courteille (5 vols. of text, Beirut 1966-74 and 2 vols. of index in Arabic, Beirut 1979; 3 vols. of

translation, Paris 1962-71, have so far appeared, but the last two and the French index have been complete for some years); this revision has been based on secondary sources rather than on new mss. (which are listed in Brockelmann, I, 151, S I, 220 and Sezgin, i, 334).

Brockelmann (in *EI*[1], s.v.) and other authors have accepted without reservation the interpretation by Gildemeister, who (in *WZKM*, v [1894], 202) asserted that *Murūdj al-dhahab* should be rendered as "gold-washings" rather than "meadows" of gold; taking as a basis the fact that the earth "makes gold to grow" (*tunbit al-dhahab*: *M*, § 796); the author of the present article regards this suggestion as nonsensical, and in this respect is followed by Khalidi (*op. laud.*, 2, n. 2) and Shboul (*op. laud.*, 71).

The *Murūdj* comprise two essential parts. The firs (§§ 34-663) contains "sacred" history up to the time of the Prophet, a survey of India, geographical data concerning seas and rivers, China, the tribes of Turkey, a list of the kings of ancient Mesopotamia, Persia, Greece, Rome, Byzantium, Egypt, and chapters on Negroes, Slavs, Gaul and Galicia. Next come the ancient history of Arabia and articles on the beliefs, the various calendars, the religious monuments of India, of Persia, of the Sabaeans, etc., and a summary of universal chronology. In this first part, which takes up roughly two-fifths of the work, al-Masʿūdī has set down, so as not to have to return to them, generalities regarding the universe and information of a historical nature on non-Muslim peoples (including the pre-Islamic Arabs), In the second part (§§ 664-3661), by contrast, there are only exceptional references to the peoples of countries outside the Islamic world, and it is the history of Islam, from the Prophet up to the caliphate of al-Muṭīʿ, which is recounted; the *khulafāʾ rāshidūn*, the Umayyad "kings" (only ʿUmar b. ʿAbd al-ʿAzīz has a right to the title of caliph, while al-Ḥadjdjādj enjoys special treatment) and the ʿAbbāsid caliphs each form the subject of a chapter in which a brief biographical article is followed by accounts (*akhbār*), anecdotes and digressions on various subjects. In view of the fact that the author declares (§ 3) that this work contains a summary of studies which had been more fully developed in the *Akhbār al-zamān* and *al-Kitāb al-awsaṭ*, as well as supplementary notices on certain points, the table of contents of the *Murūdj* allows an impression to be formed of the general format of these two works, where the points are perhaps presented with greater rigour.

5.—The *K. Waṣl al-madjālis bi-djawāmiʿ al-akhbār wa-mukhtaliṭ/mukhallaṭ al-ādāb/al-āthār*, foreshadowed in *M* (§§ 3014, 3428, 3608) and mentioned in *T* (333), was a collection of various traditions, especially concerning al-Andalus (the history of which is neglected in the *Murūdj*); it was probably composed in an unsystematic way and would certainly have appeared in a form closer to *adab* than to methodical history.

6.—The *K. al-Akhbār al-masʿūdiyyāt*, also composed after *M*, dealt (*T*, 259, 333) with the history of pre-Islamic Arabia and of al-Andalus.

7.—The *K. Maḳātil fursān al-ʿAdjam* (332/943) was no doubt a collection of traditions concerning Persian heroes, which was some sort of a counterpart of the *K. Maḳātil fursān al-ʿArab* by Abū ʿUbayda (*T*, 102).

8.—The *K. Funūn al-maʿārif wa-mā djarā fi 'l-duhūr al-sawālif* (after 332/943), which is mentioned several times in *T* (121, 144, 151, 153, 158, 160, 174, 182, 261), seems to have dealt especially with the Greeks, the Byzantines and North Africa and to have filled in the gaps left in preceding works.

9.—The *K. Dhakhāʾir al-ʿulūm wa-mā kāna fī sālif al-duhūr* (after 332/943) seems to have been more detailed than the *Tanbīh* (*T*, 97, 175, 400) on certain questions, particularly on the history of Byzantium.

10.—The *K. al-Istidhkār li-mā djarā fī sālif al-aʿṣār*, mentioned in *T* (1, 53-4, 102, 137, 144, 176, 271, 279, 401) was perhaps a kind of aide-mémoire.

11.—The *K. Taḳallub al-duwal wa-taghayyur al-ārāʾ wa 'l-milal* (*T*, 334) must have been a reflecting upon history with regard to the events which culminated in the seizure of power by the Fāṭimids in North Africa. This suggestive title makes one regret the loss of a work which Ibn Khaldūn, who had a high regard for al-Masʿūdī (see below), probably did not have the leisure to consult.

12.—Finally, the *K. al-Tanbīh wa 'l-ishrāf*, composed in 344-5/955-6, is probably the last work of al-Masʿūdī. It is not exactly an abridgement of the major historico-geographical works which came before it, although it does return to and express, with greater rigour and precision, their essential points of information concerning astronomical and meteorological phenomena, the divisions of the earth, the seas, ancient nations, universal chronology, and then the history of Islam until the caliphate of al-Muṭīʿ. As its title indicates, it is basically a combination of overall review and a setting in temporal perspective. The *Tanbīh* has been edited by De Goeje, in the *BGA*, viii, 1893-4, and by Ṣāwī, in Cairo, in 1357/1938; Carra de Vaux has translated it under the title *Le Livre de l'avertissement et de la révision*, Paris 1897.

II. A second category is also of historical nature, but it is devoted especially to ʿAlī b. Abī Ṭālib, the *Ahl al-Bayt* and the Twelver *Imāms*.

13.—The *K. al-Zāhī* (before 332/943) concerned ʿAlī and the controversies to which he gave rise (*M*, § 1463).

14.—The *K. Ḥadāʾiḳ al-adhhān fī akhbār Ahl/Āl Bayt al-Nabī wa-tafarruḳi-him fi 'l-buldān* (before 332/943) was apparently the history of the twelve *Imāms* and of the partisans of ʿAlī (*M*, §§ 1013, 1943, 2506, 2742, 3023).

15.—The *K. Mazāhir al-akhbār wa-ṭarāʾif al-āthār fī akhbār Āl al-Nabī* [*al-akhyār?*], also prior to *M*, must have been, like the preceding, a history, or, doubtless, a "sacred history" of ʿAlī and of his partisans (*M*, §§ 1677, 1755, 3032).

16.—The *Risālat al-Bayān fī asmāʾ al-aʾimmā al-ḳiṭṭiʿiyya min al-Shīʿa*, written before 332/943, contained (*M*, §§ 2532, 2798; *T*, 297) detailed biographies of the Twelve *Imāms* who, unlike the Wāḳifiyya, maintained that Mūsā al-Kāẓim [*q.v.*] was dead and had designated as his successor their eighth *Imām*, ʿAlī al-Riḍā [*q.v.*].

III. His Imāmī Shīʿī beliefs inspired al-Masʿūdī to write two works on the question of the Imāmate from the point of view of different sects and schools, as well as on other points of doctrine, such as temporary marriage, the religion of the ancestors of Muḥammad, the beliefs of ʿAlī before his conversion, etc.:

17.—*K. al-Istibṣār fī waṣf aḳāwīl al-nās fi 'l-imāma* (*M*, §§ 6, 1138, 1463, 1952, 2190), and

18.—*K. al-Ṣafwa fi 'l-imāma* (*M*, §§ 6, 1138, 1463, 1952).

IV. These writings border upon heresiography and comparativism, subjects to which the author devoted numerous articles of a more or less polemical nature:

19.—The *K. al-Maḳālāt fī uṣūl al-diyānāt*, prior to 332/943, was a survey, probably polemical, of the beliefs of Islamic sects and schools (Shīʿīs, Khāridjīs, Muʿtazilīs, Khurramīs, etc.) and of non-Islamic

religions (Sabaism, Mazdaism, Judaism and Christianity). Judging by the number of passages where it is cited (*M*, §§ 783, 1138, 1205, 1715, 1945, 1994, 2078, 2225, 2291, 2359, 2420, 2741, 2800, 3156; *T*, 154, 161-2), this work must have been regarded as quite important by its author.

20.—The *K. al-Ibāna ʿan uṣūl al-diyāna*, also prior to 332/943, dealt with the differences between Imāmism and Muʿtazilism (from which al-Masʿūdī admits having borrowed some doctrines, *M*, § 2256) and attacked Mazdaism, Manichaeism, Dayṣānism, etc. (*M*, §§ 212, 2256; *T*, 354).

21.—The *K. al-Intiṣār* was a refutation of Kh̲āridj̲ism (*M*, § 2190); this must be the text which Yāḳūt (*Udabāʾ*, xiii, 94) mentions under the title *Akh̲bār al-Kh̲awāridj̲*.

22.—The *K. al-Istirdjāʿ fi ʾl-kalām* must also have been a refutation, but of certain beliefs of the Mazdaeans, the Manichaeans, the Christians, etc. (*M*, § 1223).

23.—The *K. al-Daʿāwī/al-Daʿāwā al-sh̲anīʿa*, mentioned only once (*M*, § 1195, where the translation needs correction) was directed against "abominable" beliefs such as the transmigration of souls.

24.—The *K. Kh̲azāʾin al-dīn wa-sirr al-ʿālamīn*, written after 332/943, dealt with the opinion of various sects, especially the Carmathians, and revealed the differences between Manichaeism, Mazdaism and Mazdakism (*T*, 101, 161-3, 385).

V. Various passages of the *Murūdj̲* show that al-Masʿūdī was interested in general philosophy, to which he devoted a number of treatises, and that he was by no means indifferent to political philosophy. Since the question of the transmigration of souls has been raised in no. 23 above, the first to be cited is:

25.—The *K. Sirr al-ḥayāt*, which took up the same subject, but dealt more generally with the soul and also touched on themes such as the Trinity, the *gh̲ayba*, the *mahdī*, etc. (*M*, §§ 533, 988, 1195, 1248, 2800, 3156; *T*, 155, 353).

26.—The *K. al-Zulaf* also dealt with the soul, but a number of other subjects were also discussed: the qualities of sovereigns, cosmology, diseases, music, animals, etc. (*M*, §§ 533, 630, 743, 928, 1325, 1335).

27.—The *K. Ṭibb al-nufūs* was also devoted to the soul (*M*, §§ 988, 1247), as was:

28.—The *K. al-Nuhā wa ʾl-kamāl* (*M*, § 1247).

29.—The *K. al-Ruʾūs al-sabʿiyya* (?) *min al-siyāsa al-mulūkiyya/al-madaniyya wa-ʿilali-hā wa-milali-hā al-ṭabīʿiyya* seems to have been a treatise of political philosophy (*M*, §§ 928, 1222-3, 1232, 1336), as was

30.—The *K. Naẓm al-djawāhir fī tadbīr al-mamālik wa ʾl-ʿasākir*, which is mentioned only in *T* (400-1), whereas the preceding were prior to the *Murūdj̲*.

VI. Two major works of scientific nature may legitimately be classed separately:

31.—The *K. al-Mabādiʾ wa ʾl-tarākīb*, where there is a discussion of the influence of the two luminaries (*M* § 1325) and

32.—The *K. al-Ḳaḍāyā wa ʾl-tadj̲ārib*, in which al-Masʿūdī gives an account of observations made in the course of his travels of various phenomena, the three domains of Nature, etc. (*M*, §§ 369, 705, 815, 817, 846, 1208, 2247).

VII. Finally, although he can hardly be described *a priori* as a *faḳīh*, he did take an interest in the Sh̲arīʿa and its principles, as is shown by four treatises:

33.—The *K. al-Wādj̲ib fi ʾl-furūḍ al-lawāzim*, on points of *fiḳh* on which Sunnīs and Sh̲īʿīs were in disagreement (*M*, § 1952) and

34.—The *K. Naẓm al-adilla fī uṣūl al-milla*, both of them prior to 332/943 (*M*, § 5; *T*, 4);

35.—The *K. Naẓm al-aʿlām fī uṣūl al-aḥkām*, mentioned only in *T* (4), but probably composed much earlier; it is not impossible, in fact, that this text was known to al-Subkī, who had in his possession (*Ṭabaḳāt al-Sh̲āfiʿiyya*, ii, 307) a treatise by al-Masʿūdī completing the notes that he had taken in 306/918 when Ibn Suraydj̲ recited his *Risālat al-Bayān ʿan uṣūl al-aḥkām*; this was a survey of the principles of the law according to al-Sh̲āfiʿī, Mālik, Sufyān al-Th̲awrī, Abū Ḥanīfa and Dāwūd al-Iṣfahānī. Lastly,

36.—The *K. al-Masāʾil wa ʾl-ʿilal fi ʾl-madh̲āhib wa ʾl-milal*, mentioned in *T* (4, 155).

It will be noted that, in the introduction to the *Tanbīh*, al-Masʿūdī lists in chronological order nos, 1, 3, 4, 8, 9, 10, then the three last (nos. 34, 35, 36) and considers the *Tanbīh* to be the seventh of the first series.

It is appropriate to note in addition that the *Fihrist* (154) and Yāḳūt (*Udabāʾ*, xiii, 94) mention a *K. al-Rasāʾil*, while al-Kutubī (*Fawāt*, ii, 94) refers to a *K. al-Rasāʾil wa ʾl-istidh̲kār bi-mā marra fī sālif al-aʿṣār* (cf. above, no. 10). Similarly, the *K. al-Taʾrīkh̲ fī akh̲bār al-umam min al-ʿArab wa ʾl-ʿAdj̲am (Fihrist, Udabāʾ, Fawāt)* must be the *K. Akh̲bār al-zamān*. Finally, Ibn Abī Uṣaybiʿa (*ʿUyun al-anbāʾ*, i, 56, 82) credits al-Masʿūdī, as a result of a confusion, with a *K. al-Masālik wa ʾl-mamālik*.

However, there remains one little book, the *K. Ith̲bāt al-waṣiyya li ʾl-Imām ʿAlī b. Abī Ṭālib*, published at Nadj̲af (n.d.; *ca.* 1955 for the 1st ed.), which poses a problem difficult to solve. Omissions excepted, this title is not mentioned by any Sunnī author, although the Sh̲īʿīs unreservedly attribute it to al-Masʿūdī, and the anonymous editor identifies it with the *Bayān fī asmāʾ al-aʾimma* (no. 16 above). In spite of elements which militate in favour of this identification, it is doubtful whether the *Ith̲bāt al-waṣiyya* comes from the pen of the author of the *Murūdj̲*; but the question remains open, and is unlikely ever to be settled definitively (see Ch. Pellat, *Masʿūdī et l'Imāmisme*, in *Le Shîʿisme imâmite*, Paris 1970, 69-80).

Even if it is decided that this "anti-history" or this "sacred history" of the twelve *Imāms* is apocryphal, and speculation on the titles of the works catalogued above under the nos. 13-18 is abandoned, it is impossible to deny the Sh̲īʿism or, more accurately the Imāmism, of al-Masʿūdī. Sh̲īʿī authors are unanimous in considering him one of their number, and a reading of the *Murūdj̲* largely confirms this opinion. Among the Sunnīs it is quite curious that al-Subkī (*loc. cit.*) and Ibn Tagh̲rībardī (*Nudj̲ūm*, iii, 315-6) follow al-Dh̲ahabī in seeing him only as a Muʿtazilī, while Ibn Taymiyya (*Minhādj̲ al-sunna*, ii, 129-31) is one of the few who recognises his Sh̲īʿism, and Ibn Ḥadj̲ar al-ʿAsḳalānī reconciles all points of view in pointing out, quite rightly (*Lisān al-Mīzān*, iv, 224-5), that his writings "abound with signs showing that he was Sh̲īʿī and Muʿtazilī". Al-Masʿūdī in fact acknowledges this dual allegiance when he declares 6*M*, § 2256) that he has chosen some Muʿtazilī doctrines for his own use (cf. above, no. 20), and such an eclecticism was by no means astonishing in the 4th/10th century. As for his *madh̲hab*, it would seem to be largely Sh̲āfiʿī, but nothing can be definitely asserted and it is possible that, in his treatises of *fiḳh*, he confined himself to dealing with comparative law.

Although J. D. Pearson, in his *Index islamicus*, reserves for al-Masʿūdī a special mention under the rubric "Muslim geographers", it is in the ranks of the historians that he is normally counted, because he is characterised and classified on the basis of the *Murūdj̲* and the *Tanbīh* and because the opinion of the Arab authors who qualify him as *muṣannif li-kutub al-tawārīkh̲*

wa-akhbar al-mulūk (Ibn al-Nadīm), *muʾarrikh kabīr* (al-Kutubī), *imām* (= model) *liʾl-muʾarrikhīn* (Ibn Khaldūn, *Mukaddima*, i, 52; tr. Slane, i, 67; tr. Rosenthal, i, 64) is accepted. The esteem in which he was held by Ibn Khaldūn (who mentions him frequently but does not hesitate to criticise him) seems to have been inspired by his historical method, his interest in nations foreign to Islam, whether ancient or contemporary, and in the religions practised there, by his open-mindedness and his universal vision of history (on the links between the two authors, see in particular M. Mahdi, *Ibn Khaldun's philosophy of history*, London 1957, 152-3, 164 ff., 255 ff.; W. J. Fischel, *Ibn Khaldūn and al-Masᶜūdī*, in *al-Masᶜūdī Millenary commemoration volume*, Aligarh 1960, 51-9).

To be sure, the *Tanbīh* is presented in the form of a universal history from Adam to al-Mutīᶜ, preceded by a survey of general geography; to be sure also, the table of contents of the *Murūdj* given the same impression. But this voluminous work does not contain only history and geography; in addition, it has been observed that, in the list of works of al-Masᶜūdī, at least twenty are generally of a heresiographical, doctrinal, philosophical or legal nature. Even if it is considered that disciplines thus cultivated belong to global history, the qualification of "historian" in the normal sense of the term is only partially appropriate to this polygraph. A. Shboul has not hesitated to describe him, in the subtitle of his treatise, as *A Muslim humanist*, and A. Miquel (*Géographie humaine*, i, 202) confers on him the title of "*imām* of encyclopaedism", thus justifying the quality of *adīb* of the Djāhizian type which the author of these present lines has been led to acknowledge in him (in *Jnal of the Pakistan Historical Soc.*, ix [1961], 231-4). Eager to acquire all available types of knowledge, of whatever origin, and anxious to present them in a form responding to the exigencies of *adab* which seeks to instruct without burdening the reader, al-Masᶜūdī writes for a public which seeks to educate itself, to escape from the narrow confines of traditional instruction and to extend the field of Arab-Islamic culture, while not regarding as negligible everything that happens outside the Muslim world. On the subject of Gaul, B. Lewis recalls (in *Mas. Mill. commem. vol.*, 10) that, from the first millenium of Islam, there have survived only three works dealing with the "history" of Western Europe, and that the oldest of these is by al-Masᶜūdī, the *Murūdj*. This author established no school, and in this there is no cause for surprise, in the sense that the last-named work was in itself adequate to satisfy the curiosity of readers for many years, to say nothing of the encyclopaedists of later times who continued to exploit it without reservation (e.g. al-Kalkashandī cites him forty-two times in the *Subh*, the editor of which finds no other reference to the Persian calendar (ii, 385) than that contained in the *Murūdj*); these authors give the impression that nothing of equal substance has been written in the course of the intervening centuries on questions which nevertheless appear to have been broadly set forth.

In a period when rhymed prose was beginning to invade literature, it is remarkable that al-Masᶜūdī did not seek to elaborate his style, and only a few rhymed sentences are to be found in his writings. It will be observed, however, that he himself gave rhymed titles to around fifteen of his works, and that in only three of them is the first unit artificial. To the extent that it is possible to verify his quotations, he has sometimes introduced modifications in them, but he seldom voluntarily embellishes the form. The general arrangement of his works is not exempt from defects, and attention should be drawn to his numerous digressions, without however reproaching him for them, since they constitute one of the characteristics of *adab*. On his style, see Khalidi, *op. laud.*, 19-23.

Finally, even if it may be reckoned that the *Akhbār al-zamān* and *al-Kitāb al-awsat*, in spite of their documentary worth, were too voluminous to be preserved, the fact remains that the loss of thirty-four works out of thirty-six is hard to explain, especially considering the enduring success of the *Murūdj*. Essentially, it is perhaps this very success which has contributed most to the casting of a shadow over the major historico-geographical works and has driven the Shīᶜīs to take no further interest in the other writings of an Imāmi author who was sufficiently independent to play into the hands of the Sunnīs by giving pride of place, not to the *Imāms* (as in the *Ithbāt al-wasiyya*) but to the caliphs, and by preferring, as he emphasises on numerous occasion, objective accounts (*khabar*) to speculation (*nazar*). It can easily be understood how the Sunnīs, for their part, should have concentrated their attention on the *Murūdj*, and it may be supposed that al-Masᶜūdī has been a victim of the suspicion which was attached to both the Shīᶜīs and the Muᶜtazilīs, since he was regarded as belonging to this school.

Bibliography: The Arabic biographical sources are not particularly detailed: see Ibn al-Nadīm, *Fihrist*, 154 (ed. Cairo, 219-20); Nadjāshī, *Ridjāl*, Bombay 1317, 178; Yākūt, *Udabāʾ*, xiii, 90-4; Kutubī, *Fawāt*, Cairo 1951, ii, 94-5; Subkī, *Tabakāt al-Shāfiᶜiyya*, ii, 307; Ibn Hadjar, *Lisān al-Mīzān*, iv, 224-5; Ibn Taghrībirdī, *Nudjūm*, iii, 315-6; Hādjdjī Khalīfa, *Kashf al-zunūn*, index; Ibn al-ᶜImād, *Shadharāt*, ii, 371; Khʷānsārī, *Rawdāt al-djannāt*, 379-82; Nūrī, *Mustadrak*, iii, 310; ᶜĀmilī, *Aᶜyān al-Shīᶜa*, xli, 198-213; Ziriklī, v, 87; Kahhāla, vii, 80.

Studies: The many orientalists who have exploited the *Murūdj* and, to a lesser extent, the *Tanbīh*, have been led to review certain passages and, where appropriate, to amend them; this is especially the case with V. Minorsky, in the commentary on the *Hudūd al-ᶜālam*, London 1937. Different aspects of the work of al-Masᶜūdī have been the object of independent studies: particularly worthy of mention are: the writings of T. Lewicki (in Polish) on the Slavs and other peoples; A. Czapkiewics, *Al-Masᶜūdī on balneology and balneotherapeutics*, in *Fol. Or.*, iii (1962), 271-5; Ch. Pellat, *La España musulmana en las obras de al-Masᶜūdī*, in *Actas del primer congreso de estudios árabes e islámicos*, Madrid 1964, 257-64; and especially, S. Maqbul Ahmad and A. Rahman (eds.), *al-Masᶜūdī Millenary commemoration volume*, Aligarh 1960, which contains some twenty contributions on particular subjects. J. de Guignes appears to have been the first to draw attention to the *Murūdj*, in *Notices et extraits*, i, 1787, 27, but the earliest monograph is the work of E. Quatremère, *Notice sur la vie et les ouvrages de Masoudi*, in *JA*, 3rd series, vii (1839), 1-31; see also are Wüstenfeld, *Geschichtsschreiber der Araber*, no. 119; Marquart, *Streifzüge*, Leipzig 1903, pp. xxxiv-xxxv; Brockelmann, I, 141-3, S I, 220-1, I², 150-2; Sezgin, *GAS*, i, 332-6; F. Rosenthal, *Muslim historiography*, index. The works of S. Maqbul Ahmad, *Al-Masᶜūdī's contribution to medieval Arab geography*, in *IC*, xxvii (1953), 61-77, xxviii (1954), 275-86, and *The travels*, in *ibid.*, xxviii, 509-25, in fact mark the beginning of a resurgence of interest in the author of the *Murūdj*, illustrated by A. Miquel, *Le géographie humaine du monde musulman*

jusqu'au milieu du IIe siècle, Paris, i, 1967, 202-12, and index, ii, 1975, index; then by two successive works based on dissertations: T. Khalidi, *Islamic historiography. The histories of Masʿūdī*, Albany 1975 (an important study of the historical method of this author) and A. Shboul, *Al-Masʿūdī and his world. A. Muslim humanist and his interest in non-Muslims*, London 1979 (fundamental monograph, with comprehensive bibliography). (CH. PELLAT)

MĀSŪNIYYA [see FARĀMUSH-KHĀNA and FARMĀSŪNIYYA in Suppl.].

MAṢYĀD, a town of central Syria on the eastern side of the Djabal al-Nuṣayriyya situated at 33 miles/54 km to the east of Bāniyās [*q.v.*] and 28 miles/45 km to the east of Ḥamāt [*q.v.*], in long. 36° 35' E. and lat. 35° N., in the massif of the Djabal Anṣāriyya at the foot of the eastern slopes of the Djabal Bahrāʾ, at an altitude of 1,591ft./485 m. and to the west of the great trench of the fault of the Ghāb [*q.v.*]. The pronunciation and orthography of the name varies between the forms *Maṣyād*, *Maṣyāf* (in official documents and on the inscriptions mentioned below of the years 646 and 870 A.H.), *Maṣyāt* and *Maṣyāth* (on the interchange of *f* and *th*, see O. Rescher, in *ZDMG*, lxxiv, 465; Praetorius, in *ibid.*, lxxv, 292; Dussaud, *Topographie hist. de la Syrie*, 143, n. 4, 209, 395, n. 3). The variants *Maṣyāb* (Yāḳūt, *Muʿdjam*, iv, 556), *Maṣyāh* (Khalīl al-Ẓāhirī, *Zubda*, ed. Ravaisse, 49), *Messiat* in tr. Venture, 73 and *Maṣyāt* (al-Nābulusī, in Von Kremer, in *SB Ak. Wien*, 1850, ii, 331) are no doubt due to mistakes in copying (Van Berchem, in *JA*, Ser. 9, ix [1897], 457, n. 2). At a later period, the pronunciation *Miṣyāf*, *Miṣyād*, became usual (al-Dimashḳī, ed. Mehren, 208; al-Ḳalḳashandī, *Ṣubḥ al-aʿshāʾ*, iv, 113; Ibn al-Shiḥna, ed. Beirut, 265; cf. *Meṣyāf* on von Oppenheim's map in *Petermans Mitteilungen*, lvii [1911], ii, Taf. 11). The name is perhaps a corruption of a Greek Μαρσύα (= Μασσύα) or Μαρσου χώμη, which presumably lay on the *Marsyas amnis*, the boundary river of the Nazerini (ancestors of the Nuṣayrīs? Pliny, *Nat. hist.*, v. 81) (cf. Pauly-Wissowa-Kroll, *Realenzyklopädie*, xiv, cols. 1985-6, s.v. *Marsyas*, no. 3).

Maṣyād is an important settlement which has developed under the protection of a powerful citadel whose traces are visible on a limestone outcrop. The region gets an average of 31.5 inches/800 mm of rain, and the climate is good. Various small watercourses have allowed not only the cultivation in the region of barley and wheat but also the existence of gardens and orchards (*basātīn*). In her travel account, Gertrude L. Bell noted the abundance of flowers—anemones, iris, narcissus, and white and red orchids (*Syria: the desert and the sown*, 217).

The main communication routes between northern and southern Syria do not pass through the Orontes valley, but more to the east on the fringes of the desert steppes. In order to travel from Maṣyād to northern Syria, one has to reach the Orontes valley by a road passing through Laḳba and Dayr al-Shamīl, where a road coming from Ḥamāt is crossed, leaving to the west, on the mountain flank, the fortresses of Kharība and Abū Ḳubays [*q.v.*]. The Ghāb is descended into, and then the Orontes is crossed at the bridge of ʿAshārna, a bridge from the Roman period 8 miles/15 km below Shayzar [*q.v.*]. Beyond the bridge, the route passes by Ḳalʿat al-Muḍīk and then reaches the plateau and goes through Afāmiya [*q.v.*] to reach Anṭākiya [*q.v.*] in northern Syria. There also exists a route linking Maṣyād with Shayzar via Tell al-Salhab. Finally, at the beginning of the 20th century the traces of the paved way (*raṣīf*) of a Roman road which linked Ḥamāt with the Mediterranean (Bell, *op.cit.*, 232) could still be seen; it then crossed the Nahr Sarūt by a bridge before passing through the settlement of Maṣyād in the direction of the sea. The coast could also be reached after Maṣyād by going through Rafāniyya, where there was a bifurcation of the ways either towards Ḳalʿat Yaḥmūr in the direction of Ṭarṭūs [*q.v.*] or towards Tell Kalakh if the journey to Ṭarābulus [*q.v.*] or Tripoli was intended. At the present day, asphalted roads allow access to Maṣyād without any difficulty.

Maṣyād is not mentioned in the early Middle Ages; the first mention of the fortress is probably in a Frankish account of the advance of the Crusaders in 1099: *pervenimus gaudentes hospitari ad quoddam Arabum castrum (Anonymi gesta Francorum et aliorum Hierosolymitanorum*, ed. Hagenmeyer, 1890, 418 with n. 29; Dussaud, *Histoire et religion des Noṣairîs*, Paris 1900, 21 n. 4). In the course of the campaign which he conducted in Syria during the autumn of 389/99 to regain Antioch, threatened by the Fāṭimids, the Byzantine Emperor Basil II occupied the Djabal Bahrāʾ, at the limits of his empire, and dismantled the defences of Ḥiṣn Maṣyād and Rafāniyya, which at this time formed part of the province (*djund*) of Ḳinnasrīn [*q.v.*]. When, after the capture of Tripoli on 11 Dhu 'l-Ḥidjdja 502/12 July 1109, the Franks advanced on Rafāniyya, Ṭughtakīn set out to relieve it; by the terms of the peace concluded between them, the Franks bound themselves to abandon all designs on Maṣyāth and Ḥiṣn al-Akrād and in compensation, these two places and Ḥiṣn Ṭūfān were to pay them tribute (Sibṭ Ibn al-Djawzī, *Mirʾāt al-zamān*, in *Rec. hist. or. crois.*, iii, 537). This agreement did not last long. Around this time, the frontiers between the Latin states began to be precisely delimited; on the other hand, one may note the presence of Ismāʿīlīs, who profited from the anarchy of the years following the arrival of the First Crusade and tried to find places of refuge in the mountainous region to the west of the middle Orontes.

Before 521/1127 the fortress was in possession of a branch of the Mirdāsids [*q.v.*], who sold it to the Banū Munḳidh [*q.v.*]. The Ismāʿīlīs, having in 524/1130 ceded to the Franks the stronghold of Bāniyās in the Wādī al-Tayim, which the Būrid Ṭughtakīn had given to them, now tried to establish themselves in the Djabal Bahrā' around Maṣyād. In 527/1132-3, Sayf al-Mulk Ibn ʿAmrūn, the lord of al-Kahf, sold to them Ḳadmūs, seized from the Franks in the previous year, after which they soon occupied al-Kahf and Kharība. In Ramaḍān 535/April-May 1141, they also seized the fortress of Maṣyāf by outwitting the commandant Sunḳur, a *mamlūk* in the service of the Banū Munḳidh of Shayzar, who was surprised and slain (Abu 'l-Fidā, *Mukhtaṣar fī akhbār al-bashar*, in *Rec. hist. or. crois.*, i, 25; Ibn al-Athīr, *Kāmil*, in *ibid.*, i, 438; al-Nuwayrī, Cod. Leiden 2m, fol. 222b, in Van Berchem, *JA* [1897], 464, n. 1). Maṣyād now became the residence of the Syrian "Master" of the sect, as we may call him, with Van Berchem, to distinguish him from the Grand Master in Alamūt [*q.v.*], known as *Shaykh al-Djabal*. The Ismāʿīlīs now proceeded to make themselves independent there for a century-and-a-half. In 543/1148, after the check to the Second Crusade, the Ismāʿīlīs of Maṣyād made common cause with the Franks against Nūr al-Dīn, but in 552/1157 these same Ismāʿīlīs joined in the defence of the fortress of Shayzar, besieged by the Crusaders. Whilst the Ismāʿīlīs had just been regrouped in the mountainous region of Ḳadmūs by the Master (*muḳaddam*) Abū Muḥammad, there appeared in Syria around

557/1162 Ras͟hīd al-Dīn Sinān b. Salmān b. Muḥammad al-Baṣrī [*q.v.*] as envoy of the Grand Master of Alamūt, the head of the Nizārī Ismāʿīlīs, sometimes known as the Assassins [see NIZĀRĪS, ḤAS͟HĪS͟HIYYA]. He soon took over the direction of them in this region, and until his death in 588/1192, showed an extraordinary talent for organisation, making the sect a formidable military force which sowed terror amongst both the Crusaders and the Syrian Muslims. Ṣalāḥ al-Dīn, who wanted to punish them for two attempts on his life, invaded the land of the Ismāʿīlīs in Muḥarram 572/July-August 1176, laid it waste and laid siege to Sinān in Ḳalʿat Maṣyād. Whilst besieging Maṣyād, Ṣalāḥ al-Dīn learnt that the Crusaders had attacked in the Biḳāʿ [*q.v.*]. Since the siege became a lengthy one, he decided to negotiate through the mediation of his uncle S͟hihāb al-Dīn Maḥmūd b. Takas͟h al-Ḥārimī, the master of Ḥamāt, and at the beginning of Ṣafar/August, he retired with his army in the direction of Ḥamāt (Abu 'l-Fidā and Ibn al-Athīr, in *Rec. hist. or. crois.*, i, 47, 626). The exact terms of the agreement are not now known, but it is certain that Ṣalāḥ al-Dīn never again attacked the Ismāʿīlīs and that the latter ceased to plot against him. Shortly before he raised the siege of Maṣyād (about 1 Ṣafar), he received from Usāma b. Munḳid͟h, who was in Damascus, a letter containing a panegyric of his great patron (Derenbourg, *Vie d'Ousâma*, Paris 1893, 400-1). Rās͟hid al-Dīn died in 588/September 1192. The Syrian Masters, as the official epithet *al-Dunyā wa 'l-Dīn* henceforth regularly borne by them shows, were raised by him to a position with power and privileges equal to those of sovereign rulers (Van Berchem, *op. cit.*, 470). While Sinān had completely emancipated himself from the suzerainty of the headquarters of the sect in Alamūt, in 608/1211-12 we find the old conditions completely restored (Abū S͟hāma, *al-D͟hayl fi 'l-rawḍatayn*, in Van Berchem, *op.cit.*, 475ff., n. 1).

The fortress of Maṣyād lies to the northeast of the settlement, at the foot of the D͟jabal Bahrāʾ and within the town wall, a few traces of which are still today visible. The fortress is perched on a rocky limestone block and has a situation running from north to south; the eastern edge of this bluff rises vertically for some ten metres and gives the appearance of a cliff. Like S͟hayzar, Maṣyād is an Arab citadel antedating the Crusades and having no connection with them; in its dimensions and size, it cannot be compared with such great mediaeval fortresses of Syria as Ḥiṣn al-Akrād, Marḳab [*q.vv.*] or Ṣahyūn. For Van Berchem and Fatio (*Voyage en Syrie*, 115, 172), this fortress resembles in silhouette those of al-Musayliḥa and S͟humaymis. It is one of the best-preserved of the Ismāʿīlīs castles of Syria (Dussaud, *Topographie*, 138-48). It is made up of a curtain wall of only modest appearance with numerous rectangular salients. A donjon or keep, also rectangular, is built in the centre and dominates the ensemble. According to P. Deschamps (*Tripoli*, 39), the Ismāʿīlīs are said to have repaired in the 7th/13th century, with good-quality materials, a Byzantine building of minor importance, of which a certain number of columns and capitals embedded in the doorways of the fortress (partially reproduced in Gertrude Bell, *op. cit.*, 217-19) are still visible witnesses. The castle is entered by a grand gateway on the north side reached by several steps; the entrance is vaulted like that of Ḥiṣn al-Akrād; and the fitting-out of the interior is the work of the Ismāʿīlīs. The keep is in poor condition, and later accretions over the course of the centuries of shacks and constructions have disfigured this piece of military architecture, which merits study and publication of the results. A certain number of Arabic inscriptions mention the various building works made in the castle. The oldest, dating from the middle of the 6th/12th century, is the signature of a master of works, the *mamlūk* Ḳuṣta (*RCEA*, viii, 3197); another inscription from 560/1165 bears the signature of a certain Ibn Mubārak (*RCEA*, ix, 3264). According to two inscriptions on a doorway inside the castle (*RCEA*, x, 3890-1), the building was put into a state of repair by the Syrian Master Kamāl al-Dunyā wa 'l-Dīn al-Ḥasan b. Masʿūd under the suzerainty of the Grand Master of Alamūt ʿAlāʾ al-Dīn Muḥammad III (618-53/1221-55). The reference is probably to the al-Kamāl, who, according to al-Nasawī (*Hist. du Sultan Djelal al-Din Mankobirti*, ed. Houdas, 132), was for a period before 624/1227 governor in Syria for the Grand Master of the Ismāʿīlīs. It is uncertain whether the commandant (*mutawallī*) Mad͟jd al-Dīn, who received in 624/1227 the ambassadors of Frederick II (al-Ḥamawī, in Amari, *Bibl. arabico-sicula*, App. ii, 30) was one of the Masters (Van Berchem, in *JA* [1897], 501, n. 1). About 625-6/1228-9 and still in 635/1237-8, Sirād͟j al-Dīn Muẓaffar b. al-Ḥusayn was Syrian Master (Nasawī, *op. cit.*, 168; inscription of al-Kahf, in *RCEA*, x, 4143). In the village, there remain the traces of a mediaeval rampart provided with gateways and three inscriptions recording the repairs and works carried out.

A Persian from Alamūt, Tād͟j al-Dīn, was in 637/1239-40 *muḳaddam* of the Syrian Ismāʿīlīs (Ibn Wāṣil, *Mufarrid͟j al-kurūb*, Paris, ms. ar. 1702, fol. 333b, in Van Berchem, 466, n. 2). As Tād͟j al-Dīn Abu 'l-Futūḥ he appears in an inscription in Maṣyād of D͟hu 'l-Ḳaʿda 646/February-March 1249, according to which he had built the city wall of Maṣyāf and its south gate. The commander of the fortress under him was ʿAbd Allāh b. Abi 'l-Faḍl b. ʿAbd Allāh (inscriptions A and B in Van Berchem, *JA* [1897], 456 = Van Berchem-von Oppenheim, *Beitr. z. Assyr.*, vii, no. 19). Probably it was Tād͟j al-Dīn to whom the Dominican monk Yvo the Breton, a member of an embassy sent by Louis IX to the "Old Man of the Mountains" in May 1250, sent a naive and fruitless appeal for his conversion (Jean de Joinville, *Hist. de St. Louis*, ed. Wailly, 246; Van Berchem, in *JA* [1897], 478-80).

After having got possession of Alamūt in 654/1256 and having sacked Bag͟hdād two years later, the troops of Hülegu or Hūlākū [*q.v.*] invaded northern Syria in 658/1260 and temporarily occupied Maṣyād. In this year, in the time of the Master Riḍā al-Dīn Abu 'l-Maʿālī, the Mongols seized and held the fortress for a time, but after the victory of the Egyptian Sultan Ḳuṭuz at ʿAyn D͟jālūt [*q.v.*], they abandoned it. About two years later, Baybars began to interfere in the affairs of the Ismāʿīlīs and to demand tribute from them. He very soon deposed the Master Nad͟jm al-Dīn Ismāʿīl and appointed his son-in-law Ṣārim al-Dīn Mubārak in his place and took Maṣyād from him. When the latter returned there, Baybars had him seized and brought to Cairo, where he was thrown into prison. Nad͟jm al-Dīn was again recognised as Master for a brief period and then his son S͟hams al-Dīn, on payment of an annual tribute before the sultan definitely incorporated Maṣyād in his kingdom in Rad͟jab 668/1270 (Abu 'l-Fidā, in *Rec. hist. or. crois.*, i, 153; Mufaḍḍal b. Abi 'l-Faḍāʾil, *Gesch. d. Mamlūkensultane*, ed. Blochet, in *Patrol. Orient.*, xiv, 445; Van Berchem, in *JA* [1897], 465, n. 2). Having now become a Sunnī Muslim possession, Maṣyād presumably at first belonged to the "royal province of fortunate conquests" the capital of which was Ḥiṣn al-

Akrād, then to Ṭarābulus (after its capture in 688/1289).

Within the scheme of administrative reorganisation within the Mamlūk empire, a route was established in the 7th/13th century for the *barīd* [*q.v.*] or postal service between Ḥimṣ [*q.v.*] and Maṣyād, which was at the time an important strategic point under the authority of a commander responsible directly to the sultan because of the fortress's rôle in the defence of the *dār al-Islām* [*q.v.*] just like Ḥiṣn al-Akrād and Raḥba [*q.v.*].

Abu 'l-Fidā᾽ (about 720/1320) describes Maṣyād as an important town, with beautiful gardens through which streams flowed; it had a strong citadel and lay at the eastern base of the Djabal al-Lukkām (more accurately Djabal al-Sikkīn) about a *farsakh* north of Bārīn and a day's journey west of Ḥamā (not Ḥimṣ, as Le Strange, *Palestine*, 507 erroneously says; Abu 'l-Fidā᾽, *Geogr.*, ed. Reinaud, 229 ff.). As a result of its high situation, it has a more temperate climate than the low ground on the Nahr al-ʿĀṣī; the young Usāma in 516/1122-3 brought to Maṣyād the wife and children of the *amīr* of Shayzar, his uncle ʿIzz al-Dīn Abu 'l-ʿAsākir Sulṭān, from the heat of Shayzar which was causing the *amīr* anxiety about their health (Derenbourg, *Vie d'Ousâma*, 43).

Ibn Baṭṭūṭa, who visited Maṣyād in 756/1355, mentions (*Riḥla*, i, 166-7, tr. Gibb, i, 106) as lying near this stronghold the Ismāʿīlī fortresses of Ḳadmūs, al-Manayḳa, ʿUllayḳa and al-Kahf. These five places, the *ḳilāʿ al-daʿwa* "fortresses of the [Ismāʿīlī] mission", formed, with the castle of al-Ruṣāfa, the *niyāba* of Maṣyād which, in the 8th/14th century, was a dependency of Ṭarābulus. Later, it was separated from this province and attached to the *niyāba* of Damascus, to which it still belonged in the time of al-Ḳalḳashandī (*Ṣubḥ*, iv, 113, 202, 235), *ca.* 814/1412. Its *nā᾽ib* was nominated from Cairo and was at various times an *amīr* of *ṭabalkhāna* or an *amīr* of ten, and it had a garrison of Mamlūks. In 826/1423, under Barsbay [*q.v.*] there was no longer a *barīd* service, but there was a road which allowed one to travel from Ṭarābulus to Maṣyād and then to reach, via al-Ruṣāfa and Khawalī, Ḳadmūs, where it passed through al-Kahf and then ʿUllayḳa to end up at Balāṭunus [*q.v.*]. In the middle of the 9th/15th century, Khalīl al-Ẓāhirī, in his *Zubda* (ed. Ravaisse, 49, tr. Venture, 73), tells us that around 850/1446 "the town of Maṣyād is still within this province (sc. Ḥamāwiyya); it is a pleasant town with an extensive surrounding countryside". An inscription of Maṣyād of Ramaḍān 870/April-May 1466 contains a decree about taxes of the Sultan al-Malik al-Ẓāhir Khushḳadam (Van Berchem-von Oppenheim, *Beitr. z. Assyr.*, vii, 20, no. 23: no. 22 is perhaps of the same al-Malik al-Ẓāhir).

Under Egyptian rule, the position of the lands of the Ismāʿīlīs with Maṣyād as capital was to some extent exceptional (Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks*, Paris 1923, 182, no. 3).

In the 10th/16th century, after the Ottoman conquest of Syria, Maṣyād is mentioned in the cadastral survey amongst the *ḳilāʿ al-daʿwa* situated to the west of Ḥamāt; these villages of the Ismāʿīlīs paid a special tax. Maṣyād formed part of the *liwā* of Ḥimṣ; there was situated there a *khān* [*q.v.*] on which the Ottomans levied tolls which were abolished in the middle of the 10th/16th century (Mantran and Sauvaget, *Règlements fiscaux*, 92). In 1105/1693-4 ʿAbd al-Ghānī al-Nābulusī [*q.v.*] passed through Maṣyād and mentions a certain Sulaymān, from the tribe of Tanūkh, as governor of the town at that time. In 1697 d'Herbelot cited the place in his *Bibliothèque orientale* as "Massiat". In the middle of the 12th/18th century, Maṣyād continued to be the residence of Ismāʿīlī *amīrs*. On the map drawn up by the Sieur d'Anville in 1750, the place is called "Masiat". Of more recent date are two inscriptions of an *amīr* Muṣṭafā b. Idrīs: one from the year 1203/1788-9 relating to the building of a fountain (*sabīl*) (Van Berchem-Von Oppenheim, *op. cit.*, 21, no. 24), and the other to the building of the house of the Ismāʿīlī *amīrs* (*ibid.*, no. 25).

The Ismāʿīlīs lived constantly in open or secret enmity with the Nuṣayrīs, although various tribes of the latter had offered their services to the Ismāʿīlī Masters, for example, as early as 724/1324 to Rāshid al-Dīn (S. Guyard, *Un grand maître des Assassins au temps de Saladin*, in *JA* [1877], 165; R. Dussaud, *Histoire et religion des Noṣairîs*, 80). A number of Nuṣayrīs of the tribe of Raslān, whom the *amīr* of Maṣyād had allowed to settle in the town under their Shaykh Maḥmūd, in 1808 murdered the *amīr*, his son and about 300 Ismāʿīlīs, and seized the town. The other inhabitants, who had sought refuge in flight, applied for protection to Yūsuf Pāshā, the governor of Damascus. He sent a punitive expedition of 4-5,000 men against the Nuṣayrīs; Maṣyād had to be surrendered by the Banū Raslān after three month's stubborn resistance, and the fugitive Ismāʿīlīs returned to Maṣyād in 1810 (Dussaud, *op. cit.*, 32; Burckhardt, *Reisen in Syrien*, 258). In 1812 Burckhardt estimated the population of Maṣyād at 250 Ismāʿīlī and 30 Christian families. The population since then seems to have diminished still further. Burckhardt and Lammens found many houses in the town in ruins and large gardens within its walls. According to Burckhardt, the land east of the town was a desert heath, while in the north at the foot of the hills the citadel stands on a high steep rock; on the west side is a valley, in which the inhabitants grow wheat and oats. The town, which lies on the slope of a hill, is about half an hour's walk in circumference. Three older gates have been incorporated in the present more modern walls. The mosque is in ruins. The old citadel is for the most part destroyed; only a few buildings have been roughly restored and in parts were still inhabited at the beginning of the 20th century.

From the 19th century onwards, the "Assassins" of Maṣyād, the generations of whom had lived since the 7th/12th century under the authority of delegates from the Nizārīs of Alamūt before becoming subjects of first the Mamlūks and then the Ottomans, were exposed to repeated attacks by the Nuṣayrīs. In February 1919 the region between Maṣyād and Tartūs [*q.v.*] was shaken by the revolt of Shaykh Ṣāliḥ against the French, whose troops were held in check on the road from Shaykh Badr to Maṣyād. According to Latron, *Vie rurale*, 208, the Government of Lādhiḳiyya compelled some of the large landowners of Ḥamāt to hand over to it in 1929 their villages in the *ḳaḍā᾽* of Maṣyād: Bayāḍiyya, Miryamīn, ʿAkākir and Ruṣāfa, whose cultivated lands have been distributed amongst the peasants working them. In this way, the ʿAlawī part of the *ḳaḍā᾽* of Maṣyād, including the fortress of Abū Ḳubays, was taken away from the *sandjaḳ* of Ḥamāt for attachment to the new State of the ʿAlawites.

In the mountain regions to the west of Maṣyād there exist deposits of iron known since Antiquity and still capable of exploitation. In order to provide a legal framework for disputes over the division of water, a list of the sharers and their entitlements was set down in writing and registered officially (Latron, *op. cit.*, 160).

Until 1938, the *minṭaḳa* of Maṣyād was part of the province of Ḥamāt, but in 1939 the *ḳaḍāʾ* of Maṣyād was integrated *in toto* into the *muḥāfaẓa* of the ʿAlawites, the *ḳaḍāʾ* then having a population of 4,059 people.

In 1945, according to Robin Fedden, the road linking Ḥamāt and Maṣyād climbed westwards up a small valley whose watercourse is an affluent of the Orontes. At the approach to the village one met, among the orchards, pathways lined with pomegranate trees. The village, with its stone houses, was formerly enclosed by a wall, and formed a compact unit of Ismāʿīlī cultivators. In our own time, Maṣyād still preserves an aspect different from that of the plains villages. The region situated beyond and to the south of the region of the Ghāb does not benefit directly from the investment in the "Ghāb Project". Nevertheless, the plans for this region and the settlement of nomads have favoured a perceptible development of the *minṭaḳa* which has, according to the 1970 census, 75,437 inhabitants, 37,922 men and 37,515 women. Since 1965, the Syrian government has set up at Maṣyād a centre for carpet weaving, with workshops having an essentially female working force. Production amounted to 740 m² of carpets in 1979 but only 410 m² in 1980.

At present, Maṣyād is linked with the new autoroute which travels along the eastern bank of the Orontes northwards. There is a loop 7 km to the east of Maṣyād running northwards from the asphalt road linking Ḥamāt with Bāniyās via Maṣyād. An oil pipeline connecting Ḥimṣ with the Mediterranean coast passes just to the south of Maṣyād and then follows the road across the mountain as far as the sea.

MAṢYĀF [see Maṣyād].

AL-**MAṬĀLIʿ** (A, pl. of *maṭlaʿ*), ascensions, an important concept in mediaeval spherical astronomy and astronomical timekeeping [see mīḳāt]. Ascensions represent a measure of the amount of apparent rotation of the celestial sphere, and are usually measured from the eastern horizon, hence the name ascensions. Two kinds were used: (1) right ascensions, or ascensions in *sphaera recta*; and (2) oblique ascensions, or ascensions in *sphaera obliqua* [see also falak and maṭlaʿ].

(1) Right ascensions refer to the risings of arcs of the ecliptic over the horizon of a locality with latitude zero, and were called in mediaeval scientific Arabic *al-maṭāliʿ fi 'l-falak al-mustaḳīm*. In Fig. 1, which displays the horizon of such a locality and the celestial equator (perpendicular to the horizon) as well as an instantaneous position of the ecliptic, an arc λ of the ecliptic (measured from the vernal equinox γ) rises in the same period of time as the arc α of the celestial equator. The function $\alpha(\lambda)$ called the right ascensions measures the rising time of the ecliptic arc λ. Such ascensions were called *maṭāliʿ min awwal al-ḥamal*, since they were measured from the first point of Aries, that is, the vernal equinox γ.

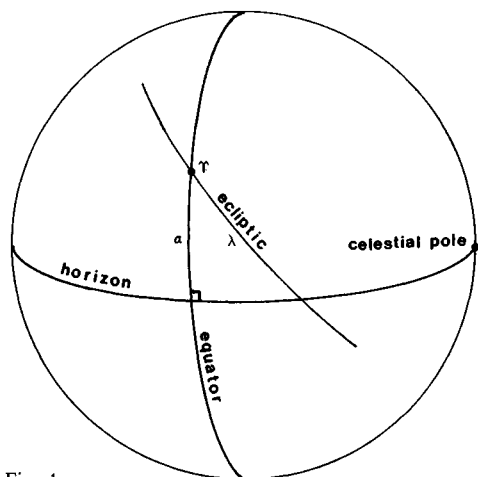
The function $\alpha(\lambda)$ was often tabulated in the


Fig. 1

astronomical handbooks known as *zīdjs* [see ZĪDJ] for each degree of λ to two or three sexagesimal digits. The underlying formula expressed in modern notation is:

$$\alpha(\lambda) = \text{arc sin } (\tan \delta(\lambda) \cot \varepsilon),$$

where ε is the obliquity of the ecliptic and δ is the declination [see MAYL]. The function $\rho(\lambda) = \tan \delta(\lambda)$ (multiplied by an appropriate constant related to the bases used for the various trigonometric functions) was also tabulated separately to facilitate computation of $\alpha(\lambda)$—it was called *al-maṭāli^c li-kull al-arḍ*, "ascensions for all the earth". More commonly, however, the quantity $\alpha' = \alpha + 90°$, called *al-maṭāli^c min awwal al-djady*, that is, ascensions measured from the first point of Capricorn, was tabulated. The use of this function, now referred to as "normed ascensions", is explained below.

The ascensions of celestial bodies not on the ecliptic, such as stars, were also called *maṭāli^c*. Fig. 2 shows a star with equatorial coordinates α for ascensions and
Fig. 2

δ for declination. Islamic star tables displayed either ecliptic longitudes and latitudes (λ and β) or equatorial ascensions (regular or normed) and declinations (α and δ) for a specific epoch. Since stellar longitudes increase steadily with time and stellar latitudes are constant, star tables could be modified for a different epoch by simply adding the amount of longitude increase (known as precession). Tables of equatorial coordinates could be prepared either by direct observation or by calculation from tables of ecliptic coordinates; in mediaeval times they could not be prepared from earlier tables of coordinates of the same kind because both stellar right ascension and declination are not linear functions of time. Formulae for the conversion of ecliptic to equatorial coordinates and *vice versa*, that is $(\lambda, \beta) \leftrightarrow (\alpha, \delta)$ were available to Muslim astronomers from Ptolemy's *Almagest*, and were simplified by them. The universal astrolabe [see SHAKKĀZIYYA] was particularly useful for performing transformations of ecliptic and equatorial coordinates.

(2) Oblique ascensions, associated with a specific latitude, were called *maṭāli^c al-balad* or *al-maṭāli^c al-baladiyya*. In Fig. 3, the arc λ of the ecliptic rises in the same time as arc α_φ of the equator over the horizon of a locality with latitude ρ. Muslim astronomers tabulated $\alpha_\varphi(\lambda)$ for specific latitudes. From *ca.* 400/1010 onwards, they often tabulated it for each degree of terrestrial latitude, usually for each degree of λ. The oblique ascensions, $\alpha_\varphi(\lambda)$, are related to the right ascension, $\alpha(\lambda)$, by the identity:

$$\alpha_\varphi(\lambda) = \alpha(\lambda) - d(\varphi, \lambda)$$

where $d(\varphi, \lambda)$ is half the excess of daylight over 180°, called in Arabic the *niṣf faḍl al-nahār*. In Fig. 3, ϒH =
Fig. 3

λ, ϒE = α_φ, and EG = d. The formula for $d(\varphi, \lambda)$ used by mediaeval astronomers was equivalent to the modern formula:

$$\delta(\varphi, \lambda = \text{arc sin } (\tan \delta(\lambda) \tan \varphi.$$

Again, the function $e(\lambda) = \tan \delta(\lambda)$ was used to generate values of $d(\varphi, \lambda)$ and, hence, tables of $\alpha_\varphi(\lambda)$ for different latitudes.

Oblique ascensions are of singular importance in timekeeping and in mathematical astrology. In both disciplines, the point of the ecliptic instantaneously rising over the horizon, which is known as the horoscopus [see ṬĀLI^c], is of interest. In Fig. 4, it is labelled H. Clearly, from the geometry of the sphere, the oblique ascensions of the horoscopus (with ecliptic longitude λ_H) are given by the relation:

$$\alpha_\varphi(\lambda_H) = \alpha_\varphi(\lambda_\odot) + T$$

where $\lambda_\odot$ is the longitude of the sun and T is the time in equatorial degrees since sunrise. In order to measure the time of day, it is thus sufficient to control the oblique ascensions of the horoscopus and the solar longitude. Similar procedures hold for timekeeping by the stars at night. Muslim astronomers, following a tradition started in Ptolemy's *Handy tables*, generally preferred to use the normed ascensions $\alpha' = \alpha + 90°$ because of the relation

$$\alpha_\varphi(\lambda_H) = \alpha(\lambda_M) + 90° = \alpha'(\lambda_M),$$

where λ_M is the longitude of upper mid-heaven, the

point of the ecliptic culminating on the meridian. If a star whose ecliptic longitude is known is observed to be culminating, then the longitude of the horoscopus can be found immediately from tables of $\alpha_\varphi(\lambda)$ and $\alpha'(\lambda)$. Once the latter is found, the astrological houses can be determined using tables of ascensions. Ascensions, then, were important in both timekeeping and astrology. In all *zīdjs* and treatises on astronomical timekeeping they figure prominently.

Ascensions were also important in determinations of lunar crescent visibility [see RUʾYAT AL-HILĀL]. Since one of the most popular conditions for crescent visibility was that the difference in setting times of the sun and moon be twelve equatorial degrees (= 48 minutes of time), the problem could easily be expressed in terms of ascensions. The situation is shown in Fig. 4. Note that the "descensions" (*maghārib*) of an ecliptic arc λ are α_φ $(\lambda + 180°)$. Thus if $\lambda_\odot$ and $\lambda_m = \lambda_\odot + \Delta\lambda$ represent the longitudes of the sun and moon, the condition may be expressed as:

$$\alpha_\varphi\,(180° + \lambda_m) - \alpha_\varphi\,(180° + \lambda_\odot) = 12°$$
Fig. 4

Using tables of α_φ (λ) for a specific latitude, as well as linear interpolation (*al-taʿdīl bayn al-saṭrayn*), it is possible to calculate values of $\Delta\lambda$ satisfying this condition for each range of $\lambda_\odot$. Tables of such values, for each zodiacal sign of solar longitude, were compiled already in the 3rd/9th century for the latitude of Baghdād. Certain later Islamic lunar visibility tables display such information for several latitudes.

(D. A. KING)

AL-**MAṬĀMĪR** [see MAṬMŪRA].

AL-**MATAMMA**, a town in the Democratic Republic of the Sudan, located in Shandī District, western bank of the Nile, opposite Shandī town [*q.v.*]. The number of households there in 1973 was 1,108.

Its origins are unknown, but its development was closely connected with caravan traffic that crossed the Nile there, and its status as a sister-town of Shandī is indicated by the fact that it was also known as Shandī al-Gharb. At the end of the 18th century it became involved in the upheavals of the Fundj kingdom [*q.v.*]; and around 1801 a rival faction of the Saʿdāb royal family of Shandī settled in al-Matamma, eventually becoming an ally of the Shāʾiḳiyya in their struggle against Fundj domination. By the time of the Egyptian invasion (1820-1), the population of al-Matamma numbered about 6,000, being ruled by King Musāʿid who was subordinate to his cousin Nimr, king of Shandī. Subjected to foreign rule, the rival kings united in a plot to kill the Egyptian commander Ismāʿīl Pasha [*q.v.*] (1822). After the subsequent reprisals in 1823, which hit Shandī more severely than al-Matamma, the latter grew into the most important tribal and commercial centre of the Djaʿaliyyūn [*q.v.*], with a large merchant class, and served as a transit point for caravans as in former times. By the middle of the century it was celebrated throughout the Sudan for the manufacture of coarse cotton scarfs. During the Mahdiyya [*q.v.*], on the eve of the British invasion in 1897, the people of al-Matamma refused to evacuate the town in order to make it a stronghold, and instead established contact with the invaders. A battle ensued in which the Mahdist forces killed most of the rebels (30 Muḥarram 1315/1 July 1897). During the present century, al-Matamma has gradually recovered but has not regained its commercial role.

Bibliography: Early references to al-Matamma are mostly found in the travel literature: G. B. English, *A narrative of an expedition to Dongola and Sennaar*, London 1822, 133-5; F. Caillaud, *Voyage à Méroé*, Paris 1826, ii, 180; E. Rüppel, *Reisen in Nubien, Kordofan und dem petrãischen Arabien*, Frankfurt-am-Main 1829, 110-11; G. A. Hoskins, *Travels in Ethiopia*, London 1835, 123-4; J. Petherick, *Egypt, the Soudan and Central Africa*, London 1861, 177-8; R. Hill (ed.), *On the frontiers of Islam. (A. BJØRKELO)

MAṬBAʿA (A.), printing.

1. IN THE ARAB WORLD

The Arabic verb *ṭabaʿa*, in the sense of printing a book, is a neologism probably inspired by the Italian or the French. This meaning is already attested in the

Dictionnaire français-arabe of Bocthor (1829): "printing", "the art of printing" is *ṭibāʿa* or *ṣināʿāt al-ṭabʿ*, while "printing-house", "printing-press" is *maṭbaʿa* or *dār al-ṭibāʿa*. It is the art of printing, in the context of the three technical processes that it comprises, xylography or wood-block printing (the discovery of which dates back to remote antiquity), printing by means of moving type (developed during the second half of the 15th century), and lithography (invented by G. A. Senefelder in 1796), which is the subject of this article.

Of the three processes, it seems that the Arabs, and the Muslims in particular, preferred lithography, especially during the 19th century. According to Demeerseman (see below, Tunisia) there are numerous reasons for this preference. The first reason is technical: lithography is more versatile than printing, and offers a greater range of possibilities in the production of designs and of maps. The second is artistic: it is an art which lends itself remarkably well to the reproduction of writing. As a corollary, there is the cultural reason: lithography causes no problem to the reader who is accustomed only to the manuscript style adopted for the writing-tablets of the Ḳurʾān school. Finally, there are social and economic reasons. In the East, the profession of copyist was highly developed, giving prestige and prosperity to a large section of the urban working class. According to the Bolognese scholar Luigi Ferdinando Marsigli (1658-1730), the number of Turkish copyists in Constantinople, when he visited the city, was as high as 80,000. The creation of printing-presses would therefore have caused devasting unemployment among the educated population. Further reasons are moral, doctrinal and political, and these may easily be imagined.

Regarding the relatively late date of the introduction of printing in the Arab countries (except in Lebanon and Syria, the practice did not emerge until the beginning of the 19th century) two other factors, besides those already mentioned, played an important role. In the first place, the majority of the Arab countries had been under the Ottoman domination since the beginning of the 16th century. Before establishing its own official press in 1726, the Sublime Porte had hitherto forbidden (edicts of Bāyezīd II in 1485 and of Selīm I in 1515) the Muslims to print texts in Arabic characters (although it permitted the Jews to print texts in Hebrew). The second factor is the economic problem which would have faced the innovators. To found presses of even modest size required the investment of substantial capital sums, which the book market, revolutionised by the availability of large-scale mechanical production, remained incapable of repaying properly. It should not be forgotten that the Medici Press in Rome was virtually bankrupt in 1610, because its proprietor-director, Raimondi, lacked the expertise to distribute the books that he printed. And such must have been the fate, undeserved, of many other presses, whose record is confined to the production of a single work! A copyist, on the other hand, worked to a contract, and his only capital outlay was the purchase of paper.

A. Xylography

Xylography, or printing by means of plates or characters engraved on wood, was used by the Arabs, judging by the specimens which have been noted in the collections of manuscripts and papyri possessed by certain libraries in Europe (Vienna, Heidelberg, Berlin and the British Library). America (Museum of the University of Pennsylvania), or the Arab countries (National Library of Cairo and the ʿAbd al-Wahhāb Collection in Tunis). There is no precise indication of the dates of these specimens, of which the majority are amulets. According to Moritz, six printing-plates in the collection of the ancient Khedival Library of Cairo date from the Fāṭimid period. A study of xylographed Arabic texts would be a worthwhile undertaking, rendering it possible to observe whether the Arabs confined themselves to plates or whether whole books were composed according to this process. See G. Levi Della Vida, *An Arabic block print*, in *The Scientific Monthly*, lix (December 1944), 473-4; F. Bonola Bey, *Note sur l'origine de l'imprimerie arabe en Europe*, in *BIE*, 5th series, iii (1909), 75; A. Demeerseman, *L'imprimerie en Orient et au Maghreb*, in *IBLA*, xvii (1954), 21-3; R. W. Bulliet, *Medieval Arabic* ṭarsh: *a forgotten chapter in the history of printing*, in *JAOS*, cvii (1987), 427-38.

B. Printing and lithography

1. *In Europe.*

Arabic printing with mobile characters originated and developed, through a curious combination of circumstances which have yet to be fully explained, in Europe in the 16th century. It was in fact with the purpose of publishing Christian religious texts in Eastern languages and in Arabic in particular, that the Cardinal Ferdinando de' Medici, on the advice of Pope Gregory XIII, in 1585 entrusted to the orientalist Giovan Battista Raimondi the task of establishing and administering the *Typographia Medicea linguarum externarum*. Until the death of Raimondi in 1614, this press was to print a whole series of Arabic works including the translation of the Bible and of the Four Gospels, the *Canon Medicinae* of Avicenna, and the anonymously-edited text of the *Kitāb Nuzhat al-mushtāḳ* by al-Idrīsī [*q.v.*].

There exist, however, numerous works printed well before the *Typographia Medicea* began to operate, such that printing in Arabic characters must be deemed to have emerged at the beginning of the 16th century, or even in the final year of the 15th. The first book in Arabic characters seems in fact to have been a Ḳurʾān printed in Venice by Paganino de' Paganini (the dates given vary between 1499 and 1530); many authors speak of this work but no specimen of it survives, all copies having been destroyed by fire (see Maria Nallino, *Una cinquecentesca edizione del Corano stampata a Venezia*, in *Atti dell'Istituto Veneto di Scienze, Lettere ed Arti*, cxxiv, Classe di scienze morali, lettere ed arti [Venice 1965], 1-12).

The earliest Arabic text that has reached us is a book of Christian prayers, the *Kitāb Ṣalāt al-sawāʿī* (or *Horologium breve*). It was produced at Fano, in the region of the Marches which constituted part of the States of the Church, in 1514, by the master printer Gregorio de' Gregori (or de' Gregoris). Two years later, in Genoa, the typographer Pier Paolo Porro printed the trilingual *Psalterium* (Greek, Hebrew and Arabic), or else the Book of Psalms (*Kitāb al-Mazāmīr*) with an Arabic preface. In 1556, in Rome, the press of the Collegium Societatis Jesu produced an anonymous religious treatise in Arabic (probably to be attributed to the Jesuit Giambattista Eliano or Romano) with the Latin title *Fidei orthodoxae brevis et explicata confessio* and the Arabic title *Iʿtiḳād al-amāna*, which was to be reprinted many times during the same century and in the following century.

The first work of a non-religious nature was printed, again in Rome, by the Venetian master printer Domenico Basa at his Roman printing-press in 1585, the book in question being the *Kitāb al-Bustān fī ʿadjāʾib al-arḍ wa 'l-buldān*, a work of descriptive geography by an author of whom nothing is known but his name, Salāmish b. Kundukdjī al-Ṣāliḥī.

Outside Italy, worthy of note is an Arabic grammar

by Guillaume Postel, printed in Paris, probably in 1538, of which the Arabic characters are unfortunately almost illegible. At Neustadt in 1582, with characters engraved on wood, there was published an *Alphabetum arabicum* by Jacob Christmann, professor of Arabic at Heidelberg. The same characters were used in Heidelberg, the following year, for the printing of a translation by Ruthger Spey of the *Epistle to the Galatians* of St. Paul.

Again at Rome, in 1627, there began the intensive typographical activity of the press of the Sacra Congregatio de Propaganda Fide, responsible for the printing of two particularly monumental works. The first is the Arabic translation of an abridged version of the *Annales ecclesiastici*, or history of the Church edited in twelve volumes by Cardinal Cesare Baronio, published between 1653 and 1671, and the second, the *Biblia arabica ad usum Ecclesiarum orientalium*, in four folio volumes.

At least three other presses, active in the 17th century, are worthy of mention. The first is that of the Collegio Ambrosiano of Milan where, in 1632, there was printed the Latin translation of the well-known *Ḳāmūs* of al-Fīrūzābādī, made by Antonio Giggei under the title of *Thesaurus linguae arabicae* in four large folio volumes.

The second is that of the Seminary of Padua, in the state of Venice, which ceased to operate in 1698 after printing, in two large volumes, the Arabic text of the Ḳurʾān, with Latin translation, an introduction and a commentary (drawn from as yet unedited Arabic works) by Ludovico Marracci, confessor to Pope Innocent XI, at the latter's request.

The third is the Reale Stamperia of Palermo, in Sicily, which published the first collection of accounts relating to the Arab occupation of Sicily intitled *Rerum arabicarum, quae ad historiam Siculam spectant, ampla collectio,* the *Libro del Consiglio d'Egitto*, or *Kitāb Diwān Miṣr*, by the notorious forger, the Abbé Giuseppe Vella, and finally the first Italian edition of the *Grammatica arabica* of Erpenius.

It is extremely difficult to establish even a rudimentary list of the Arab presses of Europe (nevertheless, see J. Balagua, *L'imprimerie arabe en Occident. (XVI^e^, XVII^e^ et XVIII^e^-siècle)*, Paris 1984). Documentation is often fragmentary, sometimes non-existent. Certain presses are known only because they are mentioned in the works that have survived from them and available for study. Four editions of the Ḳurʾān, published in Europe between the end of the 17th and the first half of the 19th century, indicate the existence of other Arabic presses in Germany and in Russia. The first is that of Hinckelmann, produced in the Free City of Hamburg in 1694. Two Russian editions represent the first two Ḳurʾāns published by Muslims: the first in 1787 in Saint Petersburg, the then capital of the Tsarist Russian Empire; and the second in 1803 in Kazan, in the region of the Volga, today the capital of the Tatar Republic. Finally, in 1834, at Leipzig in Saxony, the centre of the book trade, Gustav Flügel published the first edition of his Ḳurʾānic text, later to be used by several generations of orientalists.

See Olga Pinto, *La tipografia araba in Italia dal XVI al-XIX secolo*, in *Levante*, 1-2 (1964), 8-16; Angelo Piemontese, *I fondi dei manoscritti arabi, persiani e turchi in Italia*, in *Gli Arabi in Italia*, Milan (privately printed edition by Credito Italiano-Libri Scheiwiller) 1979, 661-88; idem, *Les fonds de manuscrits persans conservées dans les Bibliothèques d'Italie*, in *JA*, cclxx/3-4 (1982), 273-93.

In Eastern Europe, it should be noted that towards the end of the 17th century, at the request of the Melkite patriarch of Aleppo, Athanasius Ḍabbās, the Voivode of Wallachia (a tributary of the Ottoman sultanate in the kingdom of Rumania) Constantin Bassaraba Brancoveanul, installed at Sinagovo an Arabic press which edited numerous liturgical books in Arabic. This press seems to have ceased production in 1704, when Athanasius returned to Syria (see below, Syria) and took the initiative of installing a printing-press in the city of Aleppo, his patriarchal seat. See J. Nasrallah, *Les imprimeries Melkites jusqu'à la fin du 18^e^ siècle*, in *al-Maçarrat*, 34th year (1948), 438-40.

2. *In the Near East.*

a. Lebanon. The Lebanese claim the honour of having printed the first book in an Arab country. The work in question is a Psalter printed in 1610 at the Convent of Saint Antony of Ḳuzḥaya (Dayr Mār Anṭuniyūs or Dayr Ḳizḥayya ?). The pages are divided into two columns, that on the right being for the text in Syriac, and that on the left for the Arabic text in *karshūnī* script [*q.v.*]. According to a note appended to the work, the printing was done under the supervision of the master (*muʿallim*) Pasquale Eli, a native of Camerino in central Italy. This edition marked a short-lived enterprise. More than a century was to elapse, and numerous unsuccessful attempts were to be made, before the *Shammās* ʿAbd Allāh Zākhir, with his second experiment in typography (the first having been in Aleppo) established a press at the Convent of Mār Yūḥannā al-Ṣābigh in 1734. Subsequently, other presses were founded, invariably among religious communities.

The American Press and the Imprimerie Catholique deserve special mention, particularly for their editing activities. The Protestant Mission of the American Board of Commissioners for Foreign Missions had installed an Arabic press in Malta, where it functioned from 1822 to 1842. When the Mission transferred its headquarters to Beirut, on 10 July 1823, the decision was taken to move the Arabic press to the Lebanese capital. This was accomplished on 8 May 1834.

The Imprimerie Catholique was founded to some extent with the object of countering the activity of Protestant missionaries. Its operations commenced in 1848, but the press soon developed into one of the best-equipped publishing houses of the Near East. See J. Joseph Nasrallah, *L'imprimerie au Liban*, Beirut 1949, 160.

b. Syria. In Syria, it was the same Melkite Patriarch, Athanasius Dabbās, who, on his return from Europe, undertook to install a press in the city that was his patriarchal seat, Aleppo, and with the aid of the *Shammās* ʿAbd Allāh Zākhir the press operated from 1706 to 1711. More than a century was to pass before a Sardinian printer, Belfante (?), came, in 1841, to establish a lithographic press at Aleppo. Curiously, the first book printed under his supervision was the *Dīwān* of Ibn al-Fāriḍ. See Kh. Ṣābāt, *Taʾrīkh al-Ṭibāʿa*, ch. iv, 96-128, and Wahid Gdoura, *Le début de l'imprimerie arabe à Istanbul et en Syrie*, Tunis 1985.

c. Palestine. Palestine—and Jerusalem in particular—has throughout history been a centre of interest for all the revealed religions. As early as 1830, a Jew, Nessim Bāḳ (?) had opened a press in Jerusalem for the printing of religious texts in Hebrew. (The Jews were the first Ottoman subjects to use printing for this purpose; in Constantinople their typographical activity dates back to 1490 !) In 1848, it was the turn of the Franciscans, encouraged by the

young Emperor of Austria, Franz Josef, through the intermediary of a monk of Austrian origin, Frotchner, to establish the Tipografia dei Padri Francescani di Gerusalemme. Again in 1848, a printing press was founded, called the London Press, by Protestant missionaries whose aim was the propagation of the Gospel among the Jews. Within a short time, the city of Jerusalem was full of presses producing works in Arabic and other oriental languages including Russian, Armenian, Greek and Turkish, invariably operated by religious organisations or on their behalf. See Ṣābāt, *op. cit.*, ch. vii, 319-24.

d. Jordan. Jordan did not become an independent Arab state in the form of an emirate until after the First World War, in 1921 (even though it was subject to British Mandate until 1946). It was in fact in 1922 that a printing-press belonging to the typographer Khalīl Naṣr, who had founded it in Haifa in 1909, was transferred to Amman. It was used for printing the journal *al-Urdunn*. Three years later, the Government Press was established. See Ṣābāt, *op. cit.*, ch. vii, 325-6.

e. ʿIrāḳ. Historians do not agree as to the date at which printing was introduced to ʿIrāḳ. According to Razūḳ ʿĪsā, the first ʿIrāḳī lithographic works was founded at al-Kāẓimiyya and the first and only work printed was *Dawḥat al-wuzarāʾ fī taʾrīkh waḳāʾiʿ al-Zawrāʾ* by the *Shaykh* Rasūl Efendi al-Kirkūkī, in 1237/1821 or, according to others, in 1246/1830.

Rufaʾīl Buṭī (?), states that Dāwūd Pasha al-Kurdjī, the last independent Mamlūk, published in Baghdād in 1816, by means of lithography, an official bilingual Turkish-Arabic journal intitled *Djurnāl al-ʿIrāḳ*. Although no copy has survived, Buṭī claims that the existence of the journal was mentioned by foreign travellers who visited ʿIrāḳ in this period.

After the creation of another lithographical press, this time in Karbalāʾ, the first press using mobile characters was established by the Dominican Fathers in Mawṣil in 1859. One year later, it received sets of Arabic, Syriac and Latin types offered by the Imprimerie Nationale of Paris. The latter was the only establishment which possessed machinery for the casting of type.

The first official press was founded by Midḥat Pasha, who used it for the publication of a bilingual Turkish-Arabic journal, *al-Zawrāʾ* (15 June 1869). See Ṣābāt, *op. cit.*, ch. vi, 293-313; Khālid Ḥabīb al-Rāwī, *Min taʾrīkh al-ṣaḥāfa al-ʿirāḳiyya*, Baghdād 1978.

3. *In the Arabian Peninsula.*

a. Saudi Arabia. The first printing-press introduced in the country was that of the Ottoman *wilāyet* of the Ḥidjāz in the year 1300/1882. It was used to print the official journal entitled *al-Ḥidjāz*. Two years later, a lithographical press was also introduced. With the creation of the Kingdom of the Ḥidjāz, the new king, the *Sharīf* Ḥusayn, installed a small printing-press at Mecca. This was in 1919, and the press was used to print the official journal *al-Ḳibla*. According to some, the *Sharīf* personally performed the roles of writer, publisher and printer. See Ṣābāt, *op. cit.*, ch. vii, 331-6.

b. North Yemen. In 1877, the Ottoman Sultan ʿAbd al-Ḥamīd II ordered the establishment of a press at Ṣanʿāʾ, capital of the Yemen, for the publication of an offical Turkish-Arabic weekly paper intitled *Ṣanʿāʾ* after the name of the city. The same press was put to use by the Imām Yaḥyā after the recognition of the independence of his country in 1923. See Ṣābāt, *op. cit.*, ch. vii, 327-30.

c. Baḥrayn. It was a poet known by the name of *Shāʿir al-Khalīdj* ("The Poet of the Gulf"), ʿAbd Allāh ʿAlī al-Zāʾid, who in 1938 purchased a printing press in England and called it *Maṭbaʿat al-Baḥrayn*. The press was used for the printing of material required by local administration and trading-houses, as well as for text-books. In 1939 it began printing the journal *al-Baḥrayn*, published by its proprietor. See Ṣābāt, *op. cit.*, ch. viii, 339-42.

d. Kuwait. Before 1947, Kuwait imported all its printed materials from abroad. The *al-Maʿārif* Press was founded with the importation of a small press and a set of characters bought second-hand in ʿIrāḳ. Three years later, it was repurchased by the *Dāʾirat al-Maʿārif* (a kind of local education authority). In 1954, the Kuwaiti government decided to set up an official organisation for printing and publishing (*Dāʾirat al-maṭbūʿāt wa 'l-nashr*) equipped with modern machinery. See Ṣābāt, *op. cit.*, ch. viii, 343-6.

e. Ḳaṭar. In spite of its small size, the emirate of Ḳaṭar has, since 1956, possessed a typographical establishment known as *Maṭābiʿ al-ʿurūba*. Since 1961, this has printed *al-Djarīda al-rasmiyya* ("The Official Journal") and a monthly information sheet in Arabic intitled *al-Mashʿal*, organ of the Qatar General Petroleum Corporation. See Ṣābāt, *op. cit.*, ch. viii, 347-8.

4. *In the Nile Valley.*

a. Egypt. It was with the expedition of Bonaparte that printing was introduced to Egypt in 1798. The Arabic characters used were those of the official Press of the French Republic, in addition to those of the Arabic Press of the Propaganda of Rome. The latter also supplied a number of its staff, to serve as overseers, typographers and printers. The first French and Arabic printed works were produced on board the flagship *Orient*, the headquarters of Bonaparte and his staff, and bear the mention "printed on board the *Orient* by the naval military press". After disembarkation at Alexandria, a press was installed there and given the name of the "Imprimerie Orientale et Française". A second press was established in Ezbekieh Square in Cairo, and this was known as the Imprimerie Nationale. Alongside the latter, there existed for some time a private press belonging to Joseph Marc Emmanuel Aurel, a printer and bookseller from Valence (France) and a friend of Bonaparte. His press was entrusted with the printing of the *Courrier d'Egypte*, a journal of local information, and of the *Décade Egyptienne*, a literary journal reporting the activities of the Institut des Sciences et des Arts d'Égypte. When the National Press began to operate at full capacity, this put an end to the activity of Marc Aurel, who sold his press and returned to France in 1800.

It should be noted that, among the administrative or political texts published, the orientalist Jean Joseph Marcel, who was responsible for the supervision of these presses, published the Arabic text of the Fables of Luḳmān, accompanied by a French translation. The activities of the expedition's presses ceased in 1801 with the evacuation of the French troops.

Official typographical activity was revived some twenty years later, on the instructions of Muḥammad ʿAlī Pasha, with the establishment of a press at Būlāḳ. This began to function *ca.* 1822. The staff consisted partly of Egyptians, including a certain Nicolas Masabki (Masābikī) who had been sent for training to Milan, Italy, and partly of Europeans, among them some Italian typographers who had worked in the presses of the French expedition and remained in the country.

The significance of this event is immense; the inauguration of this "Press of the Pas̲h̲a" in fact marks the beginning of the movement towards the renaissance of the Arab world which has characterised these past two centuries.

Alongside the Būlāḳ Press, which was later to be known by the name of *al-Maṭbaʿa al-amīriyya*, a number of private presses, large and small, were established, usually combined with a publishing house, managed by Egyptians or by Europeans. The history of these presses has yet to be written, but with their publications they contributed in a significant manner to establishing the primacy of Egypt in the great process of evolution which the *Nahḍa* was to be.

See A. Geiss, *Histoire de l'imprimerie en Egypte*, in *Bulletin de l'Institut Egyptien*, 5th series, i, (1907), 133-57. 2nd part, in *ibid.*, ii (1908), 195-220; on the publications of the expedition's presses, see R. G. Canivet, *L'Imprimerie de l'expédition d'Egypte. Les journaux et les procès-verbaux de l'Institut (1798-1801)*, in *ibid.*, iii (1909), 1-22; on the first publications of the Būlāḳ press, see T. X. Bianchi, *Catalogue général des livres arabes, persans et turcs imprimés à Boulac, en Egypt, depuis l'introduction de l'imprimerie dans ce pays*, in *JA*, 4th series, ii (1843), 24-63; on the private presses, see O. Pinto, *Mose Castelli, tipografo italiano al Cairo*, in Univ. di Roma—Studi Orientali pubblicati a cura della Scuola orientale, v. A *Francesco Gabrieli. Studi orientalistici offerti nel sessantesimo compleanno dai suoi colleghi e discepoli*, Rome 1964, 217-23.

b. Sudan. It was during the Turkish-Egyptian occupation of this country (1820-85), at a date which cannot be fixed precisely, that a lithographic work was introduced with the object of responding to the needs of the administration. It is known that it was used by Gordon Pas̲h̲a, when he was appointed Governor of Sudan, to print paper money as a replacement for the metal coinage which gave out during the siege of Khartoum, between the end of 1884 and January 1885. After the capture of the town, the press fell into the hands of the Mahdists [see AL-MAHDIYYA], who used it to print the *k̲h̲iṭābāt al-daʿwa* (messages for religious dissemination) of the Mahdī and other books of a religious nature. See Muḥammad Ibrāhīm Abū Salīm, *al-Ḥaraka al-fikriyya fi 'l-Mahdiyya*, Khartoum 1970, 58-62; idem, *Taʾrīk̲h̲ al-K̲h̲arṭūm*, Khartoum 1971, 212.

5. *In the Mag̲h̲rib.*

a. Libya. The first press was the official one introduced by the governor of the *wilāyet* of Tripoli in 1866. Installed in the fortress of the town, it possessed lithographical and typographical facilities. It was here that the first issue of *Ṭarābulus G̲h̲arb*, the official Turkish-Arabic journal of the local Ottoman administration, was printed. According to R. L. Playfair, *The bibliography of the Barbary States, Pt.I., Tripoli and the Cyrenaica*, London-Royal Geographic Society Suppl. Papers, ii, 1889, 557-614, in 1827, a journal entitled *L'Investigateur Africain* was published in Tripoli. However, researches, especially by E. Rossi, have shown that the work involved was in fact a manuscript journal, a sort of *ante litteram* newsletter, composed by the Swedish Consul, Gråberg de Hemsö, with the collaboration of his European colleagues resident in Tripoli. See also M. Scaparro, *La stampa di Tripoli turca (1866-1911)*, in *Tripolitania*, iii/3-4 (1933), 10-20; idem, *La stampa di Tripoli (1866-1933)*, in *ibid.* iii/7-8, 13-21.

b. Tunisia. Tunisia is one of those instances where printing was not introduced at the official level. Under Aḥmad Bey (1837-55), the Abbé François Bourgade, with the aid of a refugee from Leghorn, Pompeo Sulema, opened in Tunis, in the first months of 1845, the St. Louis College, to which a small lithographical press was attached. It was here that there appeared, in 1849, the first Arabic text printed in Tunisia, a translation into Arabic by Sulaymān al-Ḥarāʾirī, Arab secretary to the French Consulate, of a text by the Abbé Bourgade, of which the French title is *Soirées de Carthage ou dialogue d'un prêtre catholique, un mufti et un cadi.* The subsequent history of this press is not known in detail, but it is known that it was closed by the Ottoman authorities in the wake of a scandal involving forged banknotes.

The official lithographical press was founded in 1857. The first text was, according to Demeerseman, the *ʿAhd al-amān* (see *Dustūr*. i. Tunisia) solemnly promulgated at the Palace of the Bardo by Muḥammad Bey on 9 September 1857.

On 7 November 1859, a decree of the Bey authorised an English merchant, Richard Holt, to establish a press and to publish a gazette in Arabic and Italian which would provide "commercial news, statistical information and extracts from other publications, with the exception of anything of a political nature". Following difficulties raised especially by foreign representatives, Sadok Bey decided on 18 July 1860 to establish an official press. This was to print *al-Rāʾid al-tunisī* (a title rendered in French by *L'indicateur tunisien*), the first issue appearing in fact on 23 July of the same year. See A. Demeerseman, *Une étape importante de la culture islamique. Une parente méconnue de l'imprimerie arabe et tunisienne: la lithographie*, in *IBLA*, xvi/64 (1953), 347-89; idem, *Une étape décisive de la culture et de la psychologie sociale islamique. Les données de la controverse autour du problème de l'imprimerie*, in *ibid.*, xvii (1954), 1-48, 113-40.

c. Algeria. The first journal printed in Algeria was the *Estafette d'Alger*, which first appeared at Sidi Ferruch on 14 June 1830, produced by French troops who had landed in this small bay to the west of Algiers and who used a field printing-press. Apparently the same press was used to print the *Moniteur Algérien*, a bilingual French-Arabic journal, two years later. It is interesting to note that the Arabic text was lithographed. Almost a hundred years were to elapse before, in 1925, the founder of the Islamic orthodox reformist movement in Algeria, Ibn Bādīs, was able to establish an Algerian press in Constantine, *al-Maṭbaʿa al-islāmiyya al-d̲j̲azāʾiriyya*, subsequently known as *Maṭbaʿat al-S̲h̲ihāb*, after the name of the monthly magazine which it published until 1939. See Christiane Souriant-Hoebrechts, *La presse maghrébine*, Paris 1975; ʿAbd al-Malik Murtāḍ, *Maʿālim al-adab al-ʿarabī al-ḥadīt̲h̲ fi 'l-D̲j̲azāʾir*, in *al-Aḳlām*, xiv/11 (1979), 44-51 (*Ins̲h̲āʾ al-maṭābiʿ al-ʿarabiyya fi 'l-D̲j̲azāʾir*, 45).

d. Morocco. The first press in Morocco was a state foundation, founded on the instructions of the Filālī *S̲h̲arīf* Muḥammad b. ʿAbd al-Raḥmān (1859-73). This was a lithographical press (*maṭbaʿat ḥad̲j̲ar*) supervised by an Egyptian master printer, Muḥammad al-Ḳabbānī, which operated from January to August 1865 at Meknès, and was subsequently transferred to Fās. The first book printed seems to have been *al-S̲h̲amāʾil al-Muḥammadiyya* (according to Ayache, "The portrait of the Prophet") by the author, compiler of one of the six canonical *sunan*, died at the end of the 3rd/9th century, Muḥammad b. ʿĪsā al-Tirmid̲h̲ī. See. G. Ayache, *L'apparition de l'imprimerie au Maroc*, in *Hespéris-Tamuda*, v (1964), 143-61; M. Ben Cheneb and E. Lévi-Provençal, *Essai de répertoire chronologique des éditions de Fès*, Algiers 1922.

General bibliography: There exists no gener-

al work covering all the Arab countries. The most important works concerning the various regions are mentioned at the end of each section. On printing with movable characters, the most complete survey remains that of Khalīl Ṣābāt, *Taʾrīkh al-ṭibāʿa fi 'l-shark al-ʿarabī*, Cairo 1966, 378 ff., with an ample bibliography of works in numerous languages; the Maghrib is however completely excluded. Other countries, including Oman, the United Arab Emirates and South Yemen, also pass without mention in this work.

On the question of the slow pace of the diffusion of printing in the Arab countries, see, besides Demeerseman (cited in the bibliography relating to Tunisia), T. F. Carter, *Islam as a barrier to printing*, ch. xv of *The invention of printing in China*, in *MW*, xxxiii (1943), 213-16.

Finally, on the Arabic works published in Europe, reference may be made to the bibliographical works of C. F. de Schnurrer, *Bibliotheca arabica*, Halle-a.-S. 1811, covering the period from 1505 to 1810, and V. Chauvin, *Bibliographie des ouvrages relatifs aux Arabes publiés dans l'Europe chrétienne de 1810 à 1885*, Liège 1892. (G. OMAN)

2. IN TURKEY

Books in Turkish, primarily grammars and dictionaries and phrase-books, were printed in Western European countries within a century or so from the beginning there of printing in Arabic characters by means of movable type, whilst the Christian (Greek Orthodox and Armenian) and Jewish communities of the Ottoman empire also at an early date took the new invention for the production in their own languages and scripts.

The printing of books in Arabic characters from Italian presses (see section 1 above) soon began to acquire an additional motive to that of the interests of Arabic and Italian scholarship in the West, sc. the hope of finding export markets for the new books in the Islamic East itself, and in particular, in the Ottoman Empire, In Dhu 'l-Kaʿda 996/September-October 1588, two merchants, Branton and Orazio Bandini, acquired a *firmān* from Sultan Murād III (982-1003/1574-95) for the import of printed books (this is reproduced at the end of the Arabic text of the mathematical text of Euclid, *K. Taḥrīr uṣūl li-Uḳlīdis*, produced at the Medici Press in Rome in 1594 from typeface made by Robert Granjon), indicating that official opinion in Istanbul, at this time at least, was not implacably opposed to the new invention (see Bonola Bey, 74-6; Gerçek, 23-4).

The French ambassador to the Porte, François Savary de Brèves (ambassador 1591-1605), had Arabic type cast in Istanbul intended for future use in his own printing house, and these were improved when he returned to Paris by the engraver Guillaume Le Bé the Elder (Bernard, 4; Brun, 170). Then when he was stationed in Rome, he printed at his own house, *Ex Typographia Savariana*, an Arabic version of the Book of Psalms (*al-Mazāmīr*), together with a Latin translation (*Liber Psalmorum Davidi Regis et Prophetae*), but the origins of the type used for printing this Psalter are uncertain (see Vaccari, 37-43). It was Savary de Brèves' diplomatic skill which brought about the agreement on trade, involving a grant of capitulations [see IMTIYĀZĀT], between Sultan Aḥmed I and Henry IV of France, signed on 20 May 1604, and in 1615 Savary de Brèves printed the text of this agreement with the help of the printer Etienne Paulin in Paris, with the Turkish and French versions on alternate pages and with the Turkish title of *Fransa pādishāhi ile āl-i ʿOthmān pādishāhi beyninde munʿaḳid olan ʿaḳīdnāmedir ki dhikr olunur.* After Savary de Brèves' death in 1627, the famous printer Antoine Vitré bought his typefaces from his heirs in the name of King Louis XIII (Bernard, 5-6, 8 ff.).

It should be noted that the first work on Turkish grammar printed in the west, at Leipzig in 1612 by Hieronymus Megiser, in Latin with Turkish examples in the Arabic script, *Institutionum linguae turcicae libri quattuor*, dates from this time also.

Jewish presses. The first Jewish press in Istanbul was established by David and Samuel Nahmias, immigrants who had moved into the Ottoman lands from the West, but there are disputes over the date of the first book produced from this press. The date on this book, in letters rather than in numbers, is Friday, 4 Tebet 5254/13 December 1493, but it has been argued (cf. Steinschneider, 17) that this date cannot be right, because (a) it would have been difficult for immigrants from Spain to have established and been able to print books only a year after their arrival in 1492, and (b) there is an otherwise inexplicable gap between this date and that of the printing of the second book at this press, a *Torah* (Nisan 5265/April 1505) (Yaary, 17-18); but the earlier date still has wide acceptance. In any case, it is certain that this first book, whatever its date, the *Arbaʿah Turim* of Rabbi Jacob ben Asher, was the earliest to appear from this press (Posner, 91, no. 126).

Armenian presses. In 1562 the future Catholicos of Etchmiadzin, Michael I of Sivas (Catholicos 1567-76), sent a mission led by Abgar Tibir of Tokat to Pope Pius IV in Rome to discuss certain religious issues. Whilst nothing concrete was in fact achieved by this mission, Abgar Tibir stayed on and subsequently received permission from the Pope and the Doge to visit Venice, with the aim of learning the art of printing in order to produce Armenian books (Zarpanelyan, 43). In 1565, whilst still in Venice, he printed with the aid of his son Sultan Shah (who later took the name of Marc Antonio) the single-paged *Harnapuntur dumari* (perpetual calendar) and the *Sagmos* (Psalter) (Anasyan, 6, nos. 8, 10). In their second book produced, they included an engraving of the Pope with some of his cardinals (Teotik, 41). But Abgar Tibir became estranged from the Pope and found the censorship prevailing in Italy oppressive, hence returned to Istanbul in 1567. He probably set up his printing press in the Church of Surp Nigogos (the present Kefeli Mescid), which was used jointly by the Armenians and the Latin Dominicans, and using the founts brought from Venice and with the help of a monk named Hotor, printed six books between 1567 and 1569 (Ishkhanyan, 212). The first book printed, in 1567, was *Pokir keraganutyan gam ayppenaran* ("Elementary Armenian alphabet") (Anasyan, 6, no. 11). The first Turkish language book printed in the Armenian alphabet came much later, this being Mekhitar of Sivas's (1676-1749) *Turun keraganutyan ashkharapar levzin hayotz* ..., a grammar written in Turkish and teaching spoken Armenian, printed in Italy, at Antonio Bortoli's press in Venice in 1727 with the proviso that the Papal imprimatur, *Con Licenza de' Superiori e Privilegio*, was to be printed on the book's cover (Anasyan, 91, no. 354). However, the first Turkish language book printed in the Armenian alphabet in Istanbul was Bagdasar Tibir's *Bu kitāb oldur ki Krisdoneyaghan ḥayātīmiza iḳtiḍālī* ("This is a book containing what is necessary for our Christian life") of 1742 (Anasyan, 115-16, no. 465).

Greek presses. Nicodemus Metaxas of Cephalonia, who graduated from Balliol College,

Oxford, in 1622, started a business in London for printing religious books and with the financial backing of his merchant brother. These books were probably printed under Metaxas's supervision by William Jones or at the Elliot's Court press, and it may be that the first book published by Metaxas in Istanbul was printed in London at the latter press (Roberts, 19-24; Layton, 155). The Oecumenical Patriarch Cyril Lucaris (1572-1638), who held views similar to those of Calvinism, invited Metaxas to Istanbul in order to use his press against Jesuit Roman Catholic propaganda, to educate the Orthodox and to reform his Church (Roberts, 13). Arriving in 1627 on a Levant Company ship, he brought with him his Greek fount, the books he had printed in London and two skilled Dutch printers (Layton, 145). His printing house began in rented premises near to the English and French embassies, and the first book produced there in 1627 was a treatise against the Jews (Legrand, no. 166); but Jesuit intrigue aroused the Janissaries against the innovation of the press, and the latter destroyed it in January 1628 (Hadjiantoniou, 80-3).

The first Turkish text printed in the Greek alphabet (originally written by the Patriarch in Greek and then translated into the Turkish dialect of Ḳaramān, *Ḳaramānlid̲j̲a*), was the profession of faith of the first post-Ottoman conquest Orthodox Patriarch, Gennadios Scolarios, addressed to Sultan Meḥemmed II Fātiḥ, the *Iʿtiḳād-nāme*; the Sultan requested that it be translated into Turkish and it was also printed by Martin Crusius in *Turco-Graeciae libri octo*, Basel 1584, 109-20. Another religious work in *Ḳaramānlid̲j̲a* is the *Gülzār-i īmān-i Mesīḥī*; no press or place of printing is mentioned in it, but it may have been produced at the Armenian press in Istanbul by Panoggiotis Kyriakides (Salaville and Dalleggio, 3-4).

In all these cases, the presses of these minority faiths had to be imported from outside, and none of them were able to construct them within the Ottoman borders.

One inevitably wonders why no Turkish press existed at this time, when printed books imported from Europe were sold in Turkey and when the non-Muslim communities were printing books. A section on printing in Pečewī's *Taʾrīk̲h̲*, Istanbul 1283/1866, i, 107, argues that the printing press was no longer an alien thing and that Turkish society was slowly accepting it, because of the great speed with which a large number of books can be produced once the tedious work of type-setting has been done; clearly, this historian approved of printing; yet it was to be 78 years after Pečewī's death before the first Turkish Muslim press was to be established. The reason for the Muslims' aversion from printing doubtless included motives of religious conservatism but also the vested social and economic interests of the professions of calligraphers (*k̲h̲aṭṭāṭ*) [see K̲H̲AṬṬ], book illustrators, binders, etc.; and when printing eventually was established in the 18th century, only small numbers of books were produced and demand remained at a low level.

Ibrāhīm Müteferriḳa and his press. Some eight years before the establishment of his press in 1140/1727, Ibrāhīm Müteferriḳa had in 1132/1719-20 printed a map of the Sea of Marmara, probably dedicated to the Vizier Dāmād Ibrāhīm Pas̲h̲a and presented to him, since a note on the map's bottom right-hand corner reads "If Your Excellency my master so commands, larger ones can be produced. [Dated] year 1132". It seems therefore that attempts at setting up a printing press antedated 1132 by some years (see Kortoğlu, 14-15). A second map, of the Black Sea, followed in 1137/1724-5, and a third one, *Memālik-i Īrān*, in 1142/1729-30. A fourth map, *Iḳlīm-i Miṣr*, was known to have existed (Ersoy, 37), but remained lost until it surfaced recently for sale (see Brill's *Turcica catalogue no. 484*, June 1976, 16).

Concerning Ibrāhīm Müteferriḳa's Transylvanian origins, his conversion to Islam, his career in the Ottoman service as a diplomat and as an author, see the article IBRĀHĪM MÜTEFERRIḲA. Here is mentioned too his written proposal, the *Wesīlet al-ṭibāʿa*, to the Grand Vizier Dāmād Ibrāhīm Pas̲h̲a of 1139/1726-7 on the benefits of printing: the benefits for the masses needing instruction and for the ruling classes alike, the perpetuation of books by printing when manuscripts could and had been destroyed by war (as in the Christian Reconquista of al-Andalus and in the Mongol invasions) and the general usefulness of the new technique for Islam (this opuscule was printed as the first five pages of the first book which he printed, Wānḳulī's Turkish version of al-D̲j̲awharī's famous dictionary, the *Ṣiḥāḥ*). He feared religious opposition, and made a formal approach to the Vizier, requested a *fatwā* from the S̲h̲ayk̲h̲ al-Islām on the licitness of printing and asked Sultan Aḥmed III for a *firmān* authorising him to print books, promising that the first work undertaken would be Wānḳulī's dictionary, enclosing a few specimen pages of this already printed, explaining the process of proof-reading, setting forth how he had been working towards the project for eight years with the patronage and financial assistance of the high official Saʿīd Efendi and promising that at the end of each book printed the sale price would be given (see the specimens from this application at the end of Gerçek, and also Sungu).

With the help of Saʿīd Efendi, the Grand Vizier Dāmād Ibrāhīm Pas̲h̲a and the S̲h̲ayk̲h̲ al-Islām ʿAbd Allāh Efendi's *fatwā*, Aḥmed III was persuaded to issue a *firmān* to Saʿīd and Ibrāhīm Müteferriḳa in D̲h̲u 'l-Ḳaʿda 1139/1727 authorising the opening of a printing-works and enjoining the printing of books not on such subjects as *fiḳh*, *ḥadīt̲h̲*, *tafsīr*, *kalām*, but on practical subjects like medicine, crafts, geographical guides, etc., based on the authority of the *fatwās* of the former *ḳāḍīs* of Istanbul, Salonica and G̲h̲alaṭa and of the S̲h̲ayk̲h̲ al-Islām (whose names were recorded in the written petition to the sultan); these last are to take charge of the proofreading, for which great care is to be exercised.

With this security behind them, Saʿīd and Ibrāhīm went ahead with the setting-up of the *dār al-ṭibāʿa* (popularly known as the *basma-k̲h̲āne*) in Ibrāhīm's own house in the Sultan Selīm neighbourhood of the Fātiḥ quarter. Documents dated 29 Rabīʿ II 1140/14 December 1727 and 2 D̲j̲umādā I 1140/16 December 1727 show that the press had begun work on Wānḳulī's dictionary, and this was completed and the book ready by 1 Rad̲j̲ab 1141/31 January 1729. In the 16 years up to Ibrāhīm's illness of 1156/1743, only 17 books were produced, explicable partly by his own carefulness but also by an apparent lack of enthusiasm for printed books in Ottoman society. The Patrona K̲h̲alīl revolt of 1143/1730 which led to the Sultan's abdication [see AḤMAD III] did not affect the progress of Ibrāhīm's work, but the idea of printing does not seem to have made a deep impression on society. In this same year, that of the new Sultan Maḥmūd I's [*q.v.*] accession, a pamphlet on military organisation, *Uṣūl al-ḥikam fī niẓām al-umam*, was printed, and on 11-20 S̲h̲aʿbān 1144-1145/early February 1732, Maḥmūd renewed the *firmān* originally granted to Saʿīd and Ibrāhīm by Aḥmed III, but this time to Ibrāhīm only. Ibrāhīm's 13th book, the *History* of Naʿīmā

[*q.v.*], was printed in two volumes in 1147/1734-5. Then followed five years of inactivity, till between 1153/1740-1 and 1156/1743 four more books were produced, bringing the total to 17. In this last year, Ibrāhīm fell ill and died in 1158/1745.

The books printed between 1141/1729 and 1156/1743 are as follows:

1. *Kitāb-ī lughat-i Wānḳulī*—1 Radjab 1141/31 January 1729
2. *Tuḥfat al-kibār fī asfār al-biḥār*—1 Dhu 'l-Ḳaʿda 1141/29 May 1729
3. *Taʾrīkh-i sayyāḥ dar bayān-i ẓuhūr-i Aghwāniyān wa sabab-i inhidām-i bināʾ-i dawlat-i shāhān-i Ṣafawiyān*—1 Ṣafar 1142/26 August 1729
4. *Taʾrīkh al-Hind al-Gharbī al-musammā bi-ḥadīth-i naw*—middle third of Ramaḍān 1142/beginning of April 1730 (illustrated)
5. *Taʾrīkh-i Tīmūr-i Gurkhān*— 1 Dhu 'l-Ḳaʿda 1142/18 May 1730
6. *Taʾrīkh-i Miṣr al-Djadīd, Taʾrīkh-i Miṣr al-Ḳadīm*—1 Dhu 'l-Ḥidjdja 1142/17 June 1730
7. *Gülshan-i khulafāʾ*—1 Ṣafar 1143/16 August 1730
8. *Grammaire turque*—1730
9. *Uṣūl al-ḥikam fī niẓām al-umam*—middle third of Shaʿbān 1144/beginning of February 1732
10. *Fuyūḍāt-i miḳnāṭisiyya*—1 Ramaḍān 1144/27 February 1732
11. *Djihān-nümā*—10 Muḥarram 1145/3 July 1732
12. *Taḳwīm al-tawārīkh*—1 Muḥarram 1146/14 June 1733
13. *Taʾrīkh-i Naʿīmā*—vol. i, middle third of Muḥarram 1147/middle-late June 1734, vol. ii, Djumādā I 1147/middle October 1734
14. *Taʾrīkh-i Rāshid Efendi*—1 Dhu 'l-Ḥidjdja 1153/17 February 1741
15. *Taʾrīkh-i Čelebi-zāde Efendi*—1 Dhu 'l-Ḥidjdja 1153/17 February 1741
16. *Aḥwāl-i ghazawāt dar diyār-i Bosna*—1 Muḥarram 1154/19 March 1741
17. *Farhang-i Shuʿūrī*—1 Shaʿbān 1155/1 October 1742

With the exception of no. 8, Holdermann's *Grammaire turque*, the size of the editions of these books printed at the *dār-i ṭibāʿa-yi ʿāmira* is given at the end of the second volume of Naʿīmā's *History*: 1,000 each for nos. 1 and 2; 1,200 for no. 3; and 500 each for the rest.

After Ibrāhīm's death, his foreman Ḳāḍī Ibrāhīm Efendi (who is thought to have been his son-in-law also) and Ḳāḍī Aḥmed Efendi got a *firmān* from Maḥmūd I, but for unknown reasons were unable to start printing (Gerçek, 92). At the beginning of Rabīʿ II 1168/1755 they got a new *firmān* from ʿOthmān III and started printing, their first publication being a second edition of Wānḳulī's dictionary, but soon after this, Ḳāḍī Ibrāhīm Efendi died and the press was abandoned. Subsequently, two secretaries of the Sublime Porte, the *Waḳʿa-nüwīs* Rāshid Meḥmed Efendi and the *Waḳʿa-nüwīs* Wāṣīf Efendi, bought the press from Ibrāhīm Müteferriḳa's heirs, obtained a *firmān* from Sultan ʿAbd al-Medjīd I and in 1198/1783-4 printed the histories of Sāmī, Ṣubḥī and Shākir in one volume; in the following year they printed the history of ʿIzzī, a sequel to the preceding three ones. After the grammatical work *Iʿrāb al-Kāfiyya* of the next year, no book was printed, and then between 1207/1792-3 and 1209/1794-5 three books on military topics were produced. Rāshid Meḥmed Efendi died in 1212/1796-7 and the press was closed down. It had hardly been a shining success in its 64 years of existence; for only 18 of these had it been actually operated, and it had printed just 24 books (including the second edition of Wānḳulī).

The books printed between 1169/1755-6 and 1209/1794-5 are as follows:

1. *Kitāb-ī lughāt-ī Wānḳulī*, 2 vols., the first in 1169/1755-6 and the second in 1170/1756-7
2. *Tawārīkh-i Sāmī wa Ṣubḥī wa Shākir* — 1198/1783-4
3. *Taʾrīkh-i ʿIzzī* — 1199/1784-5
4. *Iʿrāb al-Kāfiyya* — 1200/1785-6
5. *Fann-i ḥarb* — 1207/1792-3
6. *Fann-i laghīm* — 1208/1793-4
7. *Fann-i muḥāṣara* — 1209/1794-5.

In the meantime, another press has been established in the French Embassy in Istanbul, founded by the ambassador, Choiseul-Gouffier, which printed three books, two on military topics and one on Turkish grammar. These books are as follows:

1. *Uṣūl al-maʿārif fī tartīb al-ordū* — 1201/1787
2. *Uṣūl al-maʿārif fī wadjh taṣnīf safāʾin-i donanma* ... — 1202/1787-8
3. *Elemens de la langue turque* — March 1790

A second Turkish printing-works was opened in the School of Engineering and Artillery (*Mühendiskhāne*) at Hasköy in 1210/1795-6. The state purchased the equipment for this and the books which were in the possession of Rāshid Efendi, and appointed ʿAbd al-Raḥmān Efendi, a teacher in the School, as director of the press. The first book produced was Aḥmed ʿĀṣim Efendi's translation of the Persian dictionary, the *Burhān-i ḳāṭiʿ*, entitled *Kitāb-ī tibyān-ī nāfiʿ*, published on 23 Rabīʿ I 1214/25 August 1799 under the supervision of ʿAbd al-Raḥmān Efendi and at the *dār al-ṭibāʿa al-maʿmūra*. The first foreign-language book to appear from it was a French manual of the Turkish language for foreigners written by *Reʾīs al-Küttāb* Maḥmūd Rāʾif Efendi, *Tableau des nouveaux règlemens de l'Empire Ottomane*, illustrated, published in 1798 (see Sungu, 9-12).

A third press was opened in 1217/1802-3, again under the supervision of ʿAbd al-Raḥmān Efendi but whilst the Mühendis-khāne press was itself still active, at Üsküdār and in the Boyadjī Khān built by Sultan Selīm III at the head of the slope running up from the Harem pier. The first volume of the third edition of Wānḳulī was printed in 1217/1802 at the Mühendis-khāne press, described as the *dār al-ṭibāʿa*, but the second volume, printed at the Üsküdār one in 1218/1803-4, records this as the *dār al-ṭibāʿa al-djadīda*. The newer press expanded and was used for general printing, whilst the Mühendis-khāne press, after a period of inactivity, was used to print school books, and continued in use till the First World War. The Üsküdār press continued in its original premises till 1247/1831-2, issuing books on language, history and medicine, when Maḥmūd II transferred it to the building known as the Bath of Ḳapudan Ibrāhīm Pasha, which stood where the Central Library of Istanbul University now stands. The house next to this building was also bought, and a fourth press started here under the name of the *Taḳwīm-khāne-yi ʿāmire* to print the official newspaper *Taḳwīm-i waḳāʾiʿ* (1 November 1831).

The Būlāḳ press. During this same period, the governor of Egypt Muḥammad ʿAlī Pasha [*q.v.*] set up the press at Būlāḳ in direct competition with the Istanbul presses, and which was known as the *maṭbaʿa-yi dār al-ṭibāʿa* or *maṭbaʿat ṣāḥib al-saʿāda* or *al-maṭbaʿa al-amīriyya* or simply *maṭbaʿat Būlāḳ*. It issued as its first book Don Rafael's *Dizionario italiano e arabo*, printed in 1822 (Heyworth-Dunne, 333). This press had the responsibility of printing the official newspaper *al-Waḳāʾiʿ al-Miṣriyya*, starting on 25 Djumādā I 1244/3 December 1828 (al-Futūḥ, 263), as well as the texts of laws, calendars and general books. It printed books in

Turkish, Arabic and Persian, the majority however being in Turkish (Heyworth-Dunne, 334-5).

Cayol's lithographic press. Lithographic printing, invented in 1798 by Alois Senefelder of Munich (1771-1834) and further developed after Senefelder in 1818 published his technical manual on the process, was in use in Istanbul not much more than 30 years after its invention. Henri Cayol (1805-65) of Marseille and his cousin Jacques Cayol came to Istanbul and under the patronage of Khüsrew Pasha set up a lithographic press in the grounds of the Ministry of War, at a location whose exact spot cannot be traced today (Gerçek, 13), with machinery ordered from Paris. Fifty soldiers were assigned to the Cayols to work with them and learn the trade, and for five years books on military subjects, including drill, were produced, the first book printed by lithography being Meḥmed Khüsrew Pasha's *Nukhbat al-taʿlīm* in 1247/1831-2 and with 79 illustrations.

On Khüsrew Pasha's removal from office, the Cayols moved in 1836 to Kuleḳapī and opened a press there on the basis of a *firmān* from Sultan Maḥmūd II (Zellich, 47). On 27 Rabīʿ II 1267/1 March 1851 Henri Cayol applied to the *Medjlis-i Wālā* Presidency and received permission to print books in any language, as well as printing the Armenian monthly journal *Panacer* ("The Philologist") (Khayr al-Dīn Nedīm, 73-4). In January 1852 he printed the only issue of the *Journal Asiatique de Constantinople* (Bianchi, 248-9), but in mid-1852 the printing-works were burnt down during type-casting. It re-opened on 1 November 1855 in Beyoğlu at the corner of the street leading to the French Embassy (Zellich, 52). Henri Cayol died of cholera on 18 August 1856, and after his death, his family worked the press in his name but under the management of Antoine Zellich.

In 1840 the Djerīd-khāne press was opened to print the official newspaper *Djerīde-yi ḥawādith*; and in 1299/1881-2 the Ebu 'l-Ḍiyāʾ (Ebüzziyā) press, which was to have a special place in the history of Turkish printing, was opened by Ebu 'l-Ḍiyāʾ Meḥmed Tewfīḳ Bey in Ghalaṭa in the Maḥkeme Street. In 1864 the *Dār al-Ṭibāʿa* and the *Taḳwīm-khāne* had been combined and moved to a building within the grounds of the Topḳapī Palace, at first called the *Dār al-Ṭibāʿa al-ʿĀmira*, then up to Republican times as the *Maṭbaʿa-yi ʿĀmire*, and later, the *Millī Maṭbaʿa* and *Dewlet Maṭbaʿasī*; in 1939 it was given over to the Ministry of Education.

With the "alphabet revolution" of 1928 introduced by Kemal Atatürk [*q.v.*] as part of his westernising reforms, and the consequent change from the Arabic to a Latin system for the writing of Turkish, Turkish printing henceforth became divorced, typographically speaking, from the history and development of printing in Arabic characters.

3. In Persia

1. Under the Mongols.

Wood-block printing was introduced into Persia in 693/1294. In that year Gaykhatu Khān ordered the printing of paper money (*čaʾo*; Persianised as *čaw*) in imitation of Chinese practice. The paper money was printed in Tabrīz and circulated for the first time on 19 Shawwāl 693/12 September 1294. The paper money was probably printed with wooden blocks, which were manufactured by Chinese artisans living in Tabrīz. Despite the threat of capital punishment in case of refusal to accept paper money, the populations's reaction was one of outright rejection. Gaykhatu Khān was forced to abandon his experiment in Dhu 'l-Ḥidjdja 693/November 1294, as a result of which the art of printing was momentarily lost to Persia (see Jahn, *Paper currency*, 125-35).

2. Under the Ṣafawids.

Although the Torah was printed in Persian (with Hebrew characters) in Istanbul in 1594, it was not until 1629 that printing was reintroduced to Persia, this time in the form of typography. For in January 1629, Carmelite friars received a printing press from Rome. It had matrices of 349 Arabic letter types and two instruments to set up type. It is not known whether the press produced any actual books. The Carmelites certainly tried, but "because of the dryness of the country" they failed, according to Fr. Angelus (Gazophylacium). Their printing (*basma*, *ṭibāʿa*) experiments took place between 1629 and 1642, when Fr. Bernard of St. Theresia handed the printing press over to the Vicar-General of the Carmelites in Iṣfahān. From 1648 till 1669 the press was kept in storage by the Dutch East Indies Company, which in 1669 handed the press over to Fr. Raphael Du Mans. In 1676 Fr. Angelus reports that the Carmelites still had the press, but from the context it is clear that it had not been used for a long time (Floor, *The first printing press*).

About the same time that the Arabic-Persian printing press was introduced in Persia, an Armenian press also was established in Djulfā [*q.v.* in Suppl.], the Armenian suburb of Iṣfahān. This was done at the initiative of Bishop Khacʿatur Kesaracʿi in 1637. After 17 months of trial and error he succeeded in printing the Psalms in 1638. The Bishop's main problem was how to produce good quality paper and ink. Moreover, his type was not made out of lead, but of wood, copper and iron. He preserved and printed another two religious books, one in 1641 and the other in 1642. Both the letter types and the books can be seen in the Armenian museum at Djulfā (see Richard, *Un témoignage*...).

Despite his success, Bishop Kasaracʿi was troubled by technical problems. He therefore sent one of his pupils, Hovhannes, to Europe to obtain the required technical expertise. In 1644 Hovhannes printed a book in Armenian in Leghorn. He returned to Persia in 1646 to continue the work of Bishop Kesaracʿi, who had died in that year. To that end, Hovhannes brought lead types and a printing press with him. It was his intention to print the Bible, but "not having the way of making good Ink, and to avoid the ill consequences of the Invention, he was forc'd to break the press. For on one side the Children refus'd to learn to write, pretending they wrote the Bible themselves, only to get it sooner by heart: on the other side many persons were undone by it, that got their living by writing", according to Tavernier. The latter argument also had constrained the introduction of the art of printing in, for example, the Ottoman empire (see section 2, above). Tavernier was wrong in believing that the Armenian press had been broken, for in 1687 it was used again and this time nine books were printed. For unknown reasons, it fell into disuse again. It was only in 1771 that an Armenian printing press was established in Etchmiadzin, in 1786 in Nakhčewān and in 1796 in Astrakhān (Rāʾīn, *Armanīhā*).

3. Under the Ḳādjārs.

The art of printing was thus lost for a second time. Although the printing of the Armenian language was resumed fairly quickly, printing in Persian took somewhat longer. Persian language books were regularly printed since 1639, when in Leiden the first books in both the Persian language and characters were printed. After that date, both in Europe and towards the end of the 18th century also in India, many books in Persian were printed. The generally accepted date for the first book printed in Ḳādjār Persia is 1233/1817, when in Tabrīz the *Djihādiyya* by Mīrzā ʿĪsā Ḳāʾim-Maḳām was printed on a typographic press. Because there is no thorough analytical study on Persian incunabula, it is impossible to settle the question of the earliest printing date. The author of the *Maʾāthir al-mamālik* ascribes the introduction of the art of printing (*ʿamal al-ṭibāʿa* or *basma*) to ʿAbbās Mīrzā, the heir-apparent and governor-general of Ādharbāydjān. Iʿtimād al-Salṭana (*al-Maʾāthir wa 'l-athar*, 100), mistakenly, ascribes this initiative to Manūčihr Khān Muʿtamid al-Dawla, an influential Tehran courtier. The early books were printed by Mullā Muḥammad Bāḳir Tabrīzī, who in 1241/1825 also printed ʿAbd al-Razzāḳ Dunbulī's *Maʾāthir al-sulṭāniyya*. In 1825 another printer in Tabrīz, ʿAlī son of Ḥādjdjī Muḥammad Ḥusayn, printed the *Nasab al-ṣibyān* a well-known school text by Abū Naṣr Farāhī. By 1825, Tabrīz therefore boasted already of at least two typographic printing presses (*čāp-i surbī*).

In that same year, Muʿtamid al-Dawla established a typographic press in Tehran, which was operated by Mīrzā Zayn al-ʿĀbidīn Tabrīzī. With the support of Muʿtamid al-Dawla, who is said to have financed the printing of 8,000 copies, he printed many books, mainly religious, which were known as "Muʿtamadīs". In 1815 ʿAbbās Mīrzā had sent seven students to Great Britain to learn modern techniques. One of these students was Mīrzā Ṣāliḥ Shīrāzī, who apprenticed himself in London to a master printer (*čāp-sāz*) who specialised "in printing (*čāp zadan*) the Bible in Persian, Hindi, and Arabic and other languages". Mīrzā Ṣāliḥ returned to Persia in 1234/1819, where he established himself as a printer in Tabrīz. He shortly thereafter (1829) was sent to Russia as member of an embassy, from which he returned with a printing press. He was later engaged in printing in both Tabrīz and Tehran.

Mīrzā Ṣāliḥ in his turn sent a certain Mīrzā Asad Allāh to Russia to learn the printing trade. On his return to Persia in 1835, Mīrzā Asad Allāh stayed in Tabrīz and, together with Āḳā Riḍā, operated the first lithographic press (*čāp-i sangī*) in Iran. In that same year, Fatḥ ʿAlī Shāh summoned Mīrzā Asad Allāh to Tehran to start working there.

Because "printing in types is not relished by Persians, the characters being necessarily stiff and uncouth, and very displeasing to an eye accustomed to the flowing written hand" (Binning, i, 312),

lithography became very popular in Iran. Especially, the fact that lithography permitted Iranian artists to practice both calligraphy and illustrations in their normal way was an important advantage. Moreover, illustrated printed books became very popular, of which an increasing number, after the first items printed in 1259/1843, were produced in this way.

By 1850 there were five lithographic presses in Tehran (Sheil, 201) and in 1845 not less than 15 in Tabrīz (Schwarz, 85). However, books also continued to be published "both in types and lithograph; but the execution is rather coarse; in the latter style in particular", Binning observed in 1851 (i, 312, ii, 217). In 1256/March 1840, American missionaries in Urmiya printed the first text in Syriac; moreover, this press could also print Persian and English (Perkins, 456). Other presses followed in Sh̲īrāz, Iṣfahān, Bushire, Mas̲h̲had, Enzelī, Ras̲h̲t, Ardabīl, Hamadān, K̲h̲ōy, Yazd, Ḳazwīn, Kirmāns̲h̲āh, Garrūs and Kās̲h̲ān (Maḥbūbī Ardakānī, i, 217).

The list of early prints shows that a great variety of books were printed. Apart from religious texts, there were historical texts, popular works such as the *Thousand and one nights*, *Iskandar-nāma*, and a comic text such as *Duzd wa Ḳāḍī*. With the establishment of the *Dār al-Funūn* [*q.v.*] in 1852, a great number of scientific texts were printed on the school's own printing press. The publications were in the field of engineering, chemistry, physics, mathematics, biology, medicine, geography, military science and music. With the establishment of the government press (*dār al-ṭibāʿa*) and the state translation institute (*dār al-tard̲j̲uma*), hundreds of translations were made from European authors. Further, Persian and Arab classics were printed, while contemporary official chronicles were solicited and published, such as the *Rawḍat al-ṣafā-yi Nāṣirī* and the *Nāsik̲h̲ al-tawārīk̲h̲*. Under the direction of Iʿtimād al-Salṭana, who was in charge of the state press, translation, and censor's bureau, many of these books were published. He himself also published a great many useful official chronicles, such as the *Mirʾāt al-buldān* (3 vols.), the *Muntaẓam-i Nāṣirī* (3 vol.), and the *Maṭlaʿ al-s̲h̲ams* (3 vols.).

A separate development was the publication of newspapers (*kāg̲h̲ad̲h̲-i ak̲h̲bār*), of which the first lithographed issue was printed by Mīrzā Ṣāliḥ in Tehran on 25 Muḥarram 1253/1 March 1837. This paper had no special time, but only a long general heading, a shortened rendering of which is "Current news from Tehran" (*Ak̲h̲bār-i Waḳāyiʿ*). The paper, which lasted three years, offered foreign and local news, the latter focussing on the reforms initiating and progress promoted by Muḥammad S̲h̲āh (1834-48). In 1267/February 1851 the second newspaper to appear in Persia was published at the initiative of Mīrzā Taḳī K̲h̲ān Amīr Kabīr [*q.v.* in Suppl.]. This paper was edited by Edward Burgess and published under the name of *Rūz-nāma-yi Waḳāyiʿ-i Ittifāḳiyya*. Burgess also printed an uncensored newspaper for the eyes of Nāṣir al-Din S̲h̲āh (1848-96) and the Amīr Kabīr. In 1868 Nāṣir al-Dīn S̲h̲āh ordered the establishment of four newspapers, viz. an official gazette, both with and without illustrations, a semi-official newspaper and a scientific newspaper. Towards the end of the 19th century, many semi-official and private periodicals were published in increasing numbers. In 1874 one issue of a French newspaper, *La Patrie*, was published, which, because of its outspokenness, was immediately forbidden by the S̲h̲āh. It was soon followed by other French newspapers, one of which, *Le Journal de Perse*, was published by Iʿtimād al-Salṭana.

Since the press was mainly an instrument of the government, the latter in the 1850s established a Censor's Bureau (*Idāra-yi Sansūr*). All books and newspapers had to be approved by the censor before these could be printed or imported. Despite this censorship, these newspapers were carriers of some new ideas. Because all government officials were obliged to subscribe to the official papers, new ideas reached all parts of the kingdom. However, in general these "semi-official" newspapers were dull, mainly offering repetitious court activities. More effective in disseminating new political ideas were Persian newspapers printed outside Persia such as *Ḳānūn* (London), *Ak̲h̲tar* (Istanbul), *Ḥabl al-Matīn* (Calcutta) and *T̲h̲urayyā* (Cairo), which often had to be smuggled into Persia because of their unsettling contents. It was only with the advent of the constitutional movement in 1906 that newspapers started to play a very important role in political and cultural life of Persia.

(W. Floor)

4. In Muslim India

South Asia below the Himalayas remained beyond the diffusion of xylography from the Far East. Printing reached the subcontinent as European movable type technology introduced by Portuguese Jesuits who set up the first press in the College of St. Paul at Goa in 1556. In 1580 the Mug̲h̲al emperor Akbar was presented with a copy of the Royal Polyglot Bible printed by Plantin at Antwerp, one of the finest products of the 16th-century European press, but the Mug̲h̲al court did not adopt printing technology, being well served by its studio of calligraphers and artists. From the 1570s to the 1670s vernacular printing by the Portuguese in India to aid conversion was confined to Tamil, Konkani and Syriac, and that of the German and Dutch missionaries in the 18th century to Tamil and Sinhalese. Until the early 19th century, Christian literature in Arabic, Persian or Urdu was imported from Europe, such as Benjamin Schultze's Urdu New Testament printed at Halle in 1758.

The earliest known specimen of Arabic printing in

India is a small woodcut New Testament quotation on the title-page of *Dialogus inter Moslimum et Christianum*, a Tamil polemic against Islam printed at the Tranquebar Mission Press in 1727. But Arabic, Persian and Urdu printing in India really began in Calcutta under the East India Company from the 1780s onwards. Of the three languages, Persian was paramount to the Company's interests and the medium of the law-courts and the land-revenue system inherited from Mug̲h̲al Bengal. In the late 1770s the Governor-General Warren Hastings engaged Charles Wilkins, a Company servant with a gift for oriental languages, to manufacture Bengali and Nastaʿlīḳ types. With the Nastaʿlīḳ, Wilkins in 1780 printed Francis Gladwin's *A compendious vocabulary, English and Persian* at Malda in north Bengal. In 1781 he became first superintendent of the Honorable Company's Press in Calcutta which issued a plethora of Persian translations of the regulations, notices and blank-forms required for the administration of Bengal. The first of these was a selection of Dīwānī ʿAdālat regulations translated by William Chambers in 1781. From 1793 until 1837, when Persian ceased to be the language of the courts, Persian translations of Company regulations were reprinted in annual volumes. At Madras also Persian translations of local Company regulations were printed from 1802 onwards. Persian historical works valuable as sources on the Mug̲h̲al system of government were printed at Calcutta, such as William Davy's edition of *Tūzūkāt-i Tīmūrī* (1785), Muḥammad Sāḳī's *Muntak̲h̲abāt-i ʿĀlamgīr-nāma* prepared by Henry Vansittart (1785) and Amīr Ḥaydar Bilgrāmī's *Risāla*, a treatise on land-revenue and tenure with Gladwin's translation (1796). A Siyāḳat fount (the earliest such?) was specially cast for printing Gladwin's *A compendious system of Bengal revenue accounts* (1790 and 1796). Some linguistic works were printed to help Company servants master Persian, Gladwin again preeminent with *A vocabulary, English and Persian* (1791, 1800), *The Persian moonshee* (1795, 1799, 1800) and *The Persian guide* (1800). As the classical literary language of Muslim India, Persian was studied by the British orientalists forming the nucleus of the Asiatic Society of Bengal (founded 1784). The first work of Persian literature printed was *Ins̲h̲ā-yi Harkaran* edited by Francis Balfour (1781). Other important texts printed were Gladwin's edition of Saʿdī's *Pand-nāma* (1788) followed by *Kulliyyāt-i Saʿdī* prepared by J. H. Harington (1791-5), Sir William Jones' edition of Hātifī's *Laylī Mad̲j̲nūn* (1788), the *Dīwān* of Ḥāfiẓ (1791) and Nak̲h̲s̲h̲abī's *Ṭūṭī-nāma* with Gladwin's translation (1792). Arabic printing was far less extensive, but one important text printed before 1800 was al-Sad̲j̲āwandī's *al-Sirād̲j̲iyya* (1792), published as part of Jones' digest of Hindu and Muslim law. A concordance to the Ḳurʾān was printed at Calcutta in 1811, but the Arabic text (together with ʿAbd al-Ḳādir's Urdu translation) was not printed till 1829. The most famous translation of the Ḳurʾān printed in the subcontinent was S̲h̲āh Walī Allāh's Persian rendering (Dihlī 1866, etc.). The leading scholar of Urdu in 18th-century Calcutta was John B. Gilchrist, who published *A dictionary, English and Hindoostanee* (1786-7 to 1790), *A grammar of the Hindoostanee language* (1796) and *The Oriental linguist* (1798). In 1789 *The new Asiatick miscellany* contained the first Urdu literary text to be printed, a *rek̲h̲ta* of Walī Dakhanī. In the same year, W. H. Bird's *The oriental miscellany* also printed the words and music of several Urdu songs. From 1793 onwards, Urdu translations of Company regulations in Bengal were required to be printed as well as Persian. At Madras in 1790 the physician Henry Harris published *A dictionary, English and Hindostany*, but his grammar was never printed.

Fort William College, founded at Calcutta in 1800, provided a further stimulus for the printing of Arabic, Persian and particularly Urdu texts needed to instruct Company servants in those languages. Gladwin presented Nastaʿlīḳ types to the College, and these Gilchrist used as Professor of Urdu to equip the Hindoostanee Press, which issued many celebrated Urdu works: Mīr Ammān's version of "The Four Dervishes", *Bāg̲h̲-o-bahār* (1802); Mīr Shīr ʿAlī Afsūs' translation of Saʿdī's *Gulistān*, *Bāg̲h̲-i Urdū* (1802); Mīr Ḥasan's *Naṣr-i bī-naẓīr* (1803); Ḥaydar Bak̲h̲s̲h̲ Ḥaydarī's *Totākahānī* based on the *Ṭūṭī-nāma* (1804); etc. The largest book issued by this press was *Kulliyyāt-i Mīr Taḳī* with 1,085 pages (1811). Besides some forty Urdu works, by 1820 about twenty Arabic and another twenty Persian texts were also printed for the College's use at various Calcutta presses: John Baillie's *Arabic syntax* (1801); Joseph Barretto's edition of the *S̲h̲ams al-lughāt* (1806); Walī al-Dīn's *Mis̲h̲kāt al-maṣābīḥ* (1809); Matthew Lumsden's *A grammar of the Arabic language* (1813) and the *Dīwān al-Mutanabbī* (1814); *Anwār-i Suhaylī* (1805); Lumsden's *A grammar of the Persian language* (1810); Niẓāmī's *Sikandar-nāma* (1812); Mīrzā Abū Ṭālib K̲h̲ān's European travelogue *Masīr-i Ṭālibī* (1812); etc. At Madras, the equivalent College of Fort St. George also stimulated the printing of texts, such as the *Anwār-i Suhaylī* issued by the College Press in 1826.

The *muns̲h̲īs* of Fort William College and the Rev. Henry Martyn were equally important in early missionary printing in Islamic languages in India. Mīrzā Muḥammad Fiṭrat's translation of St. Matthew into Persian and of the Gospels into Urdu (edited by William Hunter) were both printed at Calcutta in 1805. In 1809 the Persian St. Matthew prepared by Nathaniel Sabat under Martyn's direction was printed at Serampore, the complete New Testament at Calcutta in 1816, and the Old Testament in parts (1828-38) by the Calcutta Auxiliary Bible Society. Sabat's Arabic New Testament was printed at Calcutta in 1816. Martyn's own translation of the New Testament into Urdu (the basis for all subsequent editions) was printed in 1814 at Serampore, where the Sindhi St. Matthew was issued in 1825. The mass of early 19th-century evangelical literature in Urdu, Persian, Panjabi, Sindhi, etc., was mainly printed by the various Christian tract and book societies formed (those of Calcutta, Benares, Āgra, North India, Punjab, Madras (for Dakhanī), Bombay, etc.).

The East India Company introduced lithography to India in the early 1820s, which rapidly displaced typography for Islamic printing as presses were established right across Northern India: Patna 1828; Kānpur 1830, Dihlī and Meerut 1834, Āgra 1835, Lūdhiāna 1836, Mīrzāpūr and Allāhābād 1839, Benares 1844, etc. The earliest Urdu works lithographed were medical treatises by Peter Breton, the first being *Bayān zaharōn kā* on poisons (Calcutta 1826), and in Persian editions of Saʿdī's *Gulistān* and *Būstān* (Calcutta 1827, 1828). The development of Lakhnaw as a major centre of Urdu and Persian printing exemplifies the transition to lithography. Nawwāb G̲h̲āzī al-Dīn Ḥaydar set up the royal press about 1817, its most famous product being the type-set Persian dictionary *Haft ḳulzum* (1820-2). His successor Nāṣir al-Dīn Ḥaydar brought Edward Archer's Asiatic Lithographic Press from nearby Kānpur to Lakhnaw in 1830, and the Arabic dictionary *Tād̲j̲ al-lug̲h̲āt* begun by typography was then completed (vols.

iv-viii) lithographically. Under Wād̲j̲id ʿAlī S̲h̲āh, all lithographic presses in Lakhnaw were closed because the Nawwāb disliked a history of his family lithographed by one Kamāl al-Dīn Ḥaydar. Some presses moved to Kānpur, while others continued surreptitiously and books were often issued without details of printer, etc., so that many early Lak̲h̲naw and Kānpur imprints are indistinguishable. The single most important Lakhnaw press was that of Muns̲h̲ī Nawal Kis̲h̲ōr founded in 1858. By his death in 1895 he had issued about 500 titles, mainly religious, historical and poetical texts, particularly Urdu translations from Arabic, Persian and Sanskrit, subsidised by his newspaper and his printing for government. Sikandar D̲j̲āh, Niẓām of Ḥaydarābād (Deccan), acquired a press as a curiosity of western technology during Lord Minto's vice-royalty (1807-13), but did not apparently use it.

Bombay was not important for Persian printing until the introduction of lithography, although the *Dasātīr* of 1818 printed with Nask̲h̲ types deserves mention. Among the earliest works lithographed there were the *Anwār-i Suhaylī* and the *Dīwān* of Ḥāfiẓ, both in 1828. Bombay and Karāčī were the twin centres of early Sindhi printing, one of the first Sindhi books lithographed being Sadāsukh Lālā's drawing manual *Citra jī pār* (Karāčī 1852). Karāčī had been the first city in what is modern Pakistan to acquire printing in the mid-1840s. The American Presbyterian Mission Press, Lūdhiāna, printed extensively in Panjabi (as well as Persian and Urdu) from the 1840s, but the main centres of Muslim Panjabi printing were Lāhawr and Siyālkūt, from the 1860s issuing *ḳiṣṣas* and other popular literature. The first press in modern Bangladesh was at Ḍhākā in the 1850s, but printing became widespread in East Bengal by the 1870s at Sylhet, Rajshahi, Barisal, Jessore, etc., and Calcutta also remained an important centre of Muslim Bengali printing. A number of Pas̲h̲to works were printed in Dihlī, Pes̲h̲āwar and Lāhawr in the 1870s.

Bibliography: For the history of printing in the subcontinent generally, see A. K. Priolkar, *The printing press in India*, Bombay 1958. N. Ahmad, *Oriental presses in the world*, Lāhawr 1985, contains much useful information on Islamic printing in South Asia. On early Persian, Arabic and Urdu printing in the 18th century, see G. Shaw, *Printing in Calcutta to 1800*, London 1981; C. A. Storey, *The beginnings of Persian printing in India*, in J. D. Butt, *Origin and development of printing press in Sind*, in *Pakistan library bulletin*, xii/3-4 (1981), 1-10. (G. W. Shaw)

5. In Afg̲h̲ānistān

The printing-press was only introduced to Afg̲h̲ānistān, geographically remote and beyond sustained British control, towards the end of the 19th century and then only for printing in Persian, the language of the court and of literature. The national language Pas̲h̲to was therefore first printed, whether from scholarly, evangelical or military and administrative motives, in Europe and, more extensively, in India. With British expansion north-westwards in the subcontinent, printing spread into the regions bordering Afg̲h̲ānistān itself. The first Afg̲h̲ān of note to encounter printing at first hand was the exiled king Shud̲j̲āʿ al-Mulk, who visited the American Presbyterian Mission Press at Lūdhiāna (Pand̲j̲āb) in the mid 1830s.

The pioneer of Pas̲h̲to studies in Europe was Bernhard Dorn of the Russian Imperial Academy of Sciences, whose *Chrestomathy of the Pushtu or Afghan language* (St. Petersburg 1847) included selections from poets such as ʿAbd al-Raḥmān, Mīrzā K̲h̲ān Anṣārī and ʿUbayd Allāh. Other notable early scholars were Ernest Trumpp, whose grammar of Pas̲h̲to was published at London (1873), and James Darmesteter, whose monumental collection of *Chants populaires des Afghans* was issued at Paris (1888-90). Selections from both Pas̲h̲to prose and poetry compiled by H. G. Raverty appeared as *Guls̲h̲an-i roh* (London 1860), adopted by the Government of India as the text-book for its Pas̲h̲to examination from 1866 onwards. This work included verses by the national poet K̲h̲ush̲h̲āl K̲h̲ān K̲h̲aṭak [*q.v.*], whose complete *dīwān* was lithographed at the Jail Press, Pes̲h̲āwar, in 1869 under the superintendence of H. W. Bellew.

The earliest Pas̲h̲to printing in India was at the Serampore Mission Press in Bengal: the New Testament in 1818 followed by the Pentateuch 1820 and Historical Books (incomplete) about 1832. British occupation of land between the Indus river and the Tak̲h̲t-i Sulaymān mountains in 1849 renewed missionary interest in Pas̲h̲to and in 1856 revision of the Serampore editions began under Isidor Loewenthal of the American Presbyterian Mission. The resulting New Testament was published at Hertford (1863) by the British and Foreign Bible Society. From 1859 onwards Pas̲h̲to tracts were lithographed at the press of the Pes̲h̲āwar Church Mission founded specifically for the conversion of the Afg̲h̲āns, as well as primers such as T. Tuting's *Kitāb al-Durr*. In 1883 a Pas̲h̲to Revision Committee was formed under T. J. L. Mayer of the Church Missionary Society and the translation of the complete Old Testament was published at London (1889-95).

Most early Pas̲h̲to linguistic works were compiled by officers of Pathān troops in India. Lt. Robert Leech, Bombay Engineers, who had accompanied a mission to Kābul, published *A grammar of the Pashtoo or Afghanee language* (Calcutta 1839), describing the Ḳandahārī dialect and including a specimen of verse by ʿAbd al-Raḥmān. Capt. John Vaughan, who had commanded the 5th Punjab Infantry at Derā G̲h̲āzī K̲h̲ān, compiled *A grammar and vocabulary of the Pooshtoo language* (Calcutta 1854). Most successful of all was Major H. G. Raverty, Bombay Native Infantry, who first studied Pas̲h̲to while stationed at Pes̲h̲āwar 1849-50. His Pas̲h̲to grammar went into three editions (Calcutta 1855; London 1860 and 1867) and he also published a dictionary (London 1867) and *The Pushto manual* (London 1880). All these works were printed using Nask̲h̲ types with extra sorts specially cut for the letters peculiar to Pas̲h̲to. As lithographic presses spread across north-western India, more Pas̲h̲to works began to be printed, e.g. *Ḳānūn al-ḳirāʾa*, rules for Ḳurʾān recitation (Dihlī 1865), *Kalīd-i Afg̲h̲ānī*, verse and prose selections (Pes̲h̲āwar 1872), *Sayr al-sālikīn*, *Pilgrim's progress* (Amritsar 1877), *Ḳiṣṣa-yi ḥirnī*,

Muḥammad and the deer (Abbottābād 1883) and T. C. Plowden's *Idiomatic colloquial sentences, English-Pakkhto* (Jail Press, Derā Ghāzī Khān 1884).

According to ʿAbd al-Raḥmān Khān's autobiography, there was no printing-press in Afghānistān before he became Amīr in 1880. But the first lithographic press (Maṭbaʿa-yi Muṣṭafawī) was set up under his predecessor Amīr Shīr ʿAlī Khān whose Persian polemic against the Wahhābīs, *Risāla-yi shihāb-i thāḳib*, was printed at Kābul in 1288/1871, followed by ʿAbd al-Ḳādir Khān's religious tract *Tuḥfat al-ʿulamāʾ* in 1292/1875. ʿAbd al-Raḥmān attributed the introduction of printing to Munshī ʿAbd al-Razzāḳ of Dihlī who trained many Kābulī lithographers before dying of fever. Several of the Amīr's own works in Persian were printed, including *Naṣāʾiḥ-nāmča*, advice on Afghānistān's relations with Russia (1303/1886), and *Mirʾāt al-ʿuḳūl*, on human intelligence (1311/1894). Most famous of all was his tract advocating *djihād*, *Kalimāt Amīr al-bilād fī 'l-targhīb ila 'l-djihād* (1304/1887), printed at the Humāyūn Press which also issued an almanac in the same year. The press was also used to promulgate laws, e.g. *Ḳānūn-i kār-gudhārī* relating to crimes and their punishments (1309/1892) and *Ḳawāʿid-i sirādj al-milla* relating to foreign imports and issued by ʿAbd al-Raḥmān's son, Amīr Ḥabīb Allāh Khān [*q.v.*], in 1321/1904. ʿAbd al-Raḥmān's desire to modernise his army is reflected in several military tracts printed, e.g. *Mīzak-i ṭūpkhāna* on gunnery manoeuvres (1303/1885) and *Ḳawāʿid-i risāla* on cavalry drill (1304/1887).

Bibliography: Given in the article.

(G. W. Shaw)

MAṬBAKH (A), kitchen, cookhouse, a noun of place, defined by lexicographers as "the cook's house" (*bayt al-ṭabbākh*) from the verbal root meaning "the cooking of flesh meat". The root *ṭ-b-kh* is common to the Semitic family. Already in Akkadian, OT Hebrew, Syriac, Ethiopic and post-Biblical Hebrew we find the further, related connotation of "slaughtering" in addition to that of "cooking". Undoubtedly, the mediaeval domestic *maṭbakh* combined both these functions. By extension of the root meaning, the *maṭbakh* was the place where every conceivable kind of food, including fleshmeat, was transformed from its raw state for consumption at the table.

1. In the mediaeval caliphate.

The kitchen has been described as the "birthplace" (Forbes) and the "foster home" (Needham) of innumerable terms, operations and apparatuses in the early stage of man's development of technology. Laboratory operations employed by the ancient pharmacist and cosmetician reveal their origin in the preparation of food; so too do the techniques of crushing or disintegration (pressing, grinding, impaction), the technology of fermentation, the methods for the preservation of perishable organic material and, the oven. The chemistry and technology of cooking were thus realms of practical knowledge which the Islamic world inherited from the ancient centres of Middle Eastern civilisation. This inheritance was not, however, shared equally by all the population. Techniques which had perhaps originated or else been refined in the kitchens of the ancient temple and the palace were appropriated by the mediaeval urban cook, whereas the rural and nomadic populations retained the more primitive methods of food preparation. The technological gap between the urban and rural domains can be explained as a function of the distribution of power in the economic sphere and ultimately of social stratification and its ramifications in the political sphere.

Data relating to the kitchen in the classical period (*ca.* 200-800 A.H.) are found most abundantly in the specialist culinary treatises. Few of these, unfortunately, are extant. The social milieu reflected by the cookbook is clearly that of prosperous urban households, although it would be safe to assume that both palace and domestic kitchens shared a culinary lore and a range and type of utensils in common. Apart from this we know little of the operations and personnel of the palace kitchens in particular, except that they were of a far greater scale than those in the domestic sphere. For example, Hilāl al-Ṣābī reports that in the time of al-Muʿtaḍid (d. 289/902) the imperial "cook houses" (*maṭābikh*) were separate from the bakeries (*makhābiz*) and the caliph was served from his own private kitchen while the public's needs were catered to from a different one. (*Tuḥfat al-umarāʾ fī taʾrīkh al-wuzarāʾ*, ed. ʿAbd al-Sattār Faradj, Cairo 1958, 20-2). Domestic households of a comfortable standard would have had their bread baked and food cooked in the same complex.

The concept and design of the kitchen in a traditional open courtyard house has probably remained unchanged from mediaeval times to the last surviving examples in modern-day Baghdad. Indeed, the essential characteristics of the mediaeval open courtyard house in ʿIrāḳ are said to be the Mesopotamian in origin and inspiration (see Ṣubḥī al-ʿAzzāwī, *A descriptive, analytical and comparative study of traditional courtyard houses and modern courtyard houses in Baghdad*, Bartlett School of Architecture and Planning, University of London Ph.D. thesis, unpubl.). The kitchen (the contemporary expression *bayt al-maṭbakh* being equivalent to the lexicographers' *bayt al-ṭabbākh* and *maṭbakh*) in multi-courtyard dwellings was a whole complex comprising the kitchen proper, opening on to its own courtyard with adjoining ancilliary areas such as store rooms, latrine and bathroom, well and possibly a cook's room. The upper part of the courtyard, level with the first floor of the house, was surrounded by blank walls and open to the sky. The kitchen of a single courtyard house faced directly on to the courtyard itself and had either fewer or no ancilliary areas attached to it. Larger multi-courtyard houses might have a second kitchen adjacent to the rooms where guests were entertained. Palaces of the caliph and the ʿAbbāsid princes were doubtless fashioned on a much larger scale but along essentially similar lines. Contrast this special function kitchen complex with Lane's description of a peasant's house in Lower Egypt in the 19th century, in which one room generally had an oven (Eg. *furn*) "at the end farthest from the entrance and occupying the whole width of the chamber. It resembles a wide bench or seat and is about breast high: it is constructed of brick and mud, the roof arched within and flat on top." During the cold months, the inhabitants would sleep either on top of a warmed oven or on the floor of the same room (*Manners and customs of the modern Egyptians*, London 1837, i, 30). Along the social spectrum, therefore, food preparation was performed in areas ranging from greater to lesser specialisation: from the separate public and private kitchens and bakehouses of the palaces to the shared kitchen-habitable area of the peasant's dwelling.

The well-equipped kitchen in an urban household generally contained two major appliances. One was the baking oven, the *tannūr*, of Mesopotamian origin (Akkadian *tinûrû*; see A. Salonen, *Die Öfen der alten Mesopotamier*, in *Baghdader Mitteilungen*, iii [1964], 100-24). Cylindrical and bee-hive shaped, it gave the appearance of a large, inverted pot, from which it probably evolved. Fuel, preferably good charcoal, was

inserted through a side opening, ignited, and when the oven was sufficiently hot, baking could commence. The oven's temperature could be adjusted to some extent by closing its open top, the so-called "eye" *ʿayn*, or "mouth" *fam*, and its other apertures, *a<u>th</u>ḳāb* (see Fawzi Rasūl, *al-Tannūr wa-ṣināʿatuhu fi 'l-Kāẓimiyya*, in *al-Turā<u>th</u> al-<u>Sh</u>aʿbī*, iii/12 [1972], 95-116). The earliest extant culinary manuscript, of late 4th/10th century ʿIrāḳī provenance, provides a list of implements specifically used in baking bread in a *tannūr* (see *Kitāb al-Ṭabī<u>kh</u> wa-iṣlāḥ al-a<u>gh</u><u>dh</u>iya al-maʾkūlāt wa-ṭatyīb al-aṭʿima al-maṣnūʿāt*, by Abū Muḥammad al-Muẓaffar b. Naṣr b. Sayyār al-Warrāḳ, Oxford, Bodleian, ms. Hunt. 187; now ed. K. Öhrnberg and S. Mroueh, Helsinki 1987). These include a dough board (*lawḥ*); a small rolling pin (*<u>sh</u>awbaḳ*) for the ordinary loaf (*ra<u>gh</u>īf*) and a large one for the thin *riḳāḳ*; a feather for coating the dough in certain preparations; a wooden bowl (*<u>dj</u>afna* or *miʿ<u>dj</u>an*) in which the dough was mixed and a metal scraper (*miḥakk*) for cleaning it afterwards. Yeast was kept in a wooden container called a *miḥlab*. A cloth (*mandīl*) was used to wipe a loaf clean before baking and another was used for wiping down the oven to remove unwanted moisture or condensation. A poker (*ṣinnāra*) was used to remove the loaf from the oven if it fell upon the floor inside, and a metal instrument (*miḥrak*) was used for raking out the embers and ash from the oven when baking was finished.

The *tannūr* was not used exclusively for baking bread. A recipe for a kind of chicken pie made in a pan (*miḳlā*) is described as being lowered into the oven to cook and another dish, a meat, rice and vegetable casserole made in a pot (*ḳidr*) was placed in the oven to finish cooking. Both these dishes were called *tannūriyya*, or oven-dish, which were often left to stew gently overnight in a slowly cooling oven and served the following day (al-Warrāḳ, *bāb* 87).

The second major cooking contrivance found in the kitchen was known simply as the "fire-place", *mustawḳad*. This was designed to accommodate several cooking pots and/or pans side-by-side at the same time. It was erected to about half-a-person's height, giving easy access to the cooking food and was provided with vents allowing for an intake of air over the coals and for the expulsion of smoke. It is evident that many dishes required more than one pot in their preparation, hence several "elements" might be used in the preparation of a single meal. Another, apparently independent, type of *mustawḳad* was recommended for the preparation of sweetmeats. Its single element accommodated a *miḳlā* or *tan<u>dj</u>īr*, the vessels in which sweetmeats were commonly made. These dishes required long cooking over a low heat accompanied by vigorous stirring of the pan's contents. The shape and position of this *mustawḳad* would have made it easier to hold the pan and to control the heat (al-Warrāḳ, fol. 13a).

Al-Warrāḳ's depiction of the mediaeval *batterie de cuisine* continues with a list of utensils employed in the preparation of the innumerable main dishes. Cooking pots (*ḳudūr*, sing. *ḳidr*) made of stone, earthenware, copper or lead came in various sizes. The largest pots were reported to hold the careasses of four goats (al-Masʿūdī, *Murū<u>dj</u>*, viii, 54 = §3173). Such cauldrons, however, were more apt to be found in the palace kitchens or an army field mess than in a domestic kitchen; contemporary recipes do not suggest such crude bulk of ingredients. Judging from certain archaeological evidence, kiln pottery vessels of the "cooking pot" and "casserole" types appear more modest in size. Remains from a Byzantine pottery factory in Cyprus reveal that the largest restored cooking pot item was 0.27 m high and 0.31 m at its greatest diameter; the smallest was 0.135 m high and 0.21 at its greatest diameter. Casseroles with lip-edge type rims which were probably provided with lids were smaller still, the largest restored item being 0.11 m high and 0.27 m in diameter (H. W. Catlong, *An early Byzantine pottery factory at Dhiorios in Cyprus*, in *Levant*, iv [1972], 1-82). These vessel sizes seem appropriate to the needs of even large domestic households.

Pans (sing. *miḳlā* or *miḳlāt*) generally used for frying fish and the like were made of iron. A stone-made *miḳlā* was used for other purposes, although the distinction between it and the former is unclear. Other utensils found in the kitchen were roasting skewers (sing. *saffūd*); a copper basin (*nuḳra*) for washing smaller containers and vessels in hot water; a large copper rod-like instrument (*miḥa<u>sh</u><u>sh</u>*) for stuffing intestines; a large knife for jointing meat and smaller ones for cutting up vegetables; several kinds of strainer (*miṣfāt*) made of wood or metal; a ladle (*mi<u>gh</u>rafa*) and a mallet (*miḍrab*). Spices were crushed or powdered in a mortar (*hāwun*) and kept in glass vessels. A similar but larger stone mortar (*<u>dj</u>āwun*) was used for pounding meat or crushing vegetables; while meat was cut up on a wooden table or large wooden surface (*<u>kh</u>iwān*).

As with bread-making operations, al-Warrāḳ lists separately implements for making sweetmeats (*ḥalwā*). Frequently these dishes were served shaped in the form of a fish or bird fashioned thus by means of a mould (*ḳālab*, pl. *ḳawālib*). In other cases sweetmeats were presented at a table decorated in a manner appropriate for the occasion. The thick syrupy substance which was the base of many kinds of *ḥalwā* was stirred slowly in a pan over the fire with utensils called an *iṣṭām* and a *ḳasba fārisiyya*. Some preparations were rolled out after cooking on a marble slab (*ru<u>kh</u>āma*) before being cut into individual pieces. (The above data may be compared with Athenian household utensils in the classical period in B. A. Sparkes, *The Greek kitchen*, in *J. of Hellenic Studies*, lxxxii [1962], 121-37.)

The separate lists of utensils for different tasks mentioned in al-Warrāḳ's work suggests that at least in the larger, prosperous households both a baker and possibly a sweetmaker might have been retained in addition to a cook and other assistants. It may indeed be the case too, as Pellat has proposed, that the baker's (*<u>kh</u>abbāz*) initial function evolved into that of a chief kitchen steward or even household majordomo (al-<u>Dj</u>āḥiẓ, *Bu<u>kh</u>alāʾ*. tr. Ch. Pellat, *Le livre des avares*, 213, 258). The sweetmaker, on the other hand, may have been more often a market-based specialist commissioned to make his wares in people's kitchens when the need or occasion demanded. By and large, therefore, a household's status was marked socially, in part, by its degree of independence from the commercial cooked food establishments of the market which catered more to the needs of other sections of the population. Despite allusions in the *Thousand and One Nights* to "sending out" for food cooked in the market, the *ḥisba* manuals convey the impression that such fare was to be regarded with some suspicion. This impression is underlined by the existence of one market institution which must have served many urban households. Dishes initially prepared in the kitchen could be taken to the communal oven (*furn*), cooked there and returned to the kitchen to be garnished with chopped vegetable leaves and additional spices. Preparation of such a dish in the kitchen ensured a control over its quality; for its part, the *furn*

served the needs of households which possessed neither adequate kitchen space, equipment or labour for meal preparation or else catered for a household's special festive occasions. In any event, the very affluent establishments would seldom, if ever, require the services of a communal oven manager.

Although we do not possess data on the day-to-day details of kitchen management, food preparation was a time-consuming and labour-intensive process. So too were the efforts to keep the cooking pots and pans clean in order to prevent the food becoming spoiled. Al-Ba<u>gh</u>dādī's instructions in his mid-7th/13th century cookbook run briefly as follows: "The utmost care must be taken when washing the utensils used in cooking and the pans; let them be rubbed with brick dust, then with powdered dry potash and saffron and finally with the fresh leaf of citron" (*A Baghdad cookery book*, tr. A. J. Arberry, in *IC*, xiii [1939], 33). The opening chapter of al-Warrāḳ's work deals with many of the causes of spoiled food and how to avoid such results. Meat must be thoroughly cleaned of any blood and washed in pure cold (not hot) water in a clean bowl; a knife used to cut up vegetables should not be used at the same time to cut up meat; spices which are old, have lost their essential flavour and have become "bitter", should not be used lest they "corrupt the pot". Likewise, salt and oil should be tasted before adding them to the cooking food so as to ensure they are still in good condition; attention must be paid to see that the liquid of stews or bits of onion and the like has not dried on the inside of pots and so might spoil the food when next they were used; and only fuel which does not give off acrid smoke should be used, as the smoke could alter the taste of the food.

Finally, the kitchen or kitchen complex of the single or multi-courtyard house (*bayt maftūḥ*) allowed a sheep or goat and several fowl to occupy the yard awaiting slaughter and the cooking pot; thus meat could be kept and cooked fresh. Fruits, herbs and certain vegetables were also dried and then stored in the kitchen's ancilliary area along with food prepared by pickling and special condiments such as *murrī*. Home-made beer and wine could be stored there as well. The wide range of activities associated with the transformation of food from its "raw to cooked" state (clearly reflected in the treasury of contemporary recipes) indicates the central importance of the kitchen and its management not only to the smooth running of day-to-day family life but also to the broader social and political aspects of food preparation and consumption which existed within the enclosed world of the domestic compound.

Bibliography: In addition to works cited in the article, the following items have been selected which contain data more closely related to kitchen technology than to cooking as such: R. J. Forbes, *Food and drink*, in *A history of technology*, ed. C. Singer *et alii*, Oxford 1957, ii, 103-45; idem, *Chemical, culinary and cosmetic arts*, in *ibid.*, i, 270-85; J. Needham, *Science and civilisation in China*, Cambridge 1980, v/4, 1-210; M. M. Ahsan, *Social life under the Abbasids*, London 1979, 76-164; Margaret Arnott (ed.), *Gastronomy: the anthropology of food and food habits*, The Hague 1975; D. Waines, *Prolegomena to the study of cooking in Abbasid times*, in *School of Abbasid Studies, Occasional Papers*, no. 1, St. Andrews University 1986, 30-9.

(D. Waines)

2. In Ottoman Turkey.

In Ottoman society, *maṭba<u>kh</u>*, in vernacular Turkish *mutfak*, the kitchen, had a central importance not only because the members of the ruling élite had to feed their large retinues but also because, as a social institution, it served to establish and symbolise patrimonial bonds in society. Feeding people gave rise to a variety of elaborate organisations related to the Sultan's palace, to the élite and to the charitable institutions. By fulfilling charitable duties as prescribed by Islam and by leading to the accumulation and redistribution of wealth, these organisations played a crucial role in Ottoman social life and in the economy in general.

a. Special feasts and foods. Feeding people or giving public feasts had an important ritualistic-ceremonial and political function among the pastoral nomads of Eurasia. In the Kök-Türk inscriptions dated 732-5 A.D. (ed. H. N. Orkun, IC 10, ID 16, 17), the primary task and accomplishment of a Ka<u>gh</u>an was described as "the feeding and clothing of his people". In the *Ḳutadgu bilig*, a royal advice book written in 1070 in Turkish, being generous and "entertaining people with food and drink" are counted among the chief virtues of a prince (tr. R. Dankoff, 107; İnalcık, *Kutadgu Bilig'de...*, 270).

Later references to this custom indicate that "feeding his people" was institutionalised within the state organisation. To give a public feast was a privilege and a duty of the ruler. The institution was known as *toy* in Turkish (in Mongol *toyilan*: *Man<u>gh</u>ol-un Niuča Tobča^ʾan*, tr. A. Temir, 53), *<u>sh</u>ölen* (in Mongol, *<u>sh</u>ulen*: Temir, 202) or *a<u>sh</u>*. It was originally associated with the institution of a potlatch (Abdülkadir İnan, "*Han-i yagma*" *deyiminin kökeni*, in *Türk Dili*, vi, 543-6). Ögedey ordered that one sheep from each herd was to be taken annually and given to the poor. This institution was called *<u>sh</u>ülen* (A. Temir, *ibid.*). Following his election to the khanate, Čingiz <u>Kh</u>ān had set up a kitchen as part of the state organisation (Temir, 58; cf. ch. on the qualifications of a chief cook in the *Kutadgu bilig*, 133). In the public feast given by the Ka<u>gh</u>an at the meeting of the tribal chiefs, the customarily-determined seat (*orun*) and share of mutton served (*ülü<u>sh</u>*) to each chief was scrupulously regulated, for this was considered a ceremonial recognition of his rank (see İnan, *Orun ve ülüş meselesi*, in *THIM*, i, 121-33; cf. A. Z. V. Togan, *Oğuz destanı*, Istanbul 1972, 47-48; Abu 'l-<u>Gh</u>āzī Bahādur <u>Kh</u>ān, *<u>Shedj</u>ere-yi Terākime*, ed. R. Nur, Istanbul 1925, 31). Arbitrary change in the order and hierarchy might lead to a rebellion. At such *toys* or *<u>sh</u>ülens*, important issues concerning the khanate were discussed and decisions taken. The practice was apparently introduced into the Islamic world by the Sal<u>dj</u>ūḳs. Niẓām al-Mulk (*Siyāsat-nāma*, ed. Darke, 162) speaks of it as a custom, scrupulously observed by the Sal<u>dj</u>ūḳs; Ṭo<u>gh</u>rïl Beg held an open eating table in his palace every morning. Because it was interpreted as a proof of the ruler's care for his subject, he was personally interested in the quality of the food served. The Ḳara<u>kh</u>ānids, says Niẓām al-Mulk (*ibid.*), considered *toy* an important state affair. Early Ottoman traditions (see ʿĀ<u>sh</u>ïḳ-Pa<u>sh</u>a-zāde, ed. N. Atsız, 98), tell us that in the Ottoman palace it was the custom for a band to play every afternoon to invite people to come and eat. At any rate, it was a carefully observed custom to offer, in the second court of the Ottoman palace, food to anyone who came to submit a case to the imperial council (see S. Cantacassin, 75).

The Ottomans also followed the Islamicised forms of the ancient Iranian rituals of *Mihragān* [*q.v.*] and *Nawrūz* [*q.v.*] which became occasions for public festivities. The offering of *pī<u>sh</u>ka<u>sh</u>* or presents by high officials and governors to the Sultan at such times was an occasion for the renewal of bonds of loyalty, as had

been the case in ancient Iran (Dhabīḥ Allāh Ṣafā, *Gāh-shumārī wa djashnhā-yi Īrāniyān*, n.d., n.p., 43-5, 47-51, 55, 81-102; İ. H. Uzunçarşılı, *Saray*, 366, 371, 507). The 21st (in the old calendar, 9th) of March was accepted by the Ottomans as *nevrūz* (*nawrūz*) or the beginning of the new year (for different dates, see Ṣafā, *ibid.*). On that day, it was a widespread custom to eat and offer a special paste, *maʿdjūn*, called *nevrūziyye* (M. Celâl, *Eski İstanbul*, 99; Uzunçarşılı, *Saray*, 366). *Nawrūz* was also the beginning of the fiscal year in the Ottoman financial calendar.

Festivals of Iranian origin were, in the course of time, identified with the memorable events of Islam. For Bektāshīs, *nawrūz* is the most important festival, celebrated with a special feast, since 9 March is believed to be the birthday of ʿAlī. It is a religiously meritorious act to celebrate nights of special importance in the history of Islam. The night of the Prophet's birth, 12 Rabīʿ I, as well as those of *raghāʾib*, 3 Radjab; of the prophet's *miʿrādj* [*q.v.*], 27 Radjab; of *barāʾa* or *barāt*, 15 Shaʿbān; and the *laylat al-ḳadr*, 3 Ramaḍān, are celebrated with special prayers. After prayers, special dishes or sweets (*ḥelvā*) are offered which are an important part of the ritual: special *waḳfs* [*q.v.*] called *ṭaʿāmiyye* were established specifically for the distribution of food in the *zāwiyes* and *ʿimārets* on these days (examples of Ayverdi and Barkan, *İstanbul vakıfları*, nos. 1788, 1790). The day of *ʿāshūrā* [*q.v.*], 10 Muḥarram, had special meaning for the *ṭarīḳas* of Shīʿī tinge. It was the occasion of a ritual at the derwish convents, the elements of which were reminiscent of the ancient Iranian *nawrūz* ritual (cf. Ṣafā, 88, 101). The preparation of a special food for the day called *ashūre* (*ʿāshūrā*) at the convents had its own elaborate ritual (see Grace M. Smith, *ʿAshure and, in particular, the ʿAshure of Muharrem*, in *Jnal. of Turkish Studies*, viii, 229-31; *eadem*, *Food customs at the Kadirihane Dergâh*, in *JTS*, vii, 403). The day of *ʿāshūrā* was observed commonly by all classes of society, including the Sultan's palace.

During the month of Ramaḍān, it was a custom for the Sultan and the principal dignitaries to invite their subordinates to the *ifṭār* meals in the evening, which were occasions for the renewal of the *nisba* or patrimonial relations among the élite (see M. Celâl, 93-5; B. Felek, *Yaşadığım Ramazanlar*, in the newspaper *Hürriyet*, June 1985). Special dishes were expected at the *ifṭār* meals. The introduction of a Western menu in the 19th century drew criticism regarding this. On the *ʿĪd al-aḍḥā*, Turkish *Ḳurbān bayramī*, thousands of sheep were slaughtered and distributed to the poor by the Sultan and well-to-do citizens. Offering sweets was customary at the *ʿĪd al-fiṭr* (Ali Riza, *Bir zamanlar İstanbul*, 120-81; M. Celâl, 89-100).

Also on special occasions, such as the Sultan's accession to the throne, a major victory on the battlefield, weddings or burials, elaborate public feasts were given which in their size and character resembled old Turkish *toys* (for the *Sūr-nāmes* which contain full description of the feasts, A. S. Levend, *Türk edebiyatı tarihi*, 641; Edirne, 265-96; Ö. Nutku, *IV. Mehmed'in Edirne şenligi*; on the *toy* given by Meḥemmed II after the conquest of Constantinople, Ewliyā Čelebī, i, 60-2; the *khʷān-i yaghmā* given to the Crimean troops was a typical *toy*, described by Fīndīḳlīlī Meḥmed, *Silāḥdār taʾrīkhi*, ii, 27).

The festival of Khiḍr-Ilyās, in vernacular Turkish *Hidrellez* [see KHIḌR and ILYĀS], celebrated universally in the Ottoman lands, was also an occasion for a communal ritual feast usually called *tafarrudj*. Like *nawrūz*, it was associated with a cult celebrating the beginning of spring with the difference that *Hidrellez* was celebrated on 6 May (or 23 April, O.S.). It is to be noted that the Christian festival of St. George, who was identified with Khiḍr, was held on the same day (Hasluck, i, 48, 319-26).

The *ḥalwā* (Turkish *ḥelvā*) gathering, celebrated on 1 May, is a ritual related rather to the *futuwwa* [*q.v.*] tradition of the craft guilds and the *ṭarīḳas* [*q.v.*] (I. Mélikoff, *Le ritual du Helva*; A. Y. Ocak, *Islâm-Türk inanclarında Hızır*). Ritual foods, *tuz-ekmek* (Ş. Elçin, *Tuz-ekmek hakkı deyimi üzerine*), *sherbet*, *loḳma*, *ḥelvā*, were all prepared and served ritually along with suitable prayers (see Grace Smith, *ibid.*).

In general, ritual food signified submission and mystical union in the *ṭarīḳa* ceremonies (see *Hacı Bektaş vilâyetnâmesi*, ed. A. Gölpınarlı, 17-18, 27).

The Janissary [see YENIČERI] corps was symbolically organised on the model of a kitchen. The explanation may lie in the *futuwwa* and Bektāshī connections of the corps, or in the old Turkish custom of *toy* (see above). The *ḳazān-i sharīf*, or sacred cauldron of *čorba* (soup), attributed to Ḥādjdjī Bektāsh [*q.v.*] was the emblem of the whole Janissary corps. The Janissary headgear was ornamented with a spoon. High officers were called *čorbadjī*. Also, each *orta*, or division, had its own *ḳazān*, and the head cook of the *orta* kitchen was the most influential officer in the division. The kitchen was also used as a detention place. Important meetings were held around the *ḳazān-i sharīf*. Overturning it meant rejecting the Sultan's food, i.e. rebellion, whilst to accept one's food meant submission in general (see Ş. Elçin, *Tuz-ekmek hakkı...*).

b. The *Maṭbakh-i ʿĀmira* or Palace Kitchen. In addition to visitors, there was in the Sultan's palace a large body of palace servants who had to be fed every day. In 933/1527 servants in the *Bīrūn*, Outer Service, alone, numbered 5,457 (*IFM*, xvii, 300). The annual account books of the New Palace (the Ṭopḳapī Palace) (in *Belgeler*, ix, 72-81, 108-49) list separately the following kitchens: the *Maṭbakh-i ʿĀmira*, or Imperial Kitchen; the *Ḥelwā-khāne* (formerly *sherbet-khāne*, confectioner's kitchen); and the two bake-houses for *simid* and *fodula*. Within the *Maṭbakh-i ʿĀmira* itself, reference is made to particular kitchens: *Maṭbakh-i Āghā-yi Saray* (K. for the Chief Eunuch of the Palace), the *Maṭbakh-i Āghāyān* (K. for the Chief Eunuchs), and the *Maṭbakh-i Ghulāmān-i Enderūn* (K. for the Palace pages). A special kitchen called *ḳushkhāne* (not to be confused with the Palace aviary) was reserved exclusively for the Sultan himself. The entire southern part of the Second Court in the Palace was occupied by kitchens, storerooms, apartment for the Kitchen personnel and offices (see Plan I, in B. Miller, *Beyond the Sublime Porte*, 8). After a destructive fire, ten kitchens were rebuilt under Süleymān I by the architect Sinān [*q.v.*], who created a grandiose construction with domes and chimneys. Each of the ten kitchens served a special group.

There were two storehouses, *kilār* or *kiler*, one in the *Bīrūn*, the other in the *Enderūn (Andarūn)* where provisions for the Palace were stored. The more valuable items such as sugar and spices mainly provided from Egypt (*Mīṣīr irsāliyyesi*) were preserved in the inner *kiler* under the direct supervision of the *kilerdji-bashī*. The bulkier goods were stored in the outer *kiler* under the supervision of the *Maṭbakh kilerdjisi*. Other palaces in Istanbul, such as the Sarāy-i ʿAtīḳ, Üsküdār Sarāyī and Ghalaṭa Sarāyī, and the palaces in Edirne and Bursa, had their own kitchen organisations similar to those of the Ṭopḳapī Palace.

During the classical period (1400-1600), all the

work involved in the procurement of provisions and the preparation and distribution of food within the Palace was under the responsibility of the *kilerdji-bashî*, also known as *sar-kilārī-i khāṣṣa*, or the Head of the Imperial Larder. He was the chief of the third of the Imperial Chambers which were in direct contact with the Sultan. The staff under the *kilerdji-bashî* grew considerably over the course of time, from 20 in the early 16th century to 134 in 1090/1679 (Uzunçarşılı, 315).The number of cooks in the ten Imperial Kitchens also increased considerably, as follows:

tasnifi, *Maṭbakh-i ʿĀmira muḥāsebe defterleri*; for Ottoman cookery in the mid-17th century, see Seyyid Meḥmed, *Ṣoḥbet-nāme*, Topkapı Sarayı Library, Hazine K. 1425 and 1418).

Provisions were to be supplied regularly to the imperial kitchens under the supervision of a *maṭbakh emīni*, who organised their delivery. Also responsible for book keeping and accounts, he was assisted by a *katkhudā*, two *kātibs* (scribes) and a larder attendant (*kilerdji*). A bureaucrat of the rank of *khʷādje*, the *emīn* was nevertheless a dependent of the *kilerdji-bashî* (for

The cooks, *āshdjîs* or *ṭabbākhs*, were organised in an *odjak* (corps), which was divided into *bölüks*, in the same way as other military corps at the Porte. The corps was headed by the *sar-ṭabbākhīn-i khāṣṣa*, also known as *bash-āshdjî-bashî* with the rank of *āghā*. As in other corps, the *āghā* was assisted by a *katkhudā* (lieutenant) and a *kātib*, secretary. As professionals, the cooks were subjected to a hierarchy as in any craft, which consisted of *usta* or *ustād*, *kalfa* or *khalīfa*, and *shāgird* (master, foreman and novice). As a rule, a *shāgird* joined the corps from the corps of *ʿadjemī-oghlans* [see KAPÎ-KULU]. He learned the profession while working under an *usta* or *āshdjî-bashî*, later becoming an *āshdjî*, then being promoted to *āshdjî-bashî*.

Servants under the *kilerdji-bashî* in the storerooms in the *Bīrūn* formed a separate corps in ten *bölüks*. Under him were the following: *khabbāzān* (bakers), *kaṣṣābān* (butchers), *ḥalwādjiyān* (*ḥelvā*-makers), *yoghurtdjiyān* (yoghurt-makers), *sebzedjiyān* (keepers of vegetables), *simiddjiyān* (makers of ring bread), *buzdjiyān* and *kardjiyān* (keepers of ice and snow), *ʿashshābān* (keepers of herbs), *tavukdjiyān* (keepers of poultry), *kalaydjiyān* (tinners of the copper ustensils), *mūmdjiyān* (makers of candles), *sakkāyān* (water-carriers), *gandum-kūbān* (wheat-pounders). *Čashnīgīrān* (waiters), made a completely independent group under a *čashnīgīr-bashî* in the *Bīrūn* section. The Sultan was served by the *kilerdji-bashî* and his staff in the *Enderūn*.

The Sultan's cooks competed to please the Sultan by preparing special dishes of their own cooking. The Sultan showed his pleasure by giving a reward (*inʿām*) (records in *Belgeler*, ix, 300, 305). Thus the Ottoman palace was considered as a centre where Ottoman Turkish cooking excelled and where creative chefs were trained (see A. Muhtar, *Aş-evi*). Detailed records on the ingredients used are to be found in the kitchen expenditure books (see the registers called *Muḥāsebe-yi ikhrādjāt-i khāṣṣa* published by Ö. L. Barkan, *Belgeler*, ix; and the Başvekâlet Archives, Istanbul, K. Kepeci

the functions of the *emīn*, see, e.g. *Muḥāsebe defteri*, BA, K. Kepeci no. 7291). Provisions were bought either from the market or as *irsāliyye* or *odjaklik* [see MUKĀṬAʿA] procured regularly from the resources under the control of the finance department.

The tremendous amount of meat consumed at the imperial palaces give rise to a vast organisation under a *kaṣṣāb-bashî*, who was financially dependent on the *maṭbakh emīni*. For the kitchens of the Topkapı Palace alone, the annual consumption of lamb was about 1,270 tons, costing 12 million *akčas*. The other three palaces consumed 458 tons annually (*IFM*, xvii, 295-8).

The kitchen expenditures of the temporary embassies were met by the Porte. In 1079/1669, e.g., the Russians received provisions worth 347,000 *akčes*.

Table III
The total annual expenditure for the provisions of the Palace Kitchens

	Million akčes	*In gold pieces*
Under Süleymān I	4.8	80,000
,, Selīm II	6.3	105,000
,, Murād III	21	175,000
In 1072/1661	44.3	369,000
In 1164/1750	900,000 *ghurush*	328,000

The organisation of the kitchen in the houses of the élite was a miniature replica of the Sultan's one. It included two separate kitchens, one for the lord and the other for the servants. Both had master cooks (*usta*) and apprentices or assistants (*shāgird*). In 1082/1671 a vizier-governor, ʿUmar (ʿÖmer) Pasha's kitchen personnel (see M. Kunt, 15-22) consisted of one *maṭbakh emīni*, also known as *wakīl-khardj*, six cooks, six pantrymen (*kilārī*), two shopping boys and one butler. Expenditure for provisions through the *wakīl-khardj* amounted to about 8,600 gold pieces or 16.7% of the Pasha's total expenditure. Members of the élite spent an unusual amount of money for kitchen expenses, not only because they had large retinues to feed (in ʿUmar Pasha's case, 220 persons) but also because they were expected "to keep the house open" to visitors.

In the houses of the élite and well-to-do, the *maṭbakh* and the *furūn* (oven) were to be found often as separate constructions in the courtyard.

c. The *ʿImāret* and *Zāwiye*. The *ʿimārets* functioned as an extensive network of social aid in Ottoman society, particularly in the cities. Numerous

ʿimārets provided food for thousands of people who did not have an independent source of income. Charity, materialised through the institution of ʿimāret, was accepted as an integral part of the Islamic *wakf* system, but considered extensively, the ʿ*imāret* system might also be related to pre-Islamic Turkish traditions.

Through this system, the immense wealth, which was accumulated in the hands of the ruling élite, was redistributed among the unprivileged and dependent people. Built within a religious complex, an ʿ*imāret* compound usually included a *maṭbakh*, a *taʿām-khāne* or *dār al-ḍiyāfa* (eating hall), *ḥudjras* (rooms for visitors), an *anbār* or *kilār* (larder), a *furūn* (oven), an *iṣṭabl* (stable) and a *maḥṭab* or *odunluḳ* (store for firewood). The entire ʿ*imāret* compound was put under a *shaykh-i* ʿ*imāret*, while each section came under the responsibility of an employee specialising in that service. The *Maṭbakh* personnel of a large ʿ*imāret* (see *Belgeler*, i, 235-377; *Kara Ahmed Paşa vakfiyyesi*, in *Vakıflar Dergisi*, ii, 83-97) included first a *wakīl-khardj* (steward), *kilārī* (larder attendant), *anbārī* (keeper of the storeroom for bulky provisions), *naḳībs* (distributors and supervisors), *ṭabbākhs* (cooks), a head cook, and *khabbāzs* (bakers); in the second category came a *gandum-kūb* (wheat-pounder), a *kāse-shūy* (bowl-washer), *ḥammāls* (porters) and *bostānīs* (gardeners). There were also *ḳapīdjīs* (gate-keepers), *teberdārs* (halberdiers), *ākhūrī* (stable boy), *čirāghdjī* (candle-lighter), *kāse-keskh* (waiter), *ferrāsh* (sweeper) and *mezbele-kesh* (carrier of garbage). At smaller ʿ*imārets* or *zāwiyes*, there were to be found only a *shaykh*, cooks, bakers and a store-keeper. At the derwish *zāwiyes*, the main services were assumed by the *babas* and others by dervishes, in a hierarchical order. According to the Ṣūfī interpretation, each service represented a station in the training of a disciple. In the Bektāshī order, the *ekmekdji-baba* and *āshdjī-baba* came second and third after the *pust-nishīn* in the hierarchy, which corresponded to the *ekmek-evi* and *āsh-evi* in the *tekke* (J. K. Birge, *The Bektashi order*, 175, 250; S. Faroqhi, *Der Bektaschi-Orden*, 105; eadem, *Seyyid Gazi*, in *Turcica*, xiii, 94, 103; A. Gölpınarlı, *Mevlânadan sonra mevlevîlik*, Istanbul 1953, 391). The administrators comprised a *mutawallī* (trustee and administrator), a *nāẓir* (supervising trustee), a *kātib* (secretary) and *djābīs* (collectors of revenues). All this gives an idea of how an ʿ*imāret* or *zāwiye* was organised and functioned.

The word ʿ*imāret* is sometimes used synonymously with *khānaḳāh* or *zāwiye*; but in all categories, the running of a *maṭbakh* and cooking and distributing food for the needy constituted the most important function.

Imārets founded by the sultans in large cities were the most developed form of public soup kitchen. The ʿ*imāret* of Fātiḥ, part of the charitable complex established by Meḥemmed II [*q.v.*], had an annual income of about 20,000 gold ducats. This income was derived from 57 *wakf* villages and the *djizya* tax of the non-Muslims (8,677 taxpayers) of Istanbul. At least 1,117 persons received food from this ʿ*imāret*. The figure included 957 students, employees and servants of the ʿ*imāret* and 160 travellers (*IFM*, xxiii, 306-41). For better service, a *tawzīʿ-nāma*, or regulation for distribution (ed. A. S. Ünver, *Fâtih aşhânesi tevzi' nâmesi*, Istanbul 1953) was drawn in 952/1545. The food, when left over, was further distributed among the poor in the neighbourhood, with widows and orphans getting priority. Those benefiting from an ʿ*imāret* are listed, in order, as the *fuḳarāʾ* (destitute) coming first, and then *masākīn* (those unable to make a livelihood) and *musāfirīn* (travellers). Sometimes poor orphans (*yatīm*) and school children are also mentioned in the *wakf* deeds among the beneficiaries. Dervish *zāwiyes* are included in the category of establishments which offer food and shelter to travellers and the needy. In the documents granting arable land as *mulk*/*wakf* to the *shaykh* of a *zāwiye*, it is always stipulated that his primary duty is to provide food and shelter to travellers (see *Vakıflar Dergisi*, ii, 304-53). In the countryside, the *zāwiye* was thought indispensable for people travelling and a factor promoting settlement and prosperity. Anyway, helping travellers was included among the *zakāt* [*q.v.*] duties and the performance of this duty in the name of the Sultan was given to the care of a dervish community, as an old Islamic tradition. The *zāwiyes* of the *akhīs* [*q.v.*] were particularly active during the first period of Ottoman expansion and settlement, when hundreds of *zāwiyes* and similar institutions were established throughout the empire; in 936/1530 there were 626 *zāwiyes* and *khānaḳāhs*, 45 ʿ*imārets*, 1 *ḳalender-khāne* and 1 *mevlevī-khāne* in the province of Anatolia (western Asia Minor).

As a rule, a *zāwiye* encompassed two sections, a *tekke* (convent), where the dervishes performed their religious rites, and a *maṭbakh* or *āsh-evi*, where food was prepared and distributed to the dervishes, to travellers and to the needy. The *maṭbakh* was considered so important that usually it dominated the whole *zāwiye* structure, and took up by far the largest share of the *zāwiye*'s revenue (see Faroqhi, *Der Bektashi-Orden*, 48-75). In the urban *zāwiyes*, the residents of the quarter where the *zāwiye* was built set up additional *wakfs* to supplement the salaries of the servants or to pay for the preparation and distribution of food on holy days (*ḳandīls*). Thus the *zāwiye*, like the mosque of the quarter, constituted a common religious centre as well as a charitable institution (see *İstanbul vakıfları*, ed. Ayverdi and Barkan) in the *maḥalla* [*q.v.*].

3. In Persia [see Suppl.].

4. In Mughal India.

It is not easy to determine to what extent the Mughal commissariat perpetuated earlier Indian models: consistent information comes only from the times of Akbar and his successors, and although there are copious references to banquets from earlier reigns, and some allusions to favourite articles of food, there is almost nothing recorded about kitchen organisation.

Under Akbar, the Imperial kitchen, *maṭbakh* (called in Humāyūn's time *bāwarčī-khāna*), including its dependent branches of *ābdār-khāna* (the court water-supply), *mēwa-khāna* (supply of fruits both fresh and dried) and *rikāb-khāna* (pantry, specially where bread is prepared), was one division of the imperial household under the control of the Khān-i Sāmān. The kitchen itself was controlled by a *mīr bakāwal*, on whose staff were several assistant *bakāwals*, a treasurer and his assistants—for the kitchen estimates and accounts were kept separately—clerks, marketers, a large retinue of cooks "from all countries", food-tasters, table spreaders and servers, and perhaps most important, a large number of storekeepers, for the Imperial Kitchen had to be ready to move a day in advance of the Emperor when he went on tour.

The *mīr bakāwal* was required, according to the *Āʾīn-i Akbarī*, to prepare both annual and monthly estimates for his department, to determine the rates of materials required, and to make the necesary purchases, entering all these in a day-book; he had also to pay the monthly wages of the staff. Provisions such as rice from various sources, other grains, *ghī* (clarified butter), live goats and sheep, ducks and fowls, etc., were collected at the beginning of each season (doubtless to take advantage of seasonal fluctuations in prices); the livestock would be fattened under the care of the cooks; a kitchen-garden was also

established to provide a continual supply of fresh vegetables. Livestock was slaughtered outside the city or camp by a river or tank, and the meat washed and sent to the kitchen in sealed sacks; within the kitchen it would again be washed in selected water taken from sealed vessels before being cooked. During the cooking processes, in which every dish would be under the supervision of one of the sub-*bakāwals*, awnings would be spread and lookers-on carefully kept away; the finished dishes, after being tasted by the cooks and the *bakāwals*, would be served in utensils of gold or silver, tinned copper or earthenware, tasted by the *mīr bakāwal*, tied up in cloths and sealed, with a note of their contents, before being sent to the table; as an additional precaution a storekeeper would send also a list of the vessels used, so that none of the dishes might be substituted by an unauthorised one, and the used vessels had to be checked against the list when they were returned. As the food was carried from the kitchen by the *bakāwals*, cooks and others, guarded by mace bearers, a similar procession would be sent from the bakery, the *ābdār-khāna*, and the *mēwa-khāna*, all dishes again sealed by a *bakāwal*. Some dishes from the Imperial table might be sent, as a mark of special favour, to the queens and princes; but of course the kitchen was kept busy the whole time, apart from the meals required for the emperor's table, in providing meals for the *zanāna*.

As remarked above, s.v. GANGĀ, the water of the Ganges had a special reputation for purity, and here perhaps pre-Mughal usage is perpetuated in that Muḥammad b. Tughluḳ is known to have used special couriers to bring Ganges water to his court; Akbar while at Āgra or Fatḥpur Sikrī is said to have obtained Ganges water from Sōrōn (miscalled Sarun in Blochmann's tr. of *Āʾīn-i Akbarī*, *āʾīn* 22), a town of some antiquity now no longer on the main channel of the Ganges, and while in Lāhawr from Hardwār. His practice was followed by later Mughal rulers. This was used for drinking water; but even water for cooking purposes had a small amount of Ganges water mixed with it. Trustworthy persons drew the water and despatched it to court in sealed jars. Drinking water was at first cooled in sealed containers stirred in a vessel containing a solution of saltpetre, although after the court moved to the Pandjāb, ice was regularly used, brought from the Pandjāb hills by land or water. For all these arrangements the *ābdār-khāna* was responsible, and also for the provision of *sharbat* when required; indeed, in the reign of Djahāngīr [*q.v.*] the *ābdār-khāna* was known as the *sharbat-khāna*. On the march or in camp, drinking water was cooled by being carried in a tinned flask covered with a cloth wrapping which was kept constantly moist, so that the contents were cooled by evaporation from the surface, as in the modern army water-bottle (the evidence of Mughal paintings shows a simpler method, still in use: the water is kept in a large earthenware vessel (*surāhī*), only lightly glazed or unglazed, mounted on a simple stand and placed so as to catch any breeze).

The *mēwa-khāna* received much attention from the Mughal emperors. Bābur, in a touching passage in the *Tūzuk*, recalls the delights of the grapes and melons of his homeland and regrets their absence from India; but such luxuries were later regularly imported after the conquest of Kābul, Ḳandahār and Kashmīr, and Akbar settled horticulturists from "Īrān and Tūrān" for the cultivation of fruit trees in India. Abu 'l-Faḍl, *Āʾīn-i Akbarī*, *āʾīn* 28, gives a list of some two dozen imported fruits and nuts, three dozen native Indian sweet fruits, and a score of sour and sub-acid fruits. A special "fruit" described in this section is the *pān*, a heart-shaped green leaf smeared with lime and catechu, to which is added slices or granules of betel-nut with aromatic spices, sometimes camphor, musk, or costly perfumes, and rolled into a *bīṛā*, which may then be finished with silver or even gold leaf. A *pān* was often presented to a courtier as a mark of royal favour, and Mughal brass *pāndāns*, with compartments to hold the leaves, nuts and other requisites, were also presented as gifts.

Abu 'l-Faḍl's account shows further what kinds of dishes were prepared for the Imperial table, and he gives thirty specimen receipts—or rather lists of ingredients, since there is no information about the cooking processes involved. These are divided into three categories: *bē-gōsht* (meatless), "commonly called *ṣūfiyāna*"; *gōsht bā-birandj*, meat with rice; and *abāzīr*, spiced dishes. The categories, however, do not seem to be mutually exclusive. There is already ample evidence for the Indianisation of the Mughal fare, in both the ingredients (including cardamoms, cinnamon, saffron, ample fresh ginger root, asafoetida, turmeric and others among the spices; chillis are conspicuously absent, and *summāḳ*, a favourite Persian condiment, appears only once) and the nomenclature (*dāl*, lentils; *sāg*, a spinach dish; *čapātī* among the breads; *khičrī* among the rice dishes). Abu 'l-Faḍl's list of current market prices for common commodities (*āʾīn* 27) refers to many by Indian names (e.g. *mūng* and *mōṭh* among the lentils) and includes such Indian favourites as mangoes-in-oil and lemons-in-oil, among the pickles.

The large number of meatless dishes calls for comment. Akbar declared a number of *ṣūfiyāna* days in which he ate no meat, including Fridays, Sundays (because, according to Djahāngīr, it was the day of his birth), the first day of each solar month, and throughout the month of Ābān and at least part of Farwārdīn, and on many other days detailed by Abu 'l-Faḍl; he increased the number of *ṣūfiyāna* days each year, and on these days no animals were permitted to be slaughtered. Djahāngīr, whose *Tūzuk* shows him to have been a connoisseur of good food, ate *ṣūfiyāna* meals on Sundays in his father's memory, and on Thursdays to commemorate his own accession.

The kitchen department had also obviously to provide for the wine and other intoxicants used in the court, for although the official chroniclers are understandably reticent on the subject it is inconceivable that similar precautions to those taken for foodstuffs and water should not be applied also to wine. Khᵂāndamīr records (*Ḳānūn-i Humāyūnī*, 49) that a *sūčī khāna* issuing wines existed apart from the *ābdār-khāna*. Besides wine from the grape, *ʿaraḳ*, such drugs as opium, *bhāng* (hemp, *Cannabis sativa*) and the electuary *maʿdjūn*, of variable components, were freely used by many of the Mughal rulers and the nobles (too freely, to judge by the fate of Akbar's sons Murād and Dāniyāl, and many others!).

A subordinate kitchen department, not part of the household, existed to provide food in the *langar-khāna*, soup-kitchen, established as a charity around many of the royal courts to provide simple food for the poor.

Bibliography: The most complete information is to be found in Abu 'l-Faḍl ʿAllāmī, *Āʾīn-i Akbarī*, i, *āʾīns* 22-8. MATERIALISTS [see dahriyya, māddiyya].

MAṬG͟HARA, the name of a Berber tribe belonging to the great family of the Butr [*q.v.*]; they were related to the Zanāta and brethren of the Maṭmāṭa, Kūmiya, Lamāya, Ṣaddīna, Madyūna, Mag͟hīla, etc., with whom they form the racial group of the Banū Fātin. Like the other tribes belonging to this group, the Maṭg͟hara originally came from Tripolitania; the most eastern members of the Maṭg͟hara, however, known to al-Bakrī and Ibn K͟haldūn were those who lived in the mountainous regions along the Mediterranean from Milyāna and Ténès to the north of Oujda (port of Tābaḥrīt); those of the western part of this zone were allied with the Kūmiya; their mountains rose not far from Nadrūma and the fortress of Tāwunt was in their territory.

Three sections had reached the western Mag͟hrib as early as the 2nd/8th century and formed there an important bloc. These were:

1. The Maṭg͟hara of Fās and the corridor of Taza; al-Bakrī observes that the source of the Wādī Fās was on their territory, in the region where Leo Africanus still mentions the *Sūḳ al-k͟hamīs* of the Maṭg͟hara "fifteen miles west of Fās".

2. The Maṭg͟hara of the Middle Atlas in the D̲jabal Maṭg͟hara, which Ibn K͟haldūn locates to the south-east (*ḳiblī*) of Fās and which Leo Africanus says is five miles from Taza (to the south?). The reference then is to the mountain region now occupied by the Ayt Warayn; an important section of the latter, the Ayt D̲jellidasen, represents the Banū Gallidāsan whom al-Bakrī gives as a section of the Maṭg͟hara, settled near Ténès in Algeria. We still find among the Ayt Warayn several sections of the Img͟hilen who represent the Mag͟hīla, brethren of the old Maṭg͟hara. The name of Mṭāg͟hra is today applied to all the eastern splinters of the G͟hayyāt͟ha tribe; Taza is situated in their territory. In al-Bakrī's time (5th/11th century) these two sections of the Maṭg͟hara had as neighbours in the west the Zawāg͟ha of Fāzāz and of Taza.

3. The Maṭg͟hara of the oases of the Sahara settled in the region of the Sid̲jilmāssa and in the town itself, in which they constitute the main element of the population, in the region of Fīgīg, in Tuwāt, Tamanṭit and as far away as Wallen (Ouallen).

At the beginning of the Arab conquest, the Maṭg͟hara are represented by Ibn K͟haldūn as settled and living in huts built of branches of trees (*k͟haṣāṣ*); those of the Sahara lived in fortified villages (*ḳuṣūr*) and devoted themselves to growing dates. In the time of Leo Africanus, the Maṭg͟hara of the Central Atlas occupied about fifty large villages.

Like other peoples belonging to the group of the Banū Fātin, the Maṭg͟hara took an active part in the events at the beginning of the Arab conquest and weakened themselves considerably in the fighting. As soon as they had become converted to Islam, a number of groups of Maṭg͟hara went over to Spain and settled there. Later, like their brethren, the Maṭmāṭa [*q.v.*], they adopted the principles of the Ṣufriyya [*q.v.*]; one of their chiefs, Maysara, provoked the famous schismatic rising of 122/740, which was the beginning in Morocco of the Barag͟hwāṭa heresy [see barg͟hawāṭa]. In a list of the tribes which adopted this heretical teaching, we find the Maṭmāṭa and Maṭg͟hara of the Central Atlas, as well as the Banū Abī Naṣr, the modern Ayt Bū-Nṣar, the eastern section of the Ayt Warayn.

With the rise of Idrīs, the chief of the Maṭg͟hara, Bahlūl, declared himself at first a supporter of the caliph of Bag͟hdād, Hārūn al-Ras͟hīd, then rallied to the new dynasty. Later and down to the 11th/17th century, the Maṭg͟hara of the Central Atlas do not seem to have played any part in politics; but they nevertheless retained their independence. From the 11th/17th century, they seem to have been supplanted on their territory by invaders from the south. As to the Maṭg͟hara of the shore, settled in the region of Nadrūma, their alliance with the Kūmiya gained them considerable political importance, when the latter became supporters of the Almohads. It was at this period that they built the fortress of Tāwunt. They then rallied to the Marīnids [*q.v.*] but this brought upon them the wrath of the ruler of Tlemcen, the celebrated Yag͟hmurāsen, who finally crushed them.

Ibn Ḥazm, *D̲jamharat ansāb al-ʿArab*, ed. Lévi-Provençal, 496, and Ibn K͟haldūn use the form *Madg͟hara* instead of *Maṭg͟hara*; in Moroccan texts of late date we also find *Madg͟hara*.

(G. S. Colin)

MAT͟HAL (a., pl. *amt͟hāl*) proverb, popular saying, derives—similarly to Aram. *mat͟hlā*, Hebr. *mās͟hāl* and Ethiop. *mesl*, *mesālē*—from the common Semitic root for "sameness, equality, likeness, equivalent" (cf. Akkad. *mas͟hālum* "equality", *mis͟hlum* "half"). In Arabic, to create a proverb is *fa-arsala(t)hā*, or *d̲jaʿala(t)hu mat͟hal*[an], *fa-ḍaraba(t) bihi 'l-mat͟hal*[a]; to become proverbial is *ḍuriba bihi 'l-mat͟hal*[u], *mat͟hal*[un] *yuḍrabu fa-d͟hahaba(t)*, or *d̲jarā/d̲jarat mat͟hal*[an], or, simply, *fa-ṣāra mat͟hal*[an].

Bibliography

i. Definition.

The Arabic philologists have since Abū ʿUbayd (d.224/838) repeatedly defined the concept of *mat͟hal.*

They have discerned and set forth its three essential characteristics: comparison, sc. the metaphorical way of expression (*tashbīh*); brevity (*īdjāz al-lafẓ*); and familiarity (*sāʾir*). They have established (a) that *amthāl* are based on experience and therefore contain practical commonsense (*ḥikma*); (b) that by their use facts can be stated pointedly and intelligibly in an indirect way (*kināya*); and (c) that by making use of *amthāl* it becomes possible to communicate matters that it would be difficult to communicate in a more straightforward way. This quality of the *mathal* is owing to the fact that it can be used individually to represent all, even only remotely, analogous cases and can always remain unchanged in the process, even though the origin of the *mathal* may long be forgotten. Abū ʿUbayd stresses the fact that the *mathal* "accompanies" the discourse; in doing so he exactly defines the etymological meaning of proverb, παροιμία in Greek (cf. also the more recent παραβολή) and in the Latin *adagio*, *adagium* as well as in the later *proverbium*. Al-Zamakhsharī (d. 538/1144) correctly remarks, that—corresponding to its true etymological meaning—*naẓīr* should be considered to be the basic meaning of *mathal*; cf. R. Sellheim, *Die klassisch-arabischen Sprichwörtersammlungen, insbesondere die des Abū ʿUbaid*, Ph.D. thesis, Univ. of Frankfurt am Main 1953, The Hague 1954, 8-20; idem, Arabic, revised and enlarged edition, *al-Amthāl al-ʿarabiyya al-ḳadīma*, tr. Ramaḍān ʿAbd al-Tawwāb, Beirut 1391/1971 (repr. 1402/1982 and 1404/1984), ²21-35; W. Heinrichs, *The hand of the north wind*, Wiesbaden 1977, 7.

The totality of these characteristics and qualities do not apply to each and every *mathal*. Many *amthāl* can only lay claim to two of them. This shows that by *mathal* we have to understand something wider than our (1) proverb; *mathal* includes, in addition, the (2) proverbial saying, also comprising the extensive group of comparisons involving a comparative in the form *afʿalᵘ min*, (3) adages (gnomes, dicta), that is, *ḥikam* and *aḳwāl* which, like many a proverb, can also be found among the *aḥādīth* as maxims and saws, including mottoes, personal maxims, apophthegms and aphorisms, (4) set turns of speech, that is *kalimāt* and *muḥāwarāt* (characteristic modes of expression) as used in optative and maledictive exclamation, in address and salutation, in prayer, and in speech generally, and, at some time or other, (5) parable, fable, just as in the Ancient Orient; cf. O. Eissfeldt, *Der Maschal im Alten Testament*, Giessen 1913; K.-M. Beyse, in *Theologisches Wörterbuch zum AT*, v (1984), 69ff., E.I. Gordon, in *BiOr*, xvii (1960), 130; O. E. Moll, *Über die ältesten Sprichwörtersammlungen*, in *Proverbium*, vi (1966), 114ff.; ʿAbd al-Hādī al-Fuʾādī, *Baḥth fi 'l-amthāl al-ʿirāḳiyya, dirāsa muḳārana li-amthāl al-mudjtamaʿ al-ʿirāḳī al-ḳadīm wa 'l-muʿāṣir*, in *Sumer*, xxix (1973), 83-106, xxx (1974), 27-46; J. M. Sasson (ed.), *Oriental wisdom, six essays of the sapiental traditions of Eastern Civilisations*, Worcester, Mass. 1981 (= *JAOS*, ci/1 [1981], 1-131).

ii. Arabic proverbs.

The *Kitāb al-Amthāl* of Abū ʿUbayd (d. 224/838) is the oldest collection of *amthāl* in the form of a genuine book compiled by the author. It contains a little less than 1,400 *amthāl* in systematic order, arranged in 19 chapters with, in all, 259 sub-chapters and 11 more in an appendix. This material can be classed as belonging in three layers: (1) *amthāl* from pre-Islamic times, (2) *amthāl* from the early times of Islam and its religious-political centres, and (3) *amthāl* dating back to the emergence of the Islamic centralised state, chiefly under the first ʿAbbāsid caliphs.

(1) The *amthāl* of the earliest layer in their majority are derived from the narrative tradition of the 2nd/8th century. In the context of a recall of the glorious Arabic past, favoured by early anti-Shuʿūbiyya tendencies, stories (*akhbār*), poems (*ashʿār*) and other relics (*āthār*) of the pre-Islamic times were very much alive in the centres of urban civilisation and much in demand at court and in various offices. Whatever in them ran counter to Islamic notions, laws and bans, was excused as having happened in the Djāhiliyya and as being worth preserving. In the struggle for survival under desert conditions, solidarity at any price among tribesmen is insisted upon: *unṣur akhāka ẓālimᵃⁿ aw maẓlūmᵃⁿ* "assist thy brother whether he is right or wrong" (Abū ʿUbayd [see below, iii, 1], no. 397: 519, further references here, as for all the following quotations); the father sets an example for the son: *man ashbaha abāhu fa-mā ẓalama* "who does as his father does, cannot be wrong—whatever be the merits of the deed" (*ibid.*, no. 408; 833), and the daughter admires him and his exploits unreservedly: *kullᵘ fatātⁱⁿ bi-abīhā muʿdjabatᵘⁿ* (*ibid.*, no. 402). In the permanent search for new pastures for his never-satisfied livestock, the Bedouin must necessarily be irked when he stumbles on pasturages without having his camel with him: *ʿushbᵘⁿ wa-lā baʿīrᵘⁿ* "fresh herbage and no camel" (*ibid.*, no. 581); of course, he knows how to appreciate the quality of the fodder, so he measures a normal pasture with the *saʿdān* plant, which is optimal for camels: *marʿan wa-lā ka 'l-saʿdānⁱ* (*ibid.*, no. 370), Figurative and metaphoric speech has with great tenacity held its ground among the Semites and especially among the Arabs, and plays an important part even in the higher forms of literature. To the Bedouin, illustrations taken from the animal world around him most easily come to mind. He knows the habits and the reactions of wild animals from his own lifelong experience and observation: *mā yadjmaʿu bayna 'l-arwā wa 'l-naʿāmⁱ* "what could bring a mountain goat and an ostrich together?" (*ibid.*, no. 898), if two things are incompatible, for the goat lives among the rocks and the ostrich on the desert plain! Allusions to human beings are expressly added: *innahu la-akhdaʿᵘ min ḍabbⁱⁿ ḥarashtahu* "he is trickier than a hunted lizard" (*ibid.*, no. 1229; cf. no. 597), or *laysa ḳaṭan mithlᵃ ḳuṭayyⁱⁿ* "a *ḳaṭā*-hen is not like a *ḳaṭā*-chicken (*ibid.*, no. 953), or *al-dhiʾbᵘ yaʿdū li'l-ghazālⁱ* "the wolf waylays the gazelle" (*ibid.*, no. 180), or, expressed in the earthy Bedouin style: *la-ḳad dhalla man bālat ʿalayhi 'l-thaʿālibᵘ* "contemptible is he who is pissed on by foxes" (*ibid.*, no. 319), the comparison involving a comparative (cf. below, ii, 4) as a figure of speech is widely used (*afʿalᵘ min*): *anwamᵘ min fahdⁱⁿ* "sleepier than a cheetah" (*ibid.*, no. 1215 [see FAHD]), or *innahu la-aḥdharᵘ, azhā, abṣarᵘ min ghurābⁱⁿ* "more watchful, or shining, or sharp-sighted than a raven" (*ibid.*, no. 1210ff.); cf. T. Fahd, *Psychologie animale et comportement humain dans les proverbes arabes*, in *Revue de Synthèse*, iii série, lxi-lxii (1971), 5-43; lxv-lxvi (1972), 43-63; lxxv-lxxvi (1974), 233-56; xcii (1978), 307-56.

(a) Some such *amthāl* about animals occur in connection with a fable. In these, different kinds of animals customarily are assigned well-defined parts: the hyena (*ḍabuʿ*), e.g., appears as stupid (*ibid.*, nos. 77-80), and the lizard (*ḍabb*) as clever (*ibid.*, nos. 296, 597, 1229); cf. C. Brockelmann, *Fabel und Tiermärchen in der älteren arabischen Literatur*, in *Islamica*, ii (1926), 96-128 (cf. below, iii, 1, b); Gholam-Ali Karimi, *Le conte animalier dans la littérature arabe avant la traduction de Kalila wa Dimna*, in *BÉT. Or.*, xxviii (1975), 51-6; M. Ullmann, *Das Gespräch mit dem Wolf*, Munich 1981 (= *SB Bayer. Ak.*, 1981, 2).

(b) Much more numerous than these fables with animals for characters are the stories of the type of the *akhbār* of the *ayyām al-ʿArab*, which are rendered with preference according to al-Mufaḍḍal al-Ḍabbī or Ibn al-Kalbī; cf. the lists of *ayyām al-ʿArab* in *al-Fākhir* (see below, iii, 4), no. 442 (360), and al-Maydānī (see below, iii, 12), ch. xxix. The "heroes" in these stories are sometimes known from tradition or genealogy, as e.g. al-Basūs [*q.v.*], whose she-camel triggered a forty years' war between the Banū Bakr b. Wāʾil [*q.v.*] and their kinsmen, the Banū Taghlib b. Wāʾil (*ibid.*, no. 1280), or al-Mundhir, or al-Nuʿmān b. al-Mundhir, the prince of the Lakhmids, who had the innocent poet ʿAbīd b. al-Abraṣ [*q.v.*] killed in order not to break an oath (*ibid.*, nos. 1048, 1130), or the nameless poor butter dealer, who was violated by a ruffian after he had caused her to close tightly the necks of two butter-filled skins with both her hands at the same time (*ibid.*, no. 1278). Many of these mostly short stories may have originated in an actual happening. Time and place however remain, as a rule, undefined. Their etiological character is obvious: the storyteller is interested in the question of who used the saying first, or of how it came to be coined at all, that is, in the *awāʾil* [*q.v.*] problem. The information which they contain can be exploited to answer questions concerning names and genealogies, but they are not historical, at the most anecdotal; cf. esp. the *Kitāb al-Amthāl* of al-Mufaḍḍal al-Ḍabbī (see below, iii, 1, a; Sellheim, *op. cit.*, 47f., ²73ff., and 27-39, ²50-63). Many of them are overgrown with myths, legends, and fairy tales; internationally disseminated themes have thus found their way into them, most likely by way of the Lakhhmid court at al-Ḥīra as an intermediary: the letter of Uriah (*ṣaḥīfat al-Mutalammis* [*q.v.*]), the legend of Zenobia, the reward of Sinimmār [see AL-KHAWARNAḲ], "bailment" (Bürgschaft), Gothamites of Arabia, etc.; cf. I. Lichtenstaedter, in *Folk-Lore* (London), li (1940), 195-203 (cf. below, ii, 4 and 7). It is striking that at times these *amthāl* are linked up with the ʿAmālīḳ [*q.v.*]; one of these is, e.g., ʿUrḳūb in Yathrib who makes "empty promises" to his brother, *mawāʿīdᵘ ʿUrḳūbⁱⁿ* (Abū ʿUbayd, no. 195)—could this be a reminiscence of the Jacob-Esau story according to Genesis, xxvii (cf. Escorial [Derenbourg], no. 651)? There were Jews in Yathrib! Often stories and explanations about a *mathal* widely or completely diverge from one another, because its origin and its original meaning had long been forgotten, when the paroemiographers collected the material, e.g. in the case of "the gatherer of acacia shoots of the tribe of ʿAnaza" (*ibid.*, no. 1142; al-Bayhaḳī [see below, iii, 14], no. 71), or in that about "the shoes of Ḥunayn" (*ibid.*, no. 779; *al-Fākhir*, no. 159; al-Bayhaḳī, pp. 87ff.), or in that about "the naked warner" (*al-Fākhir*, no. 146; al-Bayhaḳī, no. 261), or in that about "the repentance of al-Kusaʿī" (*ibid.*, no. 155), or in that about the poor Ḳuʿays of whom we know no more than that his aunt once gave him as a surety and never redeemed him (*ibid.*, no. 61), a story called in question by the transmitter. Not infrequently, stories may have been spun out of a *mathal*. Thus the saying *ḥidā ḥidā warāʾaki bunduḳa* (*ibid.*, no. 93) probably only means "O kite, O kite, a pellet (projected from a bow) is behind thee", which Abū ʿUbayda refers to a children's game; Ibn al-Kalbī and al-Sharḳī b. al-Ḳuṭāmī however take *Ḥidā* and *Bunduḳa* as names of South Arabian tribes who had fought with one another. Al-Aṣmaʿī rightly takes the proverb *tarakahu djawfᵃ ḥimārⁱⁿ* (*ibid.*, no. 18) at its face value: "he left him like the belly of an ass", i.e. like a useless thing, while again the two genealogists identify *Ḥimār* with an Amalekite or Azdite and *djawf* with *wādī* in the Syrian dialect (cf. Ibn Durayd, *Ishtiḳāḳ*, 287, ²490).

(c) Beyond any doubt, the proverbs which demonstrably occur in Thamudic inscriptions date back to pre-Islamic times, as e.g. *man ʿazza bazza* "he who overcomes takes the spoil" (Abū ʿUbayd, no. 285). But also *amthāl* in the verse of pre-Islamic poets—assuming they are genuine—can be assigned to this oldest level (cf. below, ii, 9). The question whether the poet created them, or whether—already in current use as *mathal*—they were only adopted by him, as a rule, remains undecided, so e.g. *wa-ḥasbuka min ghinan shibaʿᵘⁿ wa-riyyᵘ* (*ibid.*, no. 479) in a *wāfir* verse of Imruʾ al-Ḳays, or *ayyᵘ 'l-ridjālⁱ 'l-muhadhdhabᵘ* (*ibid.*, no. 67) in a *ṭawīl* verse of al-Nābigha al-Dhubyānī, or *mā ashbaha 'l-laylatᵃ bi 'l-bāriḥaʰ* (*ibid.*, no. 423) in a *sarīʿ* verse of Ṭarafa, or *al-dhiʾbᵘ yuknā Abā Djaʿda* (*ibid.*, no. 198) in a *mutaḳārib* verse of ʿAbīd b. al-Abraṣ, or *innamā yadjzi 'l-fatā laysa 'l-djamal* (*ibid.*, no. 380) in a *ramal* verse of Labīd. In verses of this time, internationally-known proverbs (cf. below, ii, 3, bff.) can also be shown to exist (cf. Sellheim, *op. cit.*, 40, ²65f.), e.g. the much discussed one of the goat (sheep, bull) who digs up his own slaughtering knife out of the ground with his hooves, in Greek: αἶξ τὴν μάχαιραν. Abū ʿUbayd gives four different versions: *lā takun ka 'l-ʿanzⁱ tabḥathu ʿanⁱ 'l-mudyatⁱ* (Abū ʿUbayd, nos. 1088, 797, 1086f.). Furthermore, *ka-ṭālibⁱ 'l-ḳarnⁱ fa-djudiʿat udhunuhu* "like the one (ostrich) who wanted horns and ended up with cut-off ears" (*ibid.*, no. 796; cf. no. 527 and al-ʿAskarī [see below, iii, 7], no. 47), a *mathal* which has equivalents in Greek (camel): ἡ κάμηλος ἐπιθυμήσασα κεράτων καὶ τὰ ὦτα προσαπώλεσεν, in the Talmud (Sanhedrin, 106a) and in the different versions of *Kalīla wa-Dimna* (ch. x, 2: ass for camel). Zuhayr b. Abī Sulmā was wont to insert *amthāl* into his verse, and Kaʿb b. Saʿd al-Ghanawī, who already extends into early Islam, was for the same reason called Kaʿb al-Amthāl. In their majority, these *amthāl* belong to the category of gnomic sayings, as e.g. the *ṭawīl* verse of Zuhayr: ... *wa-man lā yaẓlimⁱ 'l-nasᵃ yuẓlamⁱ* "and whoever does not wrong his fellow-men, will be wronged [by them]" (Abū ʿUbayd, in no. 282); cf. A. Bloch, *Zur altarabischen Spruchdichtung*, in *Westöstliche Abhandlungen (Festschrift R. Tschudi)*, ed. F. Meier, Wiesbaden 1954, 181-224.

(d) *Amthāl* of this kind are likely to have been written down already in ancient times as *ḥikma* on, e.g., small scrolls of leather or parchment (*madjalla*), papyrus, or palm-leaves (*ṣaḥīfa*), bone, wood-tablets, or on stones (see below, iii). In the Ḳurʾān, these dicta of ethic content usually are ascribed to the legendary Luḳmān [*q.v.*] (cf. Sūra XVIII [Luḳmān], 18), and all the more in later literature (cf. Solomon's *Book of Proverbs* in the Old Testament!). The paroemiographers have joined to him the no less legendary umpire of the ancient Arabs Aktham b. Ṣayfī [*q.v.*] (cf. *al-Mawrid*, x/3-4 [1402/1981], 161-8); small collections of his *amthāl* can be found in books on *adab*, e.g. in the *Kitāb al-Muʿammarīn* of Abū Ḥātim al-Sidjistānī (ed. I. Goldziher, Leiden 1899, 9-18), or, together with *amthāl* of the equally legendary Sāsānid *wazīr* Buzurdjmihr [*q.v.*, see DJĀWĪDHĀN KHIRAD in Suppl.] in the *Kitāb al-ʿIḳd al-farīd* of Ibn ʿAbd Rabbih (ed. A. Amīn *et alii*, Cairo 1372/1952, iii, 76-80; cf. E. García Gómez, in *al-And.*, xxxvii [1972], 249-323). It ought to be stressed that among the sayings of Aktham can be found Matt. vii, 16, *innaka lā tadjnī minᵃ 'l-shawkⁱ 'l-ʿinabᵃ* "you cannot pluck grapes from thorns" (Abū ʿUbayd, nos. 849, 870; cf. Ibn Hishām, 124f.). This and related material, e.g., the parable of the "beam in thine own eye" (Matt. vii, 3) quoted by

Abū ᶜUbayd (no. 152; cf. below, ii, 6), seems to have been in circulation as *amthāl al-ḥukamāʾ*. In the same direction points, too, the parable of the "camel and the eye of a needle" (Matt. xix, 24; Mark x, 25; Luke xviii, 25; cf. G. Aichler, *Kamel und Nadelöhr*, Münster 1908) in the Ḳurʾān (VII, 40; cf. M. B. Schub, in *Arabica*, xxiii/3 [1976], 311ff.; S. Khalil, in *ibid.*, xxv/1 [1978], 89-94; A. Rippin, *ibid.*, xxvii/2 [1980], 107-13). Concerning the Arabic-Hebrew-Aramaic-correspondences, e.g., *man nahashathu 'l-ḥayyatᵘ ḥadhira 'l-rasanᵃ*, "he who has been bitten by a snake is afraid of a rope" (Abū ᶜUbayd, no. 686), cf. S. D. Goitein, *The present-day Arabic proverb as a testimony to the social history of the Middle East*, in his *Studies in Islamic History and Institutions*, Leiden 1966, ²1968, 361-79, esp. 375; M. Grünbaum, *Neue Beiträge zur semitischen Sagenkunde*, Leiden 1893, 40-9, esp. 42; O. E. Moll, *op. cit.*, 113-20; S. P. Brock, *A piece of wisdom literature in Syriac*, in *JSS*, xiii (1968), 212-17; Anīs Furayḥa (Frayha), *Aḥīḳār ḥakīm min al-sharḳ al-adnā al-ḳadīm*, Beirut 1962; G. E. Bryce, *A legacy of wisdom, the Egyptian contribution to the wisdom of Israel*, Lewisburg-London 1979; esp. D. Gutas, *Classical Arabic wisdom literature: nature and scope*, in *JAOS*, ci (1981), 49-86 (= J. M. Sasson [ed.], *op. cit.*).

(2) The formation of the young Islamic community into a new society was an effect of the word. This process is also reflected in the *amthāl* of the second layer. Here pagan lore was adapted and integrated, old concepts were filled with new meaning, supplemented, changed, or formulated in a different way. The *akh* of the Djāhiliyya, for instance, became a brother in the faith, a brother in Islām. If the formula up to that time was *akhūka man ṣadaḳaka* "your brother is he who gives you a frank piece of advice", the Prophet now says *al-muʾminᵘ mirʾātᵘ akhīhi* "the believer is the mirror of his brother" (Abū ᶜUbayd, no. 530), i.e., he tells him openly what he sees, or, to put it more directly, *raḥima 'llāhᵘ radjulᵃⁿ ahdā ilayya ᶜuyūbī* "God be merciful on the man who shows me my faults!" (*ibid.*, no. 531). The ancient Arabic solidarity in right or wrong (cf. above ii, 1) causes was—supposedly by the Prophet, too (cf. al-Bukhārī, *al-Ṣaḥīḥ*, *Kitāb* 46 [*al-Maẓālim*], *bāb* 4)—interpreted to the effect that the brother helps his brother when he is in the right but restrains him from doing wrong (*ibid.*, no. 519; cf. e.g. Ḳurʾān, XLII, 39ff. Caetani, *Annali*, x, 45). As this method had thus been authorised by the Prophet, ancient *ḥikma* which he liked (Ibn Hishām, 285 = al-Ṭabarī, i, 1208), could live on to be elaborated by himself, his Companions and his Successors. He knew the power of words: *inna minᵃ 'l-bayānⁱ la-siḥrᵃⁿ* "verily there is a kind of eloquence that is enchantment" (*ibid.*, no. 13), also in the negative sense, for instance if the word of a poet hurts or tempts (cf. Ḳurʾān, XXVI, 224; I. Shahid, in *JAL*, xiv [1983], 1-21; below, ii, 10); the great ᶜUmar is said to have pronounced the words *walli ḥārrahā man tawallā ḳārrahā* "appoint over what is evil one who has been appointed over what is good" (*ibid.*, nos. 702, 920; cf. Lane and *Dict. arabe-français-anglais*, s.v. *ḥ-r-r*).

(a) The number of *amthāl* like this—mostly maxims and aphorisms—attributed to ᶜAlī, is, as is known, great. Most widely spread is a quite recent collection of 100 dicta, also in Persian and Turkish translation; cf. the collection in *al-Tuḥfa al-bahiyya*, Constantinople 1302/1884, 107-114, etc., the latest up to date being A. Zajączkowski, *Sto sentencyj i apoftegmatów arabskich kalifa ᶜAlī'ego w parafrazie mamelucko-tureckiej*, Warsaw 1968; al-Ḳuḍāᶜī, *Dustūr maᶜālim al-ḥikam wa-maʾthūr makārim al-shiyam min kalām amīr al-muʾminīn ᶜAlī b. Abī Ṭālib*, Beirut 1401/1981; al-Sharīf al-Raḍī or his brother al-Murtaḍā, *Nahdj al-balāgha*, i-ii, ed. Muḥammad Abu 'l-Faḍl Ibrāhīm, Cairo 1383/1963. Al-Maydānī (d. 518/1124), *Madjmaᶜ al-amthāl*, chap. xxx (see below, iii, 12) has compiled dicta (*kalām*) by the Prophet, by the first four caliphs, by Ibn ᶜAbbās, Ibn Masᶜūd, and others. Cf. *Oriens*, xxxi (1988), 354-7.

(b) Down to this level in time extend, too, the roots of those numerous *amthāl*—in this case turns of speech in the more restricted sense of the word—which not infrequently contain the name of the Lord, and which in the collections of *amthāl* are usually introduced with the words *min duᶜāʾihim*, e.g. *balagha 'llāhᵘ bika aklaʾa 'l-ᶜumurⁱ*, "may God grant you an extremely long life" (*ibid.*, no. 132; cf. *WKAS* s.v. *k-l-ʾ*), or, negatively *djadaᶜa 'llāhᵘ masāmiᶜahu* "may God cut off his organs of hearing" (*ibid.*, no. 166).

(c) The ancient *mathal*: *andjaza ḥurrᵘⁿ mā waᶜada* "an ingenuous man fulfils what he promises" (*ibid.*, no. 145), could naturally be maintained in Islām as well as the negative statement *āfatᵘ 'l-murūʾatⁱ khulfᵘ 'l-mawᶜidⁱ* (*ibid.*, no. 144), but in common speech only as the Islamic form of the same thought: *al-wafāʾᵘ minᵃ 'llāhⁱ bi-makānⁱⁿ* "with God, fulfilling a promise has its worth" (*ibid.*, no. 146; cf. Ḳurʾān, XIX, 54; *WKAS*, s.v. *k-w-n*). Whereas up to then you said *laysa ᶜabdᵘⁿ bi-akhⁱⁿ laka* "a slave is not your brother" (*ibid.*, no. 522), that is, treat him as you like!, the Muslim now said, because a believer could happen to be a slave: *ᶜabdᵘ ghayrika ḥurrᵘⁿ mithluka* "the slave who is not your slave is a free man like your" (*ibid.*, no. 377), or, similarly, *sāwāka ᶜabdᵘ ghayrika* (*ibid.*, no. 376), meaning, do not be arrogant, someone else can easily perform this or that! Success and victories won against the infidels made the faithful self-confident: *lā yulsaᶜu 'l-muʾminᵘ min djuḥrⁱⁿ marrataynⁱ* "the believer is not bitten twice out of the same nest (of snakes)" (*ibid.*, no. 683), a *mathal* that is traced back to the Prophet himself (cf. Ibn Hishām, 591). The more the young community had to face the tasks of political routine, the more often it was forced to make use of its ways and means: *innā la-nakshiru fī wudjūhⁱ aḳwāmⁱⁿ wa-inna ḳulūbanā la-taḳlīhim* "we outwardly smile at people, while inwardly we hate them (*ibid.*, no. 451; *WKAS*, s.v. *k-sh-r*), a statement which the companion of the Prophet Abu 'l-Dardāʾ [*q.v.*] is said to have uttered.

(3) The Arabisation of the ancient civilised areas of the Near East, conquered under the first caliphs, has greatly enriched the treasures of *amthāl*; on the one hand, by new creations, on the other by loans and by newly-developed ones by way of analogies taken from the languages of the aborigines. These *amthāl* form the third layer. Its level extends into the lifetime of Abū ᶜUbayd, that is, into the time of the early ᶜAbbāsids. Setting apart the popular wisdom expressed in sayings, which are more or less correctly ascribed to currently known personalities of the political or religious sphere, as e.g. Muᶜāwiya (d. 60/680), al-Ḥadjdjādj b. Yūsuf (d. 95/714), ᶜUmar II (d. 101/720) and al-Ḥasan al-Baṣrī (d. 110/728), they are, first of all, proverbs, the "place in life" ("Sitz im Leben") of which is to be looked for in the towns and in the country.

(a) Abū ᶜUbayd has heard many of them from the mouth of people engaged in conversation; occasionally he notes *min amthāl al-ᶜawāmm* (e.g. no. 779) or *al-ᶜāmma* (no. 1141), *ibtadhalathu 'l-ᶜawāmm* (no. 1269) or *al-ᶜāmma* (no. 81), *mubtadhal fi 'l-ᶜāmma* (no. 919) or *al-nās* (no. 524), etc. (nos. 42, 65, 146, 560, 636, 954, 1058, 1068). Some examples: *asmaᶜu djaᶜdjaᶜatᵃⁿ wa-lā arā ṭiḥnᵃⁿ* "I hear a sound of the mill,

but I see no flour" (Abū ʿUbayd, no. 1057), in English "much talk and little wool", or *inna 'l-bulag͟hāt͟ha bi-arḍinā yastansiru* "verily in our land the small bird (e.g. the sparrow) becomes/plays an eagle" (*ibid.*, no. 212), or *biʿtu d͟jārī wa-lam abiʿ dārī* "I sold my neighbour, but not my house" (*ibid.*, no. 894), or *aklan wa-d͟hamman* "eating and (afterwards) dispraising (the benefactor)" (*ibid.*, no. 861), or *al-nāsu s͟had͟jaratu bag͟hyin* "people are the tree on which all evil grows" (*ibid.*, no. 891).

(b) If it can be said in a very general way that parallels to the Arabic proverbs in other languages and related cultures can be shown the more frequently to occur the younger these are, the question whether any particular *mat͟hal* has in fact been newly coined, or borrowed, or modelled on an existing proverb must be left unanswered in most cases; for, as concerns the social surroundings against the background of which the *amt͟hāl* must be observed, there are scarcely any differences any more (cf. above, ii, 1, c). In the case of similes and comparisons which spontaneously offer themselves to the mind, foreign models must not always be sought, much as they may obtrude on our attention, e.g. *man ḥafara mug͟hawwātan waḳaʿa fīhā* (*ibid.*, no. 872; al-Ṭabarī, ii, 1142), in English "hoist with one's own petard", a proverb which can already be found in Ps. vii, 16 and lvii, 7, as well in Prov. xxvi, 27. In the case of rare metaphors, however, an appropriation of foreign material can be assumed with a greater degree of probability, e.g. *in kunta rīḥan fa-ḳad lāḳayta iʿṣāran* (*ibid.*, no. 225), a proverb—albeit with a slightly different meaning—that can likewise be shown to occur in the Old Testament, Hosea viii, 7: "for they have sown the wind, and they shall reap the whirlwind", and which probably has an echo in the New Testament, Galatians vi, 7 (cf. below ii, 6). There is a high degree of likelihood that the well-known Latin saying *res ad triarios redit, rediit*, or *venit*, that is, in order to arrange a completely bungled affair, is at the bottom of the *mat͟hal*: *ṣāra 'l-amru ila 'l-nazaʿati* (*ibid.*, no. 438). The question is more difficult to answer in the case of a *mat͟hal* like the following one: *mani starʿa 'l-d͟hiʾba ẓalama* "he who makes the wolf a shepherd, is in the wrong" (*ibid.*, no. 959), a saying familiar to the Greeks as of old: λύκος ποιμήν. The Romans know the simile of the hawk who is entrusted with pigeons: *accipitri columbas credere*; in English it is "to give a wolf the wether to keep", similarly in French "donner la brébis (sheep) à garder au loup", while in German, as in Greek, it is the wolf who becomes a shepherd, or, in a parallel phrase, the ram a gardener. In all these cases we cannot advance much beyond a simple registration of parallels (cf. E. Moll, *op.cit.*, 114f.; Ch. Speroni, "*The beauties of a woman*", in *Proverbium*, vi [1966], 139ff. and ix [1967], 216; below, ii, 5).

The Arabic paroemiographers of the succeeding three centuries augmented Abū ʿUbayd's *amt͟hāl* materials from all three layers and beyond these to five times the original number, i.e. to approximately 7,000 *amt͟hāl*. Among these there are more than 1,200 *amt͟hāl* in the form of a comparison involving the (4) comparative, *afʿalu min* (cf. above, ii, 1), and more than 1,500 which are called (5) "new ones", *al-amt͟hāl al-muwallada*. Those of the first group have come to light in their majority in the 3rd/9th century, and those of the second one in the two subsequent centuries. The amount of "wandering" international motifs among them is remarkable.

(4) *Amt͟hāl* in the form of *afʿalu min*. Reminiscences of Penelope come to the surface in *ak͟hraḳu min nāḳit͟hatin g͟hazlahā* "stupider than a woman who continually undoes her spinning (weaving)" (Ḥamza [see below iii, 6], no. 204), a simile that certainly has its source in Ḳurʾān, XVI, 92, or of Sisyphus, *aṭmaʿu min ḳālibi 'l-ṣak͟hrati* "more covetous than the one who turns over the rock" (Ḥamza, no. 431). As a matter of course, both persons, female and male, from the pre-Islamic past are designated by their names and genealogies! How much or how little account can be taken of this so-called "historical" tradition becomes still more evident in the following instance: *amḥalu min ḥadīt͟hi K͟hurāfata* "fuller of artifices than the stories of K͟hurāfa" (Ḥamza, no. 641). Here *k͟hurāfa*, "fairy tale" (actually "nonsense", cf. *EI*², iii, 369 b, s.v. ḤIKĀYA), is personified, as happens, too, in the proverbs and sayings of other peoples (cf. Sellheim, *op.cit.*, 35-8, ²59-62). Even the Prophet is reported to have told his wives the story of K͟hurāfa (*al-Fāk͟hir*, no. 280: typical fairy tales)! This group of *amt͟hāl* of the *afʿalu min* type, in which—like in Greek—attributes from "intelligent" to "stupid", from "clearsighted" to "trusty", etc., and names—among them that of the Owlglass character D͟juḥā [*q.v.*] (Ḥamza, no. 125)—pseudo-names, animals, plants, etc. can be exchanged indiscriminately, has proliferated into our own times.

(5) *Amt͟hāl muwallada*. The widely spread Latin saying *lupus in fabula*, that is, "if you talk of the wolf, he is not far off", is probably present in the "new" saying *id͟hā d͟hakarta 'l-d͟hiʾba fa 'ltafit* (al-Maydānī [see below, iii, 12], i, 57u/Freytag, ch. i, no. 436), which already Abū ʿUbayd knows in its abstract form *ud͟hkuri 'l-g͟hāʾiba yaḳtarib*, or *ud͟hkur g͟hāʾiban tarahu* (Abū ʿUbayd, nos. 140f.), in English "speak of an angel, and you hear his wings". Of internationally-known sayings we may list *inna li 'l-ḥīṭāni ād͟hānan* (al-Maydānī, i, 57, 21/ ch. i. no. 427), just as, e.g., in the Midrash, in Persian (cf. M. Grünbaum, *op.cit.*, 43) and in English "walls have ears"; or *id͟hā kunta sindānan fa 'ṣbir wa-id͟hā kunta miṭraḳatan fa-awd͟jiʿ* (*ibid.*, i, 58, 18/ch. i, no. 465), in English "hammer and anvil"; or *farra mina 'l-maṭari wa-ḳaʿada taḥta 'l-mīzābi* "fleeing the rain he is sitting under the drippings (from the roof)" (*ibid.*, ii, 25, 9/ch. xx, no. 112; just as in German; cf. R. Jente, *German proverbs from the Orient*, in *Publs. of the Modern Lang. Assoc. [of America]*, xlviii [1933], 17-37), in English "he jumps out of the frying-pan into the fire"; or *al-ḥarakatu barakatun* (*ibid.*, i, 155, 20/ch. vi, no. 244), in English "bliss is in action" (Pope) or "action gives satisfaction" (modern). To this category belong, even if not expressly identified as *amt͟hāl muwallada*, e.g. *in kunta kad͟hūban fa-kun d͟hakūran* (*ibid.*, i, 49, 13/ch. i, no. 366), in English "a liar must have a good memory" (just as in Latin); or *ka 'l-sāḳiṭi bayna 'l-firās͟hayni* (*ibid.*, ii, 64, 7/ch. xxii, no. 89), in English "between two stools one sits on the ground" (just as in Latin); or *ka-annahu ḳāʿidun ʿala 'l-radfi* (*ibid.*, ii, 74, 18/ch. xxii, no. 197), in English "to be on tenterhooks" (cf. above, ii, 1, c; 3, b; 4).

(6) In al-Maydānī's collection of *amt͟hāl* can be found anonymous sayings from the New Testament; mainly taken from the Sermon on the Mount, partly they are very close, corresponding almost literally to the New Testament text, partly they only render its meaning, e.g. Matt. vii, 3; Luke vi, 41, *kayfa tubṣiru 'l-ḳad͟hā fī ʿayni ad͟hīka watadaʿu 'l-d͟jid͟hʿa 'l-muʿtarida fī ʿaynika* (*ibid.*, ii, 67, 26/ch. xxii, no. 115 = Abū ʿUbayd, cf. above, ii, 1, d), or *yaʿuddu (yaʿkidu) fiyya mit͟hla 'l-ṣuʾābi wa-fī ʿaynayhi mit͟hlu 'l-d͟jarrati* ('l-d͟jalīzati) "he counts things (e.g. faults) with regard to me like nits, whilst there is in his own eyes something like a jar" (*ibid.*, ii, 254, 17/ch. xxviii, no. 78),

with a verse that renders the NT text word by word; cf. I. Goldziher, in *ZDMG*, xxxi (1877), 765ff.; idem, *Muh. Stud.*, ii, 391; further, A. Müller, in *ZDMG*, xxxi (1877), 513, 519-20, 524. There is Matt. vii, 15, with its generally-known simile of "the wolf in sheep's clothing", in *dhiʾb^un fī mask^i sakhlat^in* (*ibid.*, i, 192, 23/ch. ix, no. 70). There are several versions of Matt. vii, 16, the parable of "the grapes picked from thorns", an older one (*ibid.*, i, 34, 8/ch. i, no. 210 = Abū ʿUbayd, cf. above; *ibid.*, ii, 120, 8/ch. xxiii, no. 358), and a younger one (*ibid.*, i, 336, 31/ch. xviii, no. 255, according to Ḥamza [no. 498], with further variants, one of them in verse = *ibid.*, ii, 182, 4/ch. xxiv, no. 367). Matt. xix, 24, with its well-known parable of the "camel and the ear of a needle" (*ibid.*, ii, 113, 23/ch. xxiii, no. 316) was known already to Muḥammad (Ḳurʾān, VII, 40; cf. above). Matt. xxiii, 24—the parable of the "straining at gnats and swallowing camels"—is known in a slightly changed form as a *mathal*: *yaʾkulu ʾl-fīl^a wa-yaghtaṣṣu bi ʾl-baḳḳat^i* "he eats an elephant, but a gnat obstructs his throat" (*ibid.*, ii, 259, 16/ch. xxviii, no. 157). Galatians vi, 7, is there in a literal translation: *kamā tazraʿu taḥṣudu* (ibid., ii, 73, 2/ch. xxii, no. 185; cf. Ibn Hishām, 124f.; cf. above, ii, 3, b). As for wise sayings that can be shown to have parallels in the Old Testament, see above (= al-Maydānī, ii, 168, 11/ch. xxiv, no. 256; i, 20, 14/ch. i, no. 113); there are also reminiscences of Noah's Ark and his raven (*ibid.*, i, 79, 14/ch. ii, no. 168; ii, 9, 29/ch. xix, no. 66; cf. ii, 210, 20/ch. xxv, no. 154), as well as echoes of sayings in Deut. xxxii, 15 (*ibid.*, i, 228, 20/ch. xii, no. 50), and in Ecclesiastes and Proverbs; cf. J. Barth, *Arabische Parallelen zu den Proverbien*, in *Festschrift D. Hoffmann*, Berlin 1914, 38-45; Müller, *op.cit.*, 520, 524.—The Mandaean creator Fiṭaḥl owes his inclusion into a *mathal* probably to two verses of the widely known Radjaz poet Ruʾba (*Dīwān*, ed. W. Ahlwardt, xlvi, 14 = al-Maydānī, i, 334, 26/ch. xviii, no. 246 [= Ḥamza, no. 486]; cf. ii, 169, 25/ch. xxiv, no. 264).

(7) The historical yield of the many stories which the later paroemiographers know how to tell about several *amthāl* is as poor as that of the earlier story-tellers (cf. above, ii, 1, b); for, as a rule, these stories also belong to the realm of worldly or pious legend, fairy-tale, fable, droll tale, and anecdote. Quite frequently they can be traced back—as concerns their central idea—to a "wandering" international motif. On the following occasion we might be reminded of the legend of the Seven Sleepers (*al-Fākhir*, no. 239; al-Ḳālī, *al-Amālī*, Cairo 1344/1926, i, 61) which is already mentioned in the Ḳurʾān (XVIII, 9-12: *aṣḥāb al-kahf* [*q.v.*]; cf. R. Gramlich, in *Asiatische Studien*, xxxiii [1979], 99-152), or of the martyrdom of Djurdjus (*al-Fākhir*, no. 517). Each of the following reminiscences is attached to a historical personage or occurrence; there is an allusion to Muʿāwiya's delighted shout when he hears of the poisoning of al-Ashtar (Abū ʿUbayd, no. 555; Ibn Ḳutayba, *ʿUyūn al-akhbār*, Cairo 1343/1925, i, 201; see AL-ASHTAR); or to his remark when his ambassador is returning from the Byzantine court (Abū ʿUbayd, no. 1052; Ibn Ḳutayba, *op.cit.*, i, 198; Ibn al-Athīr, *al-Nihāya*, s.v. *ḥ-ṣ-ṣ*); or to the fine voices of the beloved girl-singers of the caliph Yazīd II (Ḥamza, no. 624; see YAZĪD B. ʿABD AL-MALIK), or to the defeat and death of the Khāḳān of the Khazars [*q.v.*] at the hands of Hishām's governor Saʿīd b. ʿAmr al-Ḥarashī (*al-Fākhir*, no. 160; al-Ṭabarī, iii, 1531; Zambaur, index); or to the assassination of al-Mahdī's governor ʿUḳba b. Salm (*al-Fākhir*, no. 158; al-Ṭabarī, iii, 367f., 520). The realistic account of a devastating nightly storm, which frightened the Baghdādīs out of their wits and provoked the caliph al-Mahdī and his retinue to do such penance (al-Maydānī, i, 176/ch. vii, no. 140), is not reported in other collections. It is a striking fact that the paroemiographers do not record any stories that deal with events after al-Mahdī, except for occasional references to the fact that a certain person used a certain *mathal*; the most recent of these personalities referred to in connection with a *mathal muwallad* (*ibid.*, i, 80, 7/ch. ii, no. 189) is Ibn al-Muʿtazz (d. 296/908). In this respect, a pupil of al-Maydānī, Abu ʾl-Ḥasan al-Bayhaḳī, proves a great exception (see below, iii, 14).

(8) At times the paroemiographers make note of the fact that a certain *mathal* is current locally, e.g., in Syria (Abū ʿUbayd, no. 1070), or in ʿUmān (Ḥamza, no. 443), or in Medina (Ḥamza, nos. 56, 224, 340, 397), or in Mecca (Ḥamza, no. 115), or in al-Baṣra (al-Maydānī, i, 145, 16/ch. vi, no. 149; cf. Abū ʿUbayd, no. 1144; below, iii, 8). It is interesting to learn by way that in Syria in the 3rd/9th century the Greek φησίν "says he" was much used by the Arabs (*al-Fākhir*, no. 137), a fashionable expression then, similar to to day's American "O.K." of worldwide acceptance. Already Abū ʿUbayd (no. 1349) has recorded: *ayy^u ʾl-barnasā*—or *ʾl-baransāʾ^i—huwa* (cf. al-Djawālīḳī, *al-Muʿarrab*, Cairo 1361/1942, 45), in other words, the Aramaic *bar nāshā* "Son of Man" or the obscure *tūlaʾmūr* "any one, anything" (Abū ʿUbayd, nos. 1344f.; J. Barth, *Nominalbildung*, Leipzig ²1894, 300; Th. Nöldeke, *Belegwörterbuch*, Berlin 1952, 40b). Actually, at times the collectors admit that the meaning of some *mathal* or other has remained dark to them (*ibid.*, no. 185), or that people in the streets use it but do not correctly understand (*ibid.*, no. 919), or that they had altered an ancient (*ḳadīm*) *mathal* for just this reason. As an example, one may cite *tadjūʿu ʾl-ḥurrat^u wa-lā taʾkulu bi-thadyayhā* "a free woman starves herself rather than eats for the price [she is paid for] her breasts" (*ibid.*, no. 569), i.e., she prefers starving to hiring herself out as a wet-nurse, which becomes distorted into the quite meaningless *lā taʾkulu thadyayhā* "and does not eat her breasts". From a misunderstanding of a verse of al-Farazdaḳ in which the way to al-ʿUnṣulayn (*ibid.*, no. 1127; Yāḳūt and Lane, s.v.) is mentioned, this expression became typical of taking the wrong way (cf. *al-Fākhir*, no. 496; Ḥamza, no. 423).
